Bills of exchange must be stamped. For inland bills the stamp is 2d. for one not exceeding £10, rising to 1/- for one between £75 and £100. Bills above £100 pay 1/- for every additional £100 or fraction of £100. Foreign bills pay 2d. if not exceeding £10, 6d. if between £25 and £100, and 6d. for every additional £100 or fraction of £100.

BILL OF LADING. This is a document enumerating the goods taken on board ship, thus forming a receipt. It also contains the conditions upon which they are carried. Usually a bill of lading is signed by the ship's master, and three copies of it are prepared, one for the consignee, one for the consignee, and one for the master himself. Each bill must bear a 6d. stamp. A bill of lading can be transferred from one person to another, and thus, if properly endorsed and due value received, it carries with it ownership of the goods named therein. A bill of lading resembles somewhat a bill of lading.

BILL OF SALE. In English law, a document whereby the legal ownership of personal chattels is transferred from one person to another, either absolutely or as security for a debt. Bills of sale are usually in the nature of mortgages of goods, being security for money lent.

A bill of sale to be valid must be attested by credible witnesses. It must be registered in the office of the High Court of Justice within seven days of its execution, but particulars of it need not now appear in *The London Gazette*. It must exceed £30.

BILL OF SIGHT. This is a statement made by an importer about the value and nature of his goods. It is for the use of the custom house and as soon as it has been accepted as correct the importer can remove his goods.

BILL. Name given to a measure introduced into any Parliament of the British Empire. On introduction bills, which may be either public or private, are printed. If they succeed in passing through both Houses of Parliament they become law and are known as Acts. See Act of Parliament.

BILL OF RIGHTS.

The most famous bill of this kind is perhaps the Bill of Rights, which retains this name, although it became an Act. After the flight of James II in 1688, a declaration, or Bill, of Rights was drawn up stating the terms on which the crown was offered to William and Mary. This passed through Parliament and is a document of great constitutional importance. It declares that the king cannot suspend a law, or raise money, or do other things done by the Stuarts, without consent of Parliament, and forbids any Roman Catholic from ascending the throne. The full text of the Bill is printed in *Select Charters*, W. Stubbs, 1898.

BILL. In English legal procedure a document of indictment against a person charged with crime. The bill giving particulars of the charge is presented to the grand jury. If the jury are not satisfied with the evidence they throw out the bill and the accused is discharged. If, however, they are satisfied that a case against him has been made out they return a true bill. The prisoner is then put on trial at the assizes or quarter sessions.

BILL CHAMBER. This is part of the Scottish Court of Session. It deals with cases of a summary nature and with certain non-contentious business, and is therefore somewhat analogous to the sittings of the judges and masters in chambers in the High Court of Justice in London. The chamber is open all the year round. Usually the junior judge is its president. See *Session*, Court of.

BILL (A.S. *bil*, sword or axe). Name of a weapon used in the 15th century by soldiers who were called billmen. It is a light form of battle axe with a curved blade. A double bill has two edges. Some patterns have a spike at the top and also at the back; others somewhat resemble a halberd. The billmen usually wore a shirt of mail and a helmet. The word is still used for an implement of similar nature to cut hedges and the like. Another use of the word is that for the beak of a bird.

BILLABONG. Word used in Australia for a blind channel leading out of a river, something like an English backwater. It is of native origin, but is officially used in this sense by the public works department.

BILLAUD-VARENNE, JEAN NICOLAS (1756-1819). French Revolutionist. Born April 23, 1756, he was a member of the Jacobin Club. He demanded a republic, put forward a like suggestion in the National Convention—of which he was president—and called for the death of the king. He helped to overthrow Robespierre, but his own accusation and arrest followed in 1795. He was deported to French Guiana, and after visiting New York retired to Haiti where he died, June 3, 1819.

BILLBERGIA. Genus of perennial plants of the order Bromeliaceae. Natives of S. America, chiefly Brazil, they have rigid, channelled leaves, overlapping at the base, and light clusters of showy tubular flowers, red, yellow, blue, or green.

Billbergia nutans, the flower and leaves

BILLERICAY. Market town of Essex and the centre of a rural district. It stands on high ground, 5 m. E. of Brentwood, on the L.N.E. Ry. The ancient church of S. Mary Magdalene has a tower which is considered one of the finest examples of brick architecture extant. It dates from the time of Edward IV. There is a grammar school which was founded in 1634. Pop. 24,157.

BILLET (Fr. billette, small log). In building, a short cylindrical member projecting from a moulding, its axis being parallel to the general surface. More loosely, the word is used for any projection of any kind of section.

Billet, figure in heraldry

In heraldry, a billet is a small oblong figure, which may be borne horizontally or vertically. When a shield is strewn with billets it is said to be billeted.

BILLETING (French billetter, note, ticket). Quartering of troops upon the inhabitants of a country. In time of peace this only occurs at manoeuvres, and then only to the extent of lodging for the night, the food being supplied by the military. In Great Britain the rights of civilians in this respect have always been jealously guarded by the Army Act, so that in practice innkeepers only became liable to this inconvenience, for which they were paid. In 1909 it was enacted that, in the event of the Territorial Force being embodied, troops might be billeted in dwelling houses, barns, stables, warehouses, and public buildings. This law came into operation in 1914, and during the Great War many soldiers were billeted in private houses in Great Britain.

In 1917 the Billeting of Civilians Act made provision for the billeting of persons engaged on work of national importance, but this lapsed when peace was made.

BILLIARDS (Fr. bille, billiard ball). Game played with three balls, two white and one red, upon a flat, oblong table with a slate bed measuring 12 ft. by 6 ft. 1½ ins.

The table and the rubber cushions surrounding it are covered with a smooth green cloth of very fine texture, and there are pockets, six in all, at the corners and in the middle of the longer sides. Usually the players are two in number, but the game can be played by four or more. Each player is provided with a cue to strike his own ball. The balls, of ivory or some substitute, should be of a certain equal size and weight.

Each player or combination of players has a white ball, one distinguished from the other by means of a spot, while the red ball is an object free to all players, except under conditions laid down in the rules. A balk line is drawn across the table 29 ins. from the face of the bottom cushion and parallel thereto, and the spot or initial position of the red ball

is marked on the table 12½ ins. from the centre of the face of the top cushion. There is also a centre spot and half-way between this and the top of the table a pyramid spot. At the balk or bottom end of the table a half-circle, having a radius of 11½ ins. inside the balk line, is marked, and this is usually termed the D.

The red ball having been placed upon the spot at the top of the table, the first player plays from any point inside the D on to the red, or gives a miss, sending his own ball out of balk. The opponent is then forced to play at the red or give a miss in his turn. A player continues so long as he succeeds in scoring, the total points in an innings being known as a break. The break includes a variety of strokes possessing different values. They include a cannon, made by the striker's ball coming into contact with the other two balls; and striking a ball with the player's ball and so driving into a pocket. The ordinary game is to make 100 points.

In 1928 the Billiards Association Control Board altered the rules in order to prevent the excessive use of the pendulum stroke. Not more than 35 direct consecutive cannons can now be made. In 1927 Reece had made a record break of 6,417 by means of pendulum cannons. In 1927 Thomas Newman retained the professional championship, but in 1928 and 1929 it was won by Joseph Davis of Chesterfield. In 1928 A. Wardle, of Manchester, won the amateur championship, and in 1929 it was won by H. Coles. See Lindrum, W.

BILLINGHAM.

Urban district of Durham. On the river Tees, 2 m. N.E. of Stockton-on-Tees on the L.N.E. Ry., it has extensive iron works. Since the War great developments have taken place. Imperial Chemical Industries has large works, the nucleus of which were factories created by the Government during the Great War. Other industries include shipbuilding yards. In 1930 the pop. was estimated at over 12,000.

BILLINGS, Josu (1818-85). Pen-name of an American humorist, Henry Wheeler Shaw. Born April 21, 1818, in 1858 he settled at Poughkeepsie, New York, as a land agent and auctioneer, and began writing humorous articles for the local journal, subsequently contributing many papers to The New

York Weekly and The New York Saturday Press. These sketches, by reason of their quaint phonetic spelling and dry point and humour, became popular and were collected in Josh Billings: His Sayings, 1866; Josh Billings on Lee, 1868; Everybody's Friend 1876, and Josh Billings's Spice Box, 1881. He died in California Oct. 14, 1885.

Josh Billings, American humorist

BILLINGSATE. Fish market and wharf on the N side of the Thames close to the Custom House and just below London Bridge. The oldest market in London, Billingsgate became a free and open market for all sorts of fish in 1699. In 1830 a building was erected for the market by the city corporation. This was superseded by a larger structure in 1877. The vernacular of Billingsgate has become synonymous for abuse. See London.

Billiards. Measurements and positions of spots and lines on a standard English billiard table

BILLINGTON, ELIZABETH (1768-1818). British singer. Born in London, her maiden name was Weichsel, and both her parents were musicians. She made her first public appearance in Dublin, and, after studying in

Billiard positions for various strokes. 1. How to make the bridge. 2. Taking aim. 3. A drop cannon. 4. Top of the table cannon. 5. S. rewing into top left-hand pocket. 6. Massé stroke. 7. Using the rest

Nos. 1 and 2 from "Billiards Simplified," by Wallace Ritchie (Barroughs & Watts, Ltd.)

Paris, achieved great success in London and various cities in Italy. Bianchi's opera, *Inez de Castro*, was written for her, and Reynolds painted her portrait as *S. Cecilia*. Her first husband was a musician, James Billington, and her second husband a Frenchman named Felissent. She died in Italy, Aug. 25, 1818.

BILLITON, BLITONG, OR BILETON. Island of the Dutch E. Indies, between Borneo and Banca. Circular in shape, it is about 52 m. long by 50 m. broad; area, including many islets, is 1,873 sq. m. It is rich in tin, iron, and timber, and exports rice, trepang, edible birds' nests, tortoise-shell, wax, and spices. Pandang is the capital. Pop. 65,584.

BILLON (Fr. copper or bronze coin). In metallurgy, alloys of gold or silver with copper in which the base metal largely predominates, also coins made from such alloys. There is rarely more than one part of gold or silver to three of copper.

BILSTON. Urban district and market town of Staffordshire. It is 2½ m. S.E. of Wolverhampton on the G.W. and L.M.S. Rlys. A centre of the hardware trade, it has extensive iron foundries, smelting works, and potteries. Bilston is noted for grindstones. Market days, Mon. and Sat. Pop. 27,565.

BIMETALLISM. Name, first used in 1869, for a monetary system in which two metals, usually gold and silver, are employed as currency standards. The foundation of the system is that the two metals shall be coined freely at the mints and that both shall be legal tender to any amount. Great Britain, the U.S.A., and most other great countries do not allow this, gold alone being coined freely and being, except for very small amounts, the only legal tender, except in times of special stress.

The agitation for an international system of bimetallism raged between about 1870 and 1900. It was strongest in the U.S.A., where it was an issue at presidential elections, but it was also strong in Great Britain and France. The agitation was led by producers of the silver, anxious to maintain its value, and those interested financially in India and the East, where its price in gold was rapidly falling, leaving them with heavy losses on the exchange.

BINCHE. Town of Belgium. On the Haine, about 10 m. E. by S. of Mons, it manufactures glass, cutlery, and leather, and trades in coal and marble. At the battle of Mons, Aug. 1914, the extreme right wing of the British army rested on Binche. On the retreat it was occupied by the Germans. See Mons.

BINDWEED (*Convolvulus arvensis*). Perennial herb of the order Convolvulaceae. It has a long underground root-stock, from which arise many trailing or twining stems. The leaves are spearhead-shaped; the flowers fragrant, funnel-shaped, pink or white, an inch across. A native of Europe, N. Africa, and Asia, it is a weed in cornfields and gardens. The hedge bindweed (*Volulus sepium*) has much larger leaves and inodorous white flowers. Black bindweed is a variant name for the black bryony (*Tamus communis*).

BINET. ALFRED (1857-1911). A French psychologist. He was born at Nice, July 8, 1857, and became director of the laboratory of psychology at the Sorbonne. He aimed at securing a standard by which to measure intelligence, and was in favour of the application of hypnotism in certain conditions. The results of his work are seen in the Binet-Simon Tests of 1905 and 1908, probably the best yet devised. He died in Paris, Oct. 18, 1911.

BINGEN (anc. Bingium). Town of Hesse, Germany. On the left bank of the Rhine at its junction with the Nahe, it is 17 m. W. of

Bingen, Germany. The town on the left bank of the Rhine, near the entrance to the Rhine gorge

Mainz. It has a 15th century church, an old town hall, and a technical school. The chapel of S. Roch is a pilgrim resort; in the Mouse Tower Hatto II, archbishop of Mainz, is said to have been devoured by mice. It manufactures starch, leather, and tobacco, and trades in wine, grain, cattle, and coal. It was a Gaulish and later a Roman settlement. Long the territory of the electors of Mainz, it became part of Hesse in 1815. Near it are the famous rapids, the Bingerloch. Pop. 9,146.

BINGLEY. Urban district and market town of Yorkshire (W.R.). It is on the river Aire, 5 m. N.W. of Bradford, on the L.M.S. Rly., and has worsted, woollen, cotton, and paper manufactures. Pop. 18,942.

BINH-DINH. Town of Annam, French Indo-China. It is 275 m. N.E. of Saigon, and about 11 m. N.W. of Qui-Nhon or Kwinhon, its port on the China Sea. It trades in cereals, cotton, cinnamon bark, etc. Pop. 74,400.

BINNACLE. Stand in which a compass is carried aboard ship. The compass is so fixed that the motion of the vessel does not affect its working. The older form of the word is *bittacle*. See Compass.

BINNEY, THOMAS (1798-1874). British divine. He was born at Newcastle-upon-Tyne, and after serving as a bookseller's apprentice became a Congregational minister. After being at Bedford and Newport, I.W., he moved to London, where from 1829 to 1869 he was minister of the King's Weigh House Chapel. Twice chairman of the Congregational Union, he gained great popularity as a preacher. Died Feb. 24, 1874. Binney wrote *Is it Possible to Make the Best of Both Worlds?* 1853.

BINNIE, SIR ALEXANDER RICHARDSON (1839-1917). British engineer. Born in London, March 26, 1839, he was educated privately and became a civil engineer. He was engaged on rly. construction in Wales, 1862-66, and in the Public Works Department in India 1868-74. From 1875-90 he was municipal engineer at Bradford, and from 1890-1901 he was chief engineer to the London County Council. The Blackwall tunnel was his work. Knighted in 1897, he died May 18, 1917.

BINOCULAR (Lat. bini, two together; oculus, eye). Term for special forms of micro-

scopes and telescopes. The arrangement of the lenses is such as to enable the eyes together to receive the impression of a single image, though each eye receives the impression through a distinct set of lenses. See Microscope; Telescope.

BINOMIAL (Lat. bis, twice; nomen, a name). In mathematics, a binomial expression is one which is composed of the sum or the difference of two terms, as $(x + y)$ or $(x - y)$. The binomial theorem, enunciated by Isaac Newton, expresses in the form of a mathematical series the result of raising a binomial to a given power, by multiplying it successively into itself.

BINTURONG (*Arctictis binturong*). Small animal, related to the civet, found in southern Asia. It is the size of a small cat, and is covered with coarse black hair.

BINYON, LAURENCE (b. 1869). British poet. Born at Lancaster, Aug. 10, 1869, he was educated at S. Paul's School, London, and Trinity College, Oxford. He entered the British Museum in 1893 and became assistant keeper in the department of Oriental prints and drawings in 1909. At Oxford Binyon won the Newdigate prize, and his first volume of poetry was published in 1894. Several additional volumes appeared subsequently.

Laurence Binyon, British poet Elliott & Fry

BIOBIO. Longest river of Chile. Rising in the Andes, and flowing N.W. through Biobio province for some 230 m., it enters the Pacific below Concepción, where it is 2 m. wide. It is navigable for small craft up to Nacimiento, nearly 100 m. from its mouth. It gives its name to an inland province of Chile.

BIO-CHEMISTRY. Branch of chemical science which deals with the structure of the constituents of living objects. Apart from the mineral components of plants and animals, bio-chemistry concerns itself with the highly complex bodies found in living matter, their constitution, and how they are utilised in the tissues. In 1927 a school of bio-chemistry was opened at Oxford. The building is the gift of the Rockefeller Trustees. See Biology.

BIOGENESIS (Gr. bios, life; genesis, generation). Theory of the origin of life, according to which all living cells and organisms must arise from a pre-existing

living cell, i.e. life cannot be generated from non-living matter. See Biology.

BIOGRAPHY. Name applied to all books relating the lives of individual men or women. Bayle's *Dictionnaire Historique* and the *Biographie Universelle* were issued between 1811 and 1828. The *Dictionary of National Biography* is confined to Britishers. A notable collection is *Plutarch's Lives*.

Among the records of single men, Boswell's *Johnson* still stands easily head of the list; though Carlyle's *John Sterling* and Southey's

Binocular. Diagram showing the component parts and arrangement of prismatic binocular

Nelson are models of compact narrative; while the Goethe of George Henry Lewes, the Life of Charles Darwin by his son, and John Morley's Gladstone rank high among what may be called standard biographies.

The 19th and 20th centuries saw an enormous output of biographical work, as a life was written about almost every one who had any claim to fame. Some of these were inordinately long and most were wholly laudatory in tone. In addition there were short biographies of great writers and others, of which Mark Pattison's Milton in the English Men of Letters series is a good example. In the 20th century another kind of biography had a considerable vogue. This consisted of works which were frankly critical, such, for instance, as Lytton Strachey's Queen Victoria.

BIOLOGY (Gr. *bios*, life; *logos*, discourse). The science of life and the living; the branch of human knowledge which deals with the phenomena characteristic of and peculiar to living organisms. In a more restricted sense, biology means the science which deals with plants and animals and everything connected with them, its two great divisions being botany and natural history, to which must be added the science of bacteriology.

The two great aspects of the study of plant and animal life are those of structure and function; how living creatures are made, and how they perform their functions. A biologist who described a species of animal new to science would begin by stating in what part or parts of the world the animal was found. This section of biology is known as geographical distribution or zoo-geography. Next he would proceed to describe the form and appearance of the species; its shape, size, colour, position of limbs, wings, fins, and other external structures, or the absence of these. This involves that part of biology known as the science of structure or morphology. It is only by such study that the biologist can state accurately whether he is dealing with a mammal, a bird, a reptile, a fish, an amphibian, an insect, and so forth. Having completed this phase the biologist would turn to a study of the functions of the various structures, e.g. nutrition; reproduction and development; and those involving the relationship of the animal with the world around it.

The relationship of the new species to animals of past ages, as represented by their fossil remains, is dealt with by another branch of biology—palaeontology. There is still one other point of view, which may be called the philosophical aspect of animal life, the connexion of the species with other species; its relationship, its origin, its association, and its future. This is the study of evolution.

From time immemorial speculations about the origin of life have been made and theories advanced. The modern view may be stated to be that of a reserved scepticism, which does not actually deny the possibility of living matter arising from non-living, but tends to the belief that to-day at least life only springs from pre-existing life.

The great biological problems of variation, natural selection, and heredity are focused round the fact that life is continuous from one generation to another, through the material substance known as protoplasm. Accuracy of thought and discussion upon these difficult topics dates from Darwin's time. Much has been done since to throw light upon many facts which he was the first to discover, but the fact remains that it was to Darwin that the world owes its present conception of the science. See Animal; Botany; Cell; Evolution; Heredity; Mendelism; Zoology.

BION (2nd century B.C.). Greek bucolic or pastoral poet. Born near Smyrna, he spent most of his life in Sicily, where he is said to have been poisoned by a jealous rival. His

most famous poem is the Lament for Adonis, imitated in Shelley's Adonais.

BIONOMICS (Gr. *bios*, life; *nomos*, law). Branch of biology which deals with the study of the external life of plants and animals as opposed to their internal structures or other aspects of organic life. Bionomics studies the habits, manners, and customs of living creatures, noting how their external configuration is adapted to the environment in which they live. See Biology.

BIOT, JEAN BAPTISTE (1774-1862). French mathematician. Born in Paris, he became professor of physics at the Collège de France, 1800. He was a prolific writer on astronomy and geodesy, and undertook with Arago the measurement of an arc of meridian in Spain, 1806. He published an analysis of Laplace's *Mécanique Céleste*, 1801, accompanied Gay-Lussac on the first scientific balloon ascent, and did good work in optics, especially with regard to the polarisation of light. A brown variety of mica is named Biotite after him.

Biplane. Acroplane with two pairs of wings, set one above the other. See Acroplane.

BIRCH (*Betula alba*). Slender tree, 40 ft.-60 ft. high, with peeling white bark, native of Europe, N. Asia, and N. America. The leaves are wedge-shaped or oval. The male flowers grow in pendulous catkins, the female in a shorter, more erect spike. Birch has a light and graceful appearance; yet it grows in exposed situations at high elevation. It is short-lived and quick-growing, reaching maturity in 50 years.

There are several varieties. The silver birch has rough bark at its base, the branches drooping, and twigs warty. Common birch has smooth, often reddish bark at the base, branches closer and more horizontal, and twigs and leaves hairy. Dwarf birch (*B. nana*) is a mere bush with small, round leaves.

Birch bark is used for tanning, and contains a fragrant oil which gives its characteristic aroma to Russia leather. Birch tar is a thick oil obtained from birch wood and bark. It is used in medicine and, mixed with essential oils, is employed to keep off mosquitoes.

BIRCHINGTON. Seaside resort in Thanet, Kent. It is 2 m. W. of Margate, on the Southern Rly., has good bathing facilities, and an 18-hole golf course. Pop. 3,503.

BIRD. Birds may be defined as warm-blooded feathered bipeds which lay eggs. The fore-limb has become in almost all cases a wing capable of flight, while the heart is four-chambered. Along with mammals, birds are the highest backboneed animals, but the two classes have evolved on divergent lines, and are not related except in having a common ancestry among reptiles.

The oldest known bird, *Archaeopteryx*, whose well-preserved remains have been found in Jurassic rocks, had many reptilian features; it has been placed in a special sub-class, *Saururæ*. In contrast, all other birds are usually called *Neornithes*, and often divided into a small section of flightless birds (*Ratitæ*), with raft-like breastbone, and an enormously larger section (*Carinatae*) of flying birds, having a keeled breastbone. The flightless birds include the ostriches, the emus and cassowaries, and the kiwi.

The more important orders of flying birds may be arranged in groups: (a) penguins, grebes, divers, and petrels; (b) ducks, geese, and swans; (c) storks and herons; (d) birds of prey; (e) pelicans, gannets, and cor-

morants; (f) game-birds and mound-birds; (g) rails and cranes; (h) pigeons and sand-grouse; (i) gulls, auks, and plovers; (j) cuckoos, parrots, woodpeckers, kingfishers, owls, swifts, and humming-birds; and (k) the great tribe of perching-birds or *Passeres*.

Birds have acute senses of sight and hearing and a relatively large brain: the power of accommodation or rapidly altering the focus of vision is greater than in any other creatures. The well-developed brain is the seat of considerable intelligence, and also of numerous inborn capacities or instincts.

Birds play an important part in checking the multiplication of small mammals (such as mice and voles), slugs and snails, and injurious insects. Some birds destroy useful animals, such as edible fishes; others destroy crops and fruits, and others distribute weeds, but the activities of birds are of value to mankind.

In most civilized countries official protection is given to game birds and birds useful in agriculture; also to rare, migratory, and plumage birds. In Great Britain protection is afforded by Acts of Parliament, which forbid the shooting, taking and selling of certain birds during stated seasons. Cruelty to birds is also an offence against the law, and there is a Royal Society for the Protection of Birds at 82, Victoria Street, London, S.W.1. Bird sanctuaries, areas set aside wherein birds can live unmolested, are another form of protection, and of them there are a number in Great Britain, including one in Hyde Park, London. See Lark; Partridge; Pheasant, etc.

BIRD, EDWARD (1772-1819). British painter. Born at Wolverhampton, he started a drawing school at Bristol, painting in his spare hours. Good News, shown at the Academy in 1809, Chevy Chase, and Queen Philippa and the Burghers of Calais are conspicuous among his works. He became an A.R.A. in 1812 and R.A. 1815. He died in Bristol, in Nov., 1819.

BIRDCAGE WALK. London thoroughfare on the S. side of St. James's Park. It was so called from the aviaries beloved by Charles II.

Birdcage Walk, St. James's Park, London. Wellington Barracks stand behind the trees on the right.

Its largest and most prominent building is Wellington Barracks, opened in 1814. See London.

BIRD CHERRY (*Prunus padus*). Shrub or small tree of the order Rosaceae. It grows wild in the woods of Northern England and Scotland and is cultivated in gardens. The flowers are small, white in colour, and borne in pendulous racemes. The ovoid black berries are bitter and unpalatable, though eaten by birds. The leaves are egg-shaped.

BIRDLIME. Sticky substance which draws out into long tough strings. It is smeared on trees or netting to snare small birds. Birdlime proper is made from the inner bark of the holly-tree, mistletoe berries, the woolly-stemmed distaff thistle, and other trees and plants. A similar substance can be obtained from the gluten of wheat flour.

BIRD OF PARADISE. Member of a family of passerine birds, *Paradisæidae*, closely related to the crows and famed for their

beautiful plumage. There are over fifty species, all natives of the E. Indies and N. Australia. The males in the breeding season put on a dress of extraordinary magnificence.

BIRD OF PARADISE FLOWER. (*Strelitzia reginae*). Perennial herb of the order Scitamineae, a native of S. Africa. The fine, oval-oblong leaves, on long, erect stalks, spring direct from the root-stock, and stand about 5 ft. high. Each flower consists of slender sepals and petals brilliantly coloured with orange and purple.

Bird of Paradise flower Bloom of this S African plant

BIRDOSWALD. Site of the Romano-British station of Amboglanna, Cumbria. The largest fort on Hadrian's Wall, its masonry ramparts enclose 5½ acres and it held 1,000 men. Important excavations were made in 1929, Roman coins, pottery, and inscriptions being found. It was proved that the fort was built by Hadrian about 125 A.D. and, after destruction by the Picts, was restored by Severus. In 306 Constantine again restored it, and it was finally abandoned in 383. See Hadrian's Wall.

Bird's-Eye. Variant name of the pheasant's-eye (*Adonis annua*). See Pheasant's-eye.

BIRD'S-FOOT (*Ornithopus perpusillus*). Small annual leguminous herb, native of Europe and N. Africa. Its branching stems lie on the ground. The leaves

Bird's-foot, Ornithopus perpusillus

consist of many pairs of narrow leaflets, and the tiny white flowers, veined with red, are borne in heads of three to six blossoms. The three curved seed-pods springing from a common stalk look like the claws of a small bird.

The Bird's-foot Trefoil, or lady's slipper (*Lotus corniculatus*), another leguminous herb, is a perennial valuable in pasture and meadow.

BIRD'S-NEST (*Hypopitys monstrosa*). Rare plant, a root parasite, which grows hidden among other vegetation at the base of heech and fir trees. It has no leaves, but its juicy stem is sheathed with scaly bracts. The brownish yellow flowers grow in a drooping terminal cluster. Another leafless parasite found growing in like situations in dark heech woods is the Bird's-nest Orchis (*Neottia nidus-avis*). The stem is clothed with bracts. The flowers are greyish-brown and small in size.

BIRDWOOD, SIR WILLIAM RIDDELL (h. 1865). British soldier. Born in India, Sept. 13, 1865, a nephew of Sir George Birdwood, he belonged to a family long connected with the government of India. He joined the Scots Fusiliers in 1883, transferring to the 11th Bengal Lancers in 1886. He saw service on the Indian frontier between 1891-98, and in the South African War served on the staff, and returned to India in 1902 as military secretary to Kitchener. He acted as chief staff officer on the Mohmand expedition, and in 1912 was appointed quarter-master-general in India, and afterwards secretary to the Indian Government for military affairs. In 1914, then a knight, he was selected to command the Australian corps, which he led in Egypt and in Gallipoli. On Sir Ian Hamilton's retirement he assumed command of the army in Gallipoli. He

Sir W. R. Birdwood. British soldier. Surname

remained at the head of the corps when it was moved to the western front, and in May, 1918, took over the command of the Fifth Army. Birdwood was created a baronet in 1919 and a field-marshal in 1925. He was commander-in-chief in India from 1925 until his retirement in 1930.

BIRETTA (Italian herotta; O.E. harret-cap). Form of headdress for men, once worn as a mark of honour by scholars and others. The word is usually applied to the square or three-cornered cap of silk or other stuff worn by Roman Catholic and High Anglican ecclesiastics. It is regarded as the non-episcopal form of the mitre, the cap for cardinals being red, for bishops violet or black, for priests black.

BIRKA. Old capital of Sweden. It is on the island of Björkö in Lake Mälaren and can be reached by steamer from Stockholm. Here, about 830, S. Ansgar built the first Christian church in Sweden. Birka is now only a village, but is much visited by pilgrims.

BIRKBECK, GEORGE (1776-1841). British philanthropist. The son of a Yorkshire hanker, he was educated at Edinburgh University, where he graduated in medicine in 1799. As professor of natural philosophy at the Andersonian University (later Anderson's College), Glasgow, 1800-4, he lectured to a class which in 1823 developed into the Glasgow Mechanics' Institution. Later he practised medicine in London, where he died Dec. 1, 1841.

Birkbeck College, which he helped to found, is a constituent college of the university of London. The buildings are in Bream's Buildings, Chancery Lane, W.C.

BIRKBECK BANK. Offshoot of the Birkbeck Building Society, which was founded in 1851, and soon became one of the largest of the kind. The society began to receive deposits from the general public, and this branch of the business was popularly termed the Birkbeck Bank. In June, 1911, the bank suspended payment. The total liabilities were over £10,700,000. Eventually, all the assets being realized, shareholders and depositors received 16s. 9d. in the £.

Birkdale. Formerly an urban dist. and market town of Lancashire. Since 1911 it has been part of the borough of Southport.

BIRKENFELD. Province and town of Oldenburg, Germany, not far from Trèves and Luxembourg. The province has an area of 194 sq. m., and is politically part of Oldenburg, although geographically widely separated from it, being entirely surrounded by parts of the Rhine province. It was formed as a principality in 1815 and given to the grand duke of Oldenburg. Pop. 55,649.

BIRKENHEAD. British troopship. On the night of Feb. 25, 1852, she struck a sunken reef off Cape Agulhas, the southernmost point of Cape Colony. At the time the vessel had on board 500 soldiers and 134 crew, with a number of women and children. The women and children were put into the boats. The men fell in and stood to their ranks as firmly as though on parade, while the ship went down under them. Only 192 people were saved.

BIRKENHEAD. Borough, seaport, and market town of Cheshire. Opposite Liverpool on the W. bank of the Mersey estuary, it is 194 m. N.W. from London, on the Birkenhead

(L.M.S. and G.W. Joint) and Wirral rlys. The opening of the first dock at Wallasey Pool in 1847 was the beginning of Birkenhead's rise to prosperity. The docks now cover an area of 171 acres, and are controlled by the Mersey Docks and Harbour Board. The principal docks are the Egerton, Morpeth, Morpeth Branch, Wallasey, and Alfred, and the 9½ m. of quays are equipped with large warehouses. Shipbuilding is the most important industry.

Biretta, or three-cornered cap, worn by ecclesiastics

Birkenhead has ferry and rly. connexion with Liverpool, the latter by the Mersey tunnel. The buildings include a town hall, market hall, hospital, public abattoir, free libraries, and museum. In 1929 an art gallery, called after its founders, the Williamson, was opened. In 1928 the town bought from Lord Leverhulme Arrowe Park, Woodchurch, for the use of the public. On Bidston Hill are a light-house and observatory. Birkenhead was created a co. borough in 1888. Two members are returned to Parliament. Market days, Tues. and Fri. Pop. 162,000.

Birkenhead. The Town Hall, which overlooks Hamilton Square. Valentine

BIRKENHEAD, FREDERICK EDWIN SMITH, EARL OF (h. 1872). British lawyer and politician. Born at Birkenhead, July 12, 1872, the son of a barrister, he was educated at Wadham College, Oxford, where he had a brilliant career. Called to the bar, he lectured on law at Oxford, but soon moved to London, where he quickly made a reputation as an advocate. He became a K.C. in 1908.

Earl of Birkenhead. British lawyer. Bassano

In 1906 Smith was returned to Parliament as Conservative member for the Walton division of Liverpool, and there his rise was as rapid as at the bar. He proved an able debater, and in 1911 was made a privy councillor. In 1915 he joined the Coalition as solicitor-general, and was knighted. He was attorney-general 1916-19, and in 1919 was made lord chancellor and a peer. In 1921 he was created a viscount and in 1922 an earl. In 1924 he became secretary for India, but in 1928 he left political life for business, becoming chairman of a large undertaking concerned with the supply of electricity and director of other concerns. His eldest son is called Viscount Furneaux, this being the maiden name of his wife.

Birkenhead has written a great deal. Many of his books possess only a temporary value, but his writings on international law, like some of his judgements in the House of Lords, have a high and permanent value. His work in drafting the laws of 1922 and 1925 affecting real property is also notable.

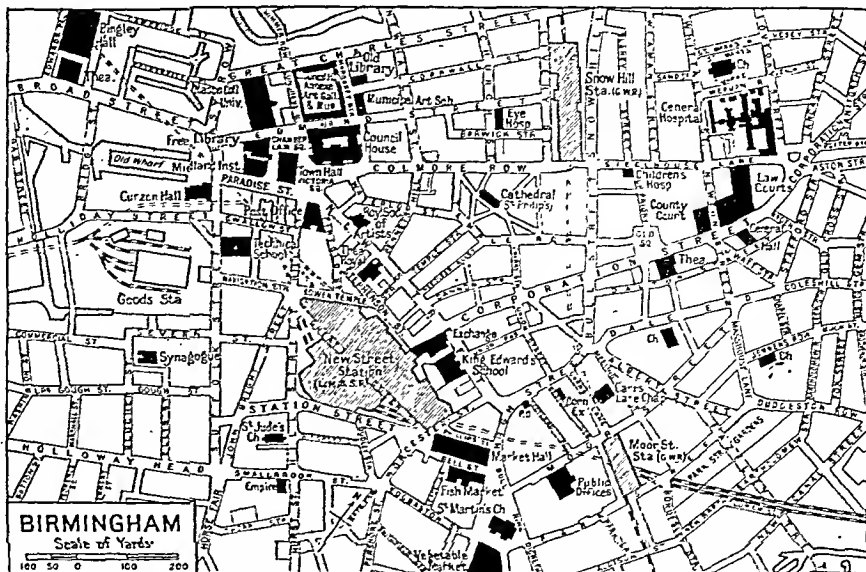

BIRKETT, WILLIAM NORMAN (b. 1883). British lawyer. Born at Ulverston, Sept. 6, 1883, he went to Emmanuel College, Cambridge, where he was president of the Union. Admitted a barrister in 1913 and made a K.C. in 1924, he became one of the most popular advocates in the country. In 1923-24 he was Liberal M.P. for E. Nottingham, and he was again elected for that constituency in 1929

Norman Birkett,
British lawyer
Mabel Robey

BIRMINGHAM. British light cruiser. Of the Chatham class, she was 460 ft. long and displaced 5,400 tons. On Aug. 9, 1914, she sank a German submarine, and she was present in the Heligoland and Jutland battles.

BIRMINGHAM. Largest provincial city of England and the third largest city of Great Britain. In Warwickshire and Worcestershire, it is 111 m. from London, and has a population of 952,800. It is governed by a lord mayor and an elected council, and returns 12 members to Parliament. The city covers 68 sq. m. Birmingham was the first large town in England to adopt a comprehensive town planning scheme, and its corporation established the first municipal bank

Birmingham. Plan of the metropolis of the Midlands and third largest city in Great Britain

machine tools and other engineering products, scales and weighing machines, edge tools, screws, nails, coinage, buttons, military ornaments, medals, japanned, galvanised, and enamelled ware, motor vehicles of all kinds, bicycles, tires and other rubber goods, chemicals and glass ware, sporting guns and rifles, military rifles, cartridges and cartridge cases of all sizes, jewelry, gold, silver, and plated goods, and leather goods. Near is Bournville, with its chocolate and cocoa works. The city is served by the L.M.S. and G.W. Rlys. In 1929 the first part of an enormous power station for supplying a great area in the midlands with electricity was opened.

Since 1904 Birmingham has been an episcopal see. The mother church, S. Martin's, dating from the 13th century, was rebuilt in 1874. S. Philip's church, now the cathedral, built in 1719 and since enlarged, is in the Palladian style. Four large windows are by Burne-Jones. Birmingham became a Roman Catholic bishopric in 1850, and an archbishopric in 1911. S. Chad's, the Roman Catholic cathedral, by Pugin, is in Bath Street. Of Nonconformist places of worship the oldest and best known is Carr's Lane chapel. The Central Hall is the Wesleyan Methodist centre. There is a Jewish synagogue in Blucher Street.

The town hall, in the style of a Greek temple, the scene of the first production of Mendelssohn's *Elijah*, has a fine organ, and is used for the triennial musical festivals, dating from 1778. In Colmore Row, near the town hall, is the council house, begun in 1874. In Edmund Street

there are extensive additions. The corporation museum and art gallery is in the upper part of the council house. The newer part is the Feeney Galleries. The city's art treasures include one of the finest pre-Raphaelite collections and the largest collection of the works of the local artist, David Cox. The Central Free Library contains the Shakespeare memorial library. Birmingham Library is in Margaret Street.

Chamberlain Square has a marble Gothic fountain commemorating Joseph Chamberlain's municipal services. New Street, the oldest street of modern Birmingham, contains, besides King Edward's Schools, the Theatre Royal, the gallery of the Royal Society of Artists, and the Exchange. Aston Park contains Aston Hall, a fine Jacobean mansion, used as a branch museum and art gallery. The corporation purchased Canwell Hall and estate, near Sutton Coldfield, for small holdings for ex-soldiers. A large area has been acquired in the centre of the city for a new civic centre. The Hall of Memory, a war memorial, was opened in 1925. In 1928 a new Stock Exchange was opened. The Birmingham

Birmingham. The Stock Exchange, which was opened in 1928

Daily Post, founded in 1857, is one of the leading dailypapers in the Midlands.

The university grew out of Queen's College, founded as a school of medicine in 1828 and afterwards merged in Mason College. The site

at Edgbaston was presented by Lord Calthorpe, and thereon extensive buildings have been erected, these including a science block, opened in 1927. Joseph Chamberlain was the first chancellor and Sir Oliver Lodge the first principal. In 1919 Sir C. Grant Robertson became principal. Other educational centres are the technical school, the gun trade school, and the school of art.

BIRMINGHAM. Largest city of Alabama, U.S.A. It lies 97 m. N.W. of Montgomery. Birmingham Southern College was created in 1918 by consolidating Birmingham College

H.M.S. Birmingham, a British light cruiser completed in 1914
Cribb, Southsea

in the country, in 1919. After the Great War it adopted Albert

The city is the chief centre of the brass and other non-ferrous metal industries. Among its manufactures are railway carriages and wagons, steam engines, electrical machinery,

Birmingham. Above, air view of the University buildings. Below, the centre of the city showing, left, the Town Hall, and, right, the Council House
(Top) Aero Hire, Ltd.; (Bottom) Surrey Flying Services

and Southern University. Birmingham owes its origin to the discovery of coal and iron. Its iron and steel manufactures are of first importance, and cotton and lumber products, flour, and cotton-seed oil are other interests. Birmingham was founded in 1871, and was named after the English city. Pop. 178,806.

BIRMINGHAM, GEORGE A. (b. 1865). Pen name of the Rev. James Owen Hannay, Irish novelist. Born July 16, 1865, the son of a clergyman, and educated at Haileybury and Trinity College, Dublin, he was ordained in 1888. From 1892-1913 he was rector of Westport, Mayo, and from 1924 of Mells, Somerset. He has written a number of novels, dealing in a humorous, farcical way with Irish life. Among these are *Spanish Gold*, 1908, *The Simpkins Plot*, and many others. His humorous survey of modern Irish affairs, contained in *An Irishman Looks at his World*, appeared in 1919. Later works include *Goody Pearls*, 1926, and *Fidgets*, 1927. His plays include *General John Regan*, 1913.

G. A. Birmingham,
Irish novelist
Russell

BIRNAM. Village and tourist resort of Perthshire, Scotland. It is on the river Tay, 15 m. N.N.W. of Perth by the L.M.S. Rly. The church of S. Mary is in the Early English style. To the S. is Birnam Hill (1,324 ft. high), with the remains of a fortified camp where King Duncan is said to have held his court. Of the Birnam Wood of Shakespeare's *Macbeth* no traces are visible.

BIRON, ERNST JOHANN DE (1690-1772). Russian statesman. The son of a landed proprietor in Courland, named Bühren, he became the favourite of Anna Ivanovna, and on her accession as empress, 1730, he took the name of De Biron and was made duke of Courland. For ten years (1730-40) he was the real ruler of Russia. He assumed the regency on the death of Anna, but a conspiracy overthrew him after three weeks, and he was exiled to Siberia. He returned in 1741, and Catherine II restored him to the duchy of Courland. He died Sept. 28, 1772.

Birr. Old name of the Irish town known as Parsonstown (q.v.).

BIRRELL, AUGUSTINE (b. 1850). British author and politician. Born near Liverpool, Jan. 19, 1850, son of a Nonconformist minister, he graduated at Trinity Hall, Cambridge, 1872, and was made a fellow of his college. Called to the bar at Lincoln's Inn, from 1896-9 he was Quain professor of law at University College, London. In 1889 he entered Parliament as Liberal M.P. for West Fife, but lost his seat in 1900. In 1905 he was made president of the Board of Education, and at the general election he was returned to Parliament for North Bristol. From 1907 until April, 1916, he was secretary for Ireland, and he retired from Parliament in 1918.

As a man of letters, Birrell's writings, especially his essays, are marked not only by knowledge and critical insight, but also by grace and humour. He began with *Obiter Dicta*, 1884, followed by a second series in 1887. Other similar volumes are *Res Judicatae*, 1892; *Essays about Men, Women, and Books*, 1894; *Collected Essays*, 1899; and *Miscellanies*, 1901. He also wrote biographies of Charlotte Brontë (1887) and Andrew Marvell (1905). His recollections were written in 1930.

BIRSAY. District of Mainland, Orkney Islands. It includes a loch known by the names of Birsay, Kurbuster, and Boardhouse. There are many standing stones and other antiquities. Marwick Head, in Birsay Bay, was chosen as the site for a monument to Earl Kitchener, who went down in H.M.S. Hampshire close to this spot on June 5, 1916.

BIRSTALL. Urban district and market town of Yorkshire (W.R.). It is 7 m. S.W. of Leeds on the L.M.S. Rly., and has worsted and cotton manufactures, iron foundries, and coal and ironstone mines. It was the Brinfield of Charlotte Brontë's *Shirley*. Pop. 7,086.

BIRTH. Act of bringing forth young or being born. A child is born in the legal sense when every part of it has been extruded from the mother, but it is not necessary that the umbilical cord which attaches the child to the mother through the placenta should have been cut. A child is born alive if, after complete birth, it shows the smallest sign of life, even if only momentary. Where inheritance of property or a title may turn on the birth, a muscular movement or a gasp for breath, even if the child does not respire, is sufficient to establish live birth.

In England and Wales a birth must be registered with a registrar of births, marriages, and deaths within 42 days, and in Scotland within 21. This duty falls in the first instance upon the father; failing him, upon the occupier of the house, or the doctor or midwife who was present at the event. The birth of a stillborn child must also be registered. A birth at sea is recorded by the captain of the ship, and one of a British subject abroad by a consul. Certificates of birth, which are required for many purposes, can be obtained at the General Register Office, Somerset House, London, or from any registrar.

BIRTH CUSTOMS. In primitive society birth customs may spring from animistic speculations upon the mystery of being, or from a presumptive physiological sympathy between man and wife. Sympathetic magic accounts for the care exercised by expectant mothers to avoid the sight of a long-nosed monkey, as with Borneo Kayans, or to eat a trumpet-shell, as in Murray Island. To avert the evil eye, salt may be sprinkled, or the house mirrors shrouded, as in the Aegean islands. To placate the spirits, animals may be sacrificed. The mother may place the babe in a hen coop and cluck to attract the baby soul.

Birthmark. A birthmark is any mark on the skin, such as a mole, that is present at birth. Such are often useful for identification.

BIRTH RATE. This may be measured in several ways, but the most common is by the number of infants born in the year per

Year	Births per 1,000 Living	
	England & Wales	Scotland
1885	32.9	32.7
1890	30.2	30.4
1895	30.3	30.0
1900	28.7	29.6
1905	27.3	28.6
1910	25.1	26.2
1915	21.8	23.0
1916	21.0	22.0
1917	17.8	20.3
1918	17.7	20.5
1919	18.5	22.0
1920	25.5	28.1
1921	22.4	25.2
1922	20.4	23.8
1923	19.7	22.8
1924	18.8	21.9
1925	18.3	21.3
1926	17.8	20.9
1927	16.6	19.8
1928	16.7	—
1929	16.3	—

Birth Rate. Table showing declining rate over a period of 43 years

the difference is the change of population per thousand, assuming that

there has been neither emigration nor immigration. Consideration, however, will show that when birth rates are employed for comparing one country with another, or the same country in two different years separated by an appreciable interval, the use of crude birth rates may lead to erroneous conclusions, since the number of infants born depends not only upon the actual fertility of mothers, but upon the proportion of women of child-bearing age in the population, the proportion of these who are married, and the proportion of illegitimate births.

BIRTHRIGHT. Word indicating the privileges of the first-born son of a Hebrew family. These included a right, if fit, to the priesthood, a double portion—probably twice as much as any other son—of the father's property, and succession to the father's authority. Conditions varied in the patriarchal age, and later the law was given through Moses (Gen. 25, 48, and 49; Deut. 21; 1 Chron. 5; 2 Chron. 21). See Esau; Family; Primogeniture.

BIRTLEY. Village of Durham. It is on the L.N.E.R., 5 m. S.E. of Gateshead, on the Durham coalfield. During the Great War a national projectile factory was built here. Here also was established a colony known as Elisabethville, which contained about 6,000 Belgian exiles. Pop. 11,279.

There is another Birtley, in Northumberland, 5 m. S.E. of Bellingham, with an interesting Early English church and sites of British or Roman camps.

BISCAY, BAY OF (anc. Sinus Aquitanicus or Sinus Cantabricus). Opening of the Atlantic, along the coast of N. Spain and W. France. Measuring some 325 m. from Brittany to Galicia, its depth varies from 20 to 200 fathoms. The Spanish coast is bold and rocky, but much of the French shore is low and sandy, with lagoons. It receives the waters of the Loire, Garonne, Adour, and other French rivers, but only a few unimportant ones from Spain. With winds from the N.W. it may become dangerous to navigation. The Spanish province of Biscay or Vizcaya borders the bay. It lies between Guipúzcoa and Santander, and is 836 sq. m. in extent.

BISCEGLIE (anc. Vigiliæ). City and seaport of Italy. On the Adriatic, 15 m. by rly. S.E. of Barletta, it has a 12th century cathedral and remains of a Norman castle. Pop. 35,000.

BISCOE SEA. Part of the S. Atlantic Ocean within the Antarctic Circle, between Weddell Sea and Enderby Land. It is named after John Biscoe, who explored it in 1837. Biscoe Islands, discovered by Biscoe in 1832, lie W. of Graham Land.

BISCUIT (Lat. bis, coctus; Fr. bis, cuit, twice cooked). Kind of flat cake, baked hard. The principal difference between biscuit and bread or cake is that the former is made either without leaven or with but a small proportion of yeast, and is baked at a higher temperature.

The basis of all hard biscuits is flour and water. Soft biscuits contain butter, sugar, and eggs. In some biscuits a small amount of yeast or baking powder is used, but such biscuits do not keep well.

Biscuit ware is a term applied to fired, unglazed pottery; also to a fine pipe-clay ware, imitating china. See Pottery.

BISHOP (Gr. episkopos, overseer; A.S. biscop). Official of the Christian Church. The word means, generally, a superintendent, civil or religious, and was at first used interchangeably with presbyter or elder. Bishops exist in the Roman Catholic and Anglican Churches all over the world, as well as in the Methodist Episcopal Church of America, the Moravian Church, among the Lutherans of Scandinavia, and in Eastern Churches.

In England a bishop of the Anglican Church is the spiritual overseer of a district or diocese, with his see or chair in the principal church in that district. He takes his title from the town or city in which that church is situated, has power to administer confirmation and ordination, and to consecrate other bishops, churches, churchyards, and memorials. After consecration a bishop takes precedence, as a lord spiritual, above the barons and below the viscounts, but his wife does not rank as a peeress. He signs his name by his title, e.g. A. F. London, sometimes using the Latin name of the see, e.g. T. Winton or St. Clair Sarum. Appointments are made by the sovereign on the recommendation of the prime minister. The 24 senior bishops sit in the House of Lords.

Bishop, Dr. Winnington Ingram, in his vestments

In addition to these diocesan bishops, as they are called, there are in the Church of England suffragan or assistant bishops.

In non-established Churches, such as the Church of Ireland and Church of Wales, the modes of election are various. In the Roman Catholic Church every episcopal appointment needs the pope's sanction. See Anglicanism; Archbishop; Church of England; Diocese; Episcopacy.

BISHOP, ISABELLA (1832-1904). British traveller and writer. Born Oct. 15, 1832, she was the daughter of an Anglican clergyman, Edward Bird. For reasons of health she began to travel about 1854. Her most adventurous journeys were made in Asia, whither she went in 1878. Her books on Asia include *Unbeaten Tracks in Japan*, 1880; *Journeys in Persia and Kurdistan*, 1891; and *Korea and Her Neighbours*, 1898. At the age of 68 she explored Morocco and made long journeys in the Atlas Mountains. In 1881 Miss Bird married John Bishop, M.D., of Edinburgh. She died in Edinburgh, Oct. 7, 1904. Consult *Life*, A. M. Stoddart, 1906.

BISHOP AUCKLAND. Urban district and market town of Durham. At the confluence of the Wear and Gauness, it is 11 m. S.W. of Durham, on the L.N.E. Rly. Auckland Castle, the palace of the bishops of Durham, was founded by Bishop Anthony Bek about 1300. The centre of a mining district, there are also engineering works and cotton factories. Market days, Thurs. and Sat. Pop. 14,480.

BISHOP'S CASTLE. Borough and market town of Shropshire, 22 m. S.W. of Shrewsbury. It is the terminus of a light rly. from Craven Arms. It received its name from the castle of the bishops of Hereford. Market day, Fri. Pop. 1,268.

BISHOPSGATE. Formerly divided into Bishopsgate Street Within and Bishopsgate Street Without, i.e. inside and outside the old city walls, this London street runs N. from Gracechurch Street and proceeds across the E. side of Liverpool Street station. Near the house at the S.E. corner of Bishopsgate Street Without was the old gate, named after Bishop Erkenwald, who is believed to have built it. It was pulled down in 1760. The street contains the church of S. Helen.

Bishopsgate, one of London's City Gates. It was several times rebuilt from an old engraving

BISHOP'S RING. Dusky, reddish ring of about 20° radius, which, for a long time after the eruption of Krakatoa in 1883, surrounded the sun. It is named after George Bishop, who first observed it at Honolulu. The phenomenon, as well as the brilliant sunset and sunrise glows of the years 1883-5 was due to the presence of minute particles of dust from the volcano. It was last seen in June, 1886. Similar rings were observed in 1902, after the eruption of Mont Pelée, in Martinique.

BISHOP'S STORTFORD. Urban district and market town of Hertfordshire. On the River Stort, it is 14 m. N.E. of Hertford, on the L.N.E.R. It trades in grain, cattle, poultry, and lime. Malting is the chief industry. Market day, Thurs. Pop. 8,875.

BISHOP'S WALTHAM. Market town of Hampshire 9 m. S.E. of Winchester. The ancient palace, now in ruins, was erected by Henry of Blois, bishop of Winchester. Here William of Wykeham died. Pop. 2,597.

BISHOP WEARMOUTH. District in Sunderland. Originally it was a settlement on the south bank of the Wear, on land granted to the bishop of Durham in 930. It became a shipping and fishing centre, but about 1500 was merged in Sunderland. The chief church, S. Michael's, is on the site of an old one. See Sunderland.

BISHOPWEED or **GOATWEED** (*Aegopodium podagraria*). Perennial umbelliferous herb, a native of Europe and W Asia. Its root-stock creeps rapidly and extensively underground. The wedge-shaped leaves consist of two or three leaflets. The flowers are small and white,

Bishopweed, an umbelliferous herb

BISKRA. Health resort and oasis in Algeria. In a valley of the Aures Mts., alt. 360 ft., at the head of caravan routes, 140 m. by rly. S.W. of Constantine. It is noted for date palm and olive trees and has hot sulphur baths. Burnous and carpets are made. It was a Roman city. Ad Piscinam, and it was taken by the French in 1844. Pop. 10,000.

BISLEY. Village and common of Surrey. It is 2 m. N. of Brookwood station on the Southern Rly. A branch railway leads to Bisley Camp, which is on ground hired from the War Office by the National Rifle Association. The longest range for shooting is 1,200 yds., the shortest (for revolvers) 25 yds. At the Bisley Meeting, held for a fortnight every summer, competitions for all classes and kinds of rifles are provided. There are also revolver and pistol competitions. The most important competition is for the King's Prize (q.v.). The Ashburton Shield (q.v.) is competed for by the public schools of Great Britain. At other times of the year the ranges are available for private competitions and practice.

BISMARCK, OTTO EDUARD LEOPOLD, PRINCE (1815-98). German statesman. Born April 1, 1815, at Schönhausen, a village on the Elbe, he came of an old Prussian family. After education at Göttingen, where he became known as a duellist, Bismarck took part in the negotiations of 1848; from 1851-59 he was a Prussian member of the diet that, representing all the German peoples, met at Frankfurt. In 1859 he went to St. Petersburg, and in 1862, after a short term in Paris, he returned to Berlin as first minister of the Prussian king, William, a position he held for 28 years.

Prince Bismarck, German chancellor

Famous now, owing to a passage in one of his speeches, as the man of blood and iron, Bismarck, by arbitrary methods, reorganized the army, engineered the war against Denmark, and then picked a quarrel with Austria, which ended in making Prussia the dominant German state. Four years later, by an alteration in the famous Ems telegram, he caused, or at least precipitated, the war with France. In 1871 came the foundation of the new empire, with himself now a prince, as its first chancellor.

Bismarck's abilities were then directed to developing the new Empire. He showed no mercy to those who would disturb its foundations, but he took the sting out of much revolutionary talk by his social reforms, which included a great scheme of national insurance, and by his policy of protecting home industries. In 1878, a great European figure, he presided over the Congress of Berlin and a little later formed the Triple Alliance. His last important move was an attempt to secure colonies for Germany. In 1888 William II became emperor, and in 1890 the chancellor was dismissed, being made duke of Lauenburg. After eight years in retirement he died at Friedrichsruh, an estate near Hamburg, given to him by the old emperor, July 30, 1898. His *Reminiscences* were published in 1919-20.

Bismarck's elder son, Herbert (1849-1904), was ambassador in St. Petersburg, 1884-85, and secretary for foreign affairs, 1886-90. He died Sept. 18, 1904. His son Otto inherited the titles and estates given to his grandfather.

BISMARCK ARCHIPELAGO. Group of islands in the Pacific, off the E. coast of New Guinea, acquired and so named by Germany in 1884-5. Captured in 1914 by an Australian force, they are administered by Australia as mandatory of the League of Nations. The largest is New Britain (formerly Neu Pommern); others are New Ireland (Neu Mecklenburg), Duke of York Islands (Neu Lauenburg), and Lavongai (Neu Hanover). The total area is about 15,570 sq. m. Rabaul is the capital. Pop. about 190,000.

BISMARCKBURG. Former name of the district in Tanganyika Territory now known as Ufipa. The port at the S. end of Lake Tanganyika, formerly known as Bismarckburg, is now called Kasanga.

Bismarck Archipelago. Group of islands in the Pacific. They are largely inhabited by Papuans

His last important move was an attempt to secure colonies for Germany. In 1888 William II became emperor, and in 1890 the chancellor was dismissed, being made duke of Lauenburg. After eight

BISMUTH. Metal, chemically an element, having an atomic weight of 209, atomic number 83, specific gravity at 12° C. 9.823, melting-point 264° C. Bismuth expands on cooling from the liquid to the solid state. The metal is greyish white in colour with a reddish tinge; crystalline, very lustrous, brittle, and easily reduced to powder. It is a bad conductor alike of heat and of electricity, and has a very low tensile strength.

Bismuth is found principally in the native state, but usually associated (not combined) with other metals, chiefly cobalt, copper, nickel, silver, lead, and tin. The principal sources have hitherto been the mines in Saxony and Bohemia; but large deposits of bismuth exist in Bolivia, while it is also found in Great Britain, the U.S.A., Sweden, Siberia, Australia, France, and Mexico.

Bismuth has important uses in medicine. The carbonate, sub-nitrate, and salicylate are used as sedatives in gastro-intestinal irritation and to allay vomiting and diarrhoea. The metal is a valuable element in the production of a number of important alloys, including type metal, fusible metals, and solder.

BISON. Small group of the ox family, comprising two species, the European and the American bison. They are distinguished by the low horns, rounded forehead, and greater height of the forequarters as compared with the hind ones. There is a large hump on the shoulders. A great mane covers the back of the head,

of extinction. It is now strictly protected by the American Government, and since about 1910 its numbers have increased. In Canada also the numbers of the bison have greatly increased. The animals are also protected in Sweden, there being a reserve for them in Vastmanland. See illus. p. 65.

BISQUE. French term, of unknown origin, for the odds given to an inferior opponent in tennis, lawn tennis, croquet, and golf. Bisque also means a thick soup, especially one made of crayfish or other shellfish, or of pigeons, quails or other birds. As a form of the word biscuit, the term is applied to pottery or stoneware after the first firing and before glazing, and to unglazed porcelain.

BISSAGOS or **BIJAGA.** Group of 16 large and many small sandy islands off Portuguese Guinea, W. Africa, opposite the Geba estuary. The climate is unhealthy. The inhabitants are a wild negro race. Products include rice, fruit and cattle. The larger islands, Bolama, Orango, and Gallinhas, contain many good harbours. The chief town is Bolama, with a pop. of about 4,000.

BISSEXTILE (Lat. bis, twice; sextus, sixth). Word meaning leap year, and formerly used as a name for it. This was due to the fact that in the Julian calendar the

extra day now represented by Feb. 29 was obtained by counting Feb. 24, which was the sixth day before the calends of March, twice over. See Calendar.

BISSING. MORITZ FERDINAND VON, BARON (1844-1917). German soldier. Born at Bellmansdorf, Jan. 30, 1844, he entered the German army as a lieutenant of cavalry in 1865, and took part in the wars of 1866 and 1870. In Dec., 1914, he became governor-general of Belgium, where he exercised an iron rule until his death, April 18, 1917. See Belgium.

BISTRITZA. River of Rumania. Rising in the Carpathian Mts., it flows 185 m. through Bukowina and Moldavia, and joins the Serech near Bacau. From its gold-bearing sands it is known as the Golden Bistrizza.

There is another river of this name in Serbia. A tributary of the Cerna, this was the Bulgarians' second line of defence in front of Monastir when the Allies recaptured that town, Nov. 19, 1916.

BIT. Mouthpiece of a bridle carried by the horse in its mouth so that the driver may cause it to obey his will. It is usually of

metal, and both the cheek straps and the reins are attached to it. A curb bit has a curb chain instead of a bar, and gives the driver a very strong leverage by enabling him to compress the horse's mouth. A snaffle bit is joined in the centre, and is usually provided with cheek pieces so that the reins may not go into the horse's mouth.

BITHYNIA. Ancient division of Asia Minor. It was bounded W. by the Sea of Marmora (the Propontis), N. by the Black Sea, S. by Phrygia, and E. by Paphlagonia. In the 7th century B.C. it belonged to Lydia, but it was conquered by the Persians in 546 B.C. Its princes, however, became independent under Niconides I (d. 246 B.C.), their kingdom lasting until Nicomedes III bequeathed it, in 74 B.C., to the Romans, by whom it was united with Pontus. It was conquered by the Turks in 1298.

BITLIS or **BETLIS.** Capital of the Turkish vilayet of Bitlis in Armenia. It is built in a ravine surrounded by hills, and is 60 m. W. of Lake Van. Bitlis contains many mosques, bazaars, and convents, a palace, and a ruined castle. In 1895 many Armenians were massacred here by the Turks. As a result of fighting between Turks and Russians for its possession in the Great War part of the town was ruined, and its pop., owing to further massacres, fell to about 15,000.

BITON. In Greek legend a son of Cydippe, a priestess of Hera at Argos, and the brother of Cleobis. When oxen were unobtainable to draw their mother's chariot to her temple, they drew the chariot themselves a distance of about five miles. Hera, being asked by Cydippe to reward the piety of her sons, sent them into a sleep from which they never woke. The story is told by Herodotus.

BITONTO (anc. Butuntum). Town of Italy. In a fertile plain, 10 m. by light rly. W. of Bari, and 5 m. from the Adriatic, it retains its medieval walls and palace, has a fine Romanesque cathedral, and trades in olive oil and wine. The Austrians were here defeated by the Spaniards, May 25, 1734. Pop. 33,000.

BITSCH or **BITCHE.** Town of France, in Alsace-Lorraine. It stands in a pass of the Vosges, 15 m. S.E. of Saargemünd. Industries include the manufacture of boots and watches. A fortress was constructed by the French on an eminence in the centre of the town. The Prussians failed to take it in 1793 and again in 1815. During the Franco-German war of 1870-71 it was heavily bombarded, but successfully resisted, and only capitulated after the termination of hostilities. Pop. 3,420.

BITTER LAKES. Two lakes of Egypt, known as the Great and Small Bitter Lakes. The Suez Canal was cut through them. When the operations began the lakes were nearly dry. They provide nearly 23 m. of the canal's course, and are divided into two basins, the first 15½ m. and the second 7 m. long. See Suez Canal.

BITTERLING (*Rhodeus amarus*). A small fish of the carp group, somewhat like a roach. Found in parts of Central Europe, it rarely exceeds 3 ins. in length. Its flesh tastes somewhat bitter.

BITTERN (*Botaurus*). Marsh bird, closely related to the heron. There are half-a-dozen species. The common bittern is found in many parts of Europe, and it was formerly plentiful in the fen districts of England. It is a handsome bird, about 28 ins. long, with buff

Bit. 1. German, late 15th century. 2. German, 16th cent. 3. Milanese, damascened with gold, 16th cent. 4. Japanese, 17th cent. 5 and 6. German, 17th cent.

neck, and shoulders. This falls off in patches during the summer. There is a heavy beard under the chin. In former times the bison ranged over a large part of Europe, but it now lingers only in the forests of Lithuania and the Caucasus. The American bison formerly roamed the prairies in vast herds, but the destruction of the animal for its hide brought it to the verge

Bison. 1. American bison, Zool. Gardens, San Francisco. 2. European bison, which sheds its mane. Gambler Bolton, F.Z.S.

Bitterling. A fresh-water fish of Central Europe, with a bitter flavour.

plumage barred with brown and black. It feeds upon frogs and small fish.

In the 20th century the bittern was re-established in Norfolk and other parts of England, and orders made under the Wild Birds' Protection Act for its protection.

Bittern. American marsh bird, smaller than the British species

BITTERN.

Bitter liquor left after the separation of common salt from sea-water by crystallisation. It contains magnesium chloride and smaller amounts of bromide and iodide, and it was formerly the chief source of bromine

BITTER PIT. Disease affecting apples. Small brown spots appear in the flesh of the fruit, and as they extend deeper into the flesh, the skin sinks into corresponding pits. The brown tissue is found to contain unaltered starch, which often acquires a bitter taste.

BITTER ROOT (*Lewisia rediviva*). Perennial herb of the order Portulacaceae, a native of N.W. America. It has a fleshy tapering root, supporting rosettes of slender succulent leaves. The large rose-coloured flowers open only in sunshine, after the leaves have withered. The root is used as food by the American Indians.

BITTERS. Aromatic, alcoholic beverages, made from infusions of bitter herbs, sugar, and alcohol, and taken as tonics, appetisers, or stomachics. Their usual object is to create appetite or excite the sense of hunger by stimulating the nerves which induce the flow of the salivary and gastric juices. They are drunk usually before meals with gin or sherry. Among substances used in their decoction are angostura, cascarilla, cinchona, gentian, orange peel, quassia, and quinine, while added flavours are given by cloves, peach kernels, caraway seeds, cinnamon, or juniper. Bitters contain a high percentage of alcohol, and when taken medicinally should be diluted

BITTERSWEET OR WOODY NIGHTSHADE (*Solanum dulcamara*). Trailing shrub of the order Solanaceae, a native of Europe, N. Africa, and Asia. It climbs among hedges and bushes, attaining a height of 5 ft.-6 ft. The leaves are dark green, variable, the lower egg-shaped or heart-shaped, the upper

Bittersweet. *Solanum dulcamara*

spear-shaped or lobed. The corolla is purple, and the bright yellow anthers cohere to form a cone. The fruit is a berry, first green, then yellow, and ultimately bright red, hanging in loose clusters. Bittersweet is a narcotic.

BITUMEN (Lat.). Name given to a number of natural inflammable pitchy or oily substances consisting of various hydrocarbons. They are believed to originate from organic matter. A classification proposed for bitumens is as follows: (1) solid, (2) semi-solid, (3) liquid, and (4) gaseous. Solid varieties are known as asphalt or mineral pitch; the term maltha (mineral tar) is applied to semi-liquid bitumens; examples of liquids are Rangoon

oil, mineral naphtha, and petroleum. Gaseous hydrocarbons are known as natural gas.

BIVALVES (Latin, bi-, double; valva, door-leaf). One of the main divisions of the Mollusca. All possess a shell composed of two valves, as in the oyster and mussel; thus they are contrasted with the univalves, in which the shell consists of one piece, as in the whelk or snail. Bivalves have no definite head, though a mouth is present. The animal obtains food in the shape of particles of organic matter which are drawn in with the water through the siphon. There is usually a foot, which in many species is protruded to push the animal along. The two valves are united by an elastic hinge, which tends to pull them open. They are closed at the will of the animal by means of two powerful muscles. See Mollusc; Oyster.

BIWA. Largest lake in Japan. In the S. part of Hondo, it is 36 m. long by 12 m. broad, and covers an area of 180 sq. m. Partly enclosed by mts. and dotted with islands, it is remarkable for its exquisite scenery. It abounds in fish, and is traversed by numerous steamers.

BIXA ORELLANA. Evergreen tree of the order Bixineae, a native of tropical America. It has heart-shaped, smooth leaves, and large pale-red flowers in terminal clusters. The fruit is a prickly capsule. The seeds are coated with a waxy substance which forms the colouring matter known as annatto (q.v.).

BIXSCHOOOTE. Village of Belgium. It is situated 6 m. N. of Ypres and E. of the Yser Canal. In 1914 it was an important bastion of the British line. It was captured by French troops on July 31, 1917, in the third battle of Ypres. In April, 1918, the German attempt to recapture it failed. See Ypres.

BIZERTA (Fr. Bizerte). French naval station and seaport in Tunisia. It occupies a strategic position at the head of a bay, and is the most northerly point of Africa, 38 m. N. of Tunis, with which it is connected by rly. It has a wireless station, and during the Great War was a transport base. Bizerta is the ancient Hippo Diarrhytus or Zarytus, and was founded by the Phoenicians. It was occupied by the French in 1881. Behind the city are two large lakes, the lake of Bizerta and the Garaat Achkel. Pop. 20,593.

B. Björnson, Norwegian writer

BJÖRNSEN, BJÖRNSTJERNE (1832-1910). Norwegian writer. The son of a Lutheran clergyman, he was born Dec. 8, 1832, and educated at Molde school and at the university of Christiania. In 1855 he wrote his first play, *Between the Battles*, and two years later became director of the theatre at Bergen. He first attracted attention by his stories of peasant life, *Synnöve Solbakken*, 1857; *Arne*, 1858; and *A Happy Boy*, 1860. He spent two years in Italy 1860-2, and during this period composed the drama of *King Sverre*, 1861, and the trilogy of plays entitled *Sigurd the Bastard*, 1862, which are among the finest things in Norwegian literature.

From 1861 Björnson was director of the National Theatre, Christiania, and from 1866-71 editor of the *Norsk Folkeblad*. Among his later plays of note were *The Editor*, 1874; *black*. See Necromancy.

Beyond our Powers, published 1883; staged 1899; *Laboremus*, 1901; and *Dagclannet*, 1904. In 1884 he brought out a remarkable novel, *Flags are Flying in Town and Port*, and in 1889 the not less striking *In God's Way*. In 1903 he was awarded the Nobel prize for literature. He took a prominent part in the proceedings which led to the separation of Norway from Sweden in 1905. He died April 26, 1910. An English translation of his novels, edited by E. Gosse, was published in 1895.

BLACK, ADAM (1784-1874). Scottish publisher. Born in Edinburgh, Feb. 20, 1784. He served as a bookseller's apprentice, and gained some experience in London before returning to Edinburgh in 1808, when he started in business on his own account. In 1827 he acquired the copyright of *The Encyclopaedia Britannica*; in 1851, with his nephew Charles, he founded the firm of Adam and Charles Black. Black was twice lord provost of Edinburgh, and succeeded Macaulay as Liberal M.P. for the city. 1856-65. He died in Edinburgh, Jan. 24, 1874.

BLACK, JOSEPH (1728-99). British chemist. He was born at Bordeaux, the son of a Belfast wine merchant, and spent most of his life in Scotland. Educated at Glasgow University, he became assistant to William Cullen, whom he succeeded as professor of chemistry, 1756-66. From 1766-99 he was professor at Edinburgh, where he had graduated in medicine. He died Dec. 6, 1799.

Black discovered magnesia, previously regarded as a variety of lime. Speculating as to the reason for the slowness with which ice melts when the temperature is raised, he discovered that to produce liquefaction, ice requires to absorb a large amount of heat. The theory of latent heat which resulted was extended to the phenomena of boiling and evaporation.

BLACK, WILLIAM (1841-98). British novelist. Born at Glasgow, Nov. 9, 1841, he studied art. In 1866 he was correspondent for *The Morning Star* in the Austro-Prussian war and from 1869-74 assistant editor of *The Daily News*. His novels include *Love or Marriage?*, 1868; *In Silk Attire*, 1869; *Kilmeny*, 1870; *A Daughter of Heth*, 1871; *Strange Adventures of a Phaeton*, 1872; *A Princess of Thule*, 1874; *Madcap Violet*, 1876; *Macleod of Dare*, 1878; and *White Heather*, 1885. He died Dec. 10, 1898. Consult *Life*, T. W. Reid, 1902.

William Black, British novelist
Elliott & Fry

BLACK APE (*Cynopithecus niger*). Species of monkey. A connecting link between the macaques and the baboons, it is found in the island of Celebes. Its hair and skin are a dense black, its face is almost as long as that of a baboon, and its tail is a mere stump. It has a large crest of hair on its head. See Monkey.

Black Ape, a native of the Celebes
Berridge. F. 2 S

BLACK ART. Term applied to magic generally, and also in a narrower sense to necromancy proper, i.e. divination by evoking the spirits of the dead (*Gr. nekros*, dead body; *manteia*, divination). The epithet black is largely due to the medieval mistake of using the form *niagramantia* instead of *necromantia*, as if the first part of the word were derived from the Latin *niger*, meaning black. See Necromancy.

Black Bass. Fish belonging to the sunfish family (Centrarchidae) and allied to the common perch (q.v.) of British waters

Black Beetle. An alter native popular name for the cockroach (q.v.)

Blackberry. Popular name for the fruit of the bramble (q.v.).

BLACKBIRD (*Turdus merula*). Song bird of Great Britain, occurring also in most parts of Europe and in Africa. The plumage of the black, the beak bright yellow;

Black Bass, a North American fresh-water fish

Asia and N. America. The male is deep blue; the female has dark brown plumage, with beak much duller in hue. The bird feeds mainly on grubs, worms, slugs and beetles, but in the fruit season it works havoc with goose-

Blackbird, *Turdus merula*, one of the most musical of British birds

berries and currants. The eggs are green mottled with reddish brown

BLACK BOOK. Name given to books containing names of delinquents, such as the proctor's book at a university. It is sometimes applied to books printed from black-letter type or with black covers. The reports on alleged monastic offences presented to the English Parliament in 1536 belong to this category, though never published as a book.

BLACK BUCK (*Antelope cervicapra*). Antelope found in India. About 32 ins. high at the shoulder, it has handsome spiral horns ringed from base to tip. The males are blackish brown above and white beneath; the females and the young are fawn coloured above.

BLACKBURN. City, and county borough of Lancashire. It is 211 m. by rly N.W. from London on the Leeds and Liverpool canal and the L.N.E. and L.M.S. Rlys. Blackburn is celebrated for its cotton manufactures, which superseded in the 18th century the checks and greys for which the town was noted. It made rapid progress from 1767, when James Hargreaves, a native, invented the spinning jenny. There are also engineering works.

The Gothic cathedral church of S. Mary dates from 1826. Secular buildings include the town hall and the exchange. There is a grammar school, established by Queen Elizabeth in 1567, and a technical institute. Two

Black Buck or Indian Antelope, remarkable for its ringed and spiral horns
Berridge, F.Z.S.

members are returned to Parliament. Blackburn became a mun. borough in 1851 and a county borough in 1888. In 1926 it was made the seat of a bishop. Market day, Wed. Pop. 124,500.

BLACKBURN ROVERS. Association football club. Founded in 1874 by a few residents of Blackburn, it acquired a ground in 1878 and soon became widely known. The Rovers soon became a professional organization and were among the first to import Scotsmen into the team. In 1882 they reached the final round for the Association Cup, and in 1884 won it for the first time, repeating their success in 1885, 1886, 1890, 1891, and 1928. They secured the Football League championship in 1912 and 1914.

BLACKBURN, JOSEPH HENRY (1842-1924). British chess player. Born at Manchester, he became a master of the game at an early age. In 1862 Blackburne gave the first of his many notable exhibitions of blindfold play, winning ten games simultaneously without seeing a board. After 1868, when he won the English championship cup, he was prominent at tournaments, and he was British champion, 1885-6. He died Sept. 1, 1924.

BLACKCAP (*Sylvia atricapilla*). British song bird of the warbler group. It is brownish grey on the back and lighter on the under parts, and the cock has a patch of black on the head. Common in Great Britain in spring and summer, it migrates south in autumn.

Blackcock (*Tetrao tetrix*). Name given to the black grouse, though the female is often known as the grey hen. See Grouse.

BLACK COUNTRY. Name applied to a manufacturing district of England which is mainly in S. Staffordshire and partly in Worcestershire and Warwickshire. Extending between Birmingham and Wolverhampton, it includes Smethwick, West Bromwich, Dudley, Tipton, Bilston, Walsall, and other industrial centres.

BLACK DEATH. Epidemic which spread over a large part of the world in the 14th century. The disease was the same as the modern bubonic plague, and as the great plague which visited England in the 17th century. One symptom was the occurrence of haemorrhages into the skin, hence the name.

The Black Death appears to have originated in the East, probably in China, and spread to Europe along the great trade routes, culminating in a devastating outbreak in 1348-9. The S. European countries were first attacked, and the disease spread to Norway and Sweden. It has been estimated that at least one-fourth of the population of Europe perished, while in London more than 50,000 persons died.

BLACK EAGLE, ORDER OF THE. Order instituted by the elector of Brandenburg on his coronation as Frederick I of Prussia in 1701. Only persons able to prove noble lineage for four generations on each side were eligible. The badge was a blue Maltese cross having in each angle a crowned black eagle, and the ribbon was orange.

BLACKFEET. N. American Indian tribe of the Western Algonquins. Their native name Siksika, or black feet, may refer to their

black moccasins. The English name is commonly derived from the discoloration of their footgear by prairie-fire ashes.

Black Fish. Variant name for the dolphin known also as the ca'ing whale (q.v.).

BLACK FOREST. Name of the district in Baden and Württemberg known to the Germans as the Schwarzwald. It stretches for about 100 m. from N. to S. parallel to the Rhine, which forms its southern boundary

Blackfriars Bridge, London. Five-arched iron structure over the Thames. It was built in 1865-69

It varies in breadth from 12 m. to 36 m. Its area is about 1,900 sq. m., with an average height of from 2,000 to 3,000 ft. Between the hills are lovely valleys. Its inhabitants are famous for their skill in making toys, others are engaged in felling and moving timber. The Forest figures in legend and romance.

BLACK FRIARS. Term applied to the Dominican Friars. It is due to the black cloak and hood worn over their white habit.

At the dissolution of the religious houses under Henry VIII, the chief Dominican priory in London stood between Carter Lane and Queen Victoria Street, and the district is still known as Blackfriars. It has a station on the District Rly., and a bridge over the Thames, widened in the 20th century. In 1596, on the site now roughly represented by The Times office in Printing House Square, James Burbage built the first covered theatre in London, hence the name Playhouse Yard which it now bears. See London; Monasticism; Shakespeare.

Black Friar. Priest of the Order of Preachers
Langflier

BLACK FRIDAY. Name given to Friday, May 11, 1866, from the financial panic in England which became most acute on that day. It was caused by the suspension of payments by the famous banking house of Overend, Gurney & Co., which failed for £11,000,000. The name was earlier given to Dec. 6, 1745, when the news that the Young Pretender was at Derby caused a panic in London business circles.

BLACKHAM, MCCARTHY (b. 1855). Australian cricketer, the greatest wicket keeper of his time. He accompanied the first representative Australian eleven to England in 1878 and several later elevens, and captained the seventh Australian team in 1893. His skill behind the wicket was chiefly responsible for the disappearance of the long-stop.

McC. Blackham, Australian cricketer

often taken by criminal organizations, from the symbol employed by them. In Spain towards the end of the 19th century an anarchist Black Hand society, recruited from the working classes, gave much trouble. One of the most dangerous

Blackburn. The cathedral of S. Mary, previously the parish church. It was rebuilt in 1826

Black Hand societies is the Italian black-mailing organization in the U.S.A., whose outrages led to the formation of White Hand societies to collaborate with the police.

BLACK HAWK (1767-1838). Chief of the Sac Indians. He took the side of the British in the American War of 1812. In 1831-2, owing to a dispute about territory, he went to war with the United States, but after two defeats was compelled to surrender. He was kept a prisoner until 1833, and died in the reservation near Fort Des Moines, Oct. 3, 1838.

Blackhead. Small mass of dried secretion which blocks the sweat glands and leads to inflammation of the skin. See Acne.

BLACKHEATH. Residential suburb of S.E. London. It is in the boroughs of Lewisham and Greenwich, 5 m. S.E. of S. Paul's, on the Southern Rly. Its heath of 267 acres, adjoining Greenwich Park, was traversed by Watling Street. Here Henry V was welcomed after Agincourt, and Henry VIII met Anne of Cleves. Here also James I is reputed to have introduced golf into England, 1608. Near the heath is Morden College, a beautiful house left with the grounds by Sir John Morden as a home for decayed Turkey merchants.

BLACKHEATH FOOTBALL CLUB. One of the oldest Rugby football clubs in England, it was founded in 1860 by boys of Blackheath Proprietary School, and adopted its present name in 1862. At first its games were played on the heath, but in 1877 a private field called Richardson's was obtained. In 1883 the club removed to the Rectory Field in the Charlton Road. See Football.

BLACK HOLE. Dungeon at Fort William, Calcutta, in which on June 20, 1756, after the surrender of the fort to Suraj-ud-Dowlah, 146 prisoners were confined. The dungeon was 22 ft. square, and during the night the victims suffered from lack of ventilation and fought for air at the two small windows. In the morning only 23 were alive.

Black Hole. The railings enclose the site of this terrible dungeon

BLACKIE, JOHN STUART (1809-95). Scottish scholar. Born at Glasgow, July 28, 1809, he was the son of a hank manager. He was educated at Marischal College, Aberdeen, at the university of Edinburgh, and in Germany. He was intended for the ministry, but this he abandoned for the law and then for literature. In 1834 he published a verse translation of Faust, and he contributed to Blackwood's Magazine. From 1841-52 he held the chair of humanity (Latin) at Marischal College, Aberdeen, and from 1852-82 was professor of Greek in Edinburgh. He died March 2, 1895.

John Stuart Blackie, Scottish scholar
Edwin A. Frey

Black Lead. Popular name for plumbago and graphite (q.v.).

BLACKLEG. Word used for a workman who acts against the interest, real or supposed, of his fellows. A word of unknown origin, it was first applied to swindlers on the Turf and elsewhere. See Strike.

BLACK LETTER. Name of a type used in the earliest printed books. Also called Gothic, it was modelled on the handwriting

in vogue in the Netherlands and Germany in the middle of the 15th century. It was first used about 1445; in England first by

Here beginneth the booke of the subtyl histories and fables of Elope which were translated out of frenche in to Englyshe by wylliam Caxton at westmynstre In the yere of oure Lorde. M. CCCC. lxxxij.

Black letter. The opening lines of Caxton's Aesop, showing the date 1483

Caxton about 1480. Although generally superseded by Roman type in the 16th century, it was long used for Bibles, prayer books, and proclamations, and still occurs occasionally in headlines and ornamental printing. Two of the founts designed by William Morris for the Kelmscott Press are Black Letter. In the modern printing trade Black Letter is called Old English or Elizabethan. See Printing.

BLACK LIST. Popular name for a list of persons frequently convicted of drunkenness and whom licensed victuallers are forbidden to serve with drink. In practice the list is obsolete, owing to the difficulty of enforcing the prohibition.

During the Great War the British Government issued statutory black lists containing the names of enemy firms in neutral countries with which British merchants were prohibited from trading. In May, 1919, the Government issued a black list of contractors ineligible to receive orders for the public service, in consequence of offences in connexion with the supply of war material.

BLACKMAIL. Popular name for the crime of demanding money with menaces. The menaces may be of personal violence, or of exposure of a crime, or of exposure of a questionable transaction. It is a crime to say or write, "Unless you pay me so much, or give me some other advantage, or do something, or refrain from doing something, I shall shoot you"; or "I shall tell your wife you have been unfaithful"; or "I shall write of you in the financial press that your business is unsound." The word is derived from black and mail (Fr. maille, a piece of copper money), and signified rent paid in baser coin as opposed to that paid in white money or silver.

BLACK MARIA. Slang name given to the covered van used in conveying prisoners to or from a prison or the court of trial. The name is said to have been first used in Philadelphia about 1838, one explanation being that a powerful negro woman, named Maria Lee, who kept a lodging-house for seamen at Boston, was frequently called upon to help in getting refractory prisoners under lock and key, and that her name afterwards became attached to the special conveyance employed. The last horse-drawn Black Maria was taken off the road in London, Nov. 18, 1924.

BLACKMORE, RICHARD DODDRIDGE (1825-1900). British novelist. Born June 7, 1825, at Longworth, Berkshire, the son of a clergyman, he was educated at Blundell's School, Tiverton, and at Oxford. His first novels, Clara Vaughan, 1864, and Cradock Nowel, 1866, were unsuccessful, but Lorna Doone, 1869, his great romance of Exmoor, brought him fame, and before his death passed into more than forty editions. He wrote many other novels, including The Maid of Sker, 1872, Cripples the Carrier, 1876, Christowell, 1882, and Springhaven, 1887. He died at Teddington, Jan. 20, 1900.

R. D. Blackmore, British novelist

BLACK MOUNTAINS. Range of hills partly in Herefordshire, England, but mainly in Brecknockshire, Wales. They form a

branch of the range which traverses Carmarthenshire and Brecknockshire. The highest peak is Pen-y-Cader Fawr, 2,624 ft.

The Black Mountains of N. Carolina, U.S.A., are a division of the Appalachian system, and contain the highest peaks E.

of the Rockies. They are a favourite tourist resort. The highest points are Mount Mitehell, 6,711 ft.; Hairy Bear, 6,681 ft.; and Balsam Cone, 6,671 ft.

BLACKPOOL. County borough, seaport, and watering place of Lancashire. Between Morecambe Bay and the mouth of the Ribbles, it is 223 m. N.W. from London by the L.M.S. Rly. The place has extensive sands, splendid

Blackpool. Central promenade and the tower, 520 ft. high, a smaller imitation of the Paris Eiffel.

Dixon Scott

bathing accommodation, excellent promenades, three piers, a pavilion, winter gardens, an aquarium, and a tower (500 ft.). These and other attractions, added to its wonderful air, have made it the most popular pleasure resort in the north of England. It is connected by tramway with St. Anne's-on-Sea and Lytham, and also with Fleetwood. There is an aerodrome at Hardhorn. Blackpool was incorporated in 1876 and became a county borough in 1904. It sends one member to Parliament. Market day, Sat. Pop. 93,160.

BLACK PRINCE. Popular name of Edward, eldest son of Edward III of England. It was given him from his black armour. See Edward, the Black Prince.

The British armoured cruiser Black Prince, of the Duke of Edinburgh (q.v.) class, was sunk by German gunfire at Jutland (q.v.).

BLACKROCK. Urban dist. and summer resort of co. Dublin, Irish Free State. It is on the Gt. Southern Rlys., 5 m. S.E. of the city of Dublin. Pop. 9,080.

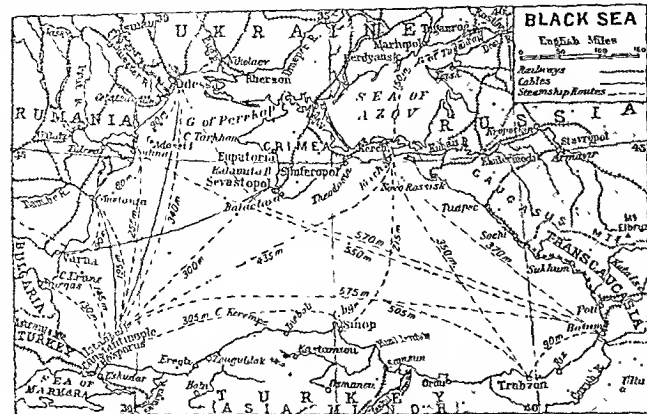

BLACK ROD. Officer of the House of Lords; in full, the gentleman usher of the black rod. He is in the lord chamberlain's department of the royal household, and is usher of the order of the Garter. Besides arranging for the maintenance of order and arresting peers for breaches of privilege, he summons the Commons to the House of Lords when a royal speech is read or the royal assent given to bills, and on the occasion of the opening and prorogation of Parliament.

Black Rod. Officer of the House of Lords

BLACK SEA, THE. Inland sea of Europe. The ancient Pontus Euxinus, and still known as the Euxine, it is surrounded by Russia

and Ukraine on the N., Transcaucasia on the E., Turkey on the S., and Bulgaria and Rumania on the W. It communicates with the

Black Sea. The tideless inland sea of Europe, which receives the waters of the Danube and those of the great southward flowing rivers of Russia

Sea of Azov by the strait of Kerch, and on the S.W. with the Aegean and the Mediterranean by the Sea of Marmara and the Dardanelles. It is 720 m. long from E. to W. and about 350 m. wide from N. to S., its area being 150,000 sq. m. Its depth in the centre is about 7,360 ft.

The sea has no tide, and the only island is Adass, at the mouth of the Danube. The chief ports are Sulina, Odessa, Sevastopol, Batum, Trabzon (Trebizond), and Varna.

The Black Sea was the scene of naval operations in the Great War. In Oct., 1914, German and Turkish vessels attacked Odessa and sank three Russian ships, and next month a Russian squadron damaged the Goeben. In 1915 the Russian fleet shelled Varna, and in June, 1916, destroyed 54 enemy sailing vessels. Rumania's entry into the war in Aug., 1916, gave the Russian fleet bases on the Danube. During 1917 the revolution paralysed the Russian fleet. Allied warships entered the Black Sea after the surrender of Turkey on Nov. 20, 1918, and interned the Goeben. In 1919 a British squadron helped Lenin to expel the Bolsheviks from the coast of the Black Sea, but was withdrawn early in 1920.

BLACKSMITH. Term for a smith who works in iron or black metal, and makes axes on horseshoes. A worker in tin or white metal is called a whitesmith. This term is also applied to a Brazilian bellbird and to a blackfish occurring on the S. coast of California. The Blacksmiths' Company is a London livery company. It was united with the carriers and its first charter granted in 1571. Its offices are 65, Lower Thames Street, E.C.

BLACKSOD BAY. Inlet on the W. coast of the Irish Free State. In co. Mayo, it is one of the finest natural harbours on the coast, penetrates about 10 m. inland, and is 4½ m. deep at the entrance. On Blacksod Point is a lighthouse. It was once proposed to make the bay a main port for the Atlantic traffic.

BLACKSTONE, Sir William (1723-80). English jurist. He was born in London, July 10, 1723, the son of a silk reeler, was educated at Winchester and Pembroke College, Oxford. He became a barrister. He was then a Fellow of All Souls College, Oxford, and in 1768 was appointed first Vinerian professor of law at Oxford. His great work, *Commen-*

Sir W. Blackstone, British jurist

taries on the Laws of England, 1765-69, a reproduction of his professorial lectures. It contains the first comprehensive survey of the English legal system. Blackstone sat for some years in the House of Commons, and in 1770 was made a judge. He died Feb. 14, 1780.

BLACKTHORN

or SLOE (*Prunus spinosa*). Shrub of the order Rosaceae, with many stiff branches and twigs which usually end in hard spines. The small white flowers are produced before the egg-shaped leaves, and are succeeded by small black drupes. The sloe is restricted to Europe; the bullace, an allied species, is a native of Europe and N. Africa, extending E. to the Himalaya mountains.

BLACK VARNISH TREE (*Melanorrhoea usitatissima*). Large Indian evergreen tree of the order Anacardiaceae. Growing to a height of 100 ft., it has large, undivided, leathery leaves and panicles of red flowers. The heavy dark-coloured wood is known as lignum vitae of Pegu. A thick white juice obtained from the tree is used for lacquering.

BLACKWALL. District of London, on the N. side of the Thames. It contains the E. India Docks. Blackwall Tunnel, for pedestrians and vehicles, connects it with E. Greenwich. Opened in 1897, the tunnel is 6,200 ft. long, 1,220 ft. being under the Thames. The district is in the borough of Poplar. A tablet shows where, on Dec. 19, 1606, the first permanent settlers embarked for Virginia.

BLACK WATCH (ROYAL HIGHLANDERS). Highland regiment, which originated in independent companies raised in 1739 to preserve order in N. Scotland. These men formed a watch, and from the dark colour of their tartan came to be known as the Black Watch. In 1740 the regiment was added to the British army, and was numbered the 43rd, later the 42nd. A second battalion became a separate regiment, the 73rd, or Perth-shires, in 1786. The record of the Black Watch began with their famous charge at Fontenoy in 1745, and they gained the distinctive red backle badge for conspicuous bravery at Geldermalsen in 1795. They served through the Peninsular War, were in the Highland Brigade in the Crimea, and fought hard during the Indian Mutiny; later they stormed the entrenchments at Tel-el-Kebir. In the South African War they led the disastrous attack on Magersfontein. During the Great War the regiment gained further battle honours. The depot is at Perth.

with their famous charge at Fontenoy in 1745, and they gained the distinctive red backle badge for conspicuous bravery at Geldermalsen in 1795. They served through the Peninsular War, were in the Highland Brigade in the Crimea, and fought hard during the Indian Mutiny; later they stormed the entrenchments at Tel-el-Kebir. In the South African War they led the disastrous attack on Magersfontein. During the Great War the regiment gained further battle honours. The depot is at Perth.

BLACKWATER. Name of several rivers in Great Britain. The largest, the Blackwater of Munster, Irish Free State, issues from the border hills of Cork and Kerry, and flows 100 m. to Youghal Bay. Another Irish Blackwater rises in co. Tyrone and flows 50 m. to Lough Neagh. The principal Blackwater of England has its source near Saffron Walden in Essex, and enters the North Sea at Mersea Island, after a course of 40 m.

BLACKWATER FEVER. Disease of hot countries, particularly tropical Africa, the southern states of America, and Central America. The most characteristic symptom is the presence of blood pigment in the urine. The exact cause of the disease is not ascertained. See Malaria.

Blackthorn, or Sloe, Prunus spinosa

BLACKWELL, ELIZABETH (1821-1910). Anglo-American woman doctor. Born at Bristol, she was taken to America when a child. In 1838 she opened a school at Cincinnati, but, deciding to study medicine, then a closed profession to women, was admitted to the medical college at Geneva, New York, where she took her degree in 1849, being the first woman to take a medical degree in the U.S.A. In 1851 she settled down to practise in New York, where she worked until 1863, when she made London her home and taught medicine. She was placed on the British medical register in 1859. She died May 31, 1910.

Elizabeth Blackwell, Anglo-American woman doctor

BLACKWOOD. Timber of three Indian leguminous trees. *Dalbergia latifolia* has leaves with roundish leaflets and pea-like white flowers. It is common on the coasts of Coromandel and Malabar, and its dark-purplish, close-grained timber is valuable for building, furniture, and carvings. *D. sissooides* is a smaller tree. *D. sissoo* is found in Bengal and the Punjab, and produces a durable dark brown timber known as sissoo or sissoom.

Blackwood, Flower and leaves of Dalbergia latifolia

BLACKWOOD, ALGERNON (b. 1869). British novelist. He was son of Sir Arthur Blackwood, and as a novelist he began his career in 1906 with *The Empty House*, but his reputation was made with his powerful book, *John Silence*, 1908. Other novels include *The Human Chord*, *No Edible Adventures*, and *The Wave*. The three-part novel *A Prisoner in Fairyland*. In *The Vanished Tongues of Fire*, and in 1929 *Darkness and Gildery*.

BLACKWOOD, WILLIAM (1776-1834). Scottish publisher. Born at Edinburgh, Nov. 20, 1776, he was apprenticed to a local bookseller. He became manager to a bookseller in Glasgow, and after some London experience started business in Edinburgh in 1804. With John Murray, he issued the first series of Scott's *Tales of My Landlord*. He died Sept. 16, 1834.

In 1817 Blackwood established *Blackwood's Magazine*, as a Tory rival to *The Quarterly Review*. The number containing the famous satire of *The Chaldee* M.D. (by James Hogg, J. G. Lockhart, and John Wilson) and a bitter attack (by Lockhart) on the Cockney School of Poetry laid the foundation of its prosperity. Among the distinguished contributors of its early years may be named Sir Walter Scott, De Quincey, John Galt, Bulwer Lytton, George Eliot, and Anthony Trollope.

BLADDER. Hollow organ which serves as a reservoir for the urine before it is discharged in the act of micturition. When empty the bladder lies entirely in the pelvis, but as it becomes distended it rises into the abdomen.

The bladder may be attacked by various diseases, the most frequent of which is inflammation of the bladder wall, or cystitis.

BLADDER CAMPION (*Silene cucubalus*). Perennial herb of the order Caryophyllaceae. A native of Europe, N. Africa, and W. Asia, it is common in cornfields and waste places. The whole plant is glaucous, and grows to a height of 2 ft.-3 ft. The leaves are egg-shaped or oblong, in pairs, their bases joined around the stem; the flowers are drooping.

Bladder Campion,
Silene cucubalus

BLADDER POD. (*Vesicaria utriculata*). Perennial cruciferous herb of S. Europe. It bears clusters of yellow flowers, the seed vessel being a small, round, inflated pod.

BLADDER SEED (*Physospermum cornubiense*). Perennial umbelliferous herb, a native of S. Europe and parts of Britain (Cornwall and S. Devon). The erect branching stem grows to a height of 2 ft.-3 ft., with large leaves. The small white flowers grow in compound umbels, and the fruits are tiny bladders, each with a single loose seed.

BLADDER SENNA (*Colutea arborescens*). Leguminous shrub with purgative leaflets which are often mixed with those of the true senna. It grows in S. and central Europe, attaining a height of about 10 ft., and bears pea-like flowers, about six in a spray. The seeds are contained in inflated pods.

BLADDER-NUT TREE (*Staphylea pinnata*). Shrub of the order Sapindaceae, a native of S. Europe. Its leaves are divided into smooth, oblong, leaflets. The flowers are small and white, in drooping sprays. The seeds are contained in a bladder-like capsule, and are round and white, with the flavour of pistachio. They are also pinnate.

BLAIR. Name given to the life history of the tape, after being swallowed into a round embryo which enters the stomach to the blood.

BLAIR. Name given to the life history of the tape, after being swallowed into a round embryo which enters the stomach to the blood.

BLAIR. Name given to the life history of the tape, after being swallowed into a round embryo which enters the stomach to the blood.

BLAIR. Name given to the life history of the tape, after being swallowed into a round embryo which enters the stomach to the blood.

BLAIR. Name given to the life history of the tape, after being swallowed into a round embryo which enters the stomach to the blood.

BLAGOVESHCHENSK. Town of Siberia. On the left bank of the Amur at its confluence with the Zeya, it is some 615 m. by steamer from Khabarovsk, and is connected with Vladivostok by rly. Iron founding and flour milling are important, and a large trade in cereals, tea, and cattle is carried on; but the prosperity of the town is chiefly due to the gold mines. Pop. 61,161.

BLAIR, HUGH (1716-1800). Scottish divine. Born at Edinburgh, April 7, 1718, he graduated at the university. From 1754 until his death he was one of the chief preachers in that city, his Sermons, which were published in five volumes, being famous. In 1759 he began a course of lectures in the university on composition, which became so popular that in 1762 a regius professorship of rhetoric was founded for him. He died Dec. 27, 1800.

Hugh Blair,
Scottish divine

BLAIR ATHOLL OR ATHOLE. Parish and village of Perthshire. It is at the junction of the Tilt and Garry, 3 m. N.W. of the Killiecrankie Pass and 35 m. N.W. of Perth by the L.M.S. Rly. Blair Castle, a fine specimen of Scottish baronial architecture, is the seat of the duke of Atholl. Built in 1269 and restored in 1872, it was occupied by Montrose before the

Blair Castle, the historic Perthshire seat of the Duke of Atholl. The oldest part dates from 1269
F. W. Hardie

battle of Tippermuir, and was partly destroyed in 1653 by Cromwell's troops. Pop. 1,824. See Atholl, Duke of.

BLAIRGOWRIE. Burgh of Perthshire, Scotland. On the river Erich, 5 m. by rly. N.W. of Coupar Angus on the L.M.S. Rly., it has linen and jute factories, and is a fruit-growing centre. It holds six fairs yearly. Market day, Tues. Pop. 3,072.

BLAKE, EDWARD (1833-1912). Canadian statesman. He was born at Adelaide, Ontario, Oct. 13, 1833. In 1867 he became a member of the first Parliament of the Dominion, and in 1871 prime minister of Ontario. From 1873-8 he was a member of the Liberal Cabinet, and in 1880 leader of the Opposition in the Dominion Parliament. In 1891 he left Canada and settled in England, being Nationalist M.P. for South Longford, 1892-1907. He died in Toronto, March 1, 1912.

BLAKE, ROBERT (1599-1657). English admiral. Born at Bridgwater, Somersetshire.

Robert Blake,
English sailor
William C. Bayly, Oxford

in Aug. 1599, he was M.P. for that town, 1640 and 1645. He commanded troops in the parliamentary armies, and distinguished himself by the capture and the defence of Taunton, 1644-5, which he held for nearly a year. In 1649 Blake was given command of the fleets of the Commonwealth.

Blake drove the royalist fleet under Rupert into the Mediterranean and destroyed many ships. He successfully commanded the fleet in the Dutch war (1652-4), and achieved his most brilliant feat in 1657, when he annihilated a Spanish squadron at Tenerife. He died four months later, Aug. 7, 1657, as his ship was entering Plymouth Sound.

BLAKE, WILLIAM (1757-1827). British artist and poet. Third son of a London hosier, he was born in London, Nov. 28, 1757, and was a visionary and mystic from early childhood. He trained as an engraver, and for a time studied at the Royal Academy. In 1782 he married Catherine Boucher, an illiterate girl whom he taught to read and write. From 1784-87 Blake kept a print shop in Broad Street, Golden Square, London. He exhibited at the Royal Academy in 1784, and in 1789 was writing and decorating his immortal Songs of Innocence. These were followed in 1794 with the Songs of Experience. He was also at work on his Prophetic Books, evolving that complete symbolism, the key to which is largely lost.

In 1790, the year of his Song of Liberty, Blake was a republican, but the September Massacres cured him of revolution. From 1793-1800 he lived in Lambeth, but about 1800 the poet Hayley persuaded him to go down to Felpham, in Sussex, where he lived for three years, doing a considerable amount of hack-work for Hayley. Blake died at 3, Fountain Court, London, Aug. 12, 1827.

His 114 designs for Gray's poems, lost for more than 100 years, were found in the possession of the duke of Hamilton in Nov., 1919. His works were edited by E. J. Ellis and W. B. Yeats, 1893, and by J. Sampson, 1905 and 1913. Consult William Blake the Man, C. Gardner, 1919.

BLANC, JEAN JOSEPH LOUIS (1813-82). French politician and historian. He was born at Madrid, Oct. 29, 1813, went to Paris in 1830, and adopted journalism as a profession.

The Revue du Progrès, started by him in 1839, contained his articles on social reorganization, published in book form in 1840 as L'Organisation du Travail. This was followed by L'Histoire de dix ans, 1830-40, published 1841-44, a damning indictment of Orleanist rule. During the revolution of 1848 the workers offered him the dictatorship, which he refused. The national workshops advocated in his writings were put into operation, but in a few weeks they were closed. Blanc then fled to England, where he devoted himself to literary work. After the fall of Napoleon III he was elected to the National Assembly, 1871. He died at Cannes, Dec. 6, 1882.

BLANCHING. Improvement of the colour and flavour of vegetables by excluding light from the growing subject. Sea kale is covered with pots; celery, as it grows, is hidden by earth so that nothing but the heads of the plants are visible; rhubarb plants are covered with inverted barrels, while lettuces are tied around with bast to save the centre leaves.

BLANC NEZ. Cape on the N. coast of France. In the department of Pas-de-Calais, 6 m. W. of Calais, and the northernmost promontory on the French coast, it is the site of an obelisk to mark the services of the Dover Patrol in the Great War.

BLANDFORD OR **BLANDFORD FORUM** Borough and market town of Dorset. On the river Stour, 16 m. N.E. of Dorchester by the L.M.S. and Southern Rlys., it has a 16th century grammar school transferred from Milton in 1775. There is also a blue coat school, founded 1729, and a church built in 1732 to replace one destroyed by fire in 1713 Market day, Thurs. Pop. 3,194.

Marquess of Blandford is the title of the eldest son of the duke of Marlborough.

BLAND-SUTTON, SIR JOHN (b. 1855). British surgeon. Born at Enfield Highway he entered the Middlesex Hospital in 1878, and was demonstrator and lecturer on anatomy, and later a surgeon there. From 1886 to 1891 he was professor and lecturer at the Royal College of Surgeons. The Bland-Sutton institute of pathology commemorates his connexion with the Middlesex Hospital. He was made a baronet in 1925.

BLANESBURGH, ROBERT YOUNGER, BARON (b. 1861). British lawyer. Born Sept. 12, 1861, he was educated at Edinburgh Academy and Balliol College, Oxford. A successful harrister, he was made a judge in 1915, a lord justice of appeal in 1919, and a lord of appeal and a life peer in 1923. In 1925 he was appointed chief British delegate on the Reparations Commission in Paris and he presided over the committee that inquired into the working of unemployment insurance.

BLANKENBERGHE. Watering-place of Belgium. On the North Sea, 9 m. by rly. N.W. of Bruges, it has a digue or parade over a mile long, an excellent bathing beach, and a casino. There are some fine hotels. Originally a fishing village, it has become a rival of Ostend as a bathing resort. Occupied by the Germans in Oct., 1914, it was re-occupied by British troops, Oct. 18, 1918. Pop. 6,522.

BLANKET (Fr. blanc, white). Term commonly used for a warm bed covering. The name is also applied to coarse-spun woollen cloth. Inferior kinds of blanket are made with an admixture of cotton and hair, and some are wholly of cotton.

The chief varieties of wool blanket are: (1) the raised blanket of the type made at Witney, Oxfordshire, and elsewhere, in which a soft spun and long-fibred weft is employed. In the process of finishing, the ends of these fibres are scratched to form a furry pile upon the surface; (2) the cloth or Bury blanket made in Bury, Lancs, and elsewhere, denser, of shorter wools and finer spun; (3) the twilled or Ayrshire blanket, woven in a diagonal twill pattern. Wool blankets are bleached by stoving in sulphur fumes.

Blankets are manufactured for mechanical use in paper making, printing, paper staining, calico-printing, and other trades. Noils and wastes, the by products of the worsted industry, skin wools removed from slaughtered sheep, and various Asiatic wools are employed for blanket-making. The chief centre of manufacture is Dewsbury.

BLANKNEY. Village of Lincolnshire, 8 m. from Sleaford. The hall was long the seat of Henry Chaplin, called the squire of Blankney. There is a station on the L.N.E. Rly. The village gives its name to a hunt founded in 1871. The kennels are at Blankney, and its country extends from Sleaford to Newark.

BLANK VERSE. Term applied in English literature to unrhymed verse written in iambic decasyllabic measure, i.e. in lines of ten syllables, in which every alternate syllable from the second to the tenth is stressed. The term is also used loosely sometimes of all verse the lines in which have blank or unrhymed endings.

Apart from the drama, blank verse did not make any progress in English until the

appearance of Milton's *Paradise Lost*, 1667, the first great poem to be written in the form. In the 19th century Wordsworth, who used it in *The Prelude* and *The Excursion*, was perhaps the greatest master of this measure. Tennyson wrote his *Idylls of the King* in blank verse. Robert Browning adopted it in *The Ring and the Book*, and Elizabeth Barrett Browning in *Aurora Leigh*. Walt Whitman in *Leaves of Grass* devised a new irregular kind of blank verse in variations of which, under the name of "free verse," many experiments were made. See Poetry: Verse.

BLANTYRE. Parish of Lanarkshire, Scotland. It is 3½ m. N.W. of Hamilton on the L.M.S. Rly. The parish contains High Blantyre, Low Blantyre or Blantyre Works, Stonefield, and other villages. Coal mining is an important industry. Low Blantyre, on the Clyde opposite Bothwell, has a church and statue in memory of David Livingstone, who was born and worked in a mill here. In 1929 his birthplace and nine acres of land were set aside as a memorial. Pop. 18,154.

BLANTYRE. Chief town of Nyasaland Protectorate, British Central Africa. In the Shire Highlands, it is 300 m. by river N.W. of Chinde. It is connected by a narrow gauge rly. with Chindio, on the Zambezi, in Portuguese East Africa, and is in direct rly. communication with Beira via Murraça. Founded in 1876 by Scottish missionaries, it was named after Livingstone's birthplace. Pop. 6,000.

BLARNEY (Ir. blairne, small field). Village of co. Cork, Irish Free State, it is 7 m. by rly. N.W. of Cork, on the Great Southern Rlys.

Blarney Castle. The famous Blarney stone is on the south side

BLASCO-IBÁÑEZ, VICENTE (1867-1928). Spanish author and politician. A native of Aragon, his novels are contemporary docu-

ments of Spanish life, chiefly in Valencia, Malaga, and the southern provinces. They are realistic and analytical in treatment, with strong portraiture of modern types, and present the ideals of the intellectual and progressive Spaniard. He was an ardent revolutionary reformer. Notable among his novels are *The Cathedral* (1903), Eng. trans. Mrs. W. A. Gillespie, 1909; *Blood and Sand* (1908), Eng. trans. Gillespie 1913, the story of a bull-fighter's career; his remarkable novel of the Great War, *The Four Horsemen of the Apocalypse* (1916), Eng. trans. C. B. Jordan, 1918; and *Onr Sea*, 1918, trans. 1920. He died Jan. 28, 1928.

BLASUS (d. 316). Saint, bishop, and martyr. According to the legend he was a bishop of Sebaste, Cappadocia, who suffered martyrdom under Licinius. He is traditionally beloved by all wild animals, and is patron saint of weavers and woolcombers. Three churches in England are dedicated to him. He is commemorated in the Western Churches on Feb. 3, and in the Greek Church on Feb. 11.

BLASPHEMY (Gr. blasphemia, evil-speaking). In English law, the publication of anything ridiculing or insulting Christianity, or the Bible, or God in the shape of any Person of the Holy Trinity. Its criminality consists in its likelihood to promote a breach of the peace and to subvert the government of the realm as a Christian community. At one time the courts were much more strict, and were apt to hold that unorthodox arguments constituted blasphemy. A bill to make prosecution for blasphemy illegal was introduced into Parliament, 1930, but was dropped.

BLAST FURNACE. Tall, cylindrical structure in which iron ores and certain classes of lead and copper ores are smelted.

Blast Furnace. Diagram of a modern furnace capable of a weekly output of 2,000 tons of pig-iron. a, hearth on which molten metal collects; b, tap hole through which molten metal is withdrawn; c, slag and cinder zone; d, slag hole at side through which slag and cinder are withdrawn as required; e, e, blast main from which air under pressure is forced into furnace through tuyeres, f, f.

It is a furnace supplied with air under pressure from some mechanical appliance, as distinguished from a furnace that depends upon a draught induced by some form of chimney. As the blast furnace is now constructed, with a long, straight, or somewhat tapering internal body part between the base and the rim, it is classed as a shaft furnace; while the newer forms, from their resemblance to the cupola of the ironfounder, are called cupola blast furnaces. See Furnace; Metallurgy.

BLASTING. Operation consisting of breaking rocks by means of explosives which, when exploded in a confined space, suddenly generate a large volume of gas, thus exerting a tremendous pressure. The larger the area of free face the more easily a rock can be blasted, so that a rock free on all sides is the easiest to deal with. By simultaneously detonating small charges in holes bored close together in the desired direction, large blocks are excavated. Two types of explosives are used—a low explosive fired by simple ignition and a high explosive which must be fired by a detonator. Special explosives, called safety explosives, which have a lower temperature of detonation, are used in collieries.

Blasting gelatine is a powerful detonating explosive consisting essentially of nitroglycerine gelatinised with nitrocellulose. It was discovered by Nobel in 1875. See Explosives.

BLASTODERM (Gr. blastos, germ; derma, skin). Term used in embryology referring to the early stages of the segmentation of a cell and meaning the layer of cells which arises from the germinal disk. It is the portion of a segmenting egg which undergoes division. See Biology; Embryology.

V. Blasco-Ibáñez, Spanish author

BLATCHFORD, ROBERT (b. 1851). British journalist and author; pen-name, Nunquam. Born at Maidstone. March 17, 1851, he drifted

Robert Blatchford,
British journalist
Elliott & Fry

into journalism and joined the staff of *Bell's Life* in 1884 and of *The Sunday Chronicle* in 1885. In 1891 he left the latter to found and edit *The Clarion* as an organ of socialism. By his writings—notably *Merrie England* and *Britain for the British*—he made many converts to socialism. He early foresaw the German menace, and in 1910 contributed a series of articles on the subject to *The Daily Mail*. His other publications include a number of army stories and volumes of controversial secularism, *God and My Neighbour*, 1903, and *Not Guilty: a Plea for the Bottom Dog*, 1905.

BLAVATSKY, HELENA PETROVNA (1831-91). Founder of the Theosophical Society. Born at Ekaterinoslav, Russia, July 31, 1831 (O.S.), she married Nisphore Blavatsky, a Russian official in Caucasia, much her senior, from whom she was soon separated. During the next twenty years, according to her own account, she travelled in Canada, Texas, Mexico, and India, and made two attempts to penetrate into Tibet. In 1870 she became a prominent spiritualist in the U.S.A., founding in 1875 the Theosophical Society in association with Colonel Olcott, who became its president and edited *The Theosophist*.

Helena P. Blavatsky,
Russian theosophist

She wrote extensively on esoteric subjects, and persuaded her followers that she was inspired by communications from spiritual beings of Tibet called mahatmas. She died in London, May 8, 1891. See *Theosophy*.

BLAYDON. Urban dist. and market town of Durham. It stands on the Tyne (navigable to this point), 5 m. W. of Newcastle by the L.N.E.R. A suspension bridge spans the Tyne, connecting the town with Newcastle. In a colliery district, it has manufactures of chemicals, hottles, etc. Market day, Sat. Pop. 33,052.

BLAZON (Fr. blason, shield, coat of arms). The art of describing in proper heraldic terms a coat of arms or a complete achievement. The tincture of the field must be mentioned first, then the principal charges, ordinaries and sub-ordinaries, followed by common charges and their respective tinctures. See *Heraldry*.

BLEACHING. Process of whitening materials, especially fabrics, by washing and exposure to light, or by chemical means. The natural method is to expose the article to the action of air light, and moisture, as in the industrial process for whitening linen. The chemical process is much quicker, the chief agents employed being sulphur, chlorine, oxygen, and ultra-violet light. Sulphur is used in the form of gas, or as sulphites and hydrosulphites. Chlorine is generally used as bleaching powder (usually prepared by impregnating cold slaked lime with the gas) or as a solution of chlorinated soda. Ozone, hydrogen peroxide, sodium peroxide, and oxidising agents such as permanganates are methods of employing oxygen.

BLEAK (*Alburnus lucidus*). Small fish, often called the fresh-water sprat. About 5 ins. long, it may be seen in most rivers playing in shoals at the surface. It is rather delicate eating, but too small to be of much value except as bait in fishing.

BLEDISLOE, CHARLES BATHURST, 1ST BARON (b. 1867). British politician. A member of Earl Bathurst's family, he became a harrister, practised for some years, and from 1910-18 sat in the House of Commons as M.P. for a Wiltshire division. Here and outside he became a spokesman of the agricultural interest, and at his seat, Lydney Park, Gloucestershire, he put some of his ideas into practice. From 1924-28 Bledisloe, who was made a peer in 1918, was parliamentary secretary to the Ministry of Agriculture, and earlier he had filled a like office at the Ministry of Food. In 1929 he was appointed governor of New Zealand.

Lord Bledisloe,
British politician
Russell

BLEEDING. Treatment at one time largely adopted for all kinds of complaints of the body. It is now occasionally found useful when there is much engorgement of the lungs with blood and consequent difficulty in breathing, and in certain conditions of the heart in which that organ is not sufficiently powerful to maintain the circulation. The blood is usually drawn from a vein at the bend of the elbow, the median basilic vein. Other names for bleeding are blood-letting, venesection, or phlebotomy. The word is now more usually applied to a spontaneous escape of blood. See *Haemorrhage*.

BLLENDE. One of the principal ores of zinc, chemically a sulphide of that metal. In nature it is found both crystalline and massive, and sometimes in a soft amorphous form. When pure the crystals are colourless and transparent, but they are usually coloured by traces of iron or other metals. Blende generally occurs as a yellowish brown or black mineral with a somewhat resinous lustre, associated with ores of lead. The rare elements, indium and gallium, were first discovered in blende. Other names for blende are black jack, sphalerite, false galena, and mock lead. See *Metallurgy*; *Zinc*.

BLENDING. Process of combining different types of the same article to produce a desired mixture. Such commodities as tea, whisky, sherry, tobacco, and snuff are blended with a view to imparting flavour or aroma and also uniformity. See *Tea*.

BLLENHEIM. Seat of the duke of Marlborough, in Oxfordshire. It is near Woodstock, on the river Glyme, with a station on the G.W.R. Blenheim Park received its name when granted to the duke of Marlborough as a reward for his victory at Blenheim in 1704. The magnificent mansion was designed by Sir John Vanbrugh. It was famous for its valuable paintings (many the work of Rubens), and its splendid collection of gems, most of

Blenheim. The Duke of Marlborough's seat in Oxfordshire, built by Sir John Vanbrugh, and at one time famous for its collection of paintings

which were sold towards the end of the 19th century. The park has an area of 2,503 acres, and is 12 m. in circuit.

BLLENHEIM, BATTLE OF. Victory gained Aug. 13, 1704, by the English, Austrians, and their allies over the French and Bavarians.

The former were under Marlborough and Prince Eugene; the latter under Tallard and Marsin. The rival armies met around a village near Höchstädt, known as Blindheim, but more commonly to-day as Blenheim. The French right rested on Blenheim itself, which they had fortified.

The battle opened about 1 p.m., and before nightfall the English and their allies had won a total victory. The Franco-Bavarians numbered about 50,000, of whom 15,000 were cavalry. The English and their allies were about equal to this strength, but they had at least 25,000 cavalry. They lost about 11,000, the French and Bavarians many more.

BLNNY (*Blennius*). Genus of small fishes, including some 40 species, mostly of very small size and common in many parts of the world. Most are marine, but a few inhabit fresh waters. They have tentacles above the eyes and slime-covered skins.

Blenny. Spiny-rayed fishes, notable for their slime-covered skins

BLÉRIOT, LOUIS French airman. In 1909 Blériot flew across the English Channel on a monoplane built to his own design, winning a £1,000 prize offered by *The Daily Mail*, and in 1912 a Blériot machine of similar pattern looped the loop. See illus. page 27.

Louis Blériot,
French airman
Elliott & Fry

Captain Farmer. After his death she married the earl of Blessington, and with him, Count D'Orsay, and others, set out on a Continental tour in 1822. At Genoa she met Lord Byron and became his intimate friend. Returning to London, the countess gathered at her soirées the most distinguished men of the time. After her husband's death she lived in London with Count D'Orsay. She died in Paris, June 4, 1849. Her *Conversations with Lord Byron* (1834) provides the most authentic account of Byron's opinions to be found outside his own *Journals and Letters*.

Countess of Blessington,
Irish author and wit
After A. E. Chalon, R.A.

Blessington is a little market town in co. Wicklow, Irish Free State.

Bletchingley. Village of Surrey, 4½ m. E. of Reigate. A picturesque place, until 1832 it returned two members to Parliament. Pop. 2,190.

BLEWITS (*Tricholoma peronatus*). Species of mushroom which appears in late autumn. The smooth, flat cap is bistre-coloured, and the thick stem and gills are stained with violet. It is an edible fungus, but should not be gathered in wet weather.

BLICKLING. Village of Norfolk. It is on the Burc near Aylesham. The hall, built

early in the 17th century, etands in a fine park. It is a seat of the marquess of Lothian. Anne Boleyn lived in the carlier house.

BLIDA. Town of Algeria. It stands at the foot of the Little Atlas Mts., 32 m. by rly. S.W. of Algiers. Noted for its orange gardens, it has corn mills and trades in flour, cork, cedar, raisins, cotton, and tobacco. The site of a Roman station, Blida was built in the 16th century, and is an important French military centre. Pop. 24,758.

BLIGH, WILLIAM (1754-1817). British admiral. Of an old Cornish family, he entered the navy. In 1787 he commanded the *Bounty* (q.v.), when it was sent to the South Seas to fetch specimens of the bread-fruit tree. As a result of Bligh's harsh treatment, the crew mutinied and set him adrift with 18 men on April 28, 1789, in the Indian Ocean. Appointed governor of New South Wales in 1805, he came into collision with his civil and military subordinates, and was imprisoned for two years. He died in England, Dec. 7, 1817.

BLIGHTY. Soldier's word for home. Long used by the army in India, the word came into general use during the Great War. It has been explained as a corruption of Hindustani vilayati or bilayati, meaning near the borders of a district, hence foreign, the adjectival form of Arabic vilayat, province, a term often used by a foreigner for his native province, and hence for home.

BLIMBING. Acid fruit resembling a small cucumber. It is produced by a small tree (*Averrhoa bilimbi*) of the order Geraniaceae, much cultivated in the hotter parts of India. The fruits are preserved in syrup, pickled, or candied. An allied species, the caramba, is larger.

BLIND, KARL (1826-1907). German writer and revolutionist. He was born at Maunheim, Sept. 4, 1826, and studied law at Heidelberg. Filled with revolutionary ideas, in 1848 he took part in the revolution in Baden. Later, the temporary government in Baden sent him to Paris as its representative. His association with extremists led to his expulsion from France, and from 1852 onward he made London his home. He died May 21, 1907.

Karl Blind,
German revolutionist
Elliott & Fry

His step-daughter, Mathilde Blind (1841-96), accompanied him and received an English education. She wrote several volumes of poetry, lives of George Eliot, 1883, and of Madame Roland, 1886, and translated the *Journal of Marie Bashkirtseff*, 1890. She died in London, Nov. 26, 1896.

BLIND HOOKEY. Card game of chance for an indefinite number of persons. The dealer, chosen by cutting, gives a packet of cards to each player and to himself. The players lay their stakes on their cards, and the dealer turns up the bottom card of his own packet. The others do the same and pay or receive the amount of their stake according as their bottom card is higher or lower than the dealer's. Quits pay the dealer.

BLINDNESS. Loss of perception of light, colour, and form. It may be congenital, due to imperfect development of the eyeballs, or acquired. Acquired blindness may be due to injuries or to diseases of the globe. The majority of the latter are inflammatory, and caused by infection of the conjunctiva. Ophthalmia neonatorum, or ophthalmia of the newly born, the commonest cause of blindness, is caused by infection during or shortly after birth, and almost invariably is of gonorrhoeal origin. It can be prevented by careful cleansing of the eyes immediately after birth.

Other causes of blindness are glaucoma, characterised by increase of the intra-ocular pressure; embolism (plugging) or thrombosis (clotting) of the central artery of the retina; degeneration of the retina. Loss of useful vision may be caused by ulceration and subsequent scarring of the cornea (leucoma), or by opacity of the lens (cataract).

Atrophy of the optic nerve is usually preceded by optic neuritis (inflammation of the nerve), and may arise from many causes, principally tumours of the brain. Severe haemorrhages from the stomach or other organs may give rise to incurable blindness. Bright's disease or diabetes may cause considerable loss of sight, due to changes in the retina. Vision may be affected seriously by the excessive use of tobacco or alcohol (toxic amblyopia). A serious form of blindness may accrue from the drinking of methylated spirit or from inhaling its fumes. Functional loss of vision occurs in some cases of hysteria. Night blindness is the result of long-continued exposure to very bright lights, and a debilitated constitution may be a predisposing cause.

The blind spot or optic disk is the name given to a circular patch on the retina of each eye which is insensible to light and colour. It is situated at the entrance of the optic nerve. The part of the retina most sensitive to light is called the yellow spot. See Eye.

TRAINING OF THE BLIND. The training of the blind deals usually only with those who have been blind from earliest childhood. In the case of those who lose their sight in, or when nearing, adult life, the process may be more properly called re-education. Only in 1918 was the first establishment for normalising blind babies started. In it blind children are received in their earliest days, and there they are kept until at the age of five they can enter one of the many schools for the blind. Here the three R's are taught by Braille. Arithmetical processes require a special apparatus, but they are easily accomplished.

Workshops for the blind have apprenticeship departments in which pupils are taught trades, the period of tuition often lasting five years. The principal trades taught to young men are basketry in most of its varieties, brush and broom making, the weaving of mats and rugs; and, in the case of girls, machine knitting and cloth weaving. Other trades which have some special relation to the locality in which they are practised are also taught. It is becoming more and more generally recognized that the blind are the best teachers of the blind. See Braille; Eye; St. Dunstan's.

BLIND STOREY. Building term implying generally a storey or any horizontal division of a building that contains no windows or other openings admitting a fair quantity of light. In medieval architecture, it is the middle storey of a church, placed between the clerestory above and the ground floor below. Used in this sense, the term is synonymous with triforium.

BLINDWORM OR SLOW-WORM (Anguis fragilis). Limbless lizard of the family Anguidae. The body is worm-like, and the eyes are so small that the animal is popularly supposed to be blind. The blindworm occurs throughout Europe, N. Africa, and W. Asia. It is about 1 ft. long, of brownish colour, has a very brittle tail, and feeds on slugs and insects, usually by night. Its bite is harmless.

BLISS, TASKER HOWARD (b. 1853). American soldier. Born at Lewisburg, Pennsylvania, Dec. 31, 1853, he graduated at the U.S. military academy. Professor at the Naval War College, 1885-8, he was chief of the staff at

Porto Rico during the Spanish-American War. From 1903-17 he was commandant of the Army War College, and general in the Philippines and on the Mexican border. He was chief military representative of the U.S.A. at the Peace Conference in Paris, 1919.

BLISTER. Vesicle containing watery material produced beneath the cuticle or superficial layer of the skin by scalding or application of an irritant substance. Blistering is employed in medicine to relieve pain and congestion in the deeper part, the drugs most often used in this connexion being cantharides and turpentine.

BLOCH, JEAN GOTTLIEB DE (1836-1902). Polish financier, economist, and writer on war. Born at Radom, Russian Poland, he became eminent as a railway contractor and administrator, banker, agriculturist, and controller of the sugar and lumber trades of Russia. Bloch's best known book is the *Future of War*, 1898, an encyclopedic work translated into English in abridged form as *The War Now Impossible?*, 1899. In this he fore-

Jean de Bloch,
Polish economist
Elliott & Fry

casted the results of the Great War. He drew up an elaborate scheme for peace propaganda, and created a museum of war and peace at Lucerne. He died Jan. 7, 1902.

BLOCK. Word with various meanings. As a part of the rigging of a ship used for raising sails, etc., it comprises one or more grooved pulleys mounted in a frame, usually of hard wood, fitted with a hook or eye by which the block may be suspended or secured. When complete with a rope the whole is known as a tackle. Iron and steel blocks are commonly used by engineers and others, the rope being replaced by a chain.

In printing, a block is the engraved plate, or a stereotype or electrotpe taken therefrom, used in the illustration of books, periodicals, etc. Blocks are of two kinds, those, in line, of pen-and-ink drawings and similar originals consisting only of black and white, and those, in half-tone, of photographs, wash drawings, and like originals consisting of various tones. See Printing; Stereotyping.

In geology, an erratic block is a mass of rock transported by glacier or ice-sheet, and left on retreat of the ice remote from its source. A perched block is such a mass left in some relatively unstable position on hill-top or hill-slope.

The block system on railways is a method by which a line is divided into sections or blocks. Each is protected by signals, which forbid a train to enter while another train is therein. (See Railways; Signalling.) Block tin is an inferior grade of tin, so-called because it is made in the form of blocks. See Tin.

BLOCKADE. Term used in international law to denote the interception by a belligerent of access to territory or to a place which is in the possession of his enemy. International law is chiefly, if not exclusively, concerned with blockade by sea, for here the rights of neutrals are involved.

All the problems of a blockade turn upon the question how far the necessities of the blockading belligerent can override the equal rights of neutrals to enter and leave, and to carry their merchandise to and from enemy ports. A blockade ceases if the blockading squadron is driven off, even temporarily, or is diverted to other

Blindworm or slow-worm (*Anguis fragilis*), a limbless lizard

purposes. The right of egress to neutral vessels caught unawares in a blockaded port is governed by special rules. The penalty for the breach of a blockade by a neutral is that the ship is always liable to be confiscated and the cargo as well if it belongs to the same owner. A neutral violates the blockade, according to the decisions of the English and American courts, if he sails after the blockade has been notified to his Government, or if its existence is notorious at the port of departure.

In Feb., 1916, a British Government department, known as the ministry of blockade, was formed to deal with questions concerning the blockade of enemy countries. It disappeared soon after the end of the war.

BLOCKHOUSE. Wooden hut built for occupation and defence by a small garrison in countries where materials for a masonry fort are not available and where artillery fire is not to be feared. Blockhouses were used in the S. African War (1899-1902), corrugated zinc being substituted for timber. In N. America they were used as a protection against Indians.

BLOCKSHIP. Vessel filled with concrete and used for blocking a port or a channel, as at Zeebrugge (q.v.). At the beginning of the Great War blockships were sunk at Portland and other British naval harbours to prevent U-boats from getting in. Preparatory to the raids upon Ostend and Zeebrugge, April 23, 1918, the obsolete cruisers, Brilliant, Sirius, Intrepid, Thetis, and Iphigenia were loaded with concrete and used as blockships. On May 9-10, 1918, an obsolete cruiser was used as a blockship to close Ostend harbour.

BLOEMAERT, ABRAHAM (c. 1564-1651). Dutch painter. Son of the sculptor, Cornelis Bloemaert, he was born at Gorkum, and studied painting at Utrecht and Amsterdam. Bloemaert was a prolific and versatile painter of history, genre, and portraits, and was the master of many of the Dutch artists. He died Jan. 27, 1651.

BLOEMFONTEIN. Capital of the Orange Free State and judicial capital of the Union of S. Africa. On the Modder river, 4,518 ft. above sea level, and 450 m. by rly. from Port Elizabeth and 750 m. by rly. from Cape Town, it was founded in 1846. It is the seat of an Anglican bishop. Grey University College is a constituent college of the University of S. Africa. It

Bloemfontein. House of the Provincial Assembly or Parliament

is largely a residential town, and its congenial climate attracts many invalids. An important live stock market, it has an annual agricultural show. Near the city is the observatory erected by Harvard University. Bloemfontein was occupied by Lord Roberts on March 13, 1900. Pop. 39,034. See Orange Free State; South Africa.

BLOIS. City of France, capital of the department of Loir-et-Cher. It lies on the right bank of the Loire, 35 m. by rly. S.W. of Orleans. The cathedral of S. Louis dates from the 17th century. The magnificent château was from time to time the residence of the French court, and within its walls Louis XII was born, and Henry, duke of Guise, assassinated. The abbey church of S. Nicholas dates from the 12th century. Pop. 19,323.

BLOMFIELD, SIR ARTHUR WILLIAM (1829-99). British architect. He was the fourth son of Rev. C. J. Blomfield (1786-1857), who was bishop of London 1828-57; he was born March 6, 1829. As a designer and restorer of churches and a specialist in modern Gothic, he enjoyed a large practice. He became a fellow of the R.I.B.A., 1867, and was knighted in 1897. His work included the churches of S. Barnabas, Oxford, S. Mary, Portsea, and S. George, Cannes, and the restoration of S. Saviour's, Southwark. He died Oct. 30, 1899.

Sir Arthur Blomfield, British architect Robinson

the restoration of S. Saviour's, Southwark. He died Oct. 30, 1899.

BLOMFIELD, SIR REGINALD THEODORE (b. 1856). British architect. Born Dec. 20, 1856, he was a grandson of Rev. C. J. Blomfield. He specialised in civil architecture and also in garden design. Elected A.R.A. 1905 and R.A. 1914, he was president of the R.I.B.A. 1912-14, and was knighted April, 1919. He was the author of *The Formal Garden in England*, 1892; *History of Renaissance Architecture in England*, 1897; *History of French Architecture*, 1494-1661, 1911; etc.

BLOMMERS, BERNARDUS JOHANNES (b. 1845). Dutch painter. Born at The Hague, Jan. 30, 1845, he first studied lithography with his father, but later decided to take up painting. In 1869 he became the pupil of Joseph Israels. Blommers painted landscapes and seascapes and the genre of the middle and lower class industrial life. His chief works are *Le Petit Moulin*; *Bonjour, Père*; *Le Repas des Pêcheurs*, and *Joie Maternelle*.

BLONDEL. French 12th century minstrel. Born at Nesle, Picardy, he accompanied Richard I to Palestine in 1190. He is said to have discovered Richard's place of detention by singing outside the walls of the castle of Dürrenstein, Austria, a love song which they had composed together. The poems which have come down to us under Blondel's name, published at Reims in 1862, are of little merit.

BLONDIN, CHARLES (1824-97). French acrobat. Born at St. Omer France, Feb. 24, 1824, his real name was Jean François Gravelet. An acrobat at the age of five, he gained notoriety and a fortune in 1859 by crossing Niagara Falls on a tight-rope. This feat he accomplished several times, performing many daring tricks while crossing the rope. Blondin afterwards settled in England, and gave exhibitions in London at the Crystal Palace and elsewhere. He died Feb. 19, 1897.

BLOOD. Fluid which circulates through the body and conveys food material and oxygen to every part of the organism. It also carries away waste products from the tissues to be discharged from the body through the excretory organs. Blood consists of a fluid part called plasma, in which are floating a number of minute blood cells or corpuscles. These are of two classes, namely, red and white.

A cubic millimetre of blood contains about 5,000,000 red corpuscles. Their chief function is to take up oxygen from the air in the lungs and thence to carry it to the tissues.

The white corpuscles, or leucocytes, average only about one to every 500 of the red. Several varieties are recognized. An important function of the white blood corpuscles is to take up minute foreign particles, such as bacteria, which they digest and destroy, a process known as phagocytosis. See Anaemia; Artery; Heart; Lung; Vein.

CIRCULATION OF THE BLOOD. The discovery of the circulation of the blood was made by the English physician, William Harvey, in 1628. The circulatory system consists of the heart, arteries, veins, capillaries, and the lymphatic vessels. Starting from the left ventricle of the heart, the blood passes through the aorta to the arteries and is distributed all over the body. The finest ramifications of the vessels are termed capillaries, and from these the blood passes into the veins, eventually reaching two great veins, the inferior vena cava and the superior vena cava, which open into the right auricle. From here it passes into the right ventricle, and from the ventricle into the pulmonary arteries, one of which passes to each lung. In the lungs the pulmonary arteries break up into smaller vessels, eventually passing into fine capillaries, in which the blood is brought in contact with the air in the lungs and thus is oxygenated. From these capillaries the blood is collected up into the pulmonary veins, which enter the left auricle, whence the blood passes to the left ventricle.

TRANSFUSION OF BLOOD. Blood may be transferred from one person to another who has suffered a severe haemorrhage. Human beings can be divided into four classes, depending upon certain qualities in their blood, and the blood of a person in any one class can be safely injected into another person of the same class. By means of tests, the class of the donor and the recipient can be determined before the operation is effected.

Thomas Blood, Irish adventurer From a print of 1791

BLOOD, THOMAS (c. 1618-1680). Irish adventurer, better known as Colonel Blood. Deprived at the Restoration of the Irish estates assigned to him by Henry Cromwell, he took part in an unsuccessful plot to surprise Dublin Castle and carry off Ormonde, the lord-lieutenant. He then fled to Holland, and after intriguing with Covenanters and Fifth-Monarchy Men, came under the protection of the duke of Buckingham. On May 9, 1671, he stole the crown jewels from the Tower, but was pardoned by Charles II. His forfeited Irish lands were subsequently restored to him. He died in London, Aug. 24, 1680.

BLOOD FEUD.

Primitive institution imposing upon a family, clan, or tribe the right and duty of retaliation when one of its members is robbed of life or honour by a member of a corresponding group. By restricting to a single person, specially appointed and known as the avenger of

Blondin carrying a man across Niagara Falls on a rope 160 ft. above the water

blood, the fulfilment of this right and duty, it placed a check upon intertribal warfare. Established in Neolithic times, the institution survives in various forms of vendetta among the Afghans, Albanians, Corsicans, etc.

Blood money is the name given to the fine formerly paid either by a homicide to the relatives of his victim to secure himself against their vengeance, or as compensation for crimes of violence other than murder. The term also denotes money earned by bringing or successfully supporting a capital charge.

BLOOD FLOWER (*Haemanthus sanguineus*). Perennial bulbous herb of the natural order Amaryllidaceae, a native of S. Africa. It has only two leaves, which are oblong-elliptic in shape. The fine scarlet flowers are gathered into dense umbels.

BLOODHOUND. One of the oldest breeds of British dogs, formerly known as the sleuth-hound. Its name is derived from the persimmon with which it follows the scent of blood, especially in the case of a wounded animal. The bloodhound was formerly much used for hunting, in England as late as 1887. Its use in tracking criminals has proved disappointing in most cases. The animal is now valued mostly for its ornamental qualities and its affectionate and intelligent disposition. Its high-peaked forehead, deep square muzzle, low-set ears hanging in long folds close to its face, and deep-set eyes give it a grave and aristocratic air. The coat is close, black and tan or tawny in colour, and the animal stands about 24 inches high at the shoulders.

Bloodhound. Fine example of this breed once famed for tracking

BLOOD POISONING. Popular term for the three morbid conditions, sapraemia, septicæmia, and pyæmia.

Sapraemia (Gr. *sapros*, rotten; *haima*, blood) is a condition produced by absorption into the body of poisonous products formed by bacteria in a suppurating wound or abscess. It is the least serious form of blood poisoning. Septicæmia (Gr. *septikos*, rendering putrid) is a form in which bacteria as well as their toxins have found their way into the circulation. Pyæmia (Gr. *pyon*, pus; *haima*, blood) is a condition in which multiple abscesses form in various parts of the body owing to pus organisms entering the blood-stream from a local source of infection.

BLOOD RAIN. Reddish coloured rain which sometimes falls in Italy and along the Mediterranean shores. A microscopic examination shows that this phenomenon is due to the formation of raindrops on dust blown from the Sahara. On rare occasions this "red rain" is experienced in the British Isles.

BLOOD ROOT (*Sanguinaria canadensis*). Perennial herb of the order Papaveraceae, native of N. America. Its long, branched rootstock is filled with orange-red juice. In spring two short stalks arise from each branch of this rootstock, one bearing a single rounded leaf, the other a large white flower. The root has been used in medicine and as a dye-stuff.

Blood Root, *Sanguinaria canadensis*

Bloodstone or **Heliotrope**. A dark green variety of chalcedony with red spots. Opaque and moderately hard, it takes a high polish, and is much used for signet rings and seals.

BLOOMER COSTUME. Woman's dress consisting of a skirt long enough to reach just below the knees, worn over wide trousers gathered in at the ankle, and a fairly close fitting jacket. It was introduced in 1851 by

Mrs Amelia Jenks Bloomer, of New York, an ardent advocate of women's rights.

BLOOMFIELD, ROBERT (1766-1823). British poet. Born of humble parentage at Honington, Suffolk, Dec. 3, 1766, he came to London, where he lived in great poverty, but lost no opportunity of self-education, and began to write verse, one of his compositions, entitled *The Milkmaid*, appearing in *The London Magazine*. In 1800 he published *The Farmer's Boy*, of which 26,000 copies were sold in three years. Bloomfield died Aug. 19, 1823.

Robert Bloomfield, British poet
From a cont. engraving

BLOOMSBURY. District of London. Part of the parish of S. Giles-in-the-Fields, it lies between Holborn and New Oxford Street on the S.; Tottenham Court Road, W.; Euston Road, N.; and Southampton Row, E. The original lord of the manor was William de Blemont, about 1203, and for 200 years the district was known as Blemont's. Once a fashionable quarter,

its streets and squares are a later ground landlord, the duke of Bedford. Once a fashionable quarter, it now contains many private hotels and boarding houses. In Great Russell Street is the British Museum; in Gower Street are University College and University College Hospital. A site has been bought by the University of London on which to erect buildings for its headquarters.

BLOOTELING. ABRAHAM (c. 1634-98). Dutch engraver. Born at Amsterdam, he produced a vast number of etchings, line engravings and mezzotints after contemporary and older masters, some of which have suggested his association with the school of Cornelis and Pieter Visscher.

Mrs. Bloomer in her original rational dress
From a daguerreotype

BLOW, JOHN (1648-1708). English composer and organist. First a chorister in the Chapel Royal, in 1669 he was made organist of Westminster Abbey, and in 1676 organist of the Chapel Royal. He was also master of the children at the Chapel Royal and at S. Paul's Cathedral 1687-93, and composer to James II. In 1699 he became composer to the Chapel Royal. He died Oct. 1, 1708, and was buried in Westminster Abbey. His compositions include over 100 anthems.

Blowfly. Variant name of the bluebottle fly (q.v.).

BLOWING ENGINE. Machine for directing air upon burning fuel or through molten metal, in order to increase its temperature. Sometimes called a blowing machine, a similar apparatus is used to supply air in large quantities for ventilating mines, tunnels, etc., and to create a forced draught for steam boilers. The blowing engine consists essentially of an air cylinder with a piston, the piston rod being connected to the piston rod of a steam cylinder. At each stroke of the latter air is drawn into the air cylinder, compressed, and discharged into a container, thence to be delivered at steady pressure to the furnace, etc. See Blast Furnace.

BLOWITZ, HENRI GEORGES STEPHANE ADOLPHE OFFER DE (1825-1903). French journalist. Born at Château Blowsky, Pilsen, Bohemia, Dec. 28, 1825, his first essays as a journalist appeared in two papers published at Lyons, and by his articles he secured the defeat of De Lesseps at the French elections of 1869. Temporary correspondent of *The Times* in July, 1871. He became the chief Paris correspondent Feb. 1, 1875, and remained so until his retirement. He was able to disclose the designs of Germany against France in 1875, transmitted the text of the treaty of Berlin before it was signed in 1878, and was among the first to foresee Russia's progress towards Herat. He died Jan. 18, 1903. Consult his *Memoirs*, 1903.

Henri G. de Blowitz, French journalist

BLOWPIPE. Tube with a small orifice through which a current of air is projected, either by the mouth of the operator or by mechanical means. The object is to direct a flame and concentrate its heat upon a particular spot. Blowpipes are used by goldsmiths, jewellers, and metal workers, for soldering metals, and by glass workers. An intensely hot flame may be obtained by the use of oxygen instead of air. Blowpipes for welding metals are supplied with both oxygen and hydrogen, or acetylene. See Welding.

Another blowpipe is a weapon used by savage tribes in hunting and warfare. It is essentially a long tube through which arrows and similar missiles may be discharged to a considerable distance by blowing with the mouth. Crude sights are often fitted, and the users show skill and accurate shooting up to a range of 50 or 60 yards.

BLUBBER. Covering of thick fat enveloping the body of whales and some other marine animals. Blubber is one of the products for which whales are hunted, and from it comes the valuable sperm oil of commerce. It has also been used as fuel for ships.

BLÜCHER, GEBHARD LEBERECHT VON (1742-1819). Prussian soldier. Born at Rostock, in Mecklenburg, Dec. 16, 1742, he gained his first experience of war in the service of Sweden. Later he joined the Prussian army, and in 1806 fought at Auerstadt and elsewhere, endeavouring to stem Napoleon's advance. In 1813 he took the command in Silesia. He fought at Leipzig (Oct. 16-19), and led the Prussians in the advance on Paris in 1814, being created prince of Wahlstadt. After

Marshal Blücher, Prussian soldier

Napoleon's escape in 1815 Blücher commanded the Prussian forces; and though Napoleon defeated him at Ligny (June 16), he made good his retreat to Wavre instead of to Namur, in order to carry out his promise of supporting Wellington at Waterloo. Marshal Vorwärts—the nick-name of the old warrior—died in Silesia, Sept. 12, 1819. See Waterloo.

Blücher was the name of a German armoured cruiser sunk in action with Sir David Beatty's forces in the North Sea, Jan. 24 1915.

BLUE. In sporting language, a man who has the right to wear the light blue cap and blazer of Cambridge or the dark blue of Oxford. There is a Blues Committee at each university, and blues and half-blues are awarded for most representative inter-university contests. The chief games for which full blues are given are rowing, cricket, and the two forms of football, Rugby and Association. For other games and competitions, athletics, lawn tennis, hockey, and cross-country running, the chief representatives receive blues and the others half-blues. For golf, polo, lacrosse, swimming, boxing, fencing, and billiards only half-blues are given.

BLUEBEARD. Character in Perrault's fairy-tale of Barbe Bleue, 1697. A wealthy ruffian marries and kills six wives one after the other, hanging up their remains in a locked chamber. The seventh wife disobeys Bluebeard's command never to unlock the door of this room, and discovers the horrible secret when he is away from home. She is rescued from the fate of her predecessors by the arrival of her two brothers, who kill Bluebeard. The story occurs in the folk lore of widely different nations. The term bluebeard is given popularly to any man notorious for monstrous crimes against women, particularly one who kills a number of brides after illegally marrying them.

Bluebell or wild hyacinth

bell of Scotland is the harebell (q.v.).

BLUE BIRD (*Sialia sialis*). Common bird of North America, allied to the thrush, often known as the blue robin. Sky-blue in colour, with chestnut throat and breast, it is a little larger than the British robin, which in habits it much resembles.

Blue Bird, *Sialia sialis*, a native of North America

BLUE BOOK. British Parliamentary and consular report bound in blue paper wrappers and issued in folio form. The term is used loosely to cover other official documents, but those referring to foreign affairs are known as White Papers. The public sale of such papers dates from 1836. Government publications of foreign countries have distinctive colours.

BLUEBOTTLE FLY OR BLOWFLY (*Musca vomitoria*). Insect of the same family as the common house-fly. It is larger than the house-fly, and has a blue abdomen. Its buzz is loud and insistent. The bluebottle lays its

eggs in meat, and is a common domestic pest. It is often confused with the flesh-fly, which however, rarely comes indoors, and whose hind body is grey and black instead of blue.

BLUE COAT SCHOOL. Name given to certain English schools from the long blue coats worn by the boys. The chief is Christ's Hospital, formerly in London, but now at Horsham, Sussex, where the boys still retain the long blue coats, as worn by their predecessors since the time of Edward VI. They also wear yellow stockings, but no hats, although until about 1850 they wore blue caps. Other blue coat schools for boys are at Birmingham, Nottingham, Westminster and Chester. For girls the chief blue coat school is at Hertford, whence it was moved from London about 1800. There is also one at Greenwich. See Christ's Hospital.

BLUE CROSS. Name given to a British organization, founded in 1912, for the care of horses and dogs in warfare, irrespective of nationality. Run on Red Cross lines and supported by voluntary contributions, it is a branch of Our Dumb Friends' League. Originally concerned with horses only, in 1917 it undertook the sole veterinary charge of the 18,000 war dogs used in the French army. During the Great War it assisted horses of the expeditionary forces. After the armistice the Blue Cross provided quarantine accommodation for war dogs, the Charlton kennels at Shooter's Hill, near Blackheath, London, being the first station opened.

BLUE ENSIGN. Official flag flown by certain vessels auxiliary to the Royal Navy. It consists of a blue ground with the Union in the upper corner next the staff, and may be flown by merchant vessels commanded by retired officers of the Navy or officers of the Naval Reserve, provided that at least 10 of the crew are naval pensioners or belong to the Royal Naval or Royal Fleet Reserve, and that the necessary admiralty warrant has been obtained. Vessels of war in the service of the Dominions have the ensign with the badge of the Dominion in the fly, and use a blue pendant in addition. See Flag.

BLUEFISH (*Temnodon saltator*). Fish akin to the mackerel. Blue on the upper parts and white below, with a black spot at the base of the pectoral fin, it attains a length of 3 ft. or more. The bluefish is common in warm climates, especially on the E. coast of N. America, and is highly esteemed as food. Its size, strength, and swiftness provide a favourite sport for American anglers.

Bluebottle or blowfly

BLUE GRASS (*Poa compressa*). Perennial grass, a native of Europe, N. and W. Asia, possibly of N. America. The name is due to the generally glaucous hue of the plant. The leaves are flat and often rough, and the flowering stems are from 1 ft.-2 ft. in height.

Blue John Mine. Natural cave near Castleton, Derbyshire, England. From it is got the purple fluorspar called Blue John

BLUE LAWS. Phrase used in the U.S.A. for laws which interfere with personal freedom, tastes, and habits, such as sumptuary laws and those regulating private morals. The name was first given to several laws of this kind said to have been imposed in the Puritan days of the 18th century on the inhabitants of New Haven, Connecticut.

BLUE MOUNTAINS. Name given to various ranges of mountains, of which the chief are: (1) A range in Jamaica, running E. and W., the highest point of which is Blue Mountain Peak (7,355 ft.). (2) A branch of the Dividing Range, New South Wales. The peaks, which average about 3,000 ft., are covered with eucalyptus forests; the highest is Mt. Beemerang, 4,100 ft. (3) A range in Oregon, U.S.A. Composed of lava on granite, they are covered with pine and fir forests. Their mean altitude is 7,000 ft.

BLUE NOSE. Nickname given to the inhabitants of Nova Scotia. Found in the novels of T. C. Haliburton, the creator of Sam Slick, the term is probably derived from the effect of the climate on the noses of the inhabitants.

Blue Peter. Blue flag with a white square in its centre which is hoisted in a ship when she is about to sail. See Flag.

BLUE RIBBON OR RIBAND. Term for a high distinction of any kind. Its use in this connexion arises from the fact that the ribbon of the Order of the Garter is dark blue. Thus the winner of the Derby is said to gain the blue ribbon of the turf, and the lord chancellorship is termed the lawyers' blue ribbon.

The Blue Ribbon Army, a society of abstainers from intoxicating drinks which flourished in Great Britain during the last quarter of the 19th century, originated in America, the mark of the members being a piece of blue ribbon. In 1893 the society took the name of the Gospel Temperance Union.

BLUESTOCKING. Word applied in a derisive manner to a learned woman. In England its modern use originated about 1750, when certain persons, weary of the usual amusements of London society, began to hold meetings for conversation on books and letters. Mrs. Elizabeth Montagu was a leading figure in this circle, which included Horace Walpole and Lord Lyttelton; and one or two of its male members, to mark their freedom from convention, wore blue stockings instead of the customary black silk. Those who thus met were called bluestockings, but in course of time the term became confined to the women members.

BLUETHROAT (*Cyanecula svecica*). Small bird akin to the redstart. It has a bright

blue throat adorned with a reddish brown patch. It breeds in Scandinavia, Siberia and other northern lands, and in winter migrates to Egypt, Abyssinia, and India. It is also known as the Swedish nightingale, and in Lapland, from its mimicking the notes of other birds, as the bird of a hundred voices.

Bluethroat, a song bird of north Europe and Asia

Blue Coat Boy in school dress

Blue Ensign, flown by vessels auxiliary to the Royal Navy

BLUFF (old Dutch blaf, flat). Name for a low cliff or high bank with a steep face. A port of South Is., New Zealand, the most southerly point of the island, on Foveaux Strait, is called Bluff. It is the first harbour on the south route from Australia to Lyttelton.

BLUNDELLSANDS. Summer resort of Lancashire. It is 6 m. N.W. of Liverpool, on the L.M.S. Rly., near the entrance to the Mersey estuary. Pop. about 4,000.

BLUNDELL'S SCHOOL. Public school at Tiverton. Built and endowed in 1604 by Peter Blundell, a clothier of Tiverton, in time it became well known. In 1876 new buildings were erected outside the town. The number of boys is about 300. R. D. Blackmore and F. Temple were educated here.

BLUNDERBUSS (Dutch donder, thunder; bus, box). Heavy pistol with flint-lock, trigger action and sometimes a bell-shaped muzzle. It was in use in the 18th century, and the length of barrel varied from 14 ins. to 28 ins. See Pistol.

BLUNT, WILFRID SCAVEN (1840-1922). British poet. Born Aug. 17, 1840, the son of a soldier and landowner, whose Sussex estate at Crabtree he inherited in 1872, he was in the diplomatic service from 1858-70. Some years of travel in Asia and Africa followed, during which he became a strong advocate of political freedom for Mahomedan races and an opponent of British policy in the East. In 1888 he was imprisoned for defying the law in Ireland. He was a breeder of Arab horses. A complete edition of his poems appeared in 1914, and he published his Diaries in two series, 1919-20. He died Sept. 10, 1922.

BLUNTSCHLI, JOHANN KASPAR (1808-81). German-Swiss jurist. Born at Zürich, March 7, 1808, he was for a time president of the Swiss council of state. He left Switzerland on the overthrow of the council in 1847, and from 1848-61 was professor of constitutional law at Munich and from 1868 at Heidelberg. He died at Karlsruhe, Oct. 21, 1881. Bluntschli wrote a History of General Constitutional Law, 1864, The Modern Law of War, 1866, and The Modern Law of Nations, 1868. The best known of his other works is his Theory of the State, 1875, Eng. trans. 1885.

BLYTH. Borough, seaport and watering-place of Northumberland. At the mouth of the river Blyth, 11 m. N.E. of Newcastle by the L.N.E. Rly., it exports coal, has shipbuilding yards, and salmon and herring fisheries, and manufactures ropes, cables, and sails. Its harbour at North Blyth, on the opposite side of the river, has been much enlarged to deal with the increasing export of coal. In 1907 the urban district of Cowpen was incorporated with Blyth. Pop. 34,070.

BOA. Genus of large snakes found in tropical America and in Madagascar. The common boa-constrictor of S. America, which sometimes attains a length of 12 ft., is marked with spots and bars, the prevailing colours being brown, with black and yellowish markings. Coiled on the branches or trunk of a tree, where its colouring serves to conceal it, the boa lies in wait for birds and such animals as rats and agoutis. See Snake.

BOABDIL (d. about 1495). Last Moorish king of Granada. He seized the throne in 1482, from his father, whom he drove into exile and became a vassal of the Spanish rulers. Troubles with his father, who desired to regain

the throne, weakened the kingdom, rendering it easy for the Christians to capture Granada in 1492. Afterwards Boabdil joined his kinsmen in Africa, where he is said to have been killed. His name is a corruption of Abu Abdallah.

BOADICEA (d. A.D. 62). British queen, wife of Prasutagus, king of the Iceni, a tribe of E. Britain. To safeguard his kingdom and family, Prasutagus had bequeathed his property jointly to his daughters and the Roman emperor Nero, but at his death his territory was seized by the Romans, his widow was scourged, and his daughters were ravished. head of a formidable host,

blunderbuss. A 17th century Spanish specimen, with decoration of pierced and engraved silver

Boudicca, at the burned Camalodunum (Colchester) and other cities, but was eventually defeated, and ended her life by poison. A colossal group of Boadicea and her daughters in her war chariot by Thomas Thornycroft stands at the W end of Westminster Bridge, London. The name is more correctly spelt Boudicca.

Boadicea was the former nameship of a class of British light cruisers built in 1909-13. Renamed the Pomone, in 1920, she displaced 3,300 tons, and had engines of 18,000 h.p. giving a speed of 25 knots.

BOANERGES. Term applied by Christ to James and John (Mark 3). It is explained as meaning sons of thunder, but the derivation is doubtful. See James, S.; John, S.

BOAR (*Sus scrofa*). Name given to all the wild members of the pig family, but especially to the wild swine of Europe and

India, progenitors of domesticated breeds. The European wild boar has a high crest on the shoulders, well-developed tusks, and a thick coat of coarse bristles. It stands about 3 ft. in height and is swift and powerful; it inhabits damp forests and marshy districts, where it feeds upon roots, fungi and berries. The wild boar is found in most of the suitable districts of Europe, in N. Africa, and W. Asia, and was formerly common in Great Britain. It has long been a favourite animal

Boar. European wild boar, from which the domestic pig descends
W. S. Berridge

Boa-constrictor, a large snake native to tropical S. America. It is pale brown with darker markings
F. W. Bond

of the chase. The extinction of the animal as a wild species was due to domestication, rather than to extermination.

BOARD. Term often applied to bodies of men responsible for the conduct of businesses, charities, etc., called boards of directors, or to certain public departments, e.g. the Board of Trade, boards of guardians, the root idea being that officials sit round a wooden table in order to discuss their business.

Boarding out is the name given to the system by which destitute orphans and other children are entrusted to the care of private persons, instead of being maintained in workhouses and similar institutions. In England the poor law authorities are allowed to board out the children under their care, the system being supervised by the Ministry of Health.

The elementary schools established and controlled by the School Boards set up under the Education Act of 1870 were called board schools. In 1902 the schools were taken over by the municipal and county councils, and became known as public elementary or council schools. See Education.

BOAR'S HEAD. Tavern in London, famous for its associations with Shakespeare. It was in Eastcheap, and the dramatist makes it the haunt of Prince Henry and Falstaff, and their companions. It was destroyed in the fire of 1666, but a new one was built which was later removed to improve the way to London Bridge. A statue of William IV stands on the site, which is near the Monument.

BOAR'S HILL. Village of Berkshire. About 4 m. from Oxford, it commands beautiful views and, associated with Matthew Arnold's poems, has become a place of residence for Oxford dons and others. Efforts are being made by the Oxford Preservation Trust to prevent any spoliation of its natural charms.

BOAT. Appliance constructed by man to enable him to transfer people and things across water. Two properties are essential to the most primitive of boats—stability in the water and buoyancy. Stability depends upon shape, hence the gradual development of the typical cross section where the portion below water level is narrowest. Increased stability led to the building of platforms with cabins and to the use of a primitive sail.

Buoyancy was attained in primitive lands where timber was scarce by the development of the raft of skins. Wickwork boats waterproofed on the underside are still in use on British rivers such as the Cheshire Dee.

The need to travel against or across a current compelled the use of paddles, or a primitive sail, and in the early forms paddling facing the direction in which the boat travelled led to the development of paddles and guiding sweeps. Facility of control by the mid of a sweep permitted the use of oars and the evolution of rowing boats.

BOAT RACE. Any race between boats, but especially the annual boat race between the universities of Oxford and Cambridge. In this each crew consists of eight oars and a coxswain. It takes place on the Thames over a course of 4½ m. from Putney to Mortlake. Up to 1929 the two universities had each won on 40 occasions. The record time, 18 min. 29 sec., was accomplished by Oxford in 1911. The race was instituted in 1829 and became an annual event in 1856.

BOATBILL (*Cancroma cochlearia*). Species of night heron peculiar to S. America and found chiefly in Brazil. Its broad flat beak suggests the shape of an inverted boat. See illus. p. 271.

Boar's Head Tavern. Sign of the inn at Eastcheap, built 1668. See below

BOAT FLY (Notonecta). Name given to a group of hemipterous insects, of which the water boatman on British ponds is an example. They swim on their backs on the surface of the water.

BOATSWAIN (A.S. swan, lad, servant). Warrant officer in a warship or merchantman who is charged with the supervision of all sails, rigging, tackle, purchases, cables, and similar gear. Boat-swains in the navy are selected from leading seamen and petty officers under the age of 35. After 15 years' service as boatswain the officer is promoted to chief boatswain (commissioned warrant officer). A small proportion of chief boatswains are promoted to lieutenant. Pron. bosun.

Boat Fly or Boatman.
Notonecta glauca

Boatswain's and
chief gunner's
sleeve badge in
British Navy

BOAZ. Bethlehemite and kinsman of the first husband of Ruth, whom he married under the obligations of the Levirate law. The father of Obed, who was grandfather of David, Boaz was an ancestor of Joseph (Matt. 1).

Boaz was also the name given to one of the two symbolical bronze pillars of Phoenician design which

stood in front of Solomon's temple. Its companion was named Jachin. They were surmounted with decorated capitals (1 Kings 7; 2 Chron. 3; Jer. 52).

BOBBIN (Fr. bobine). Wooden or other cylinder upon which yarns are spun or wound.

Bobbins are made in many shapes and sizes, a common form being the two-ended bobbin, a hollow wooden or compressed-paper tube with flat disks of wood or metal forming the ends. Others have a disk only at the bottom, the top or nose being rounded. Some, known as pirns or spools, are tapered and grooved, the better to hold their contents.

Bobbin net or bobbinet, invented in 1809, is a machine-made imitation of pillow lace.

Bobolink or reed bird, a N.
American migratory song bird

song. It is also known as the reed bird.

BOBSLEIGH or BOB-SLED. Sporting sledge of simple form, for two or more sitters, used for "coasting." The front part is controlled by a steering wheel or sometimes by ropes, those behind aiding the steering by swaying to either side and by digging into the snow with their heels. See Tobogganing.

BOCCACCIO, GIOVANNI (1313-75). Italian author. He was the son of a merchant of Florence, and was probably born in that city. At the age of 15 he was sent to study law at Naples, and ten years later fell in love with Maria d'Aquino, supposed to be a natural daughter of King Robert of Naples, who inspired much of his early work.

Some time during the next decade began his friendship with Petrarch, one of whose last literary labours was the translating into Latin of Boccaccio's *Patient Griselda*, and under whose influence he became one of the leading agents in promoting humanistic studies. About 1362, influenced by Petrarch and by a dying priest who almost scared him into renunciation of the world, he changed his moral views and conduct, and afterwards his writings were free from much of the licence which had marked his earlier work. In 1363 he settled at Certaldo, his paternal inheritance some miles from Florence. In addition to *The Decameron* he wrote in Latin some treatises on ancient mythology. He died Dec. 21, 1375. See *Decameron*.

BOCHUM. Town of Prussia. In Westphalia, about 10 m. E. of Essen, it is in the Ruhr district, and is an important coal-mining centre and has large iron and steel industries. There is a school of mining. Pop 211,249.

BOCLAND OR BOOKLAND. Name given in Anglo-Saxon times to land in England granted by the king on conditions laid down in a charter or book. It was usually granted to bishops and monasteries, and the charters were signed by the king and members of the Witenagemot. See *Folkland*.

BOD OR BAUD. Native state of India, in the west of Orissa. It covers an area of 2,064 sq. mi., and is watered by the Mahanadi, on which river is Bod, the capital.

BODE, JOHANN ELERT (1747-1826). German astronomer. Born Jan., 1747, at Hamburg, he became astronomer to the Academy of Science, Berlin, in 1772. He was made director of the observatory, 1786, and founded and for many years edited the *Berlin Astronomical Year Book*. His works on astronomy, especially his *Guide to the Knowledge of the Starry Heavens* (1768) and *Uranographia* (1801), had a large circulation. Bode's name is preserved in Bode's law, a sequence of numbers giving approximately the proportional distances of the planets from the sun. It is merely an empirical rule, useful as an aid to memory. He died at Berlin, Nov. 23, 1826.

BODE, WILHELM VON (1845-1920). German art critic. Born at Calverde, Brunswick, Dec. 10, 1845, he became assistant in the Berlin museum in 1872, and in 1890 was given charge of the picture gallery. He was responsible for the foundation of the Kaiser Friedrich Museum, opened in 1904, which soon contained one of the finest collections of paintings in Europe.

Bobsleigh. The start on the Cresta
Run of the Grand Sports, St. Moritz

Giovanni Boccaccio,
Italian author
After Van Dalen

BODIAM CASTLE. Ruin in Sussex, formerly one of the finest moated fortresses in England. It is on the left bank of the Rother, near Robertsbridge. The remains consist of four round towers, a gateway, a portecullis, parts of the hall, chapel, and kitchen, and the moat. It was presented to the nation by the Marquess Curzon in 1925.

BODIN, JEAN (1530-96). French economist, historian, and philosopher. Born at Angers, he settled in Paris as an advocate, and held a post under the crown. His later life was spent at Laon. Bodin was the founder of the philosophy of history in France and the forerunner of Montesquieu. In his work, *Of the Republic*, 1576, he sets forth his ideal of a state and defends the principle of authority.

Bodiam Castle. Remains of a moated fortress in
Sussex, considered one of the finest in England
Frith

BODKIN. Instrument originally used by Greek and Roman women for keeping up the hair. Resembling a needle with a blunt point and a large eye, it is used for running ribbons or tapes through various materials. A printer's steel instrument for lifting type is called a bodkin. In Shakespeare's time the word was applied to a small dagger, and some connect it with the Welsh word *bidog*, which has the same meaning.

Bodkin. Printer's
bodkin and bodkin
used in needlework

BODKIN, SIR ARCHIBALD HENRY (b. 1862). British lawyer. Born April 1, 1862, he was called to the bar in 1885. He was treasury counsel at the central criminal court from 1892 until 1920, and director of public prosecutions, 1920-1930. He was knighted in 1917.

BODLEIAN LIBRARY. Official library of Oxford University. It owes its name to Sir Thomas Bodley (1545-1613), scholar and diplomat, who restored the university library after its destruction by fire in the time of Edward VI. He erected a building, opened in 1602, and later enlarged, and presented a number of books to it. During the 19th century the library took over other buildings, known as the old schools, and the Ratcliffe library became its reading room.

Sir Thomas Bodley,
English scholar
Bodleian Library

Legally entitled to a copy of every book published in the United Kingdom, it contains about 1,000,000 volumes and over 30,000 MSS., some very valuable. In 1929 it was decided to build an additional library near the existing one, and a storehouse at Jordan Hill outside the city. See *Oxford*.

BODLEY, GEORGE FREDERICK (1827-1907). British architect. Born at Hull, March 14, 1827, he became a pupil of George Gilbert Scott, the elder, in 1845. He began to practise for himself about 1860, and was the architect of a large number of churches. From 1869-89 he was in partnership with Thomas Garner,

during which period the bulk of the reconstructive work of Christ Church and Magdalen and University Colleges, Oxford, was done. Bodley became A.R.A. in 1882 and R.A. in 1899. He was one of the assessors in the competition for the design of Liverpool Cathedral, and in that work Bodley himself acted as consulting architect. He died Oct. 21, 1907.

BODLEY, JOHN EDWARD COURTENAY (1853-1925). British historian. Born June 6, 1853 and educated at Oxford, he became an authority on the history of France. Of his many writings the chief is his *France* (2 vols 1898), which he wrote both in English and in French. He died May 28, 1925. Consult *Life* by Sbane Leslie, 1930.

BODMIN. Borough, market town, and co. town of Cornwall. On the river Camel, 30 m. N.W. of Plymouth, on the G.W. and Southern Rlys., it has a large Gothic church and an Elizabethan grammar school. Boots and worsteds are made, and there is trade in livestock. Market days, Wed. and Sat. Pop. 5,526.

BODYSNATCHING. Term given to the secret disinterment of corpses subsequently sold for dissection. In Great Britain before 1832 only the bodies of murderers were allowed to be dissected, and, the supply of bodies becoming insufficient, corpses were stolen by the so-called bodysnatchers or resurrection men. The scandal reached a climax when William Burke and William Hare made a practice of drugging and suffocating persons in order to sell their bodies. By the Anatomy Act, 1832, the supply of bodies for dissection was legalised and a system of licensing and supervision established. See Burke, W.

BOECE or **BOYIS, HECTOR** (c. 1465-1536). Scottish historian. Born at Dundee, he was appointed professor of philosophy in Paris in 1497. About the beginning of the 16th century he became president of the newly founded university of Aberdeen. In 1522 he published in Paris his *Latin Lives of the Bishops of Mortlach and Aberdeen*, and in 1527 his *History of Scotland to the accession of James III.*

BOECKLIN, ANNOLD (1827-1901). Swiss painter. Born at Basel, Oct. 16, 1827, Boecklin studied at Düsseldorf under Schirmer. After visiting Brussels, Paris, Rome, and Munich, he obtained a post at the Weimar Academy (1860-3). Thirty years of prosperous though restless activity followed before, in 1892, he settled in his own house at Fiesole, where he died, Jan. 16, 1901. In Boecklin's pictures landscape is the paramount consideration.

BOEHM, SIR JOSEPH EDGAR (1834-90). British sculptor. Born at Vienna, July 4, 1834, he settled in London in 1862, and was naturalised in 1865. He was elected A.R.A. in 1878, and R.A. in 1880. His work includes statues of Lord Beaconsfield and Dean Stanley in Westminster Abbey, Carlyle on the Thames Embankment, Darwin in the Natural History Museum, London, and of Wellington at Hyde Park Corner. He was made a baronet in 1889, and died Dec. 12, 1890. See illus. p. 131.

Sir J. E. Boehm,
British sculptor
Elliott & Fry

BOEHME, JAKOB (1575-1624). German mystic, best known to English readers as Jacob Behmen. In 1612 he created a sensation with his *Aurora*, which taught the unity of life and man's close relation to the divine. Boehme developed the theory of an eternal self-generation of God, and maintained that from the ground of being within Himself the Divine will or impulse finds expression in the Divine wisdom; and this self-revelation forms itself into the universe. Three kingdoms

of the universe are thus formed, which ascend from the opposition of the material forces of attraction and repulsion to those of light and warmth, and then to those of sense and intellect. His writings, which were rapidly translated into English, were in considerable repute in Great Britain in the 17th century. Boehme died Nov. 17, 1624. See Law, W.; Mysticism.

BOEOTIA. District of ancient Greece Bounded on the E. by the Euripus, on the N. and W. by Locris and Phocis, and on the S. by Attica, Megaris, and the Corinthian Gulf, it covered an area of about 1,000 sq. m. The atmosphere was damp and oppressive, and to climatic conditions was attributed the proverbial dullness of the inhabitants. Yet Boeotia produced such men as Pindar, Epaminondas, and Pelopidas. The most important town was Thebes. All the cities were united in a league, which from 371 B.C. was completely dominated by Thebes.

BOERS. Early Dutch colonists—and their descendants—in South Africa. The Dutch word, meaning originally a tiller of the soil, came to mean farmer. The first settlement was in 1648, and for two centuries the Boers spread N. by trekking. This brought them into contact with the aboriginal peoples, whom they partly repressed and partly compelled to assist in cattle-rearing and agriculture, the incidental result being half-breed populations. The Boer colonists remained faithful to the material culture, Roman law, mental outlook, and religious temperament of 17th century Holland. Their intercourse with the aboriginal peoples and their uniform physical environment produced a simplified vocabulary, protected from disintegration by the Bible.

The war of 1899-1902, between the British and the Boers, is frequently alluded to as the Boer War. See South Africa.

BOETIUS or **BOETHIUS** (c. 474-525). Roman philosopher and statesman. He married Rusticiana, daughter of Symmachus (d. 525), and became consul in 510. Theodoric the Great, whose court was then established at Rome, made him head of the civil administration, and his integrity during his term of office prevented the spoliation of the Italians, but raised enemies. Accused of supporting the Senate against Theodoric, he was deprived of all his offices, imprisoned at Padua and finally executed. The most important of his works, *De Consolatione Philosophiae*, in five books, written from a theistic standpoint, was produced in captivity.

BOETTGER or **BOETTCHER, JOHANN FRIEDRICH** (1682-1719). German porcelain manufacturer. Born in Reuss-Schleiz, he laboured for some years as an alchemist in Saxony, supported by the court at Dresden, in vain search for the philosopher's stone. While experimenting on clay he produced the famous Meissen porcelain, and was appointed supervisor of its manufacture in 1708, the strictest secrecy being enjoined as to the processes.

A hard stoneware resembling jasper, first made by him at Meissen, in Saxony, is known as Boettger ware.

BOG (Gaelic, soft). Name for soft, saturated, and spongy land, in which much decaying and decayed vegetable matter is present. Bogs are common in cool, damp, temperate climates. They are formed in shallow, stagnant lakes, gradually filled by vegetable growth, especially sphagnum, which assumes the appearance of a stiff, fibrous mud, and is known as peat. Machinery for the manufacture of gas has been installed in the Bog of Allen, the largest of the Irish bogs.

The soil of bogs is mostly acid humus, and deficient in the mineral salts which plants require. Bog plants are, therefore, those that have adapted themselves to poor conditions of soil. Rushes and sedges are

abundant. Around the borders grow the bog gentian, ling, cross-leaved heath, cranberry, bog myrtle, creeping willow, and royal fern. Bogs are often covered with bog-moss, and which grow hog asphodel, marsh andromeda, sundews, butterworts, and the bog orchis.

Bog butter is the name given to a peculiar substance of the colour and consistency of butter occurring in masses in Irish peat bogs, known mineralogically as butyrite or butyrelite. It is a form of adipocere.

Bog iron ore is a name for pisolitic ore of iron. It consists of a mixture of hydrated oxides formed by the agency of fresh water algae and bacteria at the bottom of sheets of standing water. See Peat.

Bog oak. This is the wood and roots of trees, darkened and in a good state of preservation, found beneath peat bogs. Among trees found in these conditions are the oak, beech, hazel, yew, and fir, and the colour ranges from black to dark greyish-green. Bogwood is dense and hard, and is made into furniture, ornaments, and trinkets.

BOG ASPHODEL (*Narthecium ossifragum*). Perennial marsh herb of the order Liliaceae. It is a native of Europe, N. Asia, and N. America. It resembles a small flag (iris), and has a long, creeping rootstock from which the rigid sword-shaped leaves spring. The stem bears a raceme of golden yellow flowers in July. It was once thought that sheep pastured in marshes contracted the rot through feeding on this plant and others growing near it.

BOGBEAN (*Menyanthes trifoliata*). Perennial marsh herb of the order Gentianaceae. A native of Europe, N. Asia, and N. America, its stout, matted rootstocks run through bogs and marshes, sending up large compound leaves resembling those of the broad bean. The flowers are funnel-shaped, pinkish without, white within. The starchy rootstocks have been used for food, and the plant has been employed as a tonic and as a substitute for hops in brewing.

BOGIE. Four-wheeled truck used at the front end of a locomotive, and to carry long railway and tramway cars and carriages. It is attached to the frame by a vertical pivot, which allows the wheels to adjust themselves on curves to the direction which gives easiest running. Bogies are indispensable on tracks with sharp curves for vehicles with more than four wheels. Some bogies, not for locomotives, have six wheels. See Locomotive.

BOG MOSS (*Sphagnum*). Genus of aquatic, rootless mosses, natives of temperate regions, growing in bogs and swamps, and entering largely into the composition of peat.

They differ from other mosses in their spongy structure, which enables them to draw up and hold large quantities of water. The male and female flowers are produced on separate branches. The male branches are densely covered with leaves and look like catkins, while the female branch is more loosely covered with larger leaves, and ultimately ends in a globular red spore capsule on a stalk.

Bog Moss. Peat beds are formed from it

BOG MYRTLE or **SWEET GALE** (*Myrica*). Shrub of the order Myricaceae. A native of W. Europe, N. Asia, and N. America, it grows in bogs and damp moors. It attains a height of about 3 ft., and has lance-shaped yellow-green leaves with downy undersides,

where numerous glands secrete a fragrant wax. The flowers lack sepals and petals, and are protected by brown scales. The two sexes are found on separate branches, usually on different plants. The fruits (eandle berries) are minute drupes, coated with waxy resin.

BOGNOR. Watering place and urban district of Sussex. On the Southern Rly., 10 m. S.E. of Chichester, it has a pier, with pavilion and theatre, esplanade, theatre, and other attractions for visitors, a Norman church, and a Roman Catholic priory. At Aldwick, near Bognor, King George V spent some months in 1929 recovering from a serious illness. He bestowed upon the town the name of Bognor Regis. Pop. 14,000. See Aldwick.

Bog myrtle or sweet gale, a fragrant shrub

BOGOMILI (Slav. dear to God). Greek sect, supposed to have been founded by a Bulgarian bishop named Bogomil in the 10th century. It appeared later in the Balkans and Constantinople, and lingered until the 16th century. Allied to the Cathari, the Bogomili regarded the body as a prison - house of the spirit, and therefore to be subdued by fasting and other forms of asceticism.

Bognor. Part of the sandy beach of this favourite south coast resort

BOGOTÁ (formerly Santa Fé de Bogotá). Capital of Colombia, S. America, and of the department of Cundinamarca. It stands on the San Francisco and San Agustín, tributaries of the Magdalena river, on the E. side of a plateau, 8,760 ft. high, at the foot of the E. Cordillera.

Its chief square is surrounded by the president's palace, the former viceregal palace, the cathedral (1563), and the government buildings. Other buildings are the university, national library, natural history museum, mint, and observatory. Several of the churches are adorned by the works of Murillo and others.

The commercial emporium for the central territories, its trade activities are limited by difficulty of transport. There is wireless communication with all parts of Colombia. The manufacture of carpets, cloth, glass, and matches are among the chief industries. In the locality are large salt mines, and coal, iron, and other minerals are worked. Pop. 166,148.

BOG SPAVIN. Disease of horses. It is an enlarged condition of the hock, and affects cart horses more frequently than hackneys or carriage horses. The treatment in slight cases is irrigation with cold water, or the use

of astringent lotion, but in long-standing and severe cases it may be necessary to draw off the fluid, or to fire or blister the joint.

BOGY OR BOGEY. Indefinite object of terror, or supernatural appearance. Generally used as a vague term to frighten children, it is applied to any merely imaginary evil. Supposed to be derived from the Welsh *bwg*, a ghost, it is connected with bugbear, boggle, and other words denoting vague but real terrors of the imagination.

BOHEA. Variety of black China tea. The plant, classified by Linnaeus as *Thea bobea*, grows in Fukien prov., China, the name being derived from Wu-i (pron. bou-y), the name of the hills where it is grown. The name was used in the 18th century for tea generally, and is sometimes used to day for a poorer late-grown leaf. See Tea.

BOHEMIA. Western portion of the republic of Czechoslovakia, formerly a prov. of the empire of Austria-Hungary. The country has an area of 20,100 sq. m. and a pop. of 6,922,600, two-thirds being Czechs, nearly one-third Germans, and about 400,000 Jews. It forms a province, the most important of the republic. Prague is the capital and the largest town; Pilsen (Písen) and Budweis (Budejovice) are other populous centres.

HISTORY. Little is known about the early history of Bohemia. It was at one time part of the Frankish kingdom and at another subject to Moravia. Christianity secured a footing about 900 and soon the land had its own rulers, these being the descendants, real or supposed, of a ploughman named Premysl. One of the earliest of these was Wenceslas, the hero of the carol, who was murdered in 938 and became Bohemia's patron saint. These rulers were called kings, but it was not until 1088 that this title was formally given to them by the head of the Holy Roman Empire, of which Bohemia formed part.

Ottokar, who became king in 1253, made it a European power, and the throne remained with his descendants until the family died out in 1306. In 1310 the crown, which was in theory elective, was given to John, who was killed at Crécy. He belonged to the Luxembourg family and his son Charles and his grandsons, Wenceslas and Sigismund, were emperors as well as kings of Bohemia for nearly a century. Charles, who reigned from 1346 to 1378, did much for his country's prosperity. In the next reign John Hus appeared in Bohemia and the wars that followed his execution disturbed the country during the reign of Sigismund.

On Sigismund's death in 1437 the close connexion between Bohemia and the Empire was broken. A national hero, George of Poděbrady was elected king in 1457 and his successors were Polish princes. When the last of these, Louis, was killed in battle in 1526 an arrangement made in 1364 came into operation. This provided for the succession of a Hapsburg if the ruling family died out. Consequently, Ferdinand, a brother of Charles V, who had married a sister of Louis, became king.

Henceforward, until 1918, Bohemia was united with Austria and Hungary, and members of the Hapsburg family, rulers of the Empire in which Austria was the leading partner, were also its kings. In theory each one was elected, but it became a formal proceeding only and was finally abandoned in favour of the hereditary principle. In 1919 Bohemia was the centre round which the new state of Czechoslovakia was formed. See Czechoslovakia.

BOHEMIANISM. Term applied specifically to the free and irresponsible mode of life common among students, artists, writers, and actors, and generally to unconventional tastes and habits. When the gipsies first appeared in France in the 15th century, the French, thinking they had come from Bohemia, called them Bobemians. The name was used in France to others who defied the conventions, and was introduced into English by Thackeray in his *Adventures of Philip* (1861).

BOHN, HENRY GEORGE (1796-1884). A British publisher. Son of a German bookseller settled in England, he was born in London, Jan. 4, 1796. In 1831 he started in business in Covent Garden, chiefly as a second-hand bookseller, and in 1841 issued a guinea catalogue of rare books containing over 23,000 entries. In 1846 began the publication of his standard and other libraries of cheap reprints and translations. He died at Twickenham, Aug. 22, 1884.

BOHUN. Name of an English family, deriving from Normandy, which became notable in the 13th and 14th centuries. In 1199 Henry Bohun, a nephew of William the Lion of Scotland, became earl of Hereford and was one of the barons chosen to see that the terms of Magna Carta were observed. A later Bohun won fame as one of the two earls who forced Edward I to confirm the charters in 1297. When Humphrey, earl of Hereford, Essex, and Northampton, died in 1373, the male line became extinct.

BOIL (Lat. *bull*, bubble). Small abscess in the skin due to infection of a sebaceous gland or a hair follicle by pus-producing organisms. In the early inflammatory stages a boil should be treated by hot fomentations or the application of ointments. After a few days it opens and the pus is discharged. Frequent appearance of boils usually indicates unsatisfactory general health.

BOILER (STEAM). A steam boiler is a vessel in which, by the aid of fire, water is

Boiler. Above steam boiler, Lancashire type, for all industrial purposes. F.F. two corrugated furnace flues, with hand-fired coal furnaces; large boilers have sometimes three furnace flues. These flues often have Galloway or other cross tubes to promote water circulation. Fire gases pass along furnace flues into bottom flue, A, divide at B, and return along side flues, C, C, to main flue D, and thence to economiser or chimney. Right, water-tube boiler, Babcock & Wilcox land type, with chain grate mechanical stoker. Coal falls from hopper, H, on to the moving grate and is slowly carried forward till ash drops off at end into ash pit. Fire gases follow course of arrows, being deflected to cross and recross water tubes by fire tile baffles. Water circulation is downwards from back of steam and water drum D, then upwards through water tubes back into drum at B. Sediment settles in mud drum, M, from which it is blown out at intervals. A special form is made for marine use.

converted into steam for driving steam engines and other purposes. The fuel burned is mostly coal, which is now often pulverised. Other fuels used are wood, oil, natural gas, etc. The coal may be hand-fired, or may be fed into the furnace mechanically.

Steam boilers are broadly divided into two classes, fire tube and water tube boilers. In the first the furnace is enclosed in an element of the boiler and the fire gases pass first through a tube or tubes. In the "Cornish" boiler there is one large tube, the furnace flue; in the "Lancashire" two or three; in the "Galloway" two joined to a single larger one containing water circulating tubes. In certain vertical boilers there is one large furnace and a continuing, smaller, flue. In other boilers of this class, called multitubular, the tubes are small and numerous, as in the ordinary locomotive boiler, the Cochran and other upright boilers, and the "Dry-back" and the "Scotch" marine boilers. This class has an outer shell, now nearly always cylindrical, the steam and water container, which encloses all other parts.

In the second class the water is inside the tubes, which are many in number, and the fire gases on the outside, the furnace being enclosed in a fire-brick structure external to the boiler structure proper. This class, which includes the Babcock and Wilcox, Belleville, Stirling, Yarrow, Thornycroft, and Niclausse, can raise steam very quickly, and is largely used where the steam requirements are intermittent and large quantities may be wanted suddenly, as in power stations and in warships. The Yarrow, Thornycroft, and Niclausse are only used for marine work. A special type has lately been built as a locomotive for the L.N.E. Ry.

The power of a boiler depends upon the amount of fuel that can be burned in its furnace in a given time: its efficiency upon the relation between the furnace capacity and the heating surface.

Every steam boiler must have a steam valve, safety valve, water gauge, steam gauge, one or more blow-off cocks, water injector, and feed pump. Board of Trade regulations specify two safety valves, so guarded that they cannot be tampered with.

BOILING POINT. The boiling point of a liquid is commonly associated with the application of heat, as when water is said to boil at 100° C. The boiling point depends, however, on pressure as well as on temperature, and must be distinguished from evaporation. Water can be made to boil at much lower temperatures by removing the atmospheric pressure from its surface. Other liquids boil off into vapour at temperatures below the freezing point of water, such as liquid air; and volatile liquids such as ether boil at temperatures well below that of boiling water. The boiling point of carbon dioxide is -79° C. See Heat

BOIS DE BOULOGNE. Park of Paris. It takes its name from the neighbouring town of Boulogne-sur-Seine, and covers 2,250 acres, the Seine flowing along its S. border. It was given by Napoleon III to Paris in 1853. It contains the racecourses of Auteuil and Longchamps, the Jardin d'Acclimatation (a collection of foreign animals and plants), artificial lakes and waterfalls, restaurants and facilities for boating, an amphitheatre, ruins of an abbey, and a château. See Paris

BOITO, ARRIGO (1842-1918). Italian composer and poet. Born at Padua, Feb. 24, 1842, he studied music at Milan, did some journalistic work in Milan and Paris, and fought under Garibaldi against Austria. In 1868 he produced his long opera *Mefistofele* at Milan; but it was not a success until played

in a shortened form in 1875. He finished another opera, *Nerone* (Nero), in 1912, which was produced at the Scala in 1924. As a poet his verses showed marked originality. He died in Milan, June 10, 1918.

Arrigo Boito,
Italian composer

part of the empires of Persia, Alexander, and Bactria, Bokhara passed into the hands of Chinese, Turks, and others, and the amirate came under the suzerainty of Russia in 1873. In 1920 a Bokharan soviet republic was set up.

The town of Bokhara, the capital of the former amirate, lies on a branch of the river Zerafshan, close to the Transcaspian Ry., and is the chief commercial and religious centre of Central Asia, with numerous mosques and fine bazaars. Its chief industries are the manufacture of cotton, silk, hosiery, leather, and cutlery. The bazaar wares include carpets and carnel lambkins. About 9 m. distant is New Bokhara, the residence of many Russian merchants. See Uzbek and Turcoman.

BOKSBURG. Town and pleasure resort of the Transvaal. It is 15 m. by rail from Johannesburg, being at the eastern end of the rand. In the vicinity are the most productive coal mines in the province, and also gold mines. Pop. 12,144.

BOL, FERDINAND (c. 1610-80). Dutch painter. Born at Dordrecht, he became at Amsterdam in 1640 the pupil of Rembrandt, whose art he endeavoured to emulate. His most celebrated painting is *The Four Regents of the Leper Hospital* (1668), in the town hall at Amsterdam. He is represented in the National Gallery, London, the Louvre, and other European galleries. He died at Amsterdam, July 24, 1680.

BOLAN. Pass on the frontier of Baluchistan, leading from Sibi to Quetta. Traversed by the Bolan river, a military road, and a rly. connecting Jacobabad, on the Indus plain, with the Afghan highlands, the pass is some 60 m. long, and from an entrance 800 ft. high rises to a height of 5,900 ft. at the exit. Bolan is also the name of a district.

BOLAS (Span. bola, ball). Strong rope or cord, with a stone or stones at either end, which the operator whirls in the air and then casts at his quarry in such a manner as to wind round and entangle it. It is used by Patagonians and other S. American tribes.

BOLDO. Aromatic shrub of the Monimiaceae family, mostly found in Chile. The leaves and bark are used in medicine, the bark

Bois de Boulogne. One of the avenues for pedestrians in this great park on the outskirts of Paris

also in tanning. A glucoside known as boldine is extracted from the leaves.

BOLDREWOOD, ROSE. Pseudonym of Thomas Alexander Browne (1826-1915), an

Anglo-Australian novelist. Born in London, Aug. 6, 1826, he went with his parents to Australia in 1830. His classic tale of bush-ranging, *Robbery Under Arms*, ran as a serial in *The Sydney Mail*, 1880, but only secured the recognition due to it after it had been published in book form in London, 1888. His other works include *The Miner's Right* and *The Squatter's Dream*, 1890, and *Old Melbourne Memories*, 1884. He died at South Yarra, Melbourne, March 11, 1915.

BOLE (Gr. bōlos, clod). Highly aluminous and ferruginous tough red clay. Often runny feet in thickness, it is occasionally found between successive flows of basaltic lava, and is due to the weathering and decay of the underlying basaltic rock. Such beds of clay indicate a pause in the volcanic eruptions.

BOLERO. National dance of Spain. Introduced in the latter half of the 19th century, it is performed by two persons to the accompaniment of the castanets or guitar. The term is also used of the air of the dance.

BOLETUS. Large genus of fungi of the order Hymenomycetaceae, and the family Polyporaceae. The species have

Boletus Satanas

a stout central stem and a convex fleshy cap beneath which the spores are produced in vertical tubes packed closely together, instead of on radiating plates or gills as in Agarics. Many are edible.

BOLEYN. English family, its most famous member being Anne, the second wife of Henry VIII. Sir Geoffrey Boleyn, a wealthy merchant, was lord mayor of London in 1457. One of his descendants, Thomas, was made earl of Wiltshire. He was related to the family of Butler, members of which had been earls of Wiltshire. He was the father of Anne and of George, Viscount Rochford, who was put to death two days before his sister. He left no sons and his title became extinct. See Anne Boleyn; Bickling.

BOLINGBROKE AND ST. JOHN, VISCOUNT. English titles borne since 1712 and 1716 by the family of St. John. Two of its early members were Oliver St. John, created Viscount Grandison in 1625, and his nephew John, made a baronet in 1611. The baronetcy passed through the descendants of John St. John to Sir Henry, who, in 1716, was made Viscount St. John. His son was the statesman who, in 1712, had been made Viscount Bolingbroke. By special remainder his father's viscounty of St. John passed to his younger brother, whose son Francis united the two viscounties on Bolingbroke's death in 1751. This title must be distinguished from the barony of St. John of Bletso, held by a distant branch of the same family.

BOLINGBROKE, HENRY ST. JOHN, VISCOUNT (1678-1751). English statesman and writer. The son of Sir Henry St. John, he was born at Battersea, Oct. 1, 1678, and educated at Eton. He became M.P. for Wootton Bassett in 1701, and at once his eloquence brought him to the front. He acted with the Tories, and was made secretary at war in 1704 and secretary of state for foreign affairs in 1710. In 1712 he was created Viscount Bolingbroke, and in 1713 concluded the treaty of Utrecht.

Bolingbroke's plans for a Jacobite restoration were shattered by the sudden death of

Viscount Bolingbroke,
English statesman
Engraving by H. Wallis

the queen in 1714, and he resigned and fled to France. After spending seven years in retirement, Bolingbroke received his pardon in 1723, but through the influence of Walpole he was excluded from the House of Lords, and became the centre of organized opposition to that minister. His later years were spent partly in France and partly at Battersea where he died, Dec. 12, 1751. Among his literary works are his *Letters on the Study and Use of History*, *Letters on the Spirit of Patriotism*, and *The Idea of a Patriot King*, of which the last had its share in forming George III's ideas as to the kingly office. Consult *Life*, W. Sichel, 1901-2.

BOLIVAR, SIMON (1783-1830). Venezuelan patriot, called the Liberator. Born at Caracas, July 2, 1783, he was educated at Madrid. He determined to make his native country an independent republic. His attempt to secure British support for a Venezuelan revolt in 1810 failed, but he was later successful in defeating the Spaniards, and in 1813 was proclaimed dictator. Beaten in 1814, he retired to Cartagena, thence to

Simon Bolivar, Venezuelan patriot

Jamaica and Haiti, rallying the insurgents in the latter island and proclaiming it a republic.

From 1819-21 Bolivar, as dictator of New Granada and Venezuela, now united as Colombia, steadily gained ground, and in 1822 the new republic, with Bolivar as its president, became independent of Spain. Summoned to the assistance of the Peruvians, now in revolt, Bolivar was dictator of Peru, 1824-25. Re-elected president of Colombia in 1826 and 1828, his dictatorship was violently attacked, and in 1829 Venezuela separated from Colombia. Bolivar, driven to resign, laid down his office, and died Dec. 10, 1830.

Bolivar is the name of the largest state of Venezuela, which extends from Colombia to the Atlantic and covers an area of 88,380 sq. m. It produces rubber, drugs, coffee, cocoa, cattle, and gold. Ciudad Bolivar is the capital. Bolivar is also the name of a department in the N. of Colombia, of a small prov. of central Ecuador, and of a silver coin of Venezuela and a gold coin of Bolivia.

BOLIVIA. Republic of S. America. It is bounded N. and E. by Brazil, S. by the Argentine and Paraguay, and W. by Chile and Peru. Estimates of the area vary from about 500,000 sq. m. to over 700,000. The pop. in 1927 was estimated at 2,975,000, of whom over half were Indians. Sucre is the official capital. La Paz the political and commercial capital. Other towns include Cochabamba, Oruro, Potosi, and Santa Cruz. There is no coastline.

Although about three-fifths of Bolivia consists of low alluvial plains, great swamps and undulating forest tracts, the most characteristic, valuable and populous part of the country is the vast central plateau, a bleak, wind-swept region of scanty vegetation, about 500 m. long and 120 m. wide, with an alt. of 12,000 to 13,000 ft. On either side of this the two great chains of the Andes, the Eastern and the Western Cordillera, traverse the country from north to south, containing very high peaks, e.g. Illimani (Sorata) and Illimani. Rivers include the Guaporé, Mamoré, Beni, and Madre de Dios, a tributary of the Beni. Lake Titicaca is the largest lake in S. America.

The country is very rich in minerals, mining being the most important industry. Bolivia produces a quarter of the world's supply of tin. Potosi, once the greatest silver mine in the world, is now worked for tin. Other minerals include antimony, silver, copper, and

lead. Maize, wheat, rice, coffee, and rubber are grown. The llama is the beast of burden. The chief exports are tin and rubber.

Bolivia. Group of typical Indians who are primitive hut-dwellers

thus giving Bolivia an outlet to the sea.

In the 16th century the country was called Bolivia belonged to the Incas. It then became Spanish and under the viceroy of Peru, being called Charcas or Alto Peru. After a long struggle the Spaniards were ousted in 1824, and the country became an independent republic, taking its name from Simon Bolivar. In 1879, with Peru, Bolivia was worsted in a war against Chile, being obliged to surrender some territory when peace was made. There was a serious dispute about boundary land with Brazil in 1903, and another with Paraguay which nearly led to war in 1928.

Bolivia is a member of the League of Nations. The president is elected by direct popular vote for four years. Congress consists of the Senate and the Chamber of Deputies. Each of the two capitals possesses a university. On Sept. 2, 1928, a monetary law came into effect providing for the adoption of a gold standard. The unit of account is the gold boliviano. The silver boliviano, worth 1s. 7½d., is divided into 100 centavos, and 12½ bolivianos represent £1.

BOLLANDISTS. Name given to the body of Jesuit scholars responsible for the preparation of the *Acta Sanctorum* or *Lives of the Saints*. They were named after Jan van Bolland (1596-1665), the first editor. Material had been collected by Heribert Rosweide (1569-1629), and on this Bolland, assisted by Godfrey Henschen, began to work at Antwerp. The first volumes appeared in 1643, and the work was frequently interrupted.

The biographies and stories of the saints in the *Acta* follow the arrangement in the calendar, and by 1794 the series, in 53 volumes, had reached the middle of October. In 1796 the French armies overran the country, and it was not until 1837 that the Bollandists could revive their work. In 1882 a new departure was made, a quarterly journal, the *Analecta Bollandiana*, being issued, and the society really developed into a college for the study of hagiology.

BOLLINGTON. Urban district and market town of Cheshire, 3 m. by rly. N. of Macclesfield on the L.N.E. Rly. The church of S. John the Baptist is in the Early English style. Silk and cotton are manufactured, and stone is quarried. Market day, Fri. Pop. 5,094.

BOLLWORM. Caterpillar pest of plants, especially of cotton. It attacks the boll or seed-pod. The most destructive, the larva of the moth *Heliothis armigera*, is a serious cotton pest, and also attacks Indian corn, tomatoes, and other crops.

BOLO, PAUL (d. 1918).

French adventurer. Born at Réunion, he lived by his wits in various parts of the world. In Feb. 1915, having been made pasha by Abbas Hilmi, ex-khedive of Egypt, he proposed to the latter that money should be obtained from Germany to finance a press campaign for peace in France. In 1915 and 1916 Bolo travelled in America, and it was proved that during that period he received over £300,000 from German sources. Arrested in Paris, Sept. 28, 1917, and brought to trial Feb. 4, 1918, he was shot April 17.

Paul Bolo, French adventurer

Bologna. Torre Asinelli, a leaning tower built of brick in 1109

BOLOGNA (anc. Bononia). City of Italy, capital of the prov. of Bologna. On the rivers Reno and Savena, it is a junction 134 m. by rly. S.E. of Milan. The town is intersected by the Reno Canal.

Bolivia. The third largest country of South America, with the great Andine plateau on the west and low-lying savannah eastwards

Of its many churches, S. Stefano is composed of eight different buildings, the earliest, the former cathedral, dating from the 4th century.

Bologna is the seat of an archbishop; its cathedral of S. Peter is modern. S. Petronio, the largest church, dates from 1390. S. Francesco, 1246-60, is a fine Gothic church with brick bell-tower. Of the leaning towers, that of Asinelli is 320 ft. high and 4 ft. out of the perpendicular; the Torre Garisenda is 160 ft. high and has a 9 ft. inclination. It is a busy industrial city, its establishments including printing and lithographic works.

The university, founded in the 11th century, was only housed in a special building in 1562. It was noted for jurisprudence in the 11th and anatomy in the 14th century. The Academy of Fine Arts has valuable examples of the Bolognese school.

BOLOMETER (Gr. bole, throw, beam; metron, measure). Instrument for measuring radiant heat, e.g. that of the sun. If a body absorbs radiation the energy is converted into heat. No body entirely absorbs all radiant energy, but a surface coated with lamp-black absorbs nearly all. Langley's bolometer, invented in 1881, consisted essentially of a strip of blackened metal connected with a Wheatstone's bridge, used for measuring electrical resistance. When the temperature of the strip of blackened metal rises, as radiant heat is absorbed, the electrical resistance rises; and this increase of resistance can be ascertained by a galvanometer. A change of temperature equivalent to 100°C can be detected.

BOLSENA (anc. Volsinii). Town of Italy. On the shore of the lake of Bolsena, 9 m. S.W. of Orvieto, its church was the scene of the so-called Miracle of Bolsen, 1263, commemorated in the Corpus Christi festival, in Raphael's fresco, and in the founding of Orvieto cathedral. The miracle was attributed to the incredulity of a priest about the doctrine of transubstantiation. Its truth, so it was said, was proved when drops of blood appeared on the Host. Pop. about 3,500.

BOLSHEVISM. Term adopted to express the views and government of the party called Bolsheviki in Russia. The word is derived from a root meaning "great." The Bolsheviki constitute one of the three branches—social democrats, social revolutionaries, and extremists (Bolsheviki)—which arose out of the old Socialist party, and are so called because at one of the Socialist conferences held about 1905 they were in the majority. The opposite term is men'sheviki.

meaning those in a minority.

Lenin, who with Trotsky was the leader of the movement, declared that terrorism was necessary to carry out his principles, and after the revolution in Oct., 1917, the Bolsheviks began a systematic campaign of destruction, particularly directed against the capitalistic and bureaucratic machinery of the tsarist regime as continued under the Provisional government. They transformed the army from an imperial into a proletarian institution to "safeguard the revolution" and to fight western intervention, as well as the "dark forces" in Russia itself, and this resulted in the atrocities of the Red and White Terrors, the natural result of the work of the Soviets. The Bolsheviks proclaimed that they had solved the land problem, the land having automatically reverted to the peasantry. The church was separated from the state, and the banks were nationalised to suppress exploitation by the forces of capital. One of the doctrines of Lenin was the total destruction of the economic system and of money as the means of exchange. That is why paper

money was so plentiful in Bolshevik Russia. The problem consequent upon the lack of production, still, however, remained to be solved, and this was the chief cause of Russia's condition of famine and impotence.

Bolshevist foreign propaganda, directed by Carl Radek, was a highly efficient and widespread organization, and it was probably due to this that there was so much unrest among the workers in Western Europe, the British Dominions, and even in America. In Hungary an attempt to set up a Bolshevik state had a brief success under Bela Kun. See Lenin; Russia; Soviet; Trotsky; consult also Bolshevism, H. V. Keeling, 1919.

BOLSOVER. Urban district and parish of Derbyshire. It stands 6 m. E. of Chesterfield, on the L.N.E. and L.M.S. Rlys. It has a Norman church and the ruins of a castle. There are large coal mines in the neighbourhood. Pop. 11,481.

BOLT HEAD. Headland on the S. coast of Devonshire, to the W. of the Salcombe estuary. It has a wireless station. In 1928 it became the property of the National Trust. It has an altitude of 420 ft.

BOLTON. County borough of Lancashire. It is 196 m. by rly. N.W. of London, and is served by the L.M.S. Rly. and has canal communication with various places. Bolton is one of the oldest and most important centres of the cotton industry. Besides the manufacture of muslins, fine calicoes, dimities, quiltings, etc., it has large dye-works, bleaching and paper mills, foundries, and chemical, steel, and iron works. Coal is worked near by.

Although an old town, Bolton presents a modern appearance, most of its buildings being of recent construction. They include a town hall, the art and natural history museums, the market hall, and several public libraries. The grammar school was founded in 1641. A comprehensive scheme of town planning has been put in hand. Bolton was incorporated in 1838, and since 1832 it has returned two members to Parliament. Market days Mon. and Sat. Pop. 178,300.

BOLTON, DUKE OF. English title held by the family of Paulet or Powlett from 1689 to 1794. It was first given to Charles Powlett, marquess of Winchester, for his services in

promoting the Revolution of 1688. The 3rd duke married the singer, Lavinia Fenton, and when the 6th duke died in 1794 the title became extinct. The marquessate of Winchester descended to a kinsman, George Paulet, whose heirs still possess it.

BOLTON ABBEY. Village of Yorkshire (W.R.), 22 m. N.W. of Leeds. Bolton Priory (often misnamed Bolton Abbey) was founded at Embsay in 1121 and transferred to its present site in 1150. The remains, beautifully situated near the river Wharfe, here crossed by a 14th century bridge, include the nave, now the parish church, and ruins of the choir and transepts. It is a seat of the duke of Devonshire. Pop. 186.

Bolton-upon-Dearne is an urban district of Yorkshire (W.R.). It is on the Dearne, 7 m. from Rotherham, with stations on the L.M.S. and L.N.E. Rlys. Pop. 11,960.

BOLTON WANDERERS. Association football club. Founded in 1887, it soon became a professional organization and a leading member of the Football League. In 1923 and 1926 the Wanderers won the Association Cup. They won it again in 1929 by beating Portsmouth at Wembley.

BOMA or **M'BOMA**. Former capital of the Belgian Congo. On the N. bank of the river Congo and connected with Tshela (73 m.) by the Mayumbe Rly, Boma is a port of entry. It carries on a large export trade in bananas. There is a postal air service between Boma and Elizabethville. Pop. about 6,000.

Bolton. The town hall, a fine building with a classical façade, opened in 1873

BOMB (Gr. bombos, a deep sound). Term for certain projectiles or missiles containing an explosive or other charge designed to burst on reaching their objective. It was probably first used to indicate projectiles for use from bombardiers (early cannon), later to define the projectiles fired by mortars as distinct from the shell fired by guns. In this navy small two-masted vessels known as bomb-ketches were used for attacking shore positions, and carried heavy mortars for the high-angle discharge of bombs. To-day the word is used popularly for grenades, i.e. explosive missiles thrown by hand, and for explosive or incendiary missiles dropped from aircraft. In 1914 British airmen used 20 lb. bombs, but at the end of the war bombs weighing as much as 3,000 lbs. were in use. Bombs are generally of stream-line shape, with a vaned tail, which is provided to ensure a vertical fall. See Grenade.

BOMB THROWING. Bomb throwing is a method of attack and defence in which explosive projectiles are hurled at the enemy at comparatively short range. It developed during the Great War to a high pitch of efficiency, increasing numbers of men being trained as more ammunition became available, while one officer, three N.C.O.'s and 30 men formed a bombing section attached to each

Bolshevism. Souvenir of the revolution of 1917-18. The names of the Bolshevik leaders from left to right are: Top row, Rykov, Radek, Pokrowsky, Kamenev. Middle row, Trotsky, Lenin, Sverdlov. Bottom row, Encharin, Zinoviyev, Krylenko. Mme. Kollontai. Lunacharsky

battalion. Various hand grenades were evolved, and these could be thrown 40 or 50 yds. with a motion like overhand bowling. To increase the range of these missiles, arrangements were made for projecting them from the ordinary military rifle. Trench artillery was gradually evolved, and a range of 2,000 or 3,000 yds. was attained.

Bomb. Modern type of high explosive aircraft bomb. Royal Air Force Official. Crown copyright reserved.

BOMBA. Nickname given to Ferdinand II, king of the Two Sicilies. The word, an Italian one meaning a bomb, was applied to him because he bombarded the cities of his

kingdom in 1490. See Ferdinand II.

BOMBARDIER. Lowest grade of N.C.O. in the British artillery. He is so called because in former times he handled the bombard, the name by which small cannon were designated.

BOMBARDON. Brass instrument of bass compass used in military and brass bands. One of the Saxhorn family of instruments with wide conical bore, it is commonly used in three pitches, F, E flat, and low B flat. It possesses as open notes the usual Harmonic Scale, the instrument in F giving the following series:

the Arab stables in the Bhendi Bazaar are to be seen some of the finest horses in the East. At Malabar Point is Government House. Between Malabar and Camballa Hills rise the five Towers of Silence, where the Parsis deposit their dead.

Bombay is served by the Great Indian Peninsula Railway, with its terminus at Victoria Station and branch lines to the docks; and by the Bombay, Baroda and Central India Railway, running from Colaba station northwards along the coast of the mainland through Surat. Steamship connexion is furnished by all the well-known lines plying in Eastern waters. The Port Trust, founded in 1873, controls the port. Bombay is the great cotton market of Western India. Dyeing, tanning, and metal work are among the prominent trades, and there is a large export trade.

BOMBAY DUCK. Term applied to the bunnial (*Harporodon ncherens*), a small fish of the Indian and China seas. Salted and dried, it is used in a crumbed form as an accompaniment for curry. Bombay is a centre of trade for the dried fish. See illus. below.

BONA or **BONN.** Seaport and naval station of Algeria. At the mouth of the Seybouse river, 220 m. by rly. W. of Tunis, it has a cathedral and barracks. There are inner and outer harbours. It exports phosphates and other minerals, cork, esparto, barley, and wool, and manufactures tapestry and leather goods. It is connected with Marseilles by cable and steamer, and by rly. with other parts of Algeria. Close by is the ruined city of Hippo Regius. Pop. 51,895.

BONA DEA (Lat. good goddess). Roman divinity. A goddess of fertility, her cult was probably borrowed from that of the Greek Demeter (Ceres). Two festivals were held in her honour, one on May 1, the other on Dec. 3-4. Vestal virgins performed the rites, and no man was allowed to be present. Great scandal was caused (62 B.C.) by Publius Clodius, who secured admission by disguising himself as a woman. Bona Dea is often identified with Fauna, Maia, and Ops, all of whom were connected with rural pursuits.

BONA FIDE. Latin phrase meaning in good faith. Chiefly a legal term, it implies that a contract or undertaking of any kind has been entered into without any fraud or misrepresentation. If this is not so there is a case for repudiating the engagement. In certain Acts of Parliament it is expressly stated that a thing is deemed to have been done in good faith when it was done honestly, whether negligently or not.

BONANZA. Spanish and Portuguese word meaning fair weather at sea or prosperity generally. It found its way into English through the miners on the Pacific coast of America, who applied it to a very rich body of ore in a mine. Hence the famous silver deposits of the Comstock Mine in Nevada, U.S.A., were called the Bonanza Mines. A number of American towns are called simply Bonanza.

BONAPARTE or **BUONAPARTE.** Name of the Corsican family to which the great Napo-

leon belonged. Of Italian origin, its connexion with Corsica began early in the 16th century, when Francesco Bonaparte settled there.

Carlo Bonaparte, a descendant of Francesco and father of Napoleon, was an official in the

Bombay. 1. Clock tower of the University Library; it has an octagonal lantern spire. 2. Municipal buildings, a blend of Gothic and Oriental styles.

Canino. His younger son became a cardinal. Lucien's second son, Louis Lucien (1813-91), an authority on the Basque language, was a deputy under the Second Republic.

Louis Bonaparte (1778-1846), king of Holland, was with his brother Napoleon in Italy and Egypt, and was placed on the throne of Holland in 1806. After four years he lost the emperor's favour and fled. He married Hortense Beauharnais, daughter of Josephine, and was the father of Napoleon III.

Jerome Bonaparte (1784-1860), the emperor's youngest brother, was chosen king of Westphalia in 1807 and retained the throne for six years, taking part in the campaign in Russia. Later, under his nephew, Napoleon III, he became a marshal and president of the Senate. The American Bonapartes are descended from Jerome's early marriage with Miss Elizabeth Patterson of Baltimore. Later he married Catherine of Württemberg and became the father of Napoleon Joseph Charles Paul Bonaparte (1822-91), nicknamed Plon-Plon. His elder son, Napoleon Victor (1862-1926), was expelled from France in 1886; in 1910 he married Clementine, princess of Belgium. Jerome's younger son, Louis Napoleon (b. 1864), succeeded as head of the Bonaparte family in 1926. See France; Napoleon I; Napoleon III.

BONAR, HORATIUS (1808-89). Scottish hymn writer. Born in Edinburgh, Dec. 19, 1808, he was minister at Leith and Kelso, and at the disruption in 1843 was one of the founders of the Free Church. He became minister of the Chalmers Memorial church at

Edinburgh in 1866, and in 1883 was moderator of the General Assembly. He edited *The Christian Treasury* and other religious periodicals, and was the author of many popular hymns. He died July 31, 1889.

BONAVENTURE, GIOVANNI FIDANZA (1221-74). Italian saint. He was born at Bagnorea, Tuscany, and about 1240 entered the Franciscan order, of which he was general from 1257-74. In 1273 Bonaventure, who in 1265 had refused the bishopric of York, was made cardinal bishop of Albano. He died at the council of Lyons, July 15, 1274, and was canonised by pope Sixtus IV in 1482. His festal is on July 14. Bonaventure wrote on dogma and on mysticism, and nearly 500 of his sermons are extant.

Horatius Bonar, Scottish hymn writer

BONA VISTA. Cape, bay, and town in the E. of Newfoundland. The cape forms the S.E. limit of the bay, which islands and rocks render difficult of navigation. The town, 75 m. N. of St. John's, with which it is connected by rly., is a port of entry and one of the oldest settlements in the island. Fishing is the chief industry. Pop. 4,052.

BOND. In business, a written undertaking to pay a sum of money or to perform a certain contract. Bonds are usually sealed, and in this case the statute of limitations does not apply to them until 20 years have elapsed.

Governments, corporations and companies sometimes raise money by the issue of bonds. Such are the Exchequer Bonds and National War Bonds issued by the British Government. Gold bonds are bonds that must be repaid in gold; drawn bonds are bonds drawn for repayment, a kind of lottery; and bearer bonds are bonds transferable without registration.

Persons in responsible positions are sometimes asked to give a bond, or guarantee, for a certain amount, in order to protect the employer against possible loss. (See Guarantee.)

A bonded warehouse is a place where goods that have not yet paid customs duties are stored. The proprietor must give a bond for £1,000 and find sureties that he will not make any improper use of the privilege—one that dates from 1802. See Customs.

BOND, SIR ROBERT (1857-1927). Newfoundland statesman. Born at St. John's,

Sir Robert Bond, Newfoundland politician. Elliott & Fry

Newfoundland, February 25, 1857, he entered public life in 1882 as a member of the legislative assembly, becoming speaker in 1884. Made colonial secretary in 1889 and premier in 1900, his chief work was the negotiation of reciprocity treaties with the U.S.A. in 1890 and 1902. He successfully opposed a union with Canada. From 1909-14, when he retired from public life, he was leader of the Liberal opposition in the assembly. Knighted 1901, and made privy councillor 1902, he died Mar. 16, 1927.

BONDFIELD, MARGARET GRACE (b. 1873). British politician. From 1898-1903, after she had worked in a shop, she was assistant secretary of the shop assistants' union. In 1921 she was appointed secretary of the national union of women workers, and her efforts in

Margaret Bondfield, British politician

Geneva and elsewhere to improve the labour conditions for industrial women made her prominent in the labour movement. In 1923 Miss Bondfield was elected M.P. for Northampton. She lost her seat in 1924, but was elected for the Wallsend division in 1926, and again in 1929. In 1924 she was parliamentary secretary to the Ministry of Labour, and in 1929 was chosen Minister of Labour, being the first woman to sit in a British Cabinet.

BOND STREET. London thoroughfare, the E. boundary of Mayfair. A fashionable shopping centre, it is divided into two parts. Old Bond Street, dating from 1686, runs N. out of Piccadilly, while New Bond Street, built later, is an extension still farther N. to Oxford Street. The street was named after its builder, Sir John Bond, who was Queen Henrietta Maria's comptroller.

BONDU. State of Senegal, French W. Africa. It lies S. of the Senegal river and N. of the Gambia river, and produces cereals, tobacco, cotton, in ligo, gold, and iron. The king of Bondu placed his state under French administration in 1845, and it was annexed by France in 1858. Bulihani, the capital, is on the Falemé river. The inhabitants are Fulas, professing Mahomedanism. See Senegal.

BONE. The hard part of the animal body or skeleton. When dried and freed from water, bone consists of two main constituents, one earthy, consisting largely of lime, and the other animal. Two types of structure are recognized: dense, compact bone, which forms the outer layers, and cancellous or spongy bone, found in the interior. The relative amounts of these vary in different bones and parts of a bone.

Microscopically, the structure of compact and spongy bone is essentially the same. A thin section of bone shows numerous small holes, the cut ends of the Haversian canals, each surrounded by concentric layers, in which are more or less spindle-shaped spaces termed lacunae. During life the Haversian canals are occupied by blood-vessels, and the lacunae by bone cells. The surfaces of bone are covered with a strong, fibrous membrane, the periosteum, the blood vessels of which communicate with those in the interior of the bone through the Haversian canals. Long bones also receive blood through a main nutrient artery.

Bone is developed in two ways: (1) by direct formation within a membrane which afterwards forms the periosteum; and (2) by ossification of cartilage, of which the bone is first formed. After their formation bones grow by deposition of layers beneath the periosteum.

Bone grafting is the operation of replacing shattered or destroyed bone by a graft of healthy, living bone. The best results are obtained when the new bone is taken from the patient himself.

Bone-setting, in the strict sense, consists in placing the parts of a broken bone in position for uniting. Popularly, the term is applied to manipulative surgery, such as the adjustment of deranged joints and displaced cartilages.

DISEASES OF THE BONE. Inflammation of the periosteum (periostitis) and of the bony tissues is most frequently due to injury. When severe and accompanied by suppuration it may lead to necrosis, or death of a part of the bone. Tuberculosis may affect any of the bones, producing a condition termed caries. Various forms of tumour may grow from bone, of which the most serious is sarcoma.

BONE, HENRY (1755-1834). English enamel painter. Born at Truro and apprenticed to the Plymouth Porcelain Works, Bone came to London, where he found employment in enamelling watches and fans. In 1801 he was appointed enamel painter to George III and elected A.R.A., and ten years later R.A. His greatest achievement was the series of 85

Portraits of Illustrious Englishmen, after originals. He died Dec. 17, 1834.

BONE, MURHEAD (b. 1876). British etcher and lithographer. Born at Glasgow, he first attracted attention with black-and-white work in *The Scots Pictorial*, in 1897. Four years later he came to London, where he helped to found the Society of Twelve and became a member of the New English Art Club. His etchings of buildings, docks, wharfs, all symbols of commercial life, established his reputation. In the Great War he held an official appointment with the British army and produced pictures of the western front.

BONE IMPLEMENTS. Tools and weapons made of bone, especially in primitive culture. Generically, the term embraces also horns and teeth, including ivory. Awns, shaft-

Bone Implements. 1. Needles. 2, 3, and 4. Harpoons. 5. Spear-thrower. 6 and 7. Fish hook and method of attachment.

straighteners and spear-throwers—with engraved decoration—harpoons, eyed needles, and daggers mark the course of development in Palaeolithic Europe. Some types persisted through the Azilian into the Neolithic age, during which many others were invented. Combs occur in Danish kitchen-middens, and elsewhere are found chisels, hammers, picks, axe sockets, arm guards, spoons, pendants, and cheek pieces for horse-bits. During the early metal age bone was adapted to sword grips, tool handles, box panels and the like. In early Britain bone and antler objects are numerous in earthworks, crannogs and brochs. Many primal types survive, especially among peoples who preserve the stone-age culture, such as Bushmen and American Indians.

BONHEUR, ROSALIE OR ROSA (1822-99). French painter. Born at Bordeaux, she first exhibited at the Salon in 1841, and her success

Rosa Bonheur, French painter

was won by her animal painting. Her best known works include the famous Horse Fair (a replica of which is in the National Gallery), Ploughing in the Nivernais, Hay-making in Auvergne, The Three Musketeers, and Returning to Pasture. In 1894 the officer's cross of the Legion of Honour was conferred upon her, this being an unprecedented honour for a woman. She died in Paris, May 26, 1899.

BONI. Native state of Celebes, Dutch East Indies. In the S.W. extension of the island, covering an area of about 1,000 sq. m., it produces rice, sugar, coffee, tobacco, sago, and cassia. The people, mainly Bugis, are adepts in metal work. Boni, the capital, is on

the coast. The Gulf of Boni is an inlet formed by the southern peninsulas of the island Pop. (state) about 70,000.

BONI, GIACOMO (1859-1925). Italian archaeologist. Born at Venice, April 25, 1859 he became superintendent of the Venice Academy architectural school, then inspector of antiquities, and in 1898 director of excavations in the Roman Forum and on the Palatine hill. Under his supervision S. Mark's campanile at Venice was rebuilt. He died July 7, 1925.

BONIFACE (680-755). English saint and apostle of Germany. Born at Kinton or Crediton, Devonshire, his original name being Winfrid or Winfrith, he began, in 716, the evangelisation of the Frisians and the German tribes, and then, summoned to Rome, was consecrated bishop in 723 and archbishop in 732. In 741 he was appointed by the pope to reorganize the Frankish church, and worked as both missionary and reformer. From 746-54 he was archbishop of Mainz, and then returned to his missionary work. He was massacred by pagans, June 5, 755, near Dokkum, in Frisia. He founded the famous abbey of Fulda.

BONIFACE. Name of nine popes of whom only two are noteworthy.

Boniface VIII (c. 1230-1303) was pope from 1294 to 1303. Born at Anagni, Italy, his name being Benedetto Gaetano, or Gaetani, he became a doctor of law, and, created a cardinal in 1281, served as papal legate in France and Sicily. Elected to the papacy in 1294.

on the resignation of Celestine V, his pontificate was characterised by vigorous insistence on the papal authority in civil no less than in ecclesiastical matters. He was taken prisoner by the French, at Anagni, Sept. 7, 1303, but was freed by the populace and died in Rome, Oct. 11 following.

Boniface IX (d. 1404) was pope from 1389 to 1404. Born at Naples, his name was Pietro Tomacelli. He succeeded Urban VI as pope at Rome during Clement VII's pontificate at Avignon, and while his private life was without reproach, financial difficulties drove him to dispose of benefices and dispensations to the highest bidder. He died Oct. 1, 1404.

BONIFACIO. Town on the S. coast of Corsica. It is 87 m. S.E. of Ajaccio and overlooks the strait of Bonifacio between Corsica and Sardinia. Picturesquely situated on a peninsula sheltering a fine harbour, it has a citadel, a cathedral, and a Templars' Church. It exports olive oil, wine, cereals, and cork, and has coral fisheries. Pop. about 10,000.

BONIN (Japanese, Ogasawarajima). Group of 20 volcanic islands in the N. Pacific. They lie N. of the Tropic of Cancer, between Japan and the Ladrone Islands, and have an area of 27 sq. m. They became a British possession in 1827, reverting to the Japanese in 1876. Few of the islands are inhabited, the total population being about 4,000. They produce sugar and indigo and afford turtle and shark fishing. For many years they served as a Japanese penal settlement. Port Lloyd, on Chichijima, is the chief harbour.

BONITO (Thynnus pelamys). Fish belonging to the tunny group, but smaller and more slender than the common tunny. It is usually about a yard in length, is found in most seas, and follows ships for the refuse thrown overboard. See illus. p. 280.

Boniface IX. Pope from 1389 to 1404. Statue in Rome

BONIVARD, FRANÇOIS DE (1493-1570). French priest, historian, and scholar immortalised as the original of Byron's Prisoner of Chillon. Born at Seyssel in Savoy, he was made prior of a Cluniac house near Geneva. He became involved as a partisan of Geneva in a dispute with the duke of Savoy who imprisoned him twice, the second time in an underground dungeon at Chillon, where he spent four years, and from which he was freed by his Swiss friends. Bonivard's best known work is *Chroniques de Genève*, written 1551, but first printed in 1831.

BON MARCHÉ. French term meaning good bargain and taken as a name by various drapery businesses. The chief is the large store in Paris, interesting because it has been successfully conducted on en-operative lines.

BONN. Town of Prussia. On the left bank of the Rhine about 15 m. from Cologne in the Rhine prov., Bonn is a residential town. It

Bonito. A fish of the tunny group, found in the Mediterranean. See p. 279

Applied in Tudor times in Britain to flat caps worn by men, and still used for the velvet cap lining a crown or coronet, the word is chiefly used for women's headdress, though in Scotland it still refers to woolen caps fitting closely over the head and ears. The bonnet of the Highlanders is perpetuated in the Glengarry as worn by the Scottish regiments in the British army.

The bonnet rouge, called also the cap of liberty, was worn by adherents of the French Revolution as a party sign.

The word bonnet is also used for a piece fastened on to a ship's sail, and for the decoy of a gambler. In engineering it is the term for the metal covering surrounding an engine or part of it.

A rare gold coin issued in Scotland in the reign of James V. about 1530 is called a bonnet piece because on it the king's head is represented as covered with a bonnet.

BONNINGTON or **BONINGTON**, RICHARD PANKES (1801-28). English painter. Born at Arnold near Nottingham, he studied in Paris. His training was modified by visits to England, where he came under Constable's influence, which he transmitted to the Barbizon painters. He died in London, Sept. 23, 1828. His subjects were landscapes and marine ones, generally with figures.

R. P. Bonington, English painter

BONNY. Town of Nigeria. On an island at the mouth of the Bonny river estuary, 80 m. E. of the Niger, it lies low and is unhealthy. It was for centuries a centre of the slave trade. Pop. 6,500.

The Bonny river, an arm of the Niger delta, flows into the bight of Biafra.

BONOMI, GIUSEPPE (1739-1808). Anglo-Italian architect. Born at Rome, Jan. 19, 1739, he settled in England in 1767, and was an active exponent of classical architecture. He was elected A.R.A., 1789, and died in London, March 9, 1808.

His son, also Giuseppe Bonomi (1796-1878), was director of the Soano Museum, London.

BONSPIEL (Dutch bond, society; spiel, game). Curling match or series of matches between two rival districts or parishes. Ordinary matches between members of the same club are known as spicls. See Curling.

BONUS (Lat. good). Word used in industrial and commercial circles for an occasional and gratuitous addition to wages, salaries, or dividends. It does not constitute a precedent. Bonuses were much in evidence during the Great War, being paid to British workers of almost every class to meet the extra cost of living. Since 1917 a bonus, varying with the cost of living, has been paid to civil servants and other public officials.

BONZE (Jap. bonzo, Chin. fan seng, monk). Term applied to a priest or, more correctly, to a monk of a bonzery, or Buddhist monastery, in China, Japan, and other parts of the East. Bonzes shave their heads, and wear robes with long and wide sleeves. Some earn a livelihood by teaching, and others subsist on charity.

BOOBY (Span. hobo, fool). Large sea bird of the genus *Sula*, which includes also the gannets. They are said to be so called from the ease with which they can be caught. They inhabit the S. seas, and differ from the gannets of the N. by having a bare throat.

BOOK. A substantial number of printed pages bound together in bulk. The earliest

type of primitive book exists in the form of Chaldaean inscribed tiles, 7,000 years old. Another ancient type was the Egyptian papyrus roll, made from the pith of the reed from which come the word paper, and put in a roller like a map.

The next development came when the papyrus sheet gave way to parchment and vellum skins, and the pen was used instead of the style. Books were thus produced on folded parchment in the early medieval religious houses—for long the only publishers. The folding of the parchment or vellum into four-fold or other convenient sizes of leaf helped to decide the traditional format and make-up of the ordinary book.

The printing press, which began its work about 1450, greatly increased the range of book production. Caxton was himself not only a printer, but a book-maker, translator, and redactor, a hook purveyor and publisher. His idea of a book was a tall folio, double columned like his Golden Legend, with good dark Gothic type. At first there was no title page, and the colophon gave the date, place and printer's name. The first English title-page appeared about 1482-86. Towards the end of the next century the small quarto came freely into use for smaller books. Meanwhile, abroad, the Aldine editions, first printed in Venice, 1494, had shown how good the small book could be in format. See Bible.

BOOK COLLECTING. Practice of collecting books which for one reason or another, are of exceptional interest, and at the same time so scarce as to be difficult to obtain. Some books have a value as marking a stage in the history of printing. Among these is the famous Gutenberg or Mazarin Bible, the first printed Bible (1456), which until 1919 held the record for the highest price for a single printed book in Britain, viz. £3,800, given by Quaritch at Sotheby's, Nov. 20, 1911. But a copy of Shakespeare's *Venus and Adonis*, from Britwell Court, fetched £15,000 at Sotheby's in 1919. High prices are also paid for some of the productions of the first English printer, William Caxton.

The collection of scarce first editions probably absorbs the attention of most connoisseurs. Another class of book that commands high prices in the auction rooms is technically known as "association books," owing their value to the eminence of their original owner, or to the fact that they are inscribed presentation copies.

BOOKBINDING. Although the origin of bookbinding is uncertain, the art is one of great antiquity. Bookbinding proper began when the sheets were first folded to form leaves of uniform size, sewn together, and fastened between covers.

In the earliest examples still preserved the covers were made of wood, usually covered with leather ornamented with various designs. The work, like that of manuscript, was entirely in the hands of the various religious orders, who lavished great care upon it. In the 12th, 13th, and 14th centuries books were frequently bound in ivory or gem-studded metal. In the 18th century the binding of cheaper books was usually in millboard covered with coloured paper. Even now the majority of French and Italian books are issued in paper covers; but in Great Britain the ordinary binding is cloth. To-day almost all the work formerly laboriously done by hand is accomplished by machinery.

BOOK CLUB. This is a club formed (1) by groups of individuals for the purchase of new books, such being very common before the days of circulating libraries and the cheap press; and (2) for the study and printing of rare books and MSS. The last named, such as the Camden Society and the Hakluyt Society, are often more accurately described as publishing societies.

Bonn. Market-place and 18th century Town Hall. The town was once a Roman military settlement

has a fine embankment, and a handsome bridge crosses the river to Beuel, the industrial district. There are a number of manufactures, and there is a transit trade along the Rhine. Its most interesting building is the minster, the earlier parts of which date from the 11th and 12th centuries; it was restored in the 19th century, and is famous for its great central tower. Among other churches is the Kreuzberg, once a famous place of pilgrimage. The house in which Beethoven was born contains relics of the musician. The university was founded in 1818. Pop. 90,249.

BONNAT, LÉON JOSEPH FLORENTIN (1833-1922). French painter. He was born at Bayonne, and studied in Spain, France, and Italy, after 1870 devoting himself to portraiture. Thiers, Renan, Presidents Carnot and Felix Faure, and Victor Hugo sat to him. He died on Sept. 7, 1922.

BONNER, EDMUND (c. 1500-69). English prelate. In 1529 he became chaplain to Cardinal Wolsey. He was employed by Henry VIII as his envoy at Rome in 1532, in connexion with the divorce from Catherine of Aragon, and was sent on other embassies. Bonner was made bishop of Hereford in 1538 and bishop of London in 1539. He was imprisoned from 1549-53 and deprived of his bishopric for failing to enforce the use of the new Prayer Book. Restored by Mary in 1554, he was partly responsible for the burning of the Protestant martyrs. After the accession of Elizabeth he refused to take the oath of supremacy, and was imprisoned in the Marshalsea Prison, where he died, Sept. 5, 1569.

BONNET (late Lat. honnetta, kind of fabric). Covering for the head, distinguished from the hat by being brimless. It is a development of the Roman pileus. The bonnet mentioned in the Bible (Ex. 29) was a kind of turban.

BOOKKEEPING. Method of recording business transactions in money or money's worth so that an exact statement of their result is obtainable at any time, and the effect and nature of the record is clearly understood. Only one system—that of double entry—has become recognized as being in all respects satisfactory. This is the recording of each transaction into at least two accounts, one the debtor and the other the creditor.

Transactions are first recorded in a book of primary entry, whence they are transferred or posted periodically to the book of final entry—the ledger. The most usual books are: (1) The cash book, in which are entered cash and bank transactions. (2) The purchases book, a record of all purchases on credit. (3) The sales book, a record of all sales other than cash sales. (4) The journal, for all adjustments, or what may be described as miscellaneous transactions. In certain businesses other books of first entry to suit special needs are used.

BOOKMAKER. Professional betting man who offers certain odds on races, more particularly in connexion with horse races. Laying the odds is termed making a book. The man who accepts the odds is called the backer. Since 1926 it has been necessary for bookmakers in Great Britain to be licensed. A licence costs £10 a year, and the bookmaker must also pay £40 a year for each telephone used for business purposes. See Betting.

BOOK OF THE DEAD. Ancient Egyptian work. This Book of Coming Forth by Day (Per-em-Hru) comprises magical formulas, hymns to Osiris, and directions for the soul's journey through the underworld of Amenti. It is usually written on papyrus and often magnificently illustrated, the finest being the Ani papyrus. Selected chapters were written on mummy-wrappings, heart-scarabs, and amulets. No complete copy is extant, the longest being one of 165 chapters, now in Turin, of the Ptolemaic age. See Amenti; Ani; also illus. p. 90.

BOOK PLATE. Label, printed or engraved, intended to proclaim the ownership of a book when affixed to the board or fly-leaf. It is also known as ex libris. The simplest form of plate gives merely the owner's name in type or autograph, but armorial bearings were widely affected until recently, when the designer was allowed a free hand.

BOOKSELLING. Trade formerly one with publishing. Organized bookselling began in Greece about 500 B.C., and the trade flourished in Rome. In England the monks were the first booksellers. In the 19th century bookselling became distinct from publishing.

The majority of booksellers get their copies from the big distributing houses or wholesale agents, the published price and the price at which the book is supplied by the publisher being graded to allow the bookseller or agent a profit. Some booksellers deal principally in remainders, books sold en bloc by the publishers when demand for them at their issued price has proved unremunerative or has virtually ceased. Secondhand booksellers deal chiefly in old books. See Publishing; consult also *The Romance of Bookselling*, F. A. Mumby, 1910.

BOOKWORM. Name for the larva of a small beetle of the genus *Anobium*. Some bore holes in all directions through a book, others confine their attentions to the covers. Affected volumes should be treated with benzine and placed in a closed box for a few days, and binders of valuable books should mix oil of turpentine with the paste.

BOOM (Dutch beam, pole). Barrier in a harbour or river. The use of booms for the defence of harbours against naval attack is very ancient. They consist usually of heavy

balks of timber held together by chains and wire hawsers, and stretching from side to side of the entrance to the defended harbour. Modern booms are surmounted by rows of outward-curving iron spikes, and the incursion of submarines is prevented by suspending steel nets of wide mesh reaching the bottom and sometimes dotted with contact mines.

The boom in sailing ships is a pole or spar run out from the lower part of the mast to hold a sail, such a spar being known as the jib-boom, studding-sail-boom, etc., according to position. Loosely, any projecting spar is called a boom. In stock exchange circles a sudden burst of activity is called a boom.

BOOMERANG. Hunting weapon of the Australian aborigines. It is a thin curved piece of hard wood, about 30 ins. long, flat on one side and rounded on the other. A slight axial twist imparts to it an aeroplane flight, making it return to the thrower. A non-returnable form is made use of in warfare.

BOOMPLAATS. Village of Orange Free State, S. Africa. It is 25 m. S.E. of Fauresmith. Here, in 1848, Sir Harry Smith defeated the Boers under Pretorius, thus temporarily securing the district to the British.

BOONE, DANIEL (1735-1820). American pioneer. Born in Pennsylvania, his long life was mainly passed in fighting the Indians and making journeys into the wilds of Kentucky and Virginia. He had a number of adventures with Indians, and his frontier home, a fort in North Carolina, was more than once fiercely assailed. He died Sept. 26, 1820.

BOOSTER. Electrical apparatus for adding electromotive force to, or subtracting it from, a circuit in which E.M.F. already exists. Rotary boosters are used for direct current and static for alternating current. Rotary boosters are commonly installed in generating stations equipped with storage batteries to equalise the load. The battery voltage must be somewhat higher than that at the terminals of the main generators, to allow for drop during discharge. The booster, a small dynamo driven by a motor receiving current from the bus bars, imposes its voltage on the normal voltage of the main generator, and thus enables the latter to charge the battery.

In power stations, where the demand for current varies widely, storage batteries are relied upon to make up the difference between normal and peak loads.

An automatically reversible booster runs as a dynamo and assists the generators to charge the battery under light-load conditions, and acts as a motor when the battery is discharging to the bus bars. See Dynamo; Motor.

BOOT. Covering for the foot and lower part of the leg. The art of leather manufacture was known in the earliest times. Man in the Stone Age wore roughly enred skin leggings and moccasins to protect his feet

from stones and brambles and to shield his ankles from the bites of venomous snakes and scorpions. The need of added strength to the sole brought about one of the earliest improvements in primeval footwear and the preparation of the raw hide by a process not much different from modern tanning.

Among the arts of the highly civilized Assyrian and Babylonian Greek and Roman nations the dressing and finishing of beautifully dyed leather for ornate footwear in colours that retained their brilliancy for centuries held a prominent place. The Saxon shoe was a simple affair, but in the Middle Ages extravagance in footwear taxed the ingenuity of the shoemaker, and to such lengths did the shoe fashions attain—pointed toes, for instance, were so elongated that they had to be turned up and fastened at the knees—that finally, under Edward IV, Parliament passed an Act forbidding long toes.

The peak-toed footwear gave place to squat-toed shoes, and after this craze boots became higher in the leg, a fine soft leather, mostly of russet brown, being used. In the Stuart period and during the Commonwealth, Cavalier and Roundhead alike wore a voluminous roll-collar-top jack boot. The heel is a modern innovation. It was first attached to riding boots in the reign of Elizabeth, but was general by Stuart times.

BOOT MAKING. Until the 19th century boots were made by hand, and Northampton was for some centuries famous for its boots. The boots were made in the homes of the workers, the masters supplying the materials. About 1850 machinery was introduced, and the consequent saving of labour led to a long struggle which culminated in 1859 in a general strike. Many workers moved to Leicester, which since then has been a centre of the trade, especially noted for its shoes, which branch developed enormously in the 20th century. In both centres, and also in the United States, much ingenuity was shown in devising machinery to perform every one of the small operations incidental to the making of a boot or shoe. The craft of hand-made boot

Boomerang. Non-returning types used in war; the lower three from N. Australia, the top example from Victoria

Boot. Tools employed in boot-making, and the method of cutting and sewing the uppers and stitching them to the sole, previously joined to the welt

making is not extinct, as it flourishes at Long Buckby, Northamptonshire, and there are small makers in London and elsewhere

BOOT. Instrument of torture used in Scotland and elsewhere. Usually it was made of four narrow pieces of wood or iron fastened together to form a fitting for the leg. The punishment consisted in hammering down wedges between the leg of the sufferer and the side of the boot. The boot was generally used to extort confession or information. The last recorded case of its use was in 1690 and it was declared illegal in 1709.

Boot, Sir Jesse (b. 1850). British merchant, now known as Baron Trent (q.v.).

BOOTH, BARTON (1681-1733). English actor. The son of a Lancashire squire, in 1698 he appeared on the stage in Dublin and in 1700 made his first appearance in London. His triumphs included the Ghost in Hamlet, while his Cato made both his reputation and his fortune. He died May 10, 1733.

BOOTH, CHARLES (1840-1916). British merchant and sociologist. He was born March 30, 1840, and educated at Liverpool. A partner in the shipping firm of Alfred Booth & Co., he became widely known by his nine volumes on Life and Labour of the People in London, 1889-97. The method adopted was statistical, and the books obtained for their author a high place among sociologists and the distinctions of privy councillor and F.R.S. He died Nov. 24, 1916.

BOOTH, JUNIUS BRUTUS (1796-1852). British-American actor. Born in London May 1, 1796, the son of a lawyer, he made his debut on the stage at Peckham, Dec. 13, 1813. Resembling Edmund Kean in features, stature, and voice, he was put forward as the great actor's rival at Covent Garden and at Drury Lane in Feb. and March of 1817, appearing as Richard III at the former house and playing Iago to Kean's Othello at the latter. He went to America in 1821, where he achieved considerable success. He died in America, Nov. 30, 1852.

His son, Edwin Thomas Booth (1833-93) first appeared in Cibber's version of Richard III, Sept. 10, 1849. Later he won great success as a Shakespearean actor in California and Australia, and from 1863-7 was manager of the Winter Garden Theatre, New York. In 1869 he built Booth's Theatre in New York and managed it until 1874. In 1880 and 1882 he played in London and Germany. He died at New York, June 7, 1893.

Junius Booth's younger son, John Wilkes Booth (1839-65), was responsible for the plot to murder Abraham Lincoln, whom he assassinated at Ford's Theatre, Washington, April 14, 1865. Escaping on horseback to Virginia, and refusing to surrender to justice, he was shot in a barn 12 days later.

BOOTH, WILLIAM (1829-1912). Founder and first general of the Salvation Army. Born at Nottingham, April 10, 1829, he laboured as a minister of the Methodist New Connexion, 1855-61, and in 1865 began work as an unattached evangelist in East London. He established the East London Revival Society,

which became known as the Christian Mission when it extended its operations outside the metropolis. He and his wife, Catherine Booth, worked among the poorest, and used the most unconventional methods, gradually adopting a quasi-military organization. This led to the adoption of the name of the Salvation Army in 1878, and the general superintendent was soon styled general. He died in London, Aug. 20, 1912.

W Bramwell Booth, General of the Salvation Army

Booth by G. S. Raiton, 2nd ed., 1912, and H. Begbie, 1920; These Fifty Years, by Bramwell Booth, 1929. Bramwell Booth's biography was being written in 1930.

BOOTHIA FELIX. Peninsula and the most northerly part of the mainland of N. America. Discovered by Sir John Ross, in 1829, it was named after his patron, Sir Felix Booth. In 1831 Sir James Clark Ross, Sir John's nephew, located the north magnetic pole on the peninsula. The Gulf of Boothia, about 315 m. long, and from 60 to 100 miles broad, separates Boothia Felix from Cockburn Island and Melville Peninsula.

BOOTLE. Co. bor. of Lancashire. At the mouth of the Mersey, adjoining Liverpool, it is served by the L.M.S. Rly. Its extensive docks are among the finest along the Mersey, and form part of the system belonging to Liverpool. Industrial establishments include engineering works, iron and tin smelters. Bootle was incorporated in 1868, and became a co. bor. in 1888. Bootle passed to the Stanleys, earls of Derby, at the beginning of the 18th century. After the Great War the earl of Derby sold much of his property in Bootle. Pop. 84,970.

BOOTLEGGGER. A person who sells intoxicating liquor in countries, especially the United States and Canada, where its sale is forbidden. They sprang up in great numbers after the introduction of prohibition, but they originated earlier. In Kentucky and other states, about 1870, men went about selling drink to persons who lived in remote districts. They usually wore boots reaching to the knee, and in their wide bootlegs they often carried the flasks.

BORACIC ACID OR BORIC ACID. Acid of borax. In accordance with the Lavoisierian system, it received the name boric acid, H_3BO_3 , but now in systematic nomenclature is known as boric acid. It occurs native in the lagoons of Monte Rotondo, Tuscany. The volcanic steam jets known as suffioni contain traces of boric acid, and are led into the lagoons, which are evaporated by the heat and yield crystals of the acid. The acid is also prepared from natural borax in California. Boric acid is largely used as a mild antiseptic; as a preservative of milk, meat, and fish; and in many industries. It forms salts known as borates with alkalis and metals.

BORAGE (Borago officinalis). Biennial herb of the order Boraginaceae, a native of central and S. Europe

Borage. Flowers and leaves of Borago officinalis

and N. Africa. The root leaves are lance-shaped with wavy margins, rough with stiff hairs: the flowering stems, 1 ft.-2 ft. high, bear short sprays of brilliant blue flowers. The leaves have the odour of cucumber. Borage is cultivated on account of its supposed exhilarating properties, and is used as an ingredient in claret cup, from a belief that it cools the liquor.

BORAH, WILLIAM EDGAR (b. 1865). American politician. Born in Illinois, June 29, 1865, he entered the Senate in 1906. In 1924 he was chosen chairman of the committee on foreign relations. He was a great advocate of peace and disarmament; but was equally insistent that the U.S.A. should keep clear of the League of Nations and the World Court of Justice and should insist upon the payment of the debts owing by European countries.

BORAX (Arab. bouraq). Combination of boric acid and sodium, also called biborate of soda ($Na_2B_4O_7$). The native source was Tibet, the natural mineral being called tincal. It was brought to Europe and refined at Venice and in Holland. Later borax was manufactured by adding soda ash to the boric acid obtained from the Tuscan lagoons. When borax is fused a transparent glass is obtained, which is coloured in different ways by various metallic oxides. Known as the "borax bead," this is used as a test in blowpipe analysis. Borax is employed as a detergent and for many of the purposes of boric acid; also as a laundry glaze, as a flux for metals, in calico printing, and as a solvent for shellac and casein in glazing compounds.

BORDEAUX. City and port of France, capital of the dept. of Gironde. On the left bank of the Garonne, it is about 60 m. from the sea and 360 m. by rly. S. by W. of Paris, and is connected with the Mediterranean by the Canal du Midi. A suburb, La Bastide, on the right bank of the river, is connected by bridges. Bordeaux has a fine harbour formed by a curve of the Garonne, and ample modern docks. It is the centre of the wine trade, the district around being noted for its vineyards. Wine is the most important export.

The chief buildings are the Gothic cathedral of S. André, of the 12th-14th centuries, and the churches of S. Michel, with an isolated tower, S. Severin, of the 12th century, once the cathedral, and the restored S. Croix. There are remains of a Roman amphitheatre and four magnificent old gateways. The city has a university and an observatory. The Government migrated to Bordeaux when Paris was threatened by the Germans in 1870, and again in 1914. Pop. 256,026.

BORDEAUX MIXTURE. Fungicide prepared by adding milk of lime to a solution of copper sulphate. It is used for spraying various plants, especially in potato disease, and has been found to stimulate growth and lengthen the life of the foliage.

BORDEN, SIR FREDERICK WILLIAM (1847-1917). Canadian statesman. Born in Nova Scotia, May 14, 1847, he graduated in medicine

Bordeaux. Cathedral of S. André, a late medieval Gothic building

J. Wilkes Booth, American assassin

Edwin T. Booth, American actor

William Booth, Founder of the Salvation Army

at Harvard, and began to practise in 1868. In 1874 he entered the Dominion Parliament, and from 1896-1911 was Minister of Militia and Defence in Laurier's Cabinet. Knighted in 1902, he retired from political life in 1911, and died Jan. 6, 1917.

BORDEN, SIR ROBERT LAIRD (b. 1854). Canadian statesman. Born at Grand Pré, Nova Scotia, June 26, 1854, he became a barrister in 1878, and in 1896 entered the Canadian House of Commons as Conservative member for Halifax. In 1901 Borden was chosen as leader of his party in the Commons.

Sir F. W. Borden, Canadian statesman

Sir Robert Borden, Canadian statesman
Lafayette

He became premier in 1911, and as a result of the general election in Dec., 1917, he remained in power with a large majority, and brought the Liberals into his cabinet for the purpose of carrying on the Great War. He was admitted to the privy council in 1912, and made G.C.M.G. in 1914. He attended the Peace Conference in Paris, 1919, and resigned the premiership in July, 1920.

BORDER REGIMENT. British regiment. Originally the 34th and 55th Foot, these were united in 1881 as the 1st and 2nd battalions of the Border Regiment. The regiment fought under Marlborough, saw service at Culloden, and served in the Indian Mutiny and the Crimea. In the South African War it served with distinction, and shared in the British victories in France and Flanders throughout the Great War. The regimental depot is at Carlisle.

Border Regiment badge

BORDIGHERA. Town of Italy. A popular winter resort of the Riviera, it is 6 miles by rly. W. of San Remo and 90 m. S.W. of Genoa. Picturesquely situated on the Mediterranean amid luxuriant vegetation, it comprises the old town, on a hill, and the modern one with esplanades, gardens, and a botanical museum. Pop. 5,750.

BORDONE, PARIS (1500-71). Italian painter, of the Venetian school. He studied under Titian, on whose work he finally modeled his style. His most famous painting is *The Fisherman Presenting the Ring of S. Mark to the Doge* (Venice Academy.)

BORE. Cylindrical hole through the barrel of a gun. A smooth bore gun is one in which the perforation is smooth and plain, and if the bore is of the same diameter throughout its length it is known as a cylinder; it is known as a choke bore if it tapers towards the muzzle, which restrains the shot from spreading and also increases the range. The size of a shot gun is defined as being of such a number bore. The four most common sporting guns, with the corresponding calibre in inches, are 12-bore, .729 in. diameter; 16-bore, .662; 20-bore, .615; 24-bore, .579. See Gun.

Bore (Icelandic *bara*, billow). Crest-fronted wave which rushes up certain rivers at the time of high or spring tides.

Boreas. In Greek mythology, the personification of the north wind. He dwelt in a cave on Mt. Hæmus in Thrace.

BORECOLE. Plant of the cabbage family of the natural order Cruciferae, genus

Brassica. They develop leaf only, without making heart. Kale and curly kale are the best known varieties. Borecole yields a supply of greenstuff in winter.

BORGHESE. Name of an Italian family founded at Siena in the 13th century. Camillo Filippo Ludovico Borghese (1775-1832), after joining the French army, married Napoleon I's sister Pauline Bonaparte, in 1815, and was appointed governor-general of Piedmont. The territories conveyed to him by Napoleon in part payment for the Borghese art treasures, valued at 13,000,000 francs (£600,000), were reclaimed by the king of Sardinia in 1815, and Borghese recovered a certain part of his collection. This was diminished by sales in 1892-93, but the Borghese Palace in Rome, a magnificent building finished in 1607, still contains a number of famous paintings.

Other old masters and much statuary, ancient and modern, are contained in the Borghese Villa, Rome, formerly the summer residence of the family. Now known as the Villa Umberto Primo, it dates from the 17th century and was bought by the Italian government in 1902. The title of prince is retained in the Borghese family.

BORGIA. Name of a noble Spanish family, de Borja, which became important in Italy in the 15th century. Alonso de Borja was made bishop of Valencia and accompanied Alphonso of Aragon to Naples. He was made a cardinal in 1444, and was elected pope, taking the title of Calixtus III. Many of his relatives then flocked to Rome and the name was changed to Borgia. The sister of Calixtus III was the mother of Rodrigo, who became pope as Alexander VI (q.v.). He was the father of Cesare and Lucrezia and of the first duke of Gandia. Several cardinals were numbered in the family, and one saint, Francesco Borgia (1510-72), the third general of the Jesuits. He was canonised in 1671. His festival is kept on Oct. 10.

BORGIA, CESARE (1476-1507). Italian soldier and statesman. A son of Rodrigo Borgia, who, in 1492, became Pope Alexander VI. Cesare was made an archbishop and a cardinal before he was twenty. In 1499 he was dispensed from his orders and married Charlotte d'Albret, princess of Navarre. As captain-general of the Church he recovered the provinces of Italy for the Papacy.

On the death of Alexander VI, in August, 1503, Cesare lost his main support. He was taken as a prisoner to Spain, 1504, but he escaped in 1506, and was killed in battle, Mareb 12, 1507. It was to Cesare that Machiavelli dedicated his treatise *The Prince*.

Cesare's sister, Lucrezia (1480-1519), was married first to Giovanni Sforza, second to the duke of Bisceglie, and third to the duke of Ferrara. Historical evidence fails to confirm the crimes imputed to her. She died June 24, 1519. See Machiavelli; Renaissance.

BORGU, BORKU, OR BARBA. Country of W. Africa, formerly an independent sultanate and at one time tributary to Wadai. The western portion is now included in the French colony of Dabomé, and the eastern forms part of a province of Nigeria (q.v.). The area of the British portion is about 12,000 sq. m.

Boric Acid. Alternative name for boracic acid (q.v.).

BORINAGE. District of Belgium, in the prov. of Hainault. It lies around Mons, and contains highly productive coal mines, worked, during the Great War, by the Germans.

BORIS (b. 1894). Tsar of Bulgaria. Born at Sofia, Jan. 30, 1894, the eldest son of King Ferdinand, he ascended the throne on his father's abdication, Oct. 4, 1918, under the title of Boris III. His change of religion during childhood from Roman Catholicism to the Orthodox Church, as required by the Bulgarian constitution, caused some controversy.

BORKUM. Island of Germany, in the Frisian group. At the mouth of the Ems, about 9 m. from the coast of Holland, it is about 5 m. long and 2½ m. broad. It is reached by steamer from Emden, Hamburg, and Leer. It has about 3,000 inhabitants, and for administrative purposes is in the prov. of Hanover.

BORNEO. Island in the East Indian Archipelago. It is bounded N. by the South China Sea, W. and S. by the Carimata Strait and the Java Sea, and E. by the Strait of Macassar and the Celebes Sea. Its area is 290,000 sq. m. and its pop. 2,660,000.

Politically Borneo is divided into four parts: (1) British North Borneo, administered by the British North Borneo Company; (2) Brunei, a Mahomedan state attached administratively to the Straits Settlements; (3) Sarawak, a state under British protection; and (4) Dutch Borneo. The last is divided into two provinces: (1) West Borneo, with an area of 56,838 sq. m. and a pop. of 685,545; and (2) South and East Borneo, with an area of 149,972 sq. m. and a pop. of 1,091,341.

The principal native race, aboriginal Indonesians called Dyaks, is divided into numerous

Borneo. Map of the third largest inhabited island in the world. Nearly three-fourths belong to the Netherlands, the remainder being British, or under British protection

tribes. Chinese form large trading and mining communities. Malays are scattered along the rivers. The products comprise

timber, sago, camphor, cinnamon, pepper, nutmegs, rice, rubber, gutta-percha, gum, edible birds' nests, seed pearls and bêche de mer. The great mineral wealth includes gold, copper, iron, tin, petroleum, and coal.

British North Borneo comprises the N. part of Borneo from the Sipitong river on the W., together with adjacent islands, and is held under grants from the sultans of Brunei and Sulu. The area is 31,106 sq. m. In 1904 about 200 sq. m. was made over to Sarawak. See Brunei; Sarawak; and illus. p. 268.

BORNÜ. Country of the Central Sudan. Formerly a negro kingdom to the S. and W. of Lake Chad, it was apportioned between Great Britain, France, and Germany towards the close of the 19th century, the larger portion being included in Nigeria, forming the Bornu province. The tributary state of Zinder and part of northern Bornu are in French West Africa, and the south-western portion is in the Cameroons. Bornu extended at one time to the borders of Egypt. The capital was Kuku, a walled town west of Lake Chad.

BORO BUDUR. Buddhist temple in Java, noted for its architectural and sculptural features. Built on a hill near the confluence of the Progo and Ello, 15 m. N.W. of Jokjakarta, it is 118 ft. high, and about 2,000 ft. in circuit at the base, and dates probably from the 7th century. It consists of six square storeys, and is surmounted by a large cupola for the relic, surrounded by 72 small cupolas on three circular platforms.

BORODIN, ALEXANDER PORFIRIEVITCH (1834-87). Russian composer. Born Nov. 12, 1834, at St. Petersburg, where he studied medicine and became professor of chemistry, his fame rests on his work as a musician. His compositions include symphonies, chamber music, and piano pieces; also the unfinished opera Prince Igor, completed by another hand and produced in St. Petersburg in 1890. He died Feb. 28, 1887.

BORON. Non-metallic element present in borax and boric acid. Its symbol is B, its atomic weight 10.82, and its atomic number 5. It was first prepared by Davy in 1807 by the electrical decomposition of boric acid. The next year Gay-Lussac and Thénard obtained it from boric oxide as an amorphous powder, and in 1856 Wöhler and Deville prepared it in a crystalline form. In some of its properties boron resembles carbon and silicon, but it is a more powerful reducing agent than either.

BOROUGH (O.E. burh, a fortified town). In England a place to which certain privileges have been given and which is distinct from the surrounding country. The Scottish equivalent is burgh.

The earliest boroughs were fortified towns called burghs, and at the time of Domesday there were 80 of them in England. After the Norman Conquest certain places obtained charters from the king or an overlord. These gave the inhabitants certain privileges, such as the right to hold markets, to collect their own taxes, to elect their own officials, etc. They were called chartered towns or boroughs, but there was no uniformity either about their privileges or their methods of government.

In 1835 an important Act reformed the government of the boroughs, and since then they have all been ruled in much the same way. Each has a mayor and a council consisting of aldermen and councillors, the latter elected by the ratepayers. In 1888 a special class of boroughs called county boroughs was created. These places with over 50,000 inhabitants were given the same privileges as counties, being made quite independent of the county councils. In boroughs with less than 50,000 people some of the town's affairs are looked after by the county council. In 1926 it was decided that no place should be made a county

borough unless it had 75,000 or more inhabitants. Any populous place can apply to the privy council for a charter of incorporation which will make it an ordinary borough. In 1927 there were in England and Wales 88 county boroughs, and 235 non-county boroughs.

BOROUGHBRIDGE. Market town of Yorkshire (W.R.). It stands on the river Ure, 11 m. N.E. of Harrogate by the L.N.E. Rly. Here Edward II defeated, March 16, 1322, the barons under his uncle, Earl Thomas of Lancaster. Near by are the Devil's Arrows, three monoliths, probably of the Celtic period. Market day, alternate Mon. Pop. 807.

BORROMEO, CARLO (1538-84). Saint, and archbishop of Milan. Born at Arona, Oct. 2, 1538, of noble parentage, he was the nephew of Pope Pius IV. In 1560, having been made cardinal and secretary of state at Rome, he successfully worked for the reopening of the Council of Trent. In 1563 he was ordained priest, and in 1564 consecrated archbishop of Milan. Borromeo organized a series of reforms in his diocese, and also promoted education for the young. He died at Milan, Nov. 3, 1584, and was canonised in 1610. His festival is Nov. 4.

Carlo Borromeo.
Italian cardinal.
From an old print

His cousin Federigo Borromeo (1564-1631) became a cardinal in 1587 and was made archbishop of Milan in 1595.

A group of islands in Lake Maggiore, N. Italy, the property of the Borromeo family, are called the Borromeo Islands.

BORROW, GEORGE HENRY (1803-81). British author. Born at Dimpling Green, near East Dereham, Norfolk, July 5, 1803, son of Captain Thomas Borrow, adjutant of the East Norfolk Regiment, he had a wandering boyhood, moving about with his father's regiment. Having developed a passion for outdoor life, he got into touch with the gipsies and began philological studies which led to his mastery of more than thirty languages.

During his lifetime Borrow achieved one great success in the popularity of his Bible in Spain; or, Journeys, Adventures, and Imprisonments of an Englishman in an attempt to circulate the Scriptures in the Peninsula, 1843. On this remarkable book and the two that record his adventures, real and imagined, when travelling through England, Lavengro, 1851, and The Romany Rye, 1857, Borrow's fame rests. He died at Oulton, near Lowestoft, July 26, 1881. In 1913 Mr. A. M. Samuel presented to Norwich the house in which Borrow once lived, to serve as a Borrow museum. Consult George Borrow and His Circle, C. K. Shorter, 1913.

BORROWDALE. Parish of W. Cumberland. It is 5 m. S. of Keswick, in the beautiful valley of the Derwent, ascending from Derwentwater towards Honister Pass. Once famous for its blacklead mines, it contains the curious Bowder Stone.

BORROWSTOUNNESS or Bo'NESS. Burgh and seaport of Linlithgowshire, Scotland. It stands on the Firth of Forth, 24 m. by rly. W.N.W. of Edinburgh by the L.N.E. Rly. It has a good harbour and carries on a brisk coasting trade. Pop. 10,223.

BORSTAL SYSTEM. Method of dealing with the juvenile adult offender—youths from

16 to 21 years of age. The earliest effort in this direction was made in 1902, by removing young prisoners from association with older offenders and grouping them apart in a wing of the convict prison at Borstal, near Chatham. Here, instead of solitary confinement, they worked in large, bright workshops, and were stimulated to do their best by a system of marks and privileges. Six years later the Prevention of Crimes Act extended its methods and established the Borstal System of to-day. In 1923 the care of Borstal girls was transferred to a new society, the Aylesbury Association. In 1930 an estate for another institution

Borzoi. Specimen of the Russian wolfhound acclimatised in Britain

of the kind was bought at Lowdham, Notts. See Prison.

BORZOI (Russian, swift). Russian wolfhound brought to Great Britain about 1885. It stands about 30 ins. high, resembles a large greyhound, and is very gentle.

BOSBOOM, JAN (1817-91). Dutch painter. His paintings are mainly church interiors and landscapes, especially of the country round Scheveningen. In 1851 he married Anna Toussaint (1812-86), a novelist. He died at The Hague, Sept. 14, 1891.

BOSCASTLE. Village of Cornwall. Beautifully situated on the rocky north coast, it is 6 m. from Camelford. There is a harbour and a golf course. In the vicinity are Pentargon caves, St. Nighton's Kieve, Crackington Haven, and the Rocky Valley. Pop. 630.

BOSCobel (pretty wood). Parish of Shropshire, 6 m. N.E. of Shifnal. Its manor house was the retreat of Charles II after his defeat at Worcester, Sept. 3, 1651. The Royal Oak is dead, but Boscobel House remains.

BOSCOMBE. Watering-place of Hampshire, and eastern suburb of Bournemouth. It has a fine pier, an arcade, and is noted for its chine and pleasure gardens. See Bournemouth.

BOSE, SIR JAGADIS CHANDRA (b. 1858). Indian scientist. Born Nov. 30, 1858, he was educated in Calcutta and at Christ's College, Cambridge. He founded and directed at Calcutta the Bose Research Institution. He invented an apparatus known as the crescograph, which, by enormous magnification of the natural movements in plants, makes it possible to record their life-growth. In 1917 he was knighted. See Crescograph.

BOSNIA. Country of S.E. Europe forming part of Yugo-Slavia. It is bounded N. by the Save, which separates it from Croatia and Slavonia, E. by the Drina, which divides it from Serbia, S. by Herzegovina, and W. by the Dinaric Alps and Dalmatia. Mainly it is a high mountainous region. The Save and the Bosna are the chief rivers. Its area is 16,206 sq. m.; pop. about 1,620,000, mostly Croat and Serbian. Serajevo is the capital.

Conquered by the Turks in 1463, Bosnia remained under Turkish rule until 1878, when, with Herzegovina, it was, at the Congress of Berlin, placed under Austrian officials. This lasted until 1908, when Austria annexed the district. It was made into a province, Bosnia-Herzegovina, in 1910, and its inhabitants were allowed to elect a diet of 90 members. As part of Austria, Bosnia was the object of Allied attacks in the Great War. After the downfall of Austria, Bosnia and Herzegovina became part of the new state of the Serbs, Croats, and Slovenes. See Yugo-Slavia.

BOSPORUS. A narrow channel, less correctly called Bosphorus, and known also as the straits of Constantinople, connecting the Black Sea with the Sea of Marmora, and separating Europe from Asia Minor. It is 16 m. long, and varies in width from $\frac{1}{2}$ m. to 2 m. One of its bays forms the harbour of Constantinople and the Golden Horn. During the Great War the S. end of the passage was strongly fortified by the Turks. The straits are sometimes called the Thracian Bosphorus to distinguish them from the Cimmerian Bosphorus. The word means ox ford.

BOSSUET, JACQUES BÉNIGNE (1627-1704) French bishop and orator. He was born Sept. 27, 1627, at Dijon, where his father was a judge, and in 1652 he was ordained priest, and appointed archdeacon of Sarrebourg and canon of Metz. Thence, about 1660, he went to Paris, where his great gifts were soon recognized. He was made bishop of Condom in 1669, but resigned when Louis XIV appointed him tutor to the Dauphin. During the 11 years of this tutorship Bossuet wrote his

J. B. Bossuet,
French orator
After H. Rigaud

Discours sur l'Histoire Universelle, 1681, and his book in support of the royalists against the papalists in the dispute about the rights of the Gallican Church. He was elected to the academy in 1680, appointed to the bishopric of Meaux in 1681, and made councillor of state in 1697. He died in Paris, April 12, 1704. A notable orator, Bossuet had a permanent influence on French and English preaching. He also ranks among the great prose writers of France.

BOSTON. Borough and seaport of Lincolnshire. It lies 4 m. above the entrance of the Witham into the Wash and 107 m. by rly. N. of London, on the L.N.E. Rly.

The Decorated and Perpendicular church of S. Botolph is one of the largest parish churches in Great Britain. Its western tower is popularly called Boston Stump. Boston is a prominent grain market, and engineering, brewing, malting, fishing, and the manufacture of oil cake, sails and rope are among its industries. Boston, a

Boston, Lincs. Church of S. Botolph, called Boston Stump
Frith

contraction of Botolph's town, S. Botolph, it is believed, having founded a monastery here in 654, was one of the principal English ports during the early 13th century, and a guild was established here by the Hanseatic League. Market days, Wed and Sat. Pop. 16,100.

BOSTON. Capital of Massachusetts, U.S.A. It stands on Boston harbour at the head of Massachusetts bay. The city comprises an area of 48 sq. m., is served by the Boston and Maine and other rlys., and has a system of street railways. Among buildings of historical interest are Faneuil Hall (1743), formerly the meeting house of revolutionaries; the Old South Church (1730), the scene of the protest meeting which preceded the Boston Tea Party; the Old North Church or Christ Church (1723), from whose spire were suspended the signals for Paul Revere; the Old State House, built in 1748 and since restored;

King's Chapel (1754), and the new State House (1795). Modern structures include the city hall, the county court house, the U.S.

government building, the municipal library, the new museum of fine arts, and the new Old South Church. Boston has a reputation as a seat of learning and a centre of literature, science, art and music. Among its educational institutions are Boston University, Emmanuel College, North-eastern University, Simmons College, and the Trade Union College. The Boston Opera House is in Huntington Avenue.

Boston conducts the largest leather, wool, and fish trade in the world, and after New York is the leading exporter of meat and dairy produce. There is a fine harbour, with a government navy yard. Pop. 779,620.

BOSWELL, JAMES (1740-95). Biographer of Johnson. Born in Edinburgh, Oct. 29, 1740, he was the eldest son of Alexander Boswell, who took the title of Lord Auchinleck (pron. Affleck) on becoming a Scottish judge. In 1763 he succeeded in obtaining an introduction to Samuel Johnson, who, notwithstanding his scorn for Scotsmen, fell a victim to Boswell's sociability. Boswell, resolved to write Johnson's Life, and set about the task with thoroughness and persistence. Unable to reside permanently in London, he frequented the metropolis at every opportunity, spent much of his time in Johnson's company, and kept a faithful record of the great man's conversation and habits. In 1785 he published an account of his tour with Johnson in the Highlands. His Life of Johnson appeared in 1791, and raised even more controversy than the previous book.

Boswell died in London May 19, 1795, and was buried at Auchinleck. His eldest son, Sir Alexander Boswell (1775-1822) was known as an antiquary and poet.

BOSWORTH, BATTLE OF. Fought between Richard III and Henry, earl of Richmond, Aug. 22, 1485. It took place near Market Bosworth, a village 12 m. from Leicester, and resulted in the death of Richard and the accession of Henry to the throne as Henry VII.

BOTANY (Gr. botania, botanē, a plant). The science of plant life, and one of the divisions of biology, of which the other division is zoology, the science of animal life. There was a literature of botany as far back as the time of Plato and Aristotle. Theophrastus, who left the world his Historia Plantarum, has been called the father of botany. Hippocrates enumerated about 300 plants that were used medicinally, and from his work and the De Materia Medica of Dioscorides came the herbals

of the 16th century. For several centuries British botany was largely mixed up with astrology, magic and medicine. Turner's New Herball (1551) has a real value for the historian, for the author examined his plants minutely, comparing them with the descriptions of the ancients, and assigning new English names when these were lacking.

Lobel in 1576 attempted a natural system of classification. John Ray's Catalogue of English Plants appeared in 1670, followed twenty years later by his Synopsis, the basis upon which all later English floras have been founded. The 18th century was marked by the publication of Hales's Vegetable Statics (1727), dealing with plant physiology, and by several works of Linnaeus. The artificial system of classification of Linnaeus has been discarded, but his establishment of genera and species, and his binomial system of naming species made possible the later systems of Jussieu and De Candolle.

The far-reaching advances of the 19th century include the work of Robert Brown, J. E. Smith, Lindley, Bentham, the two Hookers, Charles Darwin and his son Francis, Thistleton Dyer, Vines, Bower, and many others. A great impulse was given to the science by the publication of the Origin of Species, and other of Darwin's works. In the realm of classification and cataloguing the monumental work of Bentham and Hooker—the Genera Plantarum (1862-83) may be instanced, and another Kew enterprise, the Index Kewensis, which J. D. Hooker carried out in collaboration with B. Daydon Jackson (1893-5). This contained 375,000 names of plants.

The present main divisions of plant life—proceeding from the simple to the more complex—may be thus set down:

- Thallophyta (including seaweeds, diatoms, and fungi).
- Bryophyta (mosses and liverworts).
- Spermatophyta, seed-bearing plants, including—
- Pteridophyta (ferns, horsetails and club-mosses);
- Gymnosperms (conifers and cycads);
- Angiosperms (flowering plants), divided into monocotyledones and dicotyledones.

BOTANY BAY. Inlet, one to three miles wide, on the E. coast of New South Wales, Australia, five miles S. of Sydney. Discovered by Captain Cook in 1770, it acquired its name from the variety of its plant life. It became a penal settlement in 1787, but was found to be unsuitable, and was supplanted by the locality on which now stands Sydney. The name continued to be a popular term for any Australian convict station.

Horse bot fly,
Oestrophilus equi

BOT FLY. Name applied to various parasitic flies of the family Oestridae. The ox bot fly or ox warble lays its eggs on the hair of cattle, and the larvae burrow into the tissues and cause tumours. The sheep bot fly lays its eggs on the nostrils, and the larvae work their way up the nasal passages into the head, breeding disease. The horse bot fly deposits its eggs on the hair of its host. When the larvae emerge the horse licks the place, and thus conveys

Sheep bot fly,
Oestrus ovis

the maggots to the alimentary canal. Here they live for about a year, when they are expelled with the excrement and pupate in the ground. See Insect.

BOTHA, LOUIS (1862-1919). South African soldier and statesman. Born at Greytown, Natal, Sept. 27, 1862, the son of a Boer

farmer, he passed much of his early life in the Transvaal. In 1896 he was elected to the Transvaal Volksraad and, as an opponent of Kruger, endeavoured to prevent war with Great Britain. But on the outbreak of the South African War, in 1899, he commanded the Boers who defended the passage of the Tugela, and after Joubert's death was commander-in-chief until the end of hostilities.

Louis Botha,
S. African statesman

Botha worked loyally for the prosperity of the Transvaal, and on the granting of self-government became its premier in 1907. In 1910, as leader of the dominant Nationalist party, he was selected as the first premier of the new Union of South Africa. In 1914, on the outbreak of the Great War, Botha faced and crushed a somewhat formidable rebellion, and conducted the campaign that deprived the Germans of S.W. Africa. In 1907 he was made a privy councillor, and in 1919 he attended the Peace Conference at Paris and signed the peace treaty. He died at Pretoria, Aug. 27, 1919. See South Africa; consult also Life, H. Spender, 1920.

BOTHNIA, GULF OF. Northern extension of the Baltic Sea. Separating Sweden from Finland, it is about 410 m. long, has an average breadth of 100 m. and a maximum depth of 890 ft. It receives most of the large rivers of Sweden and Finland, contains numerous islands, sandbanks, and rocks, and has many harbours and towns on its shores. When the river-flow is great, its waters are only slightly salt, and in severe winters it is frozen over. The territory at the head of the gulf was for nerly called Bothnia. See Baltic Sea.

BOTHWELL. Colliery centre of Lanarkshire. It is situated on the Clyde, 8 m. by rly. S.E. of Glasgow, on the L.M.S. Rly. Near is Bothwell Brig, where the Royalists defeated the Covenanters, June 22, 1679. Bothwell Castle, now in ruins, stands on Bothwell Bank, round the base of which the Clyde winds. Pop. 3,450.

BOTHWELL, JAMES HEPBURN, 4TH EARL OF (1536-78). Scottish noble. He succeeded his father as earl of Bothwell in 1556. In 1566 he married Jean Gordon, sister of the earl of Huntly, and became one of the chief advisers of Mary Queen of Scots. In the plot against Darnley he was the chief actor, but he was acquitted after a trial which was little better than a farce. In April, 1567, Bothwell carried off the queen to Dunbar, and in May, when he had divorced his wife, they were married at Holyrood. But the nobles had risen in revolt, and when the rival armies met at Carberry Hill, Bothwell's forces dispersed without a struggle, and the queen became a prisoner. Bothwell escaped to Norway. After a time his enemies seized him, and he passed the rest of his days in prison in Sweden and Denmark. The earl lost his reason before his death, April 14, 1578. The title is now extinct. See Mary Queen of Scots.

BOTOLPH (d. about 680). English saint. Born in England, he was sent with his brother to the Continent for study. Having become a monk, he returned to England, and was granted land in Leicestershire or Suffolk, where he established a monastery. More than 50 churches, for the most part in East Anglia and Yorkshire, are dedicated to him, as well as two in London. His festival in England is June 17, in Scotland, June 25.

BO TREE or **PREPUL** (*Ficus religiosa*). Fig tree of India, held sacred to Buddha. It differs from the common fig in having undivided leaves of a heart shape with a long slender petiole, and from the banyan (q.v.) in that its lateral branches are not supported by prop-like roots. The leaves are continually in motion. Beneath the Bo Tree at Bodhi Gaya, in Bengal, Gautama, after seven weeks of contemplation, became Buddha, the Enlightened. See Buddhism.

BOTTICELLI, SANDRO (c. 1444-1510). Italian painter. His real name was Alessandro di Mariano dei Filipeppi. He first studied painting under Fra Filippo Lippi.

His special qualities as a painter are his acute sense of decoration, his intense love of swift and graceful movement, and his marvellous power of representing such movement, his extraordinary skill as a draftsman for intricate and lineal design, and his ability to convey the feeling of open air. He was perhaps the first to give landscape its due share in art, and to realize the ideas of infinity and space.

Botticelli's most notable pictures are in Florence, especially *The Birth of Venus*, shown in London in 1930, *The Adoration of the Magi*, two of *Judith and Holofernes*, and the extremely beautiful *Primavera*. A very early *Adoration of the Magi* is in the National Gallery, London, and he is represented also in Berlin, Milan, and Munich. In Rome his work may be seen in three frescoes in the Sistine Chapel. His drawings include a wonderful series of illustrations for Dante. Botticelli died May 17, 1510.

BOTTLE TREE (*Sterculia rupestris*). Evergreen tree of the order Sterculiaceae, a native of Australia. Its trunk is shaped some what like a soda-water bottle. The leaves are either simple and slender, or divided into leaflets arranged like those of the horse chestnut. The wood is of a loose texture and abounds in sweet mucilage, which is available for food; and the fibres are employed for making nets and the like.

Bottle Tree. Example of its curious trunk from Queensland

Bottle Gour.
See above

BOTTLE GOURD. This is a genus consisting of a single species of the order Cucurbitaceae. A native of Asia and Africa, it is an annual trailing or climbing herb with heart-shaped leaves. The flowers are white, the sexes being separate. The fruit is for the most part flask-shaped with swollen, rounded base and narrow neck. See illus. below

BOTTOMLEY, HORATIO WILLIAM (b. 1860). British journalist. He was born Mar. 23, 1860, and was for a time in business in London, after which, turning to journalism, he founded *The Financial Times*, and became known mainly by the skill with which he conducted his own case in various lawsuits. Having owned *The Sun*, he established *John Bull*, which, under his direction, attained an enormous circulation. In 1906 Bottomley was elected Liberal M.P. for South Hackney, and he retained his seat until 1912; in 1918 he was again returned for that constituency. On May 29, 1922, he was sentenced to seven years' penal servitude, being released in 1927.

BOTULISM (Lat. *botulus*, sausage). Disease caused by eating sausages and other preserved food. It is due to the presence of *Bacillus botulinus*, a spore-forming germ occasionally occurring in food from which the air has been excluded. The germ can be destroyed by cooking. The poison attacks the nervous system chiefly, producing disturbance of vision, difficulty in swallowing, great muscular weakness, nausea, etc.

BOTWOOD. Seaport of Newfoundland, on the W. shore of the estuary of the Exploits river, it is connected by rly. with the interior. The products of Grand Falls and district are shipped from here.

BOUCHER, FRANÇOIS (1703-70). French painter. Born in Paris, Sept. 29, 1703, he studied with Le Moine, and was for a time employed as a book-plate designer. Admitted to the Academy, he gained the first prize in 1723, and journeyed to Italy with Carl van Loo. After his return to Paris, 1731, he won admiration as the painter of voluptuous idylls and of portraits, including several of Madame de Pompadour. He died in Paris, May 30, 1770. A collection of his paintings is in the Wallace Collection, London.

François Boucher
French painter
Painting by Ribin

BOUCHES-DU-RHÔNE. Department of France. At the mouth of the Rhône, its area is 2,026 sq. m. It has a seaboard of about 120 m. on the Mediterranean, much of it covered by étangs or lagoons. Marseilles, the capital, is the largest town; others are Aix and Arles. Pop. 929,549

BOUCICAULT, DION (1822-90). Irish dramatist and actor, whose original name was Dionysius Lardner Bouricault. Born at Dublin, Dec. 26, 1822, his first appearance on the London stage was at *The Princess's*, June 14, 1852, in his own play *The Vampire*. His best known drama is *The Colleen Bawn*, which ran for 360 nights at *The Adelphi* in 1860-61. Boucicault wrote or adapted some 140 pieces, including *London Assurance*, 1841; *The Octoroon*, 1861; *Arrah-na-Pogue*, 1865; *The Flying Scud*, 1866; and *The Shaughraun*, 1875. He died Sept. 18, 1890. He was the father of Dion G. Boucicault (1859-1929) and Nina Boucicault (b. 1870). His grandson, Dion Clayton Calthrop (b. 1878), has won distinction as a versatile writer.

Dion Boucicault,
Irish dramatist

BOUFFLERS, LOUIS FRANÇOIS, DUC DE (1644-1711). French soldier. Born in Picardy, Jan. 10, 1644, he served under Turenne in Holland. He was made a marshal of France in 1693 after the victory of Steinkirk and later distinguished himself at Malplaquet. He died Aug. 22, 1711. His son, Joseph Marie, duc de Boufflers (1706-47), was also a marshal of France.

A later member of the family was Stanislas Jean, Marquis de Boufflers (1738-1815), commonly known as the Chevalier de Boufflers. A marshal of France, he was governor of Senegal, 1785-87, was made a member of the Academy in 1788, and of the states-general in 1789. He died in Paris, Jan. 18, 1815.

BOUGAINVILLE. Largest of the Solomon Islands, Pacific Ocean. Formerly German, it is now administered by Australia; its area is 3,500 sq. m. Of volcanic formation, it rises in Mt. Balhi, an active volcano, to 10,170 ft. Pop. 60,000.

BOUGAINVILLE, LOUIS ANTOINE DE (1729-1811). French navigator. Born Nov. 11, 1729, he joined the navy, and was sent to establish a colony on the Falkland Islands. He was the first French seaman to circumnavigate the globe, and in his Voyage round the World (Eng. trans. J. R. Forster, 1772) he added considerably to the geographical and scientific knowledge of the age. He died Aug. 31, 1811, and is commemorated by one of the Solomon Islands and a strait in the New Hebrides.

L. A. de Bougainville
French navigator

Bougainville is also commemorated by the bougainvillea, a genus of climbing shrubs. Natives of S. America, they are largely cultivated in greenhouses on account of their showiness, due to a number of rosy bracts by which the greenish flowers are surrounded.

Bougainvillea.
Leaves and flowers

BOUGH, SAMUEL (1822-78). British painter. Born at Carlisle, Jan. 8, 1822, he spent many years as a scene painter and settled down as a landscape painter in Edinburgh in 1855, being elected to the Scottish Academy in 1875. He died Nov. 19, 1878.

BOUGHTON, GEORGE HENRY (1833-1905). British painter. Born near Norwich, Dec. 4, 1833, he studied in New York, Paris, and London, where, from 1863 onwards, he was always represented at the Royal Academy. Made A.R.A. in 1879, R.A. in 1896, he died in London Jan. 19, 1905. Boughton is mainly identified with paintings of New England episodes and costume. He is represented at the Tate Gallery, London, and the Walker Gallery, Liverpool.

BOUGIE or **BUOIAH.** Seaport of Algeria. On the Bay of Bougie and the declivity of Mt. Guraya, it is 120 m. E. of Algiers, with which it is connected by rly. via Beni Mansour. As the Saldæ of the Romans it formed an important station in Mauritania. Part of the Roman wall is still in existence. Bougie was captured by the French in 1833. It has long been celebrated for the manufacture of bougies (wax candles). Pop. 15,941.

BOUGUEREAU, ADOLPHE WILLIAM (1825-1905). French painter. Born at La Rochelle, he studied under Picot and in 1850 won the Prix de Rome. He achieved popularity with *La Vierge Consolatrice*, 1877, and *The Birth of Venus*, 1879, and reproductions of the former

have made him widely known. He died Aug. 20, 1905.

BOULANGER, GEORGES RNEST JEAN MARIE (1837-91). French politician and soldier. Born at Rennes, April 29, 1837, he entered the army in 1856, and saw service in Algeria and elsewhere. In 1884 he was sent to command the troops in Tunis. In 1886 he was made minister for war, but resigned the following year and was given command of an army corps. Removed from his command in 1888 owing to alliances with royalists, he was elected to the chamber by an immense majority. But he showed no stability of character, and in 1889, accused of peculation and of intriguing with the royalists, he fled to escape arrest. He committed suicide Sept. 30, 1891.

Georges Boulanger.
French soldier

BOULDER. Mining town of West Australia. Linked with Kalgoorlie by train and tram, it is 379 m. by rly. from Perth, and close to the famous group of mines forming the Golden Mile. It has a fine racecourse. Pop. 5,884.

BOULOGNE-SUR-MER. Seaport and town of France, in the dept. of Pas-de-Calais. It stands on the English Channel, 157 m. by rly. N. by W. of Paris at the mouth of the Liane River. On a hill is the old town, surrounded by walls, containing the castle, now used as barracks, the hôtel de ville, and the cathedral of Notre Dame. Boulogne has a fine modern harbour, and is one of the chief ports for the traffic between England and France. The industries include fishing and fruits, eggs, and fish. To the north is Napoleon's column, begun to commemorate the assembly of the army for the conquest of England in 1804, and completed in 1841. There is a wireless station.

Boulogne. Street of the old town, with the cathedral of Notre Dame

Boulogne was, according to some, the starting-point of Caesar's invasion of Britain. During the Great War the town and port were under British administration and were almost entirely devoted to military uses. For the admirable conduct of its inhabitants during numerous aerial bombardments, Boulogne was awarded the Croix de Guerre. In June, 1920, a conference was held at Boulogne by the Supreme Council of the Allies to discuss the allocation of Reparation payments from Germany. Pop. 52,839.

Boulogne-sur-Seine, in the dept. of Seine, lies S.W. of Paris, in a bend of the Seine, and gives its name to the adjacent park, the Bois de Boulogne (q.v.). Pop. 75,559.

BOULTON, MATTHEW (1728-1809). British engineer. He was born in Birmingham, Sept. 3, 1728, and entered and soon enlarged the business of a silver stamper carried on by his father. Having opened works at Soho, near Birmingham, for the production of metal wares, the lack of water power caused him some anxiety, and in 1772 he entered into partnership with James Watt, who was trying to perfect his steam engine, then only thought of for pumping purposes. Boulton turned his attention later to the manufacture of coins and coining machinery. He died Aug. 18, 1809.

BOUNDS, BEATING THE. This is an old English custom for perpetuating the parish

boundaries. The ceremony took place annually in May on the Rogation days preceding Ascension Day. The parish priest, the churchwardens, the beadle, and other parish officials perambulated the boundaries accompanied by boys, who beat the boundary stones with houghs. As an aid to memory the urchins were sometimes beaten or bumped on the stones. The custom still exists in some places, notably the London parish of S. Clement Danes. At Lustleigh, Devon, it takes the form of ducking the boys.

BOUNTY (Lat. *bonitas*, goodness). Term for a gift or benefaction of any kind. It has been, and still is, used for payments made to soldiers and sailors in addition to their pay, the equivalent of the civilian's bonus. The money given at the close of a campaign is also called a bounty. The king's bounty is a sum of money sent to any British woman who gives birth to triplets. In a special sense bounty is used for a grant of public money to aid a particular industry. In the 18th century bounties were freely given in England, and in the 20th Canada fostered some of her infant industries by this means.

BOUNTY, MUTINY OF THE. In 1788 Captain William Bligh (q.v.) was sent by the British government in command of H.M.S. *Bounty* to the Society Islands to collect vegetable products with a view to propagating them in the W. Indies. In April, 1789, his crew mutinied. The captain and 18 loyal sailors were set adrift in an open boat, but ultimately landed on the island of Timor near Java. Meanwhile the crew of the *Bounty* reached Tahiti, whence nine of them, with a few natives, both men and women, sailed to the uninhabited Pitcairn Island, in 1790. Ten years later only one of the men, John Adams (q.v.) was alive; but there were several women and children, from whom the present inhabitants of the island, now numbering about 140, are descended.

BOUNTY ISLANDS. Group of 13 uninhabited islands in the S. Pacific belonging to New Zealand. They lie N. of the Antipodes Islands, about 415 m. from Port Chalmers. The principal island, which has a depot with stores for shipwrecked mariners, is visited twice a year by a government steamer.

BOURASSA, HENRI (b. 1868). Canadian politician and journalist. He was born at Montreal, Sept. 1, 1868, and became the ardent spokesman of the French-Canadians. From 1896 to 1908, and again from 1925, he sat in the Dominion House of Commons. He opposed Canada's participation in the Great War. He founded the Montreal newspaper, *Le Devoir*, in 1910.

Bourbon, ÎLE DE. A French island in the Indian Ocean, generally called Réunion (q.v.).

BOURBON. Name of a French family, members of which were kings of France from 1589-1789, and again from 1814-48, and rulers of Spain, with a brief interval, from 1700 to the present day. The name is taken from the town of Bourbon l'Archambault, and the district around this, called the Bourbonnais, was the first territory ruled by the family. They first appear as its lords in the 9th century, and in the 13th their heiress, Beatrix, married Robert, count of Clermont (1250-1318), a younger son of Louis IX.

Robert's son Louis became duke of Bourbon, and the existing Bourbons are sprung from a younger son of Duke Louis James, count of La Marche, whose grandson was Louis, count of Vendôme. Fourth in descent from this Louis was Antony, who married Jeanne d'Albret, heiress of Navarre, and became king of that land in 1554. Their son was Henry IV, who in 1589 secured the throne of France. His descendants, Louis XIII, XIV, XV, and XVI, reigned until the Revolution.

In 1814 the Bourbons were restored, but their rule ended in 1848, with the revolution that overthrew Louis Philippe. At the present time the French Bourbons are only represented by the Orleans branch, descendants of Philip I, duke of Orleans, as the count of Chambord, the last of the senior line, died in 1883.

The Spanish Bourbons are descended from Louis XIV through his grandson Philip, who became king of Spain in 1700. His descendant, Charles IV, was driven from his throne by Napoleon, but, as in France, the Bourbons were restored in 1814. Ferdinand VII, dying in 1833, left only an infant daughter, Isabella, whose claim was contested by her uncle Carlos. In the civil war, Isabella was victorious, and from her the present king is descended.

BOURBON, CHARLES, DUKE OF (1490-1527). French soldier, frequently called the Constable of Bourbon. Born Feb. 17, 1490, a son of the count of Montpensier, he obtained the title of duke through marriage. He began his notable military career in Italy, and was made constable of France by Francis I in 1515. Later he deserted his country and entered the service of the emperor Charles V, and in 1524 took command of the emperor's armies in Italy. He fought at Pavia, and then made his memorable attack on Rome, in the course of which he was killed, May 6, 1527.

BOURCHIER, ARTHUR (1864-1927). British actor-manager. Born at Speen, Berkshire. June 22, 1864, he was educated at Eton and Christ Church, Oxford, where he helped to found the O.U.D.S., and made his first professional appearance as Jacques in *As You Like It* at Wolverhampton in 1889. He was associated with Charles Wyndham in the management of *The Criterion*, London. In 1900 he became manager of *The Garrick*, London, where *The Walls of Jericho*, by Alfred Sutro, 1904, was one of his most notable productions. He died Sept. 14, 1927. Pron. Bowcher.

BOURGEOIS. Term applied generally to a member of the mercantile or shop-keeping middle class of a community or country, sometimes in a disparaging sense. From its usual reluctance to cooperate in any violent disturbance of established conditions, it has incurred the resentment of the extremists in most revolutionary movements, and in Russia the bourgeoisie was specially marked down for extermination by the Bolsheviks. In *Molière's* comedy, *Le Bourgeois Gentilhomme*, the central character is an elderly tradesman who, having suddenly become rich, wishes to educate himself in the ways of society.

BOURGEOIS. Medium-sized printing type, between brevier and long primer, known also as 9-point; about 8 lines make an inch. The name, derived probably from that of a typefounder, is so spelt in German; bourgeois, in Dutch; gaillarde, in French; and gagliarda, in Italian. Pron. bourjoice.

This line is set in bourgeois type.

BOURGEOIS, LÉON VICTOR AUGUSTE (1851-1925). French statesman. He entered public service in 1877, and after holding other offices

Léon Bourgeois,
French statesman
Manuel, Paris.

was minister of public instruction, 1890-92; of justice, 1892-93; and premier, 1895-96. He was again minister of public instruction in 1898, and in 1899 represented France at the Hague conference. President of the chamber of deputies, 1902-3, he became a senator in 1905, and was minister of foreign affairs, 1906, and minister of labour, 1912-13 and 1917. He was the permanent delegate of France at The Hague from 1907, and was

appointed to represent France on the council of the League of Nations in 1919. He died Sept. 29, 1925.

BOURGEOIS, SIR PETER FRANCIS (1756-1811). English painter. Elected R.A. in 1793, he was appointed landscape painter to George III in 1794. He died Jan. 8, 1811. There are 20 of his pictures in the gallery he founded at Dulwich.

BOURGES. City of France, capital of the dept. of Cher. It stands at the junction of the rivers Yèvre and Auron, 144 m. by rly. S. of Paris. The seat of an archbishopric, its chief building is the magnificent 12th century Gothic cathedral, famed especially for its stained glass and its two towers. Other features of interest are the hôtel de ville.

Bourges. Cathedral of S. Etienne, which took nearly 400 years to build

Courtesy of Office Français du Tourisme

built about 1440, and the old house of Jacques Cœur, now used as law courts. The university, founded in 1465, was abolished at the Revolution. The city is noted for its arsenal and engineering works. The ancient Avaricum, the chief town of the Bituriges, it was taken by Caesar and made a Roman settlement. It was long the capital of the province of Berry. Pop. 45,942.

BOURGET. Lake of France, close to Aix-les-Bains. Its length is 11 m. and its breadth 2 m. The canal de Savières takes its water to the Rhône, 2½ m. away.

BOURGET, LE. Village of France, in the dept. of Seine. It is 6 m. by rly. N.E. of Paris, and during the siege of Paris in 1870 was the scene of French reverses. It has a large aerodrome, being the airport for Paris. Pop. 6,185.

Paul Bourget,
French writer
Henri Manuel

quière, 1874, *Mensonges*, 1887; *Le Disciple*, 1889; *Outre Mer*, 1895; *Le Danseur Mondain*, 1926. In 1894 he was elected to the Academy.

BOURLON WOOD. Wood of France prominent in the Great War. It lies 3½ m. W. of Cambrai, and the village of the same name, ruined in the fighting, was at its N.W. edge. The wood played a most important part in the great series of battles fought before Cambrai in 1917 and 1918. In the former year Bourlon Wood was captured by the British on Nov. 23 in the first battle of Cambrai (q.v.), but was evacuated on Dec. 4-6. It was finally captured by the British in Sept., 1918, in the second battle of Cambrai, Canadian units and tanks being conspicuous in this operation. To mark the heroism of the Canadian troops it is proposed to erect a memorial here.

BOURNE. Urban district and market town of Lincolnshire. It is 9½ m. by rly. W. of Spalding on the L.N.E. and L.M.S. Rlys. It has a Norman church and traces of a castle. Market day, Thursday. Pop. 4,317.

BOURNE, FRANCIS (h. 1861). English cardinal. He was born at Clapham, March 23, 1861, and was ordained priest in 1884. After serving at Blackheath, Mortlake, and West Grinstead, he founded the Southwark diocesan seminary, and in 1889 became its rector. In 1897 he became bishop of Southwark, and in 1903 succeeded Cardinal Vaughan as archbishop of Westminster. He was created a cardinal in 1911.

Francis Bourne,
English cardinal
Russell

BOURNE, HUGH (1772-1852). Founder of Primitive Methodism in England. Born at Fordhays, Staffordshire, April 3, 1772, he was brought up a Wesleyan, became a local preacher, and in 1807 began holding camp meetings. These were condemned by the Wesleyan Conference, and in 1808 Bourne was expelled from the denomination. He gained many followers, commonly known as ranters, who adopted the style of the Primitive Methodist Connexion in 1812. Bourne made many preaching tours in Great Britain and Ireland, and visited the U.S.A. in 1844-46. He died on Oct. 11, 1852.

BOURNEMOUTH. Borough and watering place of Hampshire. It stands in the pine-clad valley of the Bourne rivulet on Poole Bay, 107 m. S.W. of London by the Southern Rly. Its equable climate, soft air, and picturesque chines make it a popular health

Bournemouth, a favourite health resort. View of the sea front and pier from the East Cliff

resort and residential district. Bournemouth sprang into popularity about the middle of the 19th century. It has a long stretch of firm, clean sands affording excellent bathing, and two piers. There are numerous gardens and parks. The Winter Gardens are a great attraction, and a fine pavilion was opened in 1929.

The public buildings include fine modern churches, free libraries, and the Russell-Cotes art gallery and museum. There is a broadcasting station (call 6 B M). About 3 m. outside the town is an aerodrome. Bournemouth was incorporated in 1890, and became a county bor. in 1900. Pop. 92,650.

BOURNVILLE. Industrial and residential model village of Worcestershire, included in Greater Birmingham. It was built on garden city lines in 1895 by George Cadbury

Bournville. Part of the model village built by George Cadbury

(q.v.) for his chocolate and cocoa business. In 1901 the property was made over to a trust.

BOURRIENNE, LOUIS ANTOINE FAUVELET DE (1769-1834). French diplomatist. Born at Sens, July 9, 1769, and educated at the military school at Brienne with Napoleon Bonaparte, he is chiefly remembered for his inaccurate *Mémoires sur Napoléon* (1829).

BOURSE. French word meaning purse, but used in a special sense for an exchange, especially a stock exchange. The Bourse par excellence is the Stock Exchange of Paris. The large hall has the parquet, reserved for the agents de change or official members; the coulisse is for unofficial members.

A French labour exchange was known as a *Bourse du Travail*. One was opened in Paris in 1887, and others were set up elsewhere, but they were not very successful. They were carried on by members of the trade unions, without the state or the employers having any voice in the management.

BOUSSA, BUSSA, OR BUSA. Town of Nigeria. On the Niger, at the head of navigation, it occupies a large stretch of land and is encompassed by a wall. Here Mungo Park was drowned in 1806. Pop. about 12,000.

BOUTS, DIERICK (c. 1410-75). Dutch painter. Born at Haarlem, he settled at Louvain, where in 1468 he became official painter to the town council. He executed for the hôtel de ville the two large pictures, later in the Brussels Museum, dealing with the unjust judgement of the emperor Otho and his reparation. He is represented in the Munich Gallery, Louvain, the Louvre, and the National Gallery. He died May 6, 1475.

BOUVET. Uninhabited island in the S. Atlantic. It has been British since its discovery in 1925, but in 1927 was occupied by the Norwegians. The difficulty was composed, and the island leased to a Norwegian company for whaling and the collection of guano.

BOVEY TRACEY. Village of Devonshire. It lies 6 m. S.E. of Moreton Hampstead, on the G.W.R., amid beautiful scenery in a district rich in lignites. The Church of Thomas à Becket was built by Sir William de Tracey as a penance for the murder of the archbishop. There are pottery works. Pop. 2,788.

Bovey Tracey gives its name to a series of beds consisting of sands, clays, and lignites. They are over 600 ft. in thickness and 9 m. in extent, and occupy an old lake basin in the Teign valley. The deposits are valuable on account of the lignites and certain pottery clays they contain.

BOW (A.S. hūgan, to hend). Weapon for propelling arrows. Made of a flexible piece of wood and a length of cord, bows have been used from the earliest ages in all parts of the world. The long bow is made of bamboo, yew, etc. Strings for bows are made of hemp and other fibres, of twisted cane, raw hide, silk and various other materials. In modern British archery the bow-string consists of three strands of hemp compacted with glue. Bow-string hemp is obtained from the leaves of plants of the *Sansevieria* family. It is also used for making ropes for deep-sea sounding.

Another kind of bow is the stick strung with horseshair used for producing sound and tone from stringed instruments. Its name and earlier forms were derived from the weapon. See Archery; Crossbow; also illus. pp. 112, 115

BOW OR STRATFORD-LE-BOW. Eastern suburb of London, within the met. bor. of Poplar, 3 m. E. of S. Paul's. Named from the bow or arched bridge over the Lea, which replaced the ford in the reign of Henry II, it had a Norman-French school, referred to by Chaucer in "French she spake . . . after the scol of Stratford-atte-Bowe."

BOW WARE. This is a very heavy ware having a hard, compact body. The pieces made included table services, large howls, snuff

boxes, figures and groups characterised by holes at the back for candlestick branches. These were decorated with crimson, pale blue and yellow underglaze, and other colours with gold overglaze. Biscuit-ware baskets were made.

BOW. River of Canada. It rises in the Rocky Mountains and unites some miles W. of Medicine Hat with the Belly River, the two forming the South Saskatchewan. Its total length is 315 m.

BOW CHURCH. London church, in full S. Mary-le-Bow, or S. Maria de Arcubus. Built in 1671-87, it is on the S. side of Cheapside, and possesses one of Wren's finest steeples, in height about 220 ft. The church chimes were rearranged in 1904, when Sir Charles Stanford revived the old tune. Turn again, Whittington. Anyone born within the sound of Bow bells is defined as a Cockney.

Bow Church, London famed for its chime

BOWDLER, THOMAS (1754-1825). Editor of *The Family Shakespeare*. Born at Ashley, near Bath, July 11, 1754, he graduated in medicine in 1776. In 1818 he published *The Family Shakespeare* (10 vols.), in which "nothing is added to the original text; but those words and expressions are omitted which cannot with propriety be read aloud in a family." In 1826 appeared posthumously his similarly expurgated edition of *Gibbon's Decline and Fall of the Roman Empire*. The success of the censored Shakespeare brought into use the verb "to howlerise," first employed in 1836. Bowdler died at Rhyddings, near Swansea, Feb. 24, 1825.

BOWEL (late Lat. *botellus*, little sausage). Intestine of the body. It consists of the small intestine, about 23 ft. long, divided into the duodenum, jejunum, and ileum; and the large intestine, 5 ft. or 6 ft. in length, which is divided into the caecum, colon, and rectum.

BOWELL, SIR MACKENZIE (1823-1917). Canadian politician. Born at Rickingham, Suffolk, Dec. 27, 1823, he emigrated in 1833 to Canada, where he became a printer and later a journalist. In 1867 he was elected to the first Dominion Parliament, and was minister of customs in Macdonald's Cabinet, 1878-91. In 1892, after becoming a senator, he succeeded Thompson as premier. He resigned in the next year, and was knighted. From 1896-1906 he was leader of the conservative opposition, and he remained a member of the Canadian Senate until his death, which took place, Dec. 11, 1917.

Sir M. Bowell, Canadian politician

harbour. It has one of the finest anchorages on the East Coast. Pop. about 2,000.

BOWEN, CHARLES SYNGE CHRISTOPHER BOWEN, BARON (1835-94). British judge. Born at Woolaston, near Chepstow, Mon. Jan. 1, 1835, a grandson of Richard Steele, he was called to the bar at Lincoln's Inn, in 1861. In 1872 he was made junior counsel to the treasury. He became a queen's bench judge in 1879, a lord justice of appeal, 1882, and a lord of appeal, 1893. He died April 10, 1894.

Bow Ware. A painted plate of this distinctive London pottery

BOWER BIRD. Name given to several species of Australian birds. They derive their name from their habit of constructing

howers, or covered runs, apparently for arranged to form a kind of tunnel among the bushes, and adorned with small pebbles, shells, bones, etc.

BOWES. Village of Yorkshire (N.R.), 4 m. S.W. of Barnard Castle, where it is understood the boarding school for boys was carried on which figures as *Dotbeboys Hall* in Nicholas Nickleby. A natural bridge of limestone, which is known as God's Bridge, crosses the Greta. Pop. 655.

Bower Bird. One species of this Australian bird

Bow Fell. Mountain of Westmorland. It is in the Lake District, 8 m. W. of Ambleside, and is 2,960 ft. high.

BOWFIN (*Amia calva*). Mud fish found in the lakes of N. America. It frequently comes to the surface to inhale air into its swim-bladder, and will live for an hour out of water without ill effects. It constructs a nest among the weeds for its eggs, which are guarded by the male until hatched.

Bowfin. A North American mud fish found in the lakes

BOWIE KNIFE. General term in the U.S.A. for a large heavy sheath-knife. It is so called from the American pioneer James Bowie (d. 1836), who in a fight near Natchez, in 1827, killed Major Norris Wright with a hunting knife made from a blacksmith's rasp or file.

BOW LEG (*Genu varum*). Condition in which the legs are curved outwards, usually resulting from rickets. In young children the condition can be cured or much improved by wearing splints for some months and massaging. See Leg.

BOWLS (Lat. *bullā*, bubble, anything round). British pastime. It was practised in the 13th century and was very popular in Elizabethan days. To-day the English Bowling Association has an individual membership of 100,000, and nearly 900 clubs are affiliated to it.

The game is played upon either a level green, a space 42 yds. square, divided into six rinks

Bowie knife and its sheath

In 1814 the Bourbons were restored, but their rule ended in 1848, with the revolution that overthrew Louis Philippe. At the present time the French Bourbons are only represented by the Orleans branch, descendants of Philip I, duke of Orleans, as the count of Chambord, the last of the senior line, died in 1883.

The Spanish Bourbons are descended from Louis XIV through his grandson Philip, who became king of Spain in 1700. His descendant, Charles IV, was driven from his throne by Napoleon, but, as in France, the Bourbons were restored in 1814. Ferdinand VII, dying in 1833, left only an infant daughter, Isabella, whose claim was contested by her uncle Carlos. In the civil war, Isabella was victorious, and from her the present king is descended.

BOURBON, CHARLES, DUKE OF (1490-1527). French soldier, frequently called the Constable de Bourbon. Born Feb. 17, 1490, a son of the count of Montpensier, he obtained the title of duke through marriage. He began his notable military career in Italy, and was made constable of France by Francis I in 1515. Later he deserted his country and entered the service of the emperor Charles V, and in 1524 took command of the emperor's armies in Italy. He fought at Pavia, and then made his memorable attack on Rome, in the course of which he was killed, May 6, 1527.

BOURCHIER, ARTHUR (1864-1927). British actor-manager. Born at Speen, Berkshire, June 22, 1864, he was educated at Eton and Christ Church, Oxford, where he helped to found the O.U.D.S., and made his first professional appearance as Jacques in *As You Like It* at Wolverhampton in 1889. He was associated with Charles Wyndham in the management of *The Criterion*, London. In 1900 he became manager of *The Garrick*, London, where *The Walls of Jericho*, by Alfred Sutro, 1904, was one of his most notable productions. He died Sept. 14, 1927. Pron. Bowcher.

BOURGEOIS. Term applied generally to a member of the mercantile or shop-keeping middle class of a community or country, sometimes in a disparaging sense. From its usual reluctance to cooperate in any violent disturbance of established conditions, it has incurred the resentment of the extremists in most revolutionary movements, and in Russia the bourgeoisie was specially marked down for extermination by the Bolsheviks. In Molière's comedy, *Le Bourgeois Gentilhomme*, the central character is an elderly tradesman who, having suddenly become rich, wishes to educate himself in the ways of society.

BOURGEOIS. Medium-sized printing type, between brevier and long primer, known also as 9-point; about 8 lines make an inch. The name, derived probably from that of a typefounder, is so spelt in German; *hurgeois*, in Dutch; *gaillarde*, in French; and *gagliarda*, in Italian. Pron. burjoice.

This line is set in bourgeois type.

BOURGEOIS, LÉON VICTOR AVOUSTE (1851-1925). French statesman. He entered public service in 1877, and after holding other offices was minister of public instruction, 1890-92; of justice, 1892-93; and premier, 1895-96. He was again minister of public instruction in 1898, and in 1899 represented France at the Hague conference. President of the chamber of deputies, 1902-3, he became a senator in 1905, and was minister of foreign affairs, 1906, and minister of labour, 1912-13 and 1917. He was the permanent delegate of France at The Hague from 1907, and was

appointed to represent France on the council of the League of Nations in 1919. He died Sept. 29, 1925.

BOURGEOIS, SIR PETER FRANCIS (1766-1811). English painter. Elected R.A. in 1793, he was appointed landscape painter to George III in 1794. He died Jan. 8, 1811. There are 20 of his pictures in the gallery he founded at Dulwich.

French writer
Henri Manuel

BOURGET, PAUL CHARLES JOSEPH (h. 1852). French writer. Born at Amiens, Sept. 2, 1852, his father was Russian and his mother English. He wrote many novels and volumes of essays, the best known being *La Vie Inquiete*, 1874, *Mensonges*, 1887; *Le Disciple*, 1889; *Outre Mer*, 1895; *Le Danseur Mondain*, 1926. In 1894 he was elected to the Academy.

BOURLON WOOD. Wood of France prominent in the Great War. It lies 3½ m. W. of Cambrai, and the village of the same name, ruined in the fighting, was at its N.W. edge. The wood played a most important part in the great series of battles fought before Cambrai in 1917 and 1918. In the former year Bourlon Wood was captured by the British on Nov. 23 in the first battle of Cambrai (q.v.), but was evacuated on Dec. 4-6. It was finally captured by the British in Sept., 1918, in the second battle of Cambrai, Canadian units and tanks being conspicuous in this operation. To mark the heroism of the Canadian troops it is proposed to erect a memorial here.

BOURNE. Urban district and market town of Lincolnshire. It is 9½ m. by rly. W. of Spalding on the L.N.E. and L.M.S. Rlys. It has a Norman church and traces of a castle. Market day, Thursday. Pop. 4,317.

BOURNE, FRANÇOIS (h. 1861). English cardinal. He was born at Clapham, March 23, 1861, and was ordained priest in 1884. After serving at Blackheath, Mortlake, and West Grinstead, he founded the Southwark diocesan seminary, and in 1889 became its rector. In 1897 he became bishop of Southwark, and in 1903 succeeded Cardinal Vaughan as archbishop of Westminster. He was created a cardinal in 1911.

Francis Bourne,
English cardinal
Russell

BOURNE, HUGH (1772-1852). Founder of Primitive Methodism in England. Born at Fordhays, Staffordshire, April 3, 1772, he was brought up a Wesleyan, became a local preacher, and in 1807 began holding camp meetings. These were condemned by the Wesleyan Conference, and in 1808 Bourne was expelled from the denomination. He gained many followers, commonly known as ranters, who adopted the style of the Primitive Methodist Connexion in 1812. Bourne made many preaching tours in Great Britain and Ireland, and visited the U.S.A. in 1844-46. He died on Oct. 11, 1852.

BOURNEMOUTH. Borough and watering place of Hampshire. It stands in the pine-clad valley of the Bourne rivulet on Poole Bay, 107 m. S.W. of London by the Southern Rly. Its equable climate, soft air, and picturesque chines make it a popular health

Bournemouth, a favourite health resort. View of the sea front and pier from the East Cliff

resort and residential district Bournemouth sprang into popularity about the middle of the 19th century. It has a long stretch of firm, clean sands affording excellent bathing, and two piers. There are numerous gardens and parks. The Winter Gardens are a great attraction, and a fine pavilion was opened in 1929.

The public buildings include fine modern churches, free libraries, and the Russell-Cotes art gallery and museum. There is a broadcasting station (call 6 B M). About 3 m. outside the town is an aerodrome. Bournemouth was incorporated in 1890, and became a county bor. in 1900. Pop. 92,650.

BOURNVILLE. Industrial and residential model village of Worcestershire, included in Greater Birmingham.

Bournville. Part of the model village built by George Cadbury

It was built on garden city lines in 1895 by George Cadbury (q.v.) for his chocolate and cocoa business. In 1901 the property was made over to a trust.

1864. He was vicar of S. James's, Holloway, 1870-79, of Christ Church, Lancaster Gate, 1879-84, and was made canon of Windsor in 1882. In 1884 he was

Wm. Boyd-Carpenter,
British divine
Russell

selected as bishop of Ripon, and remained there until 1911, when he exchanged the bishopric for a canonry at Westminster, which post he retained until his death, Oct. 26, 1918. Boyd-Carpenter was one of the most eloquent preachers of his day and also took an interest in social questions. He was created K.C.V.O. in 1912.

BOYLE. Market town of co. Roscommon, Irish Free State. On the river Boyle, it is 9 m. N.W. of Carrick-on-Shannon, by the Gt. Southern Rlys. It has ruins of a 12th century Cistercian abbey, and trades in flax, butter, and provisions. Market days, Wed. and Sat. Pop. 2,323.

BOYLE, ROBERT (1627-91). Irish natural philosopher and chemist. Born at Lismore, Munster, Jan. 25, 1627, the 14th child of Richard Boyle, first earl of Cork, his bent for chemistry and natural science made him a leader in the foundation of the Royal Society. From 1654-68 he resided at Oxford, and, after a long series of experiments, discovered in 1662 the law known by his name.

Robert Boyle, Irish natural
philosopher and chemist
Engraved by W. Holf

During his residence in Oxford Boyle lent his influence to procuring the Charter of the East India Company, with the idea of furthering the propagation of Christianity in the Far East. He bore the expense of translating the Bible for Indian, Irish, Welsh, Turkish and Malay readers. By bequest he founded the Boyle Lectures, a course delivered every year at S. Mary-le-Bow Church, London, and consisting of eight sermons to prove the truth of Christianity. He died Dec. 30, 1691, and his complete Works were published in 1744.

Boyle's Law—that the volume of a given mass of gas at a fixed temperature multiplied by the pressure is always a constant quantity—is the result of his study of the elasticity of gases. It has been found that gases deviate from the law slightly but consistently at high pressures and at low pressures.

BOYNE. River of the Irish Free State. Rising in the Bog of Allen near Carbery, in co. Kildare, it flows to the Irish Sea, 4 m. below Drogheda, to which town it is navigable. Its length is about 80 m., and on its banks are Trim and Navan. Its chief tributary is the Blackwater.

The battle of the Boyne was fought between William III of England and the exiled James II, July 1 (July 11, new style), 1690. The Orangemen keep July 12 as the anniversary. It resulted in the defeat of James and of his hopes of restoration. The losses were about 500 English and about 1,500 on the other side. An obelisk was erected to mark the site of the battle.

BOYS' BRIGADE, THE. Organization for the training and welfare of boys. It was founded in Glasgow, Oct. 4, 1883, by William (later Sir William) Smith. The brigade has

a distinct religious basis, and provides a sound disciplinary and moral training and elementary drill. Companies are formed in connexion with churches and other organizations.

In 1926 the union of the Boys' Brigade and the Boys' Life Brigade was effected. The latter organization, founded in 1899, promoted discipline and taught military drill (excluding rifle and bayonet practice), and gave special prominence to life-saving. The total strength is 100,000 officers and boys. The headquarters are at Abbey House, Westminster, S.W.1.

BOY SCOUTS. Organization for the development of good citizenship among boys. It exists to train the young in habits of observation, obedience, and self-reliance. It inculcates loyalty and thoughtfulness for others, and teaches boys to be useful to the public and to themselves.

The movement was initiated in Great Britain by Lord Baden-Powell in 1908, and is known as the Boy Scouts Association. It only admits to membership bodies which accept as a basis the threefold promise of the scout, the system of instruction contained in Scouting for Boys by Lord Baden-Powell (q.v.), the chief scout, and regulations from headquarters.

Scouts are graded according to age, into three classes—Wolf Cubs: eight to eleven; Scouts: eleven and upwards; Rover Scouts: over fifteen and a half. In addition there are Sea Scouts for activities connected with sailing. Badges are given for proficiency. Among the multifarious activities of the scout movement are the rally, camping, and woodcraft. The total world membership is about 2,000,000, of whom nearly 600,000 are British scouts.

In 1929 a great Jamboree was held at Birkenhead attended by scouts from 42 countries. The headquarters are at 25, Buckingham Palace Road, London, S.W.1.

BOZ. Name under which Charles Dickens first came to be known as a writer. His Sketches by Boz were published in volume form in 1836, and the Pickwick Papers were at first issued under the same pen-name in the following year. It was a nickname that had been applied to Dickens's youngest brother.

BOZRAH. Name of two towns of ancient Palestine. (1) Bozrah of Edom was the capital of the kingdom of the Nahateans, about 300 B.C. It lay 30 m. S. of the Dead Sea. It has been identified with El Buseira in Transjordan. (2) Bozrah of Moab was situated in the Mishor, or plains of Moab, 75 m. S. of Damascus. The Bostra of Roman times, it was conquered by Trajan, A.D. 105. It has been identified with Busra in Syria.

BRABANT. Name of a medieval duchy, formerly part of Lorraine. Henry, duke of Lower Lorraine, about 1190 called himself duke of Brabant. Later it passed to Burgundy and came with the lands of Mary, the heiress of Charles the Bold, to the Hapsburgs and thus passed with Spain to Philip II. The revolt of the Netherlands against Spain divided Brabant into two parts. The northern portion (now the province of Holland called North Brabant) was conquered by the Dutch and was included in the United Provinces in 1648. The southern part (now the Belgian province of Brabant) remained under Spanish

rule until 1713, when it passed to Austria. In 1815 Brabant was included in the new kingdom of the Netherlands, but the southerners soon revolted against Dutch rule. The outcome was the foundation in 1830 of the kingdom of Belgium.

The eldest son of the king of the Belgians is called the duke of Brabant. In 1926 Leopold, duke of Brabant, the oldest son of King Albert, married Princess Astrid of Sweden. A daughter was born to them in 1927.

The national anthem of Belgium is called La Brabançonne. It celebrates the establishment of Belgian independence after the revolution of 1830. The words are by Jenneval, and the music by F. Campenhout. See Belgium; Netherlands.

BRACE, WILLIAM (b. 1865). British politician. Born Sept. 23, 1865, he became a miner. Chosen agent for one of the miners' unions, he was elected president of the miners' federation of S. Wales. In 1906 Brace was returned as labour M.P. for S. Glamorganshire, and from 1915-18 was under-secretary for home affairs in the coalition government. In 1920 he was appointed chief labour adviser to the Department of Mines.

William Brace,
British politician

BRACEBROUGH SPA. Inland watering place near Stamford, Lincs. The value of its waters was discovered in 1800, and in 1920 it was reopened. The waters are good for disorders of the blood, skin, etc.

BRACEGIRDLE, ANNE (c. 1663-1748). English actress. In 1688 she took the part of Lucia in Shadwell's The Squire

Anne Bracegirdle in Howard and
Dryden's tragedy, The Indian Queen
From an old print

of Alsatia, and in 1693 that of Araminta in Congreve's The Old Bachelor. When Betterton opened the theatre in Lincoln's Inn Fields in 1695 with Congreve's Love for Love, Mrs. Bracegirdle played Angelica, one of her best parts. Congreve and Rowe wrote plays for her, and she also played Shakespearian roles.

BRACHYCEPHALIC (Gr. brachys, short; kephale, head). Term usually denoting human heads and skulls whose breadth is at least four-fifths of their length. The round-(short-, broad-) headed form is found among peoples of Alpine type from the Pyrenees across Europe into Mongol Asia, thence through Burma and the Indo-Chinese peninsula into Java. In America it appears in the N. Pacific region, along the central and Andean tablelands, and in Patagonia.

BRACKEN OR BRAKE (*Pteris aquilina*). Fern of world-wide distribution. It grows in masses upon great stretches of heath, moor-

Bracken. Under-
surface of frond

land, and forest. There is no crown of fronds, the creeping underground root-stock giving off fronds singly at intervals. The fronds are triangular in outline, leathery, and much divided. The edible fern of Tasmania, whose root-stock is eaten by the natives, is a variety.

BRACKET (Fr. *hraguette*). (1) Projecting piece of stone, wood, or metal with a horizontal supporting surface usually sprung from a vertical surface.

Bracket, in architecture

(2) Metal pipe, usually ornamented, projecting from the wall of a room or apartment and carrying gas or electric light fittings.

(3) Signs [. . .] for enclosing words, sentences, or mathematical symbols, indicating that the enclosed matter is separated from its context.

BRACKLESHAM. In geology middle Eocene beds of the Hampshire basin. They are named from Bracklesham Bay, in Sussex, where they are well exposed and yield numbers of marine fossils, and are also well developed in the Isle of Wight. They consist of blue, grey, and green clays with interbedded sands.

BRACT (Lat. *bractea*, thin metal plate). Small leaf-like organ produced on the flower stalks of plants, often just below the calyx, or below the point where the flower-stem branches. It is a modified leaf.

BRAXTON OR **BRATTON**, HENRY DE (d. 1268). English judge. Born at Bratton, Devonshire, he became the friend of Henry III and an itinerant judge. He held various ecclesiastical appointments and was chancellor of Exeter cathedral (1264). His great work was a treatise on the laws and customs of England, printed first in 1569, and edited by Sir Travers Twiss, in the *Rolls series*, 1878-83.

Bract of lime fruit

BRADBURY, JOHN SWANWICK BRADBURY, 1ST BARON (b. 1872). British civil servant. Born Sept. 23, 1872, in 1896 he entered the Colonial Office. Transferred to the Treasury, he rose to be a principal clerk there. In 1911 he was made a member of the National Health Insurance Commission, and in 1913 he became joint permanent secretary to the Treasury. He was there until 1919 and his name appeared on the notes issued by the Treasury. Knighted in 1917, he was chief British representative on the reparations commission, 1919-24, and was created a peer in 1925.

BRADDOCK, EDWARD (1695-1755). British soldier. He commanded a battalion of Coldstreamers in Holland under the prince of Orange, 1746-48, became a major-general in 1754, and was sent to America to take command against the French. He decided to invest Fort Duquesne (now Pittsburg), but being totally unused to backwoods warfare was ambushed near his objective. Mortally wounded in the battle, Braddock died July 13, 1755.

BRADDON, MARY ELIZABETH (1837-1915). British novelist. Her first great success was *Lady Audley's Secret*, 1862. This was followed by a long series of novels in which she showed herself an adept in handling sensational plots. They included *Anrora Floyd* 1862, *The Doctor's Wife*, 1864, *The Trail of*

the *Serpent*, 1866, *Dead Sea Fruit*, 1868, and *The Green Curtain*, 1911. Miss Braddon, who died Feb. 4, 1915, was the wife of John Maxwell, publisher, and mother of W. B. Maxwell, the novelist.

BRADFIELD COLLEGE. English public school, 8 m. from Reading. S. Andrew's College, Bradfield, was founded in 1850 on Church of England lines. It has about 300 boys, and scholarships both to the school and the universities, and it is famous for its performance of Greek plays, first given in 1890 by the boys in an open-air theatre constructed on the Greek model. Another Bradfield is a village near Sheffield.

BRADFORD. City and county borough of Yorkshire (W.R.). It is in a picturesque hilly district on the Aire, 9 m. W. of Leeds, and 191 m. N.N.W. of London, and is served by the L.M.S. and L.N.E. Rlys. Famous for the spinning and weaving of worsted, Bradford has long been the chief centre in England of this industry. An important allied industry is dyeing and finishing. There are several large engineering works and foundries and also stone quarries.

Foremost among public buildings is the French-Gothic town hall, erected in 1873 and since enlarged. The Exchange, opened in 1867, contains a statue of Coghden, and the Cartwright Memorial Hall, erected in 1904 in honour of the power loom, houses the art gallery and museum. Bradford became a bishopric in 1919. The parish church of S. Peter, which became the cathedral church, is a Perpendicular building erected about 1458. Among educational institutions are the grammar school, founded in the 16th century, and lodged in a new building in 1873; the technical college, opened in 1882, and acquired by the corporation seven years later; and the mechanics' institute, established in 1832. There are many parks and open spaces. Market days, Mon. and Thurs. Pop. 293,200.

Bradford was incorporated in 1847, became a co. bor. in 1888, and a city in 1897. First represented in Parliament in 1832, it returned two members down to 1885, when the number was increased to three, and in 1918 to four. In 1907 the chief magistrate received the title of lord mayor. After the great war Bradford adopted Bailleul and Nieppe.

BRADFORD, WILLIAM (1589-1657). Pilgrim Father. He was born at Austerfield, Yorkshire, and became associated in his youth with the puritan separatists at Scrooby, Nottinghamshire. He left England and lived for some years as a silk weaver at Amsterdam.

In 1620 he sailed in *The Mayflower* for New England, and the following year was made governor of Plymouth. He died May 9, 1657.

BRADFORD-ON-AVON. Urban district and market town of Wiltshire. It is 9 m. by rly. S.E. of Bath, on the G.W.R., and stands on both banks of the Avon, and on the Kennet and Avon canal. S. Lawrence, a Saxon church, is one of the oldest in England. Ma ket day, Tues. Pop. 4,621.

A bed of grey marly clay forming a local division of the Great Oolite group is known

as the Bradford Clay. It is developed especially around Bradford-on-Avon.

BRADING. Village of the Isle of Wight. It is 4 m. S. of Ryde, on the Southern Rly. It retains its stocks and bull ring, and has remains of a Roman villa. Pop. 1,696.

BRADLAUGH, CHARLES (1833-91). British freethinker. Born at Hoxton, London, Sept. 26, 1833, he obtained work in a lawyer's office, and engaged in free-thought and radical propaganda under the name of Iconoclast. He founded *The National Reformer*, and was successful in much of the litigation entailed by his publications, notably in 1877-78, when he and Mrs. Annie Besant were prosecuted and acquitted for publishing a Malthusian pamphlet. In 1880 he was elected M.P. for Northampton. He refused to take the oath, and more than once he was expelled. Each time, however, his constituents re-elected him. In 1886 he took his seat, on affirmation, without opposition. He died Jan. 30, 1891.

Charles Bradlaugh, British freethinker
Elliott & Fry

BRADLEY, JAMES (1693-1762). British astronomer. He was born in March, 1693, at Sherborne, Gloucestershire, and was ordained. Under the influence of his friend Halley, and Sir Isaac Newton, in 1721 he forsook the pulpit, became Savilian professor of astronomy at Oxford, and lecturer on astronomy and physics. Bradley's chief claims to fame are his discovery of the aberration of light and of the fixed stars, and his further discovery that the inclination of the earth's axis to the ecliptic is not constant. He succeeded Halley in 1742 as astronomer royal. He died July 13, 1762.

BRADSHAW, GEORGE (1801-53). Publisher of railway guides. Born at Salford, July 29, 1801, he served his apprenticeship as an engraver and printer, and in 1839 he issued Bradshaw's Railway Time Table as a small book, and in Dec., 1841, he first published the time-tables monthly under the title of Bradshaw's Monthly Railway Guide. He died Sept. 6, 1853.

BRADSHAW, JOHN (1602-59). English regicide. He was appointed chief justice of Chester in 1647. In 1649 he was chosen president of the commission set up by the Commons for the trial of Charles I, upon whom he pronounced sentence. He was president of the council of state 1649-52, and died Oct. 31, 1659.

BRAEMAR. District and village of S.W. Aberdeenshire. Surrounded by the Cairngorm Mts. and watered by the Dee, it has typical Highland scenery and deer-forests, and is a great tourist resort. Near are Balmoral, Abergeldie, and Braemar castles, and Mar Lodge.

Castleton of Braemar, the village, 18 m. S.W. of Ballater station, has a meteorological station. A Highland gathering is held each year. Pop. 1,029.

Bradford, Yorkshire. The Town Hall; the campanile contains a fine carillon

M. E. Braddon, British novelist

Braemar Castle, situated amidst some of the finest Highland scenery
Valentine

BRAGANZA OR BRAGANÇA. Name of the ruling family of Portugal 1640-1853 and of Brazil 1822-89. The house is descended from Alphonso, a natural son of King John I, who was made dnke of Braganza in 1442. In 1640, when the Portuguese expelled the Spaniards, a duke of Braganza became king as John IV. Members of the family remained on the throne, except when Napolcon controlled the country, until 1834, when Miguel was driven out. In 1853 the throne passed by marriage to the family of Saxc-Cohurg, a line now represented by the exiled king Manoel.

In Brazil there were two emperors of the Braganzas, Peter I and Peter II, the latter being expelled in 1889. The present head of the family is Dom Mignel, son of Miguel I, who was deposed in 1834 and died 1866.

The cradle of the dynasty was the city of Braganca. 8 m. from the Spanish border. Pop. 5,750. Another Braganca is a seaport of Brazil, near the mouth of the navigable river Caité. Pop. 10,000.

BRAGG, SIR WILLIAM HENRY (h. 1862). British scientist. Born July 2, 1862, of a Cumberland family, he was professor at Adelaide, 1886-1903, and Cavendish professor at Leeds, 1909-15. His chief work was concerned with X-rays and crystals and radio-activity. In 1915 he was appointed professor of physics at London University. In 1920 he was knighted. From 1923 Bragg was director of the Royal Institution, Fullerian professor of chemistry there, and director of the Davy-Faraday Research laboratory. He was assisted in his work by his son, William Lawrence Bragg (b. 1890), Langworthy professor of physics at Manchester University.

Sir William H. Bragg, British scientist

BRAGGADOCCHIO. Name of a hoastful hut really cowardly knight in Spenser's Faerie Queene. Now spelt braggadocio, it is applied to either an ineffective booster or any boasting intended to conceal innate cowardice.

BRAGI. In Norse mythology, one of the principal Aesir (q.v.), the god of poetry, husband of Idun. When Aegir (q.v.) visits the hall of Odin he sits next to Bragi, who answers all his questions with stories of the gods and the sources of wisdom and poetry.

Brahma. Figure of the four-headed god and his consort Saraswati, goddess of wisdom

BRAHE, TYCHO OR TYGE (1546-1601). Danish astronomer. Born Dec. 14, 1546, at Knudstrup, in Sweden, he studied rhetoric and philosophy at Copenhagen University, but an eclipse of the sun in 1560 directed his attention to the study of Ptolemy's works. Brahe discovered that the positions of the planets did not coincide with those assigned them by accepted astronomical calculations, and with such primitive instruments as he could command he carried out a series of measurements. In 1572 he discovered a new star in Cassiopeia. He published the first of his great astronomical works, De Nova Stella, in 1573.

Tycho Brahe, Danish astronomer From an old print

In 1576 the king of Denmark, Frederick II, conferred on him Hven Island, in the Sound near Elsinore. Here was built Uraniborg, or

Castle of the Heavens, which became a nursery of astronomy for the whole of Europe. Brahe died at Prague, Oct. 24, 1601. Consult Tycho Brahe, J. L. E. Dreyer, 1890.

BRAHMA (shortened form of Brahmaputra). Breed of domestic fowl. Said to he descended from two Asiatic strains originally crossed in the U.S.A., it once enjoyed a great vogue in the United Kingdom, being regarded as a good all-round fowl. But owing to a craze on the part of fanciers for markings and feathers, the ntilitarian qualities of the breed were gradually hred out, and it degenerated into a mere prodigy of feathers and fluff.

Brahma fowl, with bronze body and cream-coloured neck

BRAHMANISM. Hindu religion. The word Brahmanism is used to denote the modified form of Vedism which took the place of the older religion soon after 1000 B.C. Its introduction was due to the increasing number and the growing influence of the Brahmins, members of a priestly caste attached to the Vedic monarchs. It is less ethical hut more ceremonial than Vedism.

The literature of Brahmanism belongs to two classes, the inspired and the uninspired. The inspired embraces the Mantras or Vedic hymns, and the Brahmanas. These latter are prose or liturgical treatises intended primarily as manuals for the Brahmins; they furnish detailed instructions as to sacrifice and other priestly functions. The gods of the Brahmanas are identical for the most part with those of the early Vedas, but many others have been added. They are regarded as controlled by the sacrifices offered or hy the hymns chanted by the Brahmins.

The institution of caste originated in Brahmanism. To-day only a small percentage follow occupations connected with religion, the remainder consisting of lawyers, doctors, Government officials, clerks, policemen, artisans and servants. Some of the old food tahoes and other caste rules are now becoming disused. See Hinduism; India; Vedas.

Brahma Samaj (church of one God) is the title of a theistic society in India. It was started in 1830 in Calcutta by a Brahman, the Rajah Ram Mohan Roy (1774-1835), to purify Hinduism and establish monotheism. Under a later leader, Keshuh Chunder Sen (1838-84), the movement developed its creed and activities, condemning tho system of caste and advocating the universal brotherhood of man. Its headquarters are in Calcutta.

The Brahman ox is another name for the zebu (q.v.).

BRAHMAPUTRA (son of Brahma). One of the three great Indian rivers, the others being the Ganges and the Indus. Its length is about 1,800 m. and its drainage area about 361,200 sq. m. It traverses the Assam valley for 450 m., and then enters Rangpur district, continuing, as the Jamuna, a southerly course for about 150 m.

until it reaches the main stream of the Ganges, the Padma, at Goálanda. Here the combined delta of the two rivers begins, the main body of the Brahmaputra waters finally reaching the Bay of Bengal hy the Meghná estuary.

BRAHMS, JOHANNES (1833-97). German musician. He was horn at Hamburg, May 7, 1833, and during his student period composed his three piano Sonatas and the Scherzo in E flat minor. From 1854-59 he was musician to the prince of Lippe-Detmold. In 1862 he became conductor of the Singakademie at Vienna. He died April 3, 1897.

Johannes Brahms, German musician

Among the most important of Brahms' compositions are the German Requiem, 1867, the Triumphlied and the beautiful Schicksalslied, produced 1871, all for choir and orchestra.

BRAID, JAMES (h. 1870). Scottish golfer. He won the open championship in 1901, 1905, 1906, 1908, and 1910; played for Scotland against England in 1903-7, 1909, 1910 and 1912, and won the French championship in 1910. He wrote several hooks on golf.

BRAILA. River port of Rumania. On the Danube, about 100 m. N.E. of Bukarest, it is connected by a branch line with the main rly. systems. An important commercial town, it trades largely in grain. In 1921 Poland was given permission to use the port. It belonged to Turkey from the 16th century until 1828, when it passed to Rumania. Pop. 65,911.

BRAILLE SYSTEM. Writing and reading for the blind, so named from its inventor, Louis Braille (1809-52). The system consists

A	B	C	D	E	F	G	H	I	J
⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠

⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠	⠠

Braille. System of embossed reading and writing. The alphabet and some contractions are shown

of utilising raised dots or points on tough paper; the whole alphabet, numerals, punctuation marks, and various contractions being obtained from the variations of six dots

The writing of the system is rendered very simple by means of two metal bars, between which the paper lies, and a stylus. The bars are provided with cells into which the paper can be pressed hy the stylus to make the requisite number and arrangement of dots. A typewriter has been invented for Braille, and there is a shorthand adaptation of it.

BRAIN. Central organ of the nervous system contained within the cranial cavity of the skull. Three membranes envelop the brain: the dnra mater, thick and tough and adherent to the interior of the skull; the arachnoid membrane, thin and delicate; and

Brain. Diagram showing the difference between a human brain (left) and that of a dog (right), and demonstrating the prominence of the dog's olfactory bulb

the pia mater, lying next to the brain surface. The cerebro-spinal fluid circulates between these membranes and in the cavities of the brain substance, known as ventricles.

Anatomically the brain is divided into four principal parts, the cerebrum, cerebellum, pons and medulla oblongata, the last named being continuous with the spinal cord. In every part there are two distinct kinds of nervous substance, termed white and grey matter, the latter being chiefly upon the surface.

The cerebrum consists of two oval hemispheres, separated by a great fissure; the surface of each hemisphere is broken up into lobes and convolutions, and each hemisphere has been mapped out into divisions representing distinct functions. The cerebellum serves to maintain the equilibrium of the body. From the brain come twelve pairs of nerves with differentiated functions.

Diseases of the brain include anaemia, due to excessive haemorrhage anywhere in the body, or to blood impoverishment; arteriosclerosis, which may induce apoplexy or cerebral haemorrhage; abscesses and tumours. Injuries to the brain may result in various forms of paralysis or interference with sight, bearing, etc. The commonest immediate result of a head injury is concussion of the brain; if the skull is fractured, inflammation of the lining membrane, or meningitis, may be set up. The term brain fog is given to a condition of chronic nervous exhaustion. See Apoplexy; Meningitis; Nervous System; Spinal Cord.

BRAINTREE. Urban district and market town of Essex. On the Blackwater river, 6 m. by rly. N.W. of Witham junction on the L.N.E.R., it manufactures artificial silk and has breweries and corn mills. In 1928 a new town hall was opened, the gift of Mr. W. J. Courtauld. Market day, Wed. Pop. 6,980.

BRAITHWAITE, JOHN (1797-1870). British engineer. Born in London, March 19, 1797, he was the son of another John Braithwaite, the inventor of the diving bell. His own work included the introduction of the donkey engine and the donkey pump and much railway construction. He was responsible for the first practical fire engine, the air pumps that ventilated the House of Lords, and other inventions. He died Sept. 25, 1870.

BRAITHWAITE, SIR WALTER PIPON (b. 1865). British soldier. Born Nov. 11, 1865, from 1911-14 he was head of the Staff College at Quetta, and he was director of staff duties at the War Office from Sept., 1914, until he went to Gallipoli. On the western front he led a division and then a corps. Later he held high commands in India, Scotland and England, and in 1927 was made adjutant-general.

BRAKE. Contrivance for diminishing speed or bringing to a standstill a vehicle or other moving object.

Brake. Perrot-Bendix 2-shoe Servo brake, in which wheel rotation increases braking action in either direction. A, brake shoes. B, connecting link. C, operating lever. D, floating lever expanding the shoes. E, pins on which shoes hang with limited movement clockwise or anticlockwise. F, contracting spring

and the internal expanding type, in which a strap is expanded against the inner surface of a drum. Many cars have brakes applied simultaneously on all four wheels, usually by a servo mechanism which utilizes the momentum of the vehicle, or brings into action a hydraulic device when the brake lever is operated.

All trains carrying passengers must be provided with brakes that are continuous, capable of being applied at will by engine driver and guard, instantaneous in action, and self-applying should the train part or the apparatus go wrong. In the vacuum brake the brake-shoes are held clear of the wheels as long as a vacuum is maintained in the brake cylinders, and are applied by the admission of air to the train pipe, which lowers the vacuum. To restore the vacuum and pull off the brakes, air is exhausted by a steam ejector.

BRAMAH, JOSEPH (1749-1814). British inventor. Born at Stainborough, Yorkshire, April 2, 1749, he moved to London. His first patent (1778) was concerned with domestic sanitation, and this was followed by the invention of a lock of great ingenuity. His hydraulic press, patented in 1795, was a valuable contribution to mechanical science, and the most important of his inventions. Of Bramah's patents, the beer engine and a machine for printing bank notes deserve mention. He died in London, Dec. 9, 1814.

BRAMANTE, DONATO (1444-1514). Italian architect. Born at Castel Durante, near Urbino, he resided at Milan from 1472-99, and shortly after moved to Rome, where, in 1506, he was charged by Julius II with the plan and reconstruction of St. Peter's. Bramante died at Rome, March 11, 1514, before the work was completed.

BRAMBLE OR **BLACKBERRY** (*Rubus fruticosus*). Prickly shrub of the order Rosaceae. It is a native of Europe, Asia, and N. Africa.

Bramble. Fruit and leaves of blackberry

The stems climb to the top of hushes and then bend over till they touch the earth, when their tips root. The leaves consist of three or five oval leaflets. The pink or white flowers are produced in clusters at the end of side shoots. The fruit is a collection of drupes, hard and green at first, but succulent and purple-black when ripe.

BRAMBLING OR **MOUNTAIN FINCH** (*Fringilla montifringilla*). Small bird akin to the chaffinch, but larger. Common in N. Europe, and a native of Scandinavia, Siberia, and Lapland, it is a winter visitant to Britain.

BRAMHAM. Village of Yorkshire (W.R.), near Tadcaster. At Bramham Moor a battle was fought in 1408, when the Percies were defeated. It gives its name to a hunt of which Lord Harewood was master in 1930.

BRAMLEY, FRANK (1857-1915). British artist. Born near Boston, Lincolnshire, May 6, 1857, he was trained at the Lincoln school of art and at Antwerp and Paris. In 1884 he began to exhibit at the Academy, and four years later appeared *A Hopeless Dawn*, now in the Tate Gallery. A member of the Newlyn school, he was made A.R.A. in 1894 and R.A. in 1911. He died Aug. 10, 1915.

BRAMPTON, HENRY HAWKINS, BARON (1817-1907). British judge. Born at Hitchin, Sept. 14, 1817, he was called to the bar in 1843, and made his reputation in the Titchborne case. He became a judge in 1876 and retired in 1898. A great criminal lawyer, he had a reputation for severity, but if he was quick to detect a rogue, he was equally quick to discern innocence. In his youth a supporter of the prize ring, Hawkins was also a patron of horse racing. Made a baron in 1899, he died Oct. 6, 1907, when the title became extinct. His *Reminiscences* appeared in 1904.

Baron Brampton, British judge Russell

BRAN. Coarse offal produced as a by-product during the milling of wheat. It is the outer coating of the grain. Its percentage composition is: Water, 13.2; albuminoids, 12.1; amides, etc., 2; fat, 3.7; soluble carbohydrates, 56; fibre, 7.2; ash, 5.8. It is valued as a food for cows and for horses.

BRAN. Dog of Fingal or Finn, the hero of Gaelic tradition. Bran was a deerhound of fairy origin, and was found by Fingal in a giant's lair and carried off. According to a Scottish tradition the deerhound was killed in a fight with a dog belonging to a southern chief.

BRANCHIDAE OR **DIDYMI.** Ancient town of Asia Minor. On the W. coast, 60 m. S. of Smyrna, it is famed for its temple of Apollo and oracle of Apollo Didymaeus.

BRANCKER, SIR WILLIAM SEFTON (b. 1877). British airman. Born March 22, 1877, he passed from Woolwich into the Royal Artillery in 1896. He served in the S. African War, 1899-1902, and at the outbreak of war in 1914 was appointed deputy director of military aeronautics. Later he was director of air organization, commander of the R.F.C. in the Middle East, and controller-general of equipment and personnel at headquarters. Knighted

Sir W. S. Brancker, British airman Swaine

in 1919, he became director of civil aviation, 1922, and in 1924 air vice-marshal.

BRAND, SIR JAN HENDRIK (1823-88). South African politician. Born at Cape Town, Dec. 6, 1823, he became a harrister in England, but practised in South Africa. In 1854 he was elected a member of the House of Assembly of Cape Colony. In 1863 the hurgers of the Orange Free State elected him president. He reorganized the state finances and crushed the Basutos. He died July 14, 1888.

Sir J. Hendrik Brand, S. African politician

BRANDENBURG. Country of Germany in medieval times, now the name of a prov. of Prussia. The margraviate and electorate which afterwards grew into the kingdom of Prussia, it originated as the district around Brennvor, a settlement of the Slavs, not far from where Berlin now stands.

In 1415 Frederick of Hohenzollern became its margrave, and under him and his successors Brandenburg was enlarged in all directions. In 1569 the elector Joachim II made an arrangement with his kinsman, the duke of Prussia, that if the duke's family died out he should inherit Prussia. This came to pass in 1618, when East Prussia and Brandenburg were united under the same ruler. In 1701 the elector received the rank of king. He was not king of Brandenburg, but king of Prussia, and henceforward the latter name was used for all his dominions. See Hohenzollern; Prussia.

Brandenburg, the capital of the province of the same name, stands on the river Havel, about 36 m. from Berlin. It was a bishopric from 948 until 1544. The cathedral, on the island between the old and new towns, is Gothic of the 14th century. S. Catherine's, also Gothic, has a fine exterior and a notable altar and font. S. Peter's is Gothic of the 14th century, S. Godehard partly Gothic and partly Romanesque. Pop. 59,297.

BRANDES, GEORG MORRIS COHEN (1842-1927). Danish writer and critic. Born in Copenhagen of Jewish parents, Feb. 4, 1842, he studied jurisprudence, philosophy, and aesthetics at Copenhagen University, 1859-64, after which he spent some years abroad, chiefly in France and Italy. His first three books were *Aesthetic Studies*, 1868; *French Aesthetics*, 1870; and *Criticisms and Portraits*, 1870. In 1872 he returned to Copenhagen, where he taught at the university and wrote the earlier volumes of his *Main Currents of Nineteenth Century Literature*. Later works were his *Study of Lord Beaconsfield*, 1878, and *Study of Shakespeare*, 1895-6, an English translation of which appeared in 1898. Brandes died Feb. 19, 1927.

Georg Brandes,
Danish writer

BRANDING (A.S. brand, burning). Impressing an indelible mark upon the body of human beings or of cattle with a hot iron, as a punishment or as a means of identification. In the U.S.A. slaves were branded with the owner's initials. In England criminals were branded on the cheek, forehead, breast, shoulder, and hand, and gipsies and vagabonds on the breast, the marks usually indicating the nature of the crime. Branding was abolished in Great Britain in 1829, except in the case of army deserters, who were tattooed with the letters D and BC as late as 1879.

Branding is also used to mark merchandise in a distinctive manner, the brand usually taking the form of a trade mark.

BRANDON. Market town of Suffolk, the centre of a rural district. It is on the Little Ouse, 7 m. by rly. N.W. of Thetford, on the L.N.E.R. Flint-knapping work has been carried on here from prehistoric times. There are extensive warrens, and rabbit skins are dressed and prepared. Market day, Thurs. Pop. 2,462.

The English title Duke of Brandon has been borne since 1711 by the dukes of Hamilton, Brandon Park is a seat of the marchioness of Graham, daughter and heiress of the 12th duke of Hamilton.

BRANDON. City and river port of Manitoba, Canada. On the Assiniboine river, it is 132 m. by rly. W. of Winnipeg. An important rly. centre served by the C.P.R.

and the Canadian National Rlys., it has a government experimental farm and Indian industrial school, and trades in farm produce and agricultural machinery. Pop. 16,443.

BRANDY (formerly Brantwein, brande-wine, brandy-wine, i.e. burnt or burning wine). Spirituous liquor obtained by distilling wine or the fermented, unmodified juice of fresh grapes. The finest brandy comes from Charente dept., and is exported and named from the town of Cognac. Good brandies come from Australia, Spain, Portugal, California, the Cape, Greece, Cyprus, and Canada. The proportion of alcohol by volume averages 53. The older the brandy, the less alcohol it contains, but the greater its medicinal value. Liqueur brandy is old, well-matured, high-class brandy. There is a duty of £3 15 4 per proof gallon on all brandy imported into Britain.

BRANDYWINE CREEK. River of S.E. Pennsylvania, U.S.A. Rising in Chester co., it flows S.E. to join the Delaware below Wilmington. On its banks a battle was fought, Sept. 11, 1777, during the American War of Independence. The English commander, General Howe, met Washington at Chadd's Ford and, while feigning a frontal assault, sent a detachment, under Cornwallis, to cross the stream higher up. The Americans were soon in retreat, and a fortnight later Howe took Philadelphia.

BRANGWYN, FRANK (b. 1867). British painter. Born at Bruges, May 12, 1867, the son of an architect, Brangwyn was at first employed in his father's office in London. Later he studied at South Kensington, and occasionally worked at William Morris's establishment in Oxford Street, London. His first picture, *A Bit of the Esk*, near Whithy, was hung at the Academy in 1885, and soon he came under the influence of Whistler. In 1904 he was elected an A.R.A., and R.A. in 1919. Modern Commerce, the centre decorative panel at the Royal Exchange, is his work. Consult *The Graphic Arts* of F. Brangwyn, W. Shaw Sparrow, 1918.

Frank Brangwyn,
British painter
Lafayette

BRANKSOME. Former urban dist. of Dorset, now part of the borough of Poole. A summer resort, with a station on the Southern Rly., it is noted for its beautiful chine.

BRANTFORD. City and port of Ontario, Canada. On the Grand river, communicating by a short canal with Lake Erie, it is 24 m. by rly. S.W. of Hamilton, and is served by the C.N.R. and C.P.R. It has manufactures of clothing, agricultural implements, and electrical fittings. Pop. 29,440. The town is named after the Mohawk chief Joseph Brant (1742-1807), who fought for the British against the French and the Americans.

BRANTÔME, PIERRE DE BOURDEILLES, SEIGNEUR DE (c. 1540-1614). French soldier and memoir writer.

Pierre, Seigneur de
Brantôme, French
soldier and author
From an engraving

In 1561 he accompanied Mary Queen of Scots on her journey from France to Holyrood, and in 1579 he visited Queen Elizabeth. In 1564 he was in Morocco, and a year later fought with the Knights of Malta against the sultan. He then served in Italy and Africa, in Hungary against the Turks, and in his own country against the Huguenots. His memoirs chronicle the scandals and gallantries of the French court. He died July 15, 1614.

BRASENOSE COLLEGE. Oxford college. It was founded in 1509 by gifts from William Smith, bishop of Lincoln, and Sir Richard Sutton. There was already in exist-

Brasenose College, Oxford. The main quadrangle of the college. Behind is the dome of the Radcliffe Camera

ence a hall of Brasenose, presumably named from the figure of a nose, and this name was taken by the new foundation, which is, in full, the King's Hall and College of Brasenose. The buildings are between Brasenose Lane and the High Street. The college is specially connected with Lancashire, and in the 19th century had a great reputation for sport.

BRASOV OR BRASSO. Town of Rumania, in Transylvania, formerly known as Kronstadt. It lies 70 m. E.S.E. of Sibiu (Hermannstadt), and was until Jan., 1919, in Hungary, near the former Rumanian frontier.

The inner town, some of whose towers and walls still stand, is commanded on the N. by the Schlossberg, on which there is a fort, built in 1553. The early 15th-century town hall was restored at the end of the 18th century. S. Bartholomew's Church is the oldest in the town, and there is an old Protestant church. Brasov is a banking centre, and its industries include oil refining, glass making, and cement works. Pop. 41,056.

BRASS. Properly an alloy of copper and zinc, but the name is also given to many alloys in which other metals, usually in relatively small quantities, are also present. Technically it is a convenience to consider brass as an alloy in which copper and zinc predominate, leaving those in which copper and tin predominate to be classed as bronzes.

Brass generally is of a yellow colour, the shade varying according to the proportions of the constituents. It casts readily, is machined with equal facility, is harder than copper, and has considerable tensile strength. The melting point of the alloy is lower than the mean of its constituents, while its density is higher. Certain brasses are malleable and ductile, for example, Muntz metal. See Alloy.

BRASS. River, district, and town of Nigeria. The river, an outlet of the Niger, is about 100 m. long. The town, a prosperous trading centre, is at the mouth of Brass river. It is the headquarters of the district, and has a native court house.

BRASS. Engraved tablet of latten (q.v.) or brass placed in Christian churches as memorials of the dead. These monumental brasses were introduced in the 13th century to replace effigies in the round. The English practice developed into a national art, with

Brass. Sir Thomas
Bullen (or Boleyn)
in Eber church

guilds in London, Ipswich, Norwich, and Bristol. The figures, escutcheons, and inscribed plates were cut separately and countersunk in stone pavements, walls, or altar-tombs. The incisions were often filled with niello, the escutcheons with coarse coloured enamels. Continental brasses were rectangular sheets comprising figures and inscriptions. The oldest brasses in England, those at Stoke D'Abernon, 1277, and Trumpington, 1289, portray mailed knights.

BRASSEY, THOMAS BRASSEY, 1ST EARL (1836-1918). British politician. The eldest son of Thomas Brassey (1805-70), the railway contractor, he was born at Stafford, Feb. 11, 1836. He became a barrister, and in 1865 entered Parliament as Liberal M.P. for Devonport. From 1868-86 he was M.P. for Hastings. Brassey's ministerial career lasted from 1880, when he was made civil lord of the admiralty, to 1885, when he left office as its parliamentary secretary. Knighted in 1880, he was made a baron in 1886, and went out to Victoria as governor, 1895-1900. In 1908 he was chosen lord warden of the Cinque Ports, and in 1911 was made an earl. He died Feb. 23, 1918. In his yacht the Sunbeam Brassey visited nearly all parts of the world, accounts of the voyages being written by his first wife. He also founded The Naval Annual.

Earl Brassey
British politician
Russell

When Brassey's son, Thomas Allnutt Brassey (1863-1919), who became the second earl, died, Nov. 11, 1919, the title became extinct.

Brasso. Alternative name for the Rumanian town of Brasov (q.v.).

BRATIANU OR BRATIANO, ION (1867-1927). Rumanian statesman. Son of a politician, he was born at Florica, the family seat in Walachia. He succeeded his father as leader of the Liberals, and became prime minister in 1907. On the fall of Maiorescu's Conservative government in Jan., 1914, he was again prime minister, and occupied that position when the Great War broke out. Early in 1918 he resigned, his policy of resuming the struggle against the Central Powers having been outvoted. After the signing of the armistice by Germany, Nov. 11, 1918, he again became premier and was delegate of Rumania at the Paris Conference. He was again premier in 1922, and died Nov. 23, 1927.

Ion Bratianu
Rumanian statesman
Vandyk

BRATISLAVA. City of Czechoslovakia. It is known to the Magyars as Pozsony and to the Germans as Pressburg. It is situated on the left bank of the Danube about 50 m. to the east of Vienna. It is the chief river port of the republic, and is on the eastern slope of the Little Carpathians, a few miles east of where the Morava joins the Danube.

Since 1526 the kings of Hungary have been crowned here, in the Gothic cathedral of S. Martin, and here the Hungarian Parliament met in the Landhaus until 1848. The town hall houses the Municipal Museum; near by is the Franciscan Church, founded in 1272. The ruins of the royal palace, which was burned down in 1811, crown a wall-encircled plateau at a height of 270 ft. above the river; access to the enclosure is gained through a massive Gothic gateway. There is an iron bridge across the river. Bratislava possesses a Slovak university and is an important broadcasting station. Pop. 93,189.

BRAXFIELD, ROBERT MACQUEEN, LORD (1722-99). Scottish judge. Educated at Edinburgh University, he became a lord of justiciary in 1780 and lord justice clerk in 1788. In his treatment of political prisoners he was notorious for his roughness and ferocity. He is portrayed as Lord Weir in R. L. Stevenson's *Weir of Hermiston*, 1896.

BRAY. Parish and village of Berkshire. It is on the Thames, 1½ m. S.E. of Maidenhead. It is generally assumed that the vicar of Bray of the song was vicar here. Pop. 3,800.

BRAY. Urban district, seaport, watering place, and market town, Irish Free State. It is on the river Bray, 12 m. by rly S.E. of Dublin, on the Gt. Southern Rlys. It has a harbour, a fine esplanade, and good bathing. Market days, Tues. and Sat. Pop. 8,637.

BRAZEN SERPENT. Replica of one of the fiery serpents which afflicted the Israelites in the wilderness. The serpents were sent as a punishment of rebellion, and the image of one, wrought in bronze or copper, was set up on a pole by Moses, at the command of Jehovah, for the afflicted to look up to in token of repentance, whereupon they lived (Num. 21; Wisdom of Solomon 16; John 3). The brazen serpent was preserved, until it became an object of worship, and was destroyed by Hezekiah (2 Kings 18).

BRAZIL. Largest country of S. America. It is bounded N. by the Atlantic Ocean, Guiana, Venezuela, and Colombia, S. by Uruguay, E. by the Atlantic Ocean, W. by

Brazil. Left, Indian women mending their nets for use in the Amazon. Right, Napidian Indian shooting river fish in the Amazonas district

Peru, Bolivia, Paraguay, and Argentina. Its area is about 3,285,000 sq. m., and its pop. about 36,870,000. There are about 600,000 Indians in the Amazon area. Rio de Janeiro is the capital, other important towns including São Paulo, Bahia (São Salvador), Recife, Belem, and Porto Alegre.

The centre of Brazil consists of a great plateau with an average height of 2,000 ft. In the E. and S. mountain ranges alternate with fertile valleys. The northern regions are chiefly low-lying thickly forested plains. Brazil has the greatest water system on the face of the globe. The rivers include the Amazon, Paraná, Araguaya, and Madeira.

Coffee is the most important product cultivated, the states of São Paulo, Rio de Janeiro, Espírito Santo, and Minas Gerais being the chief coffee-growing districts. About three-quarters of the world's supply of coffee comes from these states, and over a half from São Paulo alone. Rubber is another very important natural product, the so-called "fine hard Pará" rubber coming from Brazil. Other crops include maize, maté (Paraguay tea), sugar cane, cocoa, tobacco, and cotton.

The country is very rich in minerals. It has long been famous for gold and diamonds. There are widespread deposits of manganese, and a large proportion of the world's supply of monazite comes from Brazil. Iron and low-grade coal are also found.

At the end of 1927 there were about 19,500 m. of rly., of which some 14,000 belonged to the union and about 5,000 to the states. About one-half of the telegraph system is controlled by the government. There are about 40 wireless stations. Navigable inland waterways amount to some 40,000 m.

Brazil was discovered in 1500 by the Portuguese commander, Pedro Alvarez Cabral. When the French armies approached Lisbon in 1807 the Portuguese royal family fled to Rio, which became for a time the capital of the Portuguese monarchy. In 1822, Pedro, eldest son of John VI of Portugal, declared the independence of Brazil and was chosen emperor. In 1889 his son was dethroned, and Brazil became a republic, the united states of Brazil. The union consists of twenty states, a federal territory and a federal district. There have been frequent boundary disputes. Brazil retired from the League of Nations in 1926. The federal executive is in the hands of a president elected for four years by direct popular vote. The Chamber of Deputies consists of 212 members elected for three years, and there are 63 senators. See map, p. 297; consult also Brazil and the Brazilians, G. J. Bruce, 1915; Brazil, Past, Present and Future, J. C. Oakenfull, 1920; The New Brazil, M. R. Wright, 1920; Brazil After a Century of Independence, H. G. James, 1925; The Conquest of Brazil, R. Nash, 1926.

BRAZIL NUT (*Bertholletia excelsa*). Seed of a tall tree of the order Myrtaceae, a native of Brazil, Guiana, and Venezuela. It grows in large forests and attains a height of 150 ft., with a smooth trunk of great girth. Its oblong leaves are each about 6 ft. long. The cream-coloured flowers are succeeded by spherical fruits, woody capsules each containing about 20 rough-shelled triangular nuts.

Brazza (Slav. Brac). Island of Yugoslavia, formerly belonging to Austria. It is the largest in the Dalmatian archipelago.

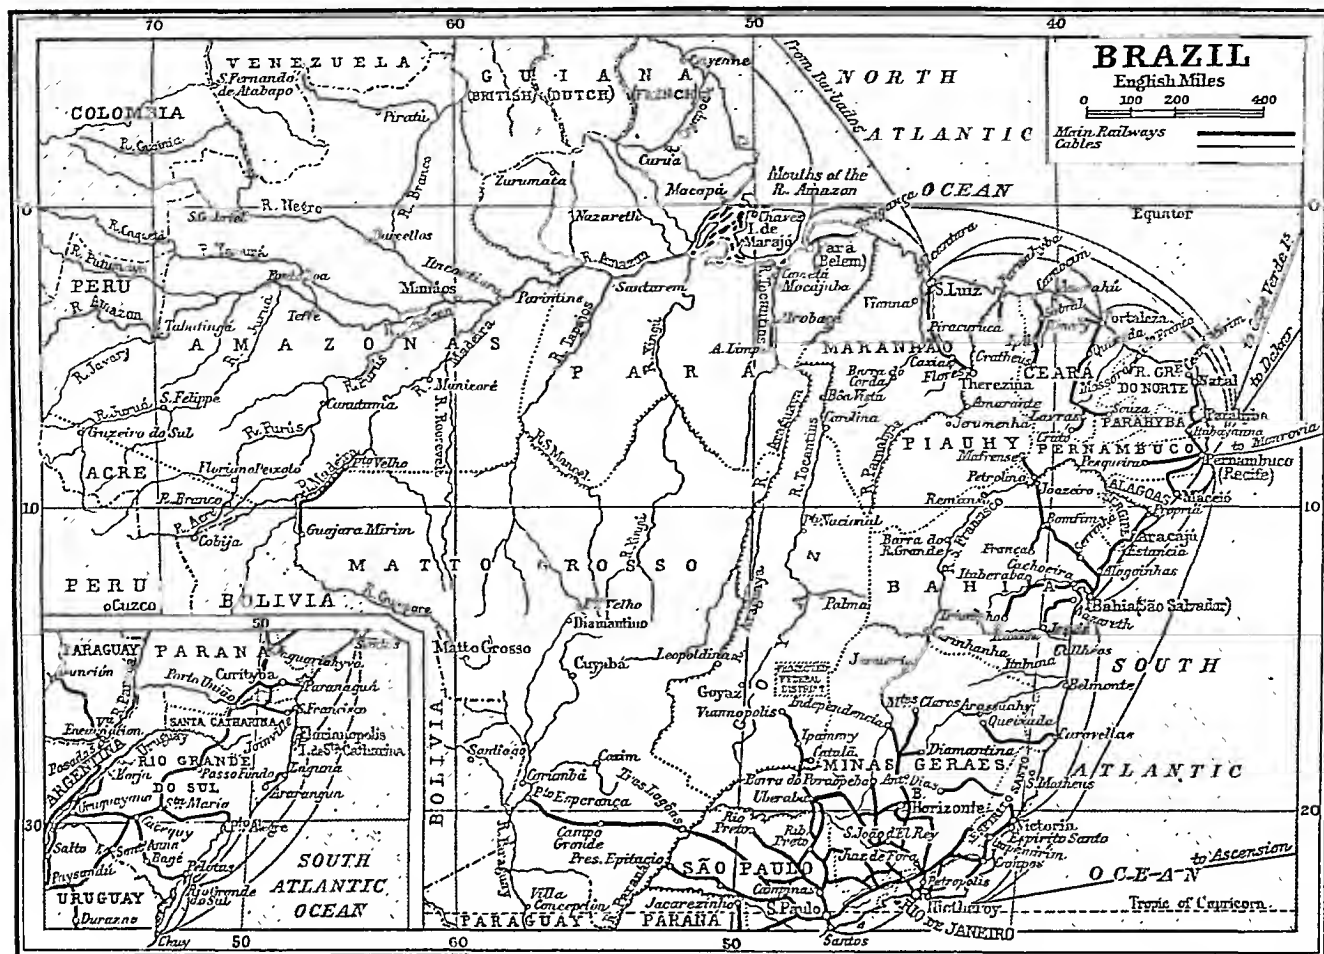

BREACH OF PROMISE. Term used in English law in connexion with promises of marriage. A contract to marry is as binding in law as any other contract; and if it is broken, the party breaking it is just as liable to pay damages. The woman who breaks her engagement is just as liable in law as a man; but in practice men seldom gain damages. In actions for breach of promise of marriage the plaintiff is entitled to the recovery of pecuniary loss, e.g. cost of a wasted trousseau, value of a situation given up, and also to such other damages given sentimentally or punitively as a jury may consider adequate.

BREAD (A.S. bread, breed). Principal food of most nations. It consists of flour mixed with water, yeast, and salt, kneaded into dough, made into loaves, and baked. Unleavened bread is made without yeast. In temperate latitudes wheat flour is generally used; in more northerly latitudes rye, oats, and barley; millet bread is made in southern Europe, and maize flour is used in parts of U.S.A.

Bread was first made with yeast in England in 1634, and aerated bread, made by forcing carbonic acid gas into the dough, was first manufactured in England in 1859. Brown bread is composed of ordinary flour with 15 to 20 p.c. of bran added; bread of unsifted

Brazil Nuts in Pod. Each pod contains about 20 nuts. See above

Brazil. Map of the largest state in South America. It borders on every state south of the Caribbean Sea except Chile. See p. 296

ground wheat is known as wholemeal bread. In Britain bread must be sold by weight, excepting in the case of rolls or fancy bread, and a quarter loaf must weigh 4 lb. when sold.

During the Great War bread was rationed in Germany, France, and other countries; even Norway, Sweden, and Switzerland. In France, bread cards were introduced in Dec., 1914, and in Germany a little later.

BREADALBANE. Mountainous district of Perthshire. It is drained by the Tay, Almond, Dochart, Orchy, and other streams, and among its lochs are the Tay and Rannoch. It has extensive deer forests, and is noted for fishing.

The district gives its name to the title of earl borne since 1681 by the family of Campbell. Sir Duncan Campbell of Glenorchy, created a baronet in 1625, was the ancestor of Sir John Campbell (c. 1636-1717), the 5th baronet, who in 1681 was created earl of Breadalbane. When John the 3rd earl died the titles fell to a descendant of the third baronet, who was given the title of marquess of Breadalbane in the United Kingdom in 1831. In 1862 this title became extinct; but the earldom passed to another descendant of the third baronet, who became the sixth earl.

His son Gavin, who succeeded in 1871, was made a peer of the United Kingdom in 1873, and in 1885 the marquessate was revived in his favour. On his death, Oct. 19, 1922, the marquessate again expired, but the earldom passed to a relative. Taymouth Castle, now an hotel, was the chief seat of the family.

BREAD FRUIT (*Artocarpus incisa*). Fruit of a tree of the order Urticaceae. A native of the South Sea Islands, it attains a height of 50 ft. and has deeply notched leaves

2 ft.-3 ft. long. The male flowers are crowded into a long spike and the females in a globular head, which later expands into the fruit.

Bread Fruit. Leaves and fruit of *Artocarpus incisa*

This is as large as a melon, and filled with starchy pulp. When roasted the interior is bread-like, though without flavour.

BREAD NUT TREE (*Brosimum alicastrum*). Evergreen tree of the order Urticaceae. It is a native of Jamaica. It possesses lance-shaped leaves and simple yellow flowers in globular heads. The so-called nuts are berries about an inch across. When boiled or roasted they are used for food, and have the flavour of hazel nuts. The bread tree is a native of Guiana. Its fruit is edible.

BREAKWATER. Structure intended to form an artificial harbour. It consists of mounds of rubble or blocks; or walls of huge concrete blocks in courses or mass concrete built up from the sea bed; or rubble mounds topped by walls. Rubble mounds are formed by dumping stones from barges, or from an overhead track on piles, or from the end of the work itself. Breakwaters of this class are best suited for positions where the rise of tide is slight, and where they can be placed at right angles to the direction of the most violent storms. Solid masonry breakwaters depend for their stability on sheer weight and

solidity. They may be built of very heavy blocks from the bottom; or be of mass concrete throughout; or contain blocks or mass concrete superimposed on huge bags of cement; or may consist of large monoliths formed by sinking concrete caissons and filling them solid. See Caisson.

BREAM. Name given to species of freshwater fish of the genus *Abramis*, allied to the carp. The only British species is the common bream (*A. brama*). It grows about a foot long and weighs two to four pounds or more. The flesh has little to recommend it. The body is deep and laterally compressed and the dorsal fin is short. The white bream, which belongs to a different genus (*Blicca*), is found in the rivers of eastern England. The sea bream (q.v.) is in no way allied.

BREAST. In human anatomy, the name given to the mammary gland of the female. In structure it consists of a number of lobes subdivided into lobules in which the milk is secreted, and which terminate in the milk-ducts opening on the nipple. During pregnancy the breast enlarges and becomes firmer.

Bream, a fresh-water fish. The common bream, *Abramis brama*

DISEASES OF THE BREAST. Acute inflammation of the breast is most likely to occur in pregnant women and during the first month after delivery, the most frequent cause being infection through a sore or crack on the nipple. The condition needs prompt medical attention.

Cancer attacks the breast more frequently than any other organ of the body in the female, with the exception possibly of the

uterus. The disease is about equally prevalent in the single and married up to the age of 45, but after that age it is much more common in the single than in the married and widowed. Cancer of the breast can only be cured by a surgical operation, which, though large and serious, is not in itself dangerous in women who are otherwise healthy. When the disease is taken early and is confined to the breast, the prospects of permanent recovery are good.

The breast-bone or sternum is the bone which forms the central part of the front of the chest of warm-blooded vertebrates. In the human being it consists of three main parts, and to it are attached the collar-bone and the upper seven pairs of ribs.

BREASTPLATE. Piece of defensive armour worn across the breast. It was used by Greeks and other early soldiers, beautiful examples having been found at Mycenae; also by the Romans. The introduction of suits of armour made it unnecessary. It appears to have been made first of leather, then of bronze or brass. The term breastplate is also applied to a part of the dress worn by the Jewish high priest (Exod. 28 and 39).

Breastplate worn by a Jewish high priest

BRECHIN. City and royal burgh of Angus, Scotland. It is on the South Esk, 9½ m. by rly. W. of Montrose by the L.M.S. It manufactures linen, sailcloth, rope, and paper, and has brewing and distilling industries. It was created a bishopric in 1150, and has a 13th century cathedral and a round tower. Brechin Castle is the seat of the earl of Dalhousie. The bishop of Brechin is the primus or head of the Episcopal church in Scotland. Market day, Tues. Pop. 7,446.

BRECKLAND.

District of Suffolk. On the borders of Norfolk, it is a sparsely inhabited region, as its sandy soil is of little use for agriculture. After the Great War much of the land was acquired for afforestation purposes, and it has been made into one of the largest forest areas in the country. Thetford is the nearest town.

BRECKNOCKSHIRE OR BRECONSHIRE.

County of Wales. Forming a part of the boundary between Wales and England, its greatest length is 38 m., greatest breadth 33 m., and its area 732 sq. m.

Brechin. The 13th century cathedral and ancient round tower, 100 ft. high

The county lies within the Welsh coal-field, and iron, copper, lead, and limestone are found. The county is intersected by the L.M.S. Rly. and the Brecon and Abergavenny Canal.

Breech Block. Breech mechanism of 6-in. gun. Left, the breech closed; right, the breech open, showing breech block with Welin screw. See below

Usually a breechloading mechanism is associated with a rifled barrel, and the letters B.L. stand for a modern gun or rifle, but old weapons with breechloading mechanism are extant. B.L. firearms came into general use in 1866. In 1870 the French and Germans both fought with B.L. rifles, the French weapon being called the Chassepot. See Artillery; Gun.

BREHON LAWS. English name for an ancient legal system which prevailed in Ireland for more than 1,000 years before the 17th century. On the authority of a royal commission appointed in 1852, six volumes, including a glossary, were published (1865-1901) under the title Ancient Laws of Ireland. They contained translations of MSS. dating from the 5th to the 13th century. The laws cover a wide field, and from them a faithful picture of social life and custom in Ireland for a long period of time may be drawn. Consult Brehon Laws, L. Ginnell, 1894.

Breitmann, HANS. Name by which Charles G. Leland (q.v.) was known after the publication of his Hans Breitmann's Ballads.

BREMEN. Free state of Germany. It consists of the city of Bremen, the surrounding district, and two detached portions of territory, the town and district of Vegesack, on the right bank of the Weser, and the port of Bremerhaven at its mouth. Bremen is the capital. The total area is 99 sq. m., and the pop. 338,846. Since 1920 the government is vested in an elected House of Burgesses of 120 members, which elects the Senate of 12 as the Executive.

BREMEN. City of Germany, capital of the free state of Bremen. It stands on the Weser, about 46 m. from its mouth and 77 m. by rly. S.W. of Hamburg. The old town is on the right bank of the Weser, and the new town on the left, bridges connecting the two. The Rathaus contains memorials of past glories.

Bremen. Stone statue of Roland the Great

Breechloader. Double-barrelled shotgun with cartridge ejector

BREECH BLOCK.

Mechanism for closing and sealing the breech end of a firearm after the projectile and propellant charge have been inserted. Modern breech blocks for cannon and howitzers embody one of two main principles, the interrupted screw (British) and sliding wedge (German). See illustration above.

BREECHLOADER.

Firearm charged at the breech, as distinguished from one loaded at the muzzle.

Brecknockshire. Inland county of South Wales, notable for its mountain chains and deep, fertile valleys. It is watered by the rivers Wye and Usk

Of old churches the chief are the Romanesque cathedral, begun in the 11th century, now a Lutheran church; S. Stephen, S. Angarius, S. Martin, S. John, and the Liebfrauen. An immense statue of Roland stands before the town hall. Characteristic of the city are the gabled houses

looking out on the narrow, winding streets of the old town.

Bremen ranks next to Hamburg in volume of trade. It is the headquarters of the North German Lloyd Steamship Company. Before the Great War it was one of the great tobacco and rice marts of the world. The exports include linen and woollen goods, iron, machinery, and toys. Cotton, iron ore, grain and tobacco are important imports. Its industries include shipbuilding and the manufacture of ropes and sails, and there are iron foundries, engineering works, rice mills, and jute spinning factories. The manufacture of tobacco is now carried on outside the city. Pop. 294,966.

Bremen was the name of a German protected cruiser sunk by a British submarine in the Baltic, Dec. 17, 1915. She was 330 ft. long, 40 ft. in beam, and displaced 3,200 tons. She carried ten 4.1-in. and fourteen smaller guns, with two submerged torpedo tubes.

Bremen. German liner which made a record voyage (4 days, 17 hours) across the Atlantic in July, 1929

Another Bremen is the North German Lloyd liner launched in 1928, gross tonnage 49,864. In July, 1929, she crossed the Atlantic in 4 days 17 hours, 42 min., setting up a record for the run from Europe to New York, hitherto held by the Cunarder Mauretania. In Mar., 1930, the Europa beat this record.

BREMERHAVEN. Seaport of Germany, the outport of Bremen. It lies at the junction of the Weser and the Geeste, about 40 m. N. of Bremen. The port was opened in 1830. The large and safe harbour has 112 acres of wet docks and several dry docks. The town is a shipbuilding centre, and was one of the bases of the German fleet. Pop. 23,896.

Brendon Hills. Limestone range in the W. of Somerset. They lie about 6 m. S. of Watchet and reach a height of 1,391 ft.

BRENNAN, Louis (h. 1852). British inventor. Born at Castlebar, Ireland, Jan. 28, 1852, his fame rests upon his inventions of the Brennan torpedo and of the gyroscopic monorail system of transport. From 1887-96 he was superintendent of a government factory where his torpedoes were made, and from 1896-1907 its consulting engineer. During the Great War he was engaged in confidential aircraft research work for the British Government.

BRENNER PASS. Lowest pass over the Alps. On the new Italo-Austrian boundary, between Innsbruck and Bolzano (Bozen), it has been a carriage-road since 1772, and is traversed by a rly., passing over many bridges and viaducts, and through several tunnels, opened in 1867. The pass, 4,500 ft. high, was used by the Romans. Near the head of the pass, on the Italian boundary, is the Austrian village of Brenner.

BRENNUS. Leader of the Gauls. He invaded Italy, defeated the Romans at the battle of the Allia, 390 B.C., and captured Rome except the Capitol, on which occasion he is said to have used the phrase *Vae victis* (woe to the conquered!).

Another Brennus, also a Gallic chief, invaded Macedonia 280 B.C. and penetrated into Greece, but was defeated at Delphi.

BRENTA. River of Italy. It rises near Trent, and after a course of 100 m. flows into the Adriatic. There was fighting in the valley of the Brenta between the Austrians and the Italians in Nov. and Dec., 1917.

BRENTFORD (with Chiswick). Market town and county town of Middlesex. It is part of the urban district of Brentford and Chiswick, the two having been united in 1927. Brentford stands at the junction of the Brent with the Thames, 10 m. by rly. W. of London, on the G.W. and Southern Rlys. In 1928 excavations revealed the remains of a pile village about 2,000 years old. In the neighbourhood is Syon House, seat of the duke of Northumberland. Brentford and its inn, The Three Pigeons, have figured largely in literature. The inn which replaced the original Three Pigeons was closed in 1916, and a fire in 1920 destroyed a large portion of the interior. Market days, Tues. and Sat. Pop. 57,889.

BRENTFORD, WILLIAM JOYNSON-HICKS, 1st Viscount (h. 1865). British politician. Born June 23, 1865, he was the son of Henry Hicks of Plaistow Hall, Kent. He became a solicitor in 1895, and on his marriage with the daughter of R. H. Joynson of Bowdon took that name. He was M.P. for Manchester, 1908-11, for Brentford, 1911-18, and for Twickenham, 1918-29. He was parliamentary secretary, Overseas Trade Dept., 1922; then in quick succession postmaster-general, financial secretary to the treasury, with a seat in the Cabinet, and minister of health. In 1924 he was made home secretary and, known as "Jix," was much in the public eye. He left office in 1929 and was made a viscount.

Viscount Brentford, British politician

BRENT GOOSE (*Branta bernicla*). Species of wild goose. It visits the shores of Great Britain in autumn and winter, spending summer in the northern regions. Blackish brown on the upper parts and grey below.

Brent Goose. *Branta bernicla*, a species of wild goose

It weighs about 4 lb., and its flesh is valued for the table. **BRENTWOOD.** Urban district and market town of Essex. It is 11 m. by rly. S.W. of Chelmsford on the L.N.E.R. It has a grammar school founded in 1557, and an Elizabethan assize house. Industries are brewing and brick-making. A fair is held in October. Pop. 6,870

BRESCIA (anc. Brixia). City of Italy. Capital of the prov. of Brescia, at the foot of the Alps, it is an important rly. junction 51 m. E. of Milan. Dominated by its old castle, now a prison, and enclosed by walls, it has Roman remains. The old cathedral, probably of the 10th century, was built over a Christian basilica; the present cathedral is modern. The town hall (1492-1574) is the work of Sansovino and Palladio. The Broletto, originally the council hall, now the law courts, dates from the 12th century. Pop. 113,489.

BRESLAU. City of Prussia. It stands on the Oder, 350 m. from its mouth and 224 m. S.E. of Berlin. It is the capital of the prov. of Lower Silesia, and its size and importance are

due to its position on the Oder, and to the rich coal and iron mines in the vicinity. The cathedral was begun in the 12th century, and restored in the 19th. The 14th century Protestant church of S. Mary Magdalene is a model of it. The church of the Holy Cross and the church of the Minorites date from the 14th century.

The Rathaus is a 14th cent. building, restored in the 19th century. Underneath is the Schweidnitzer Keller, used since about 1350 as a beer house. The Silesian museum of fine arts is housed in a modern building; the museum of industrial arts and antiquities is in the old hall of the estates, Standehaus. The Hohenzollerns had a modern palace here. The university, established in 1811, was founded in 1702 as a Jesuit college. The city has a good library and zoological and botanical gardens.

Breslau is a great railway centre, the south-eastern railways of Germany converging here, is connected by canals with the Elbe and the Vistula, and its trade in coal, timber, corn, etc., is considerable. Pop. 557,139.

Breslau was the name borne by a German protected cruiser, which, along with the Goeben (q.v.), escaped the Allied fleets in the Straits of Messina, Aug., 1914. They were then purchased by Turkey.

BREST. Naval seaport and town of France. It is in the W. of Brittany, 155 m. from Rennes, on the N. side of the Brest Roads, into which the river Penfeld falls. Along its banks are the establishments of the French navy, shipbuilding yards, foundries, magazines, repairing and other docks, barracks, etc. There is a naval school. It has a 12th century castle, which was modified by Vauban. The commercial harbour has ample docks. A fishing centre, Brest manufactures bricks, chemicals, candles, rope, soap, and oilskins. There is a telegraph cable to Duxbury, Mass., U.S.A. Pop. 67,861.

BREST-LITOVSK. Town of Poland. On the Bug, near that river's confluence with the Mukhavetz, it lies about 130 m. S. of Grodno. It is a great rly., road, and inland waterway centre, and carries on an active trade in grain, hemp, flax, timber, and leather. An old Slav town, anciently called Berestov (elm town), it was the Polish Brzesc Litewski until 1795, when it passed to Russia. It was taken by the Germans in 1915 and by the Poles in 1919. Pop. 29,100.

BREST-LITOVSK, TREATY OF. Peace concluded between Germany and her allies and Russia, Mar. 3, 1918. The conference began Dec. 22, 1917, and both sides stated their conditions. The Central Powers asked for a peace without annexations or indemnities, provided the Allies approved and would join in the negotiations. The latter did not even reply, and on Jan. 10, 1918, Trotsky announced that Russia would make a separate peace. Disagreement as to terms caused a temporary suspension of the armistice, but on Feb. 24 the Bolsheviks gave in, and the treaty of Brest-Litovsk ending the war between the contracting parties was signed on Mar. 3. The Bolsheviks undertook to evacuate Estonia, Livonia, and Finland and certain areas of Turkey-in-Asia and to demobilise their armed forces. There were to be no indemnities and prisoners were to be exchanged. The treaty was annulled by a proviso of the armistice of Nov. 11, 1918.

BRETON. One of the three branches of the Celtic languages which are grouped as *Cymric* or *Brythonic*. It is spoken by the people of Lower Brittany, and though closely connected with the old Cornish and with Welsh, the other two branches of the group, has become differentiated from them, though there are striking similarities. The language, which is still spoken by upwards of a million people, is represented by four dialects, known

respectively as those of Léon, Tréquier, Cornouailles (Quimper), and Vannes. The Union Régionaliste Bretonne, founded 1898, has laboured to preserve the ancient language of the people. See Brittany; Celt.

BRETWALDA (A.S. overlord). Word or title used in the Anglo-Saxon Chronicle. The old idea was that the eight rulers mentioned there, and also by Bede, as having this title were the recognized superiors of the other English kings. Probably the word was used for an overlord whose authority was little more than nominal.

BREVET (Fr.). Term used in France in the days of the monarchy in the sense of the English term commission, i.e. a written authorisation to assume the functions of an officer in the navy or army. Brevet has come to mean in the British army a sort of rank other than regimental rank given to three grades of officers only. A captain with six years' service may be a brevet major, a major may be made a brevet lieutenant-colonel, or the latter a brevet colonel.

In aeronautics the term is used for a certificate issued to a pilot. It indicates the official tests he has passed through, and is therefore a certificate of qualification.

BREVIARY (Lat. *breviarium*, summary). Originally a compendium of the Psalter and Christian prayers, the term has been applied since the 11th century to the complete book of prayers for the daily offices in the Roman Catholic Church. It is divided into four seasonal parts. The daily office contains the short service for the canonical hours, i.e. Prime, Terce, Sext, None, and Vespers, with the night office of Compline and the long midnight and early morning services of Matins and Lauds. There are also special offices of the Blessed Virgin and of the Dead, and the supplementary offices of each diocese.

BREVIEWER. Type, between minion and bourgeois in size, originally used in printing breviaries, and also known as 8-point. Nine lines make an inch. The text of this Encyclopedia is set in brevier. See Printing.

BREWER, JOHN SHERREN (1810-79). British historian. Born at Norwich, he was ordained in 1837. In 1839 he became lecturer in classics, and from 1855-77 was professor of English literature and lecturer in modern history at King's College, London. He arranged and edited for the Master of the Rolls many volumes of historical manuscripts. He died Feb. 16, 1879.

E. C. Brewer,
book compiler

Ebenezer Cobham Brewer (1810-97), his brother, compiled many useful books, including A Dictionary of Phrase and Fable, 1870.

BREWSTER, SIR DAVID (1781-1868). Scottish scientist. Born Dec. 11, 1781, at Jedburgh, he abandoned the ministry for science. In 1816 he invented the kaleidoscope and perfected the lenticular stereoscope. Between 1827-33 his experiments led to the introduction of the holophotal system of lighthouse illumination. From 1808 to 1830 he was editor of The Edinburgh Encyclopaedia. Knighted in 1832, he was appointed in 1838 principal of the united college of S. Salvador and S. Leonard at St. Andrews. In 1859 he became principal and vice-chancellor of Edinburgh University. He died Feb. 10, 1868.

Sir David Brewster,
Scottish scientist

BRIALMONT, HENRI ALEXIS (1821-1903). Belgian soldier and engineer. Born at Venlo, in Dutch Limburg, May 25, 1821, he made a special study of the principles of fortification, and, appointed as inspector-general of fortifications, 1875, he designed and superintended military works, especially those on the Meuse. Having fortified Bukarest, he returned to Belgium in 1884, and completed the fortifications of Antwerp, Liège, and Namur.

Henri A. Brialmont,
Belgian military
engineer

Brialmont died July 21, 1903.

BRIAN (926-1014). King of Ireland. He succeeded his murdered brother Mathgamain in 976 as king of Thomond, in 978 became king of Munster, and in 1002 became chief king of Ireland. On Good Friday, 1014, his forces totally defeated the Danes in the battle of Clontarf, but Brian, too old to fight, was slain in his tent. The charter which he gave to Armagh in 1004 may be seen in the library of Trinity College, Dublin.

BRIANÇON. Town of France. Capital of the dept. of Hautes-Alpes, it is the highest town in France, 4,334 ft. above sea level, and lies just above the junction of the Durance and Guisane, 51 m. by rly. N.E. of Gap. It has an 18th century church and a fine bridge across the Durance. Pop 5,780.

BRIAND, ARISTIDE (b. 1862). French statesman. Born at Nantes, March 28, 1862, he worked as a barrister and a journalist before being elected to the Chamber of Deputies in 1902. He was then a socialist, but he was expelled from the party when he became minister of education in 1906. In 1908 he was made minister of justice, and in 1909 he succeeded Clemenceau as premier. Resigning in Feb., 1911, he was again premier for a few weeks in 1913, and in Aug., 1914, to March, 1917, he was premier, as he was again in 1921-22 and in 1925-26.

In 1926 Briand became foreign minister, under Poincaré, and he retained that post when in July, 1929, he became premier for the twelfth time. In Oct. his government was defeated and he resigned, but returned as foreign minister under M. Tardieu. Outstanding events in Briand's long public career are the separation of church and state, which he carried through; his action in crushing the strike of railwaymen in Oct., 1910; and his part in the European negotiations, 1926-30.

BRIAR or **BRIER** (A.S. *brer*). Term in botany applied more particularly to *Rosa rubiginosa*, the sweet briar or eglantine, and *R. canina*, the wild dog-rose, but used of *R. inodora*, the slightly scented briar, *R. micrantha*, the small-flowered sweet briar, and other species of rose. The word is applied generally to any prickly or thorny shrub.

BRIAR ROOT (Fr. *bryère*). Tree-heath (*Erica arborea*), a common plant of south Europe. Its roots are as hard and fine-textured as ebony, and susceptible of a high polish. These characteristics make the wood—which is too small for most other uses—very suitable for the manufacture of tobacco pipes.

BRIBE. In English law, a gift or other material inducement given or held out to a person to betray a trust or a duty. Bribing at an election for a parliamentary or municipal seat is heavily punishable, because a vote is a

trust conferred for a public purpose. On this principle briber and bribed are equally guilty. This class of offence is regulated by the Corrupt Practices Act, 1883. The payment of secret commissions to induce business is forbidden by the Prevention of Corruption Act, 1906. This form of bribery is punishable by a fine up to £500 with or without imprisonment for a maximum of two years. The servant or agent asking for or accepting the bribe is equally punishable.

BRICK. The making of bricks is one of the oldest arts, and is still being carried on in many parts of the world much as it was some 4,000 years ago in Egypt. The Romans used bricks extensively, and a description of the method of making and laying them is given by Vitruvius (fl. 16 B.C.). Bricks were introduced into Britain by the Romans, who used them extensively in the 5th century.

Brick, showing the frog,
which is filled with mortar

The London stock brick is of a yellow colour; it is largely used by suburban builders. Of recent years the Peterborough pressed brick has been competing with it for favour. Common red and building bricks are made in almost every county. A hard, impervious blue brick is produced in South Staffordshire, and Stourbridge gives origin to fire-clay bricks used for furnaces and for the domestic grate. Glazed bricks are used where light and a good surface are needed.

One of the essential conditions of good brickwork is sound bonding, i.e. the interlacing of the bricks for mutual support and

Bricks laid without bonding

The principle of bonding

English bond, preferred for strength

Bonding applied to thick walls

Flemish bond, presenting a better appearance

Herringbone bond

Raking or diagonal bond

Brick. Examples of bonding, that is, interlacing of bricks for support, in modern brickwork

for the avoidance of continuous vertical joints. There are several methods. Those most in use are the Flemish and the English, the latter being preferred for its superior strength.

BRIDE. Variant form of Brigid, saint of Ireland. It was the form commonly used in England, where many churches, notably S. Bride's, Fleet Street, London, received this dedication. See Brigid, Saint.

BRIDEWELL. Originally a well dedicated to S. Bride, or S. Brigid, near New Bridge Street, Blackfriars, London. Now covered by a pump, it gave its name to a palace, a parish, a church, and a prison. The first palace was Saxon, built on the site of a Roman fort. Then came a palace of Henry I, which was rebuilt by Wolsey. The third act of Shakespeare's

Henry VIII is laid in the palace. Later it became a prison, and afterwards a penitentiary with a department for idle apprentices. Rebuilt after the fire of 1666, it was pulled down in 1864. The name survives in Bridewell Place.

Bridewell. The building destroyed by the Great Fire. It was in turn palace, prison, and penitentiary

BRIDGE. Bridges are structures which carry paths, roads, railways, or canals across rivers, or other water chasms, or depressions in the ground level, or over other roads or railways. A bridge consists of one or more spans, each of which has two end supports, called abutments. The intermediate supports in a bridge of several spans are termed piers.

GIRDER BRIDGES. In the commonest form each span is supported independently at the ends, the weight of a span being distributed over two or more girders connected to each other. A simple girder is made up of a top and bottom flange connected by a vertical web, or in the case of a box girder, by two webs. Plate-web girders are now used only for moderate spans, and have been superseded by different forms of truss, or open web girder, in which the plate-web is replaced by a number of struts and ties. These, proportionately to their united weight, give greater stiffness than a continuous plate. A lattice girder bridge carries the railway across the river at Newcastle-upon-Tyne. Its two river spans are each 300 ft. long.

For spans of over 600 ft. the cantilever type of girder is used. The cantilevers are deep at their points of support and taper towards the other extremity. In most bridges of this class a main span is made up of two pairs of cantilevers and an intermediate girder span which they support at each end. The Forth bridge comprises three double cantilevers each 1,360 ft. long. The Quebec cantilever bridge has a clear span of 1,800 ft.

ARCH BRIDGES. The masonry arch is composed of a number of segmental blocks or voussoirs (vv), the end ones of which, called the skewbacks (sk), rest on the abutments. The spaces above, called span-drels, are filled in with solid masonry or walls of masonry, which, by distributing the stresses of moving loads, prevent deformation of the arch. In the steel arch, bricks or stone blocks are replaced by two or more parallel curved plate or lattice ribs. The load is distributed from the top members which carry the roadway. The ends are sometimes hinged to the skewbacks, to allow for alterations of curvature due to change of temperature. (See diagram above.)

SUSPENSION BRIDGES. A tower is built on each bank or on piers, and chains, links, or cables are run over them to firm anchorages well back from the bridge. Between the towers the cables droop in a funicular curve, while between tower tops and anchorages they are taut and nearly straight. The roadway platform is attached to the cables by vertical tie-rods at equal intervals; and, to give better distribution of the load, lattice trusses, having considerable stiffness vertically and a slight rise or camber towards the middle of the span, are provided. Notable suspension bridges are the Brooklyn, the Williamsburgh, and the Manhattan, all crossing the East river, New York, and those at Menai Strait and Clifton.

CONCRETE BRIDGES. Reinforced concrete as a bridge-building material has largely displaced brick and stone. Short span bridges consist usually of a deck slab resting on longitudinal members. For longer structures the arch or the girder type is used. An example of the first type is the flat arch concrete bridge over the Mersey at Warrington, which has a span of 134 ft. A fine ferro-concrete bowstring girder bridge over the Seine at St. Pierre du Vauvray is 432 ft. long.

MOVABLE BRIDGES. Bridges which move to enable shipping to pass are of three kinds: (1) revolving or swing bridges; (2) lifting or bascule bridges; (3) transporter bridges. The Tower Bridge, London, is an example of the hinged bascule type, in which a leaf is pivoted and counter-balanced at the back end.

BRIDGE. Card game for four persons. It was first known under the title of biritch, or

Russian whist, whence arose the idea that it was a Russian game. But bridge was certainly played over 50 years ago in Eastern Europe, notably in Constantinople and Greece. Its introduction into England dates from 1880, although it is said to have been played earlier among Greeks settled in Manchester.

In Dec., 1894, a committee of the Portland club was appointed to draft an authorised code of laws. These laws were issued early in 1895, and after being passed by a joint committee of the Portland and Turf clubs, became the official laws of English bridge. They were revised in 1904 by a joint committee of the same clubs.

About 1910 the simple form of bridge was superseded by a form called auction bridge, and later a variant, contract bridge, was introduced. See Auction Bridge; Contract Bridge.

BRIDGE, SIR CYPRIAN ARTHUR GEORGE (1839-1924). British sailor. Born March 15, 1839, he served in the navy from 1853 to 1904. He was on active service during the Crimean

War and the Indian Mutiny, and was with the naval brigade in Burma. He was director of naval intelligence, 1889-94, commander-in-chief in Australia, 1895-97, and in China, 1901-4. Bridge died August 16, 1924.

BRIDGE, SIR JOHN FREDERICK, (1844-1924). British organist. Born at Oldbury, Worcestershire, Dec. 5, 1844, he was organist at Manchester Cathedral from 1869-75. Deputy organist at Westminster Abbey from 1875 to 1882, he was organist from 1882 to 1918. He was professor at London University, Gresham College, and the R. College of Music. He died Mar. 18, 1924.

Bridge. Masonry arch held together by the keystone. The segmental blocks will remain in place even if uncemented

Bridge. Modern examples of engineering skill in spanning space by structures in timber, masonry, and steel

BRIDGEMAN, SIR FRANCIS CHARLES BRIDGEMAN (1848-1929). British sailor. Born Dec. 7, 1848, he entered the navy in 1862. In 1903 he became a rear-admiral, and from 1907-9 was commander-in-chief of the Home Fleet. Knighted in 1907, Sir Francis became second sea lord of the Admiralty in 1909, and was again commander of the Home Fleet for a short time in 1911, when he was promoted to be first sea lord and was made an admiral. He died Feb. 17, 1929, at Nassau, Bahamas.

BRIDGEMAN, WILLIAM CLIVE BRIDGEMAN. 1st Viscount (b. 1864). British politician. Born Dec. 31, 1864, his father was a clergyman and a member of the earl of Bradford's family. He had a brilliant career as scholar and cricketer at Eton and Cambridge, and in 1906 became Unionist M.P. for the Oswestry division. He joined the Government in 1916 and, after holding various minor appointments, was secretary for mines, 1920-22, and home secretary, 1922-24. From 1924-29 he was first lord of the admiralty and on his retirement was made a viscount.

Viscount Bridgeman,
British politician
Russell

BRIDGEND. Urban district and market town of Glamorganshire. It stands on both banks of the Ogmore (Ogwe), 20 m. W. of Cardiff on the G.W.R. Of the ancient castle only a Norman gateway and a few other vestiges remain. It has tanneries, joinery works, collieries, etc. Pop. 10,000.

BRIDGE OF ALLAN. Burgh of Stirling-shire. On Allan Water, it is 3 m. N. of Stirling on the L.M.S. Rly. Its mineral springs and mild climate make it a favourite winter resort, and it has a well-house, baths, and hydropathic establishment. Its industries include bleaching, dyeing, paper-making, and ham curing. The annual Strathallan Gathering is held close by. Pop. 3,579

BRIDGEPORT. City and seaport of Connecticut, U.S.A., a co. seat of Fairfield co. On an arm of Long Island Sound, 58 m. N.E. of New York, it is served by the New York, New Haven, and Hartford Rly. It has a small but good harbour, carries on an extensive coasting business, and has manufactures of machinery, motor vehicles, and sewing machines. The buildings include the U.S. government buildings, the county court house, a public library, and the Barnum Memorial Institute. Daily steamboat communication with New York is maintained. Pop. 179,163.

BRIDGES, ROBERT (1844-1930). British poet laureate. Born Oct. 23, 1844, he was educated at Eton and Corpus Christi College, Oxford, studied medicine at St. Bartholomew's, London, and afterwards held posts at the Children's Hospital in Great Ormond Street and the Great Northern Hospital, until he retired in 1882. A collected edition of his poetical works was published 1898-1905. In 1916 appeared *The Spirit of Man*, an anthology in English and French; in 1920, *October and other poems*; in 1925, *New Verse*; and in 1929, *The Testament of Beauty*. In the same year he was given the O.M. In 1913 he was made poet laureate. His play *The Humours of the Court* was produced in Jan., 1930. He died April 21, 1930.

Robert Bridges,
English poet laureate,
Lafayette

BRIDGET (1302-73). A Swedish saint. In 1344 she founded a convent at Vadstena, in E. Gothland, and established a new religious order, the Briggittine or order of S. Saviour. This

order spread over Europe, and in England in 1415 Syon House, Isleworth, was the chief convent. S. Bridget journeyed to Rome in 1350, where she died July 23, 1373. Canonised in 1391, her festival is Oct. 8.

BRIDGETOWN. Capital and chief port of Barbados. It is the seat of a bishop, contains Codrington theological college, the governor's residence, House of Assembly, barracks, and arsenal, and is the headquarters of the British West Indian troops. The harbour is a fine, open roadstead. Bridgetown has an export trade in sugar and mineral oil, and is connected by rly. with the interior, and by cable with Jamaica and Trinidad. Pop. 13,486.

BRIDGEWATER, DUKE OF. English title borne by the family of Egerton from 1720 to 1803. In 1617, John Egerton was made earl of Bridgewater; he was a younger son of Sir Thomas Egerton, the lord chancellor who was made Viscount Brackley. Scroop, the 4th earl, was created duke in 1720, and the title passed to his two sons. The younger, Francis (1736-1803), became the 3rd duke in 1748.

The duke died March 8, 1803, when the dukedom became extinct. His canals, together with his great wealth, passed to a nephew, whose son, on succeeding to the property, was created earl of Ellesmere. Another nephew succeeded to the earldom of Bridgewater, which in 1823 passed to Francis Henry Egerton (1756-1829), a distinguished scientist, who became the 8th earl.

When he died, Feb. 25, 1829, the earldom became extinct. He bequeathed to the British Museum £12,000 and the so-called Egerton MSS.

His chief property was around Worsley, near Manchester. There coal was beginning to be mined, and he conceived the idea of making a canal to carry it. James Brindley was employed by him, and in a few years a canal from Worsley to Manchester had been successfully cut. It was then extended to Liverpool, and, known as the Bridgewater Canal, was purchased in 1887 by the Manchester Ship Canal for nearly £2,000,000.

Bridgewater House, the London residence of the earl of Ellesmere, lies between Green Park and Cleveland Row, S.W.

BRIDGMAN, LAURA DEWEY (1829-89). American blind-mute. Born in Hanover, New Hampshire, Dec. 21, 1829, at the age of two a

fever destroyed her sight, hearing, speech, and sense of smell. At the Perkins institution for the blind at Boston she learned to read embossed letters and words by touch. After some years she was able to receive lessons in geography, algebra, and history, and became proficient at needlework and other household duties, and also wrote a legible hand. Eventually she became a successful teacher of the blind and deaf and dumb. She died May 24, 1889.

BRIDGNORTH. Borough and market town of Shropshire. Divided by the Severn into an upper and a lower town, it is 22 m. S.E. of Shrewsbury by the G.W.R. It has a grammar school founded at the beginning of the 16th century, an old town hall and a tower of the old castle. It was the birthplace of Bishop Percy, whose house still stands. Market day, Sat. Pop. 5,143.

BRIDGWATER. Borough, seaport, and market town of Somersetshire. On both

banks of the Parret, it is 12 m. by river from Bristol Channel and 33 m. by rly S.W. of Bristol on the G.W.R. and the L.M.S. and Southern Jt. Rly., and is connected by canal with Taunton. It is the only town in Britain engaged in the making of bath brick. Ordinary bricks, tiles, pottery, and drain pipes are also made, and there are breweries, malting, and cake mills. The town suffered from floods in 1929. Bridgewater secured its first charter in 1260. In its castle the duke of Monmouth was proclaimed king in 1685. Market day, Wed. Pop. 15,968.

BRIDLE. The part of a horse's harness that fits the head. It consists of the headstall, the bit and the bearing rein, and a more

Bridle. Left: Simple bridle with single reins for driving. Right: Snaffle bridle for a hard-pulling riding horse

elaborate kind is called a snaffle bridle. Bridles are manufactured chiefly in Walsall. See Bit.

BRIDLINGTON. Borough, market town, and watering-place of Yorkshire (E.R.). It is 33 m. N. of Hull on the L.N.E.R., and consists of an old town lying 1 m. inland, Bridlington Quay, its port on Bridlington Bay, and Hildesborough, a district to the S. It has fine sands, promenades, baths, and a mineral spring. The harbour is one of the securest on the E. coast. Market days, Wed. and Sat. Pop. 22,768.

BRIDPORT. Borough and market town of Dorset. On the river Brit, it is 18 m. W. of Dorchester by the G.W.R. The main street and rly. extend to the sea at West Bay, which has a small harbour. It had a mint for silver coins, and at one time sent two members to Parliament. Market days, Wed. and Sat. Pop. 5,909.

BRIEF (Lat. brevis, short). In English law, a statement in writing furnished by a solicitor to counsel, to instruct him as to the facts of a case. Hence counsel is said to be briefed in a case.

A papal brief is the name applied to an official letter from the pope. It is always written in Latin, is sealed with the fisherman's ring on wax, and has the authority of a bull. See Bull.

BRIENZ. Lake of Switzerland, in the canton of Berne. In a valley N. of Interlaken, 1,857 ft. above sea level; it is 9 m. long, 1½ m. across, and 11½ sq. m. in area, and has a greatest depth of 860 ft. On the S. shore is the Giessbach waterfall, and N.E. lies the Rothorn, with a view of the Bernese Alps. The village of Brienz on its shores, 8 m. W. of Meiringen, is the centre of the Swiss wood-carving industry, and has a rly. up the Rothorn. Pop. 2,474.

BRIERFIELD. Urban dist. of Lancashire. It is 2 m. N. of Burnley, on the L.M.S. Rly. It has a Gothic church, built in 1872, and shares in Burnley's industries. Pop. 8,341.

BRIERLEY, BENJAMIN (1825-96). Lancashire writer. Born at Failsworth, near Manchester, June 26, 1825, he was a weaver from his 6th to his 38th year. In 1856 he wrote *A Day's Out*, the first of many tales and articles in the dialect of the people of S. Lancashire. In 1863 he became sub-editor of *The Oldham Times*, and from 1869-91 edited *Ben Brierley's Journal*. He died Jan. 18, 1896.

Laura Bridgman,
American teacher,
who was blind, deaf
and dumb

BRIERLEY HILL. Urban dist. and market town of Staffordshire. On the river Stour, it is 2½ m. N.E. of Stourbridge, on the G.W.R., and is also served by canals. It has glass, firebrick, nail, and chain manufactures. Market day, Tues. and Sat. Pop. 12,484.

BRIEUX, EUGÈNE (b. 1858). French dramatist. Born in Paris, Jan. 19, 1858, he first made his mark with *Ménages d'Artistes* at the Théâtre Libre in 1890. Afterwards he wrote a series of plays dealing with social questions: *Les Trois Filles de M. Dupont*, 1897; *La Roche Rouge*, 1900 (Eng. version, *The Arm of the Law*); *Les Avariés*, 1901 (Eng. version, *Damaged Goods*). The plays have all been translated into English. Later work included *La Femme Seule*, 1913; *Les Américains Chez Nous*, 1920; *La famille Lavolette*, 1926.

Eugène Brieux,
French dramatist
Manuel

BRIG. Type of two-masted sailing vessel, carrying square sails on both masts. Until 1904, when mast-and-yard training in the navy was abolished, brigs were attached to the depots to complete the training of youths before they were drafted to sea-going ships.

Brig. One of the old training brigs (Martin) making full sail down the Channel
Cribb, Southsea

BRIGADE (Ital. *brigata*, from *brigare*, to fight). Military organization of infantry, cavalry, or artillery. In the British army the last named is a lieutenant-colonel's command, consisting of three batteries and an ammunition column. Infantry and cavalry brigades are commanded by general officers, and consist of four battalions of infantry, or three regiments of cavalry, besides medical, veterinary, and signal details, that is, about 3,000 bayonets or 900 sabres. The ration strength of a British infantry brigade on mobilisation is 124 officers, 3,931 men, 247 horses; of a cavalry brigade, 85 officers, 1,633 men, 1,873 horses. See *Army*.

BRIGADIER-GENERAL. Commander of an infantry or cavalry brigade, and the lowest rank of general officer. It is only a temporary rank, i.e. there are no brigadiers-general as such on the establishment. The rank was abolished in the British army in 1920, colonels-commandant taking its place. It was revived in 1928.

Brigadier-General.
Shoulder-strap and
badge

Huddersfield, on the L.M.S. Rly., it has woollen and worsted factories, wire mills, flour mills, card factories, and stone quarries, and makes carpets, soap, and machinery. It has a town hall, art gallery, and free libraries. Market day, Sat. Pop. 20,610.

BRIGHT, JOHN (1811-89). British politician. Born at Rochdale, Nov. 16, 1811, in 1839 he associated himself with Richard Cobden and Charles Villiers in agitating for the repeal of the corn laws, to which cause his time, until 1846, was largely devoted. In 1843 Bright entered the House of Commons as an independent free trade M.P. for Durham, and in 1847 was elected for Manchester. That city rejected him in 1857, but in the same year he was elected for Birmingham, which he represented until his death. In 1863 he became president of the Board of Trade, but in 1870 ill-health brought about his retirement.

John Bright,
British politician
Engraving by Hall
from photo by Mayall

In 1873-4 he was chancellor of the duchy of Lancaster, and again in 1880-2, when he withdrew from the Gladstone ministry as a protest against the policy of intervention in Egypt. In 1885 he left the Liberal party on the question of Home Rule for Ireland, an action which had its share in bringing about the fall of the ministry. He died Mar. 27, 1889.

BRIGHT, TIMOTHY (c. 1551-1615). Inventor of a system of shorthand. From 1586-90 he was physician to St. Bartholomew's Hospital. In 1591 he took orders and was presented to two Yorkshire rectories by Queen Elizabeth, to whom he had dedicated his treatise on shorthand, *Characterie*, in 1588.

BRIGHTLINGSEA. Urban district and seaport of Essex. On the Colne estuary, 8 m. S.E. of Colchester by the L.N.E.R., it is a yachting station. Pop. 4,497.

BRIGHTON (formerly *Brightelmstone*). County borough and watering place of Sussex, 50½ m. by rly. S. of London on the Southern Rly. It stands high on the S. slopes of the South Downs, with a promenade stretching about 4 m. along the sea front, from Kemp Town at the E. end to Hove.

Brighton's rise was due to Dr. Richard Russell, a physician, and to the discovery of a

Brighton. View showing the esplanade, gardens, and pier entrance of this famous south coast resort
Frith

chalybeate spring, while the opening of the L.B. & S.C. Rly. in 1841 helped to popularise it. The Aquarium, opened in 1872, was replaced by a new building in 1929.

Educational institutions include the technical college and Brighton college. The Royal Pavilion and the Dome, a group of buildings of Eastern design, begun in 1784 for George IV when Prince of Wales and finished in 1827, are used for entertainments, picture galleries, etc. The Booth Museum has a fine collection of British birds. The West Pier (1866) is 1,115 ft. long, and the Palace Pier (1900),

replacing the old Chain Pier, washed away in 1896, is 1,700 ft. long. Recreation grounds include Preston Park, Queen's Park, and Hollingbury Park, with an 18-hole golf course. There is a racecourse at Kemp Town.

In 1927 the population was estimated at 147,600. In 1928 the area of Brighton was increased to 12,490 acres, or nearly 20 sq. m., and it now includes Ovingdean, Rottingdean, Patcham and other places. In 1928 the town council bought Devil's Dyke, as well as 200 acres on the cliffs between Roedean and Rottingdean to extend the marine drive. Other improvements, put in hand or suggested in 1929, include a huge bathing pool near the Aquarium.

There is a watering place called Brighton in Victoria, Australia. It stands on the E. shore of Port Philip, 8 m. S.E. of Melbourne, and has two piers and a long stretch of sandy shore.

BRIGHT'S DISEASE. Acute or chronic inflammation of the kidney, also known as nephritis. The disease is named after its investigator, Richard Bright (1789-1858), a physician at Guy's Hospital, London.

Acute Bright's disease may be due to exposure to cold and wet, particularly in persons addicted to drinking; to infectious disease, most frequently scarlet fever; to the swallowing of poisonous substances such as cantharides or turpentine; and occasionally arises in the course of chronic diseases such as gout and diabetes. Characteristic symptoms are changes in and diminution of the urine, dropsy, first noticeable in the eyelids and ankles, fever and vomiting. In cases due to exposure to cold the outlook is favourable; when the disease occurs in the course of scarlet fever in young children the mortality is high. Treatment consists in arranging the diet so as to diminish the amount of nitrogenous foods, and so rest the kidneys; in giving water and other diluents; and in increasing the action of the skin, if necessary by hot packs, in the elimination of poisons by sweating.

In chronic Bright's disease, which is of two kinds, distinguished by the morbid changes in the kidney, complete cure is impossible, but by careful treatment and a well-regulated life the symptoms may be much improved.

BRIGID (452-523). Irish saint. Born at Faughart, near Dundalk, of noble ancestry, she became a nun and founded an oratory at Cill-Dara which developed into two important abbeys and later into the city of Kildare. The friend of St. Patrick, she is with him a patron saint of Ireland, and her festival is kept on Feb. 1. The name is often abbreviated to Bride and spelt wrongly Bridget.

BRHASPATI. One of the gods of Brahmanism, regarded especially as the Lord of Prayer. A reference in the Mahabharata suggests that he may also be the god of wisdom. See *Brahmanism*.

BRIL, PAULUS (1554-1626). Flemish painter. Born in Antwerp, he was the younger of two sons of Matthys Bril, the elder. His brother, Matthys the younger (1550-84), achieved a great reputation at the Vatican, where he was employed by Gregory XIII. Going to Rome, Paulus assisted Matthys in the frescoes commissioned by the pope, and was employed in the Sistine chapel.

Brill. A species of turbot
Bertrage

BRILL. Species of fish of the same genus as the turbot (*Rhomus*), but smaller and more oval in shape and inferior in the quality of its flesh. It is greyish brown in colour, with reddish spots, and is caught in British and other European waters.

BRIMSTONE (Old Eng. brenston, burn-stone). Popular name for sulphur, also used by the alchemists, who looked upon sulphur as the principle of combustibility. The name chiefly survives in connexion with "brimstone and treacle," a popular confection for purifying the blood. See Sulphur.

BRINDISI (Gr. Brentesio; Lat. Brundisium). City and seaport of Italy in the prov. of Brindisi. On the Adriatic, 473 m. by rly. S.E. of Bologna, it has been a starting point for the E. from earliest times, and was the principal naval station of the Romans on the Adriatic. Its importance was enhanced when it became the land terminus of the overland route to India on the opening of the Suez Canal. Mail and passenger boats leave here for Egypt, India, the Far East, and Australia and New Zealand.

The city lies between the two arms of the harbour, which is accessible to large vessels and sheltered by several islands. There is a wireless station. The buildings include the cathedral, built 1089 and restored 1749; the castle, built by the emperor Frederick II, now a prison; the 11th century baptistry of S. John, which houses a museum; and San Benedetto, a Norman church dating from about 1200, with fine cloisters. Pop. 41,393.

BRINDLEY, JAMES (1716-72). British engineer. Born at Thornsett, Derbyshire, in 1742 he set up in business for himself at Leek. Employed by the

James Brindley,
British Engineer
Engraving by J. T.
Wedgwood

Wedgwoods to repair and construct machinery, he patented an improved steam engine in 1758. The following year he planned for the duke of Bridgewater the water-way known as the Bridgewater Canal, from Worsley to Manchester, including the aqueduct which still carries its water over the Irwell. The extension of the Bridgewater Canal to the Mersey, and the Trent and Mersey, or Grand Trunk Canal, were also his work. Most of Brindley's calculations were done mentally, as he could hardly write. He died Sept. 30, 1772.

BRINVILLIERS, MARIE MADELINE MARQUERITE, MARQUISE DE (1632-76). French poisoner. In 1651 she was married to the marquis de Brinvilliers, and in 1659 became the

Marie, Marquise de
Brinvilliers

mistress of a cavalry officer, Godin de Sainte-Croix. By him she was persuaded to poison first her father and then her two brothers in order that he and his mistress might inherit the whole of the family wealth. Although the cause of death was revealed at the post-mortem examinations, no suspicions fell on the murderers. Sainte-Croix died suddenly in 1672, and among his papers was a document incriminating the marquise, who fled to Germany and thence to a convent at Liège. Lured from here by a trick, she was taken to Paris and beheaded, July 16, 1676. A full confession was found among her papers.

BRIONI. Island in the Adriatic Sea. Near Pola, it is the largest of a group all called Brione. Near here the Genoese fleet defeated the Venetians in 1379, and from the islands Venice obtained stones for its palaces. Brioni is now a pleasure resort.

BRIQUETTE (Fr. little brick). Fuel made of coal dust compacted into brick form. After washing and drying, the coal dust is mixed with pitch-tar, or other binding substance, and pressed into moulds by powerful

rams. Briquettes, first made in France, are used chiefly for locomotive and marine boilers and for puddling and other furnaces, and also for domestic heating.

BRISBANE. Capital of Queensland, Australia. On the Brisbane river, 45 m. from its mouth in Moreton Bay, it has rly. connexion with Melbourne, Adelaide, Sydney, and other large towns, and is accessible to large vessels.

Brisbaue. Queen Street, the main thoroughfare, runs through the city to South Brisbane, across the river
Courtesy of the Australian Government

Brisbane is the seat of a Roman Catholic archbishop and an Anglican bishop. Notable buildings include the Parliament House, custom house, two cathedrals, law courts, and other buildings for state purposes. It is the seat of the university of Queensland, opened in 1911, and has a wireless station, botanical gardens, school of arts, and several parks and open spaces. In Albert Park stands the observatory. The industries include the manufacture of boots, tobacco, soap, and leather. The chief exports are sheep, frozen meat, coal, tallow, wool, and hides. Occupied as a penal station in 1824 by Sir Thomas Brisbane, after whom it was named, Brisbane in 1859 became the capital of the colony. In 1930 its mayor became a lord mayor. Pop. 295,430.

BRISÉIS. In Greek legend, a Trojan maiden who became the captive of the Greek hero, Achilles. Agamemnon, having been forced to restore the captive Chryseis to stay the plague sent by Apollo to avenge the insult offered to her father, claimed the surrender of Briseis. This led to the famous quarrel between Agamemnon and Achilles and the

Valentine

refusal of the latter to take any further part in the Trojan war. See Achilles; Iliad.

BRISOT, JEAN PIERRE (1754-93). Leader of Girondins in the French Revolution. Born at Chartres, Jan. 14, 1754, and trained as a lawyer, he was the author of two important treatises on criminal law, 1781-2. Imprisoned for four months in the Bastille, as the supposed author of a pamphlet against Marie Antoinette, on his release he went for safety to England, but returned to France in 1789. He was elected to the Legislative Assembly in 1791, and became leader of the republican Girondins, sometimes called after him the Brissotins. One of the first Girondins condemned, he was guillotined Oct. 31, 1793.

Jean Pierre Brissot,
French revolutionist

BRISTOL. City, county borough, and seaport on the west coast of England, mainly in Gloucestershire, but partly in Somerset. It stands on the Avon, 7 m. from the Bristol Channel, and 118 m. by rly. W. from London on the G.W. and L.M.S. Rlys.

The modern harbour was constructed in 1809 by diverting the course of the Avon, and forming the original waterway into a canalised dock (the floating harbour), well equipped with quays and warehouses. The port consists of the older docks in the city proper, together with the docks at Avonmouth and Portishead. Brewing, engineering, and the manufacture of tobacco, cocoa, chocolate, and soap are thriving industries, and there is a valuable foreign and coasting trade.

The see of Bristol was incorporated with that of Gloucester in 1836, but again became separate with its own bishop in 1896. The cathedral, originally the abbey church of the Augustinian Canons, was founded in 1142, and added to and rebuilt in the 13th, 14th, and 15th centuries. The nave is modern. The magnificent Perpendicular parish church of S. Mary Redcliffe, founded in the 13th century, and rebuilt in the 14th and 15th centuries, is a monument to the wealth of Bristol's most famous merchant prince, the younger Canynge. The first Wesleyan chapel was built in the Horsefair, Bristol, in 1739. Important public buildings are the exchange, Colston Hall, the Victoria Rooms, the city library, and the museum. In 1929 it was decided to erect new municipal buildings on College Green. Among educational institutions are the university, Clifton College, the grammar school and the Merchant Venturers' Technical College, now part of the university. The city has an aerodrome at Whitchurch. After the Great War Bristol adopted the French town of Bethune. Market day, Thurs. Pop. 385,700.

The university was founded 1909, in which year the local university college, dating from 1876, was dissolved. It has an agricultural and horticultural station at Long Ashton, and a research station at Chipping Camden. In 1926, to celebrate the jubilee of the foundation of university college, a magnificent range of new buildings was opened by King George V. In 1928 a physics laboratory, the gift of Mr. H. H. Wills, was opened.

See Avonmouth.

BRISTOL.

In the British navy the name-ship of a class of five light cruisers, 430 ft. long, 47 ft. in beam, displacement 4,800 tons. H.M.S. Bristol, service in the

launched in 1910, saw much Great War. See illus. p. 305.

BRISTOL, EARL OF. British title held by the families of Digby and Hervey. John Digby (1580-1653), ambassador for James I at Madrid, was knighted in 1607, created Baron Digby in 1618 and 1st earl of Bristol in 1622, and was succeeded by his son George (1612-77), the friend of Charles II. On the death of the third earl the title became extinct.

In 1714 Sir John Hervey (1665-1751) was made earl of Bristol for his support of the Hanoverian succession. Frederick, 5th earl, was made a marquess in 1826, and from him the present marquess is descended. His seat is Ickworth Park, Suffolk.

George Digby,
2nd earl of Bristol.
After Van Dyck

Cobb, Southsea

Neptune in her left hand and a shield with her right, the sea at her feet, but with the Eddystone lighthouse on one side and on the other the outline of a ship.

BRITANNIA. Training ship for officers of the British navy. In 1859 a vessel of this name was made a training ship for naval cadets, was discarded, and the name transferred to the Prince of Wales, a vessel of 6,200 tons. First stationed at Portsmouth, it was moved to Dartmouth. In 1903 the scheme of naval education was altered and the Britannia was replaced by the R.N. Colleges at Osborne and Dartmouth.

Britannia was also the name of a British battleship of the King Edward VII class, sunk through being torpedoed near Gibraltar in Nov., 1918. It was also the name of the first Cunard liner.

BRITANNIA METAL. Alloy in which the predominant metals are tin and antimony, with, in some instances, small proportions of copper, zinc, lead, and bismuth. It is used in making Birmingham and Sheffield plate.

BRITISH ASSOCIATION. Society for the advancement of science founded by Sir David Brewster and others in 1831. Its chief function is the holding of an annual conference, at which an address is delivered by the president for the year. It is usually held in one of the large towns, but occasionally overseas. The Association grants financial aid for research, publishes papers, etc. The offices are at Burlington House, London, W.

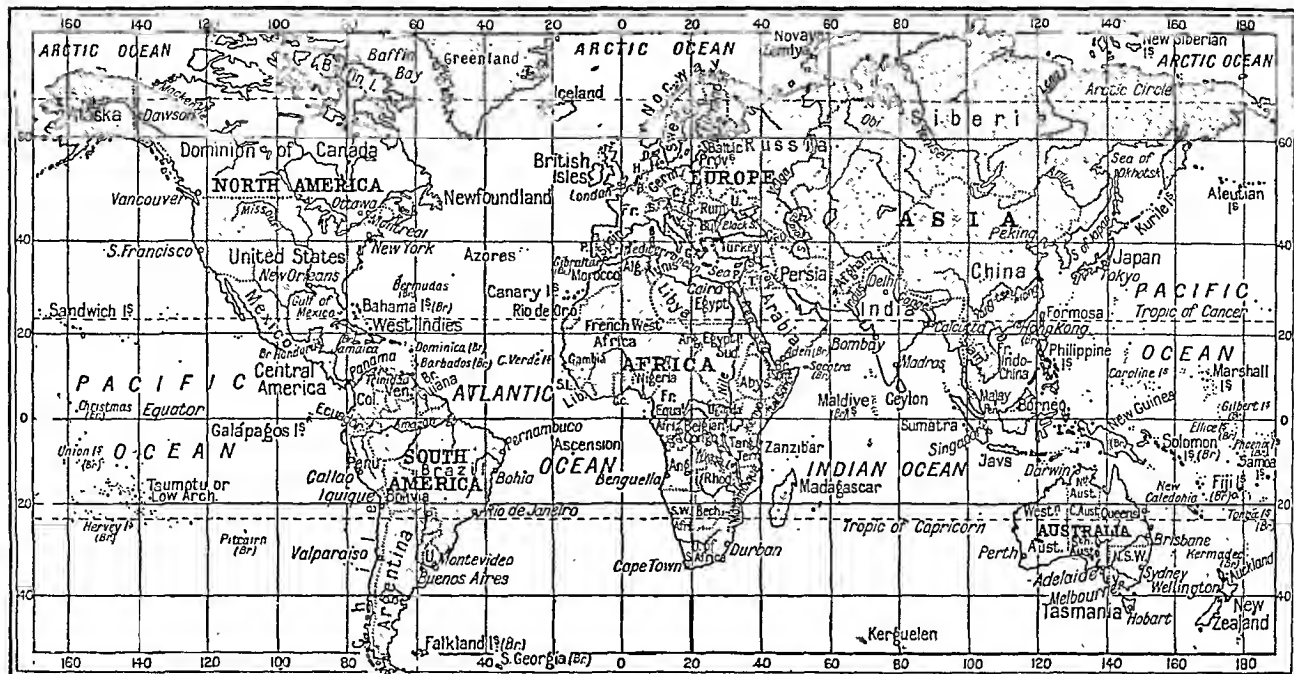

districts of the S.W. the climate is similar to that of the S. of England. Minerals include lead, copper, zinc, silver, gold, and coal.

The territory was under the Hudson Bay Company down to 1858, when it was constituted a crown colony. Vancouver I. was leased by the same company from 1843-49, when it also became a crown colony, and in 1866 united with British Columbia, which entered the Canadian Confederation in 1871. British Columbia is represented in the Senate by six members, and in the House of Commons by 14, and provincial government is by a lieutenant-governor and legislative assembly of 48 members. Victoria is the capital.

BRITISH EMPIRE. Union of lands ruled by the king of Great Britain and Ireland. It consists of (1) Great Britain and Northern Ireland; (2) six Dominions or self-governing units, Australia, Canada, Irish Free State, Newfoundland, New Zealand, and South Africa; (3) the empire of India; (4) crown colonies such as Nigeria, Ceylon, and Jamaica; (5) protectorates such as Kenya and Nyasaland, and (6) lands such as Tanganyika, that are governed under mandate from the League of Nations. The Empire belongs to the League, each of its Dominions being a distinct member with separate voting power.

The area of the Empire is 13,909,800 sq. miles and its pop. about 450,000,000. Every race and religion are found and it ranks as the greatest Moslem power in the world. Only about one-half of its inhabitants are white.

Oceania	

British Empire. Map showing the extent of the British Empire, including the mandated territories. Portions shown white are British

mother country, which is represented in each by a governor-general. Their method of government with electors, parliaments and cabinets is modelled on that of Great Britain. India occupies a special position, and its relations with the rest of the Empire were the subject of exhaustive inquiries in 1928-30. The crown colonies are governed, wholly or partly, by officials sent out from Great Britain, with a certain amount of self-government in some of them.

In theory the Parliament at Westminster can legislate for the whole Empire, but it has virtually abandoned its right to legislate for the Dominions, save at their special request. Their legislation, however, needs the assent of the King to make it valid, but this is never refused. Throughout the Empire the position of the Judicial Committee of the Privy Council as the final court of appeal from all the law courts is recognized, though S. Africa and the Irish Free State have raised certain objections.

The affairs of the Empire, except India, are looked after by the Dominions and Colonial Office in London under a secretary of state. Until 1925 he was secretary for the colonies only, but in that year a secretaryship for the Dominions was established. The two offices, however, are held by the same person, but the change marked the recognition of the Dominions as Great Britain's equals. The only recognized body that deals with the affairs of the Empire as a whole is the Imperial Conference, which meets periodically in London.

The Empire may be said to date from 1583, when Newfoundland was settled. After that additions in almost every quarter of the globe were made, some by discovery, others by conquest, but in 1783 the most valuable of these, the American colonies, were lost. Expansion, however, continued, the most notable acquisition being India, but in the second half of the 19th century a halt was called. Then Egypt and the S. African republics were added, and the end of the Great War brought further extensions, chiefly of territories governed under mandate. In 1922 Egypt was given its independence and is no longer included in the Empire's area. More important perhaps was the division of Ireland and the creation of the Free State in 1922. See Australia; Canada; India, etc.

BRITISH EMPIRE, ORDER OF THE. British order instituted June 21, 1917. Consisting of two divisions, military and civil, the order

Order of the British Empire. Badge and star of First Class

is conferred for services rendered to the Empire, whether at home or abroad, and is given to women equally with men. Both divisions consist of five classes: knight grand cross (G.B.E.), knight commander (K.B.E.), commander (C.B.E.), officer (O.B.E.), and member (M.B.E.). In the case of women the two first classes are dame commander (D.B.E.); the others are the same.

BRITISH LEGION. Federation of ex-service men's societies, formed July 1, 1921, with Earl Haig as president. Its objects are to unite all who served in the Great War, to safeguard their interests and those of the dependents of the fallen. It organizes industries for disabled men, and conducts a factory at Petersham for the manufacture of poppies for sale on Armistice Day. Earl Jellicoe succeeded Earl Haig as president in 1928. The head offices are at 29, Eccleston Square, London, S.W.1.

BRITISH MUSEUM, THE. Situated in Bloomsbury, London, it originated in the purchase for the nation of Sir Hans Sloane's collections in 1753. These comprised 50,000 books and MSS., 23,000 coins and medals, about 20,000 natural history specimens, and a great variety of other items. In 1754 Montagu House, in Great Russell Street, Bloomsbury, was purchased and adapted to its new purpose. The Cottonian collections of books and MSS. (made by Sir Robert Cotton, 1571-1631), which were already public property, and the royal collections made by successive sovereigns from the time of Henry VII, were added to the

British India, Star of the Order

others, and the whole was named the British Museum. Since then great additions have been made by purchase, bequest, and gift. The Museum was first opened to the public on Jan. 15, 1759, but was not really accessible until 1810. (See Frontispiece.)

The valuable natural history collections were removed to South Kensington, 1880-83. The British Museum Library, containing 4,000,000 printed volumes, is the largest in the world.

British Museum, Great Russell Street front. The colonnaded façade, completed in 1852, in which is the main entrance to the Museum

To this library must be sent a copy of every book, newspaper, etc., published in the United Kingdom.

BRITISH WEST INDIES REGIMENT. Corps formed during the Great War from contingents of the inhabitants of the West India islands. The 1st and 2nd battalions distinguished themselves in the Palestine campaign.

BRITOMARTIS (sweet maiden, or maiden rich in blessing). Cretan goddess, reputed daughter of Zeus and Carmē. As virgin patroness of the chase and fishing, her cult came to be associated with that of Artemis. She was worshipped on the islands and coasts of the Mediterranean as far W. as Marseilles, and at Aegina under the name of Aphaea. See illus. p. 23

British West Indies Regiment badge

BRITON FERRY. Urban district and seaport of Glamorganshire. At the mouth of the river Neath, 7 m. E. of Swansea, on the G.W. Rly., it has docks, iron and steel works, and coal mines. Pop. 9,176.

BRITTANY (Fr. Bretagne). One of the provinces into which France was divided before the Revolution. Earlier still it was an independent duchy. It is now divided into the departments of Loire-Inférieure, Ille-et-Vilaine, Morbihan, Côtes-du-Nord, and Finistère. In the N.W. of the country, it is a peninsula bounded seawards by the

English Channel and Atlantic Ocean, and landwards by Normandy, Anjou, and Maine.

Of all France, Brittany most preserves an individuality of its own, owing partly to the religious and racial nature of its inhabitants, but more to its geographical situation—remote and formerly almost inaccessible from the rest of the country. This shows itself in the piety of the people; and the survival of their own language, legends, customs, and dress. The chief town is Rennes; other important ones are Nantes, Vannes, Dol, Dinan, Brest, and Lorient. The largest river is the Vilaine; the mouth of the Loire was in the old province.

Brittany. Top, family group from Quimper. Bottom, Paimpol woman in distinctive dress

BRIXHAM. Urban dist., seaside resort, and market town of Devon. It is pleasantly situated on Torhay, opposite Torquay, 32 m. by rly S. of Exeter, on the G.W.R. A coaling station, it has a secure harbour, from which an important fishing industry and a brisk coasting trade are conducted. Near are limestone quarries. William of Orange landed here in 1688. Brixham Cave (600 ft. long), discovered accidentally in 1858, contained bones of extinct animals. Market days, Tues. and Sat. Pop. 7,782.

BRIXTON. District of S.W. London. It is in the metropolitan borough of Lambeth, 3 m. S. of S. Paul's, and is served by the

Southern Rly. It has a prison, a theatre, and a free library, and is a popular shopping centre. In 1929 a picture theatre seating 4,000 people, one of the largest in London, was opened here. Called the Brixton Astoria, its interior represents an Italian landscape. At the bottom of Brixton Hill stand the municipal offices of the borough of Lambeth and Brixton parish church. See Lambeth.

BROACH. City of India. One of the oldest seaports in western India, it stands on the Nerbada river, about 200 m. N. of Bombay. Formerly noted for woven fabrics, it is now engaged in the manufacture of cotton and flour and the exportation of raw cotton and cereals. An English factory was established here in 1616 and a Dutch factory the following year. Pop. 43,500.

BROAD ARROW. Mark placed on naval and military stores, the clothing of convicts, and other government property in the United Kingdom. The pheon or broad arrow was the crest of Henry Sidney, earl of Romney, master-general of the ordnance in the 17th century, who used this mark to identify government property. By the Act of Parliament of 1698 all unauthorised persons found in possession of goods marked with the broad arrow are liable to a fine.

Broad Arrow, Government mark

BROADCASTING. Term used in wireless telephony to indicate the sending out of wireless messages, concerts, etc., to be received by those who have the necessary apparatus to listen-in. The term is used in connexion with the daily entertainment, news bulletin, weather reports, etc., broadcasted.

Broadcasting in England began with experimental transmissions from Chelmsford by the Marconi Co. in 1919. In 1920 permission was given for the first transmitting station for entertainment and educational purposes. This was erected at Writtle, near Chelmsford. At first only a short programme was given once a week. In May, 1922, the Marconi Co. began to broadcast a programme of speech and music from Marconi House, London (2 L O).

On October 18, 1922, the British Broadcasting Co. came into being as the result of a conference between the Postmaster-General and representatives of firms manufacturing electrical apparatus, six of the leading manufacturers guaranteeing to establish and maintain a broadcasting service for two years. Eight stations were to be provided, at London, Aberdeen, Birmingham, Bournemouth, Cardiff, Glasgow, Manchester and Newcastle. In return the B.B.C. received a licence giving them the exclusive right to broadcast entertainment in Gt. Britain. Broadcast receiving licences were issued at a cost of 10s. each, and it was made compulsory for the owner of a receiving set to take out one. Half the revenue from the licences went to the company, who also received a royalty on all receiving apparatus sold. Broadcasting began from the London, Manchester, and Birmingham stations on Nov. 15, 1922, and the remaining stations came into operation during the following twelve months.

When the B.B.C. licence expired in 1924 it was renewed for a further two years. In April, 1925, a high-power broadcasting station was opened at Daventry (5 X X). Upon the expiry of the renewed licence in 1926 the Government took control of the British Broadcasting Co., which then became the British Broadcasting Corporation, with a royal charter. In August, 1927, an experimental station was set up at Daventry (5 G B), and in the following November a short-wave station was opened at Chelmsford (5 S W).

On October 15, 1929, Brookman's Park (Herts), the first of a series of high-powered,

two-wave regional stations, was opened, and superseded the London transmitter in Oxford Street, which had functioned since April, 1925. This station serves south-east England. Others are planned for the north and west, and one for Scotland. Daventry (5 G B and 5 X X) already constitutes a regional station, and serves the Midlands. In 1929 new headquarters for the B.B.C. in Portland Place, London, were planned.

The number of receiving licences in March, 1929, was 2,731,968, including 14,505 issued free to blind persons. The proportion of the licence fee received by the B.B.C. varies, diminishing as the number of licences increases. At March, 1929, the proportion was 7s. 1d. per licence. In 1926 an International Board was formed at Geneva.

BROADHURST, HENRY (1840-1911). British politician. Born at Littlemore, Oxfordshire, he became secretary of the Labour Representation League, 1873, and was M.P. for Stoke-on-Trent in 1880, for the Bordesley division of Birmingham in 1885, for Nottingham 1886-92, and for Leicester 1894-1906. He was under-secretary for the Home department in Gladstone's ministry of 1886, and was all his life identified with the Liberal party. He died at Cromer, Oct. 11, 1911. Consult his Autobiography, 1901.

Henry Broadhurst, British politician

BROADMOOR. State asylum for criminal lunatics in Berkshire. It is 2 m. from Wellington College station on the Southern Rly. Opened in 1863, it can take 700 inmates.

BROADS, THE. Low-lying district, mainly in Norfolk, but partly in Suffolk. It consists of a number of shallow lagoons connected by dykes with the rivers Yare, Bure, Waveney, Thurne, and Ant, and is navigable by small sailing boats drawing up to 4 ft. The lagoons alternate with marshes, the haunt of waterfowl. Among the principal broads are Wroxham, Salhouse, Horning, Barton, Oulton, Hoveton Great, Hoveton Little, Ranworth, Hickling, Filby, Rolleshy, and Ormesby. The area is about 5,000 acres.

BROADSHEET or **BROADSIDE.** The earliest form of popular printed literature, generally a ballad or sensational narrative on a single sheet of paper. Though largely superseded by the chap-book in the 18th century, the broadsheet continued to be issued for Last Dying Speeches of executed malefactors well into the 19th century. Up to the 20th century popular songs were still sold in broadsheet form.

BROADSIDE. Discharge by a warship of every gun that will bear upon or within a few points of the beam. In the days of sailing ships, when guns were ranged round the sides, only one-half of the guns could be thus fired. Modern battleships and battle-cruisers have all their heavy guns mounted on the centre-line, and are thus able to concentrate their whole main battery on either beam. The term salvo has been substituted for broadside. See Battleship; Gun.

BROAD SOUND. Inlet on the W. coast of Queensland, Australia. Extending inland for about 55 m., it has a maximum breadth of 25 m., and affords secure anchorage. There are coal-beds in the neighbourhood.

BROADSTAIRS. Urban district with St. Peter's and watering-place in the Isle of Thanet, Kent, 2 m. N.E. of Ramsgate on the Southern Rly. It has a pier. It was immortalised by Dickens, who made Fort House his summer residence from 1837-51, popularly but erroneously identified with the Bleak House of his story of that name. Pop. 15,461.

BROADSWORD. Sword with a broad blade, and one or both edges sharpened, primarily designed for inflicting heavy cutting

Broadsword used by Oliver Cromwell, 1649

blows. This type of weapon was the most common until about the 16th century, when the light Italian thrusting rapier began to displace it. Provided with one sharp edge and a point, it is represented to-day by the sabre and claymore. The broadsword employed in fencing has a blade about $\frac{3}{4}$ in. wide, tapering to $\frac{1}{2}$ in. from the heel to point, is heavier than the fencing sabre, and is preferred by army instructors as being a closer approximation to the military weapon. It is a modification of the 16th century thrusting rapier. See Sword.

BROADWAY. Village of Worcestershire. It is 5 m. by rly. S.E. of Evesham by the G.W.R., and lies in the Cotswold Hills district at the foot of Broadway Hill. The church of S. Michael is Early English, and the old church of S. Eadburg, now used as the mortuary, is in Norman and later styles. There are 17th century stone houses and a building thought to have been the manor house of the abbots of Pershore. Pop. 1,860.

BROBDINGNAG. Imaginary country described in Swift's *Gulliver's Travels* as peopled by a race of men as tall as a church spire. Hence the term brobdingnagian has come to be applied to anything of gigantic size.

BROCCOLI (Ital. broccolo, sprout). Vegetable belonging to the natural order Cruciferae and the genus *Brassica*. It resembles the cauliflower, for which it is frequently mistaken. It is hardy and stands the winter well. By making sowings in succession broccoli can be obtained nearly every month in the year.

BROCH (old Norse, stronghold). Prehistoric round tower in Scotland. A fortified dwelling of un-mortared rubble, it was usually built to a height of 50 ft. on a base 60 ft. across. The inner court was roofless, and enclosed by a wall 15 ft. thick, penetrated by galleries and staircases. The windows faced the court, which sometimes contained a well. Typical examples are in the Shetlands, Caithness, etc.

Broccoli. Mammoth spring white broccoli, a vegetable resembling the cauliflower

BROCK, SIR OSMOND DE BEAUVOIR (b. 1869). British sailor. The son of a naval officer, he entered the navy in 1882. In 1914-15 he commanded the Princess Royal, which he led into action at the Dogger Bank and Jutland. In Nov., 1916, he was made chief of staff to the commander-in-chief (Beatty)

Broch. One of these prehistoric round towers in the Shetlands

of the Grand Fleet, and in 1919-21 a lord of the Admiralty. He was commander-in-chief in the Mediterranean 1922-25, and at Portsmouth, 1926-29.

BROCK, SIR THOMAS (1847-1922). English sculptor. Born at Worcester, he came to London in 1866 and entered the R.A. schools. His works include the bronze bust of Lord Leighton (1893) and the Leighton Monument in S. Paul's Cathedral (1900); the *Moment of Peril* (1880) and *Eve* (1900), both in the Tate Gallery. He was responsible for the designs for the coinage of 1893 and for the Queen Victoria Memorial in the Mall, London. Elected R.A. in 1891, knighted in 1911, he died Aug. 22, 1922.

BROCKEN or **BLOCKSBERG** (anc. Mons Bructerus). Mountain in Saxony, Germany, famous in legend. The highest point in the Harz Mts. (3,730 ft.), its bare summit is reached by a railway and by two carriage roads. In heathen times it was a place of worship where certain rites were celebrated on the eve of May 1. The spectre of the Brocken is an optical phenomenon, and consists of magnified shadows thrown on a wall of fog.

BROCKLESBY. Village of Lincolnshire. It is 9 m. from Great Grimsby and has a station on the L.N.E. Rly. Here is Brocklesby Hall, the seat of the earl of Yarborough, standing in a large park. The Brocklesby Hunt is one of the oldest in the country. In the chancel of All Saints' Church are memorials of the Yarborough family. The oldest dates from 1587

BROCKLEY. District of London. It is served by stations on the Southern Rly., and is partly in the borough of Lewisham and partly in that of Deptford.

BROCKVILLE. Town of Ontario, Canada. Capital of Leeds co., it is on the St. Lawrence river, 125 m. by rly. S.W. of Montreal, and is served by the C.N. and C.P. Rlys. An important rly. junction. It is a port of call for the St. Lawrence steamers. The town is named after Sir Isaac Brock (1769-1812), who was killed when repelling an American invasion near Niagara, Oct. 13, 1812. Pop. 10,043.

BROCKWELL PARK. London pleasure ground. It is in the borough of Lambeth between Herne Hill and Tulse Hill. Once the property of the Blades family, it was made over to the public in 1892.

BRODICK. Village of Arran, Scotland. A favourite watering place on Brodie Bay, it has a fine beach and a pier. Near by is Brodie Castle, the residence of the duke of Montrose, long a seat of the dukes of Hamilton.

BRODIE, WILLIAM (d. 1788). Scottish criminal. Born in Edinburgh, the son of a cabinet maker and town councillor, he succeeded to his father's business. A gambler from boyhood, he became the leader of three accomplished burglars, whose robberies in 1787 were numerous and successful. The burglars remained undetected until

March, 1788, when, after a robbery in Canon-gate, one of them turned king's evidence. Brodie escaped to Amsterdam, but was subsequently arrested and hanged in Edinburgh, Oct. 1, 1788. The play *Deacon Brodie* (1879), by R. L. Stevenson and W. E. Henley, produced in 1884, deals with his career.

BRODSKY, ADOLPH (1851-1929). Russian musician. Born March 21, 1851, he studied music in Vienna. From 1883-91 he was professor at the Leipzig Conservatoire, and from 1891-94 was a conductor in New York. From 1895 until his death, Jan. 22, 1929, Brodsky was principal of the College of Music, Manchester.

BRODY. Town of Ukraine. It is close to the former Austro-Russian frontier, 55 m. N.E. of Lemberg. It gives its name to a battle fought between the Germans and the Russians, July, 1916, resulting in its capture by the latter. Pop. 18,055.

BROKE. British destroyer of the Dover Patrol. Her displacement was 1,850 tons, and she carried an armament of six 4-in. and two machine tubes for 21-in. torpedoes. Under Admiral E. R. G. R. Evans, in company with the Swift, she fought an action with six German destroyers, April 20, 1917, off the Belgian coast in complete darkness. Consult *Keeping the Seas*, E. R. G. R. Evans, 1920.

BROKEN HILL. Town of Australia. On the W. border of New South Wales, it is 925 m. W. of Sydney and connected by rly. with Port Pirie and Adelaide. It is the centre of a great pastoral region, and has the largest silver mine in the world, the Proprietary. Gold, lead, copper, and tin are also worked. Pop. 23,430.

There is another Broken Hill, also a well known mining centre. In a cave here, in 1921, was found the Broken Hill or Rhodesian skull, representing an extinct type of man.

Broker. Word meaning an agent, but generally used in a more special sense for one who buys or sells on behalf of another.

BROMBERG, or **BYDGOSZCZ.** Town of Poland, formerly in the Prussian prov. of Posen. A railway junction, it stands on the Brahe (Brda), not far from its junction with the Vistula. 32 m. from Thorn. It owes its modern importance to Frederick the Great, who carried through it the canal he built between the Brahe and Netze (Notec), thus connecting the Vistula and Oder. Part of Poland until 1772, it passed at the partition to Prussia, but again became a Polish town in 1919. Pop. 87,848.

BROMBOROUGH. Urban dist. (with Bebington) of Cheshire. It is on the left bank of the Mersey estuary, 5 m. S.E. of Birkenhead on the G.W. and L.M.S. Rlys. The tidal Bromborough Pool has large candle works and also wharves and a dock of the model village of Port Sunlight. Pop. 19,104.

BROMIDE (Gr. bromos, stink). Name given to a compound of bromine with other elements except chlorine, oxygen, and fluorine. (See Bromine.)

Bromide paper for printing photographs from negatives is coated with an emulsion of silver bromide in gelatin. Its sensitiveness to light is such that exposure of the paper through the negative for a few seconds to a

Sir Thomas Brock at work on the huge figure of Victory which surmounts the Queen Victoria Memorial, London

William Brodie, Scottish criminal
From an old engraving

candle or electric lamp suffices to impress the picture. The impression is invisible, and requires to be developed and fixed. Bromide prints thus made are black or blue-black, but are often toned to a sepia colour or to a purplish hue. See Photography.

BROMINE. Non-metallic element, symbol Br, atomic weight 79.9, atomic number 35. It does not occur in the free state in nature, but combined with magnesium, potassium, and sodium. Bromine is a dark brown-red liquid with a penetrating odour, and gives off vapours which cause irritation when in contact with the mucous membrane. Sources of bromine are bitterne (the mother liquor of the salt works), the liquors which remain after the manufacture of potash salts at the Stassfurt mines, and the ashes of sea plants. It exists chiefly as bromide of magnesium.

The bromides of sodium, potassium, ammonium, and strontium are employed in medicine chiefly as sedatives in cases of epilepsy, to allay pain in migraine, and as a hypnotic in insomnia. When taken for too long, symptoms of poisoning (bromism) appear.

BROMLEY. Borough and market town of Kent. On the Ravensbourne river, 11 m. by rly. S.E. of London, of which it is a residential suburb, it has two stations on the Southern Rly. The church of S. Peter and S. Paul contains the tomb of Francis Atterbury. Market day, Thurs. Pop. 35,052.

Another Bromley, in full Bromley-by-Bow, is a district of the London borough of Poplar, on the L.M.S., L.N.E., and District Rlys

Brompton Oratory. Roman Catholic basilica in London. It is in the Italian Renaissance style
Humphrey Joel

BROMPTON. Residential district of Kensington, London, between Knightsbridge and Chelsea. It contains the Brompton Oratory (served by priests of the order of the Oratory of S. Philip Neri), the Imperial Institute, S. Kensington Museums, a consumption hospital, and a cemetery. See London.

BROMSGROVE. Urban district and market town of Worcestershire, 12 m. N.E. of Worcester by the L.M.S. It has a Gothic church and a school founded in 1553. Market day, Tues. Pop. 9,449.

BRONCHITIS. Acute or chronic inflammation of the bronchial mucous membrane. The symptoms of an acute attack begin as those of an ordinary cold, and are followed by a rise in temperature, feeling of rawness in the chest, and severe cough, at first dry, and later accompanied by abundant expectoration. In infants there is serious risk of the condition extending to the lungs, and death occurring from broncho-pneumonia.

Chronic bronchitis may follow repeated attacks of acute bronchitis or may accompany heart disease, Bright's disease, or gout. The disease is not serious until, in the later stages, it is accompanied by extensive changes in the lungs and heart.

BRONDESBURY. District of London. Within the urban district of Willesden, it is 8½ m. N.W. of London (Broad Street) by the L.M.S. Rly and is also served by the Met. Rly.

BRONTE. Town of Sicily, in the prov. of Catania. It stands on the W slope of Mt. Etna, 34 m. by rly. N.W. of Catania: alt. 2,600 ft. The neighbourhood produces good wine. It was founded by Charles V, and was granted by Ferdinand I of Naples as a dukedom to Nelson in 1799. Pop. 18,260.

BRONTË. Name of a family famous in English literature. The three sisters, Charlotte, Emily Jane, and Anne Brontë, were all born at Thornton,

Brontë. Portrait of Charlotte Brontë by G. Richmond

now part of Bradford, Yorks. Their father, Patrick Brontë (1777-1861), was incumbent of Haworth. His wife, Maria Branwell (1783-1821), was a Cornish woman. Of the six children of the marriage, the eldest, Maria, and the second daughter, Elizabeth, died in 1825. The remaining children—Charlotte, born April 21,

1816, Patrick Branwell, June 26, 1817, Emily Jane, July 30, 1818, and Anne, Jan. 17, 1820—became writers of poetry and prose, though nothing the brother wrote was published during his lifetime. After an unsuccessful attempt to start a school at Haworth, the sisters turned to their poems, which had been written secretly at different times. Charlotte compiled a small book from the selected MSS., which was published under the names of Currer, Ellis, and Acton Bell. The book was published in 1846, but only two copies were sold. Nothing daunted, the sisters decided

to try prose, and sent three separate novels the rounds of the publishers. Charlotte's was *The Professor* (published in 1857, after her death); Emily produced *Wuthering Heights*; and Anne, *Agnes Grey*. The MSS. of Emily and Anne were accepted, but Charlotte's was rejected. She then quickly wrote *Jane Eyre*, which was published before her sisters' novels.

Charlotte's second novel, *Shirley*, a weaker but pleasanter work, was interrupted by the illness and death of her brother, Sept. 24, 1848, and on Dec. 19 Emily died of consumption, as her brother had done: within six months the youngest sister, Anne—who had published a second novel in 1848,

Brontë. Anne, Emily, and Charlotte, from a painting by their brother

The Tenant of Wildfell Hall—also died of the same disease, May 28, 1849. Charlotte rallied sufficiently to finish *Shirley*, which was published in Oct., 1849, but *Villette*, her last novel, did not appear until 1853. On June 20, 1854, Charlotte married her father's curate, the Rev. A. B. Nicolls. She died at Haworth, March 31, 1855.

The cult of the Brontës was fostered by the inauguration of the Brontë Society in 1894 at Bradford. A Brontë museum was opened the following year at Haworth, near the old parsonage in which all the novels were written. In 1928 the parsonage itself was opened as a Brontë museum. It was given to the public by Sir James Roberts, Bart.

BRONTOMETER (Gr. brontē, thunder; metron, measure). Instrument for recording the phenomena of thunderstorms. It was invented by G. J. Symons, and first constructed in 1890. The records are made by pens on an endless roll of paper driven by clockwork. It registers the duration of each peal of thunder and flash of lightning, changes in atmospheric pressure, the amount of rainfall, and the velocity of the wind. See Meteorology.

BRONTOSAURUS (Gr. brontē, thunder; sauros, lizard). Gigantic extinct reptile. It belongs to the sub-order Sauropoda of the order Dinosauria, and its fossil remains occur in the Jurassic strata of Wyoming, U.S.A. It was four-footed, with a short, thick body, small head, and long neck and tail, and fed chiefly on water plants. Unlike the carnivorous Dinosaurius, its limb bones were solid, and not hollow. See Fossil.

BRONZE (Lat. aes Brundisium, brass from Brindisi). Name given to alloys composed chiefly of copper and tin as distinguished from brass, in which the second preponderating metal is zinc. It was the first compound metal deliberately made and used by man.

Bronze is harder, stronger, and more durable than copper or brass. It is largely used in

Brontosaurus. Reconstructions of this gigantic prehistoric lizard. It was about 60 feet long and weighed 20 tons

engineering for bearings, pumps, boiler mountings and other valves and cocks, and for parts which are to be exposed to the action of water or corrosion. In the arts it is employed for statuary and ornaments, and for domestic and other utensils of an ornamental character. At one time cannon were made of bronze. See Alloy; Brass; Metallurgy.

BRONZE AGE. This is an archaeological term denoting a cultural phase conditioned by the use of bronze in the arts of life prior to the use of iron (1000 B.C.). It followed the age of copper, and is divisible into five geographical regions: S. or Mediterranean (Aegean, Italy, Spain); W. (Gaul, Britain); Central or Danubian (Hungary, Switzerland); E. or Uralian (Siberia; Black Sea); and N. or Scandinavian. As the earliest bronze period is alternatively called the late copper period there remain three clearly defined bronze periods, early 1800-1600; middle 1600-1200; late 1200-1000. To these may be added, for Britain, Scandinavia, and elsewhere, a latest period which synchronised with the Danubian early age of iron. See Archaeology.

BROOCH (late Lat. broca, pointed stick). Development of the skewer and pin method of dress fastening and a precursor of the button.

The main types are (1) the safety-pin; (2) the fibula; (3) the half ring with pin or tongue hinged to the back; (4) the complete ring with spring or hinged pin; (5) the disk with pin at back. All are of ancient origin and, except the half ring, are still in use under modified forms. Scottish brooches, worn on plaid and bonnet, are a combination of the ring and the disk types.

BROODSEINDE. Village of Belgium, in the prov. of West Flanders, 5½ m. E.N.E. of Ypres. It was prominent in the Great War, particularly in the battles of Ypres (q.v.).

BROOKE, SIR JAMES (1803-68). British administrator. Born in India, April 29, 1803, he was educated in England and entered the army of the E. India Co. In 1839, having inherited a fortune, he went to Borneo, where he assisted the sultan to crush a serious rebellion. As a reward he was given Sarawak to govern and made its rajah, and there his rule resulted in the establishment of order, the Dyaks being suppressed and piracy ended. The British Government

Sir James Brooke,
1st Rajah of Sarawak
After F. Grant, P.R.A.

made him governor of Labuan and consul-general for Borneo. In 1847 he was knighted, and he died at Burrator, his Devonshire home, Jan. 11, 1868.

As rajah Brooke was succeeded by his nephew Charles Johnson Brooke (1820-1917), and the third rajah was the latter's son, Charles Vyner Brooke, knighted in 1927.

BROOKE, RUPERT (1888-1915). British poet. Born Aug. 3, 1888, at Rugby, where his father was a house master, he was educated at that school, and at King's College, Cambridge. In 1911 his first volume of poems was published. On the outbreak of the Great War he received a commission in the R.N.D. and went to Antwerp, thence to the Mediterranean. He fell sick after a slight sunstroke at Lemnos, and died in hospital at Seyros, April 23, 1915. Several

Rupert Brooke,
British poet

volumes of his poems and other writings were published after his death.

BROOKE, STOPFORD AUGUSTUS (1832-1916). British writer. Born at Letterkenny, Donegal, Nov. 14, 1832, in 1857 he was ordained to a curacy in London. From 1876-94 he was minister of Bedford Chapel, New Oxford Street, London, a proprietary chapel, and he remained there when, in 1880, he seceded from the Church of England and became a Unitarian. Brooke's English Literature, 1880, widely influenced popular taste. His

Stopford Brooke,
British author

other volumes include the *Life and Letters of F. W. Robertson*, 1865; a study of Tennyson, 1894; and *The Poetry of Robert Browning*, 1902. He died March 18, 1916.

BROOKITE. Mineral compound of titanium dioxide, identical in composition with rutile and anatase. It occurs in thin red-brown plates associated with albite at Tremadoc in Carnarvonshire, and is found together with rutile in Norway and Brazil.

BROOKLANDS. Motor racing track near Weybridge, Surrey, England. It is on the Southern Rly., 20 m. S.W. of London. The

track has a minimum circuit of 2 m., a maximum of 3½ m., and a width of 100 ft., and is used for testing engines and speeds of automobiles. It was opened in 1907 and, having

Brooklands. The Members' Bridge over a section of the concrete banking

been used by the R.A.F. during the Great War, was reopened for racing in 1920. Several world's records have been established here.

BROOKLYN. Former city and now a borough of New York City, U.S.A. It lies at the S.W. end of Long Island, opposite Manhattan, with which it is connected by three bridges across East river, and a tunnel. The buildings of the borough include the city hall, hall of records, post office, and court house. Among seats of learning are the

Brooklyn Bridge, opened in 1883, at which time it was the longest span bridge in the world

Brooklyn Institute of Arts and Sciences, the Polytechnic, Pratt Institute and Packer Institute. There is a wireless station. To the W. of Prospect Park is the beautiful Greenwood Cemetery. Ridgewood reservoir, with a capacity of nearly 300,000,000 gallons, is the property of the borough. A memorial to Lafayette was unveiled May 10, 1917. The noted suspension bridge connecting Brooklyn and New York was opened to traffic in 1883, and at the time of its erection was the longest span bridge in the world. The main suspension span measures 1,595 ft. between towers. Pop. 2,203,991.

BROOKMAN'S PARK. District of Herts, near Hatfield. Here is the high power twin wave-length broadcasting station for S.E. England. See *Broadcasting*; also illus. p. 25.

BROOKS, CHARLES WILLIAM SHIRLEY (1816-74). British author. Born in London, April 29, 1816, son of an architect, and educated for the law, he took to journalism. In 1851 he joined the Punch staff, and wrote for twenty years the *Essence of Parliament*. In 1870 he became editor, and remained so until his death, Feb. 23, 1874.

Shirley Brooks,
British author

BROOKS, PHILLIPS (1835-93). American divine. Born at Boston, Massachusetts, Dec. 13, 1835, he was rector of churches in Philadelphia from 1859 to 1862 and in Boston from 1869 to 1891. In 1891 he was elected bishop of Massachusetts. He died Jan. 23, 1893.

BROOKWOOD. District in the parish of Woking, Surrey. The London necropolis is here, with a crematorium erected in 1889. There is a station on the Southern Rly.

BROOM (Cytisus scoparius). Shrub of the order Leguminosae. A native of Europe, N. Asia, the Canaries, and the Azores, it attains a height of about 6 ft., and grows on heatlands. The branches are green and furrowed. The leaves have three leaflets, covered with short, silky hairs. The flower is of the pea type, and bright yellow. The seeds are produced in a black two-valved pod, and have an oily body attached which is eaten by ants. Broom corn is a name for Indian millet. Its branches are used to make carpet brooms, clothes brushes, and similar articles.

Broom rape is the name of an extensive genus (*Orobanchae*) of leafless root parasites. Except just before flowering time the plant is entirely subterranean, the root-stock being attached to roots of furze, broom, ivy, etc. The stem is a fleshy growth, usually brown, clad with scales, and ending in a spike of two-lipped flowers.

Broom (*Cytisus scoparius*), a heath and moorland shrub

BROOME. Coast village of W. Australia, in the West Kimberley district. It stands on Roebuck Bay, has a submarine and wireless telegraph station, and is the centre of the mother-of-pearl shell industry. It is named after Sir F. N. Broome (1842-96), governor of Western Australia, 1882-90. An aeroplane leaves Perth for Broome every Saturday.

Broom rape.
See above

BROSE (old Fr. brouez, broth). Scottish dish of oatmeal on which boiling milk, water, or meat liquor is poured and stirred immediately. The various kinds of brose are named according to the ingredient added, such as water brose.

BROSELEY. Town of Shropshire. It stands on the Severn, 14 m. S.E. of Shrewsbury on the G.W.R., and is in the borough of Wenlock. The parish church, rebuilt in 1845, is Perpendicular. Broseley is noted for its clay churchwarden pipes and bricks, and has coal and iron mines. Pop. 3,037.

BROTHERHOOD. Primitive institution setting up a fraternal relationship between two men not brothers by birth or marriage. In some form of blood-brotherhood the compact is sealed by an exchange of blood through transfusion or suction. The blood-covenant may be made between man and woman or between two women. It may extend to animals, disembodied spirits, or supernatural beings.

Another kind of brotherhood is an association of men for religious or social objects. Such societies have been common in the Roman Catholic Church since the Middle Ages. The modern Brotherhood movement is a development of the Pleasant Sunday afternoon

services, and connected with it are Sisterhoods, Bible Classes, Men's Meetings, etc. The headquarters are at 37, Norfolk Street, Strand, London, W.C. The movement, which is undenominational, has taken root in Canada and Australia.

BROTHER JONATHAN. Popular nickname for a citizen of the U.S.A., corresponding somewhat to the British John Bull. Its origin is doubtful; possibly it is derived from Jonathan Trumbull, governor of Connecticut during the War of Independence. When asked a difficult question Washington often said, "We must consult Brother Jonathan."

BROUGH, LIONEL (1835-1909). British comedian. Born at Pontypool, the son of a brewer, he was educated at Manchester Grammar School, and made his first appearance on the stage at The Lyceum, London, in 1854. He played in comic opera, Shakespeare, or monologue: but was seen to advantage in parts such as Tony Lumpkin, Bob Acres, and Sir Toby Belch. He died Nov. 8, 1909.

Lionel Brough,
British actor

BROUGHAM. Covered carriage for four persons with box seat for driver and footman, and drawn by one or two horses. It was named after Lord Brougham, the designer of the first vehicle of the kind.

BROUGHAM. Village of Westmorland. The Roman Brovacum, it is 2 m. S.E. of Penrith, and contains the ruins of an old Norman castle, formerly the seat of the Brougham family. The ruins were given by Lord Hothfield to the nation, and in 1928 the Office of Works restored the castle, which was long a seat of the powerful Clifford family. Brougham Hall, the present residence of the Brougham family, is a magnificent structure often called the Windsor of the North.

Brougham. Type of horse-drawn covered carriage designed by Lord Brougham early in the 19th century

BROUGHAM, HENRY PETER BROUGHAM, 1st BARON (1778-1868). British lawyer. Born in Edinburgh, Sept. 19, 1778, he was educated at Edinburgh high school and university, and became an advocate in 1800. He was one of the founders of The Edinburgh Review, 1802, and in 1805 settled in London, associated himself politically with the Whigs, and in 1808 was called to the bar. In 1810 he secured a seat in Parliament as M.P. for Camelford. On the formation of the Whig ministry of 1830, Brougham became lord chancellor, taking the title of Baron Brougham and Vaux. He at once started on the law reforms which he had long advocated, and besides speeding up the methods of the court of chancery, established the judicial committee of the privy council and the central criminal court. He left office in 1835 and died at Cannes, May 7, 1868. His title is still held in the family.

Lord Brougham,
British lawyer

BROUGHTY FERRY. Former burgh of Angus. In 1914 it was incorporated with Dundee. On the Firth of Tay, with a station on the L.N.E. and L.M.S. Rlys., it is a seaport and watering place. Pop. 11,058. See Dundee.

BROWN, FORD MADOX (1821-93). British painter. Born at Calais, of British parents, April 16, 1821. He exhibited first at Ghent and in London at the R.A. in 1841. He was the master of Dante Gabriel Rossetti, and intimate with the Pre-Raphaelites. From 1861 Brown was actively associated with William Morris, mainly as a designer of stained glass. He died in London, Oct. 6, 1893. His three children all had artistic gifts. Oliver died in 1874 and the daughters married W. M. Rossetti and Franz Hueffer.

Ford Madox Brown,
British painter

BROWN, GEORGE (1818-80). Canadian politician. Born at Edinburgh, Nov. 29, 1818, he settled in Toronto in 1843 and started The Globe. He entered the legislature of the province in 1851, and soon became the leader of the radicals. In 1858 he was for two days prime minister. To bring about the federation of Canada, Brown in 1864-65 joined Sir John Macdonald in a coalition ministry, but resigned before the Dominion Parliament met in 1867. In 1873 he was made a senator, and on May 9, 1880, he died of wounds inflicted by a former employee.

George Brown,
Canadian politician

BROWN, GEORGE DOUGLAS (1869-1902). Scottish novelist. Born at Ochiltree, Ayrshire, he was educated at Glasgow University and at Balliol College, Oxford. His The House With the Green Shutters, a sombre story of Scottish life and character, published in 1901 under the name of George Douglas, won immediate recognition. He died suddenly, Aug. 28, 1902.

BROWN, JOHN (1735-1788). Scottish physician. Born at Bunel, Berwickshire, of humble parentage, he was for some time a pupil teacher at Duns. He graduated in medicine at St. Andrews, 1779, and devoted his time to exposing the errors of the existing medical systems. In 1780 he set forth his own views in Elementa Medicinæ, a book which was translated into several languages. In 1786 he settled in London, where he translated his Elementa Medicinæ, wrote and lectured, and where he died Oct. 17, 1788. Brown's doctrine, known as the Brunonian, attracted great attention abroad, especially in Germany.

John Brown,
American abolitionist

BROWN, JOHN (1800-1859). American abolitionist. Born in Connecticut, May 9, 1800, he led a wandering life until middle age. On Oct. 16, 1859, with his sons and fewer than 20 followers, he seized the arsenal at Harper's Ferry, hoping to encourage a general rising of the slaves, but Robert

E. Lee recovered it. Brown did not surrender until he had been seriously wounded and two of his sons killed. He was tried, found guilty and hanged at Charlestown, Dec. 2, 1859. He was generally regarded by the abolitionists as a martyr, and in the North a popular song immortalised his name:

John Brown's body lies a-mouldering in the grave,
But his soul goes marching on.

BROWN, JOHN (1810-82). Scottish writer and physician. Born at Biggar, Lanarkshire, Sept. 22, 1810, the son of a minister, he was educated at the high school and university of Edinburgh. Having qualified as a doctor, 1833, he practised in that city until a short time before his death, May 11, 1882.

John Brown,
Scottish writer

Brown was the author of Rab and his Friends, 1859, and of three volumes of Horae Subsecivæ—Leisure Hours—humorous essays, with something of the charm of Lamb, on a variety of subjects, medical, artistic, and others.

BROWN, JOHN (d. 1883). Servant to Queen Victoria. A Highlander, he entered the royal service in 1849, and was for many years confidant and friend of the queen. He died March 27, 1883. Victoria dedicated to his memory More Leaves from the Journal of a Life in the Highlands, 1862-82.

John Brown,
Queen Victoria's
servant
Docteny

BROWN, JOHN ALFRED ARNESBY (b. 1860). British artist. Born and educated in Nottingham, he studied under Sir H. Herkomer at Bushey, and first exhibited at the Academy in 1890. In 1903 he was elected A.R.A., and in 1915 a full R.A.

BROWN, LANCELOT (1715-83). British landscape gardener, known as Capability Brown. Born in Northumberland, he became a gardener at Stowe House, Buckingham, where he showed remarkable ability in planning gardens. To employ Brown became a fashion among the rich, and he was responsible for gardens at many of the greatest houses in England, including Blenheim, Bowood, and Kew. He also developed abilities as an architect of country houses, Croome Court being his work. He died Feb. 6, 1783.

BROWN, THOMAS EDWARD (1830-97). British poet. Born at Douglas, Isle of Man, and educated at King William's College, and Christ Church, Oxford, he became fellow of Oriel, 1854, and was ordained in 1885. From 1864-93 he was an assistant master at Clifton College. He died at Clifton, Oct. 30, 1897. His poems, some in the Manx dialect, are characterised by imagination and genuine feeling. His Collected Poems were edited by W. E. Henley, in 1900.

Browne, CHARLES FARRAR (1834-67). American humorist, better known under his pseudonym, Artemus Ward (q.v.).

BROWNE, HABLOT KNIGHT (1815-82). British artist, chiefly remembered as Phiz, the illustrator of the works of Dickens. Born at Kennington, London, June 13, 1815, his connexion with Dickens began in 1836. After 1860 he illustrated some of the novels of Lever and Harrison Ainsworth. Partially paralysed in 1867, he kept at work until he died, at Brighton, July 8, 1882.

Hablot K. Browne
(Phiz), British artist

BROWNE, SIR THOMAS (1605-82). English physician and author. Born in Cheapside, London, Oct. 19, 1605, the son of a prosperous mercer, he was educated at Winchester and

Sir Thomas Browne,
English physician
From a painting in the
Hall of Physicians

Broadgates Hall (Pembroke College), Oxford. After studying medicine at Oxford, Montpellier, Padua, and Leiden, he settled as a physician at Norwich, where he spent the rest of his life. He was knighted by Charles II in 1671, and dying Oct. 19, 1682, was buried in the church of S. Peter Mancroft, Norwich. As a writer, Browne developed the grand style in English prose, but is often obscure through his habit of seeking to express a thought in a single word, in quest of which he chose Latin or Latinised English. *Religio Medici*, or the religion of a physician, an attempt to reconcile faith and reason, appeared in 11 editions between 1643-81. *Hydrotaphia*, 1658, a dissertation on funeral customs, was inspired by the discovery of sepulchral urns in Norfolk, and closes with a passage of unsurpassable eloquence. Consult *Life*, E. Gosse, 1905.

BROWNE, THOMAS ARTHUR (1870-1910). British artist. Familiar as Tom Browne, he was born at Nottingham, where in 1897 he founded the colour printing firm of Tom Browne & Co. He was elected to the R.B.A. in 1898 and the R.I. in 1901. He excelled in humorous line work, and was one of the leading caricaturists of his time. He died March 16, 1910.

BROWNHILLS. Urban district of Staffordshire. On Watling Street, 6 m. W. of Lichfield by the L.M.S., it is the centre of the Cannock Chase colliery district. Pop. 20,693.

BROWNIE. Fairy of Scottish tradition. Mostly of a helpful kind, if placated by a bowl of milk set aside for them, brownies would perform various kinds of domestic work while the household slept. This fairy is described as taking the form of a tall man.

Brownie is also the name given to the youngest grade of the Girl Guides. They are girls between the ages of 8 and 11. See *Girl Guides*.

BROWNING, ELIZABETH BARRETT (1806-61). British poet. Born at Coxhoe Hall, near Durham, March 6, 1806 her girlhood was passed at Hopton End, Herefordshire. Her precocity was shown by the composition of an epic in four books on the battle of Marathon in her fourteenth year; her scholarship by a translation of *Prometheus Bound*, 1833. When fifteen, a fall from a pony left her an invalid for many years. The publication of *Poems*, 1844, was an event of importance in Victorian literature. Her romantic marriage with Robert Browning, Sept. 12, 1846, brought her happiness, marred only by the fact that her father never forgave her. Her *Sonnets from the Portuguese*, inspired by Browning's courtship, constitute her most notable work. Her death took place in Florence, June 29, 1861, and she was buried in the English cemetery there.

E. Barrett Browning,
British poet
From a drawing by F.
Talbot Nat. Port. Gallery

BROWNING, SIR MONTAGUE EDWARD (b. 1863). British sailor. Born Jan. 18, 1863, he entered the navy in 1876 and saw service in Egypt and China. In 1909 he was made chief of the staff of the Channel Fleet and in 1911 inspector of target practice. During the

Great War he commanded a squadron of the Grand Fleet except in 1916-17, when he was commanding the N. American station. In 1917 he was knighted. In 1919-20 he was second sea lord, and from 1920-23 commander-in-chief at Plymouth.

BROWNING, ROBERT (1812-89). British poet. He was born at Camberwell, May 7, 1812. He visited Russia in 1834 and Italy in 1838, the latter journey being the beginning of a long and intimate connexion with Italy which profoundly influenced his work. But already his poetic career was begun. Pauline, 1833, was succeeded by *Paracelsus*, 1835; in 1837 *Strafford* was produced by Macready at Covent Garden. The beautiful *Pippa Passes*, 1841, a collection of dramatic scenes rather than a drama, opened the series entitled *Bells and Pomegranates*. It was followed by *King Victor and King Charles*, 1842; by *The Return of the Druses* and *A Blot in the Scutcheon*, 1843, and by *Colomb's Birthday*, 1844, the last play he wrote for the stage. Besides the dramas, Browning had found time during those years for the obscure *Sordello*, 1840, as well as for a number of dramatic lyrics and dramatic romances. His later works include *Christmas Eve and Easter Day*, 1850; *Men and Women*, 1855; *Dramatis Personae*, 1864; and *The Ring and the Book*, 1868-69.

Robert Browning,
British poet
Portrait by G. F. Watts, R.A.

Browning made the acquaintance of the poet Elizabeth Barrett, whom he married in 1846. They settled at Florence, and their home was the Casa Guidi until the death of Mrs. Browning in 1861. After 1861 Browning made his home in London until 1878, when he returned to Italy. He died at Venice, Dec. 12, 1889.

The Browning Settlement was founded in his memory in 1895, in York Street, Walworth, London, S.E.

BROWNLOW, EARL. English title borne by the family of Cust since 1815. Sir Brownlow Cust was made a baron in 1776, and John, the 2nd baron, was made an earl in 1815. The family seat is Belton House, Grantham, and the eldest son is known as Viscount Alford. Ashridge (q.v.) was formerly the family home.

BROWN-POTTER, CORA URQUIART (b. 1859). Anglo-American actress. Born in New Orleans, May 15, 1859, she made her debut at Brighton in March, 1887, and a few days later appeared for the first time in London. She toured through India, Australia, and China, and in 1892 was again playing in London. In 1898 she played *Charlotte Corday*, after which she was associated with *Beerholm Tree* at Her Majesty's and at the Haymarket. In 1904 Mrs. Brown-Potter took over the management of *The Savoy*.

Cora Brown-Potter,
actress
Lottie Charles

Brown Willy. Highest summit of Cornwall. About 10 m. N.E. of Bodmin, its height is 1,375 ft.

BROXBURN. Parish and town of Linlithgowshire. It is 11 m. W. of Edinburgh, on the L.N.E.R., and is noted for its shale oil works, and makes chemical manure, etc. Pop. 7,987.

BRUCE, CHARLES GRANVILLE (b. 1866). British explorer. A younger son of the 1st Lord Aberdare, he was born April 7, 1866, and entered the Indian Army. He saw much service on the frontiers and during the Great War was in Egypt and Gallipoli. Having left the army in 1920, Bruce explored the Himalayas and was the leader of the two expeditions that climbed Mt. Everest in 1922 and 1924. He wrote *The Assault on Mount Everest*.

BRUCE, JAMES (1730-94). Scottish explorer. Born at Kinnaird, Stirlingshire, he was educated at Harrow. He was consul at Algiers, 1763-65, after which he visited the historic ruins in Northern Africa. In 1770 he went to Abyssinia for about two years. He then went on his best known journey, in which he reached the source of the Blue Nile, being the second European to visit it. He died from a fall, April 27, 1794.

James Bruce,
Scottish explorer
From an engraving
by Freeman

BRUCE, ROBERT (1274-1329). King of Scotland, known as Robert I. He was grandson of the Robert Bruce who with John Balliol and other candidates claimed the throne of Scotland in 1290, and the son of another Robert Bruce who married Marjorie, the daughter and heiress of the earl of Carrick.

The date of his birth is usually given as July 11, 1274. He took part in the struggles for independence and in 1306 was crowned king. His successful attacks on the English strongholds forced Edward II to lead an army into Scotland; but Bruce inflicted upon the English an overwhelming defeat at Bannockburn, 1314. In 1328, after much desultory fighting, King Robert's title and the independence of Scotland were recognized in the treaty of Northampton. The king died of leprosy June 7, 1329, at Cardross and was buried at Dunfermline. His daughter Marjorie married Walter the Steward, whose son Robert II was the first king of the Stewart dynasty. His own immediate successor was his young son David II. See *Bannockburn*.

BRUCE, STANLEY MELBOURNE (b. 1884). Australian statesman. Educated at Melbourne

Stanley M. Bruce,
Australian Premier
Downey

Grammar School and Trinity Hall, Cambridge, where he rowed in the University boat race in 1904, he entered on a business career in Australia. He served in the Great War, gaining the M.C. and being twice wounded. Elected to the House of Representatives in 1918, he became premier in Feb., 1923, and remained in office until his government was defeated in 1929. In Mar., 1927, he was made a Companion of Honour.

BRUCE, WILLIAM SPEIRS (1867-1921). Scottish explorer and scientist. Born at Edinburgh, Aug. 1, 1867, the son of a doctor, he accompanied the Scottish Antarctic Expedition, 1892-93, the Jackson-Harmsworth Expedition, 1896-97, and later expeditions to the Arctic regions. In 1908 he led the Scottish Antarctic Expedition, discovering 150 m. of coastline in Antarctica, after which he explored and surveyed in Spitsbergen. He was director of the Scottish Oceanographical Laboratory, and died Oct. 28, 1921.

William S. Bruce,
Scottish explorer

BRUCE-JOY, ALBERT (1844-1924). Irish sculptor. Born at Dublin, he studied under John Foxy, at South Kensington, the Royal Academy, and in Rome. He first exhibited at the Royal Academy in 1866. His works include the statues of Gladstone at Bow, London, and John Bright at Manchester, the busts of Lord Salisbury at the Mansion House, London, and Mary Anderson at Stratford-on-Avon, the colossal lion at Lowell, Boston, U.S.A., and the Harvey Memorial at Folkestone. He died Sept. 22, 1924.

BRUCINE. Alkaloid which occurs with strychnine in the seeds of *Strychnos nuxvomica* and *Ignatia amara* or *S. Ignatius*' beans. Chemically brucine is dimethoxystrychnine. It resembles strychnine, but is more soluble in water and less poisonous. See Strychnine.

BRUCITE. Mineral composed of magnesium hydroxide, named after the American mineralogist, A. Bruce. It is white, grey, blue, or green, and has a pearly lustre. The crystals are rhombohedral. Brucite occurs chiefly in serpentine, found at Texas, and is used in sugar refining.

BRUEGHEL, PIETER. Flemish painter of the 16th century. Born at Brueghel, near Bruges, of poor parents, most of his life was passed in Antwerp or Brussels, and there he painted his pictures, his subjects being taken mainly from the humorous side of rustic life. He died about 1570.

A son, Jan Brueghel (1568-1625), the friend of Rubens, was a landscape painter and is represented in many European galleries. Either from his habit of dressing in that material, or from the smoothness of his technique, he was called Velvet Brueghel.

BRUGES (Flem. Brugge). City of Belgium, capital of the province of West Flanders. Famous in the Middle Ages as the Venice of the North, it is still the most interesting city in Belgium to the artist and antiquary. It

Bruges. Left, the Hôtel de Ville and chapel of the Holy Blood. Right, the Halles (markets), with the 13th century belfry in the Grand Place

has many industries, and the ship canal to Zeebrugge made it once more a seaport, as it was in the Middle Ages.

Among notable buildings are the cathedral of S. Sauveur, the church of Notre Dame, with the tombs of Charles the Bold and his daughter Mary; the churches of S. Gilles, of the Sepulchre, S. Anne, and the Madeleine, and the chapel of the Holy Blood. The hospital of S. Jean, dating from the 12th century, contains the shrine of S. Ursula, the panels being among the masterpieces of Hans Memling. Close to it is the Beguinage, founded by Joan of Constantinople in the 12th century. Among secular buildings the Halles, with the famous 13th century belfry, the hôtel de ville, the Grunthuse, the House of the Franc, the S. Sebastian guildhouse, the White Bear guildhouse, and the weighing house are remarkable. In 1928 the House of Refuge was destroyed by fire. Captured by the Germans on Oct. 14, 1914, Bruges was in their possession until reoccupied by Belgian infantry, Oct. 18, 1918. Pop. 51,686.

BRUISE. Injury caused by rupture of a blood vessel beneath the skin causing bleeding into the tissues. A blow on the upper part of the arm may be followed by a bruise on the elbow, the blood having travelled down beneath the tissues before reaching the surface. A blow on the skin immediately over a bone such as the shin is apt to cause more extensive bruising than one on a soft part such as the abdomen. Treatment should consist first of a firm cold application in order to seal the broken blood vessels. A piece of lint soaked in lead lotion should be bound over the bruise and kept wet with the lotion.

BRUMAIRE (Fr. the month of fog). Second month in the year as rearranged during the French Revolution. It began on Oct. 22 or 23. In 1799, on 18 Brumaire (Nov. 9), Napoleon abolished the Directory.

BRUMMELL, GEORGE BRYAN (1778-1840). A British dandy, known as Beau Brummell. Born in London, June 7, 1778, he went to Eton in 1790, and after a year at Oriel College, Oxford, obtained in 1794 a commission in the army, which he left when he inherited £30,000. Setting up as a man of fashion, and backed by the Prince Regent, his unerring taste in dress, and his superb self-possession, he quickly became recognized as a social dictator. He died at Caen, March 30, 1840.

Beau Brummell, British dandy

BRUNANBURH. Site of a famous battle fought in 937. Here the Anglo-Saxons, under Athelstan, won a decisive victory over the Scots and Danes. Recent scholarship places the locality in Dumfriesshire, near the Roman camp Birrens. The story is preserved in a ballad in the Anglo-Saxon Chronicle.

BRUNEI. British protected state in the N.W. of Borneo, between Sarawak and British

North Borneo. The climate is hot and moist. Most of the interior is jungle. The area is about 2,500 sq. miles. The products include coal, cutch, rubber and coconuts. Oil exists, but awaits development. There is a wireless station at Brunei, and also in the Temburong district, and in the Belait district. In 1906 the sultan handed over the general administration to a British resident. The governor of the Straits Settlements is high commissioner of Brunei. Pop. 25,500.

Brunei, the capital, is 770 m. from Singapore. It stands on an expansion of the Brunei or Limbang river. Pop. 12,000. See Borneo; Sarawak.

BRUNEL, ISAMBARD KINGDOM (1806-59). British engineer. Born at Portsmouth, April 9, 1806, the only son of Sir Marc Isambard Brunel, he began his career as assistant to his

father in the construction of the Thames Tunnel. Appointed in 1833 engineer to the G.W.R., he adopted the 7 ft. gauge. He planned the Clifton suspension bridge, 1829, and the Hungerford suspension bridge at Charing Cross, London, 1841-45. As a naval architect he designed in 1845 the Great Britain and the Great Eastern, 1858, and he was the inventor of the polygonal system of rifling small arms and large guns. He died Sept. 15, 1859.

His father, Sir Marc Isambard Brunel (1769-1849), was born in Normandy, near Gisors, April 25, 1769. During the Revolution he left France and went to New York, 1793. At first a surveyor and later an architect, he was appointed engineer of New York City. Later he settled in England, where his great work was the building of the Thames Tunnel, 1825-42. Knighted in 1841, he died Dec. 12, 1849.

BRUNELLESCHI, FILIPPO (1377-1446). Italian architect. Born at Florence, he first practised as a goldsmith, and then as a sculptor. Deciding to become an architect, he studied at Florence and in Rome, and, returning to Florence in 1417, was commissioned to roof the unfinished cathedral with a dome. In this great undertaking he worked from 1420 to his death. He was employed on many other churches in Florence, and on the Pitti palace. He died at Florence, April 16, 1446.

BRUNETIÈRE, FERDINAND (1849-1906). French critic. Born at Toulon, July 19, 1849, he began to write in 1875 for the *Revue des Deux Mondes*, of which he became editor in 1893. He published collections of his critical essays and lectures, the later volumes, especially after he became a Roman Catholic in 1896, being marked by a definite conviction that art must be subordinated to morality, and that the theory of art for art's sake, and the teaching of the naturalistic school of writers, represented by Zola, were false. He died Dec. 9, 1906.

BRUNHILD OR BRUNHILDA. Most famous of the Valkyries or warrior maidens of Norse mythology. Placed by her father Odin (Wotan) on a fire-girt rock, she lay in spellbound sleep until the hero, Sigurd, rode through the flames and woke her. Faithless to his plighted troth, Sigurd afterwards helped Gunnar, the king's son of Rhineland, to win Brunhild by a cunning ruse and claimed as reward the hand of Gudrun, Gunnar's sister. When Brunhild learnt, through Gudrun's jealous tongue, of Sigurd's deed, she plotted his death, and, her vengeance accomplished, threw herself on his funeral pyre. So runs the *Volsung Saga*.

In the song of the Nibelungs, Siegfried, the hero, dons the Tarnkappe, which makes him invisible, and wins Brunhild for Gunther of Burgundy by conquering her in many trials of strength. In Wagner's cycle of four music dramas of the Ring of the Nibelungs, Brunhild, daughter of Wotan and Erda, is the heroine of *The Valkyrie*, the second opera.

BRÜNN (Czech, Brno). City of Czechoslovakia, formerly the capital of Austrian Moravia. It lies at the base of the Spielberg (846 ft.), where the Schwarzwasser joins the Svitava, 89 m. N. of Vienna. It has a 15th century cathedral. The Gothic church of S. James has good stained glass, and there are fine frescoes in the church of the Minorites. Other notable buildings are the 16th century Rathaus and the university, opened in 1918. Its old citadel is on the Spielberg. Pop. 221,800.

BRUNNER, SIR JOHN TOMLINSON, BART. (1842-1919). British politician. Born Feb. 8, 1842, the son of a Swiss pastor who settled in Liverpool, he entered business life and in 1873

Sir Marc L. Brunel, Franco-British engineer

Isambard K. Brunel, British engineer

he and Ludwig Mond established al ali works at Northwich. In 1885 Brunner entered Parliament as Liberal M.P. for the Northwich

Brunswick. On Nov. 8, 1918, the duke was deposed, and Brunswick was declared a republic. The German name is Braunschweig.

Brussels. Map of the central part, showing the boulevards and principal buildings

division of Cheshire, which he represented almost continuously until 1910. Made a baronet in 1895 and a privy councillor in 1906, he died July 1, 1919.

His eldest son, Sir John F. L. Brunner (d. 1929), sat in the House of Commons 1906-18. The firm of Brunner, Mond & Co. is now included in Imperial Chemical Industries.

BRUNO, GIORDANO (1548-1600). Italian philosopher. Born at Nola, in Naples, he entered the Dominican order and was ordained in 1572. On ceasing to believe in Christianity he fled from Naples, 1576, and for many years led a wandering life. He was in England 1583-85, after which he was imprisoned at Rome for six years by the Inquisition, and was burnt Feb. 17, 1600. Bruno's view of the world was a revival of that of the Stoics—a naturalistic pantheism.

BRUNSWICK. Republic of Germany, formerly a duchy and state of the German Empire. It is divided into nine distinct districts, the largest lying between the Prussian provinces of Hanover and Saxony. The country is fertile and largely agricultural. Brunswick is the capital. Its diet consists of 48 members, the Socialists being the dominant party. The area is 1,424 sq. m. and the pop. 501,875.

The duchy originated when the lands of Henry the Lion, duke of Saxony, were broken up in 1181. Like other German states, it was several times divided, one division being in 1634, when the duchy was divided between the two dukes of Lüneburg. The duke of Lüneburg Celle called his land Hanover, and his descendants were electors of Hanover and kings of England. For this reason George I and his successors on the English throne are sometimes called the house of Brunswick.

Brunswick proper passed in 1634 to the other duke of Lüneburg. He and his descendants called themselves dukes of Brunswick-Wolfenbüttel, and later simply dukes of

There is a suburb of Melbourne, Australia, called Brunswick. It is an industrial centre.

BRUNSWICK, CHARLES WILLIAM FERDINAND, DUKE OF (1735-1806). German soldier. Born at Wolfenbüttel, Oct. 9, 1735. he was nephew of Frederick the Great and husband of Augusta, daughter of George III of England. He served in the Seven Years' War, and in 1792 commanded the united forces of Austria and Prussia against the French at Valmy. He suffered a severe defeat at Auerstädt, Oct. 14, 1806, and died Nov. 10 from wounds. Owing to their heavy losses at Auerstädt the Brunswick regiment were mourning dress and were called the Black Brunswickers.

His son, Frederick William (1771-1815), entered the British service in 1809. He fought throughout the Peninsular War, and was killed at Quatre Bras, June 16, 1815.

BRUSA, BROUSSA OR BROSSA (Turk. Brusa). City of Turkey. Capital of the vilayet of Brusa, it is in Asia Minor at the foot of Mt. Olympus, about 60 m. S.E. of Constantinople. The ancient Prusa, capital of Bithynia and for a time of the Turkish Empire, it is a commercial centre. Its port Mudania is connected by rly. Brusa is the seat of Greek and Armenian archbishops. Pop. 61,450.

BRUSH, CHARLES FRANCIS (1849-1929). American inventor. Born at Euclid, Ohio, March 17, 1849, in 1870 he entered business in Cleveland as a chemical expert. About 1878 he invented the Brush electric arc lamp, and then the storage battery for electricity. He founded the Brush Electric Co., and died June 15, 1929.

BRUSH TURKEY (*Cathartus lathami*). Large bird of the mound-builder group, found in Australia and the East Indies. The bird resembles a small turkey, and deposits its eggs in mounds of decaying vegetable matter.

Brush Turkey, large bird of the Antipodes
Bertridge

BRUSILOFF, ALEXEI ALEXEIEVITCH (1861-1926). Russian soldier. He saw service in the Russo-Turkish War of 1877-78, and played a part in the conquest of Galicia under Ivanoff in 1914. He followed Ivanoff in 1916 as commander-in-chief of the Russian armies between the Pripiet and the Pruth, and in June, 1917, he became commander-in-chief of the Russian army, but was soon superseded by Korniloff. He was arrested in Sept., 1918, and his death was reported in March, 1926.

BRUSSELS (Fr. Bruxelles). Formerly capital of Brabant and of the duchy of Burgundy, and since 1831 of the kingdom of Belgium. Situated on the river Senne, a tributary of the Schelde, the city has an excellent rly. system communicating with France, Germany, and Holland. Brussels is connected by the Willebroeck canal with Antwerp via Vilvorde, and by the Charleroi canal with the industrial district on the Sambre. A third canal connects the city with the Rupel, and thence with the Schelde. The terminus of the London-Brussels air service is in the suburb of Haecren. Pop. 815,198.

Brussels is the seat of a university. The Gothic collegiate church—not cathedral, although often so called—of S. Gudule is one of the most imposing buildings in Europe

Brussels. 1. Palais de Justice (Law Courts), dominating the entire city. 2. The 15th century Hotel de Ville (Town Hall). 3. Church of S. Gudule, a beautiful specimen of pure Gothic architecture

The bulk of the building dates from the 15th century, and the massive towers and Gothic chapel of the sacrament were added early in

the 16th century. A feature is the magnificent old glass windows, some dating from the 15th century. It contains a pulpit by Verhuggen, representing the Fall. The town hall is almost entirely of the 15th century. The most unusual feature is the spire, 370 ft. high, surmounted by a gilded figure of S. Michael, the original patron saint of Brussels. The Grand Place has many historical associations.

Other notable buildings are the church of the Sablon—strictly Notre Dame des Victoires—built in the 13th century by the guild of crossbowmen to celebrate the Crusades; and the palace of the duke of Arenberg, now known by its old name of Palais d'Egmont. The magnificent Palais de Justice dominates the entire city. The art collections of Brussels are almost equal to those of Antwerp.

Throughout the greater part of the Great War Brussels was occupied by the Germans, who entered it on Aug. 20, 1914, and remained in possession until November, 1918. On Nov. 22 King Albert made his formal re-entry into his capital.

Brussels has been the seat of several international conferences. In 1899–1900 a conference took place to discuss the suppression of the African slave trade. The financial conference of 1920, held under the auspices of the League of Nations, sat in Brussels.

BRUSSELS SPROUTS. Vegetable of the natural order Cruciferae and the genus Brassica. It differs from other species of the genus in producing the small, well-known heads up the stem of the plants, for a season ranging from Oct. until March. Even after the sprouts have been cut the tops serve as an edible vegetable. In spite of its name it is a native of Britain.

Brussels sprouts

BRUTUS, LUCIUS JUNIUS. First consul of ancient Rome. A nephew of the tyrant Tarquinius Superbus, he escaped death at his uncle's hands by feigning madness; hence his surname Brutus (dullard). Indignant at the shameful treatment of Lucretia (q.v.), wife of Collatinus, Brutus put himself at the head of a movement to expel the Tarquin family. The movement succeeded, and Brutus and Collatinus became the first consuls of Rome in 509 B.C. When his two sons were detected in conspiracy to restore the Tarquins, Brutus had them put to death in his presence. He was slain in single combat by one of the Tarquins, who was also killed.

Lucius Junius Brutus, Roman consul
From a bust

BRUTUS, MARCUS JUNIUS (85–42 B.C.). One of Caesar's murderers. From his uncle the younger Cato he imbibed the principles of the republican aristocracy, and in the civil war took the side of Pompey against Caesar. After the battle of Pharsalus (48) he was pardoned by Caesar, who made him governor of Cisalpine Gaul, but he was soon easily persuaded by Cassius to join in the conspiracy against Caesar. It is said that when the blow of Brutus fell, the dying Caesar turned to him with the words *Et tu, Brute* (You too, Brutus). Brutus and Cassius led the army which opposed Antony and Octavian at Philippi in 42, when Brutus committed suicide.

Another of Caesar's murderers was Decimus Junius Brutus (84–43 B.C.). During the civil war he was on Caesar's side.

BRYAN, WILLIAM JENNINGS (1860–1925) American politician. Born at Salem, Illinois,

March 19, 1860, he became a barrister in 1883. In 1891 he was returned to the House of Representatives as a Democrat, having made a reputation by his speeches in the campaign of 1888.

William J. Bryan, American politician

During the next four years he ardently supported the cause of hi-metallism. In 1896 his party selected him as candidate for the presidency. He was, however, beaten by McKinley, as he was also in 1900. It was in 1900, too, that he founded a weekly paper, *The Commoner*. In 1908 Bryan was again an unsuccessful candidate, his opponent being W. H. Taft. In the convention of 1912 he was largely responsible for the nomination of Woodrow Wilson, after whose election Bryan held office as secretary of state from March, 1913, to June, 1915. He was an advocate of international arbitration. He died July 26, 1925.

BRYANSTON. Public school in Dorset. Near the town of Blandford, the estate, through which the river Stour passes, was long the property of the Portman family. In 1907 the house, a fine modern building, was sold by Viscount Portman and converted into a public school. Bryanston Square, London, is part of the Portman estate.

BRYANT, WILLIAM CULLEN (1794–1878). American poet and journalist. Born at Cummington, Massachusetts, Nov. 3, 1794.

He went to New York in 1825. He was made assistant editor of *The Evening Post* in 1826 and editor in chief in 1828, a post which he held until his death, June 12, 1878. His earliest work was *The Embargo*, a satire in the manner of Pope; it was published in 1808, and his mortuary poem, *Thanatopsis*, in *The North American Review*, in 1817.

William C. Bryant, American poet

BRYCE, JAMES BRYCE, VISCOUNT (1838–1922). British statesman and historian. Born at Belfast, May 10, 1838, he had a most distinguished career at Oxford. In 1880 he entered Parliament as Liberal M.P. for the Tower Hamlets, and from 1885–1907 was M.P. for S. Aberdeen. He was under-secretary for foreign affairs in 1886, and in 1892 entered the cabinet as chancellor of the duchy of Lancaster. He was president of the Board of Trade 1894–5. When the Liberals returned to power in Dec., 1905, he took the position of Irish secretary, resigning in 1907 to become British ambassador at Washington, whence he retired in 1913. In 1907 Bryce received the Order of Merit, and his viscounty was conferred in 1914. He died on Jan. 22, 1922. His writings include *The Holy Roman Empire*, 1864, and *The American Commonwealth*, 1888.

BRYNAMMAN. Village of Carmarthen-shire. It is seated near the Longhor river 18 m. N.E. of Llanelly, on the L.M.S. and G.W. Ryds. There are extensive collieries in the neighbourhood. Pop. 5,000.

BRYNMAWR. Urban dist. and market town of Brecknockshire. It stands on a tributary of the Usk, 8 m. S.W. of Abergavenny, on the L.M.S. Rly. It is a coal-mining centre, but in 1930 it was proposed to make it a pleasure resort. Market day, Sat. Pop. 8,500.

BRYONY. Common name of two unrelated perennial climbing herbs. White hryony (*Bryonia dioica*), a native of Europe, belongs to the order Cucurbitaceae. Its leaves are lobed and the flowers are greenish white. The fruit is a spherical herry, at first green, but red when ripe. The root-stock is fleshy, tuberous, white, and of large size, and has purgative properties.

Bryony, Black variety, Tamus communis

Black hryony (*Tamus communis*), is a native of Europe and the Mediterranean region. Its underground root-stock is egg-shaped, fleshy, and black. The leaves are large and heart-shaped; the greenish flowers are small and inconspicuous. The berries are oblong, first green, then orange, and red when ripe.

BRYOPHYTA (Gr. hryon, mossy seaweed; phyton, plant). Botanical group, including liverworts and mosses. It exhibits well-marked features which distinguish it from the Algae and Fungi. In most Bryophyta the plant-body shows in the differentiation of its tissues a greater division of physiological labour. See Liverwort; Moss.

BRYTHON. Later branch of the Celtic-speaking peoples, who carried to Britain the Brythonic speech. This developed into the Welsh, the Breton, and the Cornish dialects. The Brythons brought the iron age culture into Britain about 400 B.C. See Celt.

BUBASTIS. Ancient city near Zagazig, Lower Egypt, the Pibseth of Ezek. 30. Occupied in the Pyramid age, it became a royal residence under Shishak I, whence the XXII dynasty is called Bubastite. The temple, extended by Osorkon II, was uncovered by Naville in a mound called Tell Basta, 1887–89. It was sacred to the cat-headed goddess Bast, with an extensive cat cemetery. See Egypt.

BUBONIC PLAGUE (Gr. bubon, groin). Acute infectious disease caused by the bacillus pestis. The epidemic in the 14th century known as the Black Death was bubonic plague. The name is derived from the fact that in one form of the disease the lymphatic glands become enlarged and inflamed, sometimes forming buboes, or swellings. See Black Death; Plague.

BUCCANEER. Name applied chiefly to the maritime adventurers, British and French, who established themselves in the West Indies and waged war upon Spain and Spanish commerce throughout the 17th century. Sir Henry Morgan was perhaps the most famous of the "admirals" of the buccaneers.

BUCCLEUCH, DUKE OF. Scottish title borne by the family of Scott since 1663. The present holder represents three dukedoms, Buccleuch, Queensberry, and Montagu, as is shown by the family surname of Montagu-Douglas-Scott. Walter Scott was created an earl in 1619, and after his death his granddaughter Anne became Countess of Buccleuch. In 1663 she married the duke of Monmouth, who was then made duke of Buccleuch. The titles passed to her grandson, Francis, the 2nd duke, who was restored to the honours his grandfather had forfeited.

Henry, the 3rd duke (1746–1812), inherited in 1810 the title and estates of the duke of Queensberry, and his wife received from her father the property of the dukes of Montagu. The duke's chief residences are Dalkeith Palace, near Edinburgh, and Drumlanrig Castle, the old seat of the dukes of Queensberry, in Dumfriesshire. His eldest son bears the courtesy title of Earl of Dalkeith. Buccleuch itself is in Selkirkshire.

BUCEPHALUS (Greek bous, ox; kephale, head). Alexander the Great's warhorse. It died 326 B.C., on the banks of the Hydaspes,

the modern Jhelum, in the Punjab, where the king built the city of Bucephala in honour of his favourite. Tradition says that Alexander when a boy broke in the horse, a necessary preliminary, according to the oracle, to securing the throne of Macedonia.

BUCHAN. District of N.E. Aberdeenshire. Between the Ythan and Deveron rivers, it embraces the towns from Peterhead to Fraserburgh. The coastline, 40 miles long, is precipitous, and at the famous Bùllers ("boilers") of Buchan, 6 m. S. of Peterhead, is a cavern amid rocks where the sea rushes through an arch and "boils" during storms. Buchan Ness, or Boddam Point, 3 m. S. of Peterhead, is the most easterly point of the Scottish mainland. It has a lighthouse with a flashing light, visible for 18 m.

EARL OF BUCHAN. This Scottish title has been held by the Comyns, the Stewarts, and, since 1617, by the Erskines, the descendants of whom still retain it. The earl's eldest son is called Lord Cardross.

BUCHAN, ALEXANDER (1829-1907). Scottish meteorologist. Born April 11, 1829, the son of a weaver in Kinross, he was educated at Edinburgh University. In 1860 he was appointed secretary of the Scottish Meteorological Society, which under his influence built an observatory on Ben Nevis. Buchan made a reputation by his weather studies. He put forward a theory of periods, six cold and three warm, in a year, and these have proved remarkably useful. He died May 13, 1907.

BUCHAN, ELSPETH (1738-91). Founder of the Scottish sect of Buchanites. Daughter of an innkeeper in Banffshire, Scotland, she moved to Glasgow and declared she was the woman clothed with the sun mentioned in Rev. 12. Expelled from Irvine, 1784, she with some 40 followers called Buchanites settled at New Cample, near Thornhill, where they lived a communal life and awaited a millennium. The sect did not long survive her death.

BUCHAN, JOHN (b. 1875). British author. Born in Peeblesshire, Aug. 26, 1875, he was called to the bar in 1901. His works include *John Burnet of Barns*, 1898; *Prester John*, 1910; *Salute to Adventurers*, 1915; *Lives of Sir Walter Raleigh*, 1911, and *Montrose*, 1913; and a sensational trilogy, *The Thirty-Nine Steps*, 1915; *Greenmantle*, 1916; and *Mr. Standfast*, 1919. His later stories include *Huntingtower*; *Midwinter*: John Maenab; *The Dancing Floor*; *Witch Wood*, and *The Runagates Club*. He was elected Unionist M.P. for the Scottish universities in April, 1927.

Buchan's sister Anna, under the pen name of Olive Douglas, has written several novels, including *The Setons*, *Penny Plain*, and *The Proper Place*.

BUCHANAN, GEORGE (1506-82). Scottish scholar. Born at Killearn, Stirlingshire, he graduated at St. Andrews in 1525, and went to Paris, but on becoming tutor to the son of the earl of Cassilis, accompanied his pupil back to Scotland in 1537. About this time, through writing against the monastic orders, he was imprisoned in the castle of St. Andrews, but escaped to France in 1539, and passed some years there and in Portugal. Buchanan was made classical tutor to Queen Mary in 1562, and principal of St. Andrews in 1566. He now openly identified himself with Protestantism and, appointed moderator of the general assembly in 1567, was conspicuously hostile to Mary. In 1570 he was appointed tutor to the young king James VI. He died at Edinburgh, Sept. 28, 1582.

George Buchanan, Scottish scholar
Painting by F. Pourbus

BUCHANAN, JAMES (1791-1868). President of the United States. Born in Pennsylvania, April 23, 1791, he became a lawyer in 1812. After serving in the war against Great Britain, 1812-14, he entered political life, membership of the legislature of Pennsylvania leading to a seat in Congress in 1820. He was secretary of state under Polk 1845-49, minister to Great Britain 1853-55, and was elected president in 1856. His policy on the question of the day, slavery, was hesitating and weak, and at the end of his term civil war began. He retired from public life soon after Lincoln's election in 1860, and died June 1, 1868.

James Buchanan, American President

was hesitating and weak, and at the end of his term civil war began. He retired from public life soon after Lincoln's election in 1860, and died June 1, 1868.

BUCHANAN, ROBERT WILLIAMS (1841-1901). Scottish poet, novelist, and playwright. Born at Caverswall, Staffordshire, Aug. 18, 1841, he came to London in 1860 and obtained employment on *The Athenaeum*, *All the Year Round*, and other periodicals. With his London Poems, 1866, his reputation was established as a writer of narrative poetry. From 1866-76 he was engaged in a controversy with D. G. Rossetti and Swinburne, whom he attacked as leaders of *The Fleshly School of Poetry*. It resulted in a successful libel action against Swinburne, 1876, and an apology to Rossetti, 1882. In 1876 Buchanan published his first novel, *The Shadow of the Sword*, and in the next 14 years some 20 works of fiction, including *God and the Man*, 1881. He died June 10, 1901.

Robert Buchanan, Scottish poet

Bucharest. Variant spelling of the name of the Rumanian capital, Bukarest (q.v.).

BUCKFASTLEIGH. Urban district of Devon. It is 7 m. N.W. of Totnes, on the G.W.R. The Cistercian abbey was partly restored in the 19th century by French Benedictines. Near is a Tudor mansion called Buckfastleigh Abbey. Not far from the abbey ruins the Benedictine monks, with their own hands, have erected a set of monastic buildings, including a beautiful church. Pop. 2,265.

Buckhound, an almost extinct breed once used for hunting

BUCKHAVEN. Town and police burgh of Fifeshire, forming with Methil a burgh. On the N. shore of the Firth of Forth, 7 m. N.E. of Kirkealdy by the L.N.E.R., with a good harbour and pier, it has had a brisk fishing industry for several hundred years. Pop. 16,663.

BUCKHOUND. British breed of hound resembling the staghound. Largely used in the Middle Ages for buck hunting, it is now seldom seen. A royal perk was maintained until 1901. See Dog; Staghound; illus. above.

BUCKHURST HILL. Urban district of Essex, 10½ m. N.E. of London. On the L.N.E.R., it is within easy access of Epping and Hainault Forests. Pop. 5,487.

BUCKIE. Burgh and fishing town of Banffshire. It stands on Buckie burn, which divides it into Easter and Nether Buckie, and is 14 m. N. of Keith, by the L.M.S. & L.N.E. Rlys. Pop. 8,690.

BUCKINGHAM. Borough and market town of Buckinghamshire. On the Ouse, 61 m. by rly. N.W. of London, it is served by the L.M.S. Rly. and a branch of the Grand Junction Canal. It has a trade in agriculture and manufactures flour, malt, and pillow lace. Its grammar school was founded in 1548 by Edward VI. Buckingham formerly had an extensive trade in wool. Near is Stowe (q.v.), now a public school. Market day, Sat. Pop. 3,059.

Buckingham. The old gaol in this English market town
Valentine

BUCKINGHAM, DUKE OF. English title borne by the families of Stafford, Villiers, Sheffield, and Grenville, with intervals, from 1444 to 1889. In 1377 Thomas, duke of Gloucester, was made earl of Buckingham, and the title descended to his grandson, who was made a duke in 1444. He was killed in battle, July 10, 1460, and was succeeded by his grandson, Henry Stafford (c. 1453-1483), who was executed for having gone over to the side of Henry Tudor. The title became extinct when his son Edward, the 3rd duke, was executed in 1521.

In 1617 the earldom was revived by James I for his friend George Villiers, who, in 1623, became a duke. This title became extinct when the 2nd duke died in 1687. It was revived in 1703 for John Sheffield, marquess of Normanby, but became extinct on his death in 1735. In 1784 George Grenville, Earl Temple, was made marquess of Buckingham, and in 1822 his son Richard, the 2nd marquess, who had married the only child of the third and last duke of Chandos, was created duke of Buckingham and Chandos.

Of the Grenville family there were three dukes. The last Richard (1823-89) was colonial secretary, 1866-68. He died without sons in 1889, when the dukedom and marquessate became extinct.

BUCKINGHAM, GEORGE VILLIERS, 1ST DUKE OF (1592-1628). English courtier. A son of Sir George Villiers, he was born at Brooksby, Leicestershire, Aug. 28, 1592. A companion of Charles, prince of Wales, he became earl of Buckingham in 1617, and duke in 1623. From 1618 onwards he aspired to be the real ruler of the country, and exercised complete control over James and Charles. Appointed lord high admiral in 1619, he brought about the futile naval expedition to Cadiz in 1625; and was only saved from impeachment by the dissolution of Parliament in 1626. In 1627 he led the expedition to the isle of Ré, which failed to relieve Rochelle. In 1628 he was fiercely attacked by Parliament, and he was leading another expedition to Rochelle, when he was murdered at Portsmouth, Aug. 23, 1628.

BUCKINGHAM, GEORGE VILLIERS, 2ND DUKE OF (1628-87). English courtier. Born Jan. 30, 1628, he was a son of the 1st duke

George Villiers, 1st Duke of Buckingham
Painting by Jansen

Henry Stafford, 2nd Duke of Buckingham
From an old print

whom he succeeded in August, 1628. Brought up with Charles I's children, he served on the royalist side in the Civil War. In 1651 his estates were sequestered, but in 1657 he married the daughter of the parliamentary general Fairfax, to whom most of his estates had been assigned under the Commonwealth. After Clarendon's fall, which was largely due to him, he was the most influential of the king's advisers. In 1668 he was a chief member of the Cabal ministry, but after attacking Arlington in 1673 he lost favour. Buckingham died April 16, 1687, and the dukedom became extinct. Satirised as Zimri in Dryden's *Absalom and Achitophel*, he was a wit, a writer of verses, and a dabbler in chemistry.

BUCKINGHAM PALACE. Royal residence in London. Built in 1703 by a Dutch architect for John Sheffield, duke of Bucking-

Buckingham Palace, London. Front of the palace, showing the façade added by Sir Aston Webb in 1913
H. N. King

ham, it was acquired by George III in 1761 for £21,000. Reconstructed 1825-36 in the Palladian style, from designs of John Nash, a new wing was added in 1846 by James Blore. In 1856 the hall room was added, measuring 111 ft. by 60 ft.

In 1913 a new front was built from designs by Sir Aston Webb. It is of a straightforward Renaissance design and of Portland stone. The principal state apartments are the throne room, the drawing room, and the picture gallery, which contains many works of the English, Dutch, Flemish, and French schools, Reynolds, Wilkie, Lely, Rembrandt, Rubens, Claude Gellée, and Watteau being worthily represented. Part of the collection was got together by George IV; it was enriched by the gallery of Sir Francis Baring.

BUCKINGHAMSHIRE or **BUCKS.** Inland county of England. Bounded N. by Northamptonshire, E. by Bedfordshire, Hertfordshire, and Middlesex, S. by the Thames, and W. by Oxfordshire, its greatest length is 53 m., greatest breadth 27 m., and its area 749 sq. m. Next to the Thames, with its tributaries the Colne and Thame, the Ouse is the largest river. Mainly undulating, the surface is relieved by the Chiltern Hills, culminating in Wendover Hill (852 ft.). Wheat and oats are important crops, while the Vale of Aylesbury is noted for dairy produce, ducks, and sheep. Beech and oak trees are plentiful, the wood of the former being used in making brush-stocks, chairs, etc.

The county is served by the L.M.S., Metropolitan, L.N.E., and G.W. Rlys., and the Grand Junction Canal. The district of Chiltern Hundreds is within the county. Aylesbury is the county town; others are High Wycombe or Chipping Wycombe, Slough, Buckingham (the former county town), and Chesham. The county returns three members to Parliament. Pop. 236,171.

Derived from the county is the title of Earl of Buckinghamshire, held by the family of Hobart-Hampden. It dates from 1746, when it was given to John, Baron Hobart. The 4th earl, Robert (d. 1816), a politician and secretary for the colonies, gave his name to Hobart Town in Tasmania. The 5th earl succeeded in 1824 to the Buckinghamshire estates of the Hampdens, whereupon he added that name to his own.

LITERARY ASSOCIATIONS. At Horton Milton wrote *Comus*, *L'Allegro*, and other lyric poems; at Chalfont St. Giles, where he finished *Paradise Lost*, his cottage remains. At Jordans William Penn is buried. Burke lived and is buried at Beaconsfield and Disraeli at Hughenden. Stoke Poges was the scene of Gray's *Elegy* and the place of the poet's burial. Consult *Highways and Byways of Buckinghamshire*, C. K. Shorter, 1910.

BUCKLAND, FRANCIS TREVELYAN (1826-80). British naturalist. Born Dec. 17, 1826, he became a surgeon. Appointed in 1867 an inspector of fisheries, he did valuable work in discovering and remedying the causes of the decline of the salmon and other fisheries. He established the museum of economic pisciculture at South Kensington. He died Dec. 19, 1880.

Francis Buckland,
British naturalist

BUCKLAND, HENRY SEYMOUR BERRY, 1ST BARON (1877-1928). British financier. Eldest son of John Mathias Berry, of Merthyr Tydfil, and elder brother of Lord Camrose and Sir J. Gomer Berry (q.v.), he became associated with the large commercial enterprises of D. A. Thomas (later Lord Rhondda). Later he became chairman of Guest, Keen, and Nettelfolds, and was a director of other companies. He was created a baron in 1926, and was killed while riding, May 23, 1928. The title then became extinct.

BUCKLE, HENRY THOMAS (1821-62). British historian. Born at Lee, in Kent, Nov. 24, 1821, he became a remarkable linguist, and in 1850 could speak seven languages and read in nineteen. His studies bore fruit in 1857, when the first volume of the *Introduction to the History of Civilization in England* appeared, followed by a second volume in 1861. He died at Damascus, May 29, 1862. Buckle was a great chess player.

BUCKLER'S HARD. Village of Hampshire, on the Beaulieu river, New Forest. In the days of the wooden navy it was a centre for building warships. Oak was felled in the New Forest and turned into ships at Buckler's Hard, where the slips still remain.

BUCKLEY. Urban dist. of Flintshire. It is 3 m. E. of Mold, on the L.M.S. Rly. Fire-bricks, earthenware, and tiles are manufactured, and there are coal mines. Pop. 6,734.

BUCKMASTER, STANLEY OWEN BUCKMASTER, 1ST BARON (b. 1861). British lawyer and politician. Born Jan. 9, 1861, he was called to the bar in 1884, and became a K.C. in 1902. He was Liberal M.P. for Cambridge, 1906-10, and for Keighley, 1911-15. In 1913 he was knighted on becoming solicitor-general Director of the Press Bureau from Sept., 1914-May, 1915, he was in 1915 appointed lord chancellor, resigning on the fall of the Asquith ministry in Dec., 1916.

Baron Buckmaster,
British lawyer

BUCKROSE, J. E. British author. She was born at Hull, and married Robert Falconer Jameson. In a rapid succession of novels, short stories, and sketches, she admirably delineated the simple rustic and urban folk of her native Yorkshire. Her works include *The Wood End*, 1906; *A Little Green World*, 1909; *Down Our Street*, 1911; *Spray on the Windows*, 1915; *Young Hearts*, 1920; *Payment in Kind*, 1928; and *Aesop Dancing*, 1930.

BUCKSKIN. Soft yellowish or greyish leather made from the skins of bucks, sheep, or other animals, used for gloves and other

Buckinghamshire. Map of this Home County of England. It is famous for its beech woods, and has many historical and literary associations

articles of clothing. The term is also applied to a strong twilled woollen cloth, of which buckskin breeches are generally made.

BUCKTHORN (*Rhamnus catharticus*). Shrub of the order Rhamnaceae, a native of Europe, N. Africa, and Siberia. It is much branched, the branches often ending in a sharp point; the toothed leaves are oval, and the flowers small, yellow-green, in clusters from the axils of the leaves. The fruits are drupes, black when ripe. Another species, the alder buckthorn (*R. frangula*), has branches devoid of spines and broader leaves, without teeth and with the veins parallel. In their unripe state the fruits yield a green dye.

Buckthorn, *Rhamnus catharticus*

BUCKWHEAT (*Polygonum fagopyrum*). Crop-plant belonging to the order Polygonaceae. The heart-shaped leaves, red stems, and small crowded pinkish-white flowers give the plant an attractive appearance. The fruits resemble miniature beech-nuts. In Great Britain this crop is grown for green manuring, sheep-feed, and food for pheasants. The fruits are good food for horses, and, when cracked, for milch cows, pigs, and poultry. In other countries buckwheat is used for making porridge and cakes.

Buckwheat, crop-plant of the dock family

BUD (Fr. bouton, button, bud). Strictly a condensed shoot with its leaves, in embryo, packed closely together. It is covered as a rule by scales to prevent excessive transpiration and the effects of rapid temperature changes. In many cases the scales are coated with a gummy varnish. Buds are produced in the axils between leaf-stalk and stem or branch. In some cases there are no enveloping scales, but the outer leaves or leaf-stalks are modified to serve the same end. When buds expand into shoots in spring, the scales are thrown off, leaving scars.

Budding is the term used for the propagation of a scion or offspring of a choice flower or fruit upon a sturdy stock. Apples, pears, and roses are the most frequent subjects of the operation. See Grafting.

BUDAPEST. Capital of Hungary. It stands on the Danube, and consists of two towns, Buda, called Ofen by the Germans, and Pest, which were united in 1873. Buda,

plain. Around both are extensive suburbs, and they are united by several bridges across the Danube. The city is 163 m. from Vienna. It covers 78 sq. m., and its pop. is 929,000.

The most notable building is the palace, built about 1770 and restored in 1894. S. Matthias is the oldest church; the finest are the Leopoldstadt and the Franzstadt, both in Pest. The Jews have a fine synagogue. Other buildings are the legislature, a magnificent Renaissance pile facing the river, and many others that house the public officials. The palace of justice, the national and other museums, the picture gallery, and the town hall may be mentioned, as may the large central market, the opera house, and several fine theatres. The university, removed here in 1784, has some fine buildings and a large and valuable library. There are other valuable libraries in the city, one belonging to the Hungarian academy of sciences. The city has spacious boulevards, wide streets, fine squares, beautiful parks and monuments, and many of its banks and other commercial buildings are good examples of modern architecture. It does a large trade both by land and water.

Buda was the residence of the Hungarian kings from about 1320 to 1526. In 1541 it was taken by the Turks, who had previously besieged it, and it was not recovered until 1686. In the 19th century, as the centre of Hungary's social, intellectual, and commercial life, it grew enormously. From Aug. to Nov., 1919, the Rumanians occupied it.

BUDDH GAYA. Village of Bengal, India, 40 m. S.W. of Bihar. The traditional resting place of Gautama, founder of Buddhism, and a place of pilgrimage, it contains the famous peepul tree and the palace of King Asoka. See Bo Tree.

BUDDHISM. Strictly the religious system taught by Gautama Buddha and his immediate followers. He was born about 560 B.C., and died some eighty years later. His father was chief of a Rajput clan which occupied territory corresponding to Oudh and the adjoining district of S. Nepal. When about 28 Gautama-married, and a year later his son, Rahula, was born. Almost immediately afterwards Gautama left his family, and thenceforward lived a wandering life.

Seven years after he had set about the quest, while sitting in meditation under a sacred tree, afterwards known as the Bo (knowledge) tree, the vision of the true way came to him, and from that time forth he became the Buddha, the wise or the enlightened one. He saw now for the first time the evil, the cause of all suffering, and also the means by which it was to be overcome.

Buddhism has assumed four principal forms: Buddhism proper, that of Burma and especially of Ceylon; Lamaism, the Buddhism of Tibet; Foism, from Fo, the Chinese form of Buddha, the Buddhism of China; and the Buddhism of Japan, a mixture of true Buddhism and of the native Shintoism. Each of these has its own bible.

The main features of Buddhism are as follows: That suffering is universal, no man being free from it from birth to death. That the cause of this suffering is desire or longing, this leading to rebirth, and the continuance of desire and misery. That deliverance from suffering is to be obtained through the suppression of desire, the absence of passion of every kind. That this result is to be obtained by pursuing the holy eight-fold path, namely, right belief, right aspiration, right

speech, right conduct, right means of subsistence, right aim and effort, right memory, right meditation. The goal which Buddhism

sets before a man as the summum bonum is called Nirvana, of which there are two stages: first, that impassive satisfied state which may be attained in this world; secondly the perfect Nirvana which comes only after physical death.

The following five rules of conduct are binding upon all Buddhists: No living being is to be killed. No one is to take what has not been given him. Adultery is strictly forbidden. No man is to utter an untruth. All intoxicating drinks are to be avoided. Buddhists throughout the world number about 100,000,000.

The conversion of Asoka, about 250 B.C., inaugurated eight centuries of Buddhist predominance in India and propaganda in other lands. Fourteen ethical rock-edicts were incised by him on rocks at Girnar in Kathiawar and other remote places; nearer home he engraved seven pillar-edicts on monolithic pillars, one of which is now at Allahabad (see illus. p. 56). Colossal images in stone, metal, or wood are found, as at Bamian in Afghanistan, 173 ft. high; at Pegu in Burma, recumbent, 181 ft. long; and elsewhere. Consult The Beginnings of Buddhist Art, A. Foncher, Eng. trans. L. A. and F. W. Thomas, rev. ed. 1917; Buddhist Philosophy in India and Ceylon, A. B. Keith, 1923.

Buddhism. The great bronze Buddha, 49 ft. 7 in. high, at Kamakura, Japan

BUDE or **BUDEHAVEN.** Watering place on the N. coast of Cornwall. It lies 18 m. N.N.W. of Launceston, on the Southern Rly., amid beautiful scenery at the mouth of the river Bude. The Budo Canal extends 33 m. from Budo to Thornbury, and has a connexion with the Tamar. Pop. 3,140.

BUDGE, SIR ERNEST ALFRED WALLIS (b. 1857). British Orientalist. Born July 27, 1857, he was educated at Cambridge. After several publications, including a History of Esarhaddon, 1881, and Babylonian Life and History, 1884, he became in 1885 keeper of Egyptian and Assyrian antiquities in the British Museum. He excavated at Niueveh, Der, Assuan, and in S. Nubia. His numerous works include the Gods of Egypt, 1903; The Egyptian Sudan, 1907; The Nile (12th ed.), 1912; By Nile and Tigris, 1920; and The Rosetta Stone, 1929. He was knighted in 1920, and retired from the Museum in 1924.

BUDGET. Annual statement of a nation's finances made in Parliament by the chancellor of the exchequer or the minister of finance. The word comes from the French bougette, a leather bag (Lat. bulga), hence a dispatch box, usually of leather.

In Great Britain the financial year ends on March 31, and the budget is presented in April or May. It consists of (1) a statement of the actual revenue and expenditure of the year just past, and (2) an estimate of that for the year to come. The latter is partly conjecture, and in increasing or reducing taxation, in order to make revenue and expenditure balance, the chancellor is said to budget for the year.

BUDWEIS (Bohemian Budejovice). City of Czechoslovakia, in Bohemia. At the confluence of the Moldau and Maltsh, 80 m.

Budapest. 1. Former palace of the Hungarian kings, Buda. 2. Houses of Parliament. 3. Elizabeth Bridge over the Danube

on the west of the river and the official quarter, stands on hills; Pest, on the east, and the commercial and intellectual quarter, is in a

speech, right conduct, right means of subsistence, right aim and effort, right memory, right meditation. The goal which Buddhism

by rly. S. of Prague, it has a 16th century cathedral with a detached belfry, and a fine town hall. It manufactures chemicals, bricks, tiles, machinery, beer, and paper, and has a large trade in grain, timber, and salt. Pop. 44,022.

BUENOS AIRES. Federal capital of the Argentine Republic. On the S. bank of the Río de la Plata, 150 m. from the Atlantic, the city lies on a low plain sloping gradually towards the N., and its average height above sea level is not more than 20 ft. The boundaries of the city which covers an area of 72.8 sq. m., coincide with the federal district.

Buenos Aires is a well planned city, and its streets, crossing each other at right angles, are well paved and lighted. The most noteworthy of its many fine avenues is the Avenida de Mayo, the leading business thoroughfare. The most central of the numerous plazas or squares is the Plaza de Mayo. Notable buildings include the Casa Rosada (Pink House) or Government House, the archbishop's palace, the Exchange, and the Palermo Park, the Hyde Park of Buenos Aires, officially the Parque 3 de Febrero, covers about 840 acres, and here are the zoological gardens, aquarium, motor track and flying ground, and boating lakes. About 1 m. nearer the centre of the city is the remarkable cemetery known as the Recoleta.

Buenos Aires is the seat of a Roman Catholic archbishop, and, in addition to the cathedral, modelled after the Madeleine of Paris, has many Roman Catholic and Protestant churches. Other buildings are the university and the congress hall, and noteworthy among the business structures are the Prensa newspaper offices. The favourite suburb of Belgrano is beautifully laid out and contains many fine country houses.

Besides the natural harbour, called the Boca (mouth), on the river Riachuelo, there is a large artificial harbour, higher up the river. The city has extensive abattoirs, and the central produce market is one of the largest in the world. A new stock exchange was opened in 1929. There are aerial routes from Buenos Aires to Salta, Catamarca, Posadas and other cities, as well as an aerial post service between Buenos Aires and Montevideo. Pop. 2,030,765.

As distinct from the federal district, the province of Buenos Aires is the largest and most populous province of Argentina. Its capital is La Plata.

BUFFALO (Bubalus). Large animal of the ox family, found chiefly in Africa and India. No examples are found in the Western hemisphere. The horns are flattened at the base, triangular in section, set low on the skull, and have their bases close together. The African buffalo (B. caffer) is sturdy and heavy,

The Indian buffalo is a heavier animal, with straight head and usually long horns. Its ears are small, and the hair is black. It lives in herds in the jungles of the plains, and domesticated breeds are found. See illus. p. 131.

BUFFALO. City of New York State, U.S.A. At the E. extremity of Lake Erie, and at the head of the Niagara river, 423 m. by rly. N.W. from New York, Buffalo is served by several rly. lines, and is the port of transshipment for the Lake Erie and Erie Canal steamship services. One of the chief industrial and commercial centres of America, it has a great variety of manufactures, chiefly connected with iron and steel. It is the seat of a university. The water power of Niagara Falls generates electricity for lighting and other purposes. President McKinley was assassinated here in 1901. Pop. 538,016.

Buffalo Bill. Popular name given to the famous American scout and showman, William Frederick Cody (q.v.).

BUFFON, GEORGES LOUIS LECLERC, COMTE DE (1707-88) French naturalist. Born Sept. 7,

Buenos Aires. 1. Roman Catholic cathedral in the Plaza de Mayo. 2. Palace of Congress. 3. Panorama of the city from the Plaza de Mayo. 4. Colon theatre, the home of State-aided opera

1707, he first read law and then devoted himself to science. In 1739 he was appointed

director of the king's garden and museum in Paris. In association with Daubenton and others he spent the rest of his life in the production of his great work on Natural History, of which 36 volumes were published between 1749-89. One of these, *Époques de la Nature* (1773), contained his striking anticipation of the law of evolution. Buffon, who was the author of the well-known aphorism, *Le style c'est l'homme* (The style is the man), died in Paris, April 16, 1788.

Comte de Buffon, French naturalist

Buff, THE. Familiar name of the East Kent Regiment, the old 3rd Foot. See East Kent Regiment.

BUG. Popular name applied to insects comprising the sub-order Hemiptera-heteroptera. They have four wings, the basal half of the upper pair being of a thicker, more horny texture. The mouth parts are so modified as

to constitute a beak or piercing organ. A pumping chamber in the head draws up blood or sap from the victim. Most of the plant-feeding species do damage to the vegetation they attack. The bed-bug (*Cimex lectularius*), a wingless alien of uncertain origin, is an abundant pest in dirty homes and old houses. It conveys disease germs. Cleanliness is the best preventive, but the vigorous use of insecticides will keep these pests in check. Many bugs are aquatic, and every fresh-water pond contains numerous species, of which the boatman, the water-scorpion, and the water-gnats or skaters are examples.

BUG OR WEST BUG. River of the Ukraine and Poland. It rises midway between Lemberg and Tarnopol, flows N., forms part of the Polish boundary, and, passing Brest-Litovsk, turns W. to join the Vistula 21 m. below Warsaw. About 440 m. long, it is navigable for half its course. It is connected by an affluent and canal with the Dnieper.

Severe fighting took place along the banks of the Bug between the Russians and Austro-Germans in 1915 in the battles for Warsaw, and fighting continued in this region in 1917.

Another Bug, known also as the South Bug and the Black Sea Bug, rises in Volhynia, flows S.E. for some 450 m., and forms near Nikolaiev an estuary 30 m. long, opening into Dnieper Bay. It is navigable for about 55 m.

BUGBANE (*Cimicifuga elata*). Perennial herb of the order Ranunculaceae. A native of E. Europe, Siberia, and N. America, the leaves are divided into three leaflets, and the small whitish flowers are conspicuous only by their association in terminal clusters.

BUGGY.

A light vehicle for one horse, much used at one time in America, India, Australia, and elsewhere. A buggy may have either four-wheeled vehicle for one horse, much used at one time in America, India, Australia, and elsewhere. A buggy may have either two or four wheels, and one kind is fitted with a hood.

BUGLE. Brass instrument of treble pitch used for military signals. Its open notes give the chord of B flat,

thus:

written in key C, one tone higher. Side holes, covered by keys, were added in 1810 to give the intermediate notes, but this form, known as the key-bugle or Kent-bugle, has been superseded by the more useful cornet-a-piston in military and other bands.

BUGLE (*Ajuga reptans*). Perennial herb of the order Lamiaceae. It is common in moist woods and pastures. Flowers are borne in a tapering spike, and are usually blue, but white, pink, and purplish varieties are met with. The lower leaves are stalked.

BUGLE LILY (*Watsonia*). Genus of bulbous perennials of the order Iridaceae. Natives of S. Africa, they have long, sword-shaped leaves and flag-like flowers in a tall spike, scarlet, pink, rose, or purple in colour.

BUGLOSS (Gr. bous, ox; glossa, tongue). Popular name of certain plants of the order Boraginaceae, with rough, bristly leaves. The plant particularly known as bugloss is *Lycopsis arvensis*, an annual herb, native of Britain and South Europe, and one of the weeds of cultivated ground. The leaves are lance-shaped or oblong. The name is applied also to *Echium vulgare*. See Viper's Bugloss.

Bugle lily, showing flag-like flowers

Buffalo. Left, Indian water-buffalo; this breed can be domesticated. Right, African buffalo, a smaller animal which is unmanageable

Gambier Bolton, F.Z.S., and F. W. Bond

with short neck, large ears, and a blackish or reddish coat. It is found in swampy districts.

BUHL OR **BOULE**. Style of furniture decoration. Introduced by André Charles Boule, a cabinet maker who flourished in Paris under Louis XIV, its chief characteristic is the application of thin coats of tortoiseshell veneering or prepared wood. The surface is inlaid with delicate tracery in metal (gilt-bronze or silver), or thin inlays of metal plates are adorned with tortoiseshell tracery. Real Buhl furniture was solid, curved lines usually predominating, while heavy mountings in carved ormolu were often added.

BUILDING SOCIETY. Legally, "a society established to raise a subscription fund by advances from which the members shall be enabled to build or purchase dwelling houses, or to purchase land, such advances being secured to the society by mortgage of the premises so built and purchased."

In the United Kingdom the constitution and conduct of these bodies are strictly regulated by the Building Societies Acts of 1874 and 1894. Incorporated societies are empowered by statute to hold land and houses, to foreclose, to raise funds by the issue of shares, and to grant loans. A society collects money from its members by means of periodical subscriptions on shares, the amount usually varying from 10s. to 20s. monthly on each share.

In 1928 the building societies in Great Britain had assets worth £268,000,000. Their total receipts were £117,000,000 and their total advances £58,665,000. These were made to 116,376 persons. In 1927 there were 954 societies. Their accounts are supervised by the Registrar of Friendly Societies. The movement has a National Society of Building Societies and The Building Societies Gazette is published in London.

BULTH WELLS. Urban district, spa, and market town of Brecknockshire. Near the confluence of the Irfon with the Wye, 16 m. N. of Brecon, it has three rly. stations, one on the G.W. Rly, 1½ m. N., in Radnorshire, and two at Bulth Road, on the L.M.S. and G.W.R., 1½ m. distant. There are baths with saline, chalybeate, and sulphur springs. Market day, Mon. Pop. 1,776.

BUKAREST. Capital of Rumania. It stands on the Dimboritza, a tributary of the Danube, and is a centre of the country's road and railway system. The name, spelled in several different ways, means the city of

enjoyment. A modern city, it is laid out like Paris or Berlin with wide streets, beautiful squares, and large parks. It has over 100 churches, including the

state, theatres, banks, and hospitals. There is a university, many colleges and schools, several libraries and a botanic garden. Bukarest has some manufactures, but its growth and prosperity are chiefly due to its position as a distributing centre. In 1861 it was made the capital of the new principality of Rumania. During the Great War Bukarest was in the occupation of the Germans from Dec. 6, 1916, until just after the armistice, Nov., 1918. Pop. 800,000.

TREATIES OF BUKAREST. Bukarest gives its name to the important treaty signed August 10, 1913, between Bulgaria on the one hand and Rumania, Serbia, Greece, and Montenegro on the other. This treaty, which ended the second Balkan War, gave considerable additional territory to Bulgaria's late enemies.

On May 7, 1918, a treaty generally known as the peace of Bukarest was forced upon Rumania by Germany and her allies, under which she ceded to Bulgaria the territory in the Dobruja acquired in 1913. This and other supplementary treaties were annulled by the armistice of Nov., 1918. See Balkan Wars; Bulgaria; Rumania.

Bulawayo. Main Street; right, the clock tower of Post Office and Municipal Buildings. See below

BUKOKA. District and port in the N.W. of Tanganyika Territory. The district is bounded E. by Lake Victoria, N. by the Uganda Protectorate, W. by Ruanda and Urundi, and S. by Ujiji and Tabora districts. The principal river is the Kagera. The port on Lake Victoria is the administrative centre of the district.

BUKOWINA OR **BUKOVINA.** District of Rumania. Its area is 4,030 sq. m. and its population about 800,000. The Bukovina is a mountainous country, belonging principally to the region of the Carpathians, and upwards of 40 p.c. of its area is covered with forests, from which timber is obtained. Its rivers are the Dniester, Pruth, Sereth, Suczava (Suczava), and Moldava. Czernowitz is the capital. It was part of Austria from 1777 to 1918.

The Bukovina district was strategically important in the Great War as it gave access to Transylvania (Hungary). The Russians invaded it in Sept., 1914, and from that time onward there was considerable fighting between them and the Austro-German forces.

BULAIR. Town in the N.E. part of the Gallipoli peninsula. Taken by Suleiman Pasha about 1356, it was the scene of fighting in the first Balkan War, and of the armistice arranged on April 19, 1913. During the Dardanelles (q.v.) operations in 1915 the Bulair lines were bombarded by French warships.

BULAWAYO OR **BULUWAYO** (formerly Gubuhwayo). Commercial capital of Southern Rhodesia. In Matabeleland, it is the chief rly. centre of Rhodesia, being connected by rail with all the principal towns and ports of S. Africa. The distance from Cape Town is 1,360 m., from Port Elizabeth 1,198 m., from Salisbury 301 m., and from Elizabethville 944 m. Pop. whites, 8,251. Bulawayo is built round a market square, and has rectangular thoroughfares. Between the town and its suburban district on the E. are the North and South Parks, through which passes the

Matzemhlopo river. Among the public buildings are the market house, court house, stock exchange, hospital, public library, and museum. In North Park there are botanical and zoological gardens.

Bulawayo dates from 1893. It was formerly the headquarters of the Matabele, and its name signifies the place of the killing or the pathway of blood. See Rhodesia.

BULB (Gr. *bolbos*, bulbous root). Enlarged fleshy, underground termination of the roots of various orders of plants. Bulbs are (1) imbricated, in which the component layers overlap one another, as in the lily; (2) tunicated, where the bulb is made up of a succession of superimposed coats or layers, as in the onion. The word is used by gardeners to include fleshy roots solid throughout, and not built up of scales or layers, e.g. the crocus.

Bulb of snowdrop

BULBUL. Arabic-Persian name given to a family of birds, including several genera found in Syria, Arabia, and N. Africa. They are birds of brilliant plumage, and are renowned for their song, being often mentioned by the Persian poets in very appreciative terms.

BULFORD.

Village of Wiltshire. It is on the river Avon, 2½ m. N.E. of Amesbury, on the Southern Ry. There is a large military camp. Pop. 3,797. See Salisbury Plain.

Bulbul. Eastern song-bird also known as the Persian nightingale

BULGARIA. Kingdom of Central Europe. It is bounded N. by the Danube, S. by Greece, E. by the Black Sea, S.E. by Turkey, and W. by Yugoslavia. The area is 39,814 sq. m. and the pop. 5,772,600.

The country is hilly and watered by numerous streams, of which the Isker, Struma, and Maritsa are the most important. The Balkan range separates the kingdom into two parts, and the S.W. boundary of what was Eastern Rumelia lies on the Rhodope range where it approaches Macedonia.

Bulgaria. Peasant woman from Tirnovo

The climate N. of the Balkan range is more equable than to the S. of it. The capital and seat of government is Sofia, while Philippopolis (Plovdiv), the old capital of Eastern Rumelia, is the chief town. Other important towns are Vidin, Ruschuk (Ruso), Sliven (Slivno), and Plevna (Pleven), while the chief ports are Varna and Burgas. Agriculture is the principal occupation.

Bulgaria was erected into a principality by the Treaty of Berlin in 1878, and in 1885 Eastern Rumelia was united with Bulgaria.

In 1908 the independence of Bulgaria was recognized by the Great Powers, and Prince Ferdinand assumed the title of king of the Bulgarians. By the first Balkan War (1912-13)

Bukarest. Above, imposing Government buildings. Below, the Royal Palace, which was rebuilt in 1885

Metropolita (Greek) and the Roman Catholic cathedral. Other buildings are the king's palace, the offices of the various departments of

the territories of Bulgaria were increased, but at the end of the second Balkan War, Aug., 1913, the area acquired was reduced and about 2,000 sq. m. were ceded to Rumania. In Oct., 1915, Bulgaria entered the Great War by declaring war on Serbia, and in Sept., 1918, surrendered to the Allies. By the treaty of Neuilly, Nov., 1919, Bulgaria ceded small portions of territory on the W. frontier to Yngoslavia and lost a large part of Thrace, thus being deprived of its Aegean littoral.

By the constitution, originally drafted in 1879 and subsequently amended, legislative authority is vested in a single chamber, the Sobranje or National Assembly. It sits for four years, but may be dissolved at any time by the king. The principle of proportional representation was adopted in April, 1927. The prevailing religion is that of the Greek Church.

Bulgaria. Boy in Sunday dress

otherwise he may prove inferior in prepotency to the cows. For the breeding of beef cattle pedigree is less important than individual merit. A bull for a dairy herd should have been bred from a cow of good milking quality. The word is applied to the males of other large mammals such as the elephant and whale. (See Cattle.)

Bull baiting and running became illegal in 1835.

BULL (Lat. bulla, bubble, boss). Term used in the Middle Ages for the capsule of a seal, then for the seal itself, and so for the document to which the seal was attached. In this last sense it was applied to documents containing the public pronouncements of emperors, kings, and popes. Its use is now confined to papal documents.

BULL. Result of a particular kind of verbal blunder, generally of a misuse of words or images in which a ridiculous contradiction in terms occurs in a seemingly clear statement.

BULL, JOHN (1563-1628). English composer. Appointed organist in the Chapel Royal in 1591, he was the first lecturer on music at

Gresbam College. In 1617 he became organist at Antwerp Cathedral. He was regarded as the composer of the National Anthem, and

Bulgaria. Map of the state as its territories were defined after the Great War

although this has been disputed, it seems to be admitted that one of his compositions contains the earliest form of the air.

BULL, OLE BORNEMANN (1810-80). Norwegian violinist. Born in Bergen, Feb. 5, 1810, Bull was almost entirely self-taught. He made his first public appearance in 1833, and for several years toured through Europe and the U.S.A. He died Aug. 17, 1880, near Bergen, where he had built a national theatre.

BULLACE (*Prunus insititia*). Shrub or small tree related to the plum and the sloe. The fruit is larger than that of the sloe, and is less acid and more palatable: the bush is larger and less spinous. See Blackthorn.

BULLDOG. One of the oldest of distinctive British dogs. Down to the 18th century it was mainly used for bull baiting, whence its name. Close interbreeding has deprived the modern bulldog of all its fighting qualities, and it is now a gentle and good-natured animal, and quite useless as a watchdog. Its head is extremely wide and square, the face is short and the lower jaw projects so far forward and upward that the lower teeth usually project over the upper jaw, giving the dog a ferocious appearance. The chest is excessively wide and the bent forelegs, set far apart, indicate strength and sturdiness. Crosses between the bulldog and mastiff are much in demand among night watchmen, and are as a rule dangerous.

Bull. "Corner Stone," a specimen of the British shorthorn bull

The toy bulldog is of French origin, is smaller and lighter, and has large and upstanding ears. See Dog.

BULLECOURT. Village of France, in the dept. of Pas-de-Calais, 14 m. W. of Cambrai. In the Great War it formed a section of the Hindenburg line, and desperate battles, which commenced in April, 1917, were waged for its possession.

BULLEN, ARTHUR HENRY (1857-1920). British editor. Born in London, he was the son of Dr. George Bullen (1816-94), keeper of printed books at the British Museum. His editorial work largely concerned the Elizabethan dramatists. In 1904, at Stratford-on-Avon, he established the Shakespeare-Head Press, whence was issued in 1904-7 the ten-volume Stratford edition of Shakespeare and the works of other dramatists. In 1930 the Press was moved to Oxford. Bullen was the first to collect and edit the works of John Day, dramatist. He died at Stratford, Feb. 29, 1920.

BULLER, SIR REDVERS HENRY (1839-1908). British soldier. Born at Downes, in Devonshire, Dec. 7, 1839, he saw service in China 1860, Canada 1870, the Ashanti 1873, S. Africa 1878-79, Egypt 1882, and the Sudan 1884-85. In the Zulu War he won the V.C. On the outbreak of the Boer War in 1899 Buller proceeded to South Africa in command of an army of 70,000 men. After severe reverses at Colenso and Spion Kop, he succeeded in relieving Ladysmith. Superseded by Lord Roberts, he returned to England in Nov., 1900, and resumed his Aldershot command. A year later, in consequence of an indiscreet speech, he was relieved of his command. He died June 2, 1908. Consult Life, L. Butler, 1909

Sir Redvers Buller, British soldier

BULLET (Fr. boulette, little ball). Term used to define the projectiles thrown by firearms used in warfare, and the missiles employed in shrapnel shell, case-shot, and some grenades. Spherical bullets were early introduced, and survived until the barrels of muskets were rifled, when a tightly-fitting bullet became necessary.

With the introduction of the needle gun and the adoption of breechloading, it became unnecessary to expand the bullet. The adoption of brass-cased cartridges made it desirable to reduce the weight of the ammunition, and there was a tendency to reduce the bore. This led to an increase in the length of the bullet. After a certain stage even hard lead would not withstand the strain, and this brought about the introduction of the nickel-cased bullet. The higher velocities imparted by smokeless powder permitted a reduction of bullet weight, and the lead core has been partially replaced by aluminium or paper. For special purposes incendiary, armour-piercing, and explosive bullets are used. See Ammunition; Shrapnel; Shell.

Bullet. 1. Minié bullet, 1849. 2. Solid lead bullet, 1870. 3. Cupro-nickel cased bullet with lead core. Expanding bullets, 4, with core exposed at nose and, 5, with drilled nose. 6. Modern pointed bullet with composite core

Bulldog. Example of one of the oldest breeds of British dogs

BULL FIGHTING. National sport of Spain, Mexico, and Spanish S. America. In Spain a modern bull fight is divided into three parts. The first consists in a parade of all about to take part in the spectacle, after which the previously maddened bull is let loose to attack the picadores, who are armed with short spears with which they prod the animal. In the second stage the bull is further weakened by the banderilleros planting darts in its neck. In the last stage the matador or espada kills the bull by stabbing it.

Six or eight bulls may be done to death at one spectacle. It is estimated that some 1,200 to 1,300 bulls and between 5,000 and 6,000 horses are killed annually in Spain alone. In 1928 royal orders forbade the use of explosive darts in bull fights, and ordered the horses engaged to be protected by armour.

Bullfinch. European song-bird

BULLFINCH (*Pyrrhula europaea*). European song-bird, black and grey in colour, with a red breast in the male, it is common in many parts of Britain. The piping bullfinch is the ordinary species trained to imitate notes played on a whistle.

BULLHEAD (*Cottus gobio*). A small British fish. Known as the miller's thumb from its broad, flattened head, it is common in streams and ponds, especially near the coast. Certain marine species (*Cottus bubalis* and *C. scorpius*) are numerous in rock pools.

Bullhead. *Cottus bubalis*, found in shallow water, a small British fish

BULLI. Town of New South Wales, Australia. In Camden co., it is 59 m. by rly. S. of Sydney. It is the headquarters of the Bulli and other colliery companies. Near is Weber's Lookout, a tourist resort, on the picturesque Bulli Pass. Pop. 3,000.

BULLION (French *bullion*, to boil). Name usually given to gold and silver regarded as articles of merchandise, not as coin. Bullion is the metal when it has been refined and brought to a certain standard of purity, but has not been converted into money or jewelry. In order to ascertain its value it is customary to weigh and also to assay bullion, as the amount of alloy it contains varies. See Gold.

BULL ROARER. Thin slat of wood, producing a very formidable noise when swung rapidly with a string. In Australia, covered with mystic emblems, it is used by the aborigines to drive women and children away from initiation ceremonies. There, as also in New Guinea, America, and W. Africa, it is used as a charm to produce wind and rain. In Sumatra and among the Bushmen it aids in driving cattle.

BULL RUN. Small stream in West Virginia, noted because around it two battles were fought during the American Civil War. The first took place on July 21, 1861, and the second on Aug. 29-30, 1862. In both cases the Federals were defeated.

BULL TERRIER. Cross between a bulldog and a smooth terrier. A powerful dog, weighing between 20 lb. and 50 lb., and remarkable for its courage and determination, it is of great value as a watch-dog, and is the best fighting dog of all British breeds. Its coat is smooth and preferably white. It should have a long head, straight face from skull to nose, and a powerful jaw.

Bull Terrier. A champion specimen of this British breed of dogs

BULL TROUT. Term applied to various species of the trout family, more especially the grey trout found in many British streams. Rising indifferently to the fly, it affords little sport, and does not rank high as a table fish. See Angling; Trout; also illus. below.

BULLY BEEF. Name given to preserved beef. It is produced in enormous quantities in the U.S.A., and was extensively used during the Great War. The name bully may either come from bull, or be a corruption of Fr. *bullion*, boiled.

BÜLOW, BERNHARD HEINRICH MARTIN KARL, PRINCE VON (1849-1929). German statesman. Born at Klein-Flottbeck, Holstein, May 3, 1849, he entered the army in 1870, and took part in the Franco-Prussian War, 1870-71. From 1897-1900 he was foreign secretary, and in Oct., 1900, was appointed chancellor and president of the Prussian ministry. He was made a prince of the German Empire in 1905, and retired from the chancellorship in 1909. In Dec., 1914, he was sent to Rome as ambassador, but failed to prevent the entry of Italy into the Great War. His Imperial Germany, Eng. trans. M. A. Lewenz, 1914, rev. ed. 1916, is a defence of Germany's policy. Prince von Bülow died Oct. 28, 1929.

Prince von Bülow, German statesman

BÜLOW, KARL VON (1846-1921). German soldier. He was prominent in the early stages of the Great War. In command of the German 2nd Army, he invaded Belgium, took Charleroi and Namur, after-wards advancing into France to and beyond the Marne. In the battle of the Marne, in which he was directly opposed to Foch, he was heavily defeated on Sept. 8-10, 1914, and compelled to retreat to the line of the Vesle, later taking up a line on the Aisne. His account of these operations was published in book form in 1919. Bülow died on Aug. 31, 1921.

BULRUSH (*Scirpus lacustris*). Perennial sedge of the order Cyperaceae. It is a tall marsh or water plant, with a long, leafless or almost leafless stem nearly 1 in. thick. The leaves cover the base of the stem. At the summit a pair of leafy bracts marks the point from which a number of branches arise, each ending in clusters of red-brown flowers. The spongy stems are made into chair-seats, floor-mats, bags, and baskets.

BULWARK. Name of a British battleship of 15,000 tons and 18 knots speed, armed with four 12-in. and 12 6-in. guns, which was laid down at Devonport in 1899, and completed in 1902. While lying at anchor in the Medway, she suddenly blew up and disappeared at 7.53 in the morning of Nov. 26, 1914. Only twelve men were saved. A court of inquiry reported that the explosion was due to the accidental ignition of ammunition on board. An earlier Bulwark, a 110-gun screw ship of the line, launched at Pembroke in 1860 as the Howe, is now part of the boys' naval training establishment at Devonport known as H.M.S. Impregnable.

BUMBLE. Character in Dickens's novel, Oliver Twist. A pompous parish beadle, he is deprived of his position, and forced to take refuge with his wife in the workhouse, which they had tyrannised over others. The word bumbledom has become a synonym for inept parochial government. See Beadle.

BUMBLE BEE or Humble Bee. Large bee of the genus *Bombus*. See Bee.

BUNBURY. Seaport of W. Australia. Picturesquely placed on Koombanah Bay, 115 m. by rly. S. of Perth, it is a summer resort, and exports coal, tin, timber, and agricultural produce. Fish and wild birds, notably black swan, abound. Pop. 5,570.

BUNCRANA. Urban district, market town and watering place of co. Donegal, Irish Free State. It is on Lough Swilly, 11 m. by rly. N.W. of Londonderry by the Gt. Southern Rlys. It has a fine bathing beach, golf links, and remains of an old castle. Pop. 2,309.

BUND. German word, meaning a federation or union of states. The first bund of importance was the federation of the German states established in 1815. It included both Austria and Prussia, and lasted until the war between these two Powers in 1866. The assembly of representatives of these states was known as the Bundestag. After this the states of N. Germany, under the leadership of Prussia, formed a new bund, the North German Confederation, which lasted only until 1871. The second chamber of the parliament or diet of the German Empire, as it existed between 1871 and 1918, was called the Bundesrat.

BUNDABERG. River port of Cook co., Queensland, Australia. Situated 10 m. from the mouth of the Burnett river, 217 m. by rly. N. of Brisbane, it is the centre of a sugar-growing district, and exports sugar, treacle, and timber. Pop. 11,000.

BUNGALOW (Hind. *bangalah*, belonging to Bengal). Originally the name for the one-storeyed, verandahed house in use by European residents in India. Buildings of similar construction are common in all hot countries, and have been adopted in the U.S.A. and Great Britain. A long stretch of structures of this kind situated at Shoreham, Sussex, England, is known as Bungalow Town.

BUNGAY. Urban district and market town of Suffolk. It is on the Waveney, 7 m. W. of Beccles, on the L.N.E. Rly. The Norman Holy Trinity Church has a round tower. The grammar school was founded in the 16th century, and the market place contains an ancient octagonal cross. Traces remain of the ancient castle of the Bigods, earls of Norfolk. Bungay has large printing works and flour mills, and holds a race meeting. Market day, Thurs. Pop. 3,106.

BUNHILL FIELDS. Public garden and cemetery in the Finsbury district of London. It seems to have been identical with Bone Hill, where malefactors were buried in the reign of Elizabeth. During the Great Plague part of the area was used for the burial of victims. In 1788 it was made the chief burial ground for the dissenters of the metropolis. In 1869 it was formally opened as a public garden. John Bunyan, Daniel Defoe, Isaac Watts, and William Blake were buried here.

BUNION (Ital. *bugnone*, projection). Bursa, or small collection of fluid contained in a capsule, which forms over the head of the first metatarsal bone of the great toe. It may be due to wearing boots of incorrect shape. A union may become inflamed, giving rise to pain and sometimes to suppuration. Treatment in the acute stage consists in removing all pressure from the foot and allaying the inflammation with hot fomentations. In other cases the bursa can be removed.

BUNKER HILL. Elevation just outside Boston. Here on June 17, 1775, took place the first encounter in the American Civil War. The English stormed the hill, which had been fortified by the Americans.

BULL TROUT. The Grey Trout, or Bonndall, found in British streams

BUNN, ALFRED (1796-1860). British theatrical manager. Known as the "poet Bunn," although his name was a byword for insolence, ignorance, and vulgarity, he was manager of Drury Lane from 1833-48. He produced the principal operas of Balfe, the libretti of which he himself translated. He died at Boulogne, Dec. 20, 1860.

BUNSEN, ROBERT WILHELM (1811-99). German chemist. Born at Göttingen, March 31, 1811, he succeeded Wöbler in 1836 as professor of chemistry in the Polytechnic School, Cassel. In 1852 he took the professorship of chemistry at Heidelberg, remaining there until his death, Aug. 16, 1899. Many important scientific discoveries stand to his credit.

The Bunsen burner has become a necessity as giving a colourless and inodorous flame for burning gas in cooking and heating stoves, and for use with incandescent gas mantles. Air is admitted at the base of the gas tube which forms the burner, and improves the combustion of the coal gas. The volume of air employed is about $2\frac{1}{2}$ times that of the gas, and a very hot, non-luminous flame is obtained.

The Bunsen cell is a two-fluid primary cell consisting of a carbon rod in a porous pot, the latter being surrounded by a cylinder of zinc, and the whole contained in a jar. The porous pot contains strong nitric acid and the outer jar dilute sulphuric acid.

BUNT or BRAND (*Tilletia caries*). Fungoid pest of barley, wheat, and maize. It converts the grains into a black, stinking mass. Bunt consists of innumerable microscopic spores, which spread the disease. Pickling the seed corn is the best preventive.

BUNTER BEDS. Red sandstones and pebble beds of from 1,000 ft. to 2,000 ft. in thickness. They form the lower portion of the Triassic rocks of Britain, and occupy considerable areas in Devonshire and more particularly in the Midlands, being one of the chief water-bearing deposits from which many large Midland towns obtain their supply of water.

BUNTING (*Emberiza*). Name given to a number of small birds allied to the finches. Among them are the reed bunting, yellow-hammer, and ortolan. The Lapland bunting and snow bunting belong to other genera.

BUNTINGFORD. Town of Hertfordshire. It stands on the Rib, 17 m. N.E. of Hertford, on the L.N.E. Rly. Malt and leather are manufactured. Market day, Wed. Pop. 4,928.

BUNYAN, JOHN (1628-88). English author and preacher. Born at the hamlet of Harrowden, 1 m. from Elstow, Bedfordshire, he worked at his father's trade as a tinker, and took part in the Civil War, 1644-45, serving probably in the Parliamentary army. In 1648 he married. His wife's dowry consisted of two books, *The Plain Man's Pathway to Heaven* and *The Practice of Piety*, the reading of which contributed to his conversion a few years later.

John Bunyan,
English author
From an old print

Joining a nonconformist denomination in Bedford, 1653, he became a recognized preacher, 1657, and was convicted in 1660 under the law that forbade unauthorised preaching. As he steadily refused to renounce the right to preach he spent the next twelve years in Bedford county gaol, during which he wrote *Grace Abounding to the Chief of Sinners*, 1666, and other works. Bunyan underwent a second imprisonment in 1675, and

it was probably during this that he began *The Pilgrim's Progress*. The rest of his life was devoted to preaching, writing (his books number about sixty), and religious controversy. He died Aug. 31, 1688, and was buried in Bunhill Fields. Of his literary works *The Pilgrim's Progress* is immeasurably the greatest. There are memorials of him at Bedford. Consult Life, John Brown, 1887.

BUOY (late Lat. *boia*, chain). Floating structure of wood or iron, anchored in rivers, estuaries, and coastal waters as an aid to navigation. Buoys vary in shape, and are otherwise distinguished by coloured stripes and chequers, or by a plain ground of a distinctive hue. In bell buoys and light buoys the greater part showing above water is constructed like a cage the bell being rung by the motion of the water, and the light supplied by a charge of gas or oil contained in the body of the buoy and renewed periodically. Mooring buoys, attached to heavy sinkers, vary in size according to the vessels intended to use them, and are surmounted by an iron ring, to which the mooring ship's cable is made fast. See illus. below.

BURBAGE, RICHARD (1567-1619). English actor. The son of James Burbage, an actor and the builder of the first English theatre, he made his first appearance at his father's theatre, Shoreditch, as a boy. He joined the earl of Leicester's company of players, later known as the earl of Derby's company, then as the Lord Chamberlain's company. He created all the greater parts written by contemporary dramatists. The first mention of his association with Shakespeare refers to Christmas, 1594, when he and two other members of his company, William Kempe and William Shakespeare, were summoned to act in two interludes before Queen Elizabeth at Greenwich Palace on Dec. 27 and 28. He died March 13, 1619. Consult Burbage and Shakespeare's Stage, C. C. Stopes, 1913.

Gallery

Booy. 1 and 3. Can or port-hand buoys. 2. Spherical buoy marking shallows. 4. Anchor buoy. 5. Mooring buoy. 6. Method of mooring buoys. 7. Conical or star-board-hand buoy. 8. Wreck buoy. 9. Drum (mooring) buoy. 10. Bell buoy. 11. Bell and gas buoy. See above

BURBANK, LUTHER (1849-1926). American naturalist. Son of a farmer, he was born March 7, 1849. Turning his attention to the possibilities of improving the quality of seeds, he made numerous experiments in the direction of selection and cross-fertilisation. One of

his successes was the Burbank potato, and others included new varieties of fruits, flowers, and vegetables. From 1875-93 he had a nursery at Santa Rosa, California, afterwards devoting his time wholly to plant breeding. He died April 11, 1926.

Burbot (late Lat. *borba*, mud) Variant name of the eel-pout (q.v.).

BURDEKIN. River of N.E. Queensland, Australia. Rising in Seaview range, it flows past Charters Towers and Ravenswood, and empties into Upstart Bay. It is 350 m. long.

BURDEN. Term used in Scots law for a charge on property. It may be either heritable or movable, i.e. real or personal estate, and to make it legal the essential facts must be contained in a deed. In the case of landed property this must be registered in the register of sasines, Edinburgh.

BURDETT, SIR FRANCIS (1770-1844). British politician. Born Jan. 25, 1770, he married in 1793 Sophia, daughter of the banker, Thomas Coutts. In 1796 he was elected M.P. for Boroughbridge, and in 1797 succeeded his grandfather as 5th baronet. For the next 30 years, in and out of the House of Commons, he was a prominent advocate of parliamentary reform, prison reform, and freedom of speech. He died Jan. 23, 1844.

BURDETT-COUTTS, ANGELA GEORGINA BURDETT-COUTTS, BARONESS (1814-1906). British philanthropist. She was born April 21, 1814, and was the youngest daughter of Sir Francis Burdett, son-in-law of Thomas Coutts, the banker. In 1837 she inherited a large fortune from the duchess of St. Albans (the popular actress, Harriet Mellon), Thomas Coutts's second wife. Created a peeress in 1871, in 1881 she married William Lehman Ashmead-Bartlett (1851-1921), who took the name of Burdett-Coutts. She died Dec. 28, 1906. She spent vast sums on improving the housing of the poor, and supported hospitals, etc.

Baroness Burdett-Coutts,
British philanthropist

BURDOCK. Coarse biennial herb (*Arctium lappa*) of the order Compositae. It is a native of Europe and N. and W. Asia. The lower leaves are 1 ft. across, heart-shaped, and densely coated with white hairs on the underside. The stem is about 4 ft. with lance-shaped leaves, and terminates in branches which bear spherical thistle-like flower-heads closely invested with slender, stiff bracts ending in hooked points. In Japan this herb is cultivated as a vegetable.

Burdock or comfrey,
biennial herb

Bure. River of Norfolk. Rising near Hindolveston, it joins the Yare at Yarmouth. It is 50 m. long, and is navigable to Aylsham.

BUREAU (Old Fr. *burel*, baize). Form of writing desk, also called a secretary, introduced in the reign of Louis XIV (see illus. p. 324). Bureaux are compound pieces, the base being a chest of drawers, the middle portion provided with a slanting ledge, hinged at the base, and opening out to form a writing desk, revealing a nest of small drawers or niches.

By an association of ideas bureau came to mean an office or department, e.g. a bureau de change, and this use was transferred to the United Kingdom, where there have sprung up labour, information, and other bureaux.

BURETTE (French, cruet-bottle). Cylindrical glass tube upon which is engraved a scale in cubic centimetres and sub-divisions

indicating the fluid contents of the instrument. The lower end is narrowed and fitted with a glass tap or a short length of rubber tubing upon which presses a pinch-cock. The zero of the graduations is at the upper end, so that when liquid is allowed to escape the amount can be read off on the scale. The burette is used in the volumetric system of analysis.

Burette

BURFORD. Market town of Oxfordshire. It is on the Windrush, 17 m. from Oxford. With beautiful old houses and inns, it is one of the most picturesque places in the country. The fine church of S. John has a number of chapels and some interesting monuments. There is a grammar school, founded in the 16th century. Market day, Sat. Pop. 1,050. Burford Bridge, in Surrey, is near Box Hill (q.v.).

BURGENLAND. Province of Austria. Since 1647 part of Hungary. It was transferred to Austria by the peace treaties of 1919-20. This led to a good deal of unrest, and in 1921 a plebiscite was held to decide the fate of Oedenburg (Sopron) and other parts. The voting was in favour of Hungary, and after further disorder the decision was carried out, and this area was separated from Burgenland. Burgenland proper, which is a province of Austria, covers 1,532 sq. m. and has 286,000 inhabitants. Eisenstadt is the capital.

BURGESS. Originally one who lived in a burg or borough. In England, since the 13th century, the term has been applied to those entitled to vote at elections for members of Parliament. It is also used sometimes for the members sent to Parliament by the boroughs. The latter meaning spread to the English colonies in America; in Virginia and Maryland, for instance, the elected representatives were known collectively as the House of Burgesses. In certain towns in New England the chief magistrate is called the burgess. See Borough.

BURGESS, THOMAS WILLIAM (b. 1866). British swimmer. Born in Yorkshire, he settled in France, where he made motor tires. After 15 unsuccessful attempts to swim the English Channel, he succeeded when, on Sept. 5, 1911, at 11.15 a.m., he entered the water between the South Foreland light-house and St. Margaret's Bay, and touched bottom to the E. of Cape Grisnez at 9.50 next morning.

Bureau of marquetry work, French style of Louis XV. See p. 323.

BURGESS HILL. Urban dist. of Sussex. It is 9 m. N. of Brighton, on the Southern Rly. The church of S. John, built in 1863, is in the Early English style. An annual sheep fair is held. Pop. 6,000.

BURGH. Scottish equivalent of the English word borough. Royal burghs (70 in 1707) received their charters from a king; burghs of regality and burghs of barony were dependent on some lord, bishop, or baron. To-day the three classes are usually grouped together, as the difference disappeared in 1747. Two newer classes arose after 1832; parliamentary

burghs, those that then obtained the right of sending a member to parliament, or of naming with others to do so; and police burghs, places which obtained the right to elect a council to look after the drainage, lighting, etc., of their town, including all that is meant in Scotland by the word police. Since the 12th century commissioners from the burghs have held a yearly convention in Edinburgh.

Borghley House, Stamford, the Northamptonshire mansion of the Marquess of Exeter. See below Valentine

BURGH, HUERT DE (d. 1243). Chief justiciar of England. He was chamberlain to King John in 1201, and in 1215 became justiciar. In 1217 he inflicted a severe naval defeat on the French off Dover. He was the foremost man in England from 1219-31, especially during the minority of Henry III. and his whole policy was to keep the government in English hands. He died May 12, 1243.

BURGHES. The name given to members of the Associate or Burgher Synod in Scotland in the 18th century. This associate synod of Scottish Presbyterians, though they had seceded from the main body on the question of patronage, still took the burghess oath to maintain the religion authorised by the laws of the realm. To this the anti-burghers objected, and formed themselves into the general associate synod. Both synods, after being further divided, drew together again, increased in membership, and became in 1847 the United Presbyterian Church. See Auld Lights.

BURGHLEY OR BURLEIGH, WILLIAM CECIL, 1ST BARON (1520-98). English statesman. Born at Bourne, Lincolnshire, Sept. 13, 1520, he entered public life in 1548 as secretary to Somerset, and on his master's fall was sentenced to two months' imprisonment in the Tower. A year later he returned to office as secretary of state, and in 1551 was knighted. During Mary's reign he conformed to Catholicism, but was in communication with the Princess Elizabeth, whose confidence he gained.

On her accession in 1558 Elizabeth made Cecil her secretary of state, and he remained throughout her life her most trusted adviser. Created Baron Burghley in 1571, and K.G. in 1572, he was lord high treasurer from 1572 until his death, Aug. 4, 1598. He devoted much time and money to beautifying Burghley House (see above), Theobalds, in Herts, which his son exchanged for Hatfield, and Cecil House, in the Strand. His eldest son, Thomas, was created earl of Exeter in 1605. The title of Viscount Burghley is now borne by the eldest son of the Marquess of Exeter. See Exeter; Hatfield.

William Cecil, 1st Baron Burghley Painting by Gerard

BURGHLEY HOUSE. Seat of the marquess of Exeter. It stands in Northamptonshire, near the Welland, about a mile from Stamford. It was built by the great Lord Burghley in the 16th century, and in it some remains of an old minster were incorporated. It contains many fine pictures, ceilings by Verrio, and some carvings by Grinling Gibbons. See illus. above.

BURCKMAIR OR BURCKMAIR, HANS (1473-1551). German painter and engraver. Born at Augsburg, he studied under Albrecht Dürer. His principal merit lies in his engraved works, in the style of Dürer, particularly in the series representing the triumphs of his patron, the emperor Maximilian I.

BURGLARY. In English law, breaking and entering into a dwelling-house by night, with intent to commit a felony. When committed by day, the offence is known as house-breaking. At common law night meant between sunset and sunrise, but by the Larceny Act, 1861, it is limited to the hours between 9 p.m. and 6 a.m. The same Act makes it burglary to break out of a dwelling house at night after having committed a felony therein.

BURGOMASTER (Dutch *burgemeester*). Title of the chief magistrate of a Dutch, German, or Belgian town. The office nearly corresponds to that of mayor in England and provost in Scotland, but the German burgomaster is a paid official. Burgomaster is also a sailor's name for a species of gull.

BURGOS. City of Spain, capital of the prov. of Burgos. On the river Arlanzón, 230 m. by rly. N. of Madrid, on the Irun-Paris

Burgos. Facade of the cathedral, which took 300 years to build. The towers were completed in 1459

line, formerly the capital of Castile, it is the see of an archbishop. The Gothic cathedral, founded in 1221 and completed in 1567, is one of the finest in the world. Pop. 33,286.

BURGOYNE, JOHN (1722-92). British soldier, dramatist, and politician. Born Feb. 24, 1722, he was sent to Canada with instructions to join forces with Howe in New York in 1777. His army was badly equipped and much under strength, and though he took Ticonderoga he was compelled to surrender at Saratoga. On his return to England he defended himself in Parliament and in pamphlets. His comedy, *The Heiress*, 1786, achieved success. He died June 3, 1792.

Sir John Fox Burgoyne (1782-1871), a natural son of General Burgoyne, served in the Peninsular War, 1808-13, and played a conspicuous part in the Crimean War, especially at the siege of Sevastopol. He was made a baronet in 1856, and a field-marshal in 1868. He died Oct. 7, 1871.

BURGUNDY. Name applied at different times to different districts, kingdoms, duchies, and counties in the E. and S.E. of France and the adjacent parts of Switzerland. They were all in the neighbourhood of the valleys

of the Rhône and Saône, and around the cities of Dijon, Besançon, Geneva, Lyons, Arles, and Vienne. The name Burgundy is still borne in a general way by the district.

The name comes from the Burgundians, a Teutonic tribe who about 400 founded a kingdom which extended along the valleys of the Rhône and the Saône from Dijon to the sea. About 880 a certain Boso founded the kingdom of Burgundy or Provence. About ten years later another Burgundy was founded to the N., and as the two were separated by the Jura they are sometimes called Cisjurane and Transjurane Burgundy. In 937 these two Burgundies were united into one state. In 1032 its king died childless, leaving it to Conrad II. Thus this Burgundy became part of Germany, and its crown was one of the four worn by the medieval emperors. The kingdom is often called Arles, from its capital.

Franche Comté, or the free county of Burgundy, was part of Arles, and then of the duchy of Burgundy. In 1679 it was ceded to France. Its capital was Besançon.

More important was the great medieval duchy of Burgundy. This lay around Dijon and was at first part of France. In 1363 King John II gave it, as a duchy, to his son Philip, who made it a powerful and almost an independent state. He and his son John were the heads of the Burgundian party who fought the Orleanists for the control of France. Philip's successors were also persons of importance in Europe, and the strongest of them, Charles the Bold, nearly succeeded in making Burgundy into a kingdom. His death in 1477 ended his ambitions, and in 1482 the French king seized the duchy, which was a province of France until the Revolution.

BURGUNDY. Burgundy is the generic name of wines grown in E. France, in the old prov. of Burgundy, where the soil is impregnated with iron. The region of Côte d'Or produces the finest. Burgundies are either white or red, but the red predominate. The chief export centre is Beaune. Wines of this type are produced in Australia and California.

BURGUNDY MIXTURE. Liquid for the destruction of fungus, sometimes called soda Bordeaux mixture. It is a solution of copper sulphate and sodium carbonate, and is applied to the under surface of leaves.

BURIAL. Interment in the ground of the bodies of dead persons, an alternative method being cremation. In Great Britain it is usually, but not invariably, accompanied by religious rites. By law bodies can only be buried in churchyards, cemeteries, or other ground set aside for the purpose. Nonconformists can be buried in the churchyard of the parish in which they have lived. Cemeteries are usually provided by town and other councils, and are often divided into Anglican and Nonconformist portions. Jews and others have their own burial grounds. Before a body can be buried a certificate of death must be obtained from a registrar or an order from a coroner. There are special conditions in the case of stillborn children and special procedure for children whose lives have been insured for burial payments. See Cremation.

BURIN. Town and port of Newfoundland. On the E. coast of Burin peninsula, it is a fishing centre. The peninsula extends for about 75 m. between Placentia Bay and Fortune Bay. Pop. 3,500.

BURKE, EDMUND (1729-97). British statesman and writer. Born in Dublin, Jan. 12, 1729, he was educated at Trinity College, Dublin. Having moved to London, he began to write, and first attracted attention by his Vindication of Natural Society. He wrote for The Annual Register, joined the circle around Johnson, and in 1756 became secretary to the Whig premier, Lord Rockingham, and M.P. for Wendover. From 1774-80 he represented

Bristol, and from 1780-84 Malton. In 1782 and 1783 he was paymaster-general, but he never received higher office, although almost to the end he remained the most powerful influence among the Whig leaders and a constant, if dreary, participator in debate. The other chief events of his parliamentary career were his friendship with Fox, broken in 1793, and his share in the impeachment of Hastings. In 1792 he received a pension, and he died, just after his only son, July 8, 1797.

Edmund Burke,
British statesman
Portrait by Sir J. Reynolds

He was buried in the church at Beaconsfield, where was his residence, Gregories.

Burke's fame depends rather upon his writings, the most illuminating of their kind since Aristotle. They deal with the American colonies, India, financial and parliamentary reform, and finally the French Revolution. Consult Life, John Morley, 1880.

His kinsman, William Burke (d. 1798), was under-secretary of state in Rockingham's ministry, 1766-68, and was Whig M.P. for Great Bedwin, Wilts, 1766-74.

BURKE, SIR JOHN BERNARD (1814-92). British genealogist. Born in London Jan. 5, 1814, son of the compiler of the Peerage and Baronetage, he was appointed Ulster king-of-arms in 1853, and in 1854 was knighted. He annually re-edited his father's Peerage from 1847 until his death, at Dublin, Dec. 12, 1892. His own works include The Roll of Battle Abbey, 1848, and The Book of Precedence, 1881.

BURKE, ROBERT O'HARA (1820-61). Irish explorer. Born in co. Galway and educated in Belgium, he served in the Austrian army. In 1853 he emigrated to Australia, and was appointed police inspector in Victoria. In 1860 he led an exploring expedition across Australia from S. to N., but died of starvation on the return journey, June 28, 1861, his companion Wills surviving him only a few days. The bodies of Burke and Wills were recovered and taken back to Melbourne. Statues to them were afterwards erected in Melbourne.

BURKE, THOMAS (b. 1890). British vocalist. Born in Lancashire, he was the son of a miner, and went into the pits, but his remarkable voice led him to study music at Milan. In May, 1919, he sang for the first time at Covent Garden, London.

BURKE, WILLIAM (1792-1829). Murderer and bodysnatcher associated with William Hare. Having sold a dead body to Dr. Robert Knox of Edinburgh, the two kept him supplied with bodies by inveigling people into Hare's lodging house and killing them. On suspicion being aroused, Hare turned king's evidence, and Burke was hanged Jan. 28, 1829. Their victims were made drunk and then suffocated without violence; hence arose the use of the verb to burke, meaning quietly to suppress anything. See Bodysnatching.

BURLEIGH, BENNET (b. 1840-1914). British war correspondent. Born at Glasgow, he fought on the Confederate side in the American Civil War. He represented The Daily Telegraph in some 25 campaigns from 1882-1913. He was the author of The Empire of the East, 1905, and died June 17, 1914.

Burlescombe. Village of Devonshire. It is 8 m. E.N.E. of Tiverton, on the G.W.R. It has remains of a priory. Pop. 620.

BURLESQUE (Ital. burlesco, absurd). In dramatic and other literature, a ludicrously exaggerated perversion of a serious or pretentious original; more for the purpose of getting fun out of it than of satirising it. It is allied to parody, but is concerned more with the matter than the manner of its original.

BURLEY. Urban district of Yorkshire (W.R.), called Burley-in-Wharfedale. It stands on the Wharfe, 3 m. from Ilkley, and has stations on the L.N.E. and L.M.S. Rlys. There are textile mills. Pop. 3,800.

BURLINGTON, EARL OF. British title borne by the duke of Devonshire. The 4th duke, who succeeded in 1755, married the daughter of Richard Boyle, 3rd earl of Burlington and Cork, who brought the Irish estates into the family. The title was given in 1831 to George Augustus Cavendish, a younger son of the 4th duke, and the builder of the Burlington Arcade, London. He inherited the great wealth of his uncle, Lord Frederick Cavendish (1729-1803), and was succeeded by his grandson William, who in 1858 became duke of Devonshire. See Devonshire, duke of.

BURLINGTON HOUSE. Public building in Piccadilly, London. It consists of two parts, Old and New. Old Burlington House was built by Richard Boyle, 3rd earl of Burlington, early in the 18th century, and was purchased by the Government for £140,000 in 1854. Since 1866 it has been lent to the Royal Academy of Arts, and here the Academy holds its yearly exhibition of new pictures. There is also a permanent collection of pictures, the Diploma Gallery, and the Gibson collection of statuary. New Burlington House, to the S., was built by the Government in the grounds of the original house. It houses the Royal Society, with its valuable collection of books, MSS., portraits and other relics; the British Association (q.v.) and other learned bodies. (See Academy.)

Burlington House, London, where the Royal Academy exhibitions are held

The Burlington Fine Arts Club is a society of practitioners, connoisseurs, and others specially concerned in fine arts. It was founded in London in 1866. Meetings are held at 17, Savile Row, W.

BURMA. Country of Asia, the largest and easternmost prov. of British India. It is bounded N. by Tibet, S. by the Indian Ocean, E. by China, Indo-China, and Siam, and W. by Assam, Bengal, and the Bay of Bengal. Its area is 262,732 sq. m. Of this Burma proper covers 184,102 sq. m.; the Shan States cover 62,305 sq. m.; and 16,325 sq. m. are unadministered. The most important towns are Rangoon, the capital, and Mandalay. Pop. 13,212,192.

The chief rivers are the Irrawaddy and its tributaries, and the Salween. Buddhism is the prevailing religion. Rice is the most important crop, others being millet, maize, sesame, cotton, tobacco, and rubber. The forests yield immense quantities of timber, especially teak.

As early as 1612 the East India Company had factories at Syriam, Prome, and Ava. The first Burmese War began in March, 1824. In Feb., 1826, the Burmans renounced

Burma. Silk-clad lady of high rank

all claims on Assam, ceded the provs. of Arakan, Mergui, Tavoy, and Ye, and paid an indemnity. The second war, in 1852, resulted

Burma. Map of the most extensive province of British India

in Lower Burma being annexed by the British. The third war was occasioned by the aggressive attitude of the Burmans under their king, Theebaw or Thibaw. A British force was organized in Oct., 1885, and taken up the Irrawaddy. Before the end of Nov. Mandalay was captured and Theebaw made prisoner. On Jan. 1, 1886, Upper Burma was annexed by Great Britain. The governor and two members of the executive council, of whom one is a Burman, are in charge of the reserved subjects, and the governor and two Burman ministers are in charge of the transferred subjects. The legislative council consists of 103 members, 80 elected and ex officio. See India;

consult also The Burman, his Life and Notions, J. G. Scott (pseud. Shway Yoe), 1896; In Farthest Burma, F. K. Ward, 1921; Burma: from the Earliest Times to the Present Day, J. G. Scott, 1924.

BURNABY, FREDERICK GUSTAVUS (1842-85). British traveller and soldier. Born March 3, 1842, at Bedford, he entered the Royal Horse Guards in 1859. Of enormous physical strength and an expert linguist, his military

career was punctuated by frequent periods of travel. In 1875 he conceived the idea of penetrating Central Asia, access to which was denied by the Russians to Europeans, and his well-known book, *A Ride to Khiva*, 1876, contains an account of his 300-mile ride in 1875 across the frozen steppes. He was killed at Abu Klea, Jan. 17, 1885.

BURNAND, SIR FRANCIS COWLEY (1836-1917). British journalist and dramatist. Born in London, Nov. 29, 1836, he made in 1863 his first contribution to *Punch*, of which he was editor from Aug., 1880-Feb., 1906. Of his stage burlesques and light comedies, *Black-Eyed Susan* and *The Colonel* were the most successful. He wrote many parodies, and issued his *Records and Reminiscences*, 1904. His most popular contribution to *Punch* was his series of *Happy Thoughts*. He died April 21, 1917.

Frederick Burnaby, British soldier

A baronetcy was conferred upon him in 1894. He died June 17, 1895.

His son Philip (1861-1926), the second baronet, was also an artist. Consult *Memorials of Burne-Jones*, by his widow, 1904.

BURNET (Poterium sanguisorba). Perennial rosaceous herb. It has a rosette of long leaves divided into stalked, coarsely toothed, oblong leaflets, which give out the odour of cucumber when bruised. The flowering stems grow to a height of 2 ft., and bear rounded heads of small purplish flowers. The herb is a native of poor chalky soil.

BURNET, GILBERT (1643-1715). British historian and prelate. Born at Edinburgh, Sept. 18, 1643, he became parish minister at Saltoun, and in 1669 was appointed divinity professor at Glasgow. In 1674 he became chaplain to Charles II. A staunch Whig, his defence of Lord William Russell cost him his chaplaincy, the Rolls, and his lectureship, and on the accession of James II he retired to the Continent. Invited to the Hague, 1687, he won the favour of William of Orange, and was closely associated with the preliminaries to the invasion of 1688. Made bishop of Salisbury in 1689, he had charge of the succession bill of 1701, and in Anne's reign secured for the Church of England the funds afterwards called Queen Anne's Bounty (q.v.). He died March 7, 1715. Burnet's best work is the *History of My Own Time*, 1724-34.

Sir E. Burne-Jones, British painter

Fred Holtger

BURNE-JONES, SIR EDWARD COLEY, BART (1833-98). British artist. Born Aug. 28, 1833, at Birmingham, he was educated at King Edward's School, Birmingham, and at Exeter College, Oxford, intimate friend William Morris, with some kindred spirits, formed a little group called The Brotherhood. Burne-Jones came under Rossetti's influence in 1855, and at his suggestion began his career as an artist, first in Rossetti's studio, and later under his constant guidance. His earliest important work was in water colour, and the opening of the Grosvenor Gallery in 1877 first brought him into public notice. Some of his best known works include *Merlin and Vivien*, *The Golden Stairs*, *The Wheel of Fortune*, *The Depths of the Sea*, *The Merciful Knight*, *The Mirror of Venus*, and *Love Among the Ruins*. Burne-Jones also prepared cartoons for stained glass windows, as a rule carried out by William Morris, and illustrations for books published by the Kelmscott Press, notably for the Morris edition of Chaucer.

career was punctuated by frequent periods of travel. In 1875 he conceived the idea of penetrating Central Asia, access to which was denied by the Russians to Europeans, and his well-known book, *A Ride to Khiva*, 1876, contains an account of his 300-mile ride in 1875 across the frozen steppes. He was killed at Abu Klea, Jan. 17, 1885.

In 1674 he became chaplain to Charles II. A staunch Whig, his defence of Lord William Russell cost him his chaplaincy, the Rolls, and his lectureship, and on the accession of James II he retired to the Continent. Invited to the Hague, 1687, he won the favour of William of Orange, and was closely associated with the preliminaries to the invasion of 1688. Made bishop of Salisbury in 1689, he had charge of the succession bill of 1701, and in Anne's reign secured for the Church of England the funds afterwards called Queen Anne's Bounty (q.v.). He died March 7, 1715. Burnet's best work is the *History of My Own Time*, 1724-34.

BURNETT, FRANCES ELIZA HODGSON (1849-1924). Anglo-American novelist and dramatist. Born at Manchester, Nov. 1849, she went to the U.S.A. in 1865, and published her first story, *Miss Carruthers' Engagement*, in 1867. She depicted Lancashire life in *That Lass o' Lowrie's*, 1877, her first success, and *Haworth's*, 1879; and described the American girl abroad in *A Fair Barbarian*, 1881, and *The Shuttle*, 1907. She achieved great popularity with her sentimental story *Little Lord Fauntleroy*, 1886. She died Oct. 29, 1924.

BURNET, SIR CECIL (1858-1929). British sailor. Born May 15, 1858, the son of a naval officer, he entered the navy in 1873. He served in Egypt, 1882, and the Sudan, 1884, and in July, 1914, having held other high commands and been knighted, he was in control of the Channel Fleet. In Dec. he was made second in command of the Grand Fleet, and in Marlborough he led the first battle squadron at Jutland. His later posts were second sea lord, 1916-17, and commander-in-chief east coast of Scotland, and then Portsmouth, 1917-20. He died June 5, 1929.

BURNETT, SIR CHARLES DENNISTON (b. 1888). British sailor and inventor. Born Dec. 28, 1888, the eldest son Sir Cecil Burnet, he served in the Navy from 1905 to 1923. During the Great War he invented the explosive paravane for destroying enemy

submarines and the protector paravane for protecting vessels from mines. Unionist M.P. for Uxbridge, 1922-29, he devoted his energies in civil life to airship and housing improvements. As managing director of the Airship Guarantee Company he was responsible for the construction of the R 100 at Howden. He succeeded his father in the haronety, June 5, 1929, and published *The World, the Air and the Future*, 1929. See Airship.

BURNEY, FRANCES (1752-1840). British novelist, better known as Fanny Burney. Born June 13, 1752, at King's Lynn, her first novel, *Evelina: or the History of a Young Lady's Entrance into the World*, published anonymously in 1778, was hailed with enthusiasm by Dr. Johnson and his circle. Of its successors, *Cecilia*, 1792, and *Camilla*, 1796, were very popular, the house known as Camilla Lacey, Surrey, destroyed by fire in 1919, being built out of the profits of the latter book. She married a French émigré, General d'Arblay (d. 1818), in 1793, and died in London, Jan. 6, 1840, leaving journals and letters. Consult *Fanny Burney*, H. Austin Dobson, 1903; *Diary and Letters*, ed. C. Barrett, 6 vols., 1904-5.

Her father, Charles Burney (1726-1814), is famous for his *History of Music*, 1776-89.

BURNHAM; EDWARD LEVY LAWSON, BARON (1833-1916). British journalist. Born in London, Dec. 28, 1833, the eldest son of J. M. Levy, he joined his father in conducting *The Daily Telegraph* when a youth. In 1855 he became its editor and chief proprietor and under his direction the paper became very popular and prosperous. In 1875 he took the name of Lawson; in 1892 he was made a baronet, and in 1903 a baron. He retired in 1904 and died Jan. 9, 1916.

Burnham's son and successor, Harry Lawson Webster Lawson, born Dec. 18, 1862, became proprietor of *The Telegraph* on his father's retirement. He was a Unionist M.P. for many years. Created a viscount in 1919 and G.C.M.G. in 1927, he sold *The Daily Telegraph* to Lord Camrose in 1928.

BURNHAM BEECHES. Picturesque sylvan tract in Buckinghamshire. It is 5 m. by rly. from Slough, with station 2 m. N. on the G.W.R. A remnant of an ancient forest, it was bought by the corporation of the city of London in 1879, and is open to the public.

BURNHAM-ON-CROUCH. Urban dist. and watering place of Essex. It is on the N. shore of the Crouch estuary, 43 m. E.N.E. of London, on the L.N.E.R. Oysters are cultivated and it is a yachting centre. Pop. 3,433.

BURNIE. Coast town and harbor of Tasmania. It is on Emu Bay, 91 m. by rly. N.W. of Launceston and 210 m. by sea S. of Melbourne. It is now a centre of the pulp and paper making industry. Pop. 2,000.

BURNLEY. County borough of Lancashire. At the junction of the Burn and Calder, 27 m. N. from Manchester, and 212 m. N.N.W. from London, it is served by the L.M.S. Rly. and the Leeds and Liverpool Canal. It is engaged in cotton spinning and weaving, and has machinery works, brass foundries, and

breweries: near by are coal mines and slate quarries. The 14th century church of S. Peter contains a monument to Charles Towneley (d. 1805), whose collection of marbles is in the British Museum. The town hall, market hall, technical school, school of science, and Victoria Hospital are among the chief buildings. In Towneley Park is a museum and art gallery. The grammar school was founded during the reign of Edward VI. Market days, Mon. and Sat. Pop. 99,270.

Burnley possesses a famous Association football club. Founded in 1881, this won the Association Cup in 1914 and the League Championship in 1924. The ground is at Turf Moor.

BURNOUS OR **BURNOOSE** (Arab. burnus, hooded cloak). Loose, full cloak, worn by the Arabs. Usually white, it has a hood resembling that of a Capuchin monk.

BURN. Injury caused by the action of dry heat or flame upon the skin. A severe burn produces generalised as well as local symptoms. Shock may be present, and may be followed by collapse and death. If the patient recovers from the initial shock, septic infection of the burn may develop and result in general blood poisoning. The severity of the effects of a burn depends not only upon its depth, but also upon the area of skin involved.

For severe burns, a dressing of sterilised gauze or lint soaked in a solution of picro acid, two grains to the ounce, is useful. In deep burns the area should be bathed with an antiseptic solution, and then covered with lint or gauze soaked in eucalyptus oil or weak carbolised oil. To combat shock, the patient should be put to bed with hot-water bottles round the body. In the process of healing, contraction of a limb, due to the formation of dense scar tissue, can be prevented by splints.

BURNS, JOHN (b. 1858). British politician. Born in London, Oct., 1858, he served an apprenticeship as an engineer, and for a time was in West Africa. A student of economics, he became a socialist, and stood for Parliament. In 1888 he was sentenced to imprisonment for resisting the police over the right of public meeting in Trafalgar Square. In 1889 he was a leader in the London dock strike.

In 1889 Burns was elected to the first London County Council. Three years later he became Labour M.P. for Battersea, and was again returned in 1895, 1900, 1906, and 1910. In 1905 he entered the Liberal cabinet as president of the Local Government Board, and was made a privy councillor. He held this post until 1914, when he was transferred to the Board of Trade. Resigning office on the outbreak of the Great War, he retired from Parliament in 1918.

BURNS, ROBERT (1759-1796). Scottish poet. Born Jan. 25, 1759, in a cottage at Alloway, Ayrshire, Burns was the eldest son of William Burnes, a small farmer. Studious habits were fostered by his father, and

the boy became early acquainted with the English classics.

His first song was written at the age of sixteen, but not until his twenty-fifth year did the exceptional potency of his genius begin to manifest itself. After his father's death, Feb. 13, 1784, he, his brother, and two sisters combined in leasing the farm of Mossgiel, near Mauchline. During this period he wrote, in addition to the *Jolly Beggars*, the bulk and best of the pieces of the *Kilmarnock* volume published on July 20, 1786. Within a month the whole 600 copies printed were sold, and kindled the enthusiasm of all Ayrshire.

Lack of farming success and a double love entanglement with Jean Armour, by whom he had a child, and with Mary Campbell led

him to resolve upon emigration to Jamaica, but his plans were changed by the death of Mary and by the prospect of publishing a second edition of his poems in Edinburgh. To secure

this, Burns resolved to journey thither, and the chief Edinburgh publisher, William Creech, was induced by the earl of Glencairn to bring out the volume. As many as 3,000 copies were sold, and Burns obtained £500.

Having renewed his relations with Jean Armour, he acknowledged her as his wife, and settled in 1788 on the farm of Ellisland, Dumfriesshire. This was not, however, a successful venture, and in the autumn of 1791 he quitted the farm for an excisemen's post at Dumfries, at a salary of £70, which was raised to £90 when, in 1792, he was promoted port officer. Exposure to the weather brought on the illness which ended in his death at Dumfries, July 21, 1796.

BURNTISLAND. Burgh of Fifeshire. It is on the Firth of Forth, 20 m. by rly. N. of Edinburgh by the L.N.E. Rly. It is connected with Granton, 5 m. distant, by steamboat ferry. A summer resort, with golf links, it has an excellent harbour. The 16th century parish church is built in the form of a square, and is surmounted by a short, irregular tower. Pop. 6,567.

BURR, AARON (1756-1836). American politician. Born at Newark, New Jersey. Feb. 6, 1756, he served in the War of Independence and then took part in politics. Defeated in his candidature for the governorship of New York in 1804, he threw the blame on Hamilton, and shot him in a duel. Twice tried for treason and twice acquitted, in 1806 and 1808, Burr then retired to Europe. He died Sept. 14, 1836. Consult *Life*, H. G. Merwin, 1899; *The Aaron Burr Conspiracy*, W. F. McCaleb, 1903.

BURR or **BUR**. In botany, any prickly or spiny calyx, involucre, or fruit. The principal example is the involucre of the burdock. In Scotland the term is applied to the thistle-head and to the fir-cone. In metal work, it is employed for the rough edge on metal caused by punching or hammering.

BURRARD INLET. Deep, narrow arm of the Strait of Georgia, in S.W. British Columbia. Nine m. long, it forms one of the best natural harbours on the Pacific coast. It abounds in fish, and game is plentiful along its shores. Vancouver stands on its S. shore.

BURRITT, ELIHU (1811-79). American philanthropist and linguist—called the learned blacksmith. He was born at New Britain, Connecticut, Dec. 8, 1811, and became a blacksmith. His study of the Bible inspired him with the desire of reading it in Greek, Hebrew, and other versions, and he is said to have acquired a knowledge of some 50 languages. He died at New Britain, March 7, 1879.

Elihu Burritt,
American philan-
thropist

BURSAR (Lat. bursa, purse). Treasurer, especially of a college, school, or other institution. In Scotland the term refers to a student who holds a bursary, or scholarship.

BURSLEM. Part of Stoke-upon-Trent, formerly a separate borough. It is 20 m. N.E. of Stafford, on the Grand Union Canal and the L.M.S. Rly. The manufacture of pottery was begun here in 1644, and it was the birthplace of Josiah Wedgwood. The Wedgwood Institute (1865) comprises a school of art, museum, and library. Market days, Mon. and Sat. Pop. 42,442. See Stoke-upon-Trent.

BURT, THOMAS (1837-1922). Labour politician. Born in Northumberland, Nov. 12, 1837, he started work in the coal mines at the age of ten. He was secretary of the Northumberland Miners' Association, 1865-1913, Labour M.P. for Morpeth, 1874-1918, and parliamentary secretary of the Board of Trade in the Liberal ministry, 1892-95. He died April 13, 1922.

Thomas Burt,
Labour politician
Russell

BURTON, JOHN HILL (1809-81). Scottish historian. Born at Aberdeen, Aug. 22, 1809, he completed, in 1870, his History of Scotland, begun in 1853. Among his other works is The Scot Abroad, 1864. He died near Edinburgh, Aug. 10, 1881.

BURTON, SIR RICHARD FRANCIS (1821-90). British traveller. Born at Torquay, March 19, 1821, the son of an army officer, he entered the East Indian army as a cadet in 1842, and passed seven years in India. A master of Oriental languages, Burton embodied his experiences in many books. His exploits included a journey, disguised as an Afghan pilgrim, to Mecca and Medina in 1853, the discovery of Lake Tanganyika in 1858, a mission to Dahomé in 1864, and the exploration of the Gold Coast in 1882. He also travelled adventurously in S. America. He was a skilled swordsman, horseman, and shot, and a prolific writer. Burton's chief works include his Pilgrimage to El Medina and Meccah, 1855-56; and a privately printed literal translation of The Book of a Thousand Nights and a Night, 16 vols., 1885-88, re-

Sir Richard Burton,
British traveller

issued for household reading by Lady Burton, 1887-88, who also wrote his Life, 1893. He died Oct. 20, 1890. In 1921 the Burton Memorial Lecture Fund was established.

BURTON, ROBERT (1577-1640). English author. Born at Lindley, Leicestershire, Feb. 8, 1577, he was made vicar of S. Thomas's, Oxford, in 1616, and in 1630 rector of Segrave, Leicestershire, both of which livings he held until his death. Most of his life was spent in Oxford, where he died Jan. 25, 1640. Burton's The Anatomy of Melancholy, by Democritus Junior, 1621, ran through six editions in 30 years. It combines originality, humour, satire, and erudition with numberless quotations from the wisdom of all the ages.

English author
From a portrait at
Brasenose College

BURTON AGNES. Village of Yorkshire (E.R.), 6 m. S.W. of Bridlington, on the L.N.E.R. The church of S. Martin contains 14th cent. monuments. Burton Agnes Hall is a fine mansion in the Elizabethan style.

BURTON-UPON-TRENT. County borough of Staffordshire. It is on the river Trent and the Trent and Mersey Canal, 124 m. by rly. N.W. from London, with stations on the two main lines L.M.S. and L.N.E. Rlys. The seat of the Bass, Allsopp, and other breweries, Burton has been noted for ale for nearly 300 years, the industry benefiting from the sulphate of lime in the water. There are also engineering, rubber, and toy works. Market days, Thurs. and Sat. Pop. 48,930.

BURY. County borough of Lancashire. It stands high between the Irwell and Roche, 9 m. N. of Manchester, on the L.M.S. Rly. Its one-time important woollen industry has been superseded by the manufacture of cotton. There are calico printing, dyeing, paper making, iron and steel, and machinery works. Kay's free grammar school dates from 1726. The church of S. Mary was built in the 10th century. The art gallery and public library (1901) contains the Wrigley collection of paintings, engravings, and statuary. Market day, Sat. Pop. 56,770.

Bury has a noted football club. This won the Association Cup in 1900 and 1903.

BURY, JOHN BAGNALL (1861-1927). British historian and scholar. Born at Clogher, Ireland, he was made regius professor of modern history at Trinity College, Dublin, in 1893. In 1902 he was elected to the same professorship at Cambridge. His edition of Gibbon, 7 vols., 1896-1900, has superseded all others. His own writings include History of the Later Roman Empire, 1889; History of Greece, 1900; and History of Freedom of Thought, 1913. He died June 1, 1927. Pron. Bewry.

BURY ST. EDMUNDS. City and market town of Suffolk. It is on the Lark, 78 m. N.N.E. of London by the L.N.E.R. With the exception of the Norman tower or church gate (about 1120) and the beautiful decorated abbey gate (1337), little remains of the once magnificent Benedictine abbey. The old parish church of S. James, begun by Abbot Anselm, partly rebuilt in the 14th and 15th centuries, and completed in the reign of Edward VI. was in 1914 made the cathedral of the new

Bury St. Edmunds. Left, Abbey Gate. Right, tower or church gate, a fine example of Norman architecture

diocese of St. Edmundsbury and Ipswich. It was restored under the direction of Sir Gilbert Scott in the 19th century. S. Mary's church contains the tomb of Mary Tudor. Moyses Hall, now a museum, is a fine specimen of a Jew's house of the early 12th century. The grammar school, founded by Edward VI, was transferred to a new building in 1883. The town is a centre of the agricultural industry. It was at one time the capital of East Anglia, and was named after Edmund the Martyr, who was buried here. Market days, Wed. and Sat. Pop. 16,120.

BUSACO. Hamlet of Portugal, 20 m. N.N.E. of Coimbra. Here a battle was fought between the British and Portuguese on one side, and the French, Sept. 27, 1810.

BUSBY. Head-dress worn in the British army by hussars, horse artillery, artillery bandmen, and certain rifle corps. The busby was worn by officers of the Royal Engineers down to 1876. In 1929 an army order made the busby the head-dress for full dress for the R. Engineers and R. Artillery.

BUSH ANTELOPE or **BUSH BUCK** (Tragelaphus sylvaticus). One of the smaller African antelopes. Found from Abyssinia to the Cape, it is about the size of a goat, and the almost straight horns are about 12 ins. long. In colour it is reddish brown, plentifully marked with white spots and stripes.

Bush Antelope or bush buck, a small African antelope
W. F. Berridge, F.Z.S.

British dry measure of capacity, used for grain, potatoes, fruit, etc., containing four pecks or eight gallons. The imperial bushel, established in 1826, contains 2,181.91 cub. ins., or 80 lb. avoird. of distilled water. The smaller bushel of Canada and the U.S.A. is derived from the old Winchester bushel of 2,150.41 cub. ins.

BUSHEY. Urban district of Hertfordshire. It is 1½ m. S. of Watford and 16 m. by rly. N.W. of London, on the L.M.S. Rly. Here in 1882 Sir Hubert Herkomer founded an art school. Pop. 8,091.

BUSHEY PARK. Royal park in Middlesex. On the Thames, in Teddington parish, 14 m. by rly. S.W. of London, it adjoins the grounds of Hampton Court Palace, and contains the National Physical Laboratory. Its area is 1,110 acres. The triple avenue of horse chestnuts and limes was planted by William III.

BUSHIRE or **BENDER SHEHR**. Seaport of Persia. On a sandy penin-

Bushy of the
8th Hussars

sula on the N.E. shore of the Persian Gulf, about 125 m. S.W. of Shiraz, it has a large trade, especially with India, and is an important cable centre. Its harbour is accessible to vessels of 13 ft. draught. In Nov., 1914, Indian troops landed here to maintain order. On July 12, 1915, a force of Tangistani tribesmen attacked the British detachment, and a British force occupied the port and town, Aug.-Oct. Pop. 20,000.

BUSHMEN (Dutch Boschjesmans). The most primitive aboriginal race in S. Africa. Their physical characters, while resembling those of true negroes in the long head and bulging forehead, differ in their yellowish skin, straight face, shorter stature (5 ft.), and lack of the negro odour. A crossing with Bantu-speaking peoples produced the Hottentot race. Their skillful rock-engravings and cave-paintings bear a genetic resemblance to those of Palaeolithic Europe. See Anthropology.

Bushmen. Typical man of the race

BUSHRANGER. Australian term, originally applied to escaped convicts, or to one who subsisted in the bush by robbing under arms. In 1815 martial law was proclaimed in one district, and in New South Wales in 1830 and again in 1834 stringent repressive measures were taken. In their last exploit the Kelly gang, led by Ned Kelly (hanged in 1880), are said to have worn suits of rude armour.

BUSH SHRIKE or **ANT SHRIKE** (*Thamnophtilus*). Bird of S. America. There are several species, all found in the forests of Brazil. They feed upon ants and other insects.

BUSIRIS. Name of several mythical kings of Egypt, one of whom was the reputed founder of Thebes. According to the story in Apollodorus, during a famine Busiris was visited by a Greek soothsayer, who told him that the yearly sacrifice of a foreigner to the Greek god Zeus would put an end to it. Busiris promptly slew the soothsayer himself, and kept up the practice until he was killed by Hercules. Milton, *Paradise Lost*, i, 307, identifies Busiris with Pharaoh.

BUSKINS (old Fr. bousequin). High boots, worn at most periods from classical times onwards. They were made of various splendid materials in the Middle Ages, such as rich silk or velvet fastened from top to bottom with a running lace. In ancient Greek tragedy actors wore a thick-soled buskin or cothurnus of hide.

BUSTARD (old Fr. bistrarde; Lat. avis, bird; tarda, slow). Group of large, stoutly-built birds, of which there are nearly forty species, all found in the Eastern hemisphere. The common bustard (*Otis tarda*) occurs throughout central and southern Europe, and ranges across Asia to Japan. Formerly common in Great Britain, it is now only occasionally found in the S. counties. Standing over 3 ft. in height,

it is handsomely mottled with grey, brown, and black. It lives mainly on corn and young shoots, but will also devour frogs and other small animals. The nest is merely a hollow in the ground.

BUTCHER, SAMUEL HENRY (1850-1910). British scholar. Born in Dublin, April 16, 1850, he was a son of Rev. Samuel Butcher, afterwards bishop of Meath. In 1882 he became professor of Greek at Edinburgh, retiring in 1903. A strong Unionist in politics, he was elected M.P. for Cambridge University in 1906. In 1909 he was chosen president of the British Academy. He died Jan. 29, 1910.

Butcher's younger brother, John George Butcher (b. 1853), was very successful at the chancery bar. He was Unionist M.P. for York 1892-1906 and again from 1910-18. In 1918 he became a baronet and in 1924 was raised to the peerage, taking the title of Baron Danesfort.

BUTCHER BIRD. Popular name for various species of shrike (*Lanius*), a bird found in most parts of the world except S. America. The name is derived from the bird's habit of impaling the insects which it collects for food on thorns near its nest.

BUTCHER'S BROOM

(*Ruscus aculeatus*). Evergreen shrub of the order Liliaceae, native of Europe, N. Africa, and W. Asia. The plant was formerly used for cleaning hutchers' blocks. Its leaves are reduced to minute scales, and their functions are performed by flat, oval, woody twigs with a sharp point, known as cladodes, from which the greenish flowers are produced. The plants attain a height of about 2 ft., and are either male or female, the latter bearing scarlet berries. The plant is used by cigar-makers for moistening tobacco leaves.

Butcher's Broom, *Ruscus aculeatus*

BUTE. Island of Scotland. With Arran, the Cumbraes, Holy Isle, Inchmarnock and Pladda it forms the county of Buteshire. Separated from the mainland of Argyllshire by the Kyles of Bute, a narrow strait, Bute has an area of 47 sq. m. It has a rugged coast, indented by the bays of Rothesay, Kames, Ettrick, Scalpsie, St. Ninians, and Kilchattan, several inland lochs—Ascog, Fad, and Quien—and fertile, well cultivated soil. The highest point is Kames Hill (911 ft.). Kilmichael is in the extreme N., while Garroch Head is at its southern extremity. The climate is moist, but so mild that flowers can be grown here which will not flourish anywhere else in Great Britain. The scenery is charming. Rothesay is the chief town. Other small towns are Kilchattan and Port Bannatyne.

BUTE, EARL OF. Title held since 1703 by the family of Crichton-Stuart. John, the 4th earl, was made a marquess of the United Kingdom 1796, and from him the present marquess is descended. Cardiff Castle and Mount Stuart, near Rothesay, are the chief residences of the family. The marquess's eldest son is known as earl of Dumfries. John Stuart, the 3rd earl (1713-92), was born at Edinburgh, May 25, 1713, and succeeded to the earldom in 1723. As the chief adviser of the young King George III he was made prime minister in 1762, but his unpopularity forced him to resign in 1763. He continued, however, to influence the king for about two years, after which he lived in retirement until his death, March 10, 1792.

BUTLER, ELIZABETH SOUTHERDEN, LADY (b. 1850). British painter. Born at Lanesanne, the daughter of J. T. Thompson, she studied art at Florence and Rome. Her first

Academy success was *The Roll Call* (1874). *Quatre Bras*, 1875; *Balaklava*, 1876; *Inker-*

Lady Butler, British painter

mann, 1877; *The Remnants of an Army*, 1881, now in the Tate Gallery; *The Dawn of Waterloo*, 1895, are among her other works. She also illustrated some of the poems of Alice M. Meynell, her younger sister. In 1877 she married Sir William F. Butler (1838-1910) a soldier and writer.

BUTLER, JOSEPH (1692-1752). British theologian. Born at Wantage, May 18, 1692, he was ordained in 1718, the following year

was appointed preacher at the Rolls Chapel, London, and in 1725 rector of Stanhope, in Wearedale. In 1740 he was made dean of S. Paul's and in 1750 bishop of Durham. He died June 16, 1752. Bishop Butler's chief work is *The Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature*, 1736, which has become a classic of English theology.

BUTLER, JOSEPHINE ELIZABETH (1828-1906). British social reformer. Born at Glendale, Northumberland, April 13, 1828, in 1852 she became the wife of the Rev. George Butler, principal of Liverpool College and then canon of Winchester. Mrs. Butler began her work by visiting workhouses and establishing homes of refuge, and at the end of 1869 became an active leader of the opposition to the Contagious Diseases Acts. Largely as the result of her efforts, these Acts were repealed in 1886. Mrs. Butler died Dec. 30, 1906.

BUTLER, NICHOLAS MURRAY (b. 1862). American scholar. Born in New Jersey, April 2, 1862, he was educated at Columbia

Joseph Butler, British theologian From an old engraving

Bute. Map showing the seven islands which form this small Scottish county

College, New York, and became a professor there. In 1890, when it was made a university, he was appointed dean of philosophy, and

Bustard. The largest land bird in Europe and once common in Britain

in 1902 president. As a leading member of the Republican party his name has been put forward for both president and vice-president. Among the many causes in which he has been active are the promotion of world peace and the improvement of Anglo-American relations.

BUTLER, SAMUEL (1612-80). English poet. Born at Strensham, Worcestershire, he acted as a lawyer's clerk. In 1663 he published Part I of *Hudibras*, a bitter but witty metrical satire on Puritanism; Part II was printed the following year, and the last part appeared in 1678. The original of *Hudibras* was Butler's old master, Sir Samuel Luko. The book achieved immediate popularity, but brought him no financial reward. He lived in poverty until his death, Sept. 25, 1680.

Samuel Butler,
English poet
From an old engraving

BUTLER, SAMUEL (1835-1902). British author. Born at Langar, Nottinghamshire, Dec. 4, 1835, he spent the years 1860-64 on a New Zealand sheep-run, but resided for the rest of his life in chambers in London. His principal writings are *Erewhon*, 1872, a Utopian romance criticising Darwinism and orthodox Christianity; its sequel, *Erewhon Revisited*, 1901, a satire on the origins of popular religions; and *The Way of All Flesh*, an autobiographical novel, published posthumously in 1903. Butler died June 18, 1902.

BUTO. Goddess of ancient Egypt, who was worshipped at a city of the same name on the Nile delta. The hawk and the shrew mouse were sacred to her. The Greeks represented her as the goddess of night.

BUTON OR **BOETON**. Island, town, and strait of the Dutch East Indies, S.E. of Celebes. The strait separates Buton from Celebes and Muta. The island is 1,650 sq. m. in area. The strait separating Buton from Wangi Wangi is called Buton Passage. Pop. 100,000, mostly Malays.

BUTRINTO. Town of Albania, on the coast, facing Corfu. It is referred to in the *Aeneid* as the place where Aeneas met Priam's son Helenus, who made his home here after the fall of Troy. Excavations begun in 1924 show that the town was influenced by Greek, Roman, Byzantine, and Venetian civilizations. Buildings erected by all these peoples, as well as prehistoric remains, were unearthed in 1929.

BUTT, DAME CLARA (b. 1873). British singer. Born at Southwick, Sussex, Feb. 1, 1873, she made her debut in Sullivan's *Golden Legend* at the Albert Hall, Dec. 7, 1892, and a few days afterwards appeared with remarkable success in Gluck's *Orpheus*, given by the students of the R.C.M. A contralto, she rose to the front rank of public singers. In 1900 she married Kennerley Rumford, and in 1920 was created D.B.E. In 1928 appeared Clara Butt: Her Life Story, by Winifred Ponder.

Dame Clara Butt,
British singer
Russell

BUTTE. Largest city of Montana, U.S.A., co. seat of Silverbow co. In a range of the Rocky Mts., it is 65 m. by rly. S.W. of Helena, and is served by the Chicago, Milwaukee and St. Paul and other rlys. In one of the richest mining regions of the U.S.A., Butte has large copper, silver, and gold smelting works and a school of mines. Near is the famous Anaconda Mine. Pop. 41,611.

BUTTER. Result of the separation of butter-fat, 3.75 p.c. on the average, from milk, and the working it up into a palatable form. It is not possible to take out all the fat from milk, and, furthermore, butter contains other constituents, its composition on the average being, in percentages: fat, 84.91; water, 13.05; curd, 1.02; salt, 1.02. In the old method of buttermaking the milk is allowed to stand until the cream rises to the top, when it is removed by skimming, the residuo being skim milk. Laval revolutionised buttermaking in 1877 by inventing the separator, which acts by the application of centrifugal force. Fresh cream yields very insipid butter, and a ripening process is necessary. The agents are certain bacteria causing the formation of lactic acid. But it is easier to turn out a uniform product by pasteurising the cream before separation, and afterwards ripening it by adding a pure culture of the bacteria. The ripened cream is churned, and the resulting product is then worked up into butter.

BUTTER-BUR (*Petasites hybridus*). Perennial herb of the order Compositae. It is a native of Europe, N. Africa, and N. and W. Asia. The flower stem arises in March, crowned by clusters of flesh-coloured or pale purple flowers. The leaves expand to a diameter of 3 ft.

Butter-bur stem
and leaves

BUTTERCUP (*Ranunculus*). Perennial herb of the order Ranunculaceae, several species being united popularly under one name. Meadow buttercup (*R. acris*), a native of Europe and N. Asia, has roundish leaves divided into three to seven lobes, and golden-yellow flowers opening widely. Creeping buttercup (*R. repens*) a native of Europe, N. and W. Asia, and N. Africa, has long above-ground runners, and oval leaves deeply divided into three segments. The flowers are cup-shaped. All the species have acrid juices.

Buttercup, flowers
and stalks

BUTTERFLY. One of the great divisions of the order Lepidoptera, the other division comprising the moths. The antennae are simple and clubbed, whereas those of the moth are often elaborately branched and feather-like, and usually without knobs at the extremities. The butterfly when at rest usually closes its wings vertically; moths generally close the upper pair over the lower, so that only the fore-wings are seen. Butterflies are abroad in the daytime, while most moths are nocturnal in habit.

Butterflies chiefly feed on the nectar of flowers, and the mouth parts are modified to form a proboscis or sucking tube, which when not in use is tightly rolled up under the head. The wings are thickly covered with minute scales, often iridescent or metallic in hue, and they are usually brilliantly coloured. The butterfly passes through a complete series of metamorphoses, being in turn an egg, a larva or caterpillar, a pupa or chrysalis, and an imago or perfect insect. Butterflies occur all over the world, except at the Poles, and are divided into five families, all of which are represented in Great Britain.

The ten sub-families of British butterflies are: Papilioninae, Pierinae, Danainae, Apaturinae, Nymphalinae, Satyrinae, Nemeobinae, Lycaeninae, Hesperinae and Pamphilinae. See *Cambervell Beauty*; *Red Admiral*, etc

BUTTERFLY FLOWER (*Schizanthus*). Annual herb of the order Solanaceae. Natives of Chile, these herbs have showy flowers. They are covered with glands which exude a sticky excretion. The leaves are long and narrow, much cut up from the margins; the flower is half-tubular, the spreading portion much divided.

BUTTERFLY WEED (*Asclepias tuberosa*). Perennial herb of the order Asclepiadaceae. A native of N. America, with scattered, lance-shaped, hairy leaves and showy orange flowers, it is cultivated in European gardens as a border plant.

Buttermere. Village and lake of Cumberland. The lake is 1½ m. long, ½ m. broad, and has a greatest depth of 93 ft.

BUTTER TREE (*Bassia butyracea*). Tree of the order Sapotaceae, a native of Nepal, India. It has leathery, undivided leaves and fleshy, whitish flowers which are succeeded by pulpy fruits in which the seeds are embedded. The seeds yield a white fatty substance like lard. The allied mowha tree (*B. latifolia*), a native of Bengal, yields a similar substance. The African butter tree or shea tree is *B. parkii*, whose seeds are hoiled to obtain the butter. The name Butter Nut is given to a North American tree (*Juglans cinerea*) known also as white walnut and oil nut. It grows to a height of 30 ft., and its nuts are used by the N. American Indians as a purgative.

BUTTERWORT (*Pinguicula vulgaris*). Perennial herb of the order Lentibulariaceae.

native of Europe, N. Asia, and N. America. The smooth, ohlong leaves lie on the ground in a rosette from whose centre arise several leafless stalks, each with a solitary violet flower. The leaves secrete a greasy fluid in which insects are caught and digested. Butterwort inhabits bogs and wet mountain sides.

Butterwort, *Pinguicula vulgaris*

BUTTEVANT. Market town of co. Cork, Irish Free State. It is on the river Awbeg, 28 m. by rly. N.W. of Cork by the Gt. Southern Rlys. The Mulla of Spenser, it has remains of an abbey. Kileolman Castle, the residence of the poet, is 3 m. to the N.E. Market days Tues. and Fri. Pop. 834.

Buttress. Examples in British architecture. 1. Fotheringhay, Northamptonshire, circa 1440. 2. Divinity school, Oxford, circa 1490. 3. Earl's church, Durham, 1250. 4. Orton-on-the-Hill church, Leicestershire, circa 1330. 5. Gloucester cathedral, 1430

BUTTRESS (Fr. *bouter*, to thrust). In architecture, a pier or other mass of masonry built up against the exterior surface of a wall to strengthen it where the lateral pressure

of the roof calls for resistance. The oldest and simplest form is the flat-faced pier attached to the walls of Norman churches.

Massiveness was at first the characteristic in the 13th century, which was the great period in the history of the buttress; but soon the flying buttress was evolved which, as in the perfect example of Westminster Abbey, quickly attained the summit of architectural beauty, while performing an important constructional function. In the 14th century the importance of the flying buttress began to wane.

BUTYL ALCOHOL. One of the products obtained by distilling crude potato spirit, and by the fermentation of beet-root. Butyl chloral is an oily, pungent liquid obtained by passing chlorine into paraldehyde and heating the butyl chloral hydrate which forms in a stream of hydrochloric acid.

BUTYRIC ACID (Lat. butyrum, butter). Liquid acid with an unpleasant odour, first separated from butter. It occurs in a variety of animal fats and vegetable products, and is a result of fermentation. Butyric ether is a liquid which smells like pineapple and is obtained by warming together a mixture of alcohol, butyric acid, and sulphuric acid. When diluted with spirit it is used for flavouring confectionery, and known as pineapple essence.

Buxton. The Crescent, built in 1770-74, seen from the slopes. Facing the Crescent is the Pump Room
Frith

BUXTON. Borough, market town, and health resort of Derbyshire. It is 163 m. by rly. N.W. of London on the L.M.S. Rly. and 22 m. from Manchester. Its mineral springs supply tasteless water, and are efficacious in the treatment of rheumatism, gout, sciatica, and allied diseases. The hot baths are at the W. end and the natural baths at the E. end of the Crescent. In the vicinity are Diamond Hill, celebrated for its crystals, and Poole's Cavern, a stalactite cavern of great historic interest. Buxton was granted a charter of incorporation in 1916. Market day, Sat. Pop. 17,000.

BUXTON, SYDNEY CHARLES BUXTON, 1st EARL (b. 1853). British politician. Son of Charles Buxton, M.P., he was born Oct. 25, 1853, and in 1883 was elected M.P. for Peterborough. He was M.P. for Poplar 1886-1914, under-secretary for the colonies 1892-95, and postmaster-general 1906-10, when he was transferred to the presidency of the Board of Trade. In 1914 he became a peer, and was governor-general of South Africa, 1914-20. He was created an earl, Oct., 1920. He wrote on finance and politics; also a *Life of General Botha*, 1924.

Earl Buxton,
British politician
Russell

BUXTON, NOEL (b. 1869). British politician. A son of Sir T. Fowell Buxton, Bart., he was educated at Harrow and Trinity College, Cambridge. In 1905-6 he was Liberal M.P. for Whitby, and from 1910-18 for N. Norfolk. At this time he was chiefly interested in Balkan affairs. In 1922 Buxton,

having just joined the Labour party, was again elected M.P. for N. Norfolk, and in 1924 he was minister for agriculture, a position to which he returned in 1929. His *Travels and Reflections* appeared in 1929.

BUXTON, SIR THOMAS FOWELL (1786-1845). British philanthropist. Born April 1, 1786, he early displayed a zeal in social questions, working for the relief of the Spitalfields weavers, 1816, and for the reform of prison conditions. From 1818-37 he was M.P. for Weymouth. In 1824 he succeeded Wilberforce as head of the anti-slavery party. In 1840 he became a baronet. He died Feb. 19, 1845.

BUZZARD (Lat. buteo, hawk). Group of birds of prey of the sub-family Buteoninae. There are about twenty species, ranging over a great part of the world, but unknown in Australasia and the Oceanic islands. The European buzzard is usually found in wooded districts, where it nests in trees; in mountainous country it selects ledges or crevices in the rocks. The buzzard feeds mainly upon rabbits, birds, and various reptiles.

Buzzard. The common buzzard,
a diurnal bird of prey

BUZZARD, SIR EDWARD FARQUHAR (b. 1871). British physician. The son of a doctor, he was born in London, Dec. 20, 1871, and educated at Charterhouse School and Magdalen College, Oxford, where he played association football for the university. He qualified as a doctor, and a successful career led to his appointment in 1928 as regius professor of medicine at Oxford. In 1927 Buzzard was knighted, and in 1928-29 he was one of the physicians who saw King George through his serious illness.

BYBLOS. Ancient city of Phoenicia. On the coast between Beirut and Tripoli, it is the traditional birthplace of Adonis, and its temple of Astarte attracted many devotees. The Biblical Gebel and the modern Jebel, it is walled, and has towers, a castle, and many ruins. Recent excavations show that before the time of the Egyptian King Seneferu (about 3000 B.C.) Byblos had become to all intents and purposes an Egyptian colony.

Byfleet. Village of Surrey. It is 8 m. N.E. of Guildford, on the Southern rly., and is a residential district for Londoners. Pop. 4,173.

BYLAND ABBEY. Cistercian abbey in the vale of York. It was founded in 1177 by Roger de Mowbray, the 2nd baron. Its first members belonged originally to Furness Abbey. The ruins, chiefly of the church and refectory, were given to the nation in 1920 by Lady Julia Wombwell, and restoration work has been done thereon.

BY-LAW. Term used in law to denote rules and regulations made by a body acting under some Act of Parliament, royal charter, or ancient custom. Thus, a municipal corporation has the power to make by-laws dealing with the good government of towns, a railway company for the good order of its railway, and a university for the governance of its members. A by-law which is contrary to the general law of the land, or which is unreasonable, is ultra vires and void.

BYNG, JOHN (1704-57). British admiral. Son of Admiral George Byng, 1st Viscount Torrington (1663-1733), he entered the navy

in 1718. In 1745 he was made a rear-admiral. From 1751 until his death he was M.P. for Rochester. In 1756 he was sent in command of a small squadron to relieve Minorca, which the French had attacked. After a mishandled encounter with the French squadron Byng returned to Gibraltar. Put on trial he was found guilty of neglect of duty, and shot in Portsmouth Harbour, Mar. 14, 1757.

Admiral Byng,
British sailor
Painting by Hudson

BYNG, JULIAN HEDWORTH GEORGE BYNG, 1st VISCOUNT (b. 1862). British soldier. Born Sept. 11, 1862, a younger son of the 2nd earl of Strafford, he joined the 10th Hussars in 1883, and after serving in the Sudan campaign and in the South African war, went in 1912 as commander-in-chief to Egypt.

In the Great War Byng took the 3rd cavalry division to Belgium in Oct., 1914, and in May, 1915, succeeded Allenby as head of the cavalry corps. He left that to command the 9th corps in Gallipoli, and on the evacuation returned to France. In April, 1916, he took over the Canadian Corps. His next promotion, June, 1917, was to the head of the Third Army. Made a full general after the battle of Cambrai, Nov., 1917, which his army fought, he took a leading part in defeating the German offensive in the spring of 1918, and in the ensuing advance.

Knighted in 1915, he was raised to the peerage in Aug., 1919, and received a grant of £30,000. He retired from the army in Nov., 1919, and in 1921-26 was governor-general of Canada, being created a viscount in the latter year. In 1928 Lord Byng was appointed commissioner of police for the metropolis and effected many reforms. See *Cambrai*.

Viscount Byng,
British soldier
Russell

BY-PRODUCTS. Term for commodities produced incidentally in the course of some manufacturing process. For example the chief aim of the gas industry is the production of gas; but in the course of that production coke and tar are made, the latter yielding further by-products such as ammonia, benzene, aniline dyestuffs, and pitch.

BYRD, RICHARD EVELYN (b. 1888). American explorer. Born at Washington, Virginia, Oct. 24, 1888, he entered the U.S. Naval Academy, and until 1916 was a naval officer. On leaving the service he became an aviator, and as such did good work during the Great War, retiring in 1922. In 1926 he flew from Spitzbergen to the North Pole in a Fokker aeroplane, and in Nov., 1929, he flew over the South Pole. In 1929 he was made an admiral. See *Antarctic*.

BYRD, WILLIAM (c. 1542-1623). English composer. Born in London and a pupil of Tallis, he was appointed organist of Lincoln cathedral in 1563, and was a singer in the chapel royal, and its organist, 1570. Byrd composed many masses, motets, and anthems, also some of the finest English madrigals. He died July 4, 1623.

BYRNE, BRIAN OSWALD DONN (1889-1928). Irish novelist. Born Nov. 30, 1889, he went to the U.S.A., where he became known as a writer of short stories. Later he began to write novels, the chief of which are *Messers Marco Polo*, 1922, *Hangman's House*, 1926, a vivid picture of Irish life just before the Great War, and *Brother Saul*, 1927. He was killed in a motor accident, June 18, 1928.

BYRON, BARON. English title borne since 1643 by the family of Byron. About 1540 Sir John Byron secured the abbey of Newstead, near Nottingham, and his great-grandson, another Sir John, was M.P. for Nottingham. He raised a regiment and fought for Charles I, who, in 1643, made him a baron. William, the 5th baron, who was convicted for manslaughter for killing William Chaworth in a duel, was succeeded in 1798 by his great-nephew, the poet. On the latter's death in 1824 the title passed to a cousin George, from whom the present peer is descended. Newstead Abbey and estates were sold about 1870, and the family residence is Thrumpton Hall, Derby.

BYRON, GEORGE GORDON BYRON, 6TH BARON (1788-1824). British poet. Grandson of John Byron, an adventurous sailor who was

Lord Byron, British poet
After Phillips

second son of the 4th baron, George Gordon Byron was born in London, Jan. 22, 1788, heir to his great-uncle William and the estate of Newstead Abbey, in Nottinghamshire. Educated at Dulwich, Harrow, and Trinity College, Cambridge, Byron's youth was embittered by congenital lameness and by the unwise upbringing of a capricious and violent-tempered mother. In 1807 he issued his *Hours of Idleness*, which, sarcastically reviewed in the *Edinburgh Review*, provoked in 1809 *English Bards and Scotch Reviewers*. In 1808 he entered upon his inheritance, and from 1809 to 1811 toured Portugal, Spain, and Asia Minor, the literary results of which were the early cantos of *Childe Harold's Pilgrimage*, 1812, *The Giaour* and *The Bride of Abydos*, 1813, and *The Corsair* and *Lara*, 1814.

After several love affairs, notably with Mary Chaworth (q.v.), Byron married in 1815

Byron. 1. Hucknall Torkard church, where the poet is buried. 2. West front of Newstead Abbey

Anna Isabella Milbanke. Within a year his daughter, Ada, was born, and he himself was driven from England by public abuse of his conduct as a husband and his relations with his half-sister, Augusta Leigh. He wandered over the Continent, was much with Shelley in Switzerland, finished *Childe Harold* and produced several tragedies. After four years in Italy, during which he wrote *Mazeppa*, *Sardanapalus* and much other work, including his greatest, the unfinished *Don Juan*, Byron, in 1823, flung himself into the Greek War of Independence. Catching a fever from the

Missolonghi marshes, he died April 19, 1824, and was buried at Hucknall Torkard.

Byron's letters and journals were edited by R. E. Prothero, 1898-1901. Consult also *The Life of Lady Byron*, E. C. Mayne, 1929; *Life*, A. Manrois, 1930.

BYZANTINE EMPIRE. Sometimes called the East Roman Empire, this was founded in 395, when the Roman Empire was divided. At Byzantium, later called Constantinople, its continuity was preserved, and with an interval from 1204-61 an emperor who claimed to be the successor of the Caesars reigned there until its capture by the Turks in 1453. Approximately the effective Byzantine Empire at its fullest extent covered the basin of the Danube, S. Italy, the Balkan Peninsula, the eastern Mediterranean, Egypt, and western Asia as far as the Euphrates and the Persian Gulf, excepting Arabia.

The Empire was almost continually at war and its boundaries were ever changing. Belisarius and Narses, generals of the great Justinian, extended them, but their conquests in Italy and elsewhere were soon lost. Danger from the Persians was averted by the campaign of Heraclius, but the Mahomedans, in the first flush of their strength, conquered great areas from his successors. Twice the Saracens besieged Constantinople itself.

Under the Macedonian emperors (867-1056) there was a period of prosperity, and then came the age of the Crusades, with its accompanying disorder. The Turks conquered most of Asia Minor, and the establishment of the Latin Empire at Constantinople forced the emperor to find a new capital at Nicea. Constantinople was recovered in 1261, but its rulers henceforward were lords of only a fraction of the old Empire.

The Empire finally fell before the attacks of the Ottoman Turks, who in 1354 captured Gallipoli, seven years later Adrianople, and overran the Balkan Peninsula, although stayed for a time by Tamerlane. In 1453 Mohammed II laid siege to the historic capital. Constantine XI, deserted by all Christendom, valiantly resolved to fight to the last. He could muster only some 7,000 fighting men to hold the walls against the swarming Turkish hosts, but he held them for six weeks, until the assault was delivered in overwhelming force. The emperor died fighting and the city passed into the possession of Islam. See *Constantinople*; *Crusades*; *Rome*; *Turkey*; etc.; consult also *Decline and Fall of the Roman Empire*, E. Gibbon, ed. J. B. Bury, 1901-6; *History of the Eastern Roman Empire*, J. B. Bury, 1912; *The Byzantine Empire*, N. H. Baynes, 1926.

ART AND ARCHITECTURE. Byzantium or Constantinople was the home of the efflorescence of artistic activity known as Byzantine art, the leading motive of which was the adaptation of existing Greco-Roman and Oriental forms to the conception of Christianity held by the emperor Constantine and his

fellow-converts. During the reign of Justinian (527-565) this art reached its zenith.

The greatest successes of the Byzantine school were architectural. The dome, the peculiar product of Eastern constructive methods, became the leading element in the new style, while the principles of domical construction underwent far-reaching developments. Under Charlemagne was evolved the style known as Romanesque, the cousin of Byzantine and the parent of Gothic. In A.D. 532 the emperor Justinian began to build the famous church of S. Sophia, regarded as the climax of Byzantine art.

Byzantine painting may best be studied in the illuminated MSS., such as the sacred books, psalters, etc., preserved at the Bibliothèque Nationale at Paris, the Vatican at Rome, and other collections. These are mainly executed on linen. The characteristics are bright, rather crude colours and incorrect though not inexpressive figure-drawing. Great skill was attained by ivory workers and by goldsmiths. Consult *Byzantine and Romanesque Architecture*, T. G. Jackson, 1913; *Byzantine Art*, H. Picree and R. Tyler, 1926; *Byzantine Portraits*, C. Diehl, trs. H. Bell, 1927.

LITERATURE. Byzantine literature is the name given to the Greek literature of the period from the accession of Justinian to the taking of Constantinople by the Turks (527-1453). The writings of this period consist mainly of extracts and compilations from older works. The language represents the transition stage between ancient and modern Greek.

The Byzantine Research Fund is an association founded in 1908. The full title is Byzantine Research and Publication Fund. It deals with the art, architecture, and inscriptions of the East Roman empire.

BYZANTIUM (Greek Byzantion). Doric colony founded about 660 B.C. by Megarian colonists under Byzas on the so-called Golden

Byzantine Art. Ivory carving showing Christ crowning the emperor Romanus and his wife Eudocia

Byzantine Architecture. Chapel of the Norman kings at Palermo, built by King Roger II in 1143

Horn. Devastated by the Persians under Darius Hystaspes, it was raised by the Spartan leader Pausanias to the status of an important maritime and commercial city. For more than 100 years after the Persian War it was alternately hostile and friendly to Athens, until it obtained complete independence in 355. During the first century A.D. Byzantium was included with Thrace in the Roman Empire. Constantine the Great enlarged and made it the new capital of the empire under the name of Constantinople, later Constantinople. It was called by the Turks Istanbul or Stambul, and to-day is known as Istanbul (q.v.).

C. Third letter of the English and Latin alphabets. A modified form of Γ (Gamma), the third letter of the Greek alphabet, it has two distinct sounds, that of k as in cat, cot, cut, and before e, i, y that of sharps as in censor, civil, cymhal. The combination ch, the sound of which is heard in church, is a distinct letter, for which a separate sign is used in other alphabets. In Greek derivatives it is pronounced k, as in character. See Alphabet.

In music this letter indicates (1) the first note of the natural scale of C, the chief note of the Ionian mode; (2) the standard pitch for vocal music; (3) the philharmonic pitch of C, adopted in 1896, which has 522 double vibrations per second; (4) the standard pitch for transposing instruments.

CAB (Fr. cahriole). Name for a light, covered, two-wheeled one-horse vehicle for two passengers, with an outside seat for driver at back; or a four-wheeled carriage seating four passengers, with driver's seat in front.

Cab. 1. Old-fashioned four-wheeled cab or "growler," introduced into London in 1820.
2. Hansom cab, invented by J. A. Hansom in 1834; specimen in London Museum

Their place has been taken to a large extent by taxicabs, which, like other motor vehicles, must pay a duty. All cabs used by the public must be licensed by a public authority, as must their drivers. These authorities can make by-laws regulating the numbers and standing places of these cabs. The fares charged are fixed by the Home Secretary.

CABAL. Name given to a group of men working in secret for their own interests rather than for those of the people they are supposed to represent. The word, derived from the Hebrew Cabhala, obtained general currency in England in the time of Charles II from the initial letters of the names of his five ministers, Clifford, Arlington, Buckingham, Ashley, and Lauderdale, who were the origin of the modern cabinet (q.v.).

CABARET. French word originally meaning a wooden shelter or booth. Its use is now generally restricted to that of a small inn or a wine shop. In another sense it denotes the entertainment given in after theatre hours at hotels and restaurants. See Inn.

CABBAGE (Latin capit, head). Hardy biennial vegetable of the natural order Cruciferae and genus Brassica. The common cabbage (B. oleracea) is the species, of which numerous kinds have been raised.

Cabbage. Dwarf cabbage, which matures in early April

The Cabbage Fly (Anthomyia brassicae) is an insect somewhat resembling the house fly. Its larvae feed chiefly on cabbage, and do great mischief by destroying the stems. Another insect pest of the cabbage is the larva of the cabbage moth (Mamestra brassicae). The caterpillar is usually greenish brown with a dark stripe down the

back. The moth has greyish brown wings about 1½ ins. in span, partly hordered and dotted with white. It will eat holes through

a dozen layers of a large cabbage until it has reached the tender white heart, fouling the entire head. The Cabbage Snowy Fly is another cabbage pest.

Cabbage moth, Mamestra brassicae

CABBAGE-BARK TREE (Andira inermis). Evergreen tree of the order Leguminosae. A native of the West Indies, it has leaves about a foot long, divided into oval leaflets, with purple pea-like flowers. Its bark is used as a remedy for intestinal worms.

CABBALA (Heb. kahal, to receive). Hebrew mystical theosophy traditionally received by certain Jewish sects and not revealed explicitly in the O.T. The central doctrine is divine immanence, in a form akin to pantheism, and marked by the influence of neo-Platonism and Gnosticism. Cabbalism flourished between the

12th and 16th centuries, and affected both Jews and Christians.

CABER, Tossing the (Gaelic cabar, pole, beam). Popular event at Highland athletic gatherings. The caber generally consists of

Caber. Tossing the caber at the Highland meeting at Inverness

the lower trunk of a larch tree, about 20 ft. in length. The pole is raised, with the thin end resting upon the ground, into an upright position and supported against the shoulder of the competitor. Working his fingers underneath, he lifts the pole upright upon his hands until he has it balanced upon them about waist high; then with tremendous impetus he hurls it forward into the air.

CABINET. Name given to the body of ministers who control the Government of Great Britain and to similar bodies elsewhere. The main features of the Cabinet are that all its members, each of whom is the head of a department of state, must belong to one political party and that party must enjoy the confidence of the House of Commons, and through it, of the electors. Occasionally, as in 1783 and during the Great War a coalition of parties forms a cabinet. Its president and head is the prime minister, who chooses the other members, although in practice his choice is limited to politicians of standing.

The appointments must be approved by the king and ministers must be privy councillors, as in theory the cabinet is a committee of the privy council. The number of members varies, but usually it is about 20.

CABLE. Nautical term for a rope, chain, or wire hawser attached to the anchor or used in any other way for mooring a ship. A cable's length is 100 fathoms, or 200 yds.

The word is used also for the cable along which electricity is transmitted. This is a copper conductor or conductors covered with an insulating envelope, which prevents the leakage of current into the water or ground in which the cable is laid. In submarine telegraphic cables the conductor is usually composed of small wires laid up to form a very flexible strand. This is covered with gutta percha, and protected by jute, and a layer of iron or steel wire. In an underground telegraph or telephone main cable the conductors, which may number up to 2,000, are single copper wires insulated by special paper wrapped round them to form loose air-filled tubes, the whole being protected by a suitable exterior covering.

For flexible power cables, such as are used in house-wiring, the insulation is pure rubber, vulcanised rubber, waterproof tape, and hemphraiding saturated with a proofing composition, applied in the order given. Cables are made with single, twin, three, or four conductors running side by side, or with double or triple concentric conductors separated by annular insulation, according to the system of distribution.

Cable. Left, dry core lead-covered cable containing 76 strands of wire; right, 4-core gutta-percha insulated submarine telegraph cable
Hewlett's Telegraph Works Co., Ltd.

CABLE OWNERSHIP. Of the cables the Atlantic was owned by the British Government and the Pacific by the British and Dominion Governments jointly. The Eastern Telegraph and other companies owned other cables. In 1928 it was decided to unite all the cables and wireless stations, including those owned by the Marconi Co. and the Post Office, into one great organization.

CABLE, GEORGE WASHINGTON (1844-1925). American novelist. Born at New Orleans, Oct. 12, 1844, from 1863-65 he fought in the Civil War on the Confederate side. He first came into prominence through his sketches of Creole life, collected in 1879 under the title of Old Creole Days. His later novels include

G. W. Cable, American novelist

The Grandissimes, a study of French-American life in Louisiana, 1880; Madame Delphine, 1881; Bonaventure, 1888; Kincaid's Battery, 1908; Gideon's Band, 1914; and The Flower of the Chapdelaines, 1919. He also wrote The Creoles of Louisiana, 1884; The Silent South, 1885. He died Jan. 31, 1925.

CABOT, JOHN (c. 1450-98). Anglo-Italian navigator. Born at Genoa, he moved to Venice in 1461, and later he settled in England. In 1496 Henry VII authorised him to explore all hitherto unknown lands. He sailed from Bristol on May 2, 1497, and 52 days later reached Cape Breton Island. Later Cabot again sailed from Bristol, this time with a small fleet and 300 men. He landed on Greenland and named the land Labrador after João Fernandes, a lavrador or farmer, from whom in Portugal he had first heard of it. On his return voyage he rounded Cape

Cabbage fly. A destructive garden pest

(Mamestra brassicae). The caterpillar is usually greenish brown with a dark stripe down the

Farewell, crossed Davis Strait, and touched Baffin Land, convinced that this was Asia. Then, sailing S.E., he passed Newfoundland and Nova Scotia, and reached Bristol in the autumn. He died soon afterwards.

His son, Sebastian Cabot (1474-1557), came to England about 1493 with his father, with whom he sailed to Cape Breton Island in 1497. In 1512 he entered the service of Ferdinand of Spain as a cartographer, and in 1519 was pilot major to Charles V. From 1526-30 he was in command of a Spanish expedition to S. America and explored La Plata. He died before the end of 1557, and in all probability at Bristol, where there is a tower to the Cabots. (See p. 304.)

Sebastian Cabot, Anglo-Venetian navigator
From an old painting

Cabot Strait is a channel between Newfoundland and Cape Breton Island. Forming the entrance to the Gulf of St. Lawrence, it is about 60 m. wide.

CABRIOLE. Special style of chair legs. They may be traced to Roman furniture makers, and were much employed in the Queen Anne period for tables, tall-boys, chairs, etc. These legs swell outward at the upper part or knee, and inward at the ankle, and often end with the cloven hoof of a goat.

Cachalot. Alternative name for the sperm whale. See Whale

CACTUS (Cactaceae). Natural order of fleshy, thickened, and mostly leafless plants, more or less abundantly clothed with sharp spines or prickles.

They are globular or column-like, with many angles, or flattened and jointed. The flowers are solitary, stalkless, and brightly coloured. The succulent fruit often contains refreshing and sub-acid juice. Cacti are all natives of the hot, dry regions of the American continent. The walls of all the internal cells and tissues are thickened, so that transference of fluids is slow, thus preventing loss of moisture. Since leaves are absent there is no loss by transpiration.

Cactus. 1. *Echinocactus longibamatus*. 2. *Opuntia ocellifera*. 3. *Leuchtenbergia principis*. 4. *Phyllocactus*. 5. *Cereus giganteus*

CACUS. In Roman mythology, a three-headed giant. A son of the god Vulcan, his haunt was a cave on Mt. Aventine in Italy. As Hercules was passing through the country with the oxen he had taken from the monster Geryon, Cacus stole some of the herd and thought to avoid discovery by dragging the oxen backwards into his cave so that the hoofmarks suggested they were leaving it. But Hercules discovered the theft when the lowing of the rest of the oxen was answered by those within, and he slew the monster.

Richard Cadbury, British manufacturer of Mowll

from a tenant farmer of Uffculme, who died in 1557, Richard Tapper Cadbury settled in

Birmingham, 1794, and his son John began there the business which has become world-famous. His sons, Richard (1835-1899) and George (1839-1922), took control in 1861, when the firm employed a dozen workers. In 1879 they founded for their business the town of Bourneville (q.v.), and when the firm amalgamated with J. S. Fry & Son, of Bristol, 1919, they were employing about 4,000 workpeople. In 1901 George Cadbury became chief proprietor of The Daily News.

George Cadbury, British manufacturer of Whitlock

CADDIS FLY. Order (Trichoptera) of hairy winged insects, rather like light, graceful moths. The eggs are laid in a jelly-like

Caddis Fly. Above, *Phryganea minor*; centre and below, *P. grandis*

mass on the surface of ponds or on water weeds, and the insect in its larval and pupal stages is aquatic. The larva builds cases or tubes in which it lives, composed of bits of wood, tiny shells and pebbles, leaves, twigs, etc. The head and legs project at one end, while the long, segmented abdomen is covered and protected. When the time for pupation arrives, the caddis worm closes the ends of the tube with silk, or by attaching small stones. There are about 150

British species. The larvae are used as bait by anglers.

CADE, JACK (d. 1450). English rebel. His early life and personality are obscure. He was known as Mortimer, and his followers were the yeomen and smaller landed proprietors of Kent and Sussex. The rising, which was political, and not social, in its aims, took place in May, 1450. After defeating the king's troops at Sevenoaks, Cadw marched on London and entered the city. The citizens were alarmed at Cadw's demand for money; and on his retirement to Southwark the lord mayor closed London Bridge. Cadw himself retired to Rochester and fell fighting at Heathfield, Sussex, July 12, 1450.

CADENCE (Lat. cadere, to fall). In music, the termination of a phrase or section analogous to punctuation in literature. Cadence is the term applied to (1) ornamental passage for a solo instrument or voice, embellishing a pause; (2) towards the end of a concerto movement, an opportunity for free display of technique by the soloist.

CADENCY. In heraldry, the art of distinguishing the position of a bearer of arms in his branch of a family. In early feudal heraldry this was done by a wide system of differencing, but the label was adopted to distinguish the shield of the eldest son. The recognized marks of cadency are placed in the upper part of the shield as follow: eldest son a label, second a crescent, third a mullet, fourth a martlet, fifth an annulet, sixth a fleur-de-lis, seventh a rose, eighth a cross moline, ninth a double quatrefoil. See Heraldry.

Cadency. 1. Label. 2. Crescent. 3. Mullet. 4. Martlet. 5. Annulet. 6. Fleur-de-lis

CADER IDRIS (Seat of Idris). Fifth highest mountain of Wales. In Merionethshire, 4 m. S.W. of Dolgelly, it consists of a long, precipitous ridge. Its summit, Pen-y-gader, 2,914 ft. high, commands a magnificent view.

CADET (Lat. capitellum, little head). Term employed in Britain for one undergoing a course of training with a view to obtaining a commission in the navy, army, or air force. It originally meant the head of a younger branch of a family, or a younger son. In a military sense the word is used for those being trained at Sandhurst or Woolwich; members of an officers' training corps; and members of special corps raised during the War for training men for commissions.

CADET CORPS. Most public schools have a cadet corps, composed of the older boys, who are trained on military lines. They have a uniform, go on route marches and to camps and, if efficient, are recognized by the War Office. Organizations such as the Boys' Brigade and the Church Lads' Brigade are also recognized as cadet corps. In 1930 the Government grant was withdrawn.

CADI. Arabic title for a judge of summary jurisdiction in Mahomedan countries. He is required to be learned in the Koran and the religion of Islam.

CADIZ (Phoen. Agadir, Lat. Gades). City and seaport of Spain. The capital of the prov. of Cadiz, it stands at the end of a narrow isthmus projecting 5 m. into the Bay of Cadiz, 95 m. by rly. S. of Seville. Approached by a single railway and one road, it owes its importance to its geographical position and fine natural harbour. One of the oldest ports and cities in the world, it is a naval station, a wireless telegraphy station, and a centre of art and industry. There are many public gardens and promenades, and a botanic garden. Cadiz has two cathedrals, a picture gallery, library and museum, hospitals, an observatory, theatres, and bull-ring. A watch tower, the Torre del Vigia, stands in the centre of the town. Pop. 77,717.

Cadiz. Showing the 13th century cathedral and Cadiz Bay beyond

Founded by the Phoenicians, traditionally about 1100 B.C., Cadiz was by the 7th century B.C. a famous mart for tin, silver, and amber. The bay of Cadiz is an inlet of the Atlantic on the S.W. coast of Spain. It is divided into an inner and an outer bay.

CADMAN, SIR JOHN (b. 1877). British scientist. Born Sept 7, 1877, he was educated at Durham and became a mining engineer. For a time he was an inspector of mines, but, having been a member of a royal commission on the Persian oilfields, he left the public service to become a consulting engineer.

Soon recognized as a leading authority on oil, he was made petroleum adviser to the British Government and in 1926 chairman of the Anglo-Persian Co.

CADMIUM (Gr. cadmeia, ore of zinc). Metallic element. Its symbol is Cd, its atomic weight 112.4, and its atomic number 48. Its specific gravity is 8.6, and its melting point 600.6° F. (320.9° C.). In hardness cadmium comes between

gold and tin. It is white with a bluish tinge, has a compact, fibrous texture and a strong lustre, and will take a high polish. In appearance it is similar to tin, of crystalline structure. The only known native

compound or ore proper is a sulphide of the metal. It is found chiefly in Bohemia and Pennsylvania and is recovered industrially as a by-product of the production of zinc. Cadmium has a limited use in the preparation of fusible alloys and pigments.

CADMUS. In Greek legend, son of Agenor, king of Phoenicia. When his sister Europa was abducted by Zeus, Cadmus was sent by his father in search of her. After many adventures, and in obedience to the oracle at Delphi, he built the city of Thebes. He married Harmonia, daughter of Aphrodite. He and his wife were changed by Zeus into serpents and placed in Elysium. Cadmus was said to have introduced the Phoenician alphabet into Greece.

CADOGAN, EARL. English title borne since 1800 by a family of Irish descent. The 1st earl, William Cadogan (1675-1726), a soldier under William III and Anne, was made a baron and an earl in 1718. On his death the earldom became extinct, but the barony was inherited by his brother. The latter's son was made Viscount Chelsea and Earl Cadogan in 1800. The 2nd baron, Charles (1691-1776), married the daughter of Sir Hans Sloane, and thus brought into the family the valuable estates in Chelsea (q.v.).

George Henry, the 5th earl (1840-1915), was secretary for war 1875-78; for the colonies, 1878-80; lord privy seal, 1886-92; and lord-lieutenant of Ireland, 1895-1902. He died March 6, 1915.

CADORNA, COUNT LUIGI (1850-1928). Italian soldier. The son of Count Raffaele Cadorna, the leader of the Italian army that invaded the Papal States in 1870, he was born at Pallanza, Sept. 4, 1850. In 1914 he became chief of the general staff. When Italy, in May, 1915, entered the Great War, Cadorna was appointed commander-in-chief, but after Caporetto, 1917, he was superseded by Diaz. He then represented Italy on the military council at Versailles. He died Dec. 21, 1928. His memoirs, *The War on the Italian Front*, appeared in 1921.

CADOXTON. Town of Glamorganshire, Wales. It is 7 m. S.W. of Cardiff, on the G.W.R. Coal and iron are largely worked here. It has grown from a small village to its present dimensions owing to the opening of the Barry Docks. Pop. 7,065.

Caduceus. Bronze statue of Mercury, at Florence, holding the caduceus

CADUCEUS (Latinised form of Gr. *kērykeion*, herald's staff). In Greek mythology, the rod borne by Hermes, the messenger of the gods, as the symbol of his power. Two serpents were entwined round the lower end of it. With the caduceus Hermes conducted the souls of the dead to Hades. In modern times, as the symbol of Mercury, the Roman counterpart of Hermes and the god of commerce, the caduceus is sometimes adopted as the device of business houses.

CAECILIAN (Lat. *caecus*, blind). Worm-like amphibian belonging to the order

CAEDMON (d. c. 675). Anglo-Saxon poet. According to Bede, he was a labourer at S. Hilda's monastery at Whitby. He had a vision bidding him sing of the Creation, and thus inspired he composed verses, which Bede gives in Latin form. Caedmon on the advice of S. Hilda became a monk at Whitby, where he died. A 10th century MS., now in the Bodleian Library, contains a series of metrical paraphrases called *The Caedmon Poems*. They were discovered by Francis Junius, a friend of Milton, in 1655, and later criticism dates them in the main from the 9th century.

Caedmon. Memorial stone in Whitby churchyard

good accommodation for ships, is a fishing centre, and has a canal which, in addition to the navigable river, connects it with the sea. Caen stone: is quarried in the neighbourhood.

Caen is chiefly interesting historically for its connexion with William the Conqueror. Here is the church of S. Étienne, which once contained his body. The castle still stands, although there is not much of the original building. Caen possesses a small university, a town hall with a fine library, a palais de justice, a museum of antiquities, and gardens. Near the city is a racecourse. Caen proper is on the left bank of the Orne; the suburb of Vaucelles stands on the right. Pop. 53,743.

Caen. L'Abbaye-aux-Dames, built by Queen Matilda of England

CAERLAVEROCK. Coast parish of Dumfriesshire. It stands on the river Lochar, 6 m. S.E. of Dumfries. On the N. shore of Solway Firth, near the mouth of the Nith, stand the ruins of its old castle, for four centuries the seat of the Maxwells, earls of Nithsdale. Captured by Edward I in 1300, it was the original of Scott's Ellangowan.

CAERLEON. Urban dist. of Monmouthshire. It is on the river Usk, 2 m. N.E. of Newport, on the G.W.R. The ancient capital of Britannia Secunda (Wales) and one of the traditional capitals of King Arthur, it is famous both from its Roman and its British associations. It was the Roman *Isea Silurum*, and its legends are preserved in Tennyson's *Idylls of the King*. Much excavation work has been done, especially on the site of the Roman amphitheatre. Relics are in the museum, which in 1930 was made part of the National Museum of Wales. Pop. 2,285.

Caecilian, a worm-like amphibian

remains of an Edwardian castle. Pop. 36,893.

CAESAR. Cognomen of the great Julian family in Rome, which traced its descent

back to Iulus, son of Aeneas. Its most famous representative was the dictator Gaius Julius Caesar. The family name was borne by the emperor Augustus, as the adopted son of the dictator, and by later emperors who belonged to the family by descent or adoption, the last being Nero. Their successors, while reigning emperors, used the name as a title. The German Kaiser and the Russian Tsar are forms of the word.

CAESAR, GAIUS JULIUS (102-44 B.C.). Roman soldier and statesman. He was born at Rome July 12, 102 B.C., of aristocratic parents.

He was the nephew of the great democratic leader, Gaius Marius, and this fact influenced Caesar in his support of the popular party. Entering military service, he was with the army in Asia in 81.

Caesar. Classic bust of Julius Caesar in the British Museum

After another spell of military service in the war with Mithradates Caesar returned to Rome and plunged into politics, as a consistent supporter of popular measures. In 68 he became quaestor in Spain, and in 65 curule aedile. His first wife having died in 68, Caesar in 67 married Pompeia, Pompey's cousin. The year 59, during which he held the consulship, was a memorable one for Caesar. Making common cause with Pompey, he formed with him and Marcus Crassus what is known as the First Triumvirate. He then desired a great military command with extensive powers, and the province of Gaul was allotted to him for five years, and at a later date for five years more. At the end of nine years he had conquered the whole of Transalpine Gaul. In 55 and 54 he invaded Britain.

By this time Caesar's successes had aroused a good deal of animosity, and in Rome Pompey, now thoroughly jealous, stood forward as his rival. His demands having been refused, Caesar crossed the Rubicon, the dividing line between Italy proper and the provinces, thus precipitating civil war. Elected consul for 48, he routed Pompey at Pharsalus on Aug. 9, and then became entangled in a war in Egypt. At that time he fell a victim to the charms of Cleopatra, who, it is said, bore him a son, Caesarion. Further victories over Pompey's forces in Asia Minor, Africa, and Spain preceded a period of power in Rome, where he was made dictator for ten years and then for life. His reforming zeal extended to many matters, including the calendar.

Under the leadership of Cassius a conspiracy was formed against Caesar on the ground that he was aiming at a tyranny, and the conspiracy was joined by several who honestly believed this accusation, notably Marcus Brutus, a personal friend of Caesar. The conspirators surrounded their victim in the senate house on the Ides (15th) of March, 44, and stabbed him to death. The blow of Brutus provoked from Caesar the words *Et tu, Brute* (Even thou, Brutus)! Caesar's commentaries on the Gallic war and on the Civil war are models of simple and clear writing. See Augustus.

CAESAREA. Ancient name of a town in Asia Minor, and of a ruined seaport of Palestine, both now called Kaiscriyeh (q.v.), or Kayseri. The former was the earlier Mazaca, the capital of Cappadocia, and was named Caesarea when

Ophiomorpha Caecilians occur in S. Asia and Africa and in Central and S. America. They burrow in the ground, and only the larval stage is passed in the water.

it became Roman in A.D. 18. The latter was founded by Herod, 13 B.C., on the site of an earlier city.

Caesarea Philippi, an ancient city of Palestine, stands at the foot of Mt. Hermon. The ancient Panias or Banias, so called from its worship of Pan, Philip the Tetrarch re-founded it, building here a temple to Caesar Augustus and re-naming the city.

CAESARIAN SECTION. Removal of an infant from the body of the mother by opening the abdomen. The term is derived from the tradition that Julius Caesar made his entry into the world in this way. The operation is performed in cases where the mother has died but it is believed that the infant is still living. See Obstetrics.

CAESARION (47-30 B.C.). Supposed son of Julius Caesar by Cleopatra, originally called Ptolemaeus. He was executed by order of Augustus after her death.

CAESAR'S CAMP. Popular name given to several earthworks in S. England. Almost invariably pre-Roman, they may be round, as at Wimbledon, Surrey; or oval, as at Sandy, Bedfordshire. Another good example is at Eastbampstead, Berkshire. That on St. George's Hill, Weybridge, is incorrectly associated with Caesar's passage of the Thames.

CAESIUM (Lat. caesius, bluish grey). Alkaline metal. Its chemical symbol is Cs, its atomic weight 132.8, its atomic number 55, its specific gravity 1.88, and its melting point between 26° and 27° C. It was discovered by Bunson and Kirchhoff about 1860, by spectrum analysis. Caesium is silvery white in colour and soft at ordinary temperatures. Though extremely rare, the metal is widely distributed, and is generally found along with rubidium.

CAESURA (Lat. cutting). Metrical pause or rest in a verse, sometimes combined with a grammatical pause. In heroic verse especially its place can be varied to heighten effect and to avoid monotony of rhythm.

CAFFEINE. Alkaloid prepared from the dried leaves of *Camellia thea* (tea) and certain other plants. Caffeine stimulates the muscles of the heart, and increases the rate of the heart beat, thus forming a useful drug in certain forms of heart disease; it increases the flow of the urine, acts as a stimulant to the nervous system, and it is used in cases of dropsy. The dose of caffeine is 1 to 5 grs., of citrate of caffeine 2 to 10 grs., and of effervescent citrate of caffeine 60 to 120 grs.

CAGLIARI (anc. Carales). City and seaport of Italy, the capital of Sardinia. In the middle of the S. coast on the gulf of Cagliari, it is connected by rly. with the chief towns in the island. The old town lies on a hill 300 ft. high, and the modern one on level ground surrounding the harbour. The cathedral dates from the 13th, and the university from the 16th and 18th centuries. It has a Phoenico-Roman necropolis, Roman amphitheatre, Punic and Roman tombs and other remains of antiquity. Cagliari is the trade centre of the island. Pop. 94,902.

The Italian painter Paul or Paolo Veronese (q.v.) is sometimes called Paolo Cagliari.

CAGLIOSTRO, COUNT ALESSANDRO (1743-95). Italian charlatan, whose real name was Giuseppe Balsano. From Rome, where he married the beautiful Lorenza Feliciani, he set out with his wife on a tour through

Europe, fleeing fashionable society as an adept in medicine, alchemy, and the cabalistic and necromantic arts and as a vendor of love philtres and elixirs of youth. In 1785 he became involved in the affair of the Diamond Necklace and was imprisoned in the Bastille. After his release he came to London, and, proceeding later to Rome, was condemned to death in 1789 for establishing an Egyptian order of freemasonry. The sentence was commuted to imprisonment for life, and he died in the fortress of San Leone, Aug. 26, 1795.

Count Cagliostro,
Italian charlatan
After Bartolozzi

CAHER or **CAHR** (stone fort). Market town of co. Tipperary, Irish Free State. It stands on the Suir, 11 m. by rly. W. of Clonmel, on the Gt. Southern Rlys. Caher Castle, on a rock in the Suir, was founded in 1142. Market day, Friday. Pop. 1,709.

CAHORS. City of France, capital of the department of Lot. It stands on a peninsula formed by the river Lot, 70 m. N. of Toulouse, on the rly. to Limoges. The Romano-Byzantine cathedral was begun in the 11th century. Other buildings are the church of S. Ursus, remains of the palace of Pope John XXII, a native, and the Barbacane of the 15th century. There are an old town and a new town, divided by a boulevard, and the city is connected with the other side of the river by three bridges, of which the Pont Valentré is the finest fortified medieval bridge in the country. The château, or logis, du roi is now used as a prison. Its university was amalgamated with that of Toulouse in 1751. Pop. 11,866.

CAILLAUX, JOSEPH PIERRE MARIE AUGUSTE (b. 1863). French politician. Born at Le Mans, he was elected to the Chamber as deputy for Sarthe in 1898, retaining the seat until 1919. Minister of finance in four ministries, 1899-1902, 1906-08, 1911, and 1913-14, he was prime minister in 1911-12. He resigned in March, 1914, when attacks in *Le Figaro* by G. Calmette ended in the murder of the journalist by the wife of Caillaux. In 1918 he was arrested on the charge of having worked against the security of the state. After more than two years in prison, he was tried before the Senate in Feb., 1920, and found guilty on the minor charge of holding relations with the enemy. He was sentenced to three years' imprisonment, but was at once released. Caillaux was minister of finance for a short period in 1925 and again in 1926.

Joseph Caillaux,
French politician

CAIMAN OR **CAYMAN.** Group of alligators found in Central and S. America. Of the five known species the commonest is the black caiman, about 14 ft. long; the others being much smaller.

Caiman. Rough-eyed caiman of South America

CAIN. First-born son of Adam and Eve (Gen. 4; Heb. 11; 1 John 3). According to the author of Genesis, he killed his brother Abel in a fit of jealousy, was banished as a fugitive and wanderer, and founded the first city, which he called Enoch after his son. A Jewish tradition states that he was accident-

ally killed by his descendant Lamech, the father of Jubal and Tubal-cain. Cain (R.V. Kain) is also a city of Hebron (Josh. 15).

CAINE, SIR THOMAS HENRY HALL (b. 1853). British novelist. Born at Runcorn, Cheshire, May 14, 1853, of Manx and Cumberland parentage, he was trained as an architect, but became a journalist. As a novelist, he attracted notice by *The Deemster*, 1887, followed by *The Bondman*, 1890; *The Scapegoat*, 1891; and *The Manxman*, 1894, books which threw light on many Manx customs and superstitions. Of his later works, *The Christian*, 1897, *The Eternal City*, 1901, and *The Prodigal Son*, 1904, became widely popular, and many of his novels have been dramatised and filmed. He also wrote *Recollections of D. G. Rossetti*, 1882 (new and enlarged version, 1928), and *The Drama of 365 Days, Scenes in the Great War*, 1915. He was knighted, 1918.

Sir Hall Caine,
British novelist
Russell

His elder son, Gordon Ralph, was Conservative M.P. for East Dorset, 1922-29, and, Derwent, his younger son, was elected Labour M.P. for a division of Liverpool in 1929.

Cairing or pilot whales which have followed their leader and have been stranded when the tide has run out

CA'ING OR **PILOT WHALE.** (*Globicephalus melas*). Species of dolphin, known also as the blackfish, met with in great schools throughout the temperate seas. If the leader happens to run ashore and get stranded, the whole school usually follows suit. See Whale.

CAIRD, EDWARD (1835-1908). British philosopher. Born at Greenock, March 22, 1835, he was educated at Glasgow University, St. Andrews, and Balliol College, Oxford. He became fellow of Merton, 1864, and professor of moral philosophy at Glasgow, 1866. In 1893-1907 he was master of Balliol. He died at Oxford, Nov. 1, 1908. A pronounced Hegelian, in philosophy he was a critical idealist, who endeavoured to find in Kant the origin of the ideas which were later developed by Hegel.

Edward Caird,
British philosopher
Ellis & Fry

Caird's brother, Rev. John Caird (1820-98), was principal of Glasgow University, 1873-98.

CAIRN (Celt. cairn, heap). Pile of mounds of stones. The purpose may be memorial, as

Cairn. Section of the cairn at Camster, Caithness, showing passage 20 ft. long and chamber 10 ft. high the witness-cairn of Jacob's compact with Laban (Gen. 31), or the prince's cairn on Lochnagar, Scotland. In archaeology the word denotes a sepulchral mound of unmortared stones, as distinct from an earthen barrow.

CAIRNGORM. Mt. of Scotland. It is on the borders of Inverness-shire and Banffshire, 12 m. N.W. of Braemar, alt. 4,084 ft. A summit of the Cairngorm group of the Grampians, it is mostly snow-capped, and produces topazes and Cairngorm stones, a variety of quartz, yellow brown to dark brown, and nearly opaque, much used in Highland jewels. They are also found in Switzerland and Colorado, U.S.A.

In 1929 it was proposed to make the Cairngorms into a national park for Scotland.

Cairn Terrier. Small sporting dog originally bred for hunting foxes

our may be sandy, grey, brindle, or nearly black. The cairn is useful as a sporting dog and also for the house. A fair average weight is 14 lb. The name comes from the fact that the dogs were used to drive foxes out of cairns of rock into which larger dogs could not go.

CAIRNS. Seaport of Queensland, Australia. On Trinity Bay. 890 m. N.W. of Brisbane, it is the terminus of a rly. to the gold, copper, tin, and silver mines of Chillagoe and district. It has a good harbour (Trinity Inlet), and exports minerals, timber, coffee, etc. Pop. 9,500.

CAIRNS, HUGH MACCORMACK CAIRNS, 1ST EARL (1819-85). British lawyer and statesman. Born in co. Down, of Protestant stock, at the age of 25 he was called to the English bar, and from 1852-66 was Conservative M.P. for Belfast. He was solicitor-general in 1858, attorney-general in 1866, and lord justice of appeal in 1867. Created Baron Cairns in 1867, he was lord chancellor in Disraeli's ministry in 1868, and again 1874-80. He was created Earl Cairns in 1878, and died April 2, 1885.

Hugh Cairns, 1st Earl Cairns

CAIRO. Capital of modern Egypt and the largest urban centre in Africa. It lies on the right bank of the Nile, between that river and the Ismailia Canal. Pop. 1,064,567.

In the Middle Ages Cairo was the residence of the caliphs and the chief centre

of Saracenic art. More than 250 mosques attest the splendour of the medieval city. The mosque of El-Azhar, originally built by

Upper Egypt. It is further noted for its jewelry industry.

In Dec., 1919, the All-British air route from

the mosque of Amru, in Old Cairo (Masr-el-Atika). Notably beautiful mosques are that of El-Hakim (begun about 990), the mosque and tomb of Kalaun (1288), the mosque of Ak-Sunkur (1347), covered with blue and green porcelain tiles, the mosque of Sultan Hasan (1358), and that of El-Muayyad (1412). Other interesting old buildings are the citadel, built by Saladin in 1166 from stones brought from the small pyramids at Gizeh; the Bâbel Nasr and Bâbel-Futuh gates; the Coptic churches, including the cathedral of S. Mark; the Arabian Museum; the Sultania Library, and the Tombs of the Caliphs outside the city.

The medieval city was divided into the Christian or Coptic, the Jews', and the "Frank" quarters, shut off from each other by gates. Modern Cairo is now virtually one city, with special European districts. The modern portion, Ismailia (Ismailiyeh), lies W. of the Oriental part, near the banks of the Nile, and is built on European lines, in striking contrast to the native quarter, with its tortuous and narrow streets and overhanging houses. Grouped around the Esbekia Gardens (20 acres), the centre of the foreign community, are fine hotels and villas. Notable

modern buildings include the Government buildings, the Museum of Egyptian Antiquities, the British Consulate, the Exchange, and the Abdin Palace. The Gezira (island) contains the palace built by Ismail (now an hotel) and the grounds of the Sporting Club. To the W. is a racecourse.

Besides being the railway centre of Egypt, Cairo is the distributing centre for Egypt and a trading centre of goods from the Near and Far East, the Sudan, and

Caithness. The most northerly county of Great Britain, noted for its fisheries. In the extreme N.E. is the famous John o' Groat's House. See below

Cairo to Cape Town became available for traffic. There is a fortnightly air mail service between Cairo and Mesopotamia, as well as a wireless service between Cairo (Abu Zabal) and Oxford (Leafield). See Egypt.

CAISSON (Fr. caisse, a chest). Chamber of wood, concrete, or metal with water-tight walls, used for making foundations under water, or for sinking large shafts. It has a cutting edge at the bottom if intended to be sunk into the ground. Caissons for subaqueous use are made somewhat deeper than the water at the site, floated into position, and sunk. If the cutting edge enters firm clay at all points, the water can be pumped out and the ground excavated. Usually, however, an airtight horizontal floor 7 ft. or 8 ft. above the bottom edge is constructed, and air-pressure used to exclude water. When sinking is complete, the caisson is filled with masonry or concrete. Shaft caissons are erected on the site, and sunk by excavation at the bottom and by adding to the top. Caissons of another type are used in place of doors to close the entrances to docks. See Air; illus. p. 338.

CAITHNESS. Maritime county of the Scottish mainland. Bounded N. by Pentland Firth and E. by the North Sea, it has about 75 m. of generally rugged coast, and an area of 685.7 sq. m. Duncansby Head, to the W. of which is the site of John o' Groat's House, and Dunnet Head are the most prominent land projections. The Thurso is the chief river. Its fisheries are among the most important in Scotland. Wick is the county town, other towns being Thurso, Castletown, and Lybster. Caithness unites with Sutherland to return one member to Parliament. Pop. 24,700.

CAITHNESS FLAGS. This is the name given to the middle division of the Old Red Sandstone of N. Scotland, well developed in Caithness. It consists of dark grey bituminous and calcareous flagstones, largely quarried for paving purposes, and famous for the number and perfect preservation of fossil fish remains. The flags attain a thickness of over 11,000 ft.

Cairo. 1. The Citadel, built by Saladin in 1166. 2. General view, showing the mosque of Sultan Hasan

CAIUS OR KAYES, JOHN (1510-73). English physician. Born at Norwich, Oct. 6, 1510, he was educated at Gonville Hall, Cambridge. Having taken his M.D. at Padua, he was appointed anatomical lecturer to the London company of surgeons, and afterwards physician to Edward VI, Mary, and Elizabeth. Caius obtained permission, 1557, to refound Gonville Hall as the college of Gonville and Caius, to which he left his estate. He died July 29, 1573. The name is pronounced Keys

John Caius,
English physician

CAJEPUT (Molaleuca leucadendron). Evergreen tree of the order Myrtaceae. A native of the Malay region, it has lance-shaped leaves and white flowers produced in spikes. From its leaves is distilled a blue-green oil which has a strong agreeable odour and a warm aromatic taste. It is of value in medicine as a general stimulant, antispasmodic, and diaphoretic. The tree annually sheds its bark, which is used

Cajeput. Leaves and flowers of this evergreen tree

for making canoes, shields and the roofing of huts.

CALABAR. Town of Nigeria, on the left bank of the Calabar river. Called Duke Town until 1904, it was officially known as Old Calabar, to distinguish it from New Calabar, the name of a river and port about 100 m. to the E. Calabar has a good harbour and engineering and ship-building industries. The Calabar river joins the Cross and other rivers to form the Calabar estuary. Calabar was the name given by the Portuguese in the 15th century to the tribes of this part. Pop., including Creek-town, 15,000.

CALABAR BEAN. Seed of *Physostigma venenosum*. A kidney-shaped bean, about 1½ inches in length, it contains an alkaloid, physostigmine or eserine, the sulphate of which is used in glaucoma and other diseases of the eye. It is also used in cases of tetanus or lockjaw. The bean is poisonous.

CALABASH OR BOTTLE-GOURD (*Crescentia cujete*). Evergreen tree of the order Bignoniaceae. A native of tropical America, it has bell-shaped, tubular flowers variegated with green, purple, red, and yellow. The fruits are globular or slightly oval, with a hard shell-like rind, containing many large, almond-shaped seeds embedded in a sub-acid pulp. The latter is used as a purgative and, after roasting, as a poultice. The shells serve for water bottles, cups, pails, basins, often carved and polished. The Calabash Nutmeg (*Monodora myristica*) is a small tree of the order Anonaceae, a native of tropical Africa. The fruit is globular, with a hard rind, and contains a number of seeds not unlike nutmegs.

CALAIS. Seaport of France, in the dept. of Pas-de-Calais. On the Strait of Dover, 18 m. E. by S. of Dover and 185 m. by rly. N. of Paris, it consists of an old town on an

island, formed by the harbour and canals, and of the surrounding suburbs. Calais is one of the chief ports for the traffic between England and France.

Calais was in the hands of the English from its siege by Edward III in 1347 until its loss under Mary. Its modern prosperity began with the introduction of the lace manufacture early in the 19th century and the increasing intercourse with England. In the Great War it was an Allied base, and underwent many bombardments by enemy aircraft. Pop. 71,629.

Calais. The Hôtel de Ville and, left, the 15th cent. lighthouse

CALAMANDER WOOD. Timber of a large tree (*Diospyros quacita*) belonging to the order Ebenaceae. A native of Ceylon, the Cingalese use it in the manufacture of very beautiful furniture, but its hardness (it is allied to ebony) makes it difficult to work.

Calamary (*Loligo vulgaris*). Variant name of the squid (q.v.).

CALAMINE (late Lat. *calamina*, Gr. *cadmeia*). An ore of zinc. Calamine proper, the carbonate, is granular in texture, dirty white in colour, often deepening into yellow, grey, green, or brown, and of a vitreous, pearly lustre. It is usually found in stalactitic masses and in calcareous rocks, chiefly in Belgium and Germany. The zinc silicate ore is similar in many respects to calamine. In the form of ointment or lotion, calamine is a mild astringent in certain skin diseases. See Zinc.

CALAMINT (*Satureia calamintha*). A labiate herb with an aromatic smell resembling that of mint. Basil thyme (*S. acinos*) is a related species.

CALASH (French *calèche*, Polish *kolaska*, carriage). Term formerly applied to a light four-wheeled carriage often fitted with a folding hood. In Canada it denotes a two-wheeled carriage. The word came to be applied to the hood only, and hence to a woman's head covering made of silk and whalebone.

CALATRAVA. Ruined stronghold of Castile, Spain, on the Guadiana, 12 m. N.E. of Ciudad Real. It gives its name to the order of Calatrava, which originated amongst the knights who, in 1147, recovered the city from the Moors and defended it against them in 1158. It received its first statutes in 1164. The badge is a red cross with fleur-de-lis, and the ribbon is red.

CALAURIA (mod. Poro). Island in the Gulf of Aegina, off the E. coast of the Morea, Greece. Here, in 1828, the ambassadors of England, France, and Russia settled the government of the new kingdom of Greece.

In Calauria was the temple of Poseidon, famous as a sanctuary, where Demosthenes killed himself, and within the precincts of which he was buried (322 B.C.). Excavations in 1894 revealed remains of this temple and of other sacred buildings.

CALAVERAS. River of California, U.S.A. It rises among the foot-hills of the Sierra Nevada, a mountain chain running along the E. border of Calaveras co., and flows in a S.W. direction for 120 m., when it joins the San Joaquin river.

A human cranium found in 1866 in Calaveras county was alleged to have come from undisturbed gravels, 130 ft. deep. The Calaveras Skull was accepted by Josiah Dwight Whitney and others as evidence of American man in Pliocene times, but this and similar skulls and their associated implements were shown to be typical of modern aboriginal tribes. See Anthropology: Man.

CALCEOLARIA

(Latin *calceolus*, small shoe). Plants of the natural order Scrophulariaceae. The best-known kinds are hardy shrubs, natives of S. America, with flowers yellow, red, and brown. They are cultivated as half-hardy or greenhouse plants, propagated from cuttings, and form a prominent feature in summer bedding.

Calceolaria. A favourite flowering shrub for exhibition purposes

CALCHAS. Famous soothsayer who accompanied the Greeks during the Trojan war. He foretold the wrath of Apollo, and from the number of a flight of sparrows the length of the war. Later legend associates him with the wooden horse. He died of grief or committed suicide after being proved inferior as a soothsayer by Mopsus, son of Apollo.

CALCINATION (Lat. *calx*, lime). Process by which carbonic acid, water, sulphur, or other volatile constituent of an ore is expelled by the agency of heat. The term is often used as synonymous with roasting, but there is an important distinction. Calcination is effected by heat alone; roasting calls for air, to maintain the combustion of any fuel that may be used, whether contained in the ore or added, and also for oxidising one or more constituents of the ore. See Metallurgy.

CALCITE OR CALC-SPAR. Natural carbonate of calcium. When perfectly transparent it is known as Iceland spar, and is used, on account of its property of strong double refraction, in the manufacture of optical instruments,

especially Nicol's prisms. It is found commonly in veins associated with sulphidic ores of lead and zinc, or with barium-sulfate. See Aragonite.

Calash. An early example of this light four-wheeled carriage

CALCIUM (Lat. *calx*, lime). Elementary metal, the base of one of the alkaline earths. Its chemical symbol is Ca; its atomic weight 40.07; its atomic number 20; its specific gravity 1.548; its melting point 810° C. In hardness it compares with gold, and is very ductile. Calcium never occurs native, but in its compounds it is widely distributed, and forms a very large portion of the known earth's crust. In the form of calcium carbonate it occurs nearly everywhere as marble, calcite, chalk, coral reefs, or limestone rocks; it is found in the sea and in nearly all river waters and all mineral springs; while shells are almost entirely composed of it. It is used in research and analytical work and in the preparation of pure chemicals.

CALCIUM CARBIDE (CaC_2). This is used for the generation of acetylene. It is made by heating in an electric furnace a mixture of

quicklime and coke, when the carbon of the coke combines with the quicklime. The unpleasant smell of calcium carbide is due to the slow evolution of acetylene from the action of moisture in the air. See Acetylene.

CALCIUM CYANAMIDE. This is an artificial nitrogen manure (CaCN_2), made by causing calcium carbide to unite with nitrogen in the electric furnace. Calcium nitrate or Norwegian saltpetre, another artificial manure, contains about 13 p.e. of nitrogen. It is made by allowing electrically prepared nitric acid to act on limestone. Both these manures are used as substitutes for nitrate of soda.

CALCREOSE. Combination of creosote and lime. It is claimed for this drug that, while fulfilling the functions of creosote when taken internally, its action is less violent. It is a dark brown powder.

CALCULUS. In medicine, a solid concretion occurring in an organ or tissue of the body. Calculi are most frequently found in the kidney and gall bladder, though they may occur in the liver, intestines, and elsewhere. In the kidneys, calculi are most frequently associated with gout. They may be formed of uric acid, urate of ammonium, calcium oxalate, and phosphates, or mixtures of these.

CALCUTTA. City of India, capital of the province of Bengal. Formerly the capital of the Indian Empire and the official residence of the viceroy, it extends for 6 m. along the left bank of the Hooghli. On a navigable river, 86 m. from the sea, it is the gateway and emporium of the rich valleys of the Ganges and Brahmaputra, with which it is linked up by rlys. and waterways.

The aggregate area of Calcutta and its three suburbs, Cossipur, Chitpur, Maniktala, and Garden Reach, is 42 sq. m. Greater Calcutta, inclusive of Howrah, an important industrial centre on the opposite bank of the Hooghli, has a population of 1,327,547.

Of the total area, 1,283 acres make up the enclosure occupied by Fort William and the Maidan, the latter a wide open space S. of the business quarter, between the river and Chauringhi road. East of the business quarter is the European residential quarter, with the native town all round. In the Maidan are several monuments, and round it are some of the most notable buildings. On the N. side is Government

House, now the residence of the governor of Bengal, with the town hall and the High Court between it and the river; on or near the E. side are the principal hotels, the United Service and Bengal clubs, and the Imperial Museum; to the S.E. lies S. Paul's Cathedral, and due S. the race-course. Across the Lower Circular road are a group of hospitals, and farther on, S. of Tolly's Nala, are the Zoo and the logical Gardens. A large part of the western side of the Maidan is taken up by Fort William, around which Calcutta has grown. Between the Fort and the High Court are the Eden Gardens.

The original Fort, named after William III, was built in 1702, and occupied a site 2 m. to the N. It was in a lock-up cell in this fort that

the tragedy of the Black Hole (q.v.) of Calcutta was enacted. In 1757 the foundations of a new fort were laid on the present site. The building, completed in 1773, is an irregular octagon with a moat. There are six gates.

Calcutta is connected with Howrah by a number of ferries and by a pontoon bridge. On the right bank of the Hooghli, in addition to many industrial undertakings, are the Botanical Gardens (opposite Garden Reach, the southernmost suburb).

Among other buildings of note may be mentioned the Victoria Memorial Hall, the Economic Museum, the Mint, the Roman Catholic cathedral, and the General Post Office. The university, founded in 1857, serves the state of Bengal. It consists of several colleges in the city and elsewhere.

The Turf Club of Calcutta organizes the famous sweepstake on the Derby, the prizes in which amount to over £500,000.

Calcutta Cup. Trophy awarded each year to the winner of the Rugby football match between England and Scotland.

CALDECOTT, RANDOLPH (1846-86). British artist. Born March 22, 1846, in 1872 he began to draw for *The Graphic*, *Punch*, and other periodicals. He made a great hit as an illustrator of books with Washington Irving's *Old Christmas*, 1875; and *Bracebridge Hall*, 1876. Caldecott produced a series of coloured books for children, beginning in 1878 with *John Gilpin* and *The House That Jack Built*. The last two books were *The Great Panjandrum Himself* and *Elegy on Madame Blaize*. He died in Florida, Feb. 12, 1886.

CALDER. River of Lancashire and Yorkshire. Rising to the S. of Burnley, it flows 45 m. E. of the Aire, which it joins close to Castleford. It is utilised for the canal system known as the Aire and Calder Navigation. See Aire.

CALDER. Villages of Midlothian. On the Almond, 11 m. S.W. of Edinburgh by the L.M.S. Rly., Mid Calder has mineral-oil and chemical industries. East Calder and West Calder, having coal and ironstone mines, are contiguous villages. Pop. 3,207.

CALDERA. Seaport of Chile, in the prov. of Atacama. On Caldera Bay, it is the terminus of the rly. to Copiapó, the first built

lying at anchor in the bay when two torpedo boats of the other faction steamed in. One fired a torpedo, sinking the larger vessel, with 300 of her crew, in a few minutes.

CALDERON, PHILIP HERMOGENES (1833-98). British painter. Born at Poitiers, France, May 3, 1833, he came to London in 1841, and first exhibited at the R.A. in 1853. His chief works were *Broken Vows*, 1857; *Catherine of Aragon* and *her Women at Work*, 1862; *Her Most High, Noble, and Puissant Grace*, 1866; and *S. Elizabeth of Hungary*, 1891, now called *The Renunciation*, one of the Chantry pictures in the Tate Gallery. Elected A.R.A. in 1864, R.A. in 1867, he was made keeper of the Academy in 1887. He died April 30, 1898.

CALDERON DE LA BARCA, PEDRO (1600-81). Spanish dramatist. Born in Madrid, Jan. 17, 1600, he studied for six years

Calderon de la Barca, Spanish dramatist

at the university of Salamanca, and served for some time with the Spanish army in Italy and Flanders. He was already high in favour as a dramatist with the king and the public in 1636 when a volume of his plays was published. In 1640 Calderon took part in the Catalan campaign, but left the army in 1642. In 1650 he joined the third Order of S. Francis, and in 1651 was ordained priest and given charge of a Madrid parish, and in 1653 became prebendary of Toledo. In 1663 he was appointed chaplain to Philip IV. He died May 25, 1681.

Of Calderon's voluminous writings 118 dramas and 72 autos have been preserved. As a writer of the essentially Spanish auto, sacred allegorical drama, he is supreme, while as a dramatist he stands on a lower plane than his predecessor, Lope de Vega. There are English versions of his more notable plays.

CALDEY. Island off the S. coast of Pembrokeshire. It is 3 m. from Tenby, and with the adjacent St. Margaret Island covers 472 acres. There is a lighthouse on Caldey. The island has a modern abbey that belonged to a Benedictine community founded in 1896 by members of the Church of England who were received into the Roman Catholic Church in 1913. In 1928 the Benedictine monks left Caldey and Cistercian monks from Belgium made their home thereon.

CALEB. Son of Jephunneh, of the tribe of Judah. He was sent by Moses with Joshua to spy out the promised land and received Hebron as his inheritance (Num. 13 and 14; Deut. 1; Josh. 14).

CALEDON. Town of Cape Province, South Africa, in Caledon district. It is 87 m. by rly. S.E. of Cape Town on the Zwartberg, 750 ft. high, and is noted for its thermal and mineral springs. Pop. 3,499.

The river Caledon, in South Africa, rises in Mont-aux-Sources in the Drakensberg, and flows about 220 m. S.W., passing between Basutoland and the Orange Free State to the Orange river near Bethulie. It has two main feeders, the Great and Little Caledon.

The Irish title earl of Caledon has been borne by the family of Alexander since 1800. In the 17th century the Alexanders owned land in co. Londonderry. Du Pré Alexander, the 2nd earl, was in 1806 the first British governor of the Cape of Good Hope.

Caledonia. Roman name for Britain N. of the firths of Forth and Clyde, now used poetically for Scotland. See Britain.

Calcutta. Above: left, S. Paul's Cathedral; right, the Victoria Memorial in the N.E. corner of the Maidan. Below, Badri Das temple of the Jains

in S. America. Here minerals of the district are shipped. Pop. 2,500.

Caldera Bay is famous for an incident in the Chilean civil war of 1891. On April 13, at night, the ironclad Blanco Encalada was

CALEDONIAN CANAL. Waterway of Scotland. Extending for 60½ m. along the Great Glen from Moray Firth to Loch Linnhe, it is formed by the union of Lochs Ness, Oieh, Loehy, and Dochfour, and 23 m. of

Caledonian Canal. The locks at Fort Augustus, where the canal enters Loch Ness from the South
Valentine

artificial cuttings, and is navigable by ships of 600 tons. There are 28 locks, each 160 ft. long, 38 ft. broad, and 15 ft. deep; they begin at Corpach in a series of eight, known as Neptune's Staircase. Opened 1822, the canal was not completed until 1847.

CALEDONIAN MARKET. One of the largest cattle markets in the world. Officially known as the Metropolitan Cattle Market, and situated between York Road and Caledonian Road, Islington, London, it occupies land formerly known as Copenhagen Fields, bought by the City Corporation in 1852. The market superseded the old market at Smithfield, and was opened by the Prince Consort in 1855.

Principal market days, Mon. and Thurs. On Tuesdays and Fridays a pedlars' market for household goods and ornaments is held.

Caledonian Railway. Former Scottish rly. company, now merged in the L.M.S.

CALENDAR (Lat. calare, to summon; calendarium, account book). Systematic division of the year into months, weeks, and days. A year is the time occupied by the earth in making one complete revolution round the sun. The sidereal year is the time between two successive conjunctions of the sun with a fixed star, the solar or tropical year is the period between two successive passages through the vernal equinox. The mean sidereal year is 365 days, 6 hours, 9 mins., 9 secs.; the mean solar year 365 days, 5 hrs., 48 m., 46 secs.

The chief calendar of Christendom is the Roman (Julian and Gregorian); there are also Chinese, Jewish or Hebrew, and Mahomedan calendars, all with a year of twelve months, and special calendars such as that of the French Revolutionary period and that of Comtism. In 1929 Russia announced a new calendar. In this the week consists of 5 days and the month of 6 weeks, giving a year of 360 working days and five holidays.

The word calendar is applied to the almanac or to lists or tables of exercises, observances, or dates of events, e.g. church, university, legal, and racing calendars. See Easter.

CALENDS OR KALENDS (Lat. Kalendae). At day of the ancient Roman month. To undertake to pay a debt at the Greek Calends undervalued the equivalent of an intention was pay at all, there being no Calends in not to system of measuring time.

CALGARY. City of Alberta, Canada, on the Bow River.

CALGARY. City of Alberta, Canada, on the Bow River. The largest and the Bow of the province, it is a junction on the oldest cities of the C.P. and C.N. Rlys. An the main trading centre for the surrounding important mining districts, a manufacturing and machinery. There factories flour, etc. It is a city on the are large rly. works, Police and the Royal Canadian Mounted Police. The headquarters of the C.N. Bow Island, and Natural gas is piped from Bow River. electric power is developed from Bow River. Pop. (1926) 65,513.

CALICHE. Name given to impure sodium nitrate (NaNO₃) or Chile saltpetre. From caliche the world's supply of sodium nitrate is obtained, and the deposits of this substance only occur in N. Chile, the caliche beds of Tarapaca province being the most important.

CALICO. General term for plait white cotton cloth. The word is derived from the once famous cotton-weaving and printing city of Calicut, in India, which in the 16th century shared with Goa the carrying trade between India and Europe. Formerly any kind of cotton cloth imported from the East was called calico. Until 1773 calicoes had linen warps. In a charter of 1640 calico was listed among the linens as calico lawn, a grouping which led to the controversy, mentioned by Pepys in his Diary, between the East India Company, who insisted that calico was cotton, and the collectors of the additional duty, who maintained it was linen. In Great Britain the term calico is used specially for household cotton cloth. See Cotton.

CALICUT. Seaport of India, in the Malabar dist of Madras, 6 m. N. of Beypur. The Portuguese explorer Pedro de Corvillão landed here, 1487, and was followed by Vasco da Gama in 1498. Connected by rly. with Madras, it is now an important seaport. The calico which was largely made here, and took its name from the town, is no longer made. It became British in 1792. Pop. 82,334.

CALIFORNIA. Maritime state of the U.S.A., known as the Golden State. It has about 1,000 m. of coastline, an area of 158,297 sq. m., and a pop. of 5,398,457.

California is rich in minerals, including gold, silver, copper, quicksilver, lead, and coal. The state is one of the three most important petroleum producers in the Union. Among prominent industries are petroleum refining, canning and preserving, meat-packing, and lumbering. Los Angeles is in the state. Sacramento is the capital and San Francisco the chief seaport.

Lower California, or Baja California, is a peninsular territory of Mexico. It extends about 750 m. between the Pacific Ocean and the Gulf of California, and covers 58,338 sq. m. La Paz is the capital. Pop. 62,831.

Californian poppy, North American perennial

California Plateau is the name given to rising ground in the dept. of Aisne, France, just S. of Craonne at the terminus of the Chemin des Dames. Heavy fighting occurred here in the various battles of the Aisne (q.v.). The Germans made a terrific attack on it in the summer of 1917, and again in May, 1918.

CALIFORNIAN POPPY (Eschscholtzia californica). Perennial bushy herb of the order Papaveraceae. A native of N.W. America, it

Calgary, Alberta. Panorama of this large Canadian city, which is virtually the growth of only thirty years has bright yellow four-petalled flowers, which are succeeded by long seed pods. In gardens it is treated as an annual.

CALIGULA (A.D. 12-41). Roman emperor, A.D. 37-41. The son of Germanicus and Agrippina, his real name was Gaius Caesar, Caligula being derived from the caligae or soldiers' boots, which he wore as a boy with the army in Germany, where he was brought up. The first few months of his reign promised well, but a serious illness left him a changed man. The rest of his reign is a record of extravagance, cruelty, and caprice, which can scarcely be explained except on the supposition that he was insane.

Caligula, Roman Emperor

At last a conspiracy was formed against the crazy tyrant, and he was murdered by Cassius Chaerea. See Nemi, Lake.

CALIPERS (corruption of calibre). Instrument with two legs or jaws for measuring the inside or outside dimensions of shafts, cylinders and other circular objects. Ordinary calipers are used in conjunction with a foot rule.

Calipers. Left, for measuring inside, and right, for exterior, dimensions

CALIPHATE (Arab. Khalifah). Name given to the office held by the caliph or official head of Mahomedanism or Islam. The caliph was therefore the successor of the prophet, and his empire was known as the Caliphate. The name means successor.

When Mahomet died (June 8, A.D. 632) his followers chose as the first caliph Abu-Bekr (q.v.), the father of his favourite wife. The second was Omar, and the third Othman. When Othman, a son-in-law of Mahomet, was killed in 656, the succession was disputed, one party claiming it for Ali (q.v.), cousin of Mahomet and husband of his daughter Fatima. From that time there has been always a sect or section of the Mahomedan world (called Shiites) who have denied the orthodox or Sunnite succession.

The caliphate at Bagdad was overthrown in 1256, but the Mamelukes kept a puppet Abbasside caliph till the conquest of Egypt by the Ottomans in 1517, after which the succession was assumed by the Turkish sultans.

In Nov., 1922, it was announced that the office of caliph, hitherto vested in the person of the sultan, should be filled by election from among the princes of the House of Osman. Abdul-Medjid (b. 1868), cousin of the sultan, was elected. On Mar. 3, 1924, the National Assembly at Angora decreed the abolition of the caliphate. See Abbasides: Mahomedanism; Turkey.

CALIXTUS. Name of three popes, also called Callistus. Calixtus I was a slave who was freed and given charge of the cemetery in Rome still called after him. He was chosen pope in 218 and was martyred in 223. His festival is kept on Oct. 14. Calixtus II was pope 1119 to 1124. Calixtus III, pope from 1455 to 1458, was a Spaniard, Alfonso de Borgia, and one of his nephews was Rodrigo Borgia, who as Alexander VI was pope, 1492-1503.

Calixtus III, Pope, 1455-58 From a medal

CALLA, MARSH (Calla palustris). Perennial aquatic herb of the order Araceae. A native of N. Europe and N. America, it has a fleshy creeping stem and heart-shaped leaves, with long stalks. The simple flowers are arranged, like those of the wake robin, around a spadix, and are succeeded by red berries.

CALLANDER. Burgh and market town of Perthshire. On the river Teith, it is 16 m. by rly. N.W. of Stirling by the L.M.S. Rly. It is near the Trossachs and the Falls of Bracklinn. Market day, Thurs. Pop. 1,874.

CALLAO. Chief seaport of Peru, capital of the prov. of Callao. On a bay sheltered by islands, 7 m. by rly. S.W. of Lima, it has a wireless station. The modern city lies N. of the old city, which was destroyed by an earthquake in 1746. Pop. 66,000.

CALLERNISH. District near Stornoway, Lewis, famous for four neolithic stone circles. In the principal one 12 unhewn gneiss monoliths enclose an area 42 ft. across. Near a central menhir, 17 ft. high, a two-chambered dolmen was disclosed, 1858. It is approached from the N. by a stone avenue 270 ft. long. Single rows running S., E., and W. complete the design of a cross.

Callernish, Stornoway. Remains of the Neolithic period

CALLIMACHUS (c. 300-240 B.C.). Greek poet, grammarian, and critic. Born at Cyrene, he spent most of his life in Alexandria, where Ptolemy Philadelphus appointed him superintendent of the library, a post which he held until his death. He is said to have written more than 800 works in prose and verse. Of his poems, the *Aitia* (Causes) related the mythical origin of cities, festivals, manners, and customs; and the *Hecale* the story of the kindly reception of Theseus by an old woman. Fragments of his works were discovered in Egypt at Oxyrhynchus.

CALLIOPE (Gr. beautiful-voiced). In Greek mythology, one of the nine Muses who presided over the arts and sciences. She was the muse of epic poetry, and is represented with wax tablets and a stylus, or writing instrument, in her hand.

The name is given to a class of British light cruisers built in 1915, the *Calliope*, *Cleopatra*, *Cordelia*, *Champion*, *Carysfort*, *Caroline*, *Comus*, and *Conquest*. Oil-driven, they displace 3,750 tons and have a speed of 30 knots. Their armament consists of two 6-in. and six 4-in. guns.

Calliope, the muse of epic poetry. Statue in the Vatican Museum, Rome

CALLISTO.

In Greek mythology, an Arcadian nymph and companion of Artemis (q.v.), beloved by Zeus. To conceal his intrigue from his wife Hera, Zeus turned Callisto into a she-bear, in which form Artemis, at the instigation of Hera, unwittingly slew her. She was then placed by Zeus in the constellation Arctos, the Bear.

CALMETTE, GASTON (1858-1914). French journalist. Born at Montpellier, he was

attached to *Le Figaro* for many years before he became its editor-in-chief in 1903. In Jan., 1914, he began a series of attacks in *Le Figaro* on Joseph Caillaux, charging him with fraud and corruption. Having continued these attacks for nearly three months, on March 16 he was shot dead in his office in Paris by Mme. Caillaux, wife of the finance minister. See Caillaux, J.

CALNE. Borough and market town of Wiltshire. It is on the G.W.Rly., 6 m. from Chippenham and 85 m. from London. The chief buildings are the church of S. Mark, the town hall, and the 17th century grammar school. Bacon-curing is carried on. Market day, third Mon. Pop. 3,640.

CALOMEL (Gr. kalos, beautiful; melas, black). Mercurous chloride, or subchloride of mercury, HgCl_2 . It is used in medicine, in doses of $\frac{1}{2}$ to 5 grains, as a purgative for disorders of the liver.

CALORESCENCE (Lat. calor, heat). Change of rays of heat into rays of light. When a body absorbs radiation of one wavelength and, transforming it, emits it as radiation of a shorter wave-length, the phenomenon is called calorescence. Prof. Tyndall exhibited it by focussing the invisible infra-red, or heat, rays from an electric arc on to a strip of platinum foil. The platinum was thus heated to incandescence, and consequently emitted visible radiation light rays.

CALORIE. Metric unit of heat. It is the amount necessary to raise the temperature of one gramme of water through 1°C . Since this varies slightly with the initial temperature, the unit may be defined as the amount necessary to raise 1 gramme of water from 0°C . to 1°C .; or from 3.5°C . to 4.5°C .; or from 14°C . to 15°C . For some purposes it is more convenient to use the large calorie, which is equivalent to 1,000 small calories.

Calorific value is represented by the number of units of heat which the complete combustion of unit weight of the fuel will evolve. In Britain it is generally measured by the number of British thermal units (B.T.U.) generated by the combustion of 1 lb. of the fuel, the B.T.U. being the amount of heat which raises 1 lb. of water through 1°F . The calorific value of coal gas is expressed in gas-therms, a gas-therm being equal to 100,000 B.T.U. See Therm.

The term calorimeter is applied to any vessel in which heat, as distinguished from temperature, is measured. The readiest way to measure a quantity of heat is by imparting it to a known mass of water contained in a vessel (the calorimeter), the amount of heat necessary to raise the water 1 degree being already known. The heat generated by explosives is measured by the bomb calorimeter, a steel vessel in which a charge is exploded. The bomb is immersed in a vessel containing water, the increase in the temperature of the water being noted.

CALOTTE (old Fr. cale, cap). Skull-cap, especially that worn by a cardinal, monk, or priest. The word is also applied to the close-fitting crown of a helmet or other head-covering; a domed ceiling; the cap or hood on the head of certain birds; and the coif or inner skull-cap of lawn which was worn by serjeants-at-law.

Calpe. Ancient name for Gibraltar. With Abyla, on the African coast, it formed the Pillars of Heracles.

CALPURNIA. Last wife of Julius Caesar. She is said to have had an ominous dream on the night before the fatal Ides of March and

to have begged her husband to abstain from taking part in the celebrations. The story is made use of by Shakespeare in *Julius Caesar*.

CALSHOT. Promontory of Hampshire, on the W. shore of Southampton Water, at its junction with the Solent. It is the R.A.F. school of Aerial Navigation and a training school for the large flying boats. In 1912 a seaplane school was started, torpedo running from flying machines being made the subject of considerable experiment. The 1929 Schneider Trophy (q.v.) race took place here.

Calstock. Town of Cornwall. It is on the river Tamar, 9 m. N.N.W. of Plymouth by the Southern Rly. Pop. 4,400.

CALTHORPE, BARON. British title borne since 1796 by the family of Gough, now Gough-Calthorpe. Sir Henry Gough, M.P., was made a baronet in 1728, and his son, having inherited the estates of his uncle, Sir Henry Calthorpe, was made Baron Calthorpe in 1796. The family estates lie in and around Birmingham. The 6th baron presented the site at Edghaston on which the university was built. See illus. p. 255.

CALTHROP, DION CLAYTON (b. 1878). British author. Born May 2, 1878, a son of "John Clayton," the actor, and grandson of Dion Boucicault (q.v.), he was educated at S. Paul's school and studied art in Paris. He joined the Royal Naval Reserve in the Great War and rose to the rank of commander. His writings include *Guide to Fairyland*, 1905; *English Costume*, 1906; *King Peter*, 1906; *The Dance of Love*, 1907; *The Harlequin Set*, 1911; *A Trap to Catch a Dream*, 1913; *Bread and butterflies*, 1914; *A Bit at a Time*, 1920; and several plays.

Calumet. N. American Indian pipe decorated with eagle feathers

CALTON HILL. Eminence in Edinburgh. To the east of the city, which it overlooks, it is 355 ft. high. It has a number of monuments, including the National Monument, and an observatory. See Edinburgh.

CALTROP (Lat. calx, heel; trap). Name given to the four-spiked iron balls scattered on the ground in medieval warfare to impede the enemy's advance. Their use was revived by the New England colonists against the Indians. The term is also applied to various thistles and other plants and to the four-winged spicule of sponges.

CALUMBA ROOT (*Jateorhiza calumha*). Perennial plant of the order Menispermaceae. A native of tropical Africa, it has annual stems and thin three-lobed leaves; the small flowers have pale-green concave petals, and are either male or female. The perennial part of the plant consists of a bundle of spindle-shaped tubers. These are the Calumba roots, used in medicine as a bitter tonic.

CALUMET (Lat. calamus, reed). Ceremonial pipe of the N. American Indians. The name originated in the 17th century with the French Canadians. Red and white eagle feathers distinguished the war and the peace pipes. Calumets were used at tribal councils and when treaties were made. See illus. above.

CALVADOS. Department of France. In Normandy, it borders on the English Channel, where are the rocks from which it obtains its name, and has an area of 2,197 sq. m. The surface is hilly and wooded, especially in the northern district known as the Boeage. Caen is the chief town; others are Honfleur, Vire, Bayeux, Lisieux, and Trouville. Pop. 390,492.

CALVARY, MOUNT (Lat. lat. calvaria, skull; Heb. golgotha). Place of the Crucifixion of Jesus Christ. Four explanations are offered for the name: (1) a place of execution; (2) it adjoined a burial ground, Joseph of Arimathea's tomb being one of

many; (3) the small hill resembled a skull in its contour; (4) Adam's skull was buried here. The first has the widest support: but

Calvary. Back view of the calvary at Plongastel-Daoulas, Finistère

the fourth was a popular Jewish tradition, and it survives in the skull and crossbones often placed at the foot of a crucifix. The present Calvary Chapel at Jerusalem is part of the Church of the Holy Sepulchre. The term Calvary is applied to a representation of the crucifixion erected in the open air.

CALVÉ, EMMA (h. 1864). Stage name of Emma de Roquer, French operatic singer. Born in France, she made her début at the Théâtre de la Monnaie, Brussels, in 1882, as Marguerite in Gounod's *Faust*. After achieving success in Paris and visiting the principal cities of Italy, she sang for the first time at Covent Garden in 1892 as Santuzza in *Cavalleria Rusticana*. She reappeared in London in 1920. Her *Carmen* was noted.

Emma Calvé as Carmen

CALVERLEY, CHARLES STUART (1831-84). British poet. Born at Martley, Worcestershire, Dec. 22, 1831, son of the Rev. Henry Blaydes, who resumed the old family name of Calverley in 1852, he entered Christ's College, Cambridge, in 1852.

C. S. Calverley, British poet

Calverley was elected a fellow of Christ's in 1858, and in 1865 was called to the bar at the Inner Temple. In the winter of 1866-67 an accident while skating compelled the gradual abandonment of all professional work. He died Feb. 17, 1884. Calverley was a master of parody, and in his day the greatest writer of light verse

CALVIN, JOHN (1509-64). French Protestant theologian. Born at Noyon, in Picardy, July 10, 1509, he was destined for the church, but when he was about 18, his father resolved to make him a lawyer instead, and sent him to the law school at Orleans. In 1529 what he called his conversion took place, and by 1533 he was an avowed Protestant. In 1535 he settled in Basel, and here wrote his great theological treatise, *Christianae Religionis Institutio*, 1536.

In 1536 Calvin went to Geneva. The situation there was difficult. Geneva supported the Reformation in the sense of being in revolt against Rome, but there was little real acceptance of the evangelical faith and no eagerness for any real moral reform. Calvin's personality brought about a crisis. He did not merely teach, but set up a new moral code in the name of church discipline, and attached civil penalties to its non-observance. Within two years he was expelled from the city and settled in Strasbourg, where he became a

tower of strength to all the evangelical churches. He also came in contact with the German Reformation, and was one of the signatories of the Augsburg Confession. In 1541 he was recalled to Geneva, where, except for a brief interval, he lived until his death, May 27, 1564. Calvin made of Geneva a new city morally. He developed its trade, improved its health, reduced its poverty, and founded its university. His influence beyond Geneva all over Reformed Christendom was incalculable.

Calvinism, the doctrine derived mainly from his teaching, is a system that relates everything to a dependence upon God, predestination being but one example of this general principle. See Arminianism; Predestination; Reformation.

CALVINIA. District in the N.W. of Cape Province, S. Africa. Its area is 23,800 sq. m. Calvinia, the chief town, is about 185 m. direct N.N.E. of Cape Town, and has a white pop. of about 1,000.

CALVINISTIC METHODISTS. Religious denomination which adopts much of the organization of Wesley, combined with the Calvinistic doctrines of George Whitefield. It originated in South Wales in the preaching of Griffith Jones (1684-1761) and Howell Harris (1714-73). The latter, with the co-operation of several Welsh clergymen, of whom the most notable was Daniel Rowland, arranged the first Methodist Association in 1744. In North Wales, Thomas Charles, also a clergyman, was the chief apostle.

After the movement had been definitely dissociated from the established Church, Charles, assisted by a number of laymen, ordained some 20 ministers in 1811, thereby formally declaring the Welsh Methodists a separate body. Each church of the Calvinistic Methodists is autonomous, and the denomination's form of government is Presbyterian. In 1929 it possessed 1,508 churches and had 187,892 communicants. See Methodism.

CALYDON. In Greek mythology, a town in Aetolia. It was the scene of the hunt of the monstrous boar, sent by Artemis to plague the country. The boar was killed by Meleager, the first blow, according to one account, being struck by Atalanta. There exist remains of the ancient walls and buildings.

CALYPSO. In Greek mythology, a nymph, daughter of Atlas, who lived in the island of Ogygia. Here Odysseus was cast ashore, after having suffered shipwreck as a punishment for sacrilege, and here he remained for seven years in dalliance with the nymph, who promised him immortality and eternal youth if he would never leave her. At last the goddess Athena intervened and Odysseus at last was able to return home. See Odysseus.

John Calvin, French theologian From an engraving by Dankertz

CALYX (Gr. calyx, husk, shell). Botanical name for the outer whorl of floral organs, consisting of the sepals. As a rule the calyx is green, and serves as a protection for the petals, stamens, and pistil of the unexpanded flower-bud. When the petals are absent the calyx is sometimes brightly coloured.

CAM (Ger. kamm, comb; or Celtic cam, crooked). Most commonly a body of metal projecting from, or attached to, a revolving

shaft or wheel or sliding part, to impart intermittent or irregular movement to some part against which it presses. Cams of intricate design are much used in machinery in which a number of complex movements or operations have to succeed one another in a specified order.

CAM. River in Cambridgeshire, formerly the Granta. Rising on the S.W. border of the county, it flows for 40 m. to the Ouse, $3\frac{1}{2}$ m. S. of Ely. It is navigable to Cambridge.

CAMALODUNUM. Roman town, the modern Colchester. It was the capital of a British chief named Cunobelin (Cymbeline), the ruler of the Trinobantes, and was occupied by the Romans about A.D. 48. It was stormed in 62 A.D. by Boadicea. See Colchester.

CAMARGUE. District of S. France, often called the Ile de la Camargue. It is a marshy plain between two chief mouths of the Rhône and forms its delta. Its area is about 300 sq. m. Dikes protect it from the sea and rivers. There are several lagoons.

CAMBER (Fr. cambrer, to arch). In engineering, an upward curve given to a bridge girder or platform, or to the floor of a railway vehicle.

Camber. Diagram showing section of aeroplane wing cambered to deflect the air

When the structure or vehicle is loaded, an elastic deflection occurs which causes the floor to assume an approximately level line. Camber is also given to the decks of ships and to roads.

In aeronautics camber denotes the degree of curvature of a wing or controlling surface. Starting from the rather blunt leading edge, the upper surface traces a well-defined curve to the rear or trailing edge. The lower surface traces a more gentle curve. See Flight.

CAMBERLEY. Residential district in Surrey. It is on the Southern Rly., 7 m. from Ascot. Here is the army staff college, which was built in 1858.

CAMBERWELL. Metropolitan borough of S. London. In Surrey, S. of the Thames, it has an area of 4,480 acres, and is largely a residential suburb. It includes the districts of Peckham, Nunhead, and Dulwich, and in Peckham Rye and Park and Dulwich Park possesses two large open spaces. Camberwell Green was noted for its fairs. Pop. 267,198.

There is a Camberwell in Victoria, Australia, a suburb of Melbourne.

CAMBERWELL BEAUTY (Vanessa antiopa). Large British butterfly. Now rare, it used to be taken in Camberwell, London, before that district lost its rural character. The wings are brownish purple, edged with a black band spotted with blue, and having outside this a margin of yellow, speckled with brown or black.

Camberwell Beauty

CAMBODIA. French protectorate in Indo-China. It is bounded by Siam on the N.W., Annam on the E., Cochinchina on the S.E., and has a coastline on the Gulf of Siam of some 200 m. Area, 67,550 sq. m.; pop. 2,535,000, of whom about 1,900 are Europeans. Splendid ruined cities recall the greatness of the former empire, and there are prehistoric

remains of an earlier Khmer civilization. The old empire spread Brahmanism in the E., and the Angkor Wat ruins contain many statues of Hindu deities, although images of Buddha have since displaced earlier monuments.

Cambodia is ruled by a king. The chief products are rice, pepper, tobacco, indigo, sugar, coffee, cotton, and rubber, and cattle are reared. The forests contain valuable timbers, and iron ore is found. Phnom-Penh, on the Mekong, is the capital, and Kampot the only harbour.

CAMBON, JULES MARTIN (b. 1845). French diplomatist. Born in Paris April 5, 1845, in 1891 he was made governor-general of Algeria. In 1897 he was nominated French ambassador at Washington, was transferred to Madrid in 1902, and in 1907 to Berlin, where he remained until the outbreak of the Great War. He was one of the French signatories of the treaty of Versailles, June 28, 1919.

CAMBON, PIERRE PAUL (1843-1924). French diplomatist. Brother of Jules Cambon, he was born Jan. 20, 1843, and trained as a lawyer. From November, 1870, he held important administrative posts, and in February, 1882, became French resident at Tunis. In 1886 he succeeded to the embassy at Madrid. Four years later (1890) Cambon was transferred to Constantinople, and in 1898 he came to London, where he remained until 1920, his long term covering the Fashoda incident, the S. African War, and the Great War. He died May 29, 1924.

Paul Cambon,
French diplomatist
Hoppe

CAMBORNE. Urban district and market town of Cornwall. It is 3 m. by rly. S.W. of Redruth, on the G.W.R. The centre of a mining district, where tin, lead, and copper are found, the town has a school of mines, and holds yearly fairs. Pop. 14,582.

CAMBRAI. City of France, in the dept. of Nord. It stands on the right bank of the river Schelde, 37 m. S. by E. of Lille, and is a terminus of the St. Quentin Canal. Most of its historie or otherwise notable buildings were destroyed during the Revolution. Others, including the modern town hall, the old belfry or tower of S. Martin, the Porte de Paris, the 19th century cathedral, and the 18th century church of S. Gery, were either destroyed or badly damaged by bombardment or fire in the Great War. It is famous for fine muslin, one variety of which is known as cambrie. Pop. 26,023.

In the 5th century the city was the capital of a Frankish king and the seat of a bishop. In 1559 the bishop was raised to the rank of archbishop; previously he had been made a duke, and the extent of his possessions, which were known as Cambresis, gave him great power. In 1678 Cambrai became definitely French. Early in the Great War Cambrai was entered by the Germans, who retained it until Oct. 9, 1918.

The league of Cambrai (1508) was a combination against Venice.

BATTLES OF CAMBRAI. The first battle of Cambrai began on Nov. 20, 1917. It was remarkable for two new features, namely, the employment of tanks in masses to break through the German line where it was strongest, and the abandonment of the long preliminary artillery bombardment. The British troops engaged were those of the 3rd Army (Byng). So complete was the initial success, attained by the advance of 400 tanks, that if fresh troops had been available to exploit the victory the German line might have been broken. The opportunity was not used, and the Germans counter-attacked on Nov. 30, recovering much of the lost ground.

The second battle, fought Sept. 27-Oct. 5, 1918, formed part of the great final Allied offensive against the Germans. On the first day, the British advanced clean through the Hindenburg Line and took over 10,000 prisoners. Further advance was made, and on Sept. 29 the 46th Division stormed Bellenegise and crossed the Schelde Canal, and on Sept. 30 the attack was renewed all along the line, the Germans falling back. By Oct. 5 the Hindenburg system was shattered for a distance of 40 m. from N. to S., and Cambrai itself was reached.

CAMBRIA. Medieval Latin name of Wales, the land of the Cymry, a Celtic people. Strictly, it is distinguished from Cumbria, the Cymric territory farther N., between the Solway Firth and the Ribble, including Cumberland.

The mountain system of Wales is known as the Cambrian range. The main portion extends N. to S., through the counties of Carnarvon, Denbigh, Merioneth, Montgomery, Radnor, Cardigan, Brecknock, and Carmarthen. The highest summit, Snowdon, 3,560 ft., is the culminating point of England and Wales.

The Cambrian System, so called from its development in Wales, or Cambria, is the oldest system of sedimentary rocks that yield organic remains, being rich in forms belonging to the extinct sub-class Trilobita. It is well developed also in Shropshire, Warwickshire, the Malvern Hills and the N.W. Highlands of Scotland, and always rests with unconformity on igneous and metamorphic rocks, or on older sedimentary rocks devoid of organisms. The rocks consist mainly of quartzitic sandstones, shales, and slates.

Cambrian ware is very light, thin salt-glazed stoneware, tea services, jugs, etc., painted in vivid enamel colours with landscapes, figures, flowers, and animals, rough in design but effective. It was produced between 1760-1850 at works at Swansea.

CAMBRIDGE. Borough and county town of Cambridgeshire. On the Cam, 56 m. N.N.E. of London, it is served by the L.N.E. and L.M.S. Railways.

Its main interest centres in the university. S. Mary the Great is the university church, and S. Benet's, with fine pre-Norman tower,

and the church of the Holy Sepulchre, one of the four round churches in England, are noteworthy. Educational establishments, outside the university proper, include Girton and Newnham Colleges for women, theological colleges, notably Westminster for Presbyterians and Ridley Hall for Church of England

Cambridge. Classical façade of the Fitzwilliam Museum, the chief museum of the university
W.H.F. Taylor

men, and Leys School and the Perse Grammar School. Stourbridge Fair was held at Barnwell down to the 18th century. In 1928 a society was formed to protect the beauties of Cambridge and the neighbourhood. Pop. 58,680.

CAMBRIDGE UNIVERSITY. This originated in the monastic communities which settled in the town. The first college, S. Peter's, or Peterhouse, was founded by Hugh de Balsham, bishop of Ely.

The colleges are Christ's (1505), Clare (1326), Corpus Christi (1352), Downing (1800), Emmanuel (1584), Gonville and Caius (1348), Jesus (1496), King's (1441), Magdalene (1519), Pembroke (1347), Queens' (1448), S. Catharine's (1473), S. John's (1511), S. Peter's (1284), Sidney Sussex (1595), Trinity (1546), and Trinity Hall (1350). There are also two hostels, Selwyn College (1882), and the Non-Collegiate Students' (1869). In 1923 women, most of whom are members of Girton College (1869) and Newnham College (1871), founded for women only, were admitted to degrees.

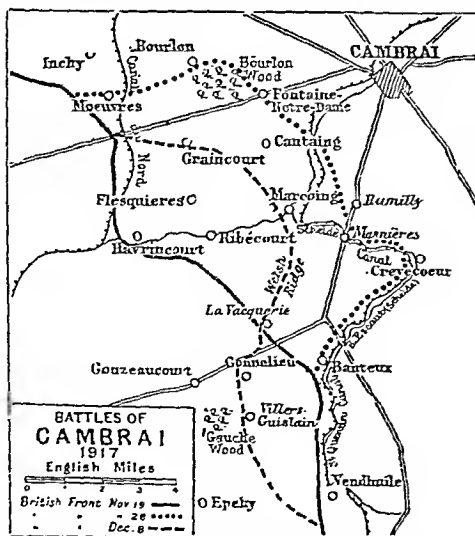

The University library ranks among the great libraries of the world, and the Fitzwilliam Museum, in Trumpington St., possesses valuable collections of antiquities and works of art. In 1928 the Rockefeller Foundation offered the university £700,000.

The Cambridge University Press shares with that of Oxford the copyright of the Revised Bible. Its more notable publications include the Cambridge Bible for Schools and Colleges, 1881-1912; Cambridge Modern History, 1902-12; and 11th edition of the Encyclopaedia Britannica, 1910-11. John Sibberh (John Lair of Sieburg), a friend of Erasmus, was the first Cambridge printer (1521-23). The offices at Cambridge date from 1804, and the name of the Pitt Press from 1831, when a building was erected as part of a memorial to William Pitt.

CAMBRIDGE. City of Massachusetts, U.S.A. On the Charles river, and close to Boston, it is served by the Boston and Albany and other rlys. It is the seat of Harvard University, Massachusetts Institute of Technology, and Radcliffe College. Near are the Harvard observatory and the Botanic gardens. Cambridge was the home of the first printing press of British N. America, the site of the first American camp in the War of Independence, the birthplace of J. R. Lowell and Oliver Wendell Holmes, and the home of Longfellow. Pop. 119,669.

University arms

Cambrai. Map of the battlefield of 1917, showing British lines

CAMBRIDGE, DUKE OF. English title, dating from 1706. There was an earl of Cambridge in the reign of Edward III, and the title was generally bestowed upon members of the reigning house. In 1706, to give him a position in England, George, electoral prince of Hanover, afterwards King George II, was made duke of Cambridge, and in 1801 the title was revived for Adolphus Frederick (1774-1850), seventh son of George III. Of his two daughters, one married the duke of Mecklenburg-Strelitz, and the other Francis, duke of Teck, by whom she became the mother of Queen Mary.

Adolphus Frederick,
1st Duke of Cambridge

His son, George William Frederick (1819-1904), the 2nd duke, joined the British army in 1838, and succeeded Lord Hardinge as commander-in-chief in 1856, resigning in 1895. He died March 17, 1904, and with him the title became extinct. In defiance of the Royal Marriages Act, he had married Miss Fairbrother; his three sons adopted the name of FitzGeorge.

George William
Frederick, 2nd
Duke of Cambridge
Downey

The title marquess of Cambridge was given in 1917 to Adolphus, duke of Teck (1868-1927), the eldest brother of

Queen Mary. He married a daughter of the 1st duke of Westminster, and died Oct. 24, 1927.

CAMBRIDGE HEATH. Former open space of N.E. London. Its name is preserved in that of a station on the Enfield, Chingford, and Palace Gates branches of the L.N.E.R., between Bethnal Green and London Fields.

CAMBRIDGESHIRE. Inland county in the E. of England, N. of Herts and Essex. Including the Isle of Ely, which forms a separate administrative county, it is 48 m. long, has a breadth varying between 16 m. and 30 m., and an area of 864 sq. m. To the S. and S.E. the surface is elevated. The Isle of Ely forms part of the Bedford Level (q.v.), but most of the fen is drained. The Ouse, Cam, Nene and Lark are the chief rivers. Pop. 203,419.

Agriculture flourishes, the Cam valley being noted for its dairy farms and breed of sheep. Railway facilities are provided by the L.N.E. and L.M.S. railways, and waterway communication by the Old and New Bedford rivers. The chief towns are Cambridge, Ely, Wisbech, Chesterton, and March.

Cambridgeshire is rich in archaeological remains; at Thorney and Denny are abbey ruins, and ancient dykes are in the S.E.

The horse race known as the Cambridge-shire is run at Newmarket. The course is one mile and a furlong and the day the Wednesday of the Houghton meeting in October.

Cambridgeshire gives its name to a territorial regiment of the British Army. The 1st battalion was embodied in Aug., 1914, and went to France early in 1915 as part of the 5th Army Corps.

CAMDEN. City of New Jersey, U.S.A., co. seat of Camden co. It is on the Delaware river, opposite Philadelphia, with which it is connected by steam ferry and a suspension bridge, and is the terminus of the Atlantic City and other rlys. It has shipbuilding yards, iron foundries, chemical works, boot, paper, and leather factories, etc. It was named after the 1st Earl Camden. Walt Whitman lived and died here. Pop. 128,642.

Another Camden is in S. Carolina. Here on Aug. 16, 1780, Lord Cornwallis defeated a body of American colonists.

CAMDEN, MARQUESS. British title borne since 1812 by the family of Pratt. This family was settled in Devon in the time of Elizabeth, and in 1714 one of its members, Sir John Pratt, was made lord chief justice of England. His son, Charles Pratt (1714-94), also a lawyer, was created a baron in 1765. He was lord chancellor from 1766-70, and became Earl Camden in 1786. His son John, the 2nd earl, was made earl of Brecknock and Marquess Camden in 1812. The family seat is Bayham Abbey, Kent, and the marquess's eldest son is known as earl of Brecknock.

1st Earl Camden,
Lord Chancellor

CAMDEN, WILLIAM (1551-1623). English antiquary. Born in London, May 2, 1551, he was appointed second master at Westminster School in 1575. Camden had already begun the preparation of Britannia, a Latin

CAMBUSKEN-NETH. Ruined abbey in Stirling-shire. On the Forth, 1 m. E. of Stirling, it was founded 1147, by David I, and was the meeting place of several Parliaments, including that of 1326, the first attended by representatives of the towns. Here were buried James III and Margaret of Denmark; in 1865 their bones were re-interred under a tomb built at the instance of Queen Victoria.

CAMBYSES. King of Persia 529-522 B.C. Son of Cyrus the Great, in 525 he conquered Egypt, but his campaign against Ethiopia was unsuccessful. Suspecting his brother Smerdis of designs on his throne, he had him secretly murdered. A false Smerdis named Gaumata, claiming to be the brother of the king, arose in Persia and obtained some following. Cambyzes had to leave Egypt to crush the threatened insurrection, but on his way died in Syria of a wound accidentally self-inflicted. Pron. Cam-by-seez.

CAMDEN TOWN. District of N.W. London, forming a large portion of the metropolitan borough of St. Pancras. It has a station on the L.M.S. Rly., and is served also by an electric rly. Notable old taverns include the Britannia, Adam and Eve, and Mother Redcap. Most of the Camden Road is in the borough of Islington.

The name Camden Town group is applied to a group of modern British artists formed under the presidency of Spencer Frederick Gore (1878-1914).

CAMEL (Heb. gamal). Group of even-toed, ungulate, ruminating mammals, including the camels of the Old World and the llamas of the New. They are long in the neck, have a hump or humps on the back, and are covered with shaggy hair growing in patchy fashion. The upper lip is divided. Of the two species, the Arabian and the Bactrian, the former, which has a single hump, is found in N. Africa, Arabia, and other parts of Asia. It is longer in the limb than the Bactrian, and has a much shorter coat. This camel is known as the dromedary (*Camelus dromedarius*), but the term is usually restricted to riding strains. The spreading foot of the animal adapts it

William Camden,
English antiquary

Cambridgeshire. The northern half of this county forms part of the reclaimed fenland known as Bedford Level, and is intersected by artificial waterways

for travelling on loose sand, and it is able to go for three days without drinking, the stomach being provided with pouches in which fluid is retained. The Bactrian camel (*C. bactrianus*) occupies the desert regions of Central Asia. It has two humps, short legs, long hair, and is generally of heavier and clumsier build. Camel hair is used for making fabrics and artists' brushes. See Llama.

CAMEL CORPS. Soldiers mounted on camels are suitable for scouting and fighting in hot, sandy countries. There were distinct British and Egyptian camel corps, both of which became famous in the Sudan campaigns. In the Great War the camel corps was used in the campaign in Egypt against the Turks and against the Senussi. The Bikanir camel corps of the maharajah of Bikanir is noted.

CAMELFORD. Market town of Cornwall. It lies in a picturesque portion of the valley of the Camel, 12 m. by rly. N. of Bodmin on the Southern Rly. The large Delabole slate quarries are in the vicinity of the town. Market day, Fri. Pop. 1,400.

CAMELLIA. Genus of evergreen shrubs and trees of the order Ternstroemiaceae. They are natives of Asia, and have glossy leathery leaves and large white or rosy flowers. *Camellia japonica*, a native of Japan and China, and a favourite greenhouse plant, has produced a great number of varieties and hybrids. It is naturally about 20 ft. in height, with reddish flowers. See Tea.

CAMELOPARDUS or **CAMELOPARDALIS.** Constellation known to navigators of the 16th century, but first appearing in a celestial planisphere published by Jacobus Bartschius in 1624. A straggling constellation of stars, none brighter than fourth magnitude, it is situated between the Pole Star and Perseus.

CAMELOT. Legendary city where King Arthur held his court, and the name given in medieval romances to Caerleon-upon-Usk in Monmouthshire. Built in Roman times, it was long the garrison of the second Augustan Legion, and many Roman remains have been discovered. An oval earthwork, known as Arthur's Round Table, is a link with Arthurian legend. See Arthur; Caerleon.

CAMEL'S THORN (*Alhagi camelorum*). Leguminous shrub, a native of the Caucasus. It has simple leaves and pea-like red flowers in clusters, followed by woody seed-pods. A species growing in Asia and Africa has been thought to have been the source of manna of the Israelites. In hot weather honey-like drops exude from the leaves and harden by exposure to the air.

CAMEO (Ital. *cammeco*). Species of sculpture. Its materials are precious stones like the agate and onyx, and molluscan shells which have at least two layers of different tint. The cutting of gem cameos was an ancient art; that of shells is modern. The lower stratum provides the background, and the upper is carved in white in low relief.

CAMERA, PHOTOGRAPHIC (Lat. *camera*, arched chamber). Development of the camera obscura, which was a medieval optical device consisting of a dark box or chamber fitted with a lens by which the image of an object was cast upon a screen. On the invention of photography the camera obscura was designed to carry the sensitive plate, and has been improved to meet the requirements of different classes of photographers. It consists essentially of a box with a lens fixed to the front, and at the rear a carrier of the sensitive plate or film. The carrier for plates is usually detachable, and is known as a dark slide.

Cameras in use at the present time may be divided into (1) those used on a stand or tripod, and (2) those operated while held in the hand. The portable stand camera possesses certain movements designed to enable it to deal with different classes of work. These permit front and back to be tilted and swung in different directions. A rising front allows the lens to be raised or lowered as desired. A reversing back (the detachable frame carrying the focussing screen and dark slide) enables the operator quickly to place either in position for an upright or horizontal shape of picture. By means of a rack and pinion the lens can be moved away from or nearer to the plate for focussing.

Hand cameras, as a rule, do not possess these various movements, but are designed for portability and simplicity in use. Most are of the folding type, the lens being supported on a hinged baseboard which forms a protective cover for it when the camera is closed, while for others a box form is adopted, but now only for quite small sizes. A hand camera is invariably fitted with a shutter by which the plate or film can be exposed for a time short enough to secure a sharp photograph of objects in motion. The amount of subject included on the plate is judged from a finder, a small reflecting mirror attached to the lens in front.

CAMERON, SIR DAVID YOUNG (b. 1865). Scottish painter and etcher. Born in Glasgow, he taught himself etching and dry point. He followed up his set of Clyde plates, 1890, with sets of North Holland, 1892; North Italy, 1895; London, 1899; Paris, 1904; and Belgium, 1907. He embellished books with etchings, collaborating, in 1902, with William Strang, in an edition of *The Compleat Angler*. R.A., 1920, he was knighted, 1924.

Cameo of the triumph of Tiberius, known as the Gemma Augustea

etchings, collaborating, in 1902, with William Strang, in an edition of *The Compleat Angler*. R.A., 1920, he was knighted, 1924.

CAMERON, SIR EWEN or **EVAN** (1620-1719). Scottish Highland chief, known as Lochiel. Eldest son of John Cameron, he lived as a hostage with the marquess of Argyll at Inveraray, 1641-47, when he returned to his clan as its head. Knighted by Charles II in 1681, he was for years in arms, and in 1689 fought at Killiecrankie. He was a notable wolf hunter, and is said to have killed the last wolf seen in the Highlands with his own hands. Cameron died in Feb., 1719.

Camera. Camera Obscura, which throws images of external objects on a white table in a dark room

CAMERON, VERNEY LOVETT (1844-94). British explorer. Born at Weymouth, July 1, 1844, he entered the navy. In 1873 he was at Zanzibar in charge of the expedition to find Livingstone, who died before he arrived. After exploring the S. side of Lake Tanganyika, he proceeded to W. Africa, and reaching Katombela, Nov. 28, 1875, was the first traveller to cross Africa from E. to W. His other explorations included journeys from

Lebanon to Bagdad and Basra, 1878-9, and in the interior of the Gold Coast with Richard Burton in 1882. He was killed when hunting, March 27, 1894.

CAMERON HIGHLANDERS. Scottish regiment, officially known as the Queen's Own Cameron Highlanders. It owes its origin to Alan Cameron, who about 1790 raised 700 young men in his native county of Inverness and, as their colonel, led them to the wars. As the 79th Cameron Highlanders they fought against Napoleon.

Cameron Highlanders, regimental badge

Sir D. Y. Cameron, Scottish painter Russell

At Tel-el-Kebir they led the charge on the Egyptian position, and at the battle of the Atbara were selected by Kitchener to storm the Arab zareba. They did good service in the South African War, and the regiment had a glorious record in the Great War. The depot is at Inverness.

CAMERONIANS. Name given to the Covenanters who followed Richard Cameron (d. 1680). Their definite severance from the parent body was a result of the religious settlement of 1690. Like the Non-jurors in England they refused to take the oath of allegiance, or to perform any civil duty. In 1743 they formed themselves into a regular Presbyterian Church, the Reformed Presbytery, and are found chiefly in S.W. Scotland and N. Ireland. Later a branch was established in N. America. In 1876 most of their congregations united with the Free Church of Scotland. Richard Cameron was killed fighting against the king's soldiers near Auchinleck, July 20, 1680.

CAMERONIANS. Scottish regiment, officially the Scottish Rifles. It was first raised from the amnestied survivors of the Cameronian Covenanters to help William of Orange against James II. Enrolled in the regular army as the 26th regiment of the line, it fought in Marlborough's battles. The 2nd battalion, the old 90th, was raised in 1794, and fought in Egypt and at Corunna. In the Crimea the battalion took part in the assault on the Redan. The regiment won distinction in the Great War. The depot is at Hamilton.

Cameronians, regimental badge

CAMEROONS. Country in W. Africa, formerly a German protectorate, now divided between Great Britain and France. It is bounded W. by the Bight of Biafra, N.W. by Nigeria, N. by Lake Chad, E. and S. by French Equatorial Africa. The small Spanish colony of Rio Muni forms an enclave on the W. coast. Cameroons forms a rough triangle, with its apex resting on Lake Chad in the N. and its base on the Gabon Colony. From N. to S. it is about 990 m. long, and from W. to E. about 600 m. broad in its widest part. The chief rivers are the Logone, Chari, Benue, Sangha, and Sanaga.

Early in the Great War British and French forces invaded the Cameroons, and by the end of 1914, Duala and other centres had been occupied. During 1915 the progress of the Allies was slow, but by Feb., 1916, the conquest of the colony was completed. At the settlement after the Great War Cameroons was allotted to France and Britain under mandates of the League of Nations.

The British portion is a strip of territory stretching from the Atlantic along the Nigerian frontier to Lake Chad. Its area is 34,236 sq. m. and pop. about 700,000. The N. part is administered by the Residents of the adjoining provinces of Nigeria, and the S. part, known as the Cameroons Province, with Buea as its capital and Victoria as the chief port, is attached administratively to the Southern Provinces of Nigeria.

The French portion, with an area of 158,000 sq. m., is an autonomous territory under a commissioner, with its capital at Yaunde, and its chief ports Duala (the former capital) and Kribi. Pop. 1,550,000.

CAMILIA. In Roman legend, daughter of the Volscian King Metahus. Brought up by her father as a handmaid of Diana, she was famed for her fleetness of foot. In Virgil's Aeneid (xi) she is represented as having espoused the cause of Turnus against Aeneas.

Marcus Camillus, Roman hero
From a cameo

CAMILLUS. Marcus Furius (d. c. 365 B.C.). Hero of the early Roman Republic. He is said to have been dictator five times, besides holding other magistracies. After a ten years' siege he took the city of Veii, but being accused of

an unjust distribution of the booty, went into exile. When the Gauls under Brennus (390) had occupied all Rome except the Capitol, and the Romans were about to buy off the invaders, Camillus suddenly appeared and drove the Gauls out of Rome.

In ancient Roman times Camillus and Camilla were the names given to the boys and girls, children of free parents, who acted as attendants at various religious rites.

CAMISARDS. Name given to a Protestant sect that rose in revolt in the Cévennes, France, early in the 18th century. It comes from the French *camisade*, an attack in the dark, one when a shirt (*camise*) was worn over the armour so that comrades might be known.

Roused by the persecution that followed the revocation of the edict of Nantes, under Pierre, called Esprit Séguier, the Camisards in July, 1702, murdered their chief enemy, the missionary priest, François du Chayla, and soon a warfare, waged with extreme ferocity on both sides, began. Under Jean Cavalier, Roland, and other leaders, the Camisards fought well for about two years, but in the end the superior strength of the state began to tell, and in 1704 Cavalier arranged a peace with Marshal Villars.

CAMMAERTS, ÉMILE (b. 1878). Belgian poet. Born in Brussels, Mar. 16, 1878, he settled in England in 1908. His earlier works

included the translation of parts of Ruskin's writings into French, and essays in art criticism, *Les Bellini*. During the Great War his poems exercised considerable influence among Belgian, French, and English readers, being for the most part translated into English by the poet's wife, Tita Brandes Cammaerts. Other works included *Through the Iron Bars*, 1917; and *The Poetry of Nonsense*, 1925.

Emile Cammaerts, Belgian poet
Elliott & Fry

CAMOENS or **CAMOEIS**, **LUIS VAZ DE** (c. 1524-80). Portuguese poet. He belonged to an impoverished noble family, and was related to Vasco da Gama (q.v.). He fell in love with Catherine de Atayde, daughter of a high official, who disapproved of his suit. Camoens addressed many sonnets and other poems to her, with the result that, in 1546, he was banished from Lisbon. In 1547 he fought against the Moors, and in an attack on Ceuta lost

Luis de Camoens, Portuguese poet

his right eye. Again in Lisbon in 1549, he plunged into a disorderly life which led to imprisonment. While on service at Macao he was imprisoned, and on being taken back to Goa was shipwrecked, escaping with the MS. of his epic poem *Os Lusíadas*, the greater part of it written during these adventurous years in the East. In 1567, having reached Mozambique, he was imprisoned for nearly two years for debt, and did not arrive at Lisbon until 1570. In 1572 his poem was published. He died June 10, 1580.

Os Lusíadas, The Lusitanians, in English *The Lusíads*, is written in ottava rima: it is not only the chief work of Camoens, but may be regarded as Portugal's great contribution to literature. In addition to his epic, sonnets, elegies, eclogues, and other poems, Camoens wrote three comedies. In 1918 a Camoens Chair of Portuguese Language and Literature was established in King's College, London.

CAMOMILE or **CHAMOMILE** (*Anthemis nobilis*). Perennial dwarf herb of the order

Compositae, a native of Europe and N. Africa. Its branches spread along the ground, and its aromatic leaves are divided into thread-like segments. The daisy-like flower-heads have yellow tubular florets in the centre, surrounded by white strap-shaped ray-florets. The dried ripe flower-heads contain a volatile oil which is used in medicine.

Camomile, the flower of which is largely used medicinally

CAMORRA. Secret or nominally secret organization, criminal, social and political, which arose in S. Italy in 1820. At this date, under the Bourbon tyranny in the

Two Sicilies, there were in Naples alone 70,000 members of secret societies. It was a definite and dreaded force until Garibaldi's entry into Naples in 1860, and though shorn of its strength, survived into the 20th century. The Neapolitan Camorra had its origin in Spain, and the word is of Spanish origin—*chamarra*, a cloak of rough material, worn by thief or bully.

CAMOUFLAGE. French slang word for the smoke made by lighting the end of a roll of paper and blown into a man's face as an insult. In practice camouflage is the strategic answer to the introduction of the aeroplane in warfare. Every solid object, or screening over it, casts its shadow, and its character is determined in the aerial photograph by the nature of the shadow it casts. The elimination and distortion of shadows are the chief problems.

The method used by the British in the Great War, and copied by the French, was the taut stretching of fishing net, threaded brush-wise with painted hay, or with knotted rags of canvas in imitation of surrounding vegetation, over guns, etc. Just over the gun and its pit an irregular pattern of open-textured canvas was attached to the net, this being opaque enough to screen all definite shadows

Camouflage. Road leading to a battle line camouflaged by mats hung at the sides and overhead

or the light soil of the earthworks around. See Q-Boat; Strategy.

CAMP (Lat. *campus*, a field). Area covered with tents for the accommodation of troops. The name is also applied to a collection of huts which take the place of tents, and if the occupation is permanent and buildings are erected, the area is called a standing camp, though the buildings are barracks, as at, e.g. Aldershot and Catterick.

The Roman camp was laid out in the form of a square, and protected by a rampart (*vallum*) and a ditch (*fossa*). It was divided into two parts by a broad road (*via principalis*)

running parallel with the front, terminating in two gates. The via principalis itself was cut at right angles by the via praetoria, at the end of which were the porta praetoria on the front and the porta decumana in the rear. The larger division of the camp, that towards the front, contained the tents of the legions and the allied contingents; the praetorium, the tent of the commander-in-chief; principia, the quarters of the chief officers (principes); the altar on which the general offered sacrifice; the tribunal, from which he addressed the troops or pronounced sentences; the quaestorium, or paymasters' quarters; the auralae, where the auspices were taken. The light-armed auxiliary forces were behind.

Concentration camp is the name given to the place used for the segregation of non-combatants, as in the S. African War; also to camps for interned aliens.

CAMPAGNA. Low-lying region surrounding Rome. Mostly an undulating plain, flat and marshy, by the Mediterranean, it rises on the N.E. to the Sabine Hills, and on the S.E. to the Alban Hills.

The inundations of the Tiber, the fumes from the sodden soil, and mosquitoes have completed the ruin begun by the Goths. Attempts have been made to improve the climate by drainage, afforestation, etc., but the Campagna remains mostly an unhealthy, desolate region. See Latium.

CAMPANIA. Territorial division of S.W. Italy. It comprises the provinces of Avellino, Benevento, Naples and Salerno, and has an area of 5,276 sq. m.

Campania was the name of an Atlantic liner belonging to the Cunard company. When built in 1893 she was Britain's fastest liner, having a speed of 22 knots. During the Great War the Campania acted as a seaplane-carrying ship. She was sunk in the Firth of Forth, after colliding with a battleship, Nov. 10, 1918.

CAMPANILE (Lat. campana, a bell). Originally applied to a bell tower in Italy, the term has been extended to similar structures, such as a church tower detached from the rest of the building. The typical form of the early specimens was square, with a perfectly plain outline, and no decoration except possibly at the top where the belfry was placed. At Ravenna, however, there are cylindrical towers of a date anterior to those at Rome. The most noted campanili are Giotto Bondone's at Florence, that in the Piazza di San Marco, Venice. Dating from 1150, it was rebuilt in 1911

Campanile in the Piazza di San Marco, Venice. Dating from 1150, it was rebuilt in 1911

There are a few campanili in Great Britain notably one at Chichester and another at Wilton.

CAMPANOLOGY (Lat. campana, bell; Gr. logos, discourse). Science or art of bell-ringing. The oldest society of bellringers would seem to be that of S. Stephen's of Bristol, which has traditions dating back to 1574. The notes of a peal of eight bells are arranged as a diatonic scale, the tenor or largest bell supplying the key-note, and the treble or smallest the octave. When bells are struck in their regular order they are said to be rung in rounds. When that order is varied and they exchange places they are rung in changes.

A peal consists of 5,000 changes at least, none of which may be repeated. The number of changes which can be rung in a peal is defined by mathematical law. Thus three bells permit of six changes, four bells of 24, and eight of 40,320. The simplest peals are Grandsire on an odd number of bells, Bob on an even number. See Bells; also illus. p. 225.

CAMPBELL. Name of a famous Scottish family, the head of which is the duke of Argyll (q.v.) The surname became very general in Argyllshire in the W. highlands, and there were soon numerous branches of the Campbells. Sir Duncan Campbell of Lochow, who was made Lord Campbell in 1445, was the ancestor of the dukes of Argyll and the marquesses of Breadalbane. Other branches of the Campbell family are represented by the earls of Loudoun and of Cawdor.

CAMPBELL, ALEXANDER (1788-1866). Founder of the sect known as Disciples of Christ, or Campbellites.

Alexander Campbell, founder of the sect termed Campbellites

Campbell died in W. Virginia, March 4, 1866.

CAMPBELL, GORDON (b. 1886). British sailor. He had a notable record in the Great War, being in command of one of the mystery Q ships in 1917. He later destroyed the German submarine UC29, being awarded the V.C., 1917. In 1921 he commanded the Impregnable and in 1925-27 the Tiger. He was made rear-admiral in 1928, in which year he retired, and in 1929 he published *My Mystery Ships*. See Q-Boat.

CAMPBELL, JOHN CAMPBELL, 1ST BARON (1779-1861). British lawyer. He was born at Cupar, Fife, Sept. 15, 1779, and in 1806 was called to the bar. He became attorney-general in 1834. 1835-39, and again in 1840-41, when he was made lord chancellor of Ireland and raised to the peerage. In 1850 Campbell was made lord chief justice, and in 1859 attained his ambition of being lord chancellor, a post which he held until his death, June 22, 1861. He wrote the *Lives of the Lord Chancellors*, of which three series appeared 1845-47, and *Lives of the Chief Justices of England*, 1849-57.

CAMPBELL, MRS. PATRICK (b. 1865). British actress. Born in London, Feb. 9, 1865, she was Beatrice Stella, daughter of John Tanner and Louisa Romani. In 1884 she married Patrick Campbell, who was killed in the S. African War in 1900. Having achieved success as an amateur, Mrs. Campbell made her first appearance on the professional stage at Liverpool in 1888. Her performance of *The Second Mrs. Tanqueray* at the St. James's Theatre, London, 1893, made her reputation as an actress, and among her later notable successes were *Juliet* (1895), *Magda* (1896), *Ophelia* (1897), *Lady Macbeth* (1898), all at The Lyceum; *George Sand* in P. Moeller's *Madame Sand*, at the Duke of York's Theatre, 1920, and the leading rôle in *The Matriarch* at The Royalty Theatre, 1929. She published *My Life and Some Letters*, 1922.

Mrs. Patrick Campbell, British actress

CAMPBELL, REGINALD JOHN (b. 1867). Anglican clergyman. Born in London, and educated at Christ Church, Oxford, he became

R. J. Campbell, Anglican clergyman
Russell

a Congregational minister in 1895. After some years at Brighton he succeeded Dr. Parker at the City Temple, London, in 1903. Four years later he published *The New Theology*, which he later repudiated. In 1915 he was received into the Church of England. Vicar of Christ Church, Westminster, 1917-21, he was vicar of Holy Trinity, Brighton, 1924-29. In 1930 he was appointed canon residentiary in Chichester Cathedral.

CAMPBELL, THOMAS (1777-1844). British poet. Born in Glasgow, July 27, 1777, the youngest son of a Virginia merchant, Alexander Campbell, in 1799

he published *The Pleasures of Hope*, which won immediate popular favour. In 1801 he contributed to *The Morning Chronicle* *Ye Mariners of England* and several other poems. In 1805 he received a pension of £200 a year. He died June 15, 1844.

Campbell's poetry is very unequal, but in his *Pleasures of Hope* he wrote lines that have become household words, while such pieces as *Ye Mariners of England* and *The Battle of the Baltic* are popular examples of national songs. *Hohenlinden* and *Lochiel* are also worthy of mention.

CAMPBELL, WILLIAM WILFRID (1861-1918). Canadian poet. Born at Berlin, Ontario, June 1, 1861, he was ordained in 1885. In 1891 he entered the civil service, and became bibliographer of the Dominion Archives at Ottawa. His first published volume of verse, *Lake Lyrics*, appeared in 1889; this was followed by *Collected Verse*, 1906, *Poetical Tragedies*, 1908, and *War Lyrics*, 1915.

W. W. Campbell, Canadian poet
Elliott & Fry

He wrote the novels, *Ian of the Oracles*, 1906, and *A Beautiful Rebel*, 1909. He died Jan. 1, 1918.

CAMPBELL-BANNERMAN, SIR HENRY (1836-1908). British statesman. Born in Glasgow, Sept. 7, 1836, he was a son of James

Campbell, of the firm of J. and W. Campbell; on the death of his uncle Henry Bannerman in 1872 he took the name by which he is known. His father was lord provost of Glasgow in 1840-43, and his only brother James Alexander Campbell (1825-1908), was a Conservative M.P. from 1880 to 1906.

Henry graduated from Trinity College, Cambridge, in 1858. He was returned as Liberal M.P. for Stirling Burghs in Nov., 1868, retaining this seat until his death. From 1871-74, and again in 1880, he was financial secretary to the War Office. In 1882 he became secretary to the Admiralty, and from 1884-85 was chief secretary to the lord-lieutenant of

Thomas Campbell, British poet
After MacIver

Sir Henry Campbell-Bannerman

Ireland. In the short Liberal ministry of 1886 he was secretary for war, and in 1892 he returned to the War Office as secretary, and remained there until 1895.

Knighted in 1895, Sir Henry succeeded Sir William Harcourt as leader of the Liberal party in 1899. In general he supported the South African War, although disapproving of it. In Dec., 1905, when Balfour's government resigned, King Edward sent for him to form a ministry. At the general election of Jan., 1906, the Liberals were returned with a large majority and C.-B. was confirmed as prime minister. On April 4, 1908, he resigned owing to ill-health, and on the 22nd died in Downing Street. Consult Life, J. A. Spender, 1925.

CAMPBELTOWN. Burgh and seaport of Argyllshire, 83 m. by boat S.W. of Glasgow. It is an important fishing centre, and has a fine natural harbour. Market day, Fri. Pop. 6,757.

CAMPERDOWN. Town of Victoria, Australia, in Hampden co., 123 m. by rly. W. of Melbourne. Near is the salt lake Corangamite, which covers 90 sq. m. Pop. 3,900.

CAMPERDOWN, BATTLE OF. Naval engagement, Oct. 11, 1797, between the English under Duncan and the Dutch under De Winter. With 16 ships Duncan attacked the enemy and forced them to surrender.

CAMPERDOWN, EARL OF. British title borne since 1831 by the family of Duncan, now Haldane-Duncan. The first earl was Robert, a son of Viscount Duncan, who in 1797 won the battle of Camperdown. He succeeded to the viscountcy in 1804, and in 1831 was made an earl. He took the additional name of Haldane, which was that of his paternal grandmother.

CAMPFOR. (Cinnamomum camphora). Evergreen tree of the natural order Lauraceae. A native of China, Japan, and Cochin China, it has small flowers without petals. The fruit is a small plum-like berry. The wood is used for making moth-proof cabinets. All parts of the tree contain a volatile oil, one of the constituents of which is the white crystalline substance called camphor, but it is from its wood that camphor is chiefly made. This, reduced to chips, is heated with water in a still, the camphor being volatilised with the water-vapour, and carried over to an earthenware vessel, where it deposits as a white mass.

Camphor, originally only obtained from the deposits occasionally found in the trunks of old camphor trees, has been known for centuries and much prized as a perfume. The volatile oil of the tree is used as a stimulating embrocation, but should not be confounded with camphorated oil or liniment of camphor, which consists of camphor dissolved in olive oil. Internally, preparations of camphor are administered to stimulate the flow of gastric juice and to increase expectoration in colds.

CAMPION. Popular name for various species of silene and lychnis. Thus *Silene latifolia* is the bladder campion, *S. maritima* the sea campion, *S. acaulis* the moss campion, *Lychnis alba* the white, *L. dioica* the red, and *L. coronaria* the rose campion.

CAMPION, EDMUND (1540-81). English Jesuit. Born in London, Jan. 25, 1540, he received deacon's orders in the Church of England, but entered the Society of Jesus in 1571. After teaching at Prague, Campion was sent to England in 1580 to minister to Roman Catholics, at that time forbidden to practise their religion in England. Captured in 1581, and charged with conspiracy against the crown, he was executed, Dec. 1, at Tyburn. He was beatified as a martyr in 1886.

Campion, *Lychnis alba*

CAMPION, THOMAS (c. 1567-1620). English physician, poet, musician, and masque writer. Born in London, he was held in high esteem as an authority on music by his contemporaries. The words and music of his English airs are full of charm, and the lines beginning *Rose-cheeked Laura, Come, make up one of the few perfectly successful rhymeless lyrics in the language.* His plea for unrhymed classical metres in his *Observations in the Art of English Poesy*, 1602, provoked Samuel Daniel's *Defence of Rhyme*, 1603. He died, Mar. 1, 1620. Consult Works, ed. A. H. Bullen, 1889; ed. P. Vivian, 1909.

CAMP MEETING. Name given to open-air religious gatherings, such as the revivalist assemblies, lasting several days, of the Methodist churches in the U.S.A. They were introduced into England early in the 19th century, when, refused sanction by the Wesleyan conference, their adherents formed the denomination known as Primitive Methodists. In the U.S.A. camp meetings have assumed a secular and educational character.

CAMPOBELLO. Island of New Brunswick, Canada. It lies in the Bay of Fundy, at the entrance to Passamaquoddy Bay. Some 9 m. long, it is well wooded. Its chief town, Campobello or Welsh Pool, is a popular resort, and trades in smoked fish. It is an outport of New Brunswick and stands on the coast opposite Eastport in Maine.

CAMPO FORMIO. Village in Italy, a few miles from Udine. Here was signed a treaty between the French Republic, represented by Bonaparte, and the Austrians, Oct. 17, 1797. By this Austria gave up the Austrian Netherlands to France and Milan and Modena to the new Cisalpine republic. Venice was partitioned, Austria being compensated for the above losses by a good share of the lands of the republic, including Dalmatia and Istria, while the Cisalpine state obtained the rest of the mainland, and France the Ionian islands.

CAMPOS. Name given to the tropical grasslands which form the natural vegetation of large areas of the comparatively dry southern Brazilian highlands.

CAMPO SANTO (Ital. holy field). Name for a burial ground in Italy, generally remarkable for its cloisters, galleries, or other architectural features. The Campo Santo of Pisa is surrounded by a tall cloister of considerable width, built in the 13th century, though much of the Gothic tracery was added two centuries later. The Campo Santo at Genoa, about 2 m. E. of the town, is modern.

CAMPSIE. District of Stirlingshire. It is 10 m. by rly. N.E. of Glasgow, by the L.N.E. Rly., and contains Lennoxton. Coal and limestone are worked, and there are chemical works and bleaching grounds. Near is Campsie Glen, a beautiful ravine of the Campsie Fells. Pop. 5,304.

There is a Campsie in New South Wales, 7 m. from Sydney.

CAMPUS MARTIUS (Field of Mars). Part of ancient Rome, so named from an altar to Mars erected on it. It was once bounded by magnificent buildings, including a stadium where the Roman youth exercised and the Roman people met in assembly. Hadrian or Aurelian enclosed it within the walls of Rome. See Champ de Mars.

CAMROSE, WILLIAM EWERT BERRY, 1ST BARON (b. 1879). British newspaper proprietor. Second son of Alderman John Mathias Berry of Merthyr Tydfil, and younger brother of Baron Buckland (q.v.), he was born June 23, 1879. In 1901 he founded Advertising World, and within a few years, in association with his brother, Sir J. G. Berry (q.v.), he had become one of the prominent figures in the newspaper world. In quick succession the brothers acquired control of

The Sunday Times, The Financial Times, and various important groups of London and provincial journals, as well as other large publishing and printing concerns, including the Amalgamated Press, Ltd. (q.v.). In 1928 Lord Camrose, along with Sir Gomer Berry and Sir Edward Hille, acquired The Daily Telegraph from Viscount Burnham (q.v.). He was created a baronet in 1921 and was raised to the peerage in 1929, taking the title of Baron Camrose of Long Cross.

Baron Camrose, Newspaper proprietor Russell

CAMWOOD OR BARWOOD. Red dyestuff, the wood of a leguminous tree, *Baphia nitida*. A native of W. Africa, it attains a height of 30 ft., and has shining leaves and white flowers. The wood yields a brilliant red dye.

CANA OF GALILEE. Village of Palestine, the scene of Christ's first miracle (John 2). The site is uncertain. Near Capernaum, W. of the Sea of Galilee, two villages, Kefer Kenna and Kana el Jellil, claim to represent the ancient one, while Conder argues in favour of Ain Kana, a spring near Nazareth.

CANAAN. Hebrew name for Palestine (q.v.). It originally denoted only the coastal region and the valley of the Jordan. Canaanites is the name applied to the descendants of Canaan, grandson of Noah (Gen. 9), and to the early idolatrous inhabitants of the land between the Jordan and the Mediterranean—Phoenicia and Philistia (Exod. 3 and 13; Num. 14).

CANADA. British dominion of North America. It includes the whole of the North American continent and islands N. of the U.S.A., except Alaska and Newfoundland, with its dependency Labrador. It is 3,684,723 sq. m. in area, and the official estimate (1928) of the population is 9,658,000. It is divided into nine provinces, namely, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, British Columbia, Alberta, and Saskatchewan, and two territories, the Yukon Territory, and the North-West Territories. In 1927 the privy council awarded some 110,000 sq. m. of Labrador to Newfoundland. Ottawa is the capital.

The most important series of waterways is the St. Lawrence river system. Starting at the river St. Lawrence, it connects up with Lake Ontario, and thence by a series of canals through the great lakes establishes connexion between the Atlantic and Fort William and Port Arthur, cities in communication with Winnipeg and the West. It is closed, however, by ice for four winter months.

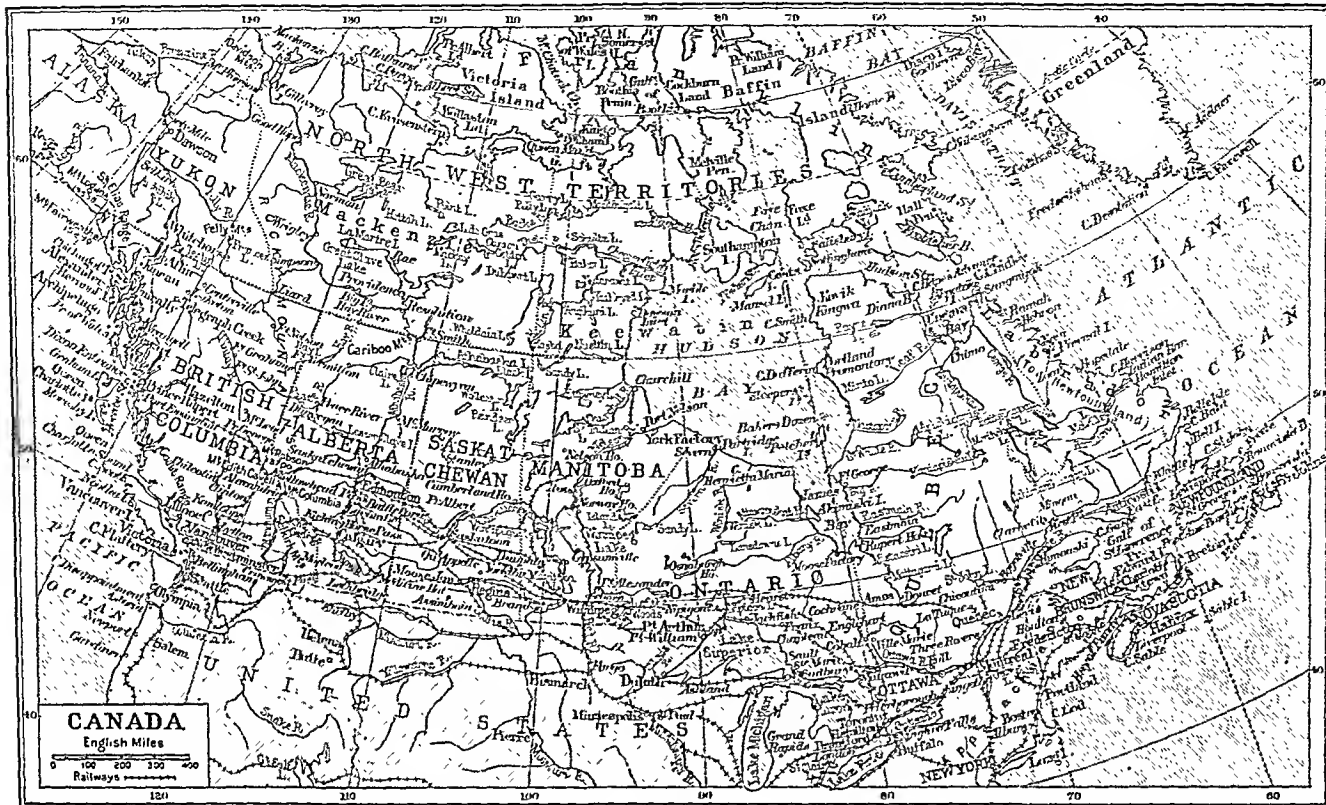

Lake Superior is the largest body of fresh water in the world. Other large lakes are the Great Bear Lake, Great Slave Lake, Lake Winnipeg, and Lake Athabaska. There are eight rivers over 1,000 m. in length: the Mackenzie, St. Lawrence, Nelson, Saskatchewan, Churchill, Columbia, Yukon, and Peace.

The Arctic zone, including the bleak islands of the North Atlantic coast, is tundra. Here are found the Arctic fox, polar bear, musk ox, lemming, and barren ground caribou. Farther S. is the sub-Arctic zone, with forests of spruce, poplar, birch, and jack pine, the home of the big game and fur-bearing animals, deer, elk, moose, and caribou. The black bear, fox, beaver, otter, marten, mink, and ermine are found here.

The transition zone contains forests of hardwoods, beech, maple, ash, oak, hickory,

Arms of Canada

Canada. British self-governing dominion extending across North America from the Atlantic to the Pacific, and experiencing great variations of climate and vegetation

elm, and yellow birch. In the S. of British Columbia there are great trees of the type found in Oregon, and abundant vegetation.

Outside the West coast, Canadian summers are short, warm, and dry; the winters long, dry, and cold; the springs short; and the autumns long and fine. On the W. coast the Pacific Ocean greatly modifies the climate.

INDUSTRIES. Agriculture is the staple industry of the country, the crops including wheat, the most important, oats, barley, rye, flax (for seed), maize, and hay. Stock raising, dairy farming, and fishing are important.

The forest resources of Canada are enormous, the more important timber areas being in British Columbia, Ontario, and Quebec. Pulp and paper are growing allied industries. Mining is another large industry. The minerals and metals include gold, copper, lead, nickel, silver, asbestos, coal, and petroleum. Canada is the greatest fur preserve of the world, and fur farming is increasingly followed. Water power has been enormously developed.

The principal rly. system is the Canadian Pacific Rly. (C.P.R.), which operates in all over 20,000 m. of line. This vast corporation played a large part in the opening-up of the New West. In 1928 it bought the rly. system of the prov. of Alberta. The other system consists of all the lines built or acquired by the Government, and is known as the Canadian National Railways.

HISTORY. Canada was discovered in 1497 by John Cabot, but the first attempts at settlement were made by Frenchmen, Cartier and Champlain. French folk settled in Nova Scotia and around Quebec and there prosperous French colonies arose. In 1713 Nova Scotia was ceded to England, and in 1763 Canada proper shared the same fate. The French remained in Lower Canada, but Upper Canada, or Ontario, was colonised by Britishers, many loyalists from the U.S.A.

In 1773 the Quebec Act enlarged the provinces and confirmed privileges to the French inhabitants. In 1810, after some trouble,

including a rising led by Papineau, Upper and Lower Canada were united. This paved the way for the larger union of 1867 by which the Dominion was created. Four provinces then joined it: two came in later and three were carved out of the western areas. The capital was fixed at Ottawa and Sir J. A. Macdonald was the first prime minister. Matters of importance were the rebellion of Louis Riel, the acquisition of the lands owned by the Hudson Bay Co., and the construction of a railway across the continent.

Macdonald, who was in power until his death in 1891, except for the years 1874-78, introduced protection, which has since been the national policy. His Conservative successors held office until 1896, when the Liberals, under Sir W. Laurier, came into power.

He and his party remained in power until 1911, when their proposals to make a reciprocity treaty with the United States led to their defeat. The Conservatives, now led by R. L. Borden, came into office, and were responsible for Canada's decision to enter the Great War.

In 1917, as in Britain, a coalition, with Borden at its head, was formed to carry on the struggle, and this lasted until July, 1920, when Borden retired. He was succeeded by Arthur Meighen, who was premier until 1921. In that year the liberals won the general election and came into power under W. L. Mackenzie King. The next election in 1925 gave the Conservatives a majority, but they only enjoyed a few months of office, because in Sept., 1926, another election reversed the verdict of 1925. King became premier for the second time, and was still in office in 1930.

On the outbreak of the Great War the Canadian government raised a first contingent of 32,000 men. Further contingents were organized, and by the autumn of 1916 the number enlisted had exceeded 370,000. The

war casualties totalled 215,545—killed in action or died of wounds, 50,869; died from other causes, 4,030; missing, 8,119; prisoners, 2,818; wounded, 149,709.

Canada is a self-governing dominion within the British Empire and a member of the League of Nations. The executive government consists theoretically of the governor-general and privy council. In practice it is a Cabinet under a prime minister, just as in Great Britain. The legislative power is vested in the senate of 96 members, who are nominated for life by the governor-general, and in the House of Commons of 245 members. Each of the provinces has a separate government, with a lieutenant-governor and a legislative body of one house, except Quebec, which has two.

CANADA BALSAM. Substance containing oils and resin derived from the balsam fir (*Abies balsamea*) of Canada. It forms an adhesive varnish when dried, and is largely used for cementing lenses, and for mounting objects on glass slides for the microscope.

CANADA HOUSE. London headquarters of the Canadian government. It serves as the offices of the High Commissioner for Canada and his staff. The building is at the corner of Cockspur Street, S.W.1.

CANADIAN MOUNTED POLICE. Mounted force, until 1919 known as the Royal North-West Mounted Police. Their duties are to maintain law and order in the thinly populated parts of Canada.

CANADIAN PONDWEED (*Elodea canadensis*). Waterweed of the order Hydrocharidaceae. A native of N. America, it has long, slender and brittle submerged stems, rooting at the joints.

CANAL (Lat. *canalis*). An artificial open water-channel, used to carry water for irrigation, town supply, or drainage, or for the purposes of navigation. Canals of the first class are more properly called aqueducts (q.v.). Navigation canals fall naturally into two classes: (1) Those which have the same

Canadian army badge

level throughout. (2) Those which cross ground higher than the water level at their extremities and are divided into steps or reaches at different levels. Transference of vessels from one level to another is made by a lock or some mechanical device. The longer canals, such as the Suez, Panama, Kiel and Welland, are known as ship canals.

The waterways of England and Wales form part of a connected system, lying chiefly in the midlands and in the southern part of the northern counties. It is entirely unconnected by inland water routes with the Scottish canals and rivers. Most of it lies within a quadrilateral bounded by a straight line drawn from the north coast of Somerset to the north coast of Kent, by a line drawn from London to Scarborough, by a line drawn from Scarborough to Barrow-in-Furness, and by a line drawn from Barrow to Bristol. The total mileage of canals at present used in the British Isles is about 4,670. In 1929 the Grand Junction Canal and a number of smaller ones (including the Regent's Canal) were united under the name of the Grand Union Canal, with a total length of 239 miles.

CANALETTO, ANTONIO (1697-1768). Venetian painter whose real name was Canale. Born in Venice, Oct. 18, 1697, he devoted himself to painting the life and buildings of that city. There are examples of his work in the National Gallery and the Wallace Collection in London. Canaletto visited England in 1746 and 1761. He died at Venice, Aug. 20, 1768. His nephew Bernardo Bellotto (c. 1724-80), also called Canaletto, painted similar subjects.

Canaletto, Venetian painter

CANARY. Bird of the finch family, a native of the Canary Islands. It is famous for its song. The wild canary (*Serinus canarius*) is yellowish-brown or green, with ashy sides streaked with black, and yellow forehead and underparts. Its song lacks the power or variety displayed by cage birds. The uniform yellow of the cage varieties is the result of artificial selection in breeding. The canary appears to have been first domesticated in Europe in the 16th century. The larger breeds are double the size of the wild bird. It breeds freely in captivity; four or five blue eggs are usually laid, and as many as four broods may be raised in a good season.

Canary. Four typical specimens of this favorite songbird. Left to right: above, Scottish Fancy and Lizard; below, Norwich and Belgian

The Norwich bird is noted for its rich colour and hardy constitution, the Yorkshire is a slender bird with close plumage, and the London Fancy is characterised by black wings and tail. The Scottish Fancy is a large bird with a hump-backed appearance, and the Lancashire Coppy is the largest of all the varieties, with a crest of radiating feathers. The rare Lizard canary gets its name from its spotted appearance. the Belgian, which usually fetches a high price, is hump-backed

to the verge of deformity. Roller canaries, chiefly bred in the Harz Mts., are famed for their sustained and melodious song, the result of prolonged training. In 1928 some breeders succeeded in producing a new canary, called the Gloucester Fancy.

Canary Grass

CANARY DANCE. Lively 16th century dance in three- or six-time. It owed its name to the Canary Islands, from which it was introduced by way of Spain. The dance is referred to by Shakespeare in *Love's Labour's Lost*—"Canary to it with the feet"—and *All's Well that Ends Well*.

CANARY GRASS (*Phalaris canariensis*). Annual grass, a native of countries bordering the Mediterranean. It has flat, lance-shaped leaves, and the flowers are produced in an egg-shaped panicle, variegated with green and white. The flattened yellow fruits of canary grass are widely used as food for cage birds.

CANARY ISLANDS (Span. Las Canarias). Archipelago in the Atlantic Ocean. Some 60 m. off the N.W. coast of Africa, they belong to Spain, of which for administrative purposes they are considered a province, and have an area of 2,807 sq. m. Pop. 503,151.

The islands are mountainous, and of volcanic origin, rising to 12,100 ft. in Pico de Teydo or Tenerife. The climate, though subject to occasional hurricanes with water-spouts, is mild and equable, and has made the islands a favourite winter resort. The people are mainly of Spanish descent, with traces of the original inhabitants, the Guanches (q.v.), now extinct. The islands have no railways, but have many good roads. There are three wireless stations.

The chief islands are Grand Canary, Tenerife, Fuerteventura, Lanzarote, Palma, Gomera, and Hierro or Ferro; the chief towns are Santa Cruz de Tenerife, the capital and an important coaling station, Las Palmas, the chief commercial town, Santa Cruz de la Palma, and Orotava. The ports are free ports.

The Canaries were known probably to the Phoenicians and certainly to the

Romans. They were rediscovered accidentally by a French ship in 1334, and taken possession of, in 1402, by Jean de Bethencourt, who relinquished his rights to the Spanish king.

The Canary Company was an English company of merchants trading with the Canary Islands. It received a charter from Charles II in 1665, which was withdrawn in 1667.

Canary wine, also known as Tenerife, is a still white wine produced in the Canary Islands. It enjoyed a high reputation in Elizabethan times.

Canary wood is a coarse kind of mahogany, the timber of *Persea indica*. An evergreen tree of the natural order Lauraceae, it is a native of the Canary Islands.

CANBERRA. City and capital, also federal territory of the Commonwealth of Australia. The federal territory, area 940 sq. m., is directly under the Commonwealth Government, and is surrounded by Murray co., New South Wales. The Murrumbidgee flows through it. Pop., federal capital territory, 7,700: Jervis Bay territory, 437.

The site is on the Molonglo affluent of the Murrumbidgee, with the Australian Alps as a background on the E. It is an irregular amphitheatre dotted with Mt. Ainslie, Black Mt., Mt. Pleasant, and Mugga Mugga hills.

A rly. connects the site with Queanbeyan, N.S.W., 196 m. by rly. from Sydney. A survey for the line to Jervis Bay has been completed, and, in addition, a line from Canberra to Yass, New South Wales, via the Federal border, is projected. The latter line will, when completed,

Canary Islands. Map of this volcanically formed archipelago, famous for its perfect climate and luxuriant vegetation.

The volcanoes are inter-cover a total distance of approximately 43 miles. The Australian School of Forestry

Canberra. Plan of the Federal capital of the Australian Commonwealth

has been established within the city area, and a solar observatory at Mt. Stromlo. There is an Anglican cathedral. The buildings of the

CANDACE (Gr. Kandakē). Official name of ancient Ethiopian queens. Their wealth, implied in Acts 8, is exemplified by jewelry finds. Pron. Canda-see.

Canberra. The Parliament House of the Commonwealth, opened in 1927
Courtesy of the Australian Government

Commonwealth Parliament were opened by the Duke of York on May 9, 1927.

Canberra is also the name of a battleship, sister ship to the Australia (q.v.).

CANCAN. Parisian dance. It had the character of the quadrille, but was danced with wanton movements and contortions and was eventually prohibited by the French Government. The word came to be applied to any noisy or scandalous demonstration.

CANCER (Lat. crab). In astronomy, the smallest and least noticeable of the constellations of the Zodiac, between Gemini and Leo. In the midst of it are a pair of not very bright stars, Gamma and Delta.

CANCER. Disease characterised by the formation of a carcinoma, that is, a malignant tumour beginning in, and consisting of, epithelial cells. These are cells which cover the skin and mucous membranes, form glands, and occur in other situations in the body. The cancer cells resemble those from which they are derived, but are altered somewhat in appearance and size and have an independent existence. They invade the normal tissues by which they are surrounded and gradually replace them. They can also be disseminated throughout the body by means of the lymphatics and the blood stream.

This change in the nature of the cells is due to two factors. First, the presence of some exciting agent; second, some change in the body cells which makes them susceptible to invasion by the virus. This may be induced in various ways; in carcinoma it is due, in most cases, to chronic irritation. The nature of the exciting agent is still under discussion. One investigator affirms that it is a virus introduced from without; another, that it is in the nature of a ferment within the body.

The disease is of world-wide distribution, is more prevalent among civilized races and occurs among the old and middle-aged rather than the young. It is not inherited, though susceptibility to develop it may be transmitted. There is no evidence of it being an infectious disease. It may manifest itself in various forms, such as a lump felt in the breast or the stomach, an ulceration on or near the surface of the skin, etc. While pain may be severe in the later stages, it is not a common early symptom. An operation done in the early stages of the disease offers an excellent prospect of cure; an operation when the disease is thoroughly established, little or none. Radium is an important instrument in the treatment of malignant tumours when an operation is out of the question. (See Sarcoma.)

The London Cancer Hospital was founded in 1851. In 1861 the present building in Fulham Road was opened. In connexion with the hospital there is a Research Institute.

The Imperial Cancer Research Fund is a society, founded in 1902, to promote investigations into the causes, prevention, and treatment of cancer and malignant diseases. The office of the fund is at 8, Queen Square, Bloomsbury, London, W.C.

CANDIA (Gr. Megalokastro or Heraklion). Largest city and former capital of Crete, on the N. coast. Founded about 824 by Saracens, it was taken and fortified by the Genoese in the 12th century, and afterwards by the Venetians, who built the city walls, arsenal, and a cathedral. The cathedral was demolished in the 19th century, and a new Greek cathedral consecrated in 1893. Pop. 33,404. See Crete.

CANDLE. Article in common use for purposes of illumination. The earliest form of candle, known as a rushlight, was a partly peeled rush stem surrounded by resins or fats. Inexpensive candles, called dips, were made by dipping wicks into melted tallow. For ecclesiastical purposes the more expensive bleached beeswax was employed. This form was made by pouring the melted beeswax down the suspended wick, layer by layer. Modern candles are made of stearine or paraffin wax.

Standard candles, made of spermaceti, are used in photometry, or the comparison of the illuminating powers of sources of light, which is expressed in candle-power. The candle is arranged on one side of a paper having a grease-spot at the centre, and the illuminant to be tested on the other, at such distances that the grease-spot becomes invisible; or both are placed on the same side of a white surface and so adjusted that the shadows cast by an interposed rod are of equal density. The candle-power is then found by calculation from the respective distances of the illuminants.

CANDLEMAS. Christian festival commemorating (Feb. 2) in the Roman Catholic Church the Purification of the Virgin Mary, and in the Eastern Churches the Presentation of Christ in the Temple. The Anglican Prayer Book retains both commemorations.

The name Candlemas dates from the 11th century, when the ceremony of blessing candles and carrying them in procession began. In Scotland Candlemas is the first quarter day of the year.

Candelabrum.
Louis XVI example in ormolu

CANDLE NUT. Fruit of *Aleurites triloba*, a tree of the order Euphorbiaceae, a native of the Moluccas and the islands of the S. Pacific.

The fruit is round and fleshy, with two seeds like small walnuts and containing a large amount of oil. In some islands, stuck on reeds, they are used as candles, and in others as food, their flavour being very much like that of the walnut. The oil expressed from them serves as a "drier" for use with paint.

Candle tree. Central American tree with candle-like fruit

CANDLE TREE (*Parmentiera cerifera*). Tree of the natural order Bignoniaceae, a native of Panama. It has trefoil leaves and large greenish-white, bell-shaped flowers, succeeded by long, cylindrical waxy-looking fruits resembling large candles. They contain a large quantity of oil and are used as cattle food.

CANDLISH, ROBERT SMITH (1806-73). Scottish divine. Born in Edinburgh, March 23, 1806, he graduated at Glasgow University in 1823, and became minister of S. George's, Edinburgh, in 1834, where he took front rank as a preacher. At the disruption he was second only to Dr. Chalmers in the founding and organizing of the Free Church. Moderator of the assembly in 1861, the following year he became principal of New College, Edinburgh. He died in Edinburgh, Oct. 10, 1873.

Robert S. Candlish,
Scottish divine

CANDYTUFT (*Iberis*). Genus of herbs of the order Cruciferae.

Natives of S. Europe and W. Asia, they have smooth, round stems and narrow leaves. The white or purple flowers are produced in flat clusters (corymbs). One species (*Iberis amara*), with minute white flowers, occurs wild in the S. and E. of England. Several species are cultivated as garden flowers, e.g. rocket and common candytuft.

Candytuft,
Iberis umbellata

CANE (Lat. canna). Commercial name for the stems of various grasses and palms. The more important are bamboo, rattan, malacca, and sugar. See Bamboo, etc.

CANEA. Scaport and capital of Crete. On the site of the ancient Cydonia, on the N. coast, it has many Turkish mosques and Greek churches, a synagogue, and numerous relics of Venetian occupation. Pop. 26,604.

CANELLA. Bark of a small evergreen tree (*Canella alba*), of the natural order Canellaceae. It is a native of the West Indies. The whole tree has an aromatic fragrance, and when in flower perfumes a considerable area around it. The bark is used as a tonic.

CANFORD. Public school in Dorset. It is 2 m. from Wimborne and six from Poole, and was founded in 1923. The building was formerly the residence of Viscount Wimborne.

CANG or **CANGUE** (Port. canga, yoke; Chinese Kea). European name for a Chinese instrument of punishment of minor offenders.

Cang. Chinese instrument for punishing minor offenders

It consists of a large heavy slab of wood made to grip the neck. Thus pilloried, the culprit can neither lie down nor reach his mouth.

CANIS. Name of the two constellations, Canis major (the greater dog) and Canis minor (the lesser dog). Canis major possesses the brightest of all the fixed stars—white, scintillating Sirius. Canis minor in Ptolemy's catalogue numbered only one star besides Procyon, namely Gomeisa, the "dim-eyed." The Greater Dog has other stars: among them Murzim, and a little triangle of bright stars very close to the Northern horizon. See Constellation.

CANKER (Lat. cancer, crab). Disease affecting trees, particularly the apple and pear, producing deformity and slow decay. It may result from the attacks of the Woolly Aphis; from severe pruning late in the season, or from excessive growth too late to be ripened. In the plum tribe it often follows upon "gumming." To prevent canker care should be taken to plant in well-drained soil, to avoid the use of rank manures, and to prune cleanly.

The name canker is given to a disease of the ear, common in dogs and less frequently in the cat. Though applied to ulcer of the flap of the ear, the word really means an ulcerated condition of the inner lining. It may be caused by wax or dirt, or by parasites.

CANNA (Lat. a reed). Large genus of perennial herbs of the order Scitamineae. They have ornamental foliage and showy flowers. They are cultivated as hothouse plants, and used for summer bedding out of doors. The true petals are green and leaf-like, while what appear to be three brightly-coloured petals are really the stamens, only one of which produces an anther. The tubers of some species are used as food; those of a Peruvian species cultivated in the West Indies yield a kind of arrowroot called Tous les mois

Canna indica, or Indian shot plant

vated in the West Indies yield a kind of arrowroot called Tous les mois

CANNABIS (Gr. Kannabis). Small genus of the order Urticaceae, and the name used by Dioscorides for the hemp plant, Cannabis sativa. Under the name of Cannabis indica, the dried flowering or fruiting tops of the female plant are employed in medicine, the extract or the tincture being given to relieve migraine and neuralgia. Cannabis indica produces a condition of mild intoxication. See Hemp.

CANNAE. Village of Apulia, Italy. Here a battle was fought between some 80,000 Romans and a Carthaginian army of about 40,000 under Hannibal. By skilful tactics Hannibal completely defeated the Romans.

CANNES. Watering-place of France, in the dept. of Alpes-Maritimes. Protected by hills on the N., it is 120 m. by rly. E. of Marseilles, and overlooks the Mediterranean. Its equable climate and beautiful surroundings have made it a popular winter resort. Near is Le Cannet, also a winter resort. The hill of La Californie, whereon is an observatory, is said to afford the finest view on the Riviera. In front of Cannes are the Iles de Lérins. The chief are S. Marguerite, on which the Man with the Iron Mask, and later Marshal Bazaine, were imprisoned; and S. Honorat, with an ancient abbey. A meeting of the Supreme Council of the Allies took place at Cannes, Jan. 6-13, 1922. Pop. 30,907.

CANNIBALISM. Practice of eating human flesh. It may be held to be coeval with the dawn of mankind. Before the development of the moral ideas no repugnance was felt to food-cannibalism under the impulse of hunger, or even of gluttony. A distinction,

however, would come to be drawn between the family group and strangers. The development of the totem theory of kinship limited these practices by putting a taboo upon the eating of one's totem. But with the growth of animism parts of the human body, whether friend or foe, would be consumed in order to acquire the deceased's strength or virtue and, later on, his soul.

CANNING, CHARLES JOHN CANNING, EARL (1812-1862). Governor-general of India. Born near Brompton, London, Dec. 14, 1812, the

Charles John Canning, Earl Canning

third son of George Canning, he became Conservative M.P. for Warwick, 1836, and Viscount Canning 1837. In 1855 he succeeded Lord Dalhousie as governor-general of India. His impartiality during the Mutiny and the consequent reorganization of India earned him the thanks of both houses of Parliament. On the transference of the government of India to the crown in 1858 Canning became first viceroy. Created an earl in 1859, he died June 17, 1862.

CANNING, GEORGE (1770-1827). British statesman. Born in London, April 11, 1770, he entered Parliament as Tory member for Newport in 1794, and held a series of posts in Pitt's administration, achieving a reputation in the House of Commons as an orator, and among the public by his contributions to The Anti-Jacobin. In 1807 he joined the Portland ministry as foreign secretary.

George Canning, British statesman
After Lawrence

Canning's objection to the policy of Castlereagh (q.v.), the war secretary, in the conduct of the Peninsular War, ended in a duel between the two ministers, Castlereagh believing that Canning had intrigued against him. Both ministers resigned, but Castlereagh returned to office as foreign secretary in 1812, and Canning in 1816 as president of the India board of control. On the death of Castlereagh he was appointed to the post of foreign secretary in the Liverpool ministry.

He maintained Castlereagh's policy of non-intervention in the domestic affairs of European states, but also insisted openly on the right of Britain to intervene when non-intervention was violated by European powers. When Liverpool left office in 1827, Canning at last became prime minister, but he died four months later, Aug. 8, 1827, and was buried in Westminster Abbey. Consult Canning and His Times, J. A. R. Marriott, 1903.

CANNING TOWN. Industrial district of E. London, a ward of the borough of West Ham. At the junction of East India Road and Barking Road, it has a station on the L.N.E.R. Here are the Victoria and Royal Albert Docks. The site and buildings of the Thames Ironworks were acquired in 1928 for a shipping station. Pop. 28,383.

CANNOCK. Urban district and market town of Staffordshire. On the L.M.S. Rly., 130 m. N.W. of London and 8 m. N.W. of Walsall, it is a mining centre. Cannock Chase, a wild moor near, is rich in coal and ironstone. Market day, Sat. Pop. 32,930.

CANNON, TOM (1846-1917). British jockey. Born at Eton, he was associated with John Day, the trainer, whose daughter he married. As a jockey he won many of the classic races, including the St. Leger in 1880 and the Derby in 1882. He rode the winner in the Grand Prix de Paris five times. After giving up riding he became a trainer and died at Stockbridge, July 13, 1917. Cannon's three sons, Tom Cannon, junior, Mornington Cannon, and Kempton Cannon, were all leading jockeys for many years.

Cannon (Lat. canna, tube). General term for ordnance or artillery, now superseded by the term gun. See Artillery; Gun.

CANNON-BALL TREE (Couropita guianensis). Tree of the order Myrtaceae. A native of tropical America, it has alternate leaves and large whitish or rosy flowers. The large globular fruit is contained in a hard, woody shell.

Cannon-ball tree, Couropita guianensis

CANOE. Generically, a boat sharp at both ends, of slight draught and good beam, of sufficient stability to be navigable in deep and fairly rough waters, and light enough for transport overland by manual labour. A canoe may be propelled by hand paddles, or sailed under easily removed sails and spars. The name is derived from canoa, the Spanish form of a native Haitian word.

Canoes in use in different parts of the world are those of South America and Australia, made of bark; Eskimo canoes of seal or walrus skin; the long and narrow Dyak variety of the Malay peninsula, and the large Fiji canoes. A canoe in much favour on the Thames is the Canadian variety made of strips of bard grained wood $\frac{1}{2}$ in. thick. The wood is steamed and fitted over a mould. All canoeing matters are controlled by the Royal Canoe Club, with headquarters at Kingston-on-Thames. See illus. below.

CANON (Gr. rule, model). Musical composition based upon imitation. One voice or part (dux) leads off and another (comes) follows at an agreed interval of time and pitch.

Canoe. 1. N. American birch bark canoe. 2. Liberian dug-out. 3. South Sea Island outrigger dug-out. 4. Rob Roy canoe

Any interval may be used, also the devices of Inversion, Augmentation, Diminution, and Retrogression (Canerizans). When a canon can be performed many times over without a break it is called infinite; when it has a full close or coda it is finite. A famous three-part canon is Byrd's Grace, Non nobis, Domine. Mendelssohn's The Nightingale is a double canon.

CAÑON or CANYON (Span. tube). Deep, steep-sided, gorge-like river valley. The typical example of such formations is found in the W. states of the U.S.A. where there is an almost rainless plateau, in parts over 8,000 ft. high, crossed by the Colorado river. The river and its tributaries have cut their way vertically downwards through the plateau, which is composed of horizontal layers of hard and soft rocks. The hard rocks form steep cliffs and the soft rocks gentle slopes, giving the valley the shape of a narrow letter V. The deepest of the Colorado cañons is the Grand Cañon of Arizona.

CANON (Gr. list. rule). Term originally applied to all clergy (canonici) on the list at each church. Later it was restricted to cathedral clergy: canons regular, who lived under a rule; and secular canons, so called because they moved in saeculo (in this world) and undertook the cure of souls. Women who lived under a similar rule to that of canons regular were known as canonesses.

Residential canons have a right to a seat in the choir, a voice in the decisions of the chapter, and a prebend or competent portion of the chapter revenues. An honorary canon is a canon without emolument and no voice in the chapter. A minor canon is one who, while he has a stall, has no prebend, and is not responsible for the preaching.

Canon law was originally a body of ecclesiastical law for the government of the clergy and affairs of the church, compiled from the writings of the fathers, the decrees of general councils and the epistolary orders and proclamations issued by the respective popes. Various collections of these rules or canons were made and were adopted by the states of Christendom as part of their own laws.

CANON, BIBLE. List of books in the O.T. and N.T. accounted of Divine inspiration. While the canon of the N.T. is of general acceptance throughout all Christian churches of the E. and W., the canon of the O.T. in the Roman Catholic Church includes those books which were rejected by Protestants at the Reformation and are classed as Apocrypha.

CANONBURY. Dist. of London in the borough of Islington. It is bounded by Upper Street on the E. and by Southgate Road on the W., and is served by the L.M.S. Rly. Canonbury Tower, in Canonbury Place, was first occupied by the prior and canons of S. Bartholomew's, Smithfield. It then passed to Sir John Spencer and next to the marquess of Northampton, and is now a club. Pop. 29,997.

CANONISATION. Process in the Roman Catholic Church of declaring and decreeing that a person is to be venerated as a saint. It extends over a number of years. The congregation of rites is the official body deputed by the pope to examine all causes brought forward. If the claims are satisfactory the person is first beatified, and permission given for local veneration. See Beatification.

CANONS. Estate near Edgware, Middlesex. Named from the priory of S. Bartholomew, Smithfield, it passed in 1710 to James Brydges, afterwards duke of Chandos (q.v.), who built a mansion, the theme of Pope's Epistle on False Taste, and laid out a park. The estate, known as Canons Park, was sold to the N. London Collegiate School for Girls, and for building purposes, in 1929.

CANOPUS. First star of the constellation Argo (Alpha Argus). It is in the southern heavens. It must be at least 300 light years distant, so that its light may be equivalent to that of 22,000 suns like ours. See Constellation.

CANOPUS. Ancient town near Abukir, Lower Egypt. Giving its name to the Canopic arm of the Nile it was a busy trading mart until superseded by Alexandria. Here was a

celebrated temple of Serapis. The Canopus stèle (Gr. pillar), found at Tanis, 1866, and now at Cairo, is a limestone slab inscribed in hieroglyphic, demotic, and Greek. It records a priestly decree in honour of Ptolemy III.

At Canopus were made the so-called Canopic jars, a set of four jars, of alabaster, terra-cotta, or wood, containing the entrails of embalmed human bodies in ancient Egypt.

CANOPUS. Nameship of a class of six British battleships built between 1899 and 1902. She was unable to take part in the Coronel actions owing to her slow speed. At the battle of the Falklands, though not actually in the engagement, she fired the first

H.M.S. Canopus, the battleship which fired the first shot in the battle of the Falkland Islands, 1914

shot at the enemy. The Goliath and the Ocean, two of the class, were lost at the Dardanelles.

CANOPY (Gr. konopcion, mosquito-curtain). Term signifying generally a roof of hard or soft material supported on pillars or poles. It is applied in architecture to the stone or wood covering of pointed or circular form over a door, niche, window, or tomb.

Canopy in a butress, Roslyn chapel, Edinburgh

Among the most famous are Perseus with the head of Medusa, Cupid and Psyche (several versions), The Three Graces, The Magdalen, Venus Leaving the Bath, and The Dancing Nymphs. He died Oct. 13, 1822.

CANSO, CAPE. Easternmost extremity of Nova Scotia. On the S. side of Chedabucto Bay in lat. 45° 17' N., long 61° W. It has a wireless direction-finding station. Near is Canso, a fishing centre and the terminus of many Atlantic cables.

The Gut of Canso is a channel between Nova Scotia and Cape Breton Island, Canada, connecting the Atlantic with Northumberland Strait. It is some 17 m. long and has an average breadth of 2½ m.

Cantacuzene (Cantacuzenus). Name of a Byzantine family, the chief member of which was the emperor John V or VI (q.v.).

CANTALUPE or CANTALOUPE. Variety of melon coming originally from Armenia, but introduced to Britain from Cantalupo, near Rome, hence the name. It is distinguished by its small, round shape and rough, irregularly meshed, netted surface. See Melon.

CANTEEN (Ital. cantina, wine-cellar). Originally a soldier's water-bottle, the term is generally applied to the liquor bar and wet canteen in barracks and on board troopships. The dry canteen provides articles of food, tobacco, and other things required by soldiers and their families living in barracks.

During the Great War, navy and army canteens assumed considerable proportions, and on April 11, 1916, the army canteen committee commenced its duties. The tenant system in the navy was abolished on June 1, 1917, and the navy canteens, like the army canteens, were provided by the Navy and Army Canteen Board acting under the direct control of the Admiralty and the War Office.

CANTERBURY. City of Kent and the ecclesiastical metropolis of England. It lies in a valley on both banks of the Stour 55 m. by road and 62 m. by rly. S.E. from London on the Southern Rly.

The cathedral, a double cruciform pile, was founded by S. Augustine, who constituted the see in 597, consecrating a Roman church as his cathedral.

Partly rebuilt by Odo about 950, it was destroyed by fire in 1067, and in 1070 Lanfranc began the construction of a new building, which Anselm carried on, and Prior Conrad finished by adding the choir. Fire demolished the choir in 1174, its reconstruction being undertaken by William of Sens and completed by William the Englishman in 1184. Prior Childen erected a new nave and nave transepts in the 14th century, and the addition of the central, or Bell Harry, tower by Goldstone and Archbishop Morton about 1495 completed the building, which is an example chiefly of the Transition-Norman and Perpendicular styles.

Of the parish churches the most notable is S. Martin's, which has a font reputed to be that in which Augustine baptized Ethelbert. S. Dunstan's Church contains memorials of the Roper family, and in the vault is the head of Sir Thomas More. Of interest are the remains of the ancient walls, the Dane John (Donjon), an artificial mound, the ruined Norman keep of the old castle, the Guildhall, and the Chequers Inn of Chaucer's Canterbury Tales. There are, besides, the King's School, traditionally founded in the 7th century, and refounded by Henry VIII (1541), S. John's Hospital, founded by Lanfranc, the Clergy Orphan School, and the Simon Langton Schools, which incorporated the blue-coat school founded by Queen Elizabeth.

During the reign of Elizabeth, Walloons settled in Canterbury and introduced silk weaving. Modern industries include agriculture, brewing, and tanning. The Canterbury week, a fashionable cricket festival, is held annually, in which the Kent county eleven oppose others. Canterbury was an old British city and an important military station of the Romans. The murder of Becket here made it a resort of pilgrims. Pop. 23,737.

The Archbishop of Canterbury is the chief dignitary of the Church of England

Canterbury. The 14th century West Gate, part of early fortifications Frith

Antonio Canova, Italian sculptor After Lawrence

Canterbury Cathedral from the south-west. The first English cathedral in point of time, it is also one of the most beautiful. For over a thousand years it has been the headquarters of the Church of England
Frith

Officially designated primate and metropolitan of all England since 1353, and the first peer of the realm, he crowns the sovereign in Westminster Abbey and is empowered to grant degrees in divinity, law, and medicine. The archbishop of Canterbury's official residences are the Old Palace, Canterbury, and Lambeth Palace, London, S.E. See Archbishop.

CANTERBURY. Prov. dist. of New Zealand. In the east-central part of South Island, it has a coastline of about 200 m. and an area of 13,858 sq. m. It is celebrated for its sheep, reared in the vast Canterbury Plains (nearly 4,000 sq. m. in extent) lying to the E. of the Southern Alps. Christchurch is the capital. Pop. 213,890. A suburb of Sydney, New South Wales, is called Canterbury.

CANTERBURY BELL (*Campanula medium*). Biennial plant of the order Campanulaceae. It is about 3 ft. in height, with bell-like blossoms, white, blue, rose, or lavender in colour. Originally a native of S. Europe, it was introduced to English gardens before the end of the 16th century. It thrives in heds or borders in any ordinary garden soil.

Canterbury bell. Favourite flower of old English gardens

CANTHARIDES (*Cantharis* or *Lytta vesicatoria*) OR SPANISH FLY. Beetle about $\frac{3}{4}$ in. in length, of a bright, metallic, coppery-green colour. A powder formed by crushing the beetle is also met with. The

active principle is a crystalline substance called cantharidine. Preparations of cantharides are used in medicine to produce counter-irritation and blistering in cases of pleurisy, pericarditis, and inflammation of the nerves. Poisoning by cantharides may occur from swallowing preparations intended only for external use.

CANTICLES. Common name for the O.T. book called in the Vulgate *Canticum Canticum*. The Hebrew title is "The Song of Songs, which is Solomon's." The language of the book shows peculiarities which suggest either a North Palestinian origin or post-exilic influences. In the latter case the

ascription to Solomon would be due to an editor, and the book itself would seem to belong to the 3rd century B.C. The theme of the book is the mutual love of husband and bride, the former being represented by King Solomon and the latter by a Shulamite maiden.

CANTON. Name of a territorial division in Switzerland and France. In Switzerland the cantons are the states of the federation. In France the word is used for a much smaller area, ranking between the *arrondissement* and the commune. Each *arrondissement* is divided into cantons, each of which has its magistrate (*juge de paix*). See Switzerland.

CANTON (Chinese, Sheng cheng or Kwang-chow-fu). City of China, capital of the prov. of Kwangtung. On the Chu-kiang or Canton river, 80 m. from its mouth, it is the chief commercial city of southern China after Hong-Kong. The city proper is surrounded by a wall 6 m. in circumference, an inner wall separating the old and new portions, and along both banks of the river extend its suburbs.

The city contains upwards of 120 temples and two pagodas. The Plain Pagoda, dating from the 9th century, is a Mahomedan mosque 160 ft. high, and the other is a 6th century octagonal nine-storied structure, 170 ft. high. Other buildings are the Roman Catholic cathedral, the mint, and the arsenal. A feature of the city is the large number of boats on the river which are used as permanent residences. The harbour is shallow. Large vessels discharge at Whampoa, 10 m. below Canton. Pop. 1,370,000. See China.

CANUTE I (c. 994-1035). Danish king of England. Known as Canute the Great, he was

the son of Sweyn Forkbeard, king of Denmark, who drove Ethelred out of England in 1013, and was acknowledged as king by the English Witan. Sweyn died in 1014, and Canute claimed the throne. He was opposed by Ethelred, who had returned, but the latter died in 1016, and Canute and Edmund Ironside decided to divide England between them. Within a few weeks of the agreement Edmund was slain, and Canute became sole king.

He married Emma, Ethelred's widow, sent away the Danish armies, and divided the country into five great earldoms or provinces. Law and order were restored. Canute aimed at creating a great northern empire which would include England, Denmark, and Norway. He died Nov. 12, 1035.

CANVEY. Island off the coast of Essex. It is in the Thames estuary, 30 m. E. of London, covers about 7 m., and is reached by the L.M.S. Rly., the station being Benfleet, with which it has communication at low tide by a causeway. The island, which is low and marshy, was reclaimed from the sea in the 17th century. In 1929 it was proposed to build a bridge to the mainland. Pop. 600.

CAP (Lat. *eappa*). Close-fitting covering for the head. The Roman pileus, an early form of cap, was almost identical with the pilos of the Greeks. In England caps were worn at a very early date. Kings are represented with them on their heads, and by an Act of Parliament of 1571 all men and boys over six years of age, the upper classes excepted, were ordered to wear the city flat cap or statute cap of wool on Sundays and holidays. This developed into the peaked cap.

Other forms of cap are the biretta, or square cap of the priest and the French advocate, the black cap of the judge, the bishop's cap of Anglican prelates, and the skull-cap long associated with astrologers and magicians. The college cap, known as "mortar-board," is an academic head-dress evolved, as are the biretta and bishop's cap, from an early soft square cap. In military regulations the word cap is used for the head-dress of soldiers who do not wear a helmet, shako, bushy, or bonnet.

CAPABLANCA, JOSÉ RAOUL (b. 1888). Cuban chess player. Born at Havana, Nov. 19, 1888, he soon became one of the best players in Cuba, and beat the island champion. About 1905 he went to New York, and in 1909 beat F. J. Marshall, the champion of the U.S.A. From 1921 to 1927 he was champion of the world, but afterwards he was beaten at Buenos Aires by Dr. Alekhine (q.v.). He wrote *My Chess Career*, 1920; *Chess Fundamentals*, 1921.

José Capablanca, Cuban chess player

CAPACITY (Lat. *capax*, holding much). Word used by electricians in several senses. The electrostatic capacity of a condenser, for example, is its capacity to retain a charge of electricity at a given difference of potential. It is measured by the quantity of electricity which must be imparted to it to raise its potential from zero to unity. The unit of capacity is the farad; the microfarad is one millionth part of a farad.

The carrying capacity of a cable is measured by the number of amperes of current it is capable of conducting. The storage capacity of an accumulator is the total quantity of electrical current it will give out. It is expressed in ampere hours.

CAPACITY. In English law, the power to perform certain contracts or exercise certain rights. Minors have only a limited liability capacity; lunatics are without civil capacity; felons are temporarily incapacitated.

Canton, Water front and Roman Catholic cathedral, built in 1860

CAPE BRETON. Island at the N.E. extremity of Nova Scotia. Politically part of the prov., it is separated from the mainland by the Gut of Canso and has an area of 3,120 sq. m. Its coast is deeply indented by bays, forming many good harbours, including Aspey, Sydney, Louisburg, Gaharus, and St. Peter's. Bras d'Or Lake, a gulf penetrating from the E. coast, almost divides the island into two, the severance being completed by St. Peter's Canal. There is a good deal of coal in the island, Sydney being the chief mining town. Pop. 130,000. See Nova Scotia.

CAPE COAST (formerly Cape Coast Castle). Seaport of the British Gold Coast colony, W. Africa, 80 m. W. of Accra. First settled by the Portuguese in 1610, it was named by them Cabo Corso, the name Cape Coast Castle referring both to this and the fortress built by the Swedes in 1652. In 1659 the Dutch took it, but in 1664 it was seized by the British, and it has always remained British. It was the chief town until 1876, when Accra became the capital. At its open roadstead vessels discharge passengers and cargo by surf boats. Pop. 15,000.

CAPE COD. Peninsula of Massachusetts, U.S.A. It forms a S.E. extension of the state and separates Cape Cod Bay from Nantucket Sound. About 65 m. long, and from 1 m. to 10 m. broad, it is served by a rly., and contains several good harbours. Its outline is continuously being modified by currents. A canal at its W. end connects Barnstable and Buzzard's bays, saving about 75 m. on a journey from Long Island Sound to Boston. Cape Cod has a wireless station.

CAPE GOOSEBERRY (*Physalis peruviana*). Perennial herb of the order Solanaceae. A native of S. America, it has become naturalised in S. Africa and other warm countries. It attains a height of 3 ft., and has downy heart-shaped leaves. The flowers are whitish, with spotted corolla, and an inflated bladder-like calyx. This remains, when the corolla has fallen, to protect the globose pale gold fruit, which is edible.

CAPE HUNTING DOG (*Lycan pictus*). Aberrant member of the dog family, found only in S. and E. Africa. Somewhat resembling a long-tailed hyaena, its coat is blotched with black, white, and yellow. It hunts in packs, and can easily run down antelopes.

CAPE K, KAREL (b. 1890). Bohemian writer. Born Jan. 9, 1890, the son of a doctor, he was educated in Prague, Berlin, and Paris. With his brother, Joseph, he attracted attention by his short stories and his theatrical productions in Prague. To a wider public he became known by his plays, especially *R.U.R.* (Eng. trans. 1923) and *Insect Play*, both satires on modern life. The former introduced the mechanical man, Rossum's universal robot. His other writings include some further plays, short stories, especially in a volume called *Painful Stories*, novels, and *Letters from England*, 1925.

CAPEL, ARTHUR CAPEL, BARON (c. 1610-49). English royalist. Elected member for Hertfordshire in the Short Parliament and the Long Parliament of 1640, he was created Baron Capel of Hadham, Herts, in 1641. He fought for the king during the Civil War, escorted the

queen to Paris, helped Charles to escape from Hampton Court, and in Aug., 1648, surrendered to Fairfax at Colchester. He was beheaded March 9, 1649.

His eldest son, Arthur (1631-83), was created earl of Essex, 1661, and was lord-lieutenant of Ireland, 1672-77. He was arrested on the discovery of the Rye House Plot, and was found dead in the Tower, July 13, 1683. From him the present earl of Essex is descended.

CAPEL CURIG. Village of Carnarvonshire. 6 m. W. by N. of Bettws-y-Coed, it is a tourist and fishing centre frequented by artists, botanists, and geologists. Pop. 359.

CAPELLA (Lat. goat). One of the three brightest stars in the northern sky, also called Alpha Aurigae. It is a double star, the components being nearly equal in size, but not equally bright.

CAPE OF GOOD HOPE. One of the four provinces of the Union of South Africa, in short, the Cape Province. Its coastline extends over 1,300 m. from the mouth of the Orange river on the W. to that of the Um-tamvuna on the E. The Orange separates it from the S.W. Africa Protectorate and the Molopo from the Bechuanaland Protectorate. The province consists of Cape Colony proper, together with Pondoland, Bechuanaland, East Griqualand, Tembuland, and Transkei. Its area is 276,536 sq. m. Cape Town is the capital, Port Elizabeth being the next town in size. The pop. is 2,781,542, the Europeans numbering 706,137 in 1926.

The chief rivers are the Orange and its tributary, the Vaal, which receives the waters of the Harts, Riet, and Modder. The Orange system drains the great interior tableland. There are forest regions in Pondoland and Knysna. The plateaux of the interior are covered with shrub, but in the coastal regions plant life is rich and varied. Sheep feed on the veld, where the elephant, rhinoceros, and other large animals have almost disappeared.

The prov. sends 58 members to the House of Assembly of the Union of South Africa, and eight to the Senate. Local affairs are managed by an elected council, with an executive of four members, presided over by an administrator, appointed by the Union Government.

The history of the prov. begins with the discovery of the headland by the Portuguese in 1488. They named it the Cape of Storms or the Cape of Good Hope, and the term "the Cape" has stuck to the district. In 1651 the Dutch made their first settlement. In 1795 Cape Town was taken by Great Britain, but in 1802 it was returned to the Dutch. In 1806 it was again seized, and in 1814 was ceded to Britain. In 1865 Kaffraria was added to Cape

Colony, as was Transkei, the land across the river Kei. in 1877. See South Africa.

CAPER. Unopened flower-buds of the Caper-tree (*Capparis spinosa*). This is a shrub of the order Capparidaceae, native of S. Europe and the Mediterranean region. The flower-buds or the unripe fruits are pickled in vinegar.

CAPERCAILLIE or **CAPERCAILLIE** (Tetrao urogallus). European game bird known also as wood grouse or cock of the woods. It resembles the blackcock, being blackish grey in plumage, with a more or less green breast in the male. The hen has a reddish breast. It is one of the game birds of Scotland, where it was introduced from Sweden.

CAPER N EDWARD (1819-94). British poet. Beginning life as a worker in a lace factory, he was afterwards rural postman of Bideford. In 1856 he brought out his first volume of Poems by the Bideford Rural Postman, followed by *Ballads and Songs*, 1858, and *Wayside Warbles*, 1865. Capern died at Braintree, Devonshire, June 4, 1894.

CAPERNAUM. Village of Palestine, on the N.W. coast of the Sea of Galilee. It was intimately associated with Christ's ministry (Matt. 4, 8, and 17; Mark 1; Luke 4; John 2 and 6). It is identified by some critics with Tel Hinn, by others with Khan Minyeh.

Capet. Name of the royal family of France, whose kings ruled from 987-1789 and again from 1814-48.

CAPE TOWN. Capital of Cape Province. It is the oldest settlement in S. Africa, and the seat of the legislature of the Union of S. Africa. Between Table Mountain and Table Bay, it was laid out by the Dutch in 1652, and was captured by the British on Sept. 16, 1795, and again in Jan., 1806.

The city is beautifully situated, and presents a striking appearance from the sea. Its geographical situation and harbour facilities have made it one of the great world ports of call. There are extensive commercial docks and a breakwater. Exports include wool, wines, ivory, gold, diamonds, and ostrich feathers.

Baroa Capel,
English royalist
After Jansen

Capercailzie,

Cape Hunting Dog, a savage dog which is notable for its speed

Cape Town. 1. Union Houses of Parliament. 2. City Hall, which has a clock tower and belfry. 3. Panorama of the city from the sea, with Table Mountain in the background

Valentine and Topley

Cape Town is laid out regularly in blocks, and many of the old Dutch houses still stand. Notable buildings are the Houses of Parliament, the cathedral, the city hall, the castle,

and the Old Town House. It has a wireless station. At Rondebosch, the chief residential suburb, is Groot Schuur, the late Cecil Rhodes, and now the official residence of the prime minister of the Union near which is the Rhodes Memorial. The University of Cape Town, established in 1918 as one of the three universities of South Africa, consists of the college erected on Groot Schuur. Pop. 212,997, Europeans 130,568 in 1926.

CAPE TO CAIRO RLY. This was built to connect Cape Town with Cairo, a distance of about 6,000 m. Progress has been made from Cape Town to Northern Rhodesia, from Cairo to Shellal in Egypt, and from Wadi Halfa to Khartum. The S. section has been carried across Belgian territory to Bukama on the Congo, and has brought Cape Town into connexion with Stanleyville on the equator and Dar-es-Salaam on the coast. The N. section has been carried S. to Sennar on the Blue Nile, with a branch almost due W. to el Obeid.

CAPE VERDE (Port. Ilhas do Cabo Verde). Group of fourteen mountainous and volcanic islands in the Atlantic. Situated 350 m. W. of Cape Verde, the most westerly promontory of Africa, they were discovered in 1441-56 by the Portuguese, and belong to Portugal.

The chief islands are Santiago (São Thlago), containing the capital, Praia; Santo Antão; São Vicente, with the coaling station of Porto Grande (Mindello); São Nicolão, Boa Vista, Sal, Fogo, Brava, and Maio. São Vicente has a cable station and a wireless station. The inhabitants are of mixed negro and Portuguese origin and speak a dialect of Portuguese. Area 1,475 sq. m. Pop. 142,552.

Capital. Example from Temple Church, London

CAPITAL PUNISHMENT. The penalty of death. In England, by the law of 1861, only for treason, murder, piracy with violence, and the firing of government arsenals and dockyards can the death penalty be inflicted. In point of fact, treason and murder alone remain capital offences, and the method of punishment is by hanging. The home secretary can advise the crown to grant a reprieve. Several European countries have abolished capital punishment.

In 1930 a committee inquired into the desirability of abolishing capital punishment in Great Britain. There is a society for its abolition in Victoria Street, London, S.W.1.

CAPITOL. General name for the Capitoline Hill (Mons Capitolinus), one of the seven hills of Rome. Its S. extremity ends in the Tarpeian

Rock, over which criminals were thrown. The Capitol, or templo of Jupiter, founded by Tarquinius Priscus, was completed by Tarquinius Superbus. Three times it was burned down, in 83 B.C., A.D. 69 and 80. Restored by Domitian, it was the chief temple in Rome. On the Capitoline Mount were many other temples and statues of deities. The present buildings—Il Campidoglio—were designed by Michelangelo at the suggestion of Pope Paul III, and comprise palace, museum, etc. See Rome; also illus. below.

CAPITOL. Name given to the seat of the Congress of the U.S.A. at Washington. The first capitol was begun in 1793, first used in 1800, and finished in 1811. This building was burned by the British in 1814 and was rebuilt 1815-27, while a wing was added in 1851-63. The present building stands at the east end of Pennsylvania Avenue. The word is also used for the legislation buildings in the state capitals. e.g. at Albany. See Washington.

CAPITULATION. In international law, the drawing-up of conditions for the surrender of a fortress, an army, etc. A conquering commander has the right to sign the terms of capitulation as well as the defeated commander. By the terms it is illegal to pillage the surrendered town.

CAP MARTIN. Promontory and winter resort of France. It is on the Riviera, between Mentone and Monaco. The promontory is 235 ft. high, and on its summit are traces of an 11th century convent.

CAP OF MAINTENANCE or **CAP OF DIGNITY.** Low cap of crimson velvet, turned up with a broad border of ermine, the border having two short pointed tails. It is borne before the king on coronations, and worn by him during part of the ceremony. This cap of dignity is often used in heraldry as a charge, and also for supporting crests.

CAPORETTO.

Village of Italy on the river Isonzo. It gives its name to a battle which was a German-Austrian victory over Italians, Oct. 1917. This battle was one of the greatest disasters sustained by the Allied armies in the Great War.

The battle began on Oct. 23-24 with an intense bombardment from Plezzo to the sea, and on Oct. 24 large infantry forces were hurled against the Italian second army from Monte Rombon to near San Gabriele. The Italian centre broke, and the front between the height of Krasji and the Vodil height was

pierced. From W. of Tolmino to Auzza the Austrians also broke through. Despite stubborn defence the Italians were driven back and Caporetto was gained by the enemy. The headlong retreat of the second army blocked the roads, preventing fresh troops being sent to stem the enemy's advance.

On Oct. 26 the Austrians pressed down the valleys of the Judrio and the Natissone, and the strategical position was such that General Cadorna ordered a retreat, first to the Tagliamento, and finally to the Piave, which was reached on Nov. 10. The battle cost the Italians the important towns of Gorizia, Cividale, and Udine and the whole of N. Venetia. The losses of the Italians were very heavy; the Germans put them at 200,000 in prisoners alone, and about 2,000 guns. To meet this overwhelming danger five British and six French divisions were sent to Italy from the western front. See Cadorna, L.; Piave.

CAPPADOCIA. District of Asia Minor. This rough hilly country was in Roman times bounded N. by Pontus, E. by Armenia, S. by the Taurus Mts., and W. by Lycaonia and Galatia. After forming part of the Persian and Greek Empires, it was for a time independent, but became a Roman province A.D. 17. In one period it included Pontus. Its capital was Mazaca, afterwards Caesarea, the modern Kaisariyeh.

CAPRI (anc. Capreae). Island of Italy. At the S. end of the Bay of Naples, 3 m. off the Sorrento peninsula and 21 m. S. of Naples, it has an area of 5½ sq. m.

It is mountainous, with cliffs rising to 900 ft., its highest point being Monte Solaro, 1,920 ft. The only safe landing-place, Marina Grande, is on the N. side. The climate is mild, and the scenery beautiful. Among attractions are the grottos, or sea-caverns, the best known being the Blue Grotto.

Capri. The famous Blue Grotto, a great sea cavern 175 feet long

Capri was celebrated in Roman times. Augustus and Tiberius resided here; the latter built twelve villas. There are remains of Roman villas, cisterns and baths. Pop. 7,000.

Cap of Maintenance, donned by the British sovereign at his coronation

Capitol, Rome. Reconstructed view from the Palatine hill of the ancient capitol, dominated by the Temple of Jupiter. See above

CAPRICORN (Lat. goat-horned). The Zodiacal constellation, also called the Goat-Fish from being represented with the fore part of a goat and the tail of a fish. One of the tropics is called Capricorn. See Constellation.

CAPSTAN (Lat. capistrum, halter). Revolving bollard used for lifting the anchor or hauling in cables aboard ship. Capstans are usually worked by steam. Formerly they were turned by sailors, who hove them round by means of stout pieces of wood called capstan bars.

Capstan. Steam capstan, with anchor chains

CAPSULE. In botany, a seed case of diverse forms in various kinds of plants. It is sometimes only one-celled (unilocular), but frequently has two (bilocular), three (trilocular), or more cells. The case dries as the seed ripens, and sometimes falls off entire, but more usually splits partially or wholly, discharging the seeds through the openings.

CAPTAIN (Lat. caput, head). British title borne by officers in the navy, army and royal air force, by men in charge of ships of all kinds, and more generally by leaders in the various branches of sport and other forms of activity.

In the British navy a captain ranks next below a rear-admiral, and usually commands one of the larger units of the fleet. When he commands an admiral's ship he is called a flag-captain. In relative rank a naval captain corresponds to a colonel or lieutenant-colonel in the army. As a sign of his rank a captain has on the sleeves of his coat four stripes of gold braid with a loop

In the British army a captain ranks next below a major and above a lieutenant. His rank is marked by three stars on the sleeve. In the British R.A.F. a group captain corresponds in rank to a captain in the navy and a colonel in the army. In the merchant service the title captain is given in practice to every seaman who commands a vessel. In legal language, the captain is the ship-master, and he has grave responsibilities towards owners, passengers, and crew.

CAPUA. City of Italy, on the river Volturno, 27 m. by rly. N. of Naples. The see of an archbishop, it has an 11th century cathedral, now mostly modernised. Founded 856 B.C., Capua became second in commerce and wealth to Rome, and was famed for its dyes, wine and textile wares. But luxury led to degeneracy, and the city was conquered, after its alliance with Hannibal, by the Romans in 211 B.C. There are many remains of antiquity, the chief being those of the amphitheatre and baths. Pop. 13,195.

Capuchin Monkey, a dweller in the tree-tops. See above

CAPUCHIN MONKEY (*Cebus capucinus*). Group of American monkeys known also as the Sapajous. The term is applied more especially to the Weeper Sapajou of Brazil. The fur is golden brown, paling to yellow, and the hair on the crown of the head has the appearance of being well brushed back. Its supposed resemblance to a monk's hood accounts for the name. See illustration below.

CAPUCHINS (late Lat. caputium, hood). Independent branch of the Franciscan order of friars. Founded in the Marches of Italy in the 16th century by Matteo di Bassi, who aimed at restoring the primitive and stricter observance of the rule of S. Francis, the reform spread quickly. The Capuchin Friars occupy themselves mainly with mission work. See Franciscans; Friar.

CAPULET. Anglicised form of the name of one of the rival families of Verona (Cappelletti) whose quarrels form the story on which Shakespeare founded his *Romeo and Juliet*.

CAPYBARA, OR **CARPINCHO** (*Hydrochoerus capybara*). Largest member of the rodent order of mammals. It is about 4 ft. long and

Capybara or Carpincho, the largest member of the rodent mammals

attains a weight of about 100 lb. Its hair is coarse and reddish brown. It is found only in S. America, where it lives on the banks of the rivers and lakes. The animals are usually seen in herds of twenty or more. They feed mainly on water plants, but sometimes do great damage by devouring crops. They are hunted for their skins, and the flesh is eaten.

CARABINIERS OR **CARABINEERS**. Regiments of cavalry equipped with a musket called a carbine. In England the 6th Dragoon Guards were known as the Carabineers, they having been armed with the carbine when the regiment was formed in 1692. The name is now borne by the 3rd Dragoon Guards, with which the 6th has been amalgamated.

In Italy the term Carabiniere is used for the gendarmes or police.

Captain, military, marks of rank

Capua. Ruins of the amphitheatre, capable of holding 60,000 spectators

CARACAL. Rare wild cat, related to the lynx group. Found in Africa and S. Asia, it is reddish brown in colour, with ears tufted like those of the lynx, but with a longer tail and no ruff round the neck. It is believed to prey upon gazelles and birds.

CARACALLA (A.D. 188-217). Roman emperor 211-217. Son of Septimius

Severus, his original name was Bassianus, afterwards changed to Marcus Aurelius Antoninus. He was nicknamed Caracalla from the long Gallic cloak of that name, which he greatly affected. Severus died at York in the course of a punitive expedition against the northern tribes. Caracalla, who was suspected of having poisoned him, was proclaimed joint emperor with his brother, Geta, but the following year he slew Geta, and in the reign of terror that followed about 20,000 of Geta's adherents were put to death. The latter part of Caracalla's reign, noted for extravagance as well as cruelty, was spent in travel. He was murdered near Edessa at the instigation of the praetorian prefect Macrinus, who succeeded him.

CARACARA (*Polyborus tharus*). S. American hawk. It feeds mainly on carrion, is long in the leg, runs swiftly, and lives almost entirely on the ground. In many of its habits the caracara suggests a game bird.

CARACAS. Capital of Venezuela and of its Federal District. It is near the foot of the Silla de Caracas, 7 m. S. of La Guayra, its port on the Caribbean Sea, with which it is connected by a narrow-gauge rly. 24 m. long. The city contains the federal palace, a cathedral, presidential house, and a university. There is a wireless station. Pop. 135,253.

Caracara, S. American hawk

CARACTACUS (c. A.D. 51). British king. He was the son of Cunobelin, Shakespeare's Cymbeline. After a long and determined resistance, he was defeated by the Romans in 51, perhaps near Shrewsbury, and sent in chains to Rome, where he figured in a procession before Claudius, who set him free.

CARADOC SERIES. Geological term. Originally applied to all deposits between the Llandilo Flags and Limestones and the Upper

Carabiniere. Italian mounted policeman

Llandovery or May Hill beds, it is now restricted to the upper portion of the Ordovician between the Llandilo Flags and the Ashgill Series or Upper Bala. It consists chiefly of black graptolitic shales and muddy sediments, with thin volcanic ashes.

CARAN D'ACHE (1858-1909). Professional name of Emmanuel Poiré, French caricaturist and illustrator. Born in Moscow, he afterwards went to Paris and specialised as an illustrator of military subjects, contributing to various comic and satirical journals. He may be regarded as the originator, in France, of the pictorial story without words, in which he was long without a rival. He died Feb 26, 1909. See Caricature.

Caracal. A rare wild cat of the lynx family

CARAPA (*Carapa guianensis*). Large tree of the order Meliaceae. A native of S. America, its leaves consist of eight to ten pairs of leathery lance-shaped leaflets. The fruit is round, about 4 ins. across, and splits into five segments, setting free a large number of oily seeds from which carap, or crab-oil, is obtained. The bark is used as a febrifuge and for tanning; while the timber is used for furniture, masts, and spars.

CARAT. Term used to express the degree of purity of gold, and also applied to a weight used for diamonds and other precious stones. In stating the grade of purity of gold the weight under consideration is divided into 24 equal parts, or carats. Thus pure gold is called 24 carat gold; gold containing $\frac{2}{3}$ alloy, is 22 carat gold; gold containing $\frac{1}{3}$ alloy, 18 carat gold, and so on. With the exception of gold for wedding rings, which is 22 carat, jewellers

seldom use gold of a higher grade than 18 carat. In 1905 an international metric carat of 200 milligrammes was suggested, and by 1914 this was in general use.

CARAUSIUS (d. A.D. 293). Roman usurper and emperor of Britain. A Gaul by birth, he became commander of the fleet. His loyalty having become suspect, Carausius crossed to Britain, and, supported by the fleet and soldiers, proclaimed himself Augustus (287). In 293 he was murdered by Allectus.

CARAVAGGIO, MICHELANGELO AMERIGHI DA (1569-1609). Italian painter. Born in the village of Caravaggio, Lombardy, whence he

M. A. da Caravaggio, Italian painter. Self-portrait in Uffizi Gallery.

took his name, his Card-players brought him the patronage of Cardinal del Monte. His masterpiece, the *Pietà*, is at the Vatican. Vienna has his superb *Lute-player*, and he is represented in the National Gallery, London, by *Christ and the Disciples at Emmaus*. Amidst his triumph he killed a friend in a quarrel, and fled to Naples and on to Malta. Deported from Malta to Syracuse, he eventually settled at Naples, where he founded the powerful but turbulent school of the *Tenebros*.

CARAVAN (Pers. *karvan*). Word used throughout Asia Minor, Persia, Arabia, and parts of northern Africa for a body of traders travelling together for their own protection.

The camel plays a large part in the caravan, as it is used to carry the wares. Mules and asses, however, are sometimes used, while the traders themselves sometimes ride on horseback or journey on foot. A leader is appointed, and the days are portioned into regular intervals for travel and for rest. The caravans follow usually well-defined routes, covering 20 or 25 miles a day. A building erected for the reception of caravans is called a *caravanserai*.

In Britain the word caravan has come to mean the vehicle in which persons can make their home and travel at the same time, and a holiday spent in this way is known as *caravanning*. Consult *The Whole Art of Caravanning*, Bertram Smith, 1907.

CARAVEL or **CARVEL** (late Lat. *carabus*, light boat). Name given in the 15th and 16th centuries to a small vessel, broad in the bows, with narrow, high-built stern, and to some extent lateen-rigged.

CARAWAY (*Carum carui*). Biennial herb of the order Umbelliferae. A native of N. Europe and N. and W. Asia, it has large much-divided fern-like leaves. The small white flowers are massed in a compound umbel. The oblong fruits are the caraway seeds of commerce, esteemed for flavouring owing to the aromatic volatile oil they contain. The liqueur known as *kümmel* is manufactured from caraway seeds.

Caraway, flowers and leaves

CARBERRY HILL. Elevation in Midlothian, just outside the town of Musselburgh. Here the forces of Mary Queen of Scots met those of her foes, June 14, 1567. The queen surrendered without fighting.

CARBIDES. Compounds of carbon with another element, such as boron, silicon, tungsten, iron, chromium, or calcium. It is probable that in the manufacture of steel carbides of iron and other metals are formed which contribute to the hardness of the metal. The most extensively used carbide is calcium carbide, from which acetylene is made. See *Calcium*.

CARBOHYDRATES. Name given to certain bodies of complex chemical constitution. They consist of carbon, oxygen, and hydrogen, the two last named being present in the proportions necessary to form water. They constitute a valuable class of foodstuffs, the most important being starch and sugar. Carbohydrates undergo oxidation in the body, thus producing heat and energy, and they also go to the building up of new fatty tissues.

CARBOLIC ACID or **PHENOL** (C_6H_5O). Body prepared by distillation of coal-tar. When pure it is a colourless, crystalline substance, but it rapidly absorbs water from the air, assuming a pinkish colour and eventually becoming a thick, syrup-like liquid. Carbolic acid is a powerful disinfectant and is used for sterilising surgical instruments, etc. It is a strong poison.

CARBON. One of the most important non-metallic elements. Its symbol is C, its atomic weight 12, and its atomic number is 6. The chemistry of carbon forms the larger part of chemical science. Carbon is contained in all animal and vegetable matter, and also in the mineral kingdom, where, as carbonate, it forms a large part of the earth's crust. Carbon in the form of coal is the chief source of power at present known, and petroleum, also largely employed as a source of energy, is a carbon compound. Carbon exists in the air as carbonic acid gas, and in untold quantities in the atmosphere of the sun. It occurs in the free state in nature as the diamond and as graphite, while a third form is made by carbonising animal or vegetable matter. These are known as allotropic modifications. See *Charcoal*; *Coal*; *Diamond*; *Graphite*.

Carbonising is the removal of vegetable matter from masses of animal fibre by the reduction of the cellulose to carbon.

CARBON BISULPHIDE (CS_2). This is a colourless liquid with an ethereal odour when pure, but generally with a disagreeable sulphurous smell. It is used for the extraction of fats and oils, as a solvent for chloride of sulphur in vulcanising rubber, for the recovery of sulphur from mineral ores, as a germicide and insecticide, and as a poison for moles and rabbits.

CARBON DIOXIDE or **Carbonic Acid Gas** (CO_2). This is a heavy, colourless, and odourless gas found in nature in the free state, and also combined with alkali metals and other elements. It is a constituent of the atmosphere, and a product of respiration. It does not support combustion, and is used for extinguishing fires. Carbon dioxide accumulates in old wells, cellars, and coal-pits, where it is known as *choke-damp*. In solid form, carbon dioxide is like snow, and can be exposed to the air for some time without loss. Compressed into rods, it is used as a caustic in surgery. Carbon dioxide does not support respiration, and when the amount in the air is increased to 15 or 20 p.e. it may rapidly prove fatal.

CARBON MONOXIDE or **Carbonic Oxide** (CO) is a colourless, odourless gas which burns with a pale blue flame. Carbon monoxide is formed when charcoal is burnt, and as it is a very poisonous gas many deaths have been caused by burning charcoal in a brazier in a closed room. For a similar reason, the use of a geyser in a bathroom is dangerous unless precautions are taken to ensure ventilation. Carbon monoxide is a constituent of water-gas made by passing steam over red-hot coke.

CARBONARI (Italian, charcoal-burners). Name given in Italy, and later in France, to certain secret societies that flourished early in the 19th century. The earliest arose in the kingdom of Naples during the Napoleonic wars; it aimed at securing greater liberty for the people. In 1820 the carbonari were strong enough to bring about a revolution in Naples, and to force King Ferdinand to grant a constitution.

CARBONATES. Salts formed by the union of carbon dioxide with a basic element. Carbon dioxide (CO_2) is an acid-forming oxide, which, dissolved in water, forms carbonic acid (H_2CO_3). Carbonates are found widely distributed in nature, calcium carbonate being met with as marble, whiting, and limestone, and in the shells of fish. The double carbonate of magnesium and calcium is known as *dolomite*.

CARBONIFEROUS. Rocks lying between those of the Devonian Old Red Sandstone and those of the Permian. In Britain they are divided into an upper and lower series. The lower series consists of the Carboniferous limestone and the upper of the millstone grit surmounted by the coal measures. The rocks of the lower series are deep-water in character, while those of the millstone grit and coal measures are largely of shallow water type. The limestones are blue-grey, often oolitic, well-bedded rocks, and reach a thickness of 3,000 ft. in the Bristol district.

CARBON PROCESS. Method of making photographic prints. A sheet of paper coated with gelatin mixed with a pigment, and made sensitive to light, is exposed to daylight behind the negative, the coating of gelatin becoming insoluble in warm water to a depth varying with the degree of light action. The image is developed by washing out the still soluble gelatin with hot water.

CARBORUNDUM (Carbo and corundum). Chemically a silicon carbide or silicide of carbon. It appears in the form of fine blue, green, or brown crystals. It is infusible by heat up to 2,220° C., and is equally unaffected by atmospheric influences or by acids. Its most striking physical property is its extreme hardness. Carborundum is manufactured from siliceous sand (54.2 p.e.), coke (34.2), sawdust (9.9), and common salt (1.7), in the electric furnace, the salt being used as flux. Carborundum is employed on a large scale as an abrasive, as a superior substitute for emery.

CARBUNCLE. Localised gangrene of the tissues beneath the skin. The treatment is incision and removal of the dead tissue and attention to the general health.

Carbuncle is also the term applied to garnets cut in round or oval form with smooth dome.

CARBURETTED HYDROGEN. Term formerly applied to marsh gas and olefant gas. The name is now given to water gas which has been enriched by mixing it with benzene vapour or oil gas.

Carburettor. Diagram of a common pattern, showing how the mixture of petrol and air is effected

CARBURETTER. Device for charging air with a hydrocarbon in a gaseous or very finely divided form. Motor-car carburetters, using petrol as the hydrocarbon, differ widely in design, but are alike in general principles. Petrol from the storage tank enters at the top of a float chamber. A needle valve attached directly to, or controlled by, the float

prevents more petrol entering when it has risen almost level with the top of a jet. The jet projects vertically into a mixing chamber, which is open to the air and communicates with the engine by a pipe wherein is a throttle-valve. When the engine is working, air is sucked into the mixing chamber, and, meeting petrol drawn out of the jet in the form of a fine spray, is carburetted. Paraffin carburettors are similar, except that the mixing chamber must be heated to vaporise the paraffin. The necessary heat is supplied from outside by a lamp for starting, and afterwards by the exhaust gases. See Motor Car.

Carcassonne. The Gothic walls and fortifications of this ancient city of Southern France

CARCASSONNE. City of France, capital of the dept. of Aude. On the river Aude, 57 m. S.E. of Toulouse, it is divided by the river into two parts, the old city on a hill on the right and the new town on the left, connected by two bridges. The former contains the old Romanesque and Gothic cathedral of S. Nazaire, begun in the 11th century, and the castle. The 13th century cathedral of S. Michel and the church of S. Vincent are in the newer town. The fame of Carcassonne rests upon the fortifications surrounding the old city. Restored in the 19th century by Viollet-le-due, they consist of two ramparts protected by 54 towers and pierced by two gates, both elaborately defended. The city is a centre of the wine trade and a port on the Canal du Midi.

CARCHEMISH. Ancient stronghold at Jerablus on the right bank of the Euphrates, N.E. of Aleppo, Syria. On the Damascus-Nineveh caravan road, its neolithic settlement developed into an opulent centre of Hittite and Mushkian life. British Museum excavations, 1878-81, resumed in 1911, yielded lion-gates and many remarkable sculptural remains. See Hittites.

CARDAMOM (*Amomum cardamomum*). Aromatic perennial herb of the order Scitamineae. A native of the E. Indies, it has a creeping root-stock, and the lance-shaped leaves are arranged in two ranks along the stems. The brownish flowers are produced near the ground, and are succeeded by capsules filled with small aromatic seeds, which are the cardamoms of commerce. They have stimulant properties.

CARDIFF. City, county borough, and seaport of Wales. It stands on the Bristol Channel, at the mouth of the river Taff, 145 m. W. of London on the G.W. main line from London to Neyland, on Milford Haven. Made a city in 1905, its chief magistrate is entitled lord mayor. Pop. 225,600.

Cardiff's main industry is the shipping of the South Wales steam coal. The docks, known officially as the Bute Docks, are five in number, Queen Alexandra, Roath, Roath Basin, East, and West. Facilities for shipping are supplemented by the Penarth Docks and Barry Docks in the vicinity. Here are steel works, copper works, flour mills, biscuit factories, dry docks for ship repairing, engineering shops, wagon building and repairing works. The town is the chief shopping centre for the mining valleys, and the principal wholesale distributing centre for the surrounding districts.

The modern streets and buildings, the absence in the town centre of any evidence of the industries, which are mainly grouped about the docks, the abundance of open spaces, and the trees planted in the residential streets, make Cardiff an attractive city. The two buildings of historic interest are S. John's Church and the castle, largely rebuilt by the 3rd marquess of Bute.

In Cathays Park (60 acres) are the city hall and law courts, the National museum of Wales, the University College of S. Wales and Monmouthshire, the registry of the university of Wales, the Glamorgan county hall, and the technical school. Roath Park, the largest in Wales, covers 166 acres. The S. Wales Engineers' Institution, the public library, the medical school and King Edward VII hospital, and the general post office in Westgate Street are important buildings. There is a stock exchange. The call number of the broadcasting station is 5WA. Cardiff is the seat of a Roman Catholic archbishop. In 1929 the Canadian Pacific Rly. made Cardiff a port for their Atlantic services. After the Great War the city adopted Lens.

Cardiff City is a famous football club, which won the Association Cup in 1927. Its ground is in Ninian Park. The Rugby football club is also famous.

Cardiff. The City Hall in Cathays Park. Above: the Castle; the oldest part is of the 12th cent.

CARDIGAN. Borough, market town, and co. town of Cardiganshire. It is on the river Teifi, 116 m. N.W. of Cardiff on the G.W. Rly. Little remains of the castle (1160). Market day, Sat. Pop. 3,450.

Cardigan Bay is a semicircular sweep of the Welsh coast, extending about 55 m. from N. to S., with a coast measurement of about 130 m. The north portion is called Tremadoc Bay.

CARDIGAN, EARL OF. English title, borne since 1661 by the family of Brudenell. Sir Thomas Brudenell, who had suffered for his loyalty to Charles I, was the first earl. His descendant, George, the 4th earl, was made duke of Montagu in 1776, but having no sons this title became extinct when he died in 1790. His brother James, however, secured the earldom of Cardigan, which passed in 1837 to James Thomas Brudenell, 7th Earl (1797-1868). Born at Hambleden, Bucks, Oct. 16, 1797, Lord

Cardigan commanded the Light Brigade at Balaklava. At his death, March 28, 1868, the earldom passed to a cousin, the 2nd marquess of Ailesbury, and has since been held by his descendants. See Balaklava.

CARDIGANSHIRE. Maritime co. of S. Wales. It has a coastline of about 50 m. on Cardigan Bay, and is bounded N. by Merionethshire and Montgomeryshire, E. by Radnorshire and Brecknockshire, and S. by Carmarthenshire and Pembrokeshire. Its greatest length from E. to W. is 40 m., its greatest breadth from N. to S. is 30 m., and its area is 692 sq. m. The surface is fairly level on the coast, but mountainous in the interior and N. and E., Plynlimon, on the Montgomeryshire boundary, being 2,468 ft. high. The Teifi, Dovey, Aeron, Ystwith, and Rheidol are the chief rivers, and there are numerous lakes, especially in the northern part. Cardigan is the county town, and Aberystwith, Lampeter, New Quay, Aberayron, Tregaron, and Llandyssul are other places. Cardiganshire returns one member to Parliament. Pop. 60,881.

Cardiganshire was conspicuous during the rebellion of Owain Glendower early in the 15th century, in the Civil War, and in the Rebecca Riots of 1843.

CARDINAL (Lat. *cardo*, hinge). Dignitary of the Roman Catholic Church. The pope alone has the right of nominating and deposing a cardinal, and while the college of cardinals has varied greatly in numbers, it does not as a rule exceed 70, and its members

should be representative of all Catholic nations. A cardinal ranks next to the pope and above all other ecclesiastical dignitaries, and is addressed as Eminence. Most cardinals are bishops. The insignia are the red hat and the scarlet biretta.

Cardinal's red hat, the distinguishing mark of this dignity

CARDINAL BIRD (*Cardinalis*). Name of several species of birds found in N. and Central

Cardiganshire. Map of this mountainous county of South Wales

America, especially given to the Virginian nightingale (*C. virginianus*). It has brilliant red plumage. Its song is melodious, and it is a favourite in aviaries. See illus. p. 360.

CARD INDEX. Method or system of keeping lists of names and other records in cards arranged alphabetically, numerically, or otherwise, in preference to keeping such records in books. The advantage of the card index system lies principally in the fact that it can be expanded indefinitely without the disturbance of order, and it can be contracted by the withdrawal of out-of-date or unneeded records.

Cardinal bird.
Red-crested cardinal.
See art. p. 359

CARDINGTON. Village of Bedfordshire. It is 3 m. from Bedford, with a station on the L.M.S. Rly. Here John Howard lived for a time, but the place is known to-day because of the aircraft works where the R101 and other airships were built. See Airship.

CARDIOGRAPH (Gr. kardia, heart; graphein, to write). Medical instrument employed for determining the character and rate of the movements of the heart.

Cardiograph. Instrument for measuring the heart's action

CARDOON (Cynara cardunculus). Perennial herb of the order Compositae. A native of S. Europe, it attains a height of about 5 ft. and has large spiny leaves, deeply indented. The flower-head is like a thistle, many leathery oval bracts enclosing the purple flowers. It is best known as a cultivated plant, when it is treated much like celery. The globe artichoke is derived from the cardoon.

Cardoon, blanched leaves and flowers

CARDROSS. Village of Dumbartonshire. It stands on the Clyde, 3½ m. by rly. N.W. of Dumbarton on the L.M.S. Rly. Robert the Bruce died, June 7, 1329, at Cardross Castle, which stood between Cardross and Dumbarton. Smollett, the novelist, was born here. Pop. 11,609.

CARDS, PLAYING. Pieces of thick paper or pasteboard used in various games of chance. The modern pack of playing cards consists of 52 cards, divided into two black suits: spades and clubs; and two red suits: diamonds and hearts. In each suit there are 13 cards: king, queen, knave (or jack), and ten others, bearing pips in number from ten down to one, the last being called the ace. In many games the ace counts as the highest card. In poker an extra card called the joker is used.

Cards are generally believed to have been invented in Asia and to have been introduced into Europe about the middle of the fourteenth century, by the end of which they were in common use. The court or picture cards have lent themselves at all times to illustrations of notable personages; to caricature, political and otherwise; and even to religious subjects. From 1615 there has been a duty on playing cards in Great Britain; beginning at 5s. per gross of packs, it rose in 1789 to 2s. 6d. each pack, was reduced to 1s. in 1828, and in 1862 to 3d. per pack. See Auction Bridge; Bridge; Contract Bridge; Poker; Whist, etc.

CARDWELL. Town of Queensland, Australia. It stands on Rockingham Bay, about 800 m. N.N.W. of Brisbane. Its harbour is one of the safest on the coast. Pop. 3,500.

CARDWELL, EDWARD CARDWELL, VISCOUNT (1813-86). British politician. Born at Liverpool, July 24, 1813, he entered parliament as a Peelite in 1842. Under

Palmerston he was chief secretary for Ireland in 1859, becoming chancellor of the duchy of Lancaster, 1861-64, and secretary for the colonies, 1864-66. Under Gladstone he was secretary for war from 1868-74. Cardwell introduced the system of short service and the reserve, and procured the abolition of promotion by purchase. Raised to the peerage as Viscount Cardwell of Ellerbeck in 1874, he died Feb. 13, 1886, when the title became extinct. See Army.

CAREW, THOMAS (c. 1595-1645). Courtier and lyrical poet. Son of Sir Matthew Carew, of Middle Littleton, Wiltshire, he became secretary to Sir Dudley Carleton in Italy, and accompanied Lord Herbert of Chisbury to France. "He that loves a rosy cheek" is perhaps his best-known song, and "Ask me no more" his best.

CAREY, JAMES (1845-83). Fenian and informer. Born in Dublin, he started life as a bricklayer like his father, and became a successful builder, and was elected to the Dublin Town council. He became a Fenian, and in 1882 took an active part in the plot which ended in the assassination of Lord Frederick Cavendish. Arrested in 1883, he turned Queen's evidence. To clude vengeance, he sailed for South Africa, but was shot dead on board ship, July 6, 1883.

CAREY, WILLIAM (1761-1834). British Baptist missionary and Orientalist. Born at Paulerspury, Northamptonshire, Aug. 17, 1761, in 1787 he was appointed minister at Moulton, later removing to Leicester. A leading spirit in the foundation of the Baptist Missionary Society, in 1793 he went to India as a missionary. Professor of Oriental languages at Fort William College, Calcutta, 1801-30, he died at Serampore, June 9, 1834.

William Carey.
British missionary
From a portrait by nome

CARHAM. Village of Northumberland. It is on the Tyne, 19 m. S.W. of Berwick-on-Tweed, on the L.N.E. Rly. Here the English were defeated by the Scots in 1018. Pop. 841.

CARIAMA. Large, long-legged bird of S. America, allied to the cranes, and in appearance resembling the secretary bird. There are two species, both brownish grey in colour, found respectively in Brazil and Argentina. They live in the open, and feed mainly upon snakes, lizards, rats, and mice.

CARIBBEAN SEA. Arm of the Atlantic Ocean. Lying between the Antilles, the N. coast of S. America and the E. coast of Central America, it is connected on the N.W. with the Gulf of Mexico, by Yucatan Strait, and with the Pacific by the Panama Canal. It has a maximum length of 1,750 m. It takes its name from the Caribbee Islands. The Indians met with by Columbus on its coasts were called Caribs. Their name is embodied in the word cannibalism (q.v.).

CARIBOU. American reindeer. They are grouped into two sub-species, known as the Barren Ground and the Woodland caribou. The former is only found in Arctic districts of North America, and is usually small, with long, slightly curved antlers; the Woodland caribou roams the forest districts of Canada, and has shorter, much-branched horns. Of the same species as the European reindeer, it has never been domesticated.

CARICATURE (Ital. caricare, to overload). Drawing or description of a person or thing made deliberately grotesque and ludicrous by means of a pronounced exaggeration of feature, dress, habit, or other characteristic. The whole is so contrived as to preserve the general likeness. Caricature is used both as an instrument of ridicule and of chastisement. Max Beerholm may be cited as a successful caricaturist of the one mode, and Louis Raemaekers of the other.

Thomas Carew,
English poet
After Van Dyck

In England caricature of the coarser sort flourished in the 18th century. As a rule the 19th century caricaturists evinced a much stronger regard for decency and drawing. George Cruikshank and Hablot K. Browne (Phiz) were seldom malevolent, while the leading Punch men—John Leech, John Tenniel, Charles Keene, Richard Doyle, George du Maurier, and Harry Furniss—were great artists who hardly ever transgressed the bounds of taste.

Among present-day caricaturists may be mentioned Percy Hutton Fearon (b. 1874), who, under the pseudonym Poy, contributed regular cartoons to The (London) Evening News. His pictorial figures, John Citizen and Dilly and Dally, were very popular. Equally prominent was D. Low, formerly of The Star and later of The Evening Standard. Both these mainly confined their efforts to political subjects. W. K. Haselden (b. 1872) became cartoonist to The Daily Mirror in 1904, and his cartoons during the period of the Great War were specially striking. His Big and Little Willie series, dealing with the Kaiser and the Crown Prince, were the most famous. Tom Webster (b. 1888), after being political cartoonist to a London daily newspaper, developed a remarkable gift as a humorous delineator of sporting events.

CARIES (Lat. rottenness). Diseased condition resulting from inflammation of bony tissue. Its most frequent form is dental caries, brought about partly chemically and partly parasitically. Foodstuffs of a starchy or sugary nature are decomposed by bacteria invariably present in the mouth, giving rise to acid which decalcifies the enamel. This breaks down, the bone of the tooth is similarly disorganized, and the pulp of the tooth destroyed by the bacteria.

No race of mankind is exempt from the disease. It may be prevented by selecting foods which do not leave a residue of fermentable carbohydrates. See Teeth.

CARILLON (Fr. chimes). Set of bells played by some kind of keyboard mechanism,

Caribou or American reindeer, common in the forest districts of Canada
Berridge

actuated by hand or by power. In England only a few buildings possess this kind of tune-producer, e.g. the Royal Exchange, London. On the Continent carillon-playing has been for centuries important. As a war memorial the idea of installing keyboard carillons has been adopted at Loughborough, Wellington, New Zealand, and other places. The New Zealand carillon was erected in Hydo Park, 1930, before being taken to its destination. See Bruges; Campanology.

CARINUS, MARCUS AURELIUS. Roman emperor, A.D. 283-85. Cruel and dissolute, he was a capable soldier and fought with success against the Britons and Alamanni, put down the revolt of Julian in Pannonia, and defeated Diocletian, who had been declared emperor at Chalcedon by the troops.

Carisbrooke. Entrance to Carisbrooke Castle, with the Keep built by Henry I

CARISBROOKE. Village in the Isle of Wight. An ancient and historic place, a Roman villa was found in the valley of the Lugley. The Norman castle was built by William Fitz Osbern, the first lord of the island. The keep was added in the time of Henry I, and Elizabeth enlarged the fortifications. Charles I was imprisoned here for 14 months, 1647-48; as were his two youngest children, one of whom, Elizabeth, died here in 1650. Pop. 4,767.

Alexander Mountbatten, Marquess of Carisbrooke
Specialist

In 1917 the title of marquess of Carisbrooke was given to the eldest son of Princess Henry of Battenberg. He served in the Great War with the Guards, and in 1917 married Irene, daughter of the earl of Londeshorough.

CARLETON, WILLIAM (1794-1869). Irish novelist. Born at Prillisk, co. Tyrone, Feb. 20, 1794, his best work is to be found in his *Traits and Stories of the Irish Peasantry*, 1830 and 1833. Of his novels *Fardorougha*, the *Miser*, 1839; *Rody the Rover*, 1845; and the *Black Prophet*, 1847, are notable. He died at Dublin, Jan. 30, 1869.

CARLILE, WILSON (b. 1847). Founder of the Church Army. Born at Brixton, Jan. 14, 1847, he was ordained in the church of England in 1880. Two years later he started the Church Army in a slum behind Vincent Square, Westminster, and continuously acted as its hon. chief secretary. He was appointed rector of S. Mary-at-Hill, London, in 1892, and prebendary of S. Paul's in 1906. See Church Army.

Wilson Carlile, founder of the Church Army
Special News Co.

CARLINE THISTLE (*Carlina vulgaris*). Biennial herb of the order Compositae. It is a native of Europe, Africa, and W. Asia. About 1 ft. high, it is common on heaths and dry pastures. The much divided leaves are prickly, each lobe ending in a spine. The florets are purple, and the flower-head is invested by persistent chaffy yellow scales.

CARLINGFORD. Market town of co. Louth, Irish Free State. It is on the S. shore of Carlingford Lough, at the foot of Carlingford Mt., 10 m. by rly. N.E. of Dundalk, and is a favourite watering-place. Its fisheries,

especially of oysters, are important. It has remains of King John's castle, erected about 1210, and a monastery, founded 1305. Pop. 547.

Carlingford Lough, between co. Down and Louth, is 10 m. long and about 2 m. wide. It can take the largest ships, and is connected by the Newry Canal with Lough Neagh.

CARLISLE. City, county borough and co. town of Cumberland. It is 299 m. by rly. N.N.W. of London, and 22½ m. E.N.E. of Silloth, its port. At the confluence of the rivers Caldew, Petteril, and Eden, it is one of the principal rly. junctions of the United Kingdom, being served by the L.M.S. and L.N.E. railways.

The Augustinian church, founded by William Rufus in 1092, was created a cathedral by Henry I in 1133. It is noted for its fine E. window. In its nave Sir Walter Scott was married in 1797. The 11th century castle, with Norman keep, is now used as a barracks. Other prominent buildings are the court house, town hall, library and museum, and grammar school. The town cross was erected in 1682.

Among the indus-

Carlisle. County buildings on the site of the old Citadel. Above, the Cathedral, founded in the 12th cent.

tries are cotton and woollen manufactures, iron founding, tanning, and hewing. he sides a large rly. repair works.

In June, 1916, the Government started experiments in state ownership of the liquor traffic in Carlisle. Market day, Sat. Pop. 56,620.

CARLISLE, EARL OF. English title borne by the families of Hay and Howard, its present holders. James Hay, one of the intimates of James I, was created earl of Carlisle in 1632. His second wife, Lucy, daughter of the 9th earl of Northumberland, figured largely in the intrigues of the Civil War, and is the theme of verses by Herrick, Suckling, and others. When James, the 2nd earl, died in 1660, the title became extinct.

In 1661 Charles Howard was made earl of Carlisle by Charles II.

Frederick, the 5th earl, who succeeded in 1758, was an active politician during a long life and Viceroy of Ireland, 1780-82. George, the 7th earl (1802-64), was also notable as a politician. He was chief secretary for Ireland, 1835-41, chancellor of the Duchy of Lancaster, 1850-52, and lord lieutenant of Ireland, 1855-58 and 1859-64. The earl's seats are Naworth Castle, Carlisle, and Castle Howard, Malton, Yorkshire.

Carlisle thistle

CARLISTS. Supporters of Don Carlos and his successors in their claim to the Spanish

throne. They waged two wars without success, but their activities did not cease until the death of Don Carlos in 1909.

CARLOS I (1863-1908). King of Portugal. Born Sept. 28, 1863, of the house of Braganza-Cohurg, he succeeded his father, Louis I, Oct. 19, 1889. In May, 1907, he aroused hostility by suspending the constitution and appointing Franco as dictator. Franco's conduct increased this hostility, and on Feb. 1, 1908, Carlos and his elder son Louis were assassinated in Lisbon. He was succeeded by Manoel, the only surviving son, who was deposed Oct., 1910. See Portugal.

Carlos I,
King of Portugal

CARLOS, DON. Name of several claimants to the Spanish throne, the supporters of whom were called Carlists.

When Ferdinand VII died in 1833 he left his kingdom to his daughter Isabella. Thereupon his brother Carlos (1788-1855) claimed it, and civil war broke out. This raged until 1839, when, owing partly to the hostility of Great Britain and France, Carlos admitted defeat and left the country. He died March 10, 1855.

The claims of Don Carlos were, however, kept alive and in 1872, following serious disturbance in Spain, a grandson, also Don Carlos (1848-1909), took the lead in another civil war. This lasted until 1876, when Alphonso XII was recognized by the European powers. Don Carlos, having left the country, died July 18, 1909, leaving a son, Jaime (b. 1870).

An earlier Don Carlos was the eldest son of Philip II of Spain. As a boy he showed signs of insanity and was put under restraint. His death on July 24, 1568, aroused suspicions of foul play, and several dramas have been written about his mysterious fate.

Don Carlos (d. 1855),
Spanish prince

Don Carlos (d. 1909),
Spanish prince

CARLOW. Inland co. of the Irish Free State. Generally flat or undulating, its surface becomes elevated in the S.E.; Mt. Leinster (2,610 ft.), Blackstairs Mt. (2,409 ft.), and Knockroe (1,746 ft.) are the loftiest summits. The Barrow and Slaney are the chief rivers. Agriculture occupies most attention. The co. is served by the Gt. Southern Rlys. Carlow is the co. town. Pop. 34,476. See map. p. 362.

CARLOW. Urban district, co. and market town of co. Carlow, Irish Free State. At the confluence of the Barrow and Burren, it is 56 m. by rly. S.W. of Dublin. It has a Roman Catholic cathedral, and S. Patrick's College (1795), a Protestant church, court house, and county buildings. Market days, Mon. and Thurs. Pop. 7,163.

CARL ROSA OPERA COMPANY. Society founded in London in 1875 by Carl August Nicolas Rosa (1842-89). This company has been influential in forming English taste in opera, especially in the provinces.

CARLTON HOUSE. London mansion which formerly stood in Pall Mall. Built on a site fronting St. James's Park, by Henry Boyle, Baron Carleton, it was acquired by Frederick, prince of Wales, father of George III, in 1732. In 1783 it became the residence of the prince of Wales, afterwards George IV.

Lucy, Countess of
Carlisle
After Van Dyck

The house was taken down in 1827, when a series of lectures from 1837 to 1840 in Willis's Rooms, the most notable being those on Heroes and Hero Worship. Out of the last-named grew the volume of that title published in 1841. Oliver Cromwell's Letters and Speeches: with Elucidations, appeared in 1845. Five years later came the stinging Latter-Day Pamphlets, while the Life of John Sterling appeared in 1851. The many volumes of Frederick the Great were published between 1858 and 1865, after which he did no further work of importance outside the Reminiscences of his own life, edited by J. A. Froude, and published soon after his death on Feb. 4, 1881.

CARLYLE; THOMAS (1795-1881). British essayist, historian, and philosopher. Born on Dec. 4, 1795, in the parish of Ecclefechan, in Dumfriesshire, his father was a mason. He received an excellent education: first at a school in Annan, then in the university of Edinburgh, where he chiefly studied mathematics. He started life as a schoolmaster, but soon turned to a literary life. The series of articles in The London Magazine on Schiller, afterwards incorporated in the Life, inaugurated his career in 1823. The following year was partly occupied by miscellaneous biographies for Brewster's Edinburgh Encyclopedia; but was chiefly remarkable for the translation of Wilhelm Meister's Apprenticeship, followed three years later by Wilhelm Meister's Travels, vol. iv of German Romance.

In 1826 Carlyle married Jane Welsh (1801-66), and in 1828 moved to the moorland farmhouse of Craigenputtock, Galloway, where he remained six years. Mrs. Carlyle was a brilliant woman, and the publication of her correspondence gave her a sure position among British letter writers. At Craigenputtock Carlyle wrote and published Sartor Resartus and some of his best miscellaneous Essays. In 1834 he moved to 185 (now No. 24), No. 5 Row, Chelsea, where he was sea, ed to spend the last of his life. The stormy volume The French Revolution and the last sentence of the third volume was written on Jan. 12, 1837. But this brought no immediate reward, and it was only the intervention of Harriet Martineau and other friends that prevented him from migrating to America. He delivered

Carlow. Map of this Irish agricultural county. See p. 361

CARMAN, WILLIAM BLISS (1861-1929). Canadian poet. Born at Fredericton, New Brunswick, April 15, 1861, he made his home in the U.S.A. He became in 1890 literary editor of The New York Independent. His first volume of verse, Low Tide on Grand Pré, 1893, was the pioneer of a succession of volumes which placed him in the front rank of Canadian poets. Others are Ballads of Lost Haven, 1897, Pipes of Pan, 1903, Daughters of Dawn, 1912, and April Airs, 1916. Carman died June 8, 1929.

Jane Carlyle,
British author

K. Maclean

CARMANIA. British triple-screw turbine liner of 19,524 tons gross and 19 knots speed, launched at Clydebank in 1905 for the Cunard company. Early in the Great War she was commissioned for naval service and fought a successful action off Trinidad Island, S. Atlantic, with the German armed merchant cruiser Cap Trafalgar, Sept. 14, 1914. The latter was sunk.

CARMARTHEN. Borough and co. town of Carmarthenshire. Situated on the Towy river, 8 m. from Carmarthen Bay, it is served by the G.W. and L.M.S. railways. It has a grammar school. The county gaol incorporates part of the old castle. Market days, Wed. and Sat. Near are large iron and tin works. Pop. 10,011.

Carmarthen Bay is an extension of Bristol Channel, between S. Gowan's Point, Pembroke, and Worms Head, Glamorgan.

shire. It receives the Taff, Towy, and several smaller rivers. Burry Inlet is an E. arm.

CARMARTHENSHIRE. Southern maritime county of Wales. With about 35 m. of coast on Carmarthen Bay, it has an area of 910 sq. m. Pop. 175,073.

Mountainous on the N. and E. borders, the remainder of the surface is hilly and undulating and traversed by many valleys; the highest point is Carmarthen Van (2,632 ft.). The principal river is the Towy; the Vale of Towy, a fertile tract, is 30 m. long and has an average breadth of about 2 m. Agriculture and breeding of stock are the most important industries. The G.W.R. main line to Pembroke and Fishguard, with its branches, afford communication. Carmarthen, Llanelly, Ammanford, Llandilo, Kidwelly, and Llandovery are the chief towns. See map below.

CARMEL, MOUNT (Heb. orchard). Hill in Palestine which gives its name to a range of hills 14 m. in length from N.W. to S.E. The height (1,750 ft.) lies W. of the plain of Esdraelon and overlooks Haifa and the Mediterranean. It was the scene of Elijah's sacrifice (1 Kings 18).

CARMELITES. Order of mendicant friars. Founded at Mt. Carmel by Berthold in the 12th century, the rule was sanctioned in 1210, and before the end of the 13th century the order had spread to Europe, and had houses in Kent and Northumberland. The order is still distinguished for its austerities and attention to the contemplative life. The habit is brown, and the mantle of white wool; hence the name Whitefriars.

Carmelite House and Carmelite Street, London, E.C., derive their name from the Carmelite Priory which at the time of the dissolution of the monastic houses occupied land between the Thames and Fleet Street.

Carmelites. Dress of the order

Carmen Sylva. Pen-name of Elizabeth, queen of Rumania. See Elizabeth.

CARMINATIVE (Lat. carminare, to card wool, cleanse). Drug which stimulates

puttock, Galloway, where he remained six years. Mrs. Carlyle was a brilliant woman, and the publication of her correspondence gave her a sure position among British letter writers.

At Craigenputtock Carlyle wrote and published Sartor Resartus and some of his best miscellaneous Essays. In 1834 he moved to 185 (now No. 24), No. 5 Row, Chelsea, where he was sea, ed to spend the last of his life. The stormy volume The French Revolution and the last sentence of the third volume was written on Jan. 12, 1837. But this brought no immediate reward, and it was only the intervention of Harriet Martineau and other friends that prevented him from migrating to America. He delivered

D. McLeish

Carmarthenshire, Wales. Map of the largest county in Wales. See above

the movements of the stomach and intestines, and thereby assists in the expulsion of gases, and relieves flatulency and colic.

The more important are aromatic substances, bitters, valerian, camphor, and volatile oils.

CARMINE. Red colouring matter obtained from the cochineal insect. It is prepared by boiling the crushed insects with water, allowing the sediment to subside, and then adding alum or cream of tartar to the clear liquid, when the carmine is precipitated. Carmine is used in dyeing scarlet cloth, as an artists' colour, and for colouring dentifrices.

Carnac. Thousands of granite menhirs arranged in definite alignment on the plain near Carnac

CARNAC. Village of France, in the dept. of Morbihan, 10 m. S.W. of Auray. It is noted for its megalithic monuments. Rows of granite menhirs, 18 ft. down to 2 ft. high, stand in definite alignments. An oval chambered tumulus, Mont St. Michel, 380 ft. long, averaging 33 ft. high, yielded fine jadeite celts, turquoise and ivory beads.

CARNARVON. Borough, market, and eo. town of Carnarvonshire. It is near the S. entrance to the Menai Strait, 69 m. W. of Chester, on the L.M.S. Rly. Its castle, begun by Edward I in 1283, is in good preservation. The parish church dates from the 14th century. In the Eagle Tower Edward II is said to have been born. Much of the old town wall is still intact. There is a wireless station. Market day, Sat. Pop. 8,301.

Carnarvon Castle. In the Eagle Tower, in the foreground, Edward II is said to have been born

An old Roman station, Carnarvon was the residence of Welsh princes down to 873. There are a circular mound and vestiges of a Roman fort, villa, and baths.

There is a town called Carnarvon in Cape Province, S. Africa, and a township of the same name in Tasmania.

Carnarvon Bay is an opening of the Irish Sea, on the angle formed by the cos. of Carnarvon and Anglesey.

CARNARVON, EARL OF. Title held by the family of Herbert since 1793. Henry Herbert, a grandson of the 8th earl of Pembroke, was the first earl. Henry, the 4th earl (1831-90), was in 1885-6 lord-lieutenant of Ireland, and he took a leading part in the negotiations with the Irish leaders. The 5th earl (1866-1923) worked with Howard Carter, with whom he discovered the tomb of Tutankhamen (q.v.) in Nov., 1922. He died in Cairo, April 5, 1923. The earl's seat is Highclere Castle, Newbury, and his eldest son is called Viscount Portchester.

CARNARVONSHIRE. The most N.W. county of the Welsh mainland. It is bounded N. by the Irish Sea, E. by Denbighshire, S. by Merionethshire and Cardigan Bay, and W. by Carnarvon Bay and Menai Strait. It has an extreme length from N. E. to S. W. of 56 m., greatest breadth of 27 m., and an area (including a small detached part in Denbighshire) of 572 sq. m. The S. promontory of Lleyn occupies about one-half the total length. Great Orme's Head is the N. extremity.

The surface is mountainous, especially towards the centre, where the maximum elevations are attained in Snowdon (3,560 ft.), the loftiest summit of England and Wales, Carnedd Llewellyn (3,484 ft.), and Carnedd Dafydd (3,426 ft.). The chief river is the Conway. There are several lakes. The county has the Penrhyn slate quarries. There is a little mining, but agriculture is the chief industry. Carnarvon, Bangor, Conway, Llandudno, Bethesda, and Pwllheli are among the principal towns, the last being the terminus of the L.M.S. and the branch line of the Cambrian (G.W.) Rly., which serves the S. Coast. Pop. 130,975.

CARNATIC. District of India. Originally the name of the Kanarese country, it came to mean the Tamil country of Madras, one of the principal scenes of the struggle between English and French in the 18th century. The name is applied to the S.E. of Madras and to the southern part of the Bombay Presidency E. of the W. Ghats, close to its original locality.

CARNATION (late Lat. carnatio, fleshiness). Hardy perennial plants of the order Caryophyllaceae; genus, *Dianthus*. The flowers are of nearly every shade of colour except blue. About thirty actual species and hundreds of florist-raised varieties are in cultivation. Carnations are divided into classes according to colouring. The three desiderata in growing good carnations are colour, scent, and size, but all three qualities are rarely found in a single plant. Flowers of moderate size, with perfume, are considered to be the best.

Carnation in full bloom

CARNAÚBA PALM OR WAX PALM (*Copernicia cerifera*). Perennial plant of the order Palmae. A native of Brazil, it grows to a height of 40 ft., with a trunk 6 ins. or 8 ins. in diameter, ending in a tuft of fan-shaped leaves. When young, these leaves are coated with lemon-coloured wax, which is used for candle-making, etc. The hard wood of the trunk is used for building; the recently formed upper part yields a kind of sago. The young leaves are given to horses as food.

CARNEDD DAFYDD. Mt. of Carnarvonshire. About 6 m. N.E. of Snowdon, it is included in the Snowdon system, and is 3,426 ft. high. The peak is connected by a narrow ridge with Carnedd Llewellyn (3,484 ft.).

CARNEGIE, ANDREW (1835-1919). Scottish business man and philanthropist. Born at Dunfermline, Nov. 25, 1835, he emigrated to

Carnarvonshire. Map of this mountainous county of North Wales

Pittsburg, U.S.A., in 1848. Carnegie established the Keystone Bridge Works and Union Ironworks at Pittsburg, introduced the Bessemer process in 1868, and became head of the Homestead and other steel works. The various firms he controlled were consolidated into the Carnegie Steel Co. in 1889, and this was merged into the U.S. Steel Corporation in 1901. In that year he retired from business, and made Skibo Castle, Sutherlandshire, his residence.

Andrew Carnegie, Scottish philanthropist

Carnegie now became known for his extensive and generous gifts. He endowed a great number of public libraries in Great Britain, America, and other English-speaking countries; established a fund, known as the Carnegie Trust, for assisting students at the Scottish universities; while his other benefactions included the Carnegie Institute for Technical Education at Pittsburg, 1900, and the Carnegie Hero Fund for the U.S.A. and Canada, 1904, and for the United Kingdom, 1908. Other funds were given to the Carnegie endowment for international peace, 1910, and to the burgh of Dunfermline. There is also the Carnegie United Kingdom Trust, which distributes money for philanthropic purposes. He died Aug. 11, 1919.

CARNERA, PRIMO (h. 1907). Italian boxer. He came to England in 1929, where on Oct. 17, at the Albert Hall, London, he defeated Jack Stanley in 108 seconds. After subsequent contests, he left for the U.S.A. in 1930, where he gained other sensational victories.

CARNIVORA (Lat. caro, flesh; vorare, to devour). Generally, all predatory and distinctively flesh-eating animals. All members of the order Carnivora, which includes a vast number of species, have teeth specially adapted for flesh-eating, though a few—like some bears—live mainly on vegetables or fruit. The Carnivora are usually divided into eleven families: Cats, civets, hyaenas, aard-wolves, dogs, bears, raccoons, weasels, sea-lions, walrus, and seals.

CARNOT, LAZARE NICOLAS MARGUERITE (1733-1823). French soldier and mathematician. Born at Nolay, Burgundy, May 13, 1753.

Carnot entered the army as an engineer, and was elected to the National Assembly in 1791. Appointed to a seat on the Committee of Public Safety, he undertook the reorganization of the armies of the Revolution, raising 14 armies. Minister of War in 1800, he retired in 1801, owing to his disapproval of Napoleon's monarchist plans, and spent much of the rest of his life in scientific pursuits. In the campaign of 1814 he distinguished himself by his defence of Antwerp. He died Aug. 2, 1823.

Lazare Carnot,
French soldier

His eldest son, Nicolas Léonard Sadi Carnot (1796-1832), laid the foundation of the modern science of thermodynamics. His theory of the reversible heat-engine embodies what is known as Carnot's cycle of operations, from which he deduced the principle that the transference of heat from a colder body to a hotter is possible only by the application of mechanical work. He died of cholera in Paris on Aug. 24, 1832.

CARNOT, MARIE FRANÇOIS SADI (1837-94). French statesman. Born at Limoges, Aug. 11, 1837, he became an engineer, and in 1870 was entrusted with the task of organizing resistance to the Germans in the departments of the Eure, Calvados and Seine Inférieure. Elected to the chamber of deputies in 1871, he became secretary to the minister of public works in 1878 and minister of finance in 1885. In 1887, Carnot was elected president by a large majority, but at the height of his popularity he was fatally stabbed at Lyons by an Italian anarchist named Caserio, June 24, 1894.

M. F. S. Carnot,
French statesman
Pierre Petit

CARNOTITE. Essentially vanadate of uranium and potassium. Containing about 54 p.c. of uranium oxide, it occurs as a canary-yellow impregnation of sediments in Utah and Colorado, and is also reported from S. Australia. It is an important source of uranium and radium.

CARNOUSTIE. Burgh and coast town of Angus (Forfarshire). It is 10 m. N.E. of Dundee, on the L.N.E. and L.M.S. Rlys. Facing the North Sea, it is a watering-place, with good bathing facilities and golf links. Pop. 5,957.

CARNWATH. Parish and village of Lanarkshire. On the Carnwath Burn, 6 m. E.N.E. of Lanark by the L.M.S. Rly., it lies in a coal and ironstone district. Pop. 6,547. Carnwath gives the title of earl to the family of Dalzell or Dalryell.

CAROB. Leguminous evergreen tree (*Ceratonia siliqua*). A native of the Mediterranean countries, it attains a height of 40 ft. or 50 ft. The fruits are flat, pulpy pods about 6 ins. long, glossy, and dark purple, containing a number of small hard seeds. The fleshy pods are sweet, and mucilaginous, and are used as food for cattle, and to some extent by man. A mucilage known as gum tragacanth is prepared from the pods. Another name for the pod and tree is locust.

Carob. Foliage and
bean of this ever-
green tree

CAROLINA. NORTH. A S. Atlantic state of the U.S.A., one of the 13 original states of the Union. Its area is 35,927 sq. m.

The W. portion, traversed by the Appalachian system, contains many summits above 6,000 ft., a number of which are clad with forests. Separated from the mainland by Pamlico, Albemarle, and Currituck Sounds is a chain of long, narrow sandy islands or heaches, which throw out three prominent capes, Fear, Lookout, and Hatteras. Maize, wheat, cotton, tobacco, and fruit are cultivated. Raleigh is the capital. Pop. 2,759,014.

CAROLINA, SOUTH. A S. Atlantic state of U.S.A., one of the thirteen original states of the Union. Its area is 30,989 sq. m. The surface rises from a low and level coast belt to a height of more than 3,500 ft. in the W., where it is broken by spurs of the Appalachian system. The coast is harried in parts by islands separated by narrow straits. Wheat, maize, rice, and tobacco are cultivated, but the cotton crop is of greatest importance. Phosphate rock, granite, and other minerals are worked. The capital is Columbia. Pop. 1,779,084.

CAROLINE ISLANDS. Archipelago in the N.W. Pacific. They lie E. of the Pelew Islands and S. of the Ladrone or Marianne Islands and cover an area of about 390 sq. m. The three groups formerly belonged to Spain, but, with the exception of Guam, in the Ladrone group, were sold in 1899 to Germany. For administrative purposes they were divided into the Eastern Carolines, with Truk and Ponapé as centres of administration, and the Western Carolines, with Palau and Yan as administrative centres.

The Carolines comprise over 500 coral isles and islets. Occupied by the Japanese in 1914, they are now governed by Japan under mandate from the League of Nations. Pop. 24,000.

CAROLINE (1683-1737). Queen of George II of Great Britain. Born March 1, 1683, she was the daughter of Frederick, margrave of Brandenburg-Ansbach. In 1705 Caroline was married to George, electoral prince of Hanover.

and for nine years she lived at Hanover. In 1714 she followed her husband and his father, by this time King George I, to England. She took her husband's part in his quarrel with his father, and, exiled from the king's court, passed much time at Richmond. In 1727 Caroline became queen consort, and for ten years her influence on public affairs was pronounced. She died Nov. 20, 1737. Caroline had a large family, her sons including Frederick, prince of Wales, and the duke of Cumberland (1721-65).

CAROLINE (1768-1821). Queen of George IV. Born May 17, 1768, daughter of Charles William Ferdinand, duke of Brunswick, and Augusta, George III's sister, she married her cousin George, the prince of Wales, in 1795. They were formally separated a year later, after the birth of the Princess Charlotte. In 1820 George had her name removed from the Prayer Book, and in June a bill was brought in to dissolve her marriage on the ground of adultery committed by her. She was eloquently defended by Lord Brougham, and the bill was abandoned on the third reading. On July 19, 1821, she was excluded from the coronation ceremony, and she died in August.

Caroline of Brunswick,
wife of George IV
After Lawrence

CAROLUS. Latin form of Charles. A British gold coin issued by Charles I was so named. Its value was 20s., increased later to 23s. The Carolus dollar was named after Charles III of Spain.

Carolus. Gold
coin of Charles I

CAROLUS-DURAN, EMILE AUGUSTE (1838-1917). French painter. Born at Lille, July 4, 1838, his real name being Charles Emile Auguste Duran, he first exhibited at the Paris Salon in 1863. For many years he produced a series of portraits of women and children. In association with Puvis he helped to found the Société Nationale des Beaux Arts, of which he became president in 1898. In 1905 he was appointed director of the École Française in Rome. He died in Paris, Feb. 18, 1917.

CARP (Cyprinidae). Family of fresh-water fishes. It includes more than 100 genera, distributed over most parts of the world, with the

exceptions of S. America and Australasia. The common carp (*Cyprinus carpio*) of British ponds is a native of central Asia, and was introduced into Great Britain in the 15th century. Although in the free state a comparatively small fish, in captivity the carp has been known to exceed a weight of 25 lb. It lives in ponds to a great age.

Carp. Fresh-water fish found in
most parts of the world

CARPACCIO, VITTORIO (c. 1450-c. 1522). Venetian painter. His best and most characteristic works are in the Venice academy, among others nine pictures illustrating the life of S. Ursula, A Patriarch of Grado Casting out a Devil, and The Presentation in the Temple, generally regarded as his masterpiece.

CARPATHIANS, THE. Range of mountains in Central Europe. It extends in a curve from the N. of Bratislava (Pressburg) in Czecho-Slovakia to Orsova in Rumania. The range traverses Czecho-Slovakia and forms the boundary of that state with Poland and Ukraine, thereafter becoming the natural division between Transylvania and Rumania proper. Its total length is about 900 m., and its breadth varies from 20 m. to 200 m.

On the N.W. the range connects with the Alps by the Little Carpathians, continues N.E. and E. by the White Mts. and the Beskids to the Forest Carpathians, and finishes S.E. in the Transylvanian Alps. In the central Carpathians are the Tatra Mts., S. of the Beskids. The Gerlsdorfer (8,737 ft.), in the High Tatra, is the highest peak in the whole range.

On Jan. 23, 1915, the Austrians, supported by German forces, started a great offensive over the whole Carpathians on a front 200 m. in length, but this definitely failed after the capture of Przemyśl, by Russians, on Mar. 22.

CARPEAUX, JEAN BAPTISTE (1827-75). French sculptor. Born at Valenciennes, May 11, 1827, he entered the École des Beaux Arts, Paris, in 1844. After ten years he won the Prix de Rome with his Hector and Astyanax, but it was not until 1863, when his group of Ugolino and his Children won the first medal at the Salon.

J. B. Carpeaux,
French sculptor

that public attention was attracted by his work. Among notable achievements were his designs decorating the pavilion of Flora in the Tuileries and the Group of the Dance, executed in 1869, for the façade of the New Opera. He died Oct. 12, 1875.

CARPENTARIA, GULF OF. Indentation of the N. coast of Australia. Its length and breadth average 350 m., and its extreme headlands are Capes York and Arnhem. The gulf is shallow, its coasts are low, and it contains a large number of islands. The ports are Burketown and Normanton. Discovered by the explorer Tasman in 1606, it was named after the governor-general of the Dutch East Indies, Pieter Carpenter.

CARPENTER, ALFRED FRANCIS BLAKE-NEV (b. 1881). British sailor. Born Sept. 17, 1881, he entered the navy in 1897, and was promoted commander June, 1915. In the Great War Carpenter commanded the *Vindictive* at the attack on Zeebrugge, April 22-23, 1918, and for his valour received the V.C., awarded on the selection of the officers and the naval assaulting party. He was subsequently promoted captain and appointed to the Naval Intelligence Department. In 1924-26 he was captain of Chatham Dockyard. He published *The Blockading of Zeebrugge* in 1921. See Zeebrugge.

Alfred F. B. Carpenter,
British sailor
Russell

CARPENTER, EDWARD (1844-1929). British author and social reformer. Born at Brighton, Aug. 29, 1844, he purchased land and settled down near Sheffield and lived as a market gardener, taking an active part later in the socialist movement, visiting Walt Whitman in the U.S.A. and travelling in India. He died June 28, 1929. His writings include *Towards Democracy*, 1883-1892, completed 1905; and *Pagan and Christian Creeds: Their Origin and Meaning*, 1920. Consult *My Days and Dreams*, autobiog., 1916.

CARPENTER, JOHN (c. 1370-1441). Benefactor to the city of London, and one of the executors of Sir Richard Whittington. He was town clerk, 1417-38; M.P. for the city in 1436 and 1439; and compiled the *Liber Albus*, an account of the city's privileges, which was not printed till 1859. His bequests included one which served in 1837 as the foundation of the City of London School.

CARPENTER, MARY (1807-77). British philanthropist. Born at Exeter, April 3, 1807, she was the eldest daughter of Dr. Lant Carpenter (1780-1840), a unitarian divine. She started a society for visiting the poor in Bristol in 1835, and in 1846 opened a ragged school. She founded several reformatory schools, and many of her suggestions were included in the *Industrial Schools Acts* of 1857, 1861, and 1866. She died June 14, 1877. Consult *Life*, J. Carpenter, 1879.

Mary Carpenter,
British philanthropist
Russell

CARPENTER BEE (*Xylocopa*). Genus of solitary bees of large size, which construct nests in the wood of trees. They bore a long hole, divided into cells by partitions formed of the wood-dust, and deposit an egg in each. The larvae pass through the stages of their development in the cells. See Bee.

Carpenter bee,
Xylocopa teredo

CARPENTIER, GEORGES (b. 1894). French boxer. Born at Lens, France, Jan. 12, 1894, he began his boxing career when quite a youth, and, after many successes, in 1913 he defeated the English heavy-weight champion, Wells, at the National Sporting Club, London, in one round. In 1919 he defeated J. Beckett in the fight for the heavy-weight championship of Europe, also in one round. In 1921 he was beaten at Jersey City by Jack Dempsey.

Georges Carpentier,
French boxer

CARPET. Woven fabric used to-day for a floor covering. The earliest mention of carpets dates back to remote antiquity, a carpet loom and its workers being shown in an Egyptian fresco (about 3000 B.C.). They were in use in England in the time of Henry VIII, and even more extensively in the reign of Elizabeth, when direct communication with the East had been opened up. In 1701 a charter was granted to the weavers of Wilton and Axminster, a proof that the industry had already made a start in England. About 1740 the earl of Pembroke brought over weavers from France, and introduced into Wilton the manufacture of loop-pile, or Brussels carpeting, which developed soon after into the cut pile fabric now known by the name of Wilton. Carpets of the ingrain or Kidderminster type were being made in Kidderminster in 1736, while the manufacture of the Brussels and Wilton types was started in 1745 in that town, which is the most important centre of the carpet industry in the United Kingdom. Carpets are of two classes: those made by hand, and those made by machine.

CARR, ARTHUR WILLIAM (b. 1894). English cricketer. Born at Mickleham, Surrey, May 21, 1894, he was educated at Sherborne, where he distinguished himself at games. As a cricketer he qualified for Nottinghamshire and he played in the county team before the Great War. In 1919 he was made captain, and he was captain in 1923, when his county won the championship. In 1926 Carr captained the English team in matches against Australia.

CARRACCI, LODOVICO (1555-1619). Italian painter. Born in Bologna, April 21, 1555, he started an art school at Bologna, persuading his cousins, Agostino and Annibale, to cooperate. Thus arose the school of the Incamminati or Eccelesies. Among Lodovico's most attractive pictures are *The Madonna and Child with Angels and Saints* and *The Birth of the Baptist*. He died Dec. 13, 1619.

Agostino Carracci (1557-1602) was occupied with engraving from 1576-99. His masterpiece is *The Communion of S. Jerome*, in the Bologna Gallery. He died March 22, 1602.

Annibale Carracci (1560-1609) was engaged upon the Farnese frescoes: The most familiar of his works is the *Three Marys*, now at Castle Howard, Yorks. He died July 15, 1609.

CARRAGEEN. Alternative name for the seaweed *Chondrus crispus*, or Irish moss (q.v.).

CARRANZA, VENUSTIANO (1859-1920). Mexican statesman. In 1893 he joined in a revolt against President Diaz, in 1910 associated himself with Madero, and after the murder of the latter in 1913 he organized a revolution with the help of Villa, Obregon, and Gonzalez. In Oct., 1915, he was recognized by President Wilson as president of Mexico, Great Britain and other Entente Powers afterwards following suit. A revolution broke out in April, 1920, and Carranza was killed May 20, 1920. See Mexico.

Venustiano Carranza,
Mexican statesman

Carpet. Section of 5-frame Brussels carpet: A, chain; B, pile warp; C, stuffer warp. Left, a Turkish knot

Carpet. Section of 5-frame Wilton carpet: A, chain; B, pile warp; C, stuffer warp

Carpet. Section of 3-shot imperial Axminster: A, chain; B, tufts; C, stuffer warp; D, double welt

statuary. Pop., with Avenza, 52,729.

CARRHAE. Ancient city of Mesopotamia, about 25 m. S.E. of Edessa. It is the Haran of the O.T. Here the Romans under Crassus were defeated by the Parthians, 53 B.C.

CARRIAGE (Old Fr. cariage; cf. carroche, coach.) Vehicle for conveying passengers. An early form was that of the chariot mentioned in Genesis. A small open carriage was used for a French queen. A coach was introduced into England for Queen Mary in 1555. Stage wagons started in London in 1564, and hackney coaches began to ply for hire in 1625. These vehicles were without springs; it was not until 1804 that the elliptical spring was introduced. Carriages and gigs were two-wheeled carriages of the 18th century; tilburies, stan-

Carrara. One of the marble quarries

hopes, and the haansom (1821) belong to the early 19th century. Lord Brougham introduced the brougham in 1839; the landau and victoria followed.

The word carriage is also applied to the coaches used on rlys., to the wheeled support of a gun, to the framework upon which a coach is built, and to mechanical contrivances which carry some parts of a machine. In Great Britain the trade of carriage building has become almost extinct, owing chiefly to the advent of the motor car. It is now merged in that of coach building. See Berlin; Brougham; Buggy; Cab; Coach; Railway.

CARRIAGE LICENCE. In the United Kingdom an annual payment is made by those who keep carriages. It is included in the licences collected by the county councils and other local authorities, who pay part of the proceeds into the national exchequer. Carriages pay £2 2s. a year if drawn by two or more horses; £1 1s. if drawn by one horse, being a four-wheeled vehicle; 15s. if drawn by one horse, being a two-wheeled vehicle; and 15s. for a hackney carriage.

CARRICK (Celtic, rock). Old division of S. Ayrshire. S. of the river Doon, its W. portion is covered by rugged hills and the centre is mainly moorland. As Great Steward of Scotland, the prince of Wales receives the title of earl from Carrick. Robert the Bruce and other kings were earls of Carrick.

The Irish title of earl of Carrick comes from Carrick-on-Suir, and has been borne since 1748 by the family of Butler. In 1912 Charles, the 7th earl, was made a peer of the United Kingdom as Baron Butler.

CARRICK-A-REDE. Rocky islet off the N. coast of co. Antrim, Northern Ireland. Of volcanic formation, it is 350 ft. high, and is used as a salmon-fishing station. A rope-bridge spans the chasm between the islet and the mainland.

CARRICKFERGUS. Urban district, seaport, and market town of co. Antrim, Northern Ireland. It stands on the N. side of Belfast Lough, 9 m. N.E. of Belfast by the L.M.S. Rly. Its industries include flax, spinning, oyster-fishing, salt-mining, and the manufacture of linen and leather goods. The 12th century castle and portions of the old walls remain. Market day, Sat. Pop. 4,610.

CARRICK-ON-SHANNON. Market town and co. town of co. Leitrim, Irish Free State. Part of it is in co. Roscommon. On the river Shannon, 38 m. S.E. of Sligo, it is served by a branch of the Gt. Southern Rlys. The assize town, it trades in grain and dairy produce. Pop. 1,026.

CARRICK-ON-SUIR. Urban district and market town of co. Tipperary, Irish Free State. It is on the Suir, 14 m. E. of Clonmel by the Gt. Southern Rlys. The river is spanned by bridges connecting it with Carrickbeg. It has a ruined castle, formerly the seat of the dukes of Ormonde. Market day, Sat. Pop. 4,657.

CARRIER. Literally, one who carries anything. Railway and canal companies, shipping firms, lightermen, and others that undertake to carry goods are known as common carriers, and are on a special footing before the law. A common carrier is bound to carry any goods that may be offered to him, providing they belong to the class he purposes to carry, the person sending them is willing to pay the usual charges, and his vehicles are not already full. The carrier must deliver the goods without unreasonable delay, and he is liable if the goods are damaged or lost.

CARRIER. Medical term for a person apparently in sound health, whose secretions contain the organisms of an infectious disease, and who may in consequence quite innocently be the means of starting an epidemic. Typhoid fever, for instance, may be carried in this way.

CARRIER WAVE. In wireless telephony, the wave resulting from the continuous high-frequency oscillation sent out by a transmitter. It is modulated, or varied in amplitude, by speech or other sounds directed into a microphone which forms part of the apparatus. See Beat: Wireless.

CARRINGTON, SIR FREDERICK (1844-1913). British soldier. Born at Cheltenham, Aug. 23, 1844, he was educated at Cheltenham College and entered the army, S. Wales Borderers, in 1864. In 1877, in S. Africa, he became known as a leader of light horsemen, and Carrington's Horse took part in the war against the Kaffirs in 1877. In 1893 he became commandant of the Bechuanaland Police, and he was commander-in-chief during the rebellion in Rhodesia. He helped to raise the siege of Mafeking and died March 22, 1913.

CARRION CROW (*Corvus corōnē*). One of the two European species of crow, the other being the hooded crow (*C. cornix*). It is bluish black in colour, and the skin at the base of the beak is covered with short feathers. The carrion crow inhabits wooded districts, and is usually seen either singly or in pairs. It eats carrion; but eggs and young birds and the freshwater mussel enter into its diet. It also seeks small crabs and dead fish on the seashore. The nest is usually built on the bough of a tree, close to the trunk. See Crow.

Carrion Crow. Bird found in most parts of Great Britain

CARRION FLOWER (*Stapelia*). Genus of leafless, perennial plants of the order Asclepiadaceae. Natives of S. Africa, they have dwarf stems, with large, showy flowers. These have a five-lobed corolla, tinted with purple, yellow and flesh-colour, spotted and marbled to resemble decaying flesh in harmony with the odour of carrion which they give off, and which attracts numerous carrion-loving flies.

Carrion Flower, native of S. Africa

CARROLL, LEWIS (1832-98). Pseudonym of Charles Lutwidge Dodgson, English author and mathematician. Born at Daresbury, near Warrington, Jan. 27, 1832, he was fellow and mathematical lecturer at Christ Church, Oxford, 1854-81. It was to amuse Alice Liddell, daughter of the dean of Christ Church, that he wrote the book which first brought him fame, *Alice in Wonderland*, 1865, followed by *Through the Looking Glass*, 1871. Both books, to which Tenniel contributed illustrations, have been translated into French, German, Italian and Dutch. The later fanciful works of Dodgson were *The Hunting of the Snark*, 1876; *Sylvie and Bruno*, 1889; and *Sylvie and Bruno Concluded*, 1893. He died Jan. 14, 1898.

Lewis Carroll, British author

CARRON. Name of five rivers and one sea-loch of Scotland. The most important is a river of Stirlingshire which rises in Carron Bog and flows E. to the Firth of Forth at Grangemouth.

Its length is 20 m. The others are shorter streams. One is a tributary of the Nith in Dumfriesshire and another is in Kincardineshire. The remaining two are both in Ross-shire, and the sea loch Carron is in the south-western part of that county.

CARRON. Village of Stirlingshire. It lies near the river Carron, 2 m. N.W. of Falkirk. The Carron ironworks here were founded in 1760. They gave the name carronade to a short naval cannon of cast iron, invented in 1776 by General Robert Melville, and still manufacture iron ware. Pop. 3,586.

A mixture consisting of equal parts of lime water and linseed oil is called carron oil from being first used, in the case of burns, at the Carron ironworks.

CARROT (Lat. *carota*). Vegetable of the order Umbelliferae, and genus *Daucus*. One of the most useful vegetables and valuable

Carrot. Left to right: Early Market; Golden Ball; Long Forcing; Summer Favorite; Red Elephant

for light soils, the carrot is easily raised from seed sown first in Feb. and then in succession for later crops. In the late autumn any carrots not required for immediate use should be raised and stored. The roots should be packed in sand.

CARSE O' GOWRIE. Low-lying alluvial tract of Perthshire and Forfarshire (Angus). It lies N. of the Firth of Tay, between Invergowrie and Kinnoull Hill, and is 15 m. long by 2 m. to 4 m. broad. The word carse means the fertile land on the banks of a river.

CARSHALTON. Urban district of Surrey. It stands on the Wandle, 11 m. S. of London by the Southern Rly., which has stations here. It has a fine old church, and the grounds of Carshalton Park are now a public park. Pop. 14,021.

CARSO. Alternative name for the limestone region in Yugo-Slavia known as Karst (q.v.). In the Great War four battles were fought in the Carso (Karst) region between the Italians and the Austrians, in 1916 and 1917. Considerable forces were employed in each and both sides captured many prisoners and gained ground, but these battles had little effect on the ultimate outcome of the war. In the fourth battle, fought in Sept. 1917, batteries of British 6-in. howitzers co-operated with the Italians.

CARSON, EDWARD HENRY CARSON, BARON (b. 1854). British politician. Born Feb. 9, 1854, he became member of the English and also of the Irish bar and was retained as counsel in many important cases. In 1892 he had entered Parliament as M.P. for Dublin University, and soon became prominent among the Ulster Unionists. He had already been solicitor-general for Ireland, when in 1900 he was made solicitor-general for England and was knighted. In 1912-13 he led the opposition to the Home Rule bill, but when it passed the Commons he was the official head of the Ulster volunteers, who were raised to resist it. Made a lord of appeal, 1921, he took the title of Baron Carson of Duncairn. He retired in Oct., 1929.

Baron Carson, British politician Russell

Carronade. Short naval gun cast at the Carron Works

CARSTAIRS. Village of Lanarkshire, Scotland. It is on the Clyde, 1 m. from the junction on the L.M.S. Rly. where the main line branches to Edinburgh and to Glasgow. Pop. 1,828.

CARSTARES, WILLIAM (1649-1715). Scottish statesman and divine. Born at Cathcart, Feb. 11, 1649, he was engaged for many years in conspiring against Charles II, and was imprisoned at Edinburgh, 1674-79, and again in 1683. Made court chaplain to William III, he was his intimate adviser. He took a prominent part in promoting the Revolution settlement and the Union. He died Dec. 28, 1715.

William Carstares,
Scottish divine

CART. River of Renfrewshire. It is formed by the junction of the Black Cart (9 m.) and White Cart (19 m.) at Inchinnan Bridge. The combined stream enters the Clyde after a course of 1 m. The Cart and Forth Junction Canal affords direct communication with the Forth and Clyde Canal.

CARTAGENA or **CARTHAGENA**. City and seaport of Spain, in the prov. of Murcia. On a deep bay of the Mediterranean, 326 m. by rly. S.E. of Madrid, it is the principal naval harbour of Spain. The site was chosen by Hasdrubal about 242 B.C., for the new citadel of the Carthaginian dominion in Spain: he named it Nova Carthago. It became a flourishing city, but was captured by the elder Scipio Africanus in 209 B.C. Under the Romans it also prospered. Sacked by the Goths in 425 A.D., it later came under the Moors. Cartagena exports lead, copper, iron, sulphur, and zinc, besides wine, fruit, and grain. It has a wireless station. Pop. 96,981.

CARTAGENA or **CARTHAGENA**. City and seaport of Colombia, capital of the dept. of Bolivar. It has the largest and best harbour on the Caribbean coast, and has rly. communication with Calamar, on the river Magdalena. Founded in 1533, it was heavily fortified, but was captured by pirates in 1544, and again by Drake in 1586. In the war of independence it fell to Bolivar, but although soon recaptured, was freed from Spain in 1821. It has a cathedral and a university. Pop. 68,119.

CARTE, RICHARD D'O'LY (1844-1901). Theatrical manager. Born in London, May 3, 1844, in 1875 he produced Gilbert and Sullivan's Trial by Jury at the Royalty Theatre, London, and from that date until 1899, first at the Opéra Comique, and later at the Savoy, which he built, Carte was associated with the production of light opera. The Palace Theatre of Varieties, London, erected by Carte as the Royal English Opera House, was opened in 1891 with the production of Sullivan's *Ivanhoe*. He died April 3, 1901.

Richard D'O'ly Carte,
theatrical manager

CARTER, HOWARD (b. 1873). British Egyptologist. Born at Swaffham, Norfolk, he first went to Egypt in 1890, and later worked with Sir Flinders Petrie at El-Amarna. Appointed inspector-general of antiquities at Thebes, 1901, in 1907 he began his association with the 5th earl of Carnarvon in exploring the Valley of the Kings. On Nov. 5, 1922, in almost the last explored piece of ground, he made his sensational discovery of the tomb of Tutankhamen (q.v.). In 1923 he published, with A. C. Mace, an account of his investigations here. See Carnarvon, Earl of.

Howard Carter,
British Egyptologist
F. J. Mortimer

CARTERET, JOHN (1690-1763). British politician. Born April 22, 1690, he succeeded to the barony of Carteret at the age of five, and later sat in the House of Lords as a Whig and a supporter of the Protestant succession. In 1721 he joined the administration of Townshend and Walpole, and from 1724 to 1730 was lord lieutenant of Ireland. On Walpole's fall in 1742 Carteret joined the new ministry with the direction of foreign affairs, and as its virtual head. But his policy was denounced as Hanoverian in England, and in 1744 he retired. In that year he became Earl Granville, succeeding to the title on the death of his mother, who had been created countess in her own right. He joined the Pelham administration in 1751 as lord president of the council, an office which he retained until his death, Jan. 2, 1763. See Granville, Earl.

CARTHAGE (Phoenician Karthadisha, new city; Lat. Carthago; Gr. Karchēdon). Famous ancient city on a peninsula on the N.W. coast of Africa, near the modern Tunis. According to tradition it was founded by Phoenician settlers from Tyre under Dido (q.v.). The oldest part of the town was called Byrsa (citadel), perhaps from the story that Dido purchased as much land as could be covered by the hide (Gr. byrsa) of an ox, which she cut into strips so that it surrounded a large tract of ground. There were two harbours, the inner, called Cothion, for warships. On the land side the town was protected by a triple wall.

The Carthaginians were at the height of their power before the first Punic war (264 B.C.). In the 4th century B.C. their empire extended from the altars of the Philæni, near the great Syrtis (gulf of Sidra) on the E. to the Pillars of Hercules (Gibraltar) on the W. Sardinia, Corsica, and Malta were in their hands; Hanno the navigator founded colonies on the W. coast of Africa, and Himilco sailed along the W. coast of Spain and Gaul. Their importance as traders is shown by the fact that as early as 509 they concluded a commercial treaty with the Romans.

Although defeated (480) by Gelon, the tyrant of Syracuse, the Carthaginians would probably have succeeded in subjugating Sicily but for the intervention of the Romans. The three Punic wars (264-241, 218-201, 149-146) ended in the triumph of the Roman arms. Cato's demand, *delenda est Carthago* (Carthage must be destroyed), was carried out to the letter; after a three years' siege the city was taken by storm by the younger Scipio and razed to the ground. The territory became the Roman province of Africa.

In the time of Augustus, Carthage again began to prosper. During the 1st and 2nd centuries of the Christian era Carthage, next to Rome and Alexandria, was the most important city in the Roman empire. The prov. became the home of what was known as African Latinity. It was also a stronghold of Christianity. Numerous church councils or synods were held there. From the end of the 2nd century Carthage had a bishop, and such

fathers of the church as Augustine, Cyprian and Tertullian were natives of North Africa.

In 439 the Vandals under Geiseric (Genseric) made themselves masters of the Roman dominions, and Carthage the capital of their kingdom. Carthage was reconquered by Belisarius (533) and re-united to the eastern empire under the name of Justinianopolis. Finally it was burned in 698 by the Arabs.

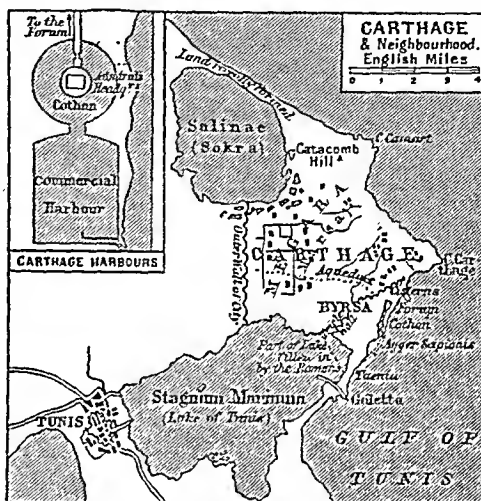

Since the French occupation of Tunis, researches and excavations have led to important Punic and Roman discoveries. Consult Carthage and the Carthaginians, R. B. Smith, new ed., 1897.

Carthamin. Red colouring matter of safflower (*Carthamus tinctorius*), formerly much employed as a dyestuff. See Safflower.

Carthusians.
Dress of the order

CARTHUSIANS (Fr. Chartreuse; Lat. Cartusia). Religious order, founded by S. Bruno at Chartreuse in the 11th century. In England a Carthusian monastery was called a charterhouse, the English form of Chartreuse. The chief characteristics of the Order are a separate dwelling house in the precincts of the charterhouse for each monk, and the general assembly in the church twice in the day and once at night. The habit is white serge, and the badge a globe surrounded by seven stars. See Chartreuse.

Carthage. Map of this ancient city and its surroundings. Inset, a plan of the harbours

CARTIER, SIR GEORGE ETIENNE (1814-73). Canadian statesman. Born Sept. 6, 1814, he was called to the bar. He took part in the rebellion of 1837-38, but was soon pardoned and in 1848 became a member of the legislature. In 1857 he was made attorney-general for Lower Canada and from 1858 to 1862 he and Sir J. A. Macdonald were joint premiers. Cartier was one of the Fathers of Confederation, and minister for militia and defence in the first Dominion cabinet (1867). Created a baronet in 1868, he resigned office just before his death in London, May 21, 1873.

Sir George Cartier,
Canadian statesman

CARTIER, JACQUES (1494-1557). French explorer. He was born at St. Malo, Dec. 31, 1494, and conducted three expeditions across the Atlantic. In the first, in 1534, he reached Newfoundland and sailed about the eastern coasts of Canada. In 1536 he recrossed the ocean and discovered the St. Lawrence river. A third voyage in 1541 in search of Saguenay, near the river Saguenay, was without result. He died Sept. 1, 1557.

Jacques Cartier,
French explorer

CARTILAGE (Lat. cartilago, gristle). Tissue of the body occurring in two forms, hyaline cartilage and fibro-cartilage. Hyaline cartilage consists of a clear ground-substance through which are scattered cartilage cells. It is found covering the ends of bones which form joints; forming rib cartilage; and constituting the embryonic structures which eventually become bones. Fibro-cartilage has a ground substance pervaded with fibres of connective tissue. White fibro-cartilage forms the disks which join the vertebrae of the spine together; yellow fibro-cartilage is found in the external ear.

CARTON, R. C. (1856-1928). Pseudonym of Richard Claude Critchett, British dramatist. He is remembered chiefly for a fine series of light comedies on contemporary manners, in most of which his wife, Miss Compton, was the leading lady. These included: *Sunlight and Shadow*, 1890; *Liberty Hall*, 1892; *The Home Secretary*, 1895; *Lord and Lady Algy*, 1898; *The Rich Mrs. Repton*, 1904; *Mr. Preedy and the Countess*, 1909; *The Bear Leaders*, 1912. He died April 1, 1928, and his wife the following month.

CARTOON (Lat. charta, paper). Term used in art in two senses. (1) A drawing on strong, tough paper preliminary to the execution of the subject in its proper medium or material. The artist is thus afforded an opportunity of correcting the drawing, composition, or colour scheme in advance. (2) The principal picture, generally of topical interest, in certain illustrated periodicals. The cartoons in *Punch* by John Leech, Sir John Tenniel, Linley Sanbourne, Bernard Partridge, L. Raven-Hill, and other artists are celebrated. See *Caricature*.

CARTOUCHE (Fr. from Lat. charta, paper). Wooden cases to hold about 400 musket-balls, also a leather sling belt in which artillerymen used to carry the ammunition from the wagon to the gun. In architecture a cartouche is an ornamental tablet, moulding, or scroll, having an inscription or emblem.

CARTOUCHE. Term applied by Champollion to the linear device employed in ancient Egypt for enclosing royal, and occasionally divine, names and titles in hieroglyphic inscriptions. At the beginning of dynastic history it was a circle resting on a bar, suggesting a signet ring. As the number of enclosed characters increased it became oblong with rounded ends, and a plain or decorated bar at one end, resembling a knotted cord. The term now commonly designates both the enclosing device and its contents.

CARTRIDGE (Fr. cartouche). Metallic, textile, or paper receptacle, usually of approximately cylindrical shape, containing the propellant charge and in some cases the projectile and igniter for any fire-arm, or an explosive charge made up into a convenient form for blasting purposes. The first military rifle cartridge to contain its own means of ignition in addition to the bullet and charge was that for the needle gun. On the adoption of the Snider rifle by Britain in 1866, a cartridge with a metal case was introduced. The cap was in the base, and the escape of gas and flame from the breech was eliminated. The present military rifle cartridge weighs about 400 grs. complete and is about 3 ins. long. Sporting cartridges are of similar general construction, but paper cases with brass bases are generally employed. See *Ammunition*; *Artillery*; *Bullet*; *Rifle*.

CARTWRIGHT, EDMUND (1743-1823). British inventor. Born April 24, 1743, a younger brother of John Cartwright, the political reformer, he took out his first patent for the power-loom in 1785, and two years later established a factory at Doncaster for its use. His next invention (1789) was a wool-

combing machine, while his later ones were chiefly concerned with agricultural improvements. He died Oct. 30, 1823.

CARTWRIGHT, JOHN (1740-1824). British reformer. Born at Marnham, Nottinghamshire, Sept. 17, 1740, he entered the navy in 1758 and was for five years on the Newfoundland station. He sympathized with the American colonists, and resigned rather than fight against them. In 1775 he was appointed major in the Nottinghamshire militia. An indefatigable pamphleteer, he advocated annual parliaments, universal suffrage, the ballot, and the improvement of national defences. He died Sept. 23, 1824.

CARUS, MARCUS AURELIUS. Roman emperor A.D. 282-283. He was prefect of the praetorian guard under Probus, after whose assassination he was declared emperor by the soldiers, by whom he was later murdered.

Enrico Caruso,
Italian singer
Gerschel

CARVER, JOHN (c. 1575-1621). Chief of the Pilgrim Fathers. Born in England, he left the country in 1608 owing to religious persecution and settled in Leiden with a band of exiles. He obtained a charter from the Virginia Company of London for the foundation of a colony in America, and was the first governor of Plymouth colony. See *Pilgrim Fathers*.

CARYATIDES. Name given to the sculptured figures of women used instead of ordinary columns in ancient architecture. The name, meaning women of Caryae, a town in ancient Laconia, probably refers to the attitude of the dancers at the festival of Artemis Caryatis. See illus. p. 151.

CASABIANCA, LOUIS DE (1755-98). French naval officer. Born at Bastia, Corsica, he took part in the American war of independence, and during the Revolution sat in the national convention and assisted in organizing the navy. At the battle of the Nile, Aug. 1, 1798, he commanded the fleet on the death of Brueys, and, though badly wounded when his ship, the Orient, caught fire, continued to fight. His son, Giacomo Jacante, old, also remained on both were killed when the ship was blown up.

Edmund Cartwright,
British inventor
From engraving by Thomson

John Cartwright,
British reformer

CARUSO, ENRICO (1873-1921). Italian singer. Born at Naples, Feb. 25, 1873, his first great success was in *La Traviata* in 1896, and his appearance at Milan in 1898, as Marcello in *La Bohème*, established his position as a leading operatic singer. He sang at Covent Garden in 1903. He died Aug. 2, 1921.

vice connects Casa Blanca with Toulouse. The town, which has a wireless station, was built by the Portuguese in the 15th century, and occupied by the French in 1907. Pop. 106,608, of whom 34,984 are Europeans.

CASA GRANDE (Sp. large house). Name applied to several prehistoric communal dwellings in the southern United States and Mexico. One near Florence, Arizona, when first visited in 1694, was of four storeys and roofless. The walls are of huge adobe blocks, 3 ft. to 5 ft. thick: the ground floor, 59 ft. by 43 ft., has five rooms. A canal brought water from the Gila river, $\frac{1}{2}$ m. away.

CASALS, PABLO (b. 1878). Spanish musician. Born near Barcelona, he studied in the Conservatoire there and rapidly became famous as a violoncellist. In 1898 he first appeared in London. His honours include the gold medal of the Royal Philharmonic Society, 1912, and membership of the legion of honour.

CASANOVA, GIOVANNI JACOPO (1725-98). Italian adventurer. He was born in Venice, and is chiefly famous for his adventures and his writings. He went from place to place making friends and losing them, gaining money and employment, but soon from misconduct and folly, an exile without either. He was at one time director of state lotteries in Paris, at another a spy in the service of Venice. His acquaintances included Frederick

Giovanni Casanova,
Italian adventurer

the Great and other monarchs, as well as Voltaire. He died June 4, 1798. His *Mémoires* were first published in 12 vols. in 1826-38. His younger brother, Francesco (1727-1802) was a painter who gained a high reputation in Paris and in Vienna.

CASAUON, ISAAC (1559-1614). French classical scholar. Born at Geneva, Feb. 18, 1559, he succeeded Francis Portus as professor of Greek there in 1582. From 1596 to 1600 he held the Greek professorship at Montpellier, and in 1600 removed to Paris, where, in 1604, he succeeded Gosselin as librarian to the king. In 1610 Casaubon settled in England, where he was naturalised in 1611, and died July 1, 1614. His introduction to Polybius, 1609, is a valuable contribution to the history of Greek historiography.

His son, Méric Casaubon (1599-1671), was educated in England, and held livings in the Church of England. He did valuable classical work, edited numerous Latin authors, and wrote his father's life.

Isaac Casaubon,
French scholar
After von Werff

CASCA, PUBLIUS SERVILIUS. Roman noble. He belonged to the reactionary party, and was one of the conspirators against Julius Caesar. He is said to have struck the first blow, wounding Caesar in the neck. He was probably slain at Philippi (42 B.C.).

CASCADE. Term used in the description of land forms to denote a river feature characteristic of a sudden change of slope in the bed of the stream. When the slope gradually becomes steeper, rapids are formed, as in most mountain streams and in nearly all the rivers of Japan: when the slope is vertical, waterfalls result.

In physics cascade is the name of a method of performing operations in a series. It also denotes the joining up of pieces of apparatus

Louis de Casabianca,
French sailor
From portrait in Bib.
Nat. Paris

(e.g. the cells of a battery, or a number of thermionic valves) in consecutive order, so that the output of the first is led to the input of the second, and so on.

CASCARA (Sp. peel). Dried bark of *Rhamnus purshiana*, the California buckthorn. A dry extract of cascara (dose 2 to 8 grs.), a liquid extract (dose $\frac{1}{2}$ to 1 fluid dram), and an aromatic syrup (dose $\frac{1}{2}$ to 2 fluid drams) are used in medicine as purgatives.

CASCARILLA BARK. Bark of a tree (*Croton eluteria*) of the order Euphorbiaceae. It is a native of the Bahamas. It has aromatic, stomachic, and tonic properties being administered in dyspepsia, chronic diarrhoea, dysentery, and similar complaints.

CASEIN (Lat. caseus, cheese). Protein compound contained in milk, of which it forms about 3 $\frac{1}{2}$ p.c. It exists in a suspended state and is thought to be combined with calcium in milk. On the addition of acids or rennet the casein is precipitated, and the milk is said to have curdled. The industrial uses of casein are of great importance, and its preparation is carried out on a large scale. Dried milk, which is mainly casein when it is made from skimmed milk, contains the natural sugar of the milk. Many concentrated foods are sold which have a casein salt as a basis.

A number of plastic substances used as substitutes for horn, ivory, and celluloid are made from casein, and possess the great advantage that they are non-inflammable.

Casemate. Above, trench casemate, dug-out or bomb-proof shelter. Below, casemate on H.M.S. Australia and battery of 4 in. and 12 pdr. guns viewed from aft

CASEMATE (Ital. casa, house; matta, dark). House or lodging for the garrison of a fortress constructed as part of its wall or rampart, and thus secure from shot or shell; also a similar cover for the fortress guns. In modern infantry redoubts the casemate is a trench about 6 ft. deep and 7 ft. wide, sunk close to the rear of, or underneath, the parapet, and roofed in. In warships the casemate is a shield of armour plating about 6 ins. in thickness. See Armour; Battleship.

CASEMENT, ROGER (1864-1916). Irish conspirator. Born Sept. 1, 1864, he entered the consular service. He exposed the evils in native labour conditions on the Congo and at Putumayo, and in 1911 was knighted. In 1915 he visited the Irish prisoners of war in Germany, and tried to persuade them to renounce British allegiance and form an Irish brigade in the German army. On April 20, 1916, he landed in Ireland from a German vessel and was arrested.

Roger Casement, Irish conspirator

Brought to trial in London for high treason, he was hanged at Pentonville on Aug. 3, 1916.

CASERTA. City of Italy, 21 m. by rly N.E. of Naples. It grew up round the magnificent palace of the Bourbons, built 1752-54. In Sept., 1919, the palace and grounds were presented by the king of Italy to soldiers who had fought in the Great War. Pop. 35,052.

Caserta Vecchia, 3 m. N.E., has a remarkable 12th century cathedral.

CASHEL. Urban dist. and market town of co. Tipperary, Irish Free State. It is 96 m. S.W. of Dublin on the Gt. Southern Rlys. It is the seat of a Roman Catholic archbishop and a Protestant bishop. A flat-topped limestone mass, the Rock of Cashel (300 ft.), is surmounted by the ruins of a 12th century cathedral. Cormac's chapel round tower, and ancient cross. Market days, Wed. and Sat. Pop. 2,953.

Cashew nut and leaves

at the extremity shaped fruit-stalk, and their shells contain a black caustic oil. This is extracted for use in protecting timber from termites.

Cashmere. Variant spelling of the name of the Indian native state Kashmir (q.v.).

CASHMERE. Name of various dress materials. (1) Goat hair of exceptional fineness and softness produced by the Tibetan goat, used to make native Kashmir shawls and for high-class knitted undergarments. (2) Dress stuff twilled on the surface, plain on the back, made with a weft of merino wool and generally a warp of the same. (3) Cashmere trousering, a name given by tailors to worsted and smooth-faced trouserings. (4) Cashmere twill, used in weaving coarse and other woollens, a corrupt form of Kerseymere.

Cashmere Goat. This animal is noted for its fine and useful hair

The Cashmere goat is a breed of the domesticated goat (*Capra hircus*). Beneath its long, fine hair it has a thick under-fleece of exceptionally soft wool which is combed out and spun.

CASH ON DELIVERY. In short, c.o.d. System by which a post office or public company undertakes, when delivering goods, to collect the money for them from the buyer and to transmit it to the seller. The maximum value that can be sent is £40. In addition to the usual postage and registration fees, there is a C.O.D. fee, which is 4d. for 10s. and 10d. for from £2 to £5, with an additional 2d. for every £5, or part of £5.

CASIMIR-PÉRIER, JEAN PAUL PIERRE (1847-1907). French statesman. Born in Paris, Nov. 8, 1847, he became in 1871 secretary to his father, Auguste Casimir-Périer, then minister for internal affairs. In 1876 he was deputy for the department of Aube. Conservative in outlook, yet an upholder of republican institutions, he became under-secretary for war in 1883, president of the chamber in 1893, and president

J.P.P. Casimir-Périer, French statesman

of the Republic in June, 1894, after the assassination of Carnot. Within six months he resigned, saying he was not supported by his ministers. He died March 11, 1907.

CASINO. Town of New South Wales, Australia. On the Richmond river, 67 m. by rly. N. of Grafton, it is a rly. junction. The road from Darling Downs here comes down from the coast ranges to the coastal plains, where sugar cane is grown. Pop. 3,635.

CASKET. Literally, a small box or chest. The word, however, has come to be used for a receptacle of more than ordinary value, either on account of the rich material of which it is made or with which it is adorned, or of the value of its contents.

CASKET LETTERS. The letters written in French by Mary Queen of Scots to Bothwell, in 1567, were found in a silver casket, hence the name, but they disappeared about 1584, and only copies and translations exist. If genuine throughout, they prove that Mary was a party to the death of Lord Darnley. Mary's defenders, however, assert that the most damning passages are forgeries.

Caskets. Lighthouse on the highest of these rocky and dangerous islets in the English Channel

CASKETS OR CASQUETS. Group of rocky islets in the English Channel, 7 $\frac{1}{2}$ m. W. of Alderney. They were the scene of the wrecks of the White Ship, 1120: the Victory, 1744, when all on board perished, and the Stella, 1899. On the highest is a lighthouse in lat. 49° 43' N., long. 2° 22' W. They are mentioned in Victor Hugo's *Toilers of the Sea*.

CASPIAN SEA. Inland sea between Europe and Asia. The ancient Mare Caspium or Mare Hyrcanum, this inland salt sea has an area of 170,000 sq. m., and is the largest inland body of water on the globe. It is 760 m. long from N. to S., and its width varies from 120 m. to 300 m. It is about 85 ft. below the level of the Mediterranean, has no outlet, and virtually no tides. The principal rivers draining into it are the Ural, Volga, Terek, Kur, Aras, Sefid Rud, and Atrek. It abounds with sturgeon. See Baku.

CASQUE (Fr.). Armour for the head. It was more especially a form of helmet without any covering for the face, and was worn for

Casque, Renaissance period, embossed and damascened

parade rather than for fighting or even tilting purposes. In the Renaissance period great attention was paid to casque making, and many surviving specimens are beautiful in design and workmanship. See Armour.

CASSANDRA. In Greek legend, daughter of Priam, king of Troy, and of Hecuba. Smitten by her beauty, the god Apollo conferred on her the gift of prophecy in return for her favours, but when she failed to keep her word he punished her by causing her prophecies to be always ridiculed and disbelieved. After the fall of Troy, Cassandra was slain by Clytemnestra. The name is used in modern times for one who prophesies evil without sufficient justification.

CASSATT, MARY (1845-1926). American painter. Born at Pittsburg, Pennsylvania, in 1879 she settled in Paris, where she was attracted by the Impressionist group, then seeking recognition. Her pastel, *The Young Mother*, is in the Luxembourg, and specimens of her work are in the Metropolitan Museum, New York, and the museums of Boston and Worcester, Mass. She died June 14 1926.

CASSEL, SIR ERNEST (1852-1921). Anglo-German financier. Born at Cologne, March 3, 1852, he settled in England and became a member of the circle of the prince of Wales, afterwards King Edward VII. He was notable as a racehorse owner and for his generosity to charities, especially hospitals. In 1905 he was knighted. He died Sept. 21, 1921. His daughter married W. W. Ashley (q.v.).

CASSEL, GUSTAV (b. 1866). Swedish economist. Born at Stockholm, Oct. 20, 1866, he studied mathematics and in 1904 became a professor of economics. During the war he was consulted by the German Government on financial matters and later about the stabilization of the mark. In 1920 and 1921 his Memoranda on the world's monetary problems attracted much attention. In 1922, as an expert, he attended the conference at Genoa, and was consulted on other occasions on matters of international importance.

CASELL, JOHN (1817-65). British publisher. Born Jan. 23, 1817, the son of a Manchester innkeeper, he became a dealer in tea and coffee in London. Soon, however, he turned author and publisher, the change being due largely to his religious and philanthropic interests. From his office at 335, Strand, he issued in Jan., 1850, *The Working Man's Friend and Family Instructor*. On April 3, 1852, he started *The Popular Educator*, and in 1861 *The Quiver*.

John Casell,
British publisher

In 1859 he entered into partnership with Petter and Galpin, and that firm developed into Casell & Co. In 1926 the magazine side of the business was acquired by The Amalgamated Press Ltd. John Casell died April 2, 1965.

CASSIA. Extensive genus of leguminous shrubs and herbs, chiefly natives of the tropics. Several species yield medical substances, e.g., senna, consisting of the leaflets and seed-pods, from which purgative drinks are made. See Senna.

Cassia, American
senna plant

CASSINO (anc. Casinum). Town of Italy, 85 m. by rly. S.E. of Rome. Picturesquely placed at the foot of Monte Cassino (1,700 ft.), on which stands the famous Benedictine monastery, it was called until 1871 San Germano. It has a ruined castle, some old churches and remains of a Roman amphitheatre, etc. The monastery, founded 529, on the site of the temple of Apollo, and now a national monument, contains a large library, a picture gallery, and many valuable relics.

CASSIOBURY or **CASHIOBURY**. Former seat of the earl of Essex (q.v.), N.W. of Watford, Hertfordshire. The manor belonged to St. Albans abbey; at the dissolution of the monasteries it was given to Sir Richard Morrison, or Moryson, from whom it passed by marriage to Arthur Lord Capel, in the hands of whose descendants it remained until the 20th century. Of the park of 700 acres, 75 acres were purchased by the Watford urban district council as a public park. The mansion was demolished and the rest of the estate sold.

CASSIOPEIA. Constellation in the northern hemisphere. Cassiopeia and her chair, the lady on the throne, are easily recognizable, her five principal stars making a scrawling W. In classical mythology, Cassiopeia was the name of an Ethiopian queen, mother of Andromeda. See Constellation.

Cassiopeia. South American
birds in their pocket-like
nests

Cassiopeium. Variant name for the rare metal Itteium (q.v.).

CASSIQUES. Small group of South American birds, forming a subfamily of the trochilids. The cassiques represent the starlings in the New World, and are notable for the long pocket-like nests which they suspend from the branches of trees.

Cassiterides (Gr. Tin Islands). This is the traditional name for the places whence the Phoenicians obtained their tin.

CASSITERITE or **TINSTONE**. Ore from which tin is obtained. It is an oxide of tin, and when pure contains 78.6 of the metal. It occurs chiefly in the form of rounded grains or pebbles in the crystalline rocks, granite, gneiss, and mica slate, or in derived formations. Cassiterite is sometimes found as a white, translucent crystal of great beauty, known as tin diamond. See Tin.

CASSIUS, GAIUS CASSIUS LONGINUS (d. 42 B.C.). Chief conspirator against Julius Caesar. He joined Pompey on the outbreak of the civil war, but when the battle of Pharsalus (48) shattered the fortunes of the Pompeian party, Cassius was pardoned by Caesar, and made praetor for the year 44. He headed the conspiracy and took part in the murder of Caesar. He afterwards joined Brutus, and when his troops were defeated by those of Antony at Philippi (42) he ordered one of his servants to stab him to death.

Gaius Cassius,
Roman conspirator
From an ancient bust

Another of the murderers of Caesar was known as Cassius Parmensis (d. 30 B.C.), and was a poet and literary man of some note.

CASSIVELLAUNUS (c. 54 B.C.). British prince, chief of the Catuvellauni, a tribe N. of the Thames. He led the resistance to Julius Caesar's second invasion in 54 B.C., but was forced to submit.

Cassock. English
cassock and sash

CASSOCK (Ital. *casacca*). Close-fitting under-dress with tight sleeves, worn by clergy and laymen engaged in the conduct of divine service. It resembles a long coat, has a single upright collar, is confined at the waist with a sash called a cincture, and is worn beneath surplice or alb. In the English church the colour is usually black, occasionally violet, for the clergy. For sacristans and vergers it is black.

CASSOWARY. Large genus of running birds (Cassarius) akin to the ostrich and emu. The cassowaries stand about 5 ft. high and are found only in Australia, New Guinea, and certain adjacent islands. The head and upper

part of the neck are bare, the head being crowned with a kind of bony helmet. The wings are rudimentary. The plumage is black and glossy, the narrow feathers resembling coarse hair. The legs are stout and strong, enabling the bird to run fast and defend itself by kicking.

Cassowary. A kind of ostrich peculiar to Australia and New Guinea

CASTANETS (Span. *Castañeta*, chestnut). Pairs of pieces of hard wood, hollowed like small shells or chestnuts, used to emphasise the rhythm in dance music of Spanish, Moorish, or Eastern type. They are usually actuated by a special kind of finger grasp on the part of the dancer, but are also mounted on a handle which requires only to be shaken.

CASTE (Port. *casta*, race. Lat. *castus*, chaste). Social system under which every Hindu is deemed to be born into an endogamous group with a common name and traditional occupation. These ties are often conjoined with a traditional common origin and the possession of the same tutelary deity, social status, and ceremonial observances.

Modern Indian caste is the outcome of a gradual social development, one impelling force of which is the communal as opposed to the individualist element in the Indian mind. Most existing castes are occupational and many the result of economic factors. See Brahmanism; Hinduism.

CASTELNAU, MARIE JOSEPH EDOUARD DE CURIERES DE (b. 1851). French soldier. Born Dec. 24, 1851, he entered the French army in 1870. In 1871 he fought in the armies of the Loire, and also against the Paris communists. On the outbreak of the Great War Castelnau was placed in command of the French second army, Aug.-Sept., 1914, and, with General Dubail, saved Nancy. In 1915 he was given, under General Joffre, immediate direction of the French forces in France, as chief of the general staff, and in that year went to Salonica to examine the position there. In 1917 he was in command of a group of French armies at Verdun, and in 1918 he commanded an army in Lorraine. In 1919 he was elected to the Chamber of Deputies.

CASTIGLIONE, COUNT BALDASSARE (1478-1529). Italian writer. After service with several Italian rulers, he was sent as Papal nuncio to Spain. There, at Toledo, he died. He is most famous as the author of *Il Cortegiano* (The Courtier), 1528. This work gives dialogues which reveal much of what was best in the social and intellectual life of the time.

CASTIGLIONE, GIOVANNI BENEDETTO (1616-70). Italian painter and engraver.

called usually *Il Crocchetto* and *Il Benedetto*. He was born in Genoa, where are his chief works. Some of these depict rural scenes; others are the *Nativity*, *S. Mary Magdalene*, and *S. Catherine*, all in churches of his native city. His engravings are nearly all after his own drawings.

Giovanni Castiglione,
Italian painter

CASTILE. One of the kingdoms into which Spain was divided before it was united under Ferdinand and Isabella. This former kingdom occupied the centre of the country and consisted of Old and New Castile.

The counts of Castile were at first vassals of the king of Leon, but before long they were acting as independent rulers. The next step was easy. Other little Christian kingdoms had arisen around Castile and there were endless quarrels between them. In 1028 Sancho of Navarre seized the country and gave it to his son Ferdinand, who is regarded as the first king of Castile. Ferdinand secured also Leon, and regarded himself as the overlord of the other Christian kings. Descendants of Ferdinand ruled over the two kingdoms, one of them being John II, son of Henry III, who succeeded in 1406.

Several times the ruling families of Aragon and Castile had intermarried, and John himself was not far removed from the succession to Aragon. The union of the two kingdoms, however, came about through his daughter Isabella. Her brother, Henry IV, had no sons, so she secured the throne. She married her cousin Ferdinand, who became king of Aragon, and from that time the kingdom of Spain, a union of Castile and Aragon, dates. See Spain.

CASTING OR FOUNDRY. Pouring a melted metal or mixture of metals into a mould, where it is allowed to solidify. The art was practised by the ancient Egyptians, and the Chinese, Hindus, Greeks, Etruscans, Romans, and Samians attained a high degree of excellence in it. The heat required for melting the metals was for a long time furnished exclusively by the combustion of charcoal, coal, or coke. Now gas and electricity are used to a large extent. The furnaces employed range from the small gas-fired oven used by the dentist to the gigantic blast furnace. A mould is necessary in which the casting may be formed. In the case of hollow castings cores may be required. A pattern or model will represent the external form of the finished casting; the core corresponds to the internal form, or hollow part.

CASTING VOTE. Deciding vote given by the chairman of a meeting when the votes on either side are equal. In Britain, custom, but not law, decrees that the chairman of a public meeting has a casting vote. In the case of public companies the chairman has an ordinary vote as well as his casting one. At a parliamentary election the returning officer has a casting vote. See Chairman.

CASTLE (Lat. castellum small fortified place). Fortified building constructed for purposes of defence. The Roman castrum was a piece of ground, generally on the summit of a hill, surrounded by a ditch or earthwork sometimes with a palisade. As the use of the castrum extended to more or less permanent quarters for soldiers, timber buildings were erected within the enclosure.

In early Norman times a certain type of small castle was common in both England and France. It consisted of a donjon or keep of solid stone, castellated so as to afford facilities for the discharge of missiles, and set upon a mound surrounded by the walls of a courtyard, a ditch, and an earthwork. In its most elaborate stage of development the interior

was divided into (1) the outer ballium, also known as a bailey, courtyard, or base-court, the approach to which was guarded by a towered gateway or barbican, drawbridge, and portcullis; and within which were the stables and a justice mount. (2)

An inner ballium, also defended by a gateway and within which were the chapel and barracks. (3) The donjon or keep, of great strength, and with a well. On the first floor was the hall, approached by a movable ladder or staircase; on the second floor were the apartments of the lord; and the summit was battlemented. Among English examples of Norman work are the Tower of London, the keep of Rochester, Kent, and Canterbury, Colchester, Dover, Guildford, Heddingham, and Porchester castles.

Castle. Arrangement of a Norman castle. 1. Keep. 2. Chapel. 3. Stable. 4. Inner bailey. 5. Outer bailey. 6. Barbican. 7. Justice mount. 8. Soldiers' quarters.

CASTLE ASHBY. Seat of the marquess of Northampton in Northamptonshire. About 6 m. S.E. of Wellingborough, it dates in part from the reign of Henry VIII. It was designed in part by Inigo Jones and stands in a park of 645 acres with ornamental lakes.

CASTLEBAR. Urban dist. and market town of co. Mayo, Irish Free State. It stands on the river Castlebar, at the head of Lough Lanach or Castlebar, 11 m. N.E. of Westport by the Gt. Southern Rlys. Capital of the county, and an agricultural centre, it has a castle. Market day, Sat. Pop. 4,266.

CASTLE CARY (Roman Coria). Roman fort 6 m. S.W. of Falkirk, Stirlingshire. Massive masonry ramparts, with an angle turret, enclosed 4 acres. The N. side being on the line of Antonine's Wall. A granary 89 ft. by 21 ft. was supported on piles; a ramparted annex contained the baths. The church of All Saints has a 15th century font.

CASTLE DONINGTON. Town of Leicestershire. It is near the Trent, 11 m. S.W. of Nottingham by the L.M.S. Rly. Of its old castle, only vestiges exist. Donington Hall (q.v.) was an asylum for French refugees, including Charles X, in 1830, and was used for German officers during the Great War. Basket making is carried on. Pop. 2,736.

CASTLE DOUGLAS. Burgh and market town of Kirkcubrightshire. It is on Loch Carlingwark, 19½ m. S.W. of Dumfries by the L.M.S. Rly. Its sheep and cattle sales are among the most important in S.W. Scotland. It has tanning, agricultural implement, and mineral water industries. Down to 1765 it was called Causewayend, then Carlingwark, and in 1792 it was renamed Castle Douglas. Market day, Mon. Pop. 2,801.

CASTLEFORD. Urban dist. and market town of Yorkshire (W.R.). It is on the Aire, 10 m. by rly. S.E. of Leeds, and is served by the L.M.S. and L.N.E. Rlys. It occupies the site of a Roman camp. Market day Sat. Pop. 24,185.

CASTLEMAINE. Town of Victoria, Australia, 78 m. by rly. N.W. of Melbourne. An important rly. and road junction and a health resort for chest ailments, it has trade in wine, fruit, and stone. Pop. 7,170.

CASTLEREAGH, ROBERT STEWART. Viscount (1769-1822). British statesman. Eldest son of the first marquess of Londonderry, he was born June 18, 1769. He was instrumental in persuading the Irish parliament to pass the Act of Union, 1800. He entered

Addington's cabinet in 1802, as president of the board of control, and in 1805 became Pitt's war minister. While the Walcheren expedition of 1809 was Castlereagh's plan, its failure was due to the delays of the government. Finding his retirement had been arranged in the cabinet, he challenged Canning to a duel, 1809, with the result that both resigned office. In 1812 he returned as foreign secretary and leader of the House of Commons. He represented Britain at the congress of Vienna, 1814, and refused Napoleon's proposals for a separate peace in April, 1815. He arranged treaties with Spain in 1817, and Belgium in 1818, for the abolition of the slave trade. In 1822 his brain gave way, and he died Aug. 12, 1822. The title is still borne by the eldest son of the marquess of Londonderry. Consult Lives, Lady Londonderry, 1904: A. Hassall, 1908.

Viscount Castlereagh, British statesman.

CASTLE RISING. Village of Norfolk. At one time a borough and seaport, it sent two members to parliament until 1832. In 1835 it lost its rank as a chartered town. It is famous for its castle. Built in the 12th century, it is one of the most interesting buildings of its kind in the country. The church is a beautiful example of Norman work. Near is the bede house, an almshouse, also called Trinity Hospital, founded in 1614. The village is 1½ m. from North Wootton, on the L.N.E. Rly.

CASTLETON. Village of Derbyshire. It is 17 m. S.W. of Sheffield, and is the capital of the Peak district. Its ruined castle was built by William Peveril, a natural son of William I. (See Scott's Peveril of the Peak.) Near are the cavern of the Peak and fluorspar mines, including the Blue John. Pop. 646.

CASTLETOWN (Manx, Bully Cashtel). Coast town and, until 1862, capital of the Isle of Man. It is on the W. shore of Castletown Bay, 10 m. by rly. S.W. of Douglas. Castle Rushen was built about 960, the present castle having been built probably in the 14th century. The court house dates from 1644, and the old House of Keys was the seat of the Manx parliament for two centuries. Pop. 1,880.

CASTOR AND POLLUX (Gr. Polydeukēs). In Greek mythology, two heroes generally represented as twin sons of Zeus

Castor and Pollux. Ancient classic statue of Castor and a horse. From the Capitol, Rome.

(Dioscuri, Gr. Dios Kouroi) and Leda. Castor was famed as a tamer of horses, while Pollux was a great boxer. They took part in the Argonautic expedition and the Calydonian boar hunt, and invaded Athens to rescue their sister Helen.

They are supposed to have fought on the side of the Romans against the Latins at the battle of lake Regillus.

Castor and Pollux are the names given to two bright stars in the constellation of Gemini. Castor is a celebrated double star.

CASTOR OIL PLANT (Ricinus communis). Small tree of the order Euphorbiaceae,

believed to be a native of tropical Africa. North of the Alps it is grown as an ornamental annual. The green flowers, produced in a crowded spike at the ends of the branches, have no petals. The upper (female) flowers develop into large three-lobed, prickly capsules, each lobe containing a single mottled seed.

Castor Oil Plant,
Ricinus communis

The valuable medicinal oil (castor oil) is obtained from these seeds by pressure. It is a mild purgative largely used for children.

CASTRATION

(Lat. castrare, to geld). Removal of the testicles in the male, or of the ovaries in the female.

It is performed on horses to make them more docile, and also on certain other animals.

CASUISTRY (Lat. casus, a particular instance). Application of general accepted principles of right and wrong to particular and concrete cases in order to decide personal conduct. Christian casuistry, as a scientific study of the application of Christian morality to the daily duties of life, began in the 14th century with scholastic theology. The controversy in the 17th century within the Roman Catholic Church between two extreme schools of rigorists and laxists, the former largely Jansenist, the latter Jesuit, brought the whole study into disrepute. See Jesuit.

CAT. Name given to the most graceful and highly specialised members of the Carnivora. They are mainly distinguished by the possession of completely retractile claws, except in the cheetah, and by the dentition. There are three pairs of incisor teeth in each jaw, and the canines are exceptionally long. The true molars are rudimentary. The large cats include the lion, tiger, leopard, jaguar, ounce, puma, and cheetah; while among the smaller ones are the lynx, caracal, serval, clouded leopard, ocelot, the various "wild cats," and the domestic breeds. The British wild cat, *Felis catus*, is the only member of the cat family still found wild in Great Britain. It closely resembles a grey domestic cat, but is larger and heavier in build, and its tail is short and bushy.

The domestic cat is thought to be the result of crossings between the wild cat and the Egyptian cat. Of the many domestic breeds.

CAT. Nautical term. To cat the anchor is to haul it completely up. Cat head is the place where the anchor is secured; a cat block that to which the anchor is secured at the cat head; cat falls are the ropes by which the anchor is hauled inwards. A cat boat, used mostly in America, is a small boat with one sail right forward. Cat, an abbreviation of cat o' nine tails, is also used for the nine-tongued whip employed in corporal punishment for certain criminal offences.

CATACOMB (Gr. kata, down; kymbé, a hollow). Subterranean place of sepulture. The name is derived from Catacumba (late

Catacomb. Chapel in the Roman catacombs, showing burial niches

about 615 acres, these labyrinths of galleries and chambers would, if extended in one straight line, attain a length variously estimated at from 350 to 800 m., and the number of bodies interred between 6,000,000 and 7,000,000. They were excavated in the soft tufa or granular stone of the Roman Campagna, at varying depths, and they are usually four to seven storeys. The burial niches were hewn parallel with the narrow passages, forming tiers of recesses ranging from three to seven. Burial in the catacombs ceased after the sack of Rome in 410.

CATAPULT (Fr., Ital. catapulta). Temporary structure of wood used in funeral ceremonies. On it is placed the coffin at a height which makes it visible from a distance. The word also denotes an open hearse or funeral car in which the coffin is raised.

in the position in which they are placed, a peculiarity which distinguishes it from trance. It may last for hours or days, generally with intervals of freedom from the condition, and is much more frequent in women than in men.

CATALONIA (Sp. Cataluña). Former prov. of Spain and principality of Aragon, now represented by the provs. of Gerona, Barcelona (q.v.), Lérida, and Tarragona. It is bounded by the Pyrenees, the Mediterranean, and Aragon.

In recent years there has been unrest in Catalonia. In 1918 some Catalans petitioned the Peace Conference for independence. Others wanted something like home rule, and Primo de Rivera, when captain-general of Catalonia, favoured this idea. During his dictatorship, however, he carried out a policy of repression. See Spain.

CATALYSIS (Gr. kata, down; lysis, loosing). Name first applied by Berzelius to a class of chemical reactions which only take place in the presence of a substance—the catalyst—which itself undergoes no permanent change. Potassium chlorate when heated to about 370° C. gives off oxygen, but if the powder is mixed previously with a small proportion of manganese dioxide, the heat required to cause evolution of oxygen is much less. The manganese salt is unchanged, and can be recovered in its original state from the residue. An important industrial application of catalysis is involved in the conversion of oils into hard fats. Inferior oil such as whale oil can be converted into a white hard fat by agitating it with hydrogen in the presence of a catalyst.

Catapult. Sir Edward Poynter's representation of a Roman catapult in action against the walls of Carthage

CATANIA. City and seaport of Sicily. Capital of the province of Catania, it lies at the base of Mt. Etna, 59 m. by railway S. of Messina. It has a cathedral, a university, a Benedictine monastery, and remains of a Roman amphitheatre, temple, baths, and aqueduct. The port is protected by a breakwater, and has facilities for dealing with coal. Catania was founded by the Greeks and was afterwards a rich Roman city. Pop. 289,644.

CATAPULT (Gr. kata, down; pallin, to poise, hurl). Ancient engine of war, said to have been invented by Dionysius of Syracuse, 399 B.C. It consisted of a heavy wooden frame supporting a large bow which was bent by means of a windlass and cord and released by a catch or trigger. It was employed to throw heavy darts, arrows, stones, etc. See Crossbow.

CATARACT (Gr. kata, down; rhégynai, to break). Opacity in the crystalline lens of the eye or its capsule. It prevents the passage of the rays of light and therefore causes partial or total blindness. See Eye.

CATARRH (Gr. kata, down; rhein, to flow). Inflammation or congestion of any mucous membrane of the body. The term, however, is most frequently applied to inflammatory conditions of the nasal mucous membrane. See Nose.

Cat: a wild specimen and types of domesticated breeds. 1. Short hair silver tabby. 2. Siamese cat. 3. Manx short hair. 4. Cream Persian. 5. Wild cat from Scotland. 6. Chinchilla Persian

the long-haired Persian and Angora varieties are the most esteemed. The tailless Manx variety may be of Japanese origin.

CATALEPSY (Gr. kataleipsis, seizure). Abnormal condition in which the muscles become rigid and the limbs remain for a time

CATBIRD. Popular name for a species of American mocking bird (*Galeoscoptes carolinensis*), which makes a sound somewhat like the cry of a cat. The name is also given to a bright green bird of Australia (*Aeluredus viridis*) allied to the bower birds.

CATCHFLY (Silēnē). Genus of herbs of the order Caryophyllaceae. They are chiefly found in the N. temperate regions. Many species exude a sticky fluid from their stems and calyces, in which insects are trapped. See illus. below.

CATEAU CAMBRESIS. Name often given to the French town of Le Cateau (q.v.). It means the castle of Cambrai, and was given because the bishop of Cambrai built a castle here.

The Treaty of Cateau Cambresis was made between France and Spain, with whom England was allied in 1559. The terms provided for the cession of Calais to France for eight years, when it was to be restored to England, or 500,000 crowns paid for it. France and Spain each gave up their conquests.

CATECHISM (Gr. katēchein, to instruct orally). System of teaching by formal question and answer. Such methods were widely used for secular instruction in the early 19th century, but are now mainly restricted to religious instruction of the young.

Throughout the Anglican Church the catechism in the Book of Common Prayer is the standard for the instruction of the young, and is required to be learnt before confirmation. It consists of two parts, the earlier dating from the reign of Edward VI, and the later from that of James I. Among Scottish and other Presbyterians the shorter catechism of the Westminster Assembly (1647) is the standard book of doctrinal instruction.

CATECHU. Two kinds of cutch known to the pharmacopoeia as black catechu and pale catechu. The first is produced by boiling chips of the wood of *acacia catechu*, an East Indian tree. The decoction so obtained is very astringent and bitter, and is prescribed in diarrhoea, haemorrhage, and mucous discharges. Pale catechu is the product of a Malayan climbing shrub, *Uncaria gambir*. The leaves and young shoots are boiled and the liquid is evaporated to a syrup.

CATERHAM. Urban district of Surrey, 7 m. S. of Croydon, on the Southern Rly. Here are the barracks where recruits for the Guards are trained. Caterham valley is finely situated between wooded hills. Pop. 14,000.

CATERPILLAR (old Fr. chatte peluse, hairy cat). Larva of the Lepidoptera. The eggs, which are laid by the butterfly or moth in situations near the food of the future larvae, hatch out usually in from a week to a month. The larvae have long, segmented bodies, often brilliantly coloured and sometimes adorned with spiny processes or tufts of hair. The head is protected with an armour of chitin, and is provided with six eyes on either side. There are also two short antennae. The mouth is armed with powerful jaws. There are six jointed legs placed on the first three segments of the body. The pro-legs, which vary in

number, are placed farther back, and are really short tubes armed with a broken circle of hooks. On the last segment of the body is a pair of claspers, by means of which the animal holds to the plant on which it is feeding.

Along the sides of the body are spiracles, or breathing holes. The larval stage is occupied almost entirely in eating and in storing up a reserve for the pupal stage, in which no food is taken. Many species possess a spinning apparatus for producing threads of silk by which they can lower themselves to the ground and climb up again.

CATERPILLAR TRACTOR. Device adopted for moving a heavy load over soft ground where wheels sink and stick. Round the wheels passes an endless band of linked plates, which travels along as the wheels revolve and forms a track on which the vehicle is supported. The wheel base is, in effect, the whole length of the band stretched between the two wheels. The device is much used on agricultural machines, and became very prominent during the Great War in connexion with the development of the Tanks. See Tank.

CATESBY, ROBERT (1537-1605). English conspirator. Son of Sir William Catesby, and like his father, a Roman Catholic and a determined recusant, he was involved in Essex's rebellion, 1601. He became the moving spirit in the Gunpowder Plot. Warned that the plot had been discovered, he delayed his flight for a week, and then, pursued by the sheriff and his posse, reached Holbeache House, near Dudley, Staffordshire, where he was shot, Nov. 8, 1605.

CAT FISH (*Anarrhichas lupus*). One of the blennies. It differs from the other blennies in being of larger size (3 ft. to 6 ft. long), and affecting the deeper waters in the North Sea and the Atlantic. Its colour is bluish-grey marked with darker bands from the back half way down the sides. The peculiarity which has suggested the name is the possession of long curved fang-like teeth.

CATFORD. Suburb of London, in the metropolitan borough of Lewisham. It is 8 m. S.E. of Victoria Station on the Southern Rly. Here are S. Dunstan's College for boys, and the Lewisham town hall.

CATGUT. Name used for a string of great strength prepared from the intestines of various animals. The strings are used for

Caterpillar. 1. *Malacosoma neustria* (Lackey Moth). 2. *Vanessa antiopa* (Camberwell Beauty Butterfly). 3. *Phalera hucephala* (Buff Tip Moth). 4. *Biston hirtaria* (Brindled Beauty Moth)

musical instruments, for tennis and other rackets, for bows, and for surgical sewing. Mueb catgut comes from Italy.

CATHAY. European name for China in the Middle Ages, still used in poetry. It is derived from Khitai, the kingdom of N. China conquered by the Khitai tribes of Mongolia in the 10th century.

CATHCART. Parish of Scotland, mainly in Renfrewshire, but partly in Lanarkshire. It lies on the White Cart river, 2 m. S. of Glasgow, of which it is a ward, on the L.M.S. Rly. It includes the villages of New and Old Cathcart, the latter having the ruins of a castle, and Langside (q.v.).

The district of Cathcart in Cape Province, S. Africa, is suitable for sheep rearing. Its chief town is Cathcart, founded in 1876, 85 m. by rly. N.W. of East London.

CATHEDRAL (Gr. kathedra, a seat). Church of an eccles. dist. in which the cathedra, or seat of an archbishop or bishop, is permanently placed. In eccles. law authority over a cathedral is vested in a governing body called the dean and chapter. There are usually four or six canons (q.v.) attached to a cathedral, besides honorary canons or prebendaries.

Cathedrals in Great Britain were divided into (1) those which were always served by secular canons not attached to a monastery, and (2) monastic churches served by regulars, i.e. monks. At the Reformation the monastic cathedral establishments were dissolved and then reconstituted on a new basis.

The architectural planning of cathedrals does not differ in essentials from that of other important churches. The most noble of English buildings, such as York, Durham, Canterbury, and Lincoln, have three towers; Lichfield and Truro have three spires; one prominent central tower is the feature of Gloucester, Winchester, and S. Albans.

The cathedral of the Roman Catholic archbishopric of Westminster was erected 1895-1903, and is a striking building in the Byzantine style. New York possesses the two best specimens of cathedral architecture in America, S. Patrick's (R.C.) and S. John the Divine (Protestant Episcopal), both modern. The only cathedral of the Church of England built since the Reformation is the one at Liverpool, which when completed will be the largest in England. Cathedrals for the new dioceses of Sheffield and Guildford have been planned. See Apse; Basilica; S. Paul's; Westminster Abbey; also illustrations of the principal cathedrals of Britain and elsewhere under their respective names.

Catherine. Toothed wheel, on which Catherine was condemned to be tortured

CATHERINE OF ALEXANDRIA. Christian saint, virgin, and martyr of the 4th century.

According to the legend she was of noble birth and was martyred under the emperor Maximinus. The wheel on which she was to be broken was miraculously destroyed, and after she was beheaded her body was conveyed by angels to Mount Sinai. Nov. 25 is the day of her festival.

CATHERINE OF SIENA (1347-80). Christian saint. Born at Siena, at the age of 16 she took the habit of a Dominican Tertiary, i.e. third order living under the rule of S. Dominic while remaining at home. In 1378 Pope Urban VI summoned her to Rome, where she laboured until her death, April 29, 1380. She was canonized by Pius II, in 1461.

CATHERINE I (c. 1684-1727). Empress of Russia. Born in Lithuania, she was the daughter of a small landowner. When in 1702 the Russians captured Mariburg she attracted the notice of the Russian general, Sheremetieff, who subsequently sold her to Prince Menshikov. At the latter's house in Moscow she was first seen by Peter the Great. In 1711 she was publicly married to Peter, after he had divorced his wife Eudoxia. In 1722 she was proclaimed his successor, and in 1724 was crowned empress consort. On Peter's death in 1725 she became empress. She died May 17, 1727.

CATHERINE II (1729-96). Empress of Russia. A German princess, she was born at Stettin, May 2, 1729, and married Peter of Holstein, the heir-presumptive to the Russian throne, in 1745. Peter succeeded the Tsarina Elizabeth in 1761, but after a few months was deposed and murdered, and his wife was made empress. She died Nov. 17, 1796, leaving the Russian throne to her son Paul II.

CATHERINE OF ARAGON (1485-1536). First wife of Henry VIII of England. Born at Alcalá de Henares, Dec. 15 or 16, 1485, she was the daughter of Ferdinand and Isabella of Spain. In 1501 she was married to Arthur, prince of Wales, the eldest son of Henry VII. Arthur died April 2, 1502, and the following year Catherine was betrothed to Henry, prince of Wales, but it was not until Henry's accession that the marriage was celebrated, June 11, 1509. Catherine had six children, of whom only Mary survived. In 1526 Henry began proceedings for a divorce which affected the whole history of England. On March 23, 1534, Rome at last declared the marriage of Catherine and Henry to be valid, and to the end the queen refused to acknowledge her deposition. Her last years were spent at Buckden and Kimbolton, in Huntingdonshire. She died Jan. 7, 1536.

CATHERINE OF BRAGANZA (1638-1705). Wife of Charles II of England. Born at Villa Viçosa, Portugal, Nov. 25, 1638, she was the

daughter of John, duke of Braganza, who became king of Portugal in 1640. Her dowry was Tangiers and Bombay; religious and commercial freedom for the English merchants in Portugal; and £300,000. The queen survived her husband, and remained in England until 1692. In 1703-05 she was regent for her brother Pedro. She died Dec. 31, 1705.

CATHERINE DE' MEDICI (1519-89). Queen regent of France. Born April 13, 1519, she was the daughter of Lorenzo de' Medici. She was married to Henry, the son of Francis I of France, in 1533, and became queen on his succession to the throne in 1544. On his death, in 1559, followed by that of their son, Francis II in 1560, Catherine became queen regent for their next son Charles IX. She died Jan. 5, 1589. Consult Catherine de' Medici, E. Siehel, 1905.

CATHERINE OF VALOIS (1401-37). English queen. Born in Paris, Oct. 27, 1401, she was the youngest daughter of Charles VI, the mad king of France. In 1420 she was married to Henry V of England at Troyes and in 1421 was crowned at Westminster. After Henry's death she was secretly married to Owen Tudor, and the pair were the grandparents of Henry VII. Catherine died in Bermondsey Abbey, Jan. 3, 1437.

CATHERINE WHEEL. Form of firework. It consists of a case of stout paper filled with an inflammable mixture and wound round a piece of wood, the end of it being primed.

CATHETER (Gr. kathienai, to let down into). Hollow instrument used to draw off fluid from a cavity, as, for example, urine from the bladder. They are made usually of silver or rubber.

CATHETOMETER. Instrument for measuring small vertical differences in height. It consists of a horizontal telescope mounted to slide upon a graduated vertical standard. The observer sights in succession the points under examination and then reads from the

impetus from Edward Irving in the fourth decade of the 19th century. Its liturgy was compiled from Anglican, Greek, and Roman services, and the ministry consisted of twelve 'apostles,' separated to special work of blessing and intercession, who supported themselves by tithes and practised prophecy and healing the sick by anointing. The chief church is in Gordon Square, London, W.C. See Irving, Edward.

CATHOLIC CHURCH. (Gr. katholikos, universal, general). Term with two applications. (1) In its widest sense the Catholic church is the body of believers baptized into the church of God, and it includes all members of every society and denomination which professes faith in the divinity of Jesus Christ as the Saviour of mankind and in the Holy Trinity. (2) In its more limited sense the term Catholic is applied to that body of Christians which throughout all ages has held to the faith of the Roman Catholic Church.

CATHOLIC EMANCIPATION. Name given to the movement in the United Kingdom which secured for Roman Catholics almost the same privileges as are enjoyed by Protestants. In 1778 a few of the disabilities penalising English Roman Catholics were removed by statute. This provoked the Gordon riots. In 1791 more sweeping alterations were made.

In Ireland, where the penal code was severer than in England, the first relieving act was passed in 1774. Further measures in 1778 and 1782 preceded the important one of 1790, after which Roman Catholics in Ireland could enter the professions, teach in schools, enter the army and navy, and take degrees. They could sit on corporations, and could vote at elections. They were still, however, forbidden to sit in Parliament.

An Act of 1829 substituted for the existing oath of supremacy a new one which honest Roman Catholics could take. They were admitted to both Houses of Parliament, and all civil and political offices, save only those of regent and lord chancellor. The legal and other professions were opened to them. The centenary of the grant of emancipation was celebrated in 1929.

CATILINE OR LUCIUS SERGIUS CATILINA (c. 108-62 B.C.). Roman politician and conspirator. In 66 he was an unsuccessful candidate for the consulship. This prompted him to organize (65) his first conspiracy. The plan miscarried, and Catiline set himself to organize another and more far-reaching conspiracy, collecting supporters for his plans among bankrupt nobles. In 63 the conspirators were again foiled by the consul Cicero. Catiline was accused by Cicero in the Senate on Nov. 8 in the first of his famous Catiline orations, and after a vain attempt to justify himself escaped from the city. Early in the following year the conspiracy was finally crushed. See Cicero.

CATKIN (O. Duteb, kattenken). Popular name of a form of unisexual inflorescence. It consists generally of a pendulous spike formed of a number of stalkless flowers, as on the filbert, hazel, poplar, willow, birch. The catkins bearing male are generally longer than those bearing female flowers, and the former, when they have fulfilled their function of scattering pollen, fall off. Botanically a catkin is known as an ament.

CATMINT (Nepeta cataria). Erect herb of the order Labiales. The leaves are oval, and hairy beneath, the flowers white. It is so named because its smell is attractive to cats.

CATO, MARCUS PORCIUS (234-149 B.C.). Roman statesman and writer, known as Cato the Censor. In 195 he became consul, his colleague being Valerius Flaccus. His consulship was followed by military successes in Spain and against Antiochus the Great in

S. Catherine. From a statue in the oratory in Siena

Catherine. Six famous queens of this name. 1. Catherine I, Empress of Russia. 2. Catherine II, Empress of Russia. 3. Catherine of Aragon, wife of Henry VIII. 4. Catherine of Braganza, wife of Charles II. 5. Catherine de' Medici, queen of France. 6. Catherine of Valois, wife of Henry V

seals the distance through which the telescope has moved in making the observations.

Cathode. Variant spelling of the electrical term kathode (q.v.).

CATHOLIC APOSTOLIC CHURCH. Religious community which arose in Scotland, spread to London, and received its first

Greece. A stern moralist in a corrupt age, Cato set himself to check the pernicious tendencies of the younger generation. He became

Marcus Porcius Cato, called Cato the Censor
From a statue in the
Lateran Museum, Rome

censor in 184, and his tenure of office was marked not only by legislation against luxury, but by the expulsion from the senate of many of its unworthy members. His treatise *De Re Rustica* (On Agriculture), Eng. Trans. by "F. H." in Roman Farm Management, New York, 1913, is still extant.

CATO, MARCUS PORCIUS (95-46 B.C.). Roman statesman. Great-grandson of the Censor, surnamed Uticensis, he served with distinction in the Spartacist insurrection and afterwards became one of the leaders of the

senatorial and aristocratic party. In continual opposition to Caesar, when the civil war broke

Marcus Porcius Cato, great-grandson of Cato the Censor
From a statue by Labatut

out he joined the party of Pompey. After Pompey's defeat at Pharsalus (48) he made his way to Africa and joined forces with Quintus Metellus Scipio, but suffered a crushing defeat at Thapsus (46). Finding the position hopeless at Utica, where he had taken refuge, he committed suicide. He is the subject of Addison's tragedy *Cato*, which was staged in 1713.

CAT'S EAR (*Hypochaeris radicata*). Perennial herb of the order Compositae. A native of Europe and N. Africa, it has a long tap-root and a rosette of long, hairy, scalloped leaves. The heads of bright yellow flowers are borne singly on a leafless stem about a foot long. It is a common weed in meadows and wastes. An annual species, the Smooth Cat's Ear, with smaller flower-heads and broader leaves, is found in drier soils.

Cat's Ear, leaves and flower

CAT'S EYE. Semi-precious stone, a variety of quartz of a greenish-golden hue, containing fibres of asbestos. When the stone is cut en cabochon (with a convex face) the asbestos produces in certain lights a silky flash, known as chatoyancy, resembling the phosphorescent gleam of a cat's eye.

CATSKILL. Group of mts. in New York State, U.S.A. The highest peaks attain just over 4,000 ft. To the west of the Hudson river, it is a picturesque region much visited by tourists. The scene of Washington Irving's whimsical tale *Rip Van Winkle* is partly laid in the Catskill region.

The summer resort of Catskill, a town on the Hudson, 33 m. by rly. S. of Albany, is the chief gateway to the Catskill Mts. region.

The great Catskill aqueduct, by which water is conveyed to New York, is fed by the Ashoken reservoir, created by damming the Esopus river in the Catskill mountains.

CAT'S TAIL OR TIMOTHY GRASS (*Phleum pratense*). Perennial grass, native of Europe, N. Africa, and W. Asia. It has smooth tufted stems, short, flat leaves, and a cylindrical panicle of flowers. It is a valuable fodder plant of pastures, by reason of its being early and very productive.

CATTARO (Slav. Kotor). Seaport of Yugo-Slavia, in Dalmatia. At the head of the Gulf of Cattaro, and 35 m. E. by S. of Ragusa, it is the seat of Greek Orthodox and Roman Catholic bishops, and has a cathedral and a naval school.

At an early date Cattaro was the capital of an independent state, and by the 14th century an important commercial place. It passed to Austria in 1814, by whom it was held until Oct. 30, 1918, when it became part of Yugo-Slavia. Pop. 6,040.

CATTERICK. Military camp in Yorkshire. It is 5 m. from Richmond, and is served by the L.N.E. Rly., which has a station at Catterick Bridge. In the 20th century a camp was established here, and during the Great War this was a scene of great activity. The village of Catterick, on the Swale, was once a Roman station. Races are held here.

CATTERMOLE, GEORGE (1800-63). English painter and illustrator. Born at Dickleborough, Norfolk, Aug. 8, 1800, he was drawing at the age of 16 for John Britton's *Cathedral Antiquities*. In 1822 he joined the Royal Society of Painters in Water Colours, becoming a constant contributor to its exhibitions until 1850. He illustrated many episodes from the *Waverley Novels* and other well-known works, including *Barnaby Rudge*. He died July 24, 1868.

George Cattermole,
English painter

CATTLE. Name applied loosely to all the members of the Ox genus (*Bos*), which includes

the Buffalo, Bison, and Yak, as well as the various domesticated breeds. Cattle are of chief importance to man as producers of milk, and the other food stuffs derived from it. The hides are also of great economic importance, and in fact every portion of the body of the ox is put to practical use.

The best milk-producing breeds are the Jersey, Guernsey, British Holstein, Kerry, Dexter, Shorthorn, Lincoln Red, Longhorn, Ayrshire, and Devonshire; while the Shorthorn, Lincoln Red, Devonshire, Highland, Aberdeen-Angus, Hereford and Sussex are famed for their beef-producing qualities. Jersey cattle have long held the first place as milk-producers, the yield of butter from this breed being phenomenal. See Beef; Bull; Ox; Ruminant; also illus. p. 376.

CATULLUS, GAIUS VALERIUS (c. 84-54 B.C.). Greatest Roman lyric poet. The details of his life are obscure, but it is almost certain that he was born at Verona, came to Rome at an early age, and was about thirty when he died.

His poems consist of 116 pieces, some very short, many of the most exquisite lyrics being addressed to a lady called Lesbia, who has been identified with the notorious Clodia, sister of the equally notorious Clodius. He excelled also in satire. Of the longer poems the best known are the *Lock of Berenice*, imitated from Callimachus; *Epithalamia*, or Marriage Songs; the *Wedding of Peleus and Thetis*; and the strange and exotic *Attis*, the mutilated Phrygian deity. Catullus uses a variety of metres.

Roman poet
From a cameo

CAUCASIAN. Term for the white or European race of mankind. It originated in the selection in 1775 of a Georgian skull as the perfect type, a view since proved wrong. The term, however, is retained in modern ethnology, but with certain reservations. The race numbers about 725,000,000. See *Ainu*; *Ethnology*.

CAUCASUS. District, also called Caucasia, between the Black and Caspian Seas, with Turkey to the S.W. and Persia to the S.E. A mountainous area, it covers 180,000 sq. m.

Caucasus. Map of this mountainous country lying between the Black Sea and the Caspian Sea. Formerly part of the Russian Empire, it now consists of separate Socialist Soviet republics

Cattle. 1. British wild bull of the Chartley herd. 2. Shorthorn cow. 3. North Devon bull. 4. Ayrshire cow. 5. Jersey cow. 6. Galloway bull. 7. Welsh bull. 8. Kerry cow. 9. Red polled cow. 10. Highland bull. 11. Hereford bull. 12. Longhorn cow. 13. Guernsey cow. 14. Aberdeen-Angus bull. See article, p. 375

and is traversed by the Caucasus Mts. Before 1917 it was a territory of the Russian Empire, being divided into Ciscaucasia, the European part, and Transcaucasia, the Asiatic part. Tiflis was the capital of Transcaucasia. It is now covered by a group of Socialist Soviet republics, including Armenia, Azerbaijan and Georgia (q.v.).

Major Rodd

THE GREAT

WAR The campaign in the Caucasus began early in Nov., 1914, when Russian troops crossed the frontier. Meanwhile, the Turks, with German aid, had organized a great offensive. The Russians, strongly reinforced, defeated the Turks at Sarikamis, and by Jan. 21, 1915, had driven them towards Erzurum. On Jan. 11, 1916, the Russians began a great attack, whose objective was Erzurum, which they took on Feb. 16. Trabzon was captured on April 18. Nothing of importance took place until, on Mar. 17, 1917, the Russians occupied Van.

After the Revolution the Bolshevik Government, by the treaty of Brest-Litovsk, surrendered some of the conquests. But the people, who had already decided on independence, formed a republic of Georgians, Armenians, and others, and carried on war with the Turks, who were supported by the Tartars.

In 1918 the Georgians opened negotiations for peace with Turkey and Germany, and at Berlin an arrangement was come to by which Batum and its district were ceded to the Turks and the rest of Georgia was constituted a separate state. Later other Soviet republics

were formed in the district. See Armenia; Azerbaijan; Batum, etc.

CAUCASUS MOUNTAINS. Range of mts. running from the Black Sea to the Caspian. The highest peak is Mt. Elbrus (Elburz), 18,540 ft. The mts. are very rich in minerals, especially oil and manganese.

CAUDEBEC. Town of France, in the dept of Seine-Inférieure. On the Seine, 27 m. N.W. of Rouen, it is famous for its 15th century church, with wonderful stained glass, lofty tower, west portal, and balustrades in the form of Gothic letters. It is called Caudebec-en-Caux, to distinguish it from Caudebec-Elbeuf, which is 14 m. S. by W. of Rouen, a suburb of Elbeuf. Pop. 2,400.

CAUL (Old Fr. cale, cap). Cap or network to enclose the head, worn by women from the 14th to the 17th centuries. In physiology, a caul is that part of the amniotic sac which sometimes envelops the head of a newly-born child. It was long associated with superstitious belief as a protection against drowning.

CAULIFLOWER (Lat. caulis, stem; flos, flower). Vegetable of the order Cruciferae, genus Brassica, similar in appearance to bro-

coli (q.v.), for which it is often mistaken. It is, however, not so hardy as broccoli, and is obtainable only in summer and autumn. For early use seed is sown in boxes of light soil, at the end of Jan., and kept in a temperature of 60° to 70° F. They are transplanted about the middle of March and finally planted out during April or early in May. For a success-

Cauliflower. Walcheren variety, one of the hardest kinds

sional crop seed is sown in the open in April, transplanted in May, and finally separated to a distance of 18 in. every way between the plants in June.

CAUSTIC (Gr. kaustikos, burning). Any substance which burns or corrodes organic tissue. Applied to certain chemicals, e.g. caustic potash or caustic soda, it implies that these substances possess corrosive properties. The chemical names of these two products are potassium and sodium hydroxide. Silver nitrate is lunar caustic, luna being the alchemical name for silver. For use in surgery the silver nitrate is fused and poured into cylindrical moulds so as to form pencils. Caustics are used to destroy superficial new growths, such as corns or warts, to reduce overgrowth of tissues, and to prevent harmful results following poisonous bites.

CAUSTIC CURVE. Term used in optics. When light is reflected from the surface of a concave mirror whose breadth is large relatively to its radius of curvature the image is spread out along a heart-shaped curve, called a caustic curve. Such a curve may be seen on the surface of a partly filled tea-cup if it is observed in a strong light.

CAUTERETS. Health resort of France, in the dept. of Hautes-Pyrénées. It lies in a valley enclosed by mts., 3,250 ft. above sea level and 41 m. S. by E. of Pau. Its mineral springs contain sulphates and silicates, and are efficacious in anaemia, rheumatism, and skin diseases. Pop. 1,200.

CAUTERY (Gr. kauterion, branding iron). Instrument or substance used for destroying new growths or disinfecting injuries by burning or destroying the tissues. The cautery usually employed consists of a point or loop of platinum heated by an electric current.

CAUTION (Lat. cautio, security). English law term. When a magistrate has heard all the evidence for the prosecution, which is

taken down in writing, and is about to commit the accused for trial, he is bound to ask the accused if he wishes to say anything, and at the same time to caution him that whatever he says will be taken down and used as evidence against him at the trial. In Scots law caution is the same as the English bail. Students at the universities and the Inns of Court usually deposit a sum of money on entrance as caution money. *See* Bail.

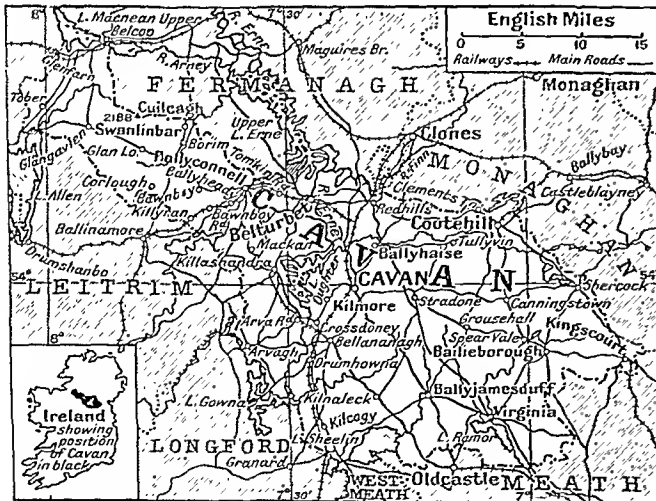

CAVALIER (Fr. *chevalier*; Lat. *caballus*, a horse). Originally meaning a horseman or knight, the term came to be applied to the adherents of Charles I during the Civil War.

CAVALRY (Span. *caballero*, a horseman). Name given to mounted troops who use their horses directly against the enemy, not, as mounted infantry do, merely for mobility.

In the Great War cavalry action varied according to the theatre of operations. In France and Flanders, during the periods of trench warfare, cavalry could only be used as infantry. In the great Allied advance of 1918 they were able to resume their proper position in pursuit of the retreating Germans. In Palestine, Allenby made great use of his cavalry, and in Mesopotamia the horsemen proved their value in open warfare. The East African and Egyptian expeditionary forces would have been equally incomplete without their mounted men.

The cavalry of the British regular army consists of the Household Cavalry (the Life Guards and the Royal Horse Guards) and cavalry of the line (lancers, hussars, etc.). There are cavalry schools at Netberavon and Saugor (India). The official organ, *The Cavalry Journal*, is published from the Royal United Institution, Whitehall, London, S.W.1. *See* Army; Hussar, etc.

CAVAN. Inland county of the Irish Free State. It is in Ulster, and has an area of 467,025 acres. It is undulating, the only considerable heights being in the N., where is Cuileagh, over 2,100 ft. The chief rivers are the Erne and the Blackwater. Cavan is the chief town; others are Cootchill, Belturbet, and Kilmore. In 1584 the district, formerly known as the Brenny, was made into a county. Pop. 82,452.

Cavan. Map of this inland county of Ulster, since 1922 in the Irish Free State

CAVAN. Urban district, county and market town of co. Cavan, Irish Free State. It is 80 m. by rly. S.W. of Belfast, and the terminus of a branch line from Clones. It has an old grammar school. Market day, Tues. Pop. 3,060.

CAVAN, FREDERICK RUDOLPH LANBART, 10TH EARL OF (b. 1865). British soldier. Born Oct. 16, 1865, he was educated at Eton and

entered the Grenadier Guards. His first active service was in S. Africa, 1899-1902. In the Great War he took over the 4th, or Guards brigade, becoming leader of the Guards division on its formation in June, 1915. The command of the 14th corps followed, and at the head of this Cavan went to Italy in Nov., 1917. In 1918 he became head of the British forces in Italy. He succeeded to the Irish earldom in 1900, and was chief of the imperial general staff from Feb., 1922, to Feb., 1926.

10th Earl of Cavan, British soldier
Lafayette

CAVE (Lat. *cavus*, hollow). Deep hollow place in the earth produced by the work of underground water or by the action of waves along sea coasts. Caves of the first class are found in districts formed of rocks such, for example, as lime, capable of being carried away in solution by water charged with solvents.

Cave exploration as a sport has resulted in the formation of the Yorkshire Ramblers' Club, which has explored most of the important caves and pot-holes in England, while in France similar work has been done by the Société de Spéléologie de Paris. **CAVE DWELLING**. Natural caves were used as dwellings by various mammals from pliocene times. Hyæna dens were sometimes shared by palaeolithic man and others were more fully monopolised by him. Some continued in use even to medieval times. This early cave-dwelling culture still survives among the Bushmen and elsewhere; Les Roches, Loir-et-Cher, is a troglodyte village of 600 souls.

Cave Temple at Karli, India. It is entirely rock hewn, with a teak roof
F. Deauville Walker

CAVE TEMPLE. A cave temple is a rock cavity or excavation devoted to religious uses. In Egypt it developed from the rock-hewn tomb, as at Abu-Simbel (see illus. p. 9), but reached its fullest expression in early India. There are over 1,000 known examples, mostly in W. India, three-fourths of them being Buddhist. The finest, at Karli, between Bombay and Poona, of the 2nd century B.C., is 126 ft. long, 45 ft. wide, and 46 ft. high.

CAVE, GEORGE CAVE, 1ST VISCOUNT (1856-1923). British lawyer and politician.

Born in London, Feb. 23, 1856, he became a barrister in 1880. In 1906 he entered Parliament as Unionist M.P. for the Kingston division. He was solicitor-general, 1915, and home secretary 1916-18, when he was made a lord of appeal and created a viscount. He was lord chancellor 1922-24, and again 1924-28. On retiring he was given an earldom, but died

Mar. 29, 1928, before he could assume the title. His wife was therefore created a countess.

CAVE, EDWARD (1691-1754). English printer and friend of Dr. Johnson. Born at Newton, near Rugby, Feb. 27, 1691, he came to London, and in Jan., 1731, opened a printing office at St John's Gate, Clerkenwell. Here he started *The Gentleman's Magazine*, for which Johnson wrote the parliamentary debates. He died Jan. 10, 1754.

Edward Cave, British printer
From a portrait by Kytz

CAVEAT (Lat. *let him beware*). Term employed in English law. It is addressed to the officials of a department warning them not to proceed without informing the caveator.

Caveat emptor, a Latin phrase meaning, let the buyer beware, is now a maxim of English law on the sale of goods. The maxim only stands good when a buyer buys goods which are open to inspection. The seller need not point out any defect in them; though, if he is asked, he must reply truthfully.

CAVELL, EDITH LOUISA (1865-1915). British nurse. She was born Dec. 4, 1865, at Swardston, Norfolk, the daughter of the Rev. Frederick Cavell. She completed her education in Brussels, and was trained as nurse at the London Hospital. In 1900 she was appointed superintendent of the Highgate infirmary. In 1906 she returned to Brussels, where she became matron of the École Belge d'Infirmières Diplômées, later known as the École Edith Cavell. On Aug. 5, 1915, she was arrested by the Germans, charged with harbouring refugees and assisting them to escape. On Oct. 7 her trial took place; on Oct. 11 she was sentenced to death, and was shot in the Tir National, Brussels, the following morning. In May, 1919, her body was brought to England and buried in the precincts of Norwich Cathedral.

Edith Cavell, British nurse

In Britain memorials to her, such as homes for nurses, etc., were established. A monument to her was erected in St. Martin's Place, London, a short distance to the N. of Trafalgar Square.

CAVENDISH. Surname of an English family whose head is the duke of Devonshire. The name is taken from Cavendish, a village in Suffolk, where the family is first heard of in the 15th century. Sir William Cavendish (c. 1505-57) was the real founder of the family's greatness. At the dissolution of the monasteries he obtained enormous grants of church lands, these territories being further increased by his marriage with Bess of Hardwick. From this marriage are descended the earls and dukes of Devonshire (q.v.).

Lord Frederick Cavendish (1836-82), second son of the 7th duke of Devonshire, was chief secretary for Ireland, and was murdered with Thomas Henry Burke, the under-secretary, in Phoenix Park, Dublin, May 6, 1882.

The Cavendish Club was founded in 1912. Its headquarters are at 119, Piccadilly, London, W.

Lord F. Cavendish, British politician
London Stereoscopic

Viscount Cave, British lawyer

CAVENDISH, HENRY (1731–1810). English physicist. The eldest son of Lord Charles Cavendish, brother of the 3rd duke of Devonshire, he was born at Nice, Oct. 10, 1731. His chief work, which was of sufficient importance to procure him a European reputation, was in the chemistry of gases, but his theorems on the nature of electricity and of heat were remarkable. His last investigation, known as the Cavendish Experiment, was the series of experiments framed to determine directly

Henry Cavendish,
English scientist
From an old print

the density of the earth by observing the degree of attraction which suspended leaden balls exercised on one another. He died at Clapham Common, March 10, 1810.

CAVENDISH, THOMAS (c. 1555–92). British sailor. He was born in Suffolk, and commanded a ship of his own in Sir Richard Grenville's Virginia expedition in 1585. In June, 1586, he set out from Plymouth with three small ships on what was in effect a piratical expedition: sailing to S. America, he discovered Port Desire, Patagonia, passed through the Magellan Straits, went on westward, and returned by the Cape, being the second Englishman to sail round the world. He discovered for the English the island of St. Helena. Cavendish died at sea off the island of Ascension in 1592.

CAVIARE (Fr. caviar, of Tartar origin). Roe of the sturgeon treated by beating, straining, and salting. The best kind of caviare, which comes from Russia, is only made in winter, and one of the causes of its high price is the great difficulty in preserving it. Shakespeare's phrase "caviare to the general" is used of something which the ordinary man is incapable of appreciating.

CAVOUR, COUNT CAMILLO BENSO DI (1810–61). Italian statesman. He was born at Turin, Aug. 10, 1810, when Piedmont formed part of the Sardinian kingdom. He entered Parliament in 1848 as an advocate of a united Italy, and as a member of the Piedmontese ministry worked energetically at financial and administrative reforms: in 1852 he became first minister, and his shrewd move of joining with France and England in the Crimean War gave Sardinia a new status among the European powers. He encouraged the efforts of Garibaldi, and when Cavour died, June 6, 1861, the objects for which he had striven were in nearly all respects attained.

Count Cavour,
Italian statesman

CAVY. Genus of small rodents common in S. America, best known in the domesticated species, called the guinea pig (q.v.). In the wild state these animals are all of uniform greyish or blackish brown colour. The restless cavy (*Cavia porcellus*) is found in Brazil and Uruguay, usually in small herds. It inhabits marshy districts and lives in burrows among the dense vegetation. The rock cavy of the same countries lives in cracks and crevices in the hills.

Cavy. Patagonian cavy,
Dolichotis patagonica

CAWDOR. Village of Nairnshire. It is 5 m. S.W. of Nairn, and 3 m. by the L.M.S. Rly. from Gollanfield. According to Shakespeare, it was in the castle here that Macbeth slew King Duncan in 1040. The present building does not date farther back than 1454.

From it is derived the British title borne since 1827 by the family of Campbell. Frederick, 3rd Earl Cawdor, was chairman of the Gt Western Rly. 1895–1905 and first lord of the Admiralty in 1905. He died Feb. 8, 1911, and was succeeded by a son and then by a grandson. The earl's eldest son is called Viscount Emlyn and his seat is Golden Grove near Carmarthen.

CAWNPORE. City of the United Provinces, India, capital of Cawnpore district. It is on the right bank of the Ganges, 45 m. S.W. of Lucknow.

Cawnpore. Memorial statue to
the victims of the massacre

the scene of the massacre of the Europeans who had surrendered to Nana Sahib. A memorial church, statue, and well perpetuate their memory. Pop. 216,436.

CAXTON, WILLIAM (c. 1422–91). The first English printer and publisher. Born near Hadlow, Kent, and apprenticed to a London mercer, Caxton left England in 1441 for Bruges, became in 1463 governor of the guild of merchant adventurers in that city, and later entered the service of the duchess of Burgundy, who encouraged him to complete his translation of Raoul le Fevre's romance, *Le Recueil des Histoires de Troye*. Having studied printing at Cologne, he, with the help of Colard Mansion, printed this work in 1474, probably at Bruges, this being the first book printed in England.

Returning to England in 1476, Caxton set up, at the Sign of the Red Pale, a press in the Abbey Almonry (on a site now covered by the Wesleyan Central Hall), and thence, on Nov. 18, 1477, issued Earl Rivers's translation of the *Dictes and Sayings of the Philosophers*, a folio of 76 leaves and the first dated book printed in England. Of the ninety-nine works printed by Caxton, he translated twenty-five.

CAYENNE. Town of French Guiana. The capital of the colony, it lies at the mouth of the Arapa river, on the island of Cayenne. It is a penal settlement. Pop. 13,936.

CAYENNE PEPPER. Pod-like fruit, dried and pounded, of various species of capsicum. Capsicum is cultivated mostly in the East Indies, but is also grown in England and in other parts of the world, both for the fruit and for ornament. Cayenne has a pungent flavour, and owing to its digestive properties is useful in medicine. Used externally in an ointment, it is a good counter-irritant.

CAYMAN. Group of three islands in the British West Indies. They lie about 200 m.

W.N.W. of Jamaica, and are administered by the government of that island. The largest is 17 m. by from 4 to 7 m., capital Georgetown. Cayman Brac is 11 m. by 1 m., and Little Cayman 9 m. by 1½ m. They are of coral formation. Pop. of the group, 5,650.

CEANOTHUS (Gr. thistle). Genus of shrubs of the order Rhamnaceae. Natives of N. America, they have erect branches, alternate leaves, and small white or blue flowers in terminal clusters. *Ceanothus americanus* is known as New Jersey tea, from its use during the American War of Independence as a substitute for the British-exported China tea.

Ceanothus americanus, or New
Jersey tea plant

CEBUS (Gr. kebēs, long-tailed monkey). Group of S. American monkeys. The Capuchin is a well-known species of this group, which includes the Howling (*Mycetes*) and Spider monkeys (*Ateles*). The long prehensile tail and a body covering of short thick hair are characteristic. See Capuchin Monkey.

CECIL. Name of a historic English family. Its known ancestry begins about 1500 with David Cecil, whose name is variously spelled. A freeman of Stamford, he became M.P. for that place, and later held a position at the court of Henry VIII. Richard Cecil, his son, also a courtier, was the father of William Cecil, Lord Burghley (q.v.), the founder of the family's greatness. His eldest son, Thomas, was made earl of Exeter in 1605, and the 10th earl was made a marquess in 1801. The younger branch is represented by the marquess of Salisbury. See Salisbury, Marquess of: Exeter, Marquess of.

CECIL, ROBERT (b. 1864). 1st Viscount (b. 1864). British politician. Third son of Lord Salisbury, he was born Sept. 14, 1864. In 1906 he entered Parliament as Conservative M.P. for E. Marylebone. He lost his seat in 1910, but in 1912 and 1918 was returned for the Hitchin division of Hertfordshire. In 1915 Lord Cecil joined the Coalition ministry as under-secretary for foreign affairs. He was also minister of blockade in 1916 with a seat in the Cabinet, but resigned office in Nov., 1918, rather than consent to Welsh disestablishment. In 1924 he was created a peer as Viscount Cecil of Chelwood, and was chancellor of the duchy, 1924–27, when he resigned because he disagreed with the disarmament policy of the Government. Lord Cecil is best known for his continuous advocacy of the League of Nations.

Viscount Cecil,
British politician
Swaine

CECIL, LORD HUGH (b. 1869). British politician. The youngest son of the 3rd marquess of Salisbury, he was born Oct. 14, 1869.

Lord Hugh Cecil,
British politician
Russell

He entered Parliament in 1895 as Conservative M.P. for Greenwich. In the House of Commons his oratorical gifts gave him a prominent place: ecclesiastical questions interested him predominantly. He opposed Chamberlain's fiscal proposals, and in 1906 as a free trader he lost his seat, but from 1910 sat as one of the members for Oxford University. Lord Hugh Cecil was made a privy councillor in Jan., 1918.

CECILIA (c. 200). Roman saint, virgin, and martyr, and the patron saint of music. She figures largely in legends of the 5th and 6th centuries, is represented in many paintings, and celebrated in many poems, of which Dryden's Ode for St. Cecilia's Day is one of the most notable. Her festival is on Nov. 22.

CECROPS. Legendary founder of Athens and first king of Attica. During his reign the famous contest for the guardianship of Athens took place between Poseidon and Athena. Cecrops is said to have introduced the benefits of civilization into Attica, and to have divided the inhabitants of the district, the citadel of which became known as Cecropia, into twelve communities. He was represented as half man, half serpent.

CEDAR (Gr. Kedros). Ornamental evergreen trees of the order Coniferae and genus Cedrus, natives of Africa and India, first introduced into Eng- land in 1676. Cedars are of lofty and spreading habit. The deodar, sacred to the Hindus, is the Himalayan Cedrus deodara. The cedar of Lebanon is known botanically as Cedrus libani. It is indigenous from Palestine to the Himalayas.

Cedar is a name for the timber from three distinct genera of trees. Properly the name belongs to the produce of the cedar of Lebanon and the deodar, but the cedar wood in common use for making cigar-boxes is from Cedrela odorata, and cedar pencils are made from species of Juniperus.

Cedar gum is the gum resin yielded by the Capo cedar, Widdringtonia juniperoides. It resembles olihanum in properties, and is employed as a component in incense, in medicinal plasters, and for varnish.

CEDRON (Simaba cedron). Small tree of the order Simarubaceae. A native of New Grenada, it has leaves divided into about 20 narrow leaflets and sprays of flowers 3 ft. or 4 ft. in length. These are succeeded by plum-like fruits of the size of a swan's egg, containing a single seed like a large almond. In great repute as a febrifuge, it is an antidote to snake-bite.

CEILING (Lat. cacum, sky, canopy). The upper interior surface of a room. Until the 16th century the open timber roof prevailed in domestic buildings, but by that time the plasterer's art had begun to develop, and the end of the century saw the plaster ceiling established in the more important English houses. The pattern of these early ceilings is often extremely rich in design, the ornament being either floral, geometric, or heraldic. In 18th century ceilings the constructional beams were no longer hidden, but utilised to break up the surface into a series of recessed divisions or bays. Ornament was concentrated on or near these beams. A later style, perfected by the brothers Adam (q.v.), showed a reversion to the flatter surface decorated in low relief of classic design.

The painted ceiling of the late 17th century was virtually confined to public buildings

and great mansions. Interest in ceiling design disappeared in the 19th century with the introduction of stock mouldings.

CELANDINE, GREAT (Chelidonium majus). Perennial herb of the order Papaveraceae. It is a native of N. Europe and W. Asia. It has erect, branching, brittle stems, and its large, band- some leaves are deeply divided, the lobes being again deeply cut. The flowers, an inch or less across, are yellow, with two sepals and four petals. The fruit is a long pod which separates from the base into two valves.

The lesser celandine (Ranunculus ficaria) is a dwarf perennial herb of the order Ranunculaceae. A native of Europe, N. Africa, and W. Asia, its fibrous, swollen roots resemble in miniature the dahlia's bunch of tuberous roots. In early spring the blotched heart-shaped leaves appear, and soon after the shining golden, widely opened flowers.

CELEBES. Island of the Dutch East Indies. It lies E. of Borneo, from which it is separated by Macassar Strait, and covers an area of 48,061 sq. m., or with dependent islands 72,679. From the main portion stretch four long peninsulas to the N.E., E., S.E., and S., forming the gulfs of Tomini, Tolo, and Poni. Near the E. extremity of the northernmost peninsula are several active volcanoes. The longest river is the Sandang, and there are many lakes.

The climate is tropical, but tempered by the sea breezes. Macassar, on the S.W. coast, is the chief port and the principal trading centre of the archipelago; it has a wireless station. Next in importance is Menado on the N. coast. Celebes was discovered by the Portuguese in 1512, and annexed by the Dutch about 1750. Pop. 3,438,000.

The Celebes Sea is a division of the Pacific, between Celebes, Borneo, and Mindanao, in the Philippine Islands; its deepest sounding is 16,770 ft.

CELERIAC. Vegetable of the order Umbelliferae and genus Apium. It is more popular in France than in England, and is known also as the turnip-rooted celery.

CELERY (Gr. selinon, parsley). Biennial vegetable of the order Umbelliferae and genus Apium, usually treated as an annual. Seedlings are raised in heat in February, and later transplanted into frames. In May the celery is planted out in richly manured trenches. When the plants are about a foot in height they are tied round with bast like lettuces and earthed up.

The process of earthing up ensures a pure white heart and stems crisp to the palate. The chief pest is the celery fly (Tephritis oenopionis) which infects the leaves.

The wild celery (Apium graveolens) is found in wet places and near the sea. It is strong in flavour and uneatable.

CELESTINE. Natural sulphate of strontium. It crystallises in orthorhombic crystals similar to those of barytes. In Britain it occurs at many localities in Scotland, but most abundantly at Yate, in Gloucestershire.

CELESTINE. Name of five popes, of whom two are notable. Celestine I (d. 432) was a Roman who succeeded Boniface I in 422. Canonised, his feast is kept on April 6. Celestine V (1215-1296) was born at Molise in Naples, his name being Pietro di Morrone. About 1232 he formed an order called after him, the Coelestini, or Celestines. When nearly eighty he was summoned to the papal throne, and was crowned on Aug. 29, 1294, abdicating the same year. He died May 19, 1296, and was canonised in 1313. His feast is kept May 19.

CELIBACY (Lat. coelebs, unmarried). Term commonly used to define the state of the unmarried, but especially applied to the renunciation of marriage for the observance of chastity. Decrees of the first Lateran Council, 1123, and still more definitely the fourth, 1215, pronounced marriage illegal for all clerics who were ordained sub-deacons, and this rule, confirmed by the council of Trent, 1563, prevails to-day in the Roman Catholic Church. The Protestant churches do not favour celibacy for their ministers.

CELL. In biology, the material unit of all living things. It is a tiny mass of protoplasm, usually possessing a wall, the contents of the cell being known as the cytoplasm. Within the cytoplasm there is usually a minute structure termed the nucleus, and within this again a further substance called chromatin. Before cell division, or multiplication, takes place, the chromatin forms itself into distinct masses or chromosomes. These are definite in number for each living species.

The nature of the organism which is to develop from the cell depends, apparently, upon the nucleus. This contains that special form of protoplasm termed the germ-plasm, the material basis of hereditary characters or tendencies. Variation is thought to be due to factors of character, called genes, regarded as being inherent in the chromosomes.

The investigation of the fundamental problems of biology—reproduction, growth and heredity—is bound up with that of the intimate structure of cells. See Biology; Protoplasm.

CELL. Element of a voltaic (primary) battery, or of a storage (secondary) battery. A voltaic cell is that which produces electricity by chemical action. Two plates of dissimilar metal, such as copper and zinc, or a plate of carbon and a plate of zinc, are insulated from each other and immersed in a vessel containing a conductive and decomposable solution. The plates are termed electrodes and the solution the electrolyte. A number of cells suitably connected form a battery.

The external circuit is from the terminal of one plate, through the lamp, bell, or whatever the cell operates, and back to the other. The terminal from which the current flows to the external circuit is known as the positive (+) pole, and that by which it returns to the cell as the negative (—) pole. The current leaves the electrolyte by the + pole and enters it by the — pole. The first is distinguished as the kathode, and the second as the anode

Celandine, Chelidonium majus

Celandine. Lesser celandine flowers and leaves

Cell. Plant cell highly magnified, showing (1) cell wall, (2) protoplasm, (3) nucleus, (4) chloroplasts, and (5) vacuole with cell-sap

Celery. The process of earthing up this vegetable

For providing current required at regular intervals, as in the case of electric bells, the simplest cell is the Leclanché. In this a zinc rod and a porous pot, containing a slab of carbon packed round with a mixture of crushed carbon and black manganese oxide, is immersed in a solution of sal-ammoniac.

What are termed dry cells are nearly always upon the Leclanché principle. The outer vessel is of zinc and forms the negative pole. The annular space between the central carbon rod, with its surrounding mass of manganese and carbon, and the zinc container is packed with some absorbent material saturated with a solution of sal-ammoniac and chloride of zinc.

A storage cell consists of two or more grids of lead coated with lead oxide and immersed in a dilute solution of sulphuric acid. When current from an outside source is passed through the cell electrical energy is converted into chemical energy; the plates are polarised, metallic lead being deposited on the negative plate and lead peroxide on the positive plate. After being charged with electricity such a cell will give out current until the plates become inactive. It may then be recharged.

CELLIER, ALFRED (1844-1891). British composer and conductor. Born in London, Dec. 1, 1844, from 1862-79 he was director of the Ulster Hall concerts in Belfast; musical director in Manchester and London; and joint conductor with Sir A. Sullivan at the Covent Garden promenade concerts. His most popular light opera was *Dorothy*. He died Dec. 28, 1891.

Alfred Cellier,
British composer
London Stereoscopic

produced in 1886.

CELLINI, BENVENUTO (1500-71) Italian metal worker and sculptor. Born in Florence, Nov. 3, 1500, he was apprenticed to a goldsmith. He is as remarkable for his own personal characteristics, revealed in his autobiography, as for his artistic work.

No piece of gold work can be attributed to him with absolute certainty except the great salt-cellar now in the imperial treasury at Vienna, which he made for Francis I of France. Of the medals and coins for which he was responsible many remain, and of his groups of bronze and in marble his famous figure of Perseus with the head of Medusa in Florence, his great crucifix at the Escorial, and his *Nymph of Fontainebleau* in the Louvre, attest his amazing skill and dexterity. He died Feb. 13, 1571. Pronounced Tchell-lee-nee.

'Cello. Colloquial abbreviation of violoncello (q.v.). Pronounced chello.

CELLULOSE. Hard, semi-transparent substance insoluble in water and readily

inflammable, made by uniting nitrocellulose and camphor. The uses of celluloid are numerous, and are based upon the desire to employ cheaper substances than ivory and tortoiseshell for billiard balls, combs, piano keys, knife handles, and ornaments. Celluloid decomposes at a comparatively low temperature. Ignition or decomposition may result from exposure to temperatures which are not specially dangerous in the case of ordinary combustible materials, and which may sometimes be attained in storage and use. The Celluloid and Cinematograph Act, 1922, deals with the storage of celluloid and cinematograph film. Buildings in which these are stored must be registered.

CELLULOSE (Lat. cellula, little cell). Framework or cellular-tissue of plants and the characteristic product of the vegetable kingdom. It is familiar in the form of cotton, linen, and paper, but silk and wool are not composed of cellulose. Various products of cotton are obtained from it by the action of chemical reagents. Strong sulphuric acid converts cellulose into a substance called amyloid. Nitric acid converts cellulose into nitrocellulose, one form of which is gun cotton. Another kind (pyroxylin) is soluble in a mixture of ether and alcohol, making a viscous solution known as collodion. Artificial silk is made from cellulose in solution or in the plastic form by forcing it through very fine orifices or by drawing it into threads. Various compound celluloses are known. Jute fibre, for example, consists of 75 p.c. of cellulose and 25 p.c. of lignin. Raw flax fibre and esparto are pectocelluloses, and another variety, mucocellulose, is decomposed by water, forming solutions known as mucilages. See Artificial Silk.

CELSIUS, ANDERS (1701-1744). Swedish astronomer. Born Nov. 27, 1701, at Upsala, he became professor of astronomy there in 1730, and, in 1740, director of the observatory. Here he occupied himself with the measurement of the intensity of light, with researches concerning the Northern Lights, and with the theory of the satellites of Jupiter. He died April 25, 1744.

CELT. Name used by classical writers to describe the tall, fair-haired, blue or grey-eyed peoples living north of the Alps.

The original European habitat of the Celts embraced both banks of the upper Danube, whence they invaded Italy, founding important settlements. About 300 B.C. the subjugated Teutonic tribes inhabiting the German lands taken by early Celtic conquest rose against their oppressors and drove them westward. At the same time the Celts invaded Macedonia and later founded the province of Galatia, in Asia Minor. Their fortunes then waned; they lost Spain, which they had taken from the Iberians, and were driven from the N. of Italy by the Romans, who then, under Julius Caesar, invaded and subdued Gaul, which was at that time the principal seat of the Celtic power.

It is probable that there were Celts in Britain before the end of the Bronze Age. The invading hordes subdued the original inhabi-

tants, who were not of the Aryan race, and established their own civilization. In England this was superseded to some extent by those of the Romans and the Anglo-Saxons, but in Scotland, Wales, and Ireland it became the main factor in the country's cultural life. At the Anglo-Saxon invasion the Celts were driven from England.

They were responsible for the dissemination of the early Iron-age culture, out of which there developed in Ireland, during centuries of comparative isolation, a native art of singular beauty. See Ardagh; Kells, Book of; Ireland; Wales.

CELT. Prehistoric and primitive implement with a chisel-shaped edge. The word has no reference to the people named Celts. It includes forms used as axes, chisels, adzes, and hoes. They were made of flint in Denmark; basalt, porphyry, and felstone in Scotland and Ireland; jade, nephrite, and bone in Switzerland. See illus. p. 98.

Celt. Examples of bronze celts found in England and Ireland

CEMENT (Lat. camentum, rough stone). Any glutinous

adhesive substance that serves to unite bodies is termed a cement. The word is specifically applied to those mixtures of chalk and clay which, after burning and crushing, acquire adhesive properties, when water has been added to them, that adapt them for use in connecting brickwork and masonry, or in the formation of concrete. Cement concrete, used by the Romans, is a mixture of lime and a siliceous material. It resists the action of water, and is accordingly termed "hydraulic." The so-called Roman cement is made by heating and crushing nodules containing carbonate of lime and clay, which are dredged up in the Thames estuary. Keene's cement is made by burning gypsum. Parian, which is made from gypsum and borax, baked together, is mainly used for mouldings in plastering work.

Portland cement, for which, as a primitive mixture of lime and clay treated in an old-fashioned bottle-shaped kiln, Joseph Aspdin took out a patent in 1824, is now manufactured in vast quantities by highly-developed processes. Estuary mud from the Thames and grey chalk are the materials which are chiefly used in England.

For use, cement is mixed with sufficient water to bring it to a plastic paste. Setting occurs within a few hours, but the subsequent hardening may go on for more than a year. Its property of hardening under water renders Portland cement invaluable for harbour, dock, and reservoir construction. See Concrete.

CEMETERY (Gr. koimeterion, sleeping place; Lat. coemeterium). Ground, other than a churchyard, set apart for the burial of the dead. In ancient times the burial places of the Jews, Greeks, and Romans were outside the walls of their cities and towns, and, prompted by dictates of public health, modern custom is a return to ancient practice. In Britain most cemeteries are public property, as local authorities have power to provide them. Permanent graves in them can be purchased. Every person has a right to be buried in the burial ground of his or her parish. See Burial; Catacomb; Churchyard; Cremation; Funeral.

CENCI, BEATRICE (1577-99). Central figure in an Italian tragedy of the 16th century. Daughter of Francesco Cenci, a rich and vicious Roman noble, she conspired with her brother and stepmother to have him assassinated. The three were beheaded Sept. 10, 1599. It was long but erroneously believed that she was impelled to the crime by her father's incestuous advances.

Benvenuto Cellini,
Italian metal worker
From an old portrait

Celtic bronze shield with
enamelled studs
British Museum

CENIS, MONT. Mt. and pass between France and Italy. The carriage road in the pass was built between 1803-11 by Napoleon's engineers. To the S.W. of the pass is the Little Mont Cenis, a mule path leading from a hospice on the Italian side to Etache in Savoy. It is higher (7,164 ft.) than the main pass, which rises to 6,893 ft. Probably used by Hannibal, it was one of the chief routes over the Alps to Italy.

The Mont Cenis tunnel, on the rly. from Lyons to Turin, pierces the Col de Fréjus, 17 m. to the W. of the pass. It $7\frac{1}{2}$ m. long, 26 ft. wide, 19 ft. high, and at its summit reaches a height of 4,245 ft. It was begun in 1857, opened in 1871, and cost £3,000,000.

CENOTAPH (Gr. kenos, empty; tapchos, tomb). Name for an empty or honorary tomb. The term is applied generally to a monument in memory of a person or persons whose remains are irrecoverable or hurried elsewhere, and sometimes to a tomb during a person's lifetime. A notable modern example is that designed by Sir Edwin Lutyens and erected in Whitehall, London, in 1920, to commemorate those who fell in the Great War.

Cenotaph in Whitehall which commemorates Britain's "Glorious Dead" in the Great War

two in number, were first appointed in 413 B.C. Their chief duty was to take a census of the persons and property of the inhabitants. They also had the power of disfranchising a citizen or reducing his status. They issued regulations to check extravagance, to suppress practices contrary to morality, and were charged with the maintenance of temples and other public buildings, and with the administration of the finances. A censorship notable for its severity was that of the elder Cato (q.v.) in 184 B.C.

CENSORSHIP. Control by ecclesiastical or state authority of the publication and dissemination of opinions and news and the exhibition of plays or pictures. Books regarded as heretical were subjected to censorship by the early Church, and the practice is exerted in the Roman Catholic Church through the medium of the Index Librorum Prohibitorum et Expurgandorum.

Apart from the restrictions placed to-day on libellous, treasonable, or obscene matter, the press in Great Britain is free. In 1928 the Irish Free State established a board of censors. They have power to refuse to allow the circulation of books and newspapers that are considered immoral.

STAGE CENSORSHIP. The censorship of stage plays is traceable back to the 16th century. Players as well as plays had to be licensed; to-day, while actors and actresses require no licence, plays have to be approved by the lord chamberlain's department, in connexion with which there are two officials known as examiners of plays.

Films are censored by a board appointed by the trade. In 1929 Edward Shortt succeeded T. P. O'Connor as chairman.

In time of war there is a censorship over everything written about naval and military operations. See Press.

CENSUS (Lat. censo, I estimate). Official inquiry into the number and condition of the inhabitants of a country. In the early books of the Bible there is abundant evidence that the tribes of the Israelites were numbered from time to time; one book is called Numbers. This form of inquiry was a feature of the life of ancient Rome.

In the United Kingdom a census has hitherto been taken every ten years, although the Census Act (1920) provided for its being taken every five years. In 1921, in the United Kingdom, the particulars required were the name, sex, age, occupation, marital condition, birthplace, and nationality of every person residing in a house on the night of June 19. With other details the results of the census are published in a series of blue books. See Birth Rate; Population.

CENSUS OF PRODUCTION. This is an inquiry into the amount of wealth produced by a country. The Board of Trade took the first in 1903, the figures being for the previous year, and the returns were published in ten volumes between 1909-12.

The results of the census of 1924 were published in 1927-28. They showed that 7,612,800 persons were employed in the industries surveyed. Altogether, it was stated that 20,000,000 persons were gainfully employed in Great Britain, this being an increase of 13.9 per cent on the figures for 1907. The proportion of female workers had increased, but, save in clerical occupations, only to a slight extent. The number of boys under 18 years old employed showed a considerable fall, but more girls under 18 were at work than in 1907.

The value of the output showed an enormous increase over 1907, due in the main to higher prices. The gross output was valued at £3,353,000,000, against £1,698,000,000 in 1907. The cost of materials, etc., was £2,155,500,000, leaving the value of the net output £1,697,500,000. In 1907 it was £689,000,000.

CENT (Lat. centum, a hundred). Bronze or copper coin, value about $\frac{1}{4}$ d. It is the hundredth part of a dollar in the U.S.A., Canada, and other countries where dollars are current. In Holland it is $\frac{1}{100}$ of a guilder.

CENTAL. Modern measure of weight, equal to 100 lb. avoirdupois. Introduced in Liverpool in 1859, it was adopted by the U.S.A. in 1878, and legalised in Britain, Feb. 4, 1879. It is used in the Canadian corn trade.

CENTAUR. In Greek mythology, monster half man and half horse. In Homer, the Centaurs are a wild race dwelling on the mountains of Thessaly, whose fondness for riding probably gave rise to the idea of their forming part of their horses. They are chiefly remembered for their fight with the Lapithae, which may be said to represent the conflict between barbarism and civilization. The most famous Centaur was Chiron (q.v.).

CENTAURUS. Constellation in the southern hemisphere, one of those named by Ptolemy. It is remarkable for comprising Alpha Centauri, the nearest star to the solar system, and Omega Centauri, the finest globular cluster in the sky. See Constellation.

Centaur contending with a Lapith, relief from a frieze in the Parthenon

CENTAVO. Small copper coin of Argentina, Bolivia, Chile, Mexico, Venezuela, and, since 1911, of Portugal. It is the $\frac{1}{100}$ th part of the respective monetary units of those countries. In Latin America its value varies from one to three centimes; in Portugal the centavo equals nearly six, i.e. almost a halfpenny.

CENTIGRADE (Lat. centum, hundred; gradus, degree). Term denoting the thermometer scale of Celsius, in which the lower fixed point, 0° C, is taken to be the melting point of ice, and the upper fixed point, 100° C, the temperature of steam given off from water boiling under the pressure of the standard atmosphere. This scale is divided into one hundred degrees. See Thermometer.

CENTIPEDE (Lat. centum, hundred; pes, foot). Order of the Myriopoda. The body consists of fifteen to twenty-four flattened segments; each segment except the last two bears a pair of legs. There are several British species, all of small size, which may be found in damp places beneath stones. They prey on various small animals, which they catch by night, but are harmless to man. Many of the large tropical species are, however, able to inflict dangerous wounds.

CENTRAL AMERICA. Isthmus connecting the continents of N. and S. America. Bounded on the N. by Mexico, on the S. by Colombia, and lying between the Pacific Ocean and the Caribbean Sea, it includes the republics of Guatemala, Honduras, Salvador, Nicaragua, Costa Rica, and Panama, and the colony of British Honduras. (See map, p. 382.) Its general direction is from N.W. to S.E.: it is approximately 1,000 m. in length, with a width varying from over 500 m. in the N. to less than 50 m. in the S. It contains a mountainous core, which with the W. Indian Islands forms the remainder of a continent, most of which is now beneath the sea.

HISTORY. Discovered by Columbus in 1502, Central America was under Spanish rule until 1821. It was known as Guatemala, and its five departments corresponded to the five republics that existed before Panama was called into existence in 1903. In and after 1821 Spain's authority was overthrown, and in 1823 a republic, the United States of Central America, was formed. This did not last long, while its successor had a still briefer life, from 1842 to 1845 only.

During the next 50 years there were further attempts at union, but none had any result save to add to the prevailing disorder. In 1895 a republic, with a constitution and a diet, was formed of three of the states, but this came to an end in 1898. In 1907 there was a conference ending in a treaty, and in 1920 an agreement for a union was signed, but nothing came of it. In 1923 a general treaty of peace and friendship was signed by five republics, one clause providing for the establishment of an international tribunal. In these later developments the United States took a leading part, and the conferences were held in Washington. See Costa Rica; Guatemala; Honduras; Honduras, British; Nicaragua; Panama; Salvador; also map p. 382.

CENTRAL AUSTRALIA. Name given to one of the two territories into which the Northern Territory has been divided. The territory to the N. is called North Australia. The capital is Alice Springs, and the area is 236,393 sq. m. See Alice Springs; Australia.

CENTRAL CRIMINAL COURT. Court established in 1834 for trying criminals in the London area, i.e. a district about 420 sq. m.

Common British Centipede

in extent, comprising the counties of London and Middlesex, and one or two smaller districts. Its sittings correspond to the assizes held throughout the rest of the country, and it serves as quarter sessions for the City of London. The sittings are held ten or twelve times a year at the Old Bailey, and the judges are one or two of the High Court, the recorder and common serjeant of the city, and the judges of the City of London court; also the lord mayor.

Central Criminal Court, London, usually known as the Old Bailey

CENTRAL PROVINCES AND BERAR. Province in India, S. of the Central India Agency and United Provinces. The Central Provinces contain alternating tracts of upland and plain country. The chief rivers are the Nerbada, Godavari, and Mahanadi. Nagpur, the capital, is an important cotton-spinning centre. The prov. is administered by a governor. Its area is 131,052 sq. m. and the pop. 15,979,660. See India.

CENTRE OF GRAVITY. Point, fixed relatively to a body, through which its weight must always act, in whatever position the body may be placed. This definition applies strictly only to solid bodies which are not deformable (rigid bodies); such a body will balance if its weight is supported at any point either vertically below or vertically above its centre of gravity. The centre of gravity of a body coincides with its centre of mass (centre of inertia); the centre of mass is found by averaging out the masses and positions of all the particles of which a body may be regarded as composed. The centre of mass is a more general conception than the centre of gravity.

CENTURION. Officer in the ancient Roman army and originally a commander of 100 men. In republican times there were 60 centurions to the legion, under the empire 69. His badge of authority was a staff made of a vine branch (vitis).

CEPHALONIA. Largest of the Ionian Islands. In the Ionian Sea, a part of the Mediterranean, and giving its name to a department of Greece, it is mountainous, reaching an alt. of 5,320 ft. in Mt. Ainos. It produces currants, wine, oranges, lemons, and figs. The chief town is Argostoli. Area, 260 sq. m.

CEPHALOPODA (Gr. *kephalē*, head; *pous*, foot). Important class of the Mollusca. It consists of the cuttlefishes and their kindred, all of which have the head surrounded by tentacles. The most highly developed and specialised of all the molluscs, they are the most active. The nautilus, octopus, and squid are familiar examples. Cephalopods are common in all the temperate and tropical seas, and about twenty species occur around the British coasts. In size they vary from very small creatures to giants with tentacles 30 ft. long and thick in proportion. Fossil cephalopods abound in palaeozoic and mesozoic rocks. The two chief groups are the ammonites and nautilus. See Ammonite; Fossil.

CERAM or **SIRANG.** Island of the Dutch East Indies, the second largest of the Molucca group, between Buru and New Guinea. It is traversed by several mountain ranges, and is densely vegetated, chiefly by cocoanut and sago palms; but cultivation is restricted to the coastal tracts. Its area is 6,625 sq. m. Pop. about 67,000.

Centrifugal force. Simple example shown by whirling of weight at end of a string

CERASTES (Gr. *keras*, horn). Horned viper. It is found in two species, *C. cornutus* and *C. vipera*, in N. Africa, Arabia, and Syria, and is characterised by horn-like processes above the eyes in the male.

CERATODUS (Gr. *keras*, horn; *odus*, tooth). Mud fish of Queensland, locally known as the Barramunda. It has the power of breathing air directly, as well as of extracting it from the water by gills. It is said to attain a length of

CERBERUS. In Greek mythology, the dog that guarded the entrance to Hades, generally represented with two or three heads. When Aeneas visited the underworld, according to Virgil, the Sibyl who accompanied him gave a sop steeped in honey to the guardian of the gate—hence the saying giving a sop to Cerberus, in the sense of appeasing.

CEREAL (Lat. *Ceres*, goddess of corn). Name given to cultivated grasses that constitute grain and corn crops. The familiar cereals of temperate climates are wheat, barley, oats, and rye, while maize (Indian corn), rice, durra, millet, and other less-known forms flourish in warmer parts of the globe.

CEREBRO-SPINAL FEVER. Infectious and contagious disease due to a micro-organism. It is most prevalent in winter and in spring, and the majority of cases occur in children below the ages of 15.

The meningococcus responsible for the disease probably obtains access to the body in all cases through the nose. The patient complains of shivering, which is rapidly followed by intense headache, and a few hours later by vomiting. The temperature may rise to 104° F. or 105° F. Pain and stiffness in the muscles of the neck are often early symptoms. A rash may appear on the skin, hence the name "spotted fever" sometimes given to the disease. More than half the cases die within a few days.

The symptoms are mainly due to inflammation of the meninges or membranes covering the brain. In 1905, Abraham Flexner, an American physician, prepared a serum, the injection of which has proved of considerable value in treatment.

The cerebro-spinal fluid is a watery fluid containing salts and traces of protein material and sugar. It fills a cavity in the centre of the brain and spinal cord, and bathes the external surface of the brain, communicating with it through an aperture in the pia mater or inmost covering of the brain.

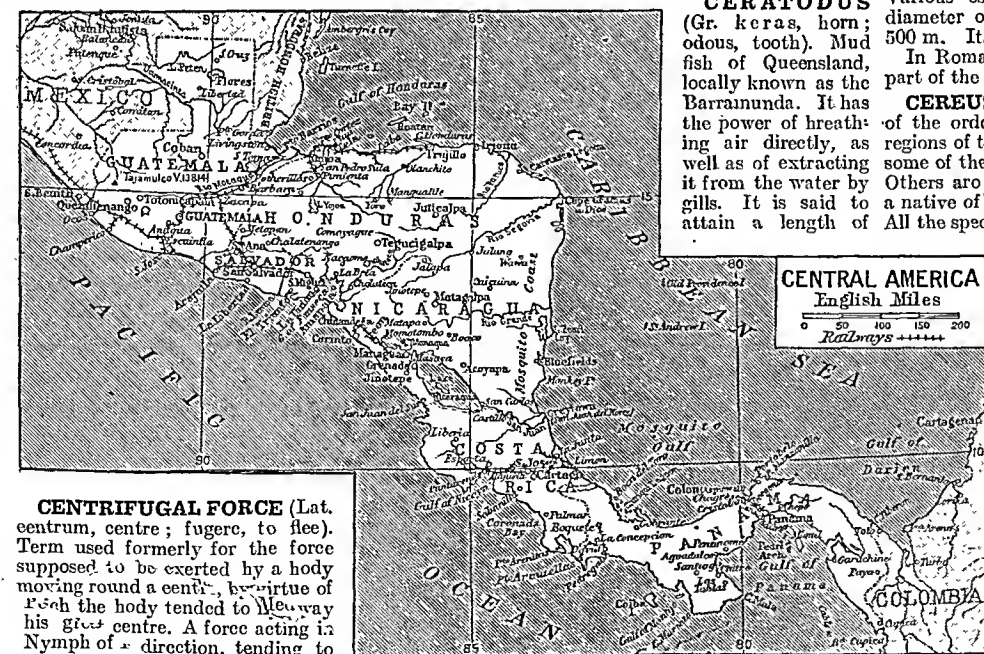

CERES. The largest of the asteroids or minor planets, and the first to be discovered. Various estimates have been given of the diameter of Ceres, which is probably nearly 500 m. Its orbit is distinctly eccentric.

In Roman mythology Ceres is the counterpart of the Greek Demeter (q.v.).

CEREUS. Large genus of succulent plants of the order Cactaceae. Natives of the arid regions of tropical America and the W. Indies, some of the species are only a few inches high. Others are tall, one known as the suwarrow, a native of Mexico, attaining a height of 60 ft. All the species are soft and fleshy when young,

but may become hard and even woody as they grow old. Their stems are angular or cylindrical, the latter ribbed and fluted in their length. Some creep along the ground or up trees, rooting as they go; others are erect.

CERIUM. Metal of ceria, one of the rare earths. Its chemical symbol is Ce, atomic weight 140.25, atomic number 58, and melting point 623° C.; in hardness it compares with tin and silver; in colour and lustre with iron. It is malleable and ductile, and may be drawn into fine wire. Cerium never occurs native, but is found in combination with fluorine, lime, yttria, lanthanum, thorium, silica, and manganese and some other elements in various minerals. It is obtained chiefly as a by-product in the extraction of thorium from monazite sands. An alloy with metallic iron, ferrocerium, is largely used in the manufacture of mechanical igniters.

Central America. Map of the states occupying the isthmus between the continents of North and South America. See p. 381

CENTRIFUGAL FORCE (Lat. *centrum*, centre; *fugere*, to flee). Term used formerly for the force supposed to be exerted by a body moving round a centre, by virtue of which the body tended to fly away from the centre. A force acting in the opposite direction, tending to his amazing to the centre, was called centripetal force. Centrifugal force.

CELLO. Colloquial name for cello (q.v.). Pronounced keep a body moving

CELLULOSE. Hard, of a normal substance insoluble in water.

about 6 ft. and a weight of 20 lb.; usually it is about half this size. The scales are large and the fins resemble fringed paddles.

Ores of cerium are complex minerals of widespread occurrence, yielding the so-called rare earths. They are classified according to their relative richness in the earths or metallic oxides of the cerium and yttrium groups respectively. The most important commercially is monazite, with 40-70 p.c. The ores are worked primarily for the thorium which is used in gas mantles.

CERNAVODA, CHERNAVODA, or TSENAVODA. Town of Rumania. On the E. side of the Danube, in the Rumanian Dobruja, it gives its name to the great bridge across the river also known as the Carol Bridge. During the Great War the town was occupied by Germans and Bulgarians on Oct. 25, 1916, and the bridge, which had previously been partly destroyed by gunfire, shortly afterwards was lost to the Rumanians. This success gave the Germans control of the important Cernavoda-Constanza railway. Pop. 5,863.

CERTOSA. Carthusian monastery of Italy, the finest of its kind in the world. It is situated 5 m. by rly. N. of Pavia. Begun in 1396 by Galeazzo Visconti in the Gothic style, it was finished in early Renaissance about

Certosa. Façade of the Carthusian monastery, near Pavia, Italy, which was completed about 1465

1465, although decorative additions were made later. It contains valuable works of art. The monastery was suppressed in 1866, and the building became a national monument in 1891.

CERUSSITE (Lat. cerussa, white lead). Important ore of lead, known also as white lead ore. Chemically it is a carbonate of the metal. In colour it is white or greyish, it is brittle, and its specific gravity is about 6.47. Usually associated with galena, it occurs in Cornwall, the S. of Scotland, and in many parts of Europe. The Mississippi valley, in the U.S.A., has yielded large quantities of lead from this ore. See Lead.

CERVANTES SAAVEDRA, MIGUEL DE (1547-1616). Spanish writer. Born in October, 1547, the son of an apothecary surgeon, in 1569 Cervantes entered the service of Cardinal Julio de Acquaviva, who had been sent as papal legate to Spain. In 1570 he enlisted as a private soldier, fought at the battle of Lepanto, at the battle off Navarino, and was at the capture of Tunis in 1573.

Miguel de Cervantes, Spanish novelist After a Spanish engraving

While filling positions as title collector and purveyor to the army, in the course of which he suffered severe losses and was twice imprisoned for monetary deficiencies, Cervantes produced much poetry and between twenty and thirty plays, but without achieving any substantial success. He then conceived the idea of his immortal book, which he wrote in inns and prisons, and published the first part in 1605. It met with instant success. In

the last period of his life, besides the second part of *Don Quixote*, published in 1615, Cervantes wrote his *Novelas Ejemplares*, 1613. He died April 23, 1616.

CESAREWITCH. Name borne until 1917 by the eldest son of the tsar of Russia. It is also the name of a horse race run at Newmarket on the Wednesday of the second October meeting. The course is 2½ miles, the landmark known as the Bushes being about ¼ m. from the winning-post. Established in 1839, it was named after the Cesarevitch Alexander, afterwards Alexander II.

CESENA (ancient Caesena). City of Italy. It is at the base of the Apennines, 19 m. by rly. N.W. of Rimini. Formerly a Roman station and fortress, it has a medieval citadel, a cathedral, the Capuchin church, noted for its fine painting by Guercino, and the Malatesta library. It has been noted from classic times for its wine. It was the birthplace of Popes Pius VI and Pius VII, and the scene of Murat's defeat of the Austrians on March 30, 1815. The place is mentioned in Dante's *Inferno* (xxvii, 52). Pop. 50,868.

CESS. Name for a tax, an abbreviation of *cessus*. It is used in Scotland for the land tax, and in Ireland was formerly employed instead of the word rate. It is also used in India.

CESSION (Lat. *cedere*, to yield). In international law the giving up of territory by agreement between one state and another. It is voluntary, as distinguished from annexation, which is forcible. Cession may be by purchase, as when during the Great War the U.S.A. bought the Danish West India Islands.

Cessio bonorum is a term used in Scots law. Derived from Roman law, it means that by making a full surrender of all his property, a debtor is protected from punishment, either by imprisonment or otherwise, for his debts. It does not, however, like bankruptcy in England, carry with it a complete discharge of such debts. See Bankruptcy.

CESSNOCK. Town in Northumberland co., New South Wales, Australia. It is the terminus of a branch railway, 17 m. from Maitland (q.v.), and is on the edge of the Newcastle coalfield. Pop. 14,340.

Cestodes or *CESTODA*. Order of flat worms parasitic in animals. See Tapeworm.

CESTUS (Lat. *caedere*, to cut, kill). Piece of stout leather, often weighted with metal, worn by Greek and Roman boxers on the hands or forearms to give force and bruising power to the blow. The Latin word is more correctly spelt *caestus*, *cestus* being the latinised form of Greek *kestos*, a girdle.

Cestus. Ancient boxing glove British Museum

skull very small, and the teeth adapted to vegetable diet. See Dinosaur.

CETINJE. Town of Yugo-Slavia, formerly capital of Montenegro. On an elevated plateau surrounded by mts., the chief of which is Mt. Lovtchen, it was taken by the Turks in their efforts to conquer the Montenegrins in 1683, 1714, and 1785. During the Great War it was captured by the Austrians on Jan. 13, 1916, after the fall of Mt. Lovtchen. In the course of the recovery of Serbia it was occupied by the Serbians on Nov. 4, 1918. Pop. 5,300.

CETTE, or **SÈTE**. Seaport of France, in the dept. of Hérault. It is on the Mediterranean, 18 m. S.W. of Montpellier. The old town is on the hill, Mont St. Clair, at the foot of which

are the canals, including the Canal du Midi, which link up with the interior of France. Cette has a large trade in wine, brandy, chemicals, coal, etc. It is also a fishing centre and exports sardines, which are prepared here. The port was created in 1666 as the terminus of the Canal du Midi, and in the 19th century it became second only to Marseilles among the seaports on the south coast. Pop. 36,505.

CETUS (Gr. *kētos*, whale). Constellation spreading over a vast expanse of sky, with a length of 50° and an average breadth of 25°. It is named after the legendary sea monster from which Perseus rescued Andromeda. Mira Ceti is one of the most famous variable stars in the sky. See Constellation.

CETWAYO, CETEWAYO, or KETSHWYO (c. 1836-84). King of Zululand. He revolted against his father, King Panda, in 1856, and usurped the throne. The Natal government agreed to recognize him on condition that he disbanded his warriors and ruled his people more humanely. After the annexation of the Transvaal, 1877, it became necessary to enforce these conditions, and Cetwayo was captured and taken to England, but was restored to his kingship in 1883. Shortly after his return to Zululand he sought an asylum from his former enemies on British territory, and died at Eshowe, Feb. 8, 1884.

Cetwayo, last King of Zululand

CEUTA. Town and harbour on the coast of Morocco, opposite Gibraltar. It belongs to Spain, and occupies the site of the Roman settlement *Septem Fratres*, named from the seven hills, one of which, *Abyla*, formed one of the Pillars of Hercules. Gibraltar being the other. It is a free port, a wireless station, and is connected with the European telephone system. A rly. runs between Ceuta and Tefuan. Pop. 39,078.

CÉVENNES. Range of mts. in southern France, on the S. and E. edge of the central plateau. The Cévennes proper are the S. part of the range, in the depts. of Lozère and Gard, while the name sometimes embraces also the adjacent ranges, such as the mts. of Charolais and Beaujolais, and the *Boutières*, *Carrigues*, and *Vivarais* groups. The highest peak is the *Mont de Lozère* (5,650 ft.).

CEYLON. Island in the Indian Ocean, off the S. end of India. It is separated from India by Palk Strait, which is almost cut in two by a line of coral reefs and sandbanks known as Adam's Bridge. The island is 271 m

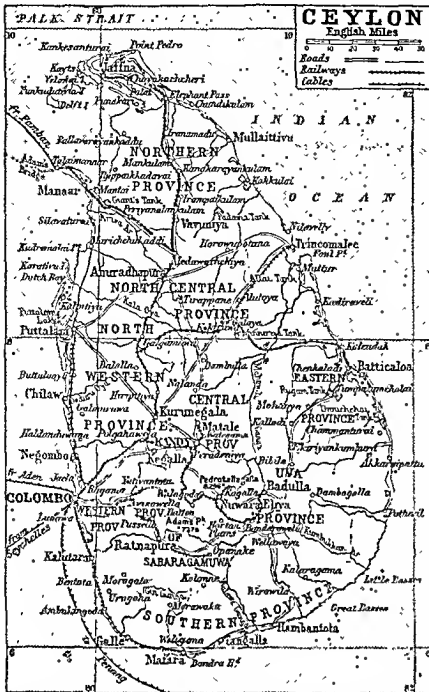

Ceylon. Left, Sinhalese girl. Right, a Kandyan chief, one of the race dominant in the interior

from N. to S., 139 m. from E. to W., and has an area of 25,332 sq. m. Pop. 5,228,792, the most important element being the Sinhalese. Other races include Tamils and Veddahs.

The ground slopes upwards from the coast to a central massif, the highest point being 8,296 feet above sea-level. Adam's Peak, containing an impression resembling a huge human foot, is 7,353 ft. high. The climate is

tropical, but varies with the altitude. The rainfall is heavy. Rice is the principal grain grown for home consumption. Tea is the staple

Ceylon. Map of the island, which is connected with the mainland of India by Adam's Bridge, a chain of sand islands, over thirty miles long, which offer a serious obstruction to navigation

product, others including rubber, coconut products, cinnamon, and cocoa. The forests yield ebony. Plumbago is mined, and cats' eyes, rubies, sapphires and other gem stones are found. There are valuable pearl fisheries. The chief towns are Colombo, the capital; Kandy, the old capital; Jaffna, and Trincomalee.

The Portuguese landed in Ceylon in 1505. Their settlements were seized by the Dutch about the middle of the 17th century, and in 1796 were annexed by the British to the Presidency of Madras. In 1802 the island was separated administratively from India and formed into a crown colony. It is administered by a governor, assisted by an executive council of nine members and a legislative council of 49.

In 1928 a commission went out to Ceylon to report upon a new constitution, and in 1929 its proposals were accepted. These include the election of members of the legislative council by universal suffrage and the control of the administration by committees of its members. In 1930 it was decided to build a university at Colombo, at a cost of £750,000.

CÉZANNE, PAUL (1839-1906). French painter. Born at Aix in Provence, Jan. 19, 1839, he formed original and pronounced views of art which provoked a long and bitter boycott by the Salon. His best works are his landscapes and his pictures of flowers and fruit, examples being in the Louvre. He died Oct. 23, 1906.

Chablis. Town of France, in the dept. of Yonne. On the Serein, 14 m. E. of Auxerre, it is known for its white wine. Pop. 1,846.

CHACO, EL. Territory of Argentina. It lies S. of the Bermejo river, and touches the Paraná on the E. In the S.E. corner is Resistencia, the capital. Much of the territory is unexplored. There are many lakes and swamps. The area is 52,741 sq. m.

The territory forms part of the region known as El Gran Chaco, which also embraces S.E. Bolivia and N.W. Paraguay. The N. Chaco, an area of about 100,000 sq. m. between the river Pilcomayo and the Paraguay,

has been long in dispute between Paraguay and Bolivia. Friction arose in Dec., 1928, and the matter was eventually referred to the Pan-American Conference. See Paraguay

CHAD, TCHAD, OR TSAD. Lake in the Central Sudan. It has an estimated area of over 10,000 sq. m. in the dry season, but double that figure in the wet season. Its shores are partly British and partly French.

CHAD or CEADDA (d. 672). English saint. Born probably in Northumbria, he was consecrated bishop of York in 664. About 668 S. Chad, who had been deprived of his bishopric, was invited to Mercia. He became bishop of the Mercians and made Lichfield his seat. His shrine was subsequently in Lichfield Cathedral, which was dedicated to his memory. His festival is kept on March 2.

Chadwell Heath. District of Essex. It is 10 m. N.E. of London, on the L.N.E.R.

CHAFFINCH (*Fringilla coelebs*). Common British bird, of the finch tribe. It is found in most parts of Europe, and is migratory from the colder regions to N. Africa in winter, though the male birds usually remain behind. In length it is not more than 6 ins., and its note is clear and loud. The chaffinch feeds on insects, being useful in destroying the garden pest aphids.

Chaffinch. A common bird of the British hedgerows

CHAFING DISH (Fr. *chauffer*, to warm). Vessel for cooking food on the table. Its earlier form was a small oblong box on four feet with a grating in front, filled with live coal, the food being cooked in a metal dish over this. It is now more generally a metal dish with cover, on a stand, and heated by a spirit lamp or electricity.

CHAILLU, PAUL BELLONI DU (1835-1903). French explorer and author. Born at New Orleans, July 31, 1835, in 1855 he went on a four years' expedition to the interior of W. Africa, chiefly for botanical and zoological specimens. The record of his travels set forth in *Explorations and Adventures in Equatorial Africa*, 1861, provoked much discussion, the accounts of pygmies and gorillas being widely discredited. Other journeys followed, after which he explored in the Arctic regions. He died in St. Petersburg (Leningrad), April 29, 1903.

Paul du Chaillu, French explorer

CHAIN (Fr. *chaîne*, Lat. *catena*). Series of links or rings passing through one another. Chains are chiefly of two classes, the open, short, or close link chain, and the stud link chain. In the former the link is simply a ring, round or oval, flat or twisted; in the latter a distance piece or stud is introduced in the middle of the long way of the link, the object being to support the long sides of the link, and prevent them from collapsing under a load. Other kinds are the pin and bar link, the loop link, and the hook.

Derivatively, the word is applied to a measuring-line of 100 links, totalling 22 yds., used in land-surveying. A projectile invented about 1665, and used principally for naval ordnance to destroy the rigging of ships, was known as chain shot. Usually two round shot were linked together by a strong chain about 9 ins. long, though one shot cut through was sometimes used.

ORNAMENTAL CHAINS. Gold or silver chains are used for the attachment of a watch or pendant, or as a necklace. Such chains were

used by the Phoenicians as ornaments; and ear-rings, formed partly of fine gold chains, attributed to the 8th century B.C., were found in Rhodes. Gold chains made by Indians are as fine and flexible as a thread of silk. A gold chain was part of the insignia of a knight, and the use of the mayors' chains in England as a symbol of their office dates from the time of Richard II.

Chain. 1. Short or open link. 2. Stud link. 3. Pin and bar link. 4. Loop or hook link

CHAIR (Lat. *cathedra*). Seat for one person, usually movable. Chairs of a throne-like character were known to the Egyptians, Assyrians, and most ancient peoples, who also used folding chairs and stools. Chairs were rare in the Middle Ages, the common seats being stools and benches. Throne chairs were architectural in character. S. Peter's chair, in the Vatican, Rome, is of early Byzantine workmanship, while the British coronation chair in Westminster Abbey is of the Gothic architectural type.

Most modern chairs are made of wood, and in the majority the back and back legs are continuous, the seat being notched into them and screwed; but in others the back legs fit into the under surface of the seat and the back is separate and fitted above. The seat may be a solid piece of wood, but more frequently it is framed together with an open middle space, which is filled in by upholstering, or sometimes cane or plywood.

Chair. 1. English 17th century carved oak armchair. 2. Walnut chair, early 18th century. 3. Mahogany chair in Chippendale style. 4. Hepplewhite armchair in walnut, late 18th century

1, 2 and 4, Victoria and Albert Museum, S. Kensington; 3, courtesy of Waring & Gillow

CHAIRMAN. One who presides over a public meeting. To-day an elaborate code of rules, derived largely from the procedure of the House of Commons, regulates the duties and powers of a chairman. His chief duty is to maintain order and keep speakers to the

business in hand. He can decide who shall speak, he puts resolutions to the vote and announces their result, having usually a casting vote, and can declare the meeting at an end. According to English company law, every limited company must have a chairman for its board of directors. In the House of Commons the Chairman of Committee is an official second in importance to the Speaker.

CHAISE (Fr. chair). Light two or four-wheeled travelling vehicle drawn by one horse or more, but without a driver's seat. An outcome of the Sedan chair, it had no shafts, and was driven by postillions. It was the chief vehicle for posting, but later degenerated into a low, four-wheeled carriage.

Chaise. Light travelling vehicle of the eighteenth century

CHALCEDON OR **CALCHEDON**. Town of ancient Bithynia (Asia Minor), on the E. shore of the Sea of Marmora. Founded by Greek colonists from Megara, 684 B.C., it became a Roman free city under the empire. It was captured by the Persians under Chosroes, A.D., 616. The fourth oecumenical Church Council dealing with Monophysite and Nestorian heresies, was held there in 451. Excavations, at Kadiköi, the modern town on the site, have revealed interesting remains, including some that were perhaps part of the church of S. Euphemia, in which the council was held. Chalcedon is the seat of a Roman Catholic archbishop. Pron. Kal-sē-don.

CHALCEDONY. Variety of quartz composed of an amorphous and a crystalline form of silica. Included in the species are a number of semi-precious stones used in jewelry and for ornament—agates (cornelian, jasper, onyx, sard), bloodstones, cats' eyes, tigers' eyes, etc. It is so named from Chalcedon, where it was found in great quantities.

CHALDEA. Biblical name for a region in the Euphrates-Tigris plain. It is the Greek form of the cuneiform *Kaldu* denoting a people who for several centuries after 1000 B.C. occupied the marshy sea-land S.E. of Babylon to the head of the Persian Gulf. The capital was Bit Yakin, and one of the kings, Merodach-baladan II, captured Babylon about 721, holding it for twelve years until driven out by Sargon II. A still earlier *Kaldu* settlement in this region is indicated in the phrase *Ur of the Chaldees* (Gen. 11). Under the new Babylonian or Chaldean empire, founded by Nabopolassar about 625, the name *Chaldea* was applied to the whole alluvial plain of N. and S. Babylonia, together with some bordering uplands. See *Babylonia*; *Ur*.

The Chaldeans acquired the direction of the astro-theological learning, becoming finally the Babylonian priestly caste (Dan. 1). The name was also used by Daniel to mean astrologer.

CHÂLET (Fr., late Lat. castellum, little castle). Species of wooden dwelling house specially identified with the Swiss mountains. The exterior indicates the interior by showing the division into storeys, and the eaves of the roof, some-

Châlet. Example of this type of peasant house
Courtesy of Swiss Federal Rly.

times extending as much as 10 ft beyond the walls. are supported by brackets of proportional size

CHALFONT ST. GILES. Village of Buckinghamshire, 3 m. S.E. of Amersham. William Penn is buried in the Quakers' burial-ground attached to Jordans Meeting House, 2 m. to the S.W. Milton (q.v.) retired here during the Great Plague, 1665, to a cottage hired for him by his friend, Thomas Elwood, the Quaker, and in it he is said to have finished *Paradise Lost*. His cottage is national property. Adjoining is the parish and village of Chalfont St. Peter. Its church contains some fine brasses.

Chalfont St. Giles. Cottage in which John Milton lived in 1665

CHALGROVE. Village of Oxfordshire, 6 m. N.E. of Wallingford. It is memorable for an engagement between Prince Rupert and the parliamentarians on June 18, 1643, in which John Hampden was mortally wounded.

CHALIAPINE, THEODORE IVANOVITCH (b. 1873). Russian bass singer. Born at Kazan of peasant stock, in 1890 he became a member of an opera company, working at the same time as a railway porter. After singing in Tiflis in 1892, he appeared in St. Petersburg, 1894, and at the private opera house, Moscow, 1896. In 1913 he appeared in London as a member of the Beecham Opera Company at Drury Lane, and in 1914, under the same auspices, he confirmed his reputation with superb performances in *Boris Godunov*, *Ivan the Terrible*, and *Prince Igor*. In 1927 he published *Pages from My Life*.

Theodore Chaliapine, Russian singer

CHALICE (Gr. *kylix*, cup). Sacred vessel used in the Christian Church at Holy Communion. It is referred to in the N.T. Early chalices were of glass, ivory, horn, wood, and base metals, but as the goldsmiths' and silversmiths' art developed, and church funds increased, chalices of gold and silver, often ornamented with jewels, became the rule, except in the poorer churches. See *Communion*; also *illus.* p. 119.

CHALK (Lat. *ealx*, limestone). White, calcareous, fine-grained rock, consisting almost entirely of the shells of minute marine organisms. Originally deposited on a sea-floor under water, chalk is remarkably free from solid matter derived from the land. As a geological formation it succeeds the Upper Greensand, and is followed by the Tertiary deposits. It is divided into three main divisions, lower, middle, and upper. Chalk marl is a marly deposit forming the lowest portion of the lower chalk. Chalk rock is a thin bed of hard yellowish chalk occurring at the base of the upper chalk of the central region of England.

Chalk is mixed with Medway mud or other clays in the production of Portland cement. It furnishes quicklime, mortar, and plaster, and is used as a dressing on clayey soils. Whiting, Paris white, or Spanish white—the fine sediment deposited when ground chalk is mixed with water—is the basis of putty and of many paints.

CHALK FARM. District of London, to the N.W. of Primrose Hill. A large portion of it is occupied by rly. goods yards. The name is

a corruption of Chalcot Farm, the site of Upper Chalcot manor house being in England's Lane, Haverstock Hill.

CHALLENGER EXPEDITION. Scientific expedition sent out under the auspices of the British Government to investigate the physical and biological conditions of the Atlantic, Pacific, and Antarctic oceans. The voyage was made 1872-76 in H.M.S. *Challenger*, under the command of Captain Nares, with Wyville Thomson as head of its scientific staff, charged with the study of the conditions of life in the deep seas. The official report was not completed until 1895.

CHALMERS, JAMES (1841-1901). Scottish missionary and traveller. Born at Ardristra, Argyllshire, he worked in 1861 in the Glasgow city mission. Ordained as a Congregationalist minister in 1865, in 1866 he was sent by the London Missionary Society to the island of Raratonga in the Hervey's. Ten years later he removed to New Guinea, over which he helped to establish the British protectorate, and won the respect of the native chiefs. On April 7, 1901, he and a small band of followers were murdered by cannibals.

CHALMERS, THOMAS (1780-1847). Scottish divine and writer. Born at Anstruther, Fife, March 17, 1780, he was ordained and became minister of a church in Glasgow. In 1823 he was appointed to the chair of Moral Philosophy at St. Andrews, and five years later became professor of theology at Edinburgh. In 1843 he led the movement that resulted in the formation of the Free Church of Scotland, and became the first principal of the Free Church College in Edinburgh. By his scheme of one penny a week from every member the financial basis of the Free Church was laid securely. He died May 30, 1847.

Thomas Chalmers, Scottish divine

CHÂLONS - SUR - MARNE. City of France, capital of the dept. of Marne. It is built on both sides of the Marne, 107 m. by rly. N.E. of Paris. The cathedral dates from the 13th century. Secular buildings include the hôtel de ville, with library and museum, and the prefecture. Châlons, in ancient times the chief town of the Catalauni, became the seat of a bishop and one of the chief places in Champagne. The camp of Châlons, established north of the town by Napoleon III, is still used for military purposes. Châlons has large barracks. Pop. 31,194.

The battle of Châlons is the name given to the defeat of Attila by the Roman general Aëtius and Theodoric, king of the Visigoths, A.D. 451. The Catalaunian Fields, the scene of the battle, are not now located at Châlons but near Troyes.

CHALON-SUR-SAÔNE. Town of France, in the dept. of Saône-et-Loire. It is on the right bank of the Saône, 80 m. by rly. N. of Lyons. In Roman times a great road centre. from the 3rd century to the Revolution it was the see of a bishop. The cathedral is now the church of S. Vincent. The old church of S. Pierre, and the episcopal palace, with remains of the old town walls, still stand. Chalon is a river port and the terminus of the Canal du Centre. It ships wine, corn, timber, etc. Pop. 31,609.

CHALYBEATE WATERS (Gr. *chalyps*, steel). Mineral waters which contain iron salts. The iron exists chiefly as the carbonate or sulphate, very occasionally as the chloride. The amount of iron is usually small, but it is claimed that, taken as naturally occurring in mineral water, iron is more easily absorbed by

the system. The chief British natural mineral waters containing iron are those of Flitwick, Harrogate, and Leamington.

CHAM (1819-79). Pseudonym of Amédée de Noé, French caricaturist. Born in Paris, Jan. 26, 1819, he developed an aptitude for caricature. His designs are said to have numbered 40,000. He died Sept. 6, 1879. Pron. Kam.

CHAMBER (Lat. camera, a room). Word originally used for any room, it came to refer principally to one in which meetings of importance were held.

The Chamber of Deputies is the lower chamber of the parliament or national assembly of the French republic. It is elected by manhood suffrage for a period of four years. In 1930 it was composed of 597 Deputies.

In most towns there is a chamber of commerce, which exists to further the interests of traders. There is in London a general association of these chambers.

CHAMBERLAIN (Lat. camera, chamber). Attendant in a chamber or household. The title was early applied in Europe to an officer in charge of the royal household. The lord chamberlain (q.v.) is a member of the government. The lord great chamberlain (q.v.) is an hereditary office, concerned with ceremonial. In London the city chamberlain is treasurer of the corporation; he is elected annually by the liverymen, admits to the freedom of the city, and has judicial functions.

CHAMBERLAIN, ARTHUR NEVILLE (b. 1869). British politician. The younger son of Joseph Chamberlain, he was born March 18, 1869. In Dec., 1916, he became director-general of national service. He entered Parliament in 1918 for a Birmingham division, and became postmaster-general in 1922. He was minister of health and then chancellor of the exchequer in 1923-24, and again minister of health in the Unionist Government of 1924-29, when he was responsible for the important reform of derating.

CHAMBERLAIN, JOSEPH (1836-1914). British statesman. Born in Camberwell, July 8, 1836, in 1873 he was elected mayor of Birmingham, and carried through a series of reforms and improvements.

When Chamberlain entered the House of Commons in 1876 as John Bright's colleague in the representation of Birmingham, he was already known as an extreme radical. In 1880 he became president of the board of trade, and in the campaign for an extended franchise in 1884 he was Gladstone's most active lieutenant. In 1885 Chamberlain was returned as a Liberal for West Birmingham and held the seat till his death.

When Home Rule was introduced Chamberlain broke away from Gladstone, and his speeches helped materially to defeat the measure. He became a leader of the Liberal Unionists, but it was not until 1895 that he definitely threw in his lot with the main Unionist party and joined Lord Salisbury's government as secretary for the colonies. In Jan., 1896, he was called upon to deal with the

difficulties caused by Dr. Jameson's raid. Prolonged friction with President Kruger and the Boer oligarchy followed, culminating in the South African War of 1899. In Nov., 1902, he went to South Africa, and on his return advocated an imperial preferential tariff. This led to a fierce controversy between the tariff reformers and the free traders and to serious dissensions in the Unionist party. In Sept., 1903, Chamberlain resigned office in order to be free to advocate his cause, and this he did until his health broke down in 1906. He died July 2, 1914. He is commemorated in several ways in Birmingham, especially, perhaps, in the university, which he helped to found, and of which he was the first chancellor.

CHAMBERLAIN, SIR JOSEPH AUSTEN (b. 1863). British politician. Elder son of Joseph Chamberlain, he was born Oct. 16, 1863, and educated at Rugby and Trinity College, Cambridge. Elected Liberal Unionist M.P. for E. Worcestershire in 1892, he took office in 1895 as civil lord of the Admiralty. In 1900 he was made financial secretary to the treasury, in 1902 postmaster-general, and in 1903 chancellor of the exchequer.

Sir A. Chamberlain,
British politician

He left office with the Unionists in 1905, not returning thereto until 1915, when he became secretary for India in the Coalition ministry. In 1917 he resigned in consequence of the censure passed on the conduct of the Mesopotamian expedition, but in 1918 he was again a member of the Cabinet. He succeeded Bonar Law as chancellor of the exchequer in 1919 and as leader of the Unionist party in 1921, but he resigned with Lloyd George in Oct., 1922, and was not included in the Unionist ministry of 1923-24. From 1924-29, however, he was foreign secretary in the Baldwin ministry, and as such directed Britain's policy through five most eventful years. He was M.P. for E. Worcestershire until 1914, when he succeeded his father as M.P. for West Birmingham. In 1925 Chamberlain received the K.G.

CHAMBERS, CHARLES HADDON (1860-1921). British playwright. Born at Sydney, at the age of 22 he settled in England, took up journalism and play-writing, and made his mark as a dramatist with Captain Swift, produced at the Haymarket, June 20, 1888. It was followed by The Idler, John-a-Dreams, The Tyranny of Tears, and other plays. He died Mar. 20, 1921.

CHAMBERS, EPHRAIM (c. 1680-1740). English encyclopedist. Born at Kendal, Westmorland, in 1728 he brought out his Cyclopaedia: or, an Universal Dictionary of Arts and Sciences. The fifth edition of this, 1746, formed the basis of Abraham Rees's Cyclopaedia, 1819, and inspired the great French Encyclopédie of Diderot and d'Alembert, which appeared 1751-65. Chambers died May 17, 1740.

CHAMBERS, WILLIAM (1800-83). Scottish publisher. Born at Peebles, April 16, 1800, he started in business as a bookseller in 1818. After his brother Robert joined him, in 1832, they collaborated in writing The Gazetteer of

Scotland and in founding Chambers's Edinburgh Journal, which in 1854 became Chambers's Journal; other publications were Chambers's Information for the People, 1833; and Chambers's Encyclopaedia, 1859-68.

Robert Chambers,
Scottish publisher

William, who died May 29, 1883, was twice lord provost of Edinburgh.

His brother Robert (1802-71) was the author of more than twenty historical works, including histories of Rebellions in Scotland and a Life of James I. Among his later works was the Book of Days. He died at St. Andrews, March 17, 1871.

CHAMBERY. Town of France, capital of the dept. of Savoie. It stands on the rivers Laysse and Albane, 80 m. by rly. S.W. of Geneva. The chief buildings are the cathedral of the 14th and 15th centuries and the château, which incorporates some parts of the castle,

Chambéry, France. The château which was formerly the residence of the dukes of Savoy

once the residence of the dukes of Savoy. Others are the palais de justice and the hôtel de ville. Chambéry is the seat of an archbishop. Once the capital of the duchy of Savoy, it was definitely secured by France in 1860. Near are Lémenc, with its church, Les Charmettes, once the residence of Rousseau; and Challes les Eaux, known for its medicinal waters. Pop. 20,617.

CHAMBORD. Town of France, in the dept. of Loir-et-Cher. On the Cosson, a tributary of the Loire, 10 m. E. of Blois, it is famous for its 16th century château, said

Chambord, France. Northern façade of the magnificent Renaissance château, once the home of the French kings

to be one of the finest Renaissance houses in existence. The estate, after belonging to the counts of Blois, passed to the kings of France. Francis I began to build the present château, where Louis XIV and other kings lived at times. Chambord was given by Napoleon to Marshal Berthier, from whose widow it was purchased for the grandson of Charles X, who left it to the Parma family.

CHAMBORD, HENRI, COMTE DE (1820-83). French prince. Born posthumously in Paris, Sept. 29, 1820, he was a son of the duke of Berry and a grandson of Charles X, who, on his abdication in 1830, tried to secure the succession of his grandson, called Henry V. It was useless and the two left the country, Henry becoming head of the Bourbon family on the ex-king's death in 1836. Known now as the comte de Chambord, Henry lived mainly at Frohsdorf, near Vienna, quietly maintaining the rôle of the rightful king of France. He died Aug. 24, 1883, leaving Don Carlos, duke of Madrid, as head of the House of Bourbon, and therefore in virtue of the Salic law rightful king of France. See Bourbon

CHAMELEON (Gr. chamai, on the ground : leōn, lion). Genus of lizards found chiefly in Africa and Madagascar, and distinguished by the possession of a long tongue which is used for capturing insects. The eyes are large and covered with a lid having a minute hole in the centre, the two eyes working independently. The toes are divided into two opposable groups, so that they can grasp forcibly the stems of plants. The tail also is prehensile. The chameleon is able to alter its colour—usually green or brown—so that the hue approximates to that of the animal's surroundings.

The name chameleon is given to a constellation of the southern hemisphere. It was so named by Bayer. See Constellation.

CHAMOIS (*Rupicapra tragus*). Ruminant animal found in the mountain regions of S. Europe and W. Asia. Placed between the goat and the antelope, it is more akin to the latter. It can leap wide ravines and scramble up and down precipices. The chamois stands about 2 ft. high; has fur of a warm brown on the back and lighter below; and a pair of short hooked horns. The skin is valuable as leather.

Chamois. An agile mountain ruminant.
W. S. Berridge, F.Z.S.

CHAMONIX. Valley and village of France, in the dept. of Haute-Savoie. The valley, famous for its scenery occupies the upper portion of the Arve basin and extends north-east to south-west for about 12 m.

The village of Chamonix, 3,416 ft. high, is a noted tourist resort. The chief starting point for the ascent of Mont Blanc. A Benedictine priory was founded here in 1091 from which Chamonix derives its variant name of Le Prieuré. Pop., commune, 3,094.

CHAMPAGNE (Lat. campus, plain). Formerly a province of France. It covered the east central part, through which the Marne and Seine flow before they unite near Paris. Within it are the towns of Troyes, Reims, Châlons, Brienne, and Soissons. Since the Revolution it has been divided up between the departments of Marne, Aube, etc.

Champagne was famous in the Middle Ages for its fairs, and has always been noted for its wines, more especially a white, sparkling wine produced in the Marne dept. The best is made from small black grapes, grown either on the slopes of chalk hills or the alluvial plain of the river Marne.

During the Great War heavy fighting took place between the French and Germans in the Champagne district. The great offensive launched by the French on Sept. 25, 1915, was the equivalent to the British battle of Loos, both operations being intended to relieve the hard-pressed Russian armies. The losses of both armies were heavy, and the result achieved was negligible.

CHAMPAIGNE OR **CHAMPAGNE**, PHILIPPE DE (1602-74). French painter. Born in Brussels, May 26, 1602, he studied in Paris from 1621, and succeeded Duchesne as court painter, 1627. His trinity of portraits of

Cardinal Richelieu in one picture (a full face and profiles to right and left) is in the National Gallery, London, and his portrait of Fénelon is in the Wallace Collection. He is well represented in the Louvre. He died in Paris, Aug. 12, 1674.

Chameleon. A lizard whose colour changes to tone with its surroundings

CHAMP DE MARS

(Lat. campus Martius, field of Mars or of March). Originally a place of assembly for political and military purposes. The Franks held annual meetings in March, the month named after Mars, to which they came

armed. These assemblies continued as long as the Frankish Empire held together, the date being afterwards changed to May. and the meeting-place called Champ de Mai.

Champ de Mars is the name of a square in Paris, long used for military displays, between the Seine and the École Militaire. Here the exhibitions of 1867, 1878, and 1889 were held.

CHAMPFLEURY (1821-89). Pen-name of Jules Fleury-Husson, French novelist. Born at Laon, Sept. 10, 1821, his first literary success was *Chien-Caillou*, 1847. He lived with Murger, whom he induced to forsake verse for prose. In addition to a large number of novels and short stories, he wrote much on art. His *Histoire des faïences patriotiques sous la révolution*, 1866, procured him a post at the museum at Sèvres. He died Dec. 5, 1889.

CHAMPION. Term applied generally to one who fights for or strenuously supports a person or cause; also to one who has proved himself pre-eminent in some branch of sport. The Seven Champions of Christendom were the seven national saints.

The king's champion, champion of the realm, or champion of England, challenged to single combat any person who should gainsay the sovereign's title to the crown at his coronation. The Dymoke family now hold the hereditary office of king's champion.

CHAMPLAIN. Lake of U.S.A., a natural and historic highway between the States and Canada. Named after its discoverer, Samuel de Champlain, it lies between the states of Vermont and New York, the former containing about two-thirds of its area of 750 sq. m. Drained N. by the Richelieu river into the St. Lawrence, it penetrates for a few miles into Canada, is 120 m. long, and from 1 m. to 15 m. broad, 95 ft. above sea level, and reaches a greatest depth of 300 ft.

CHAMPLAIN, SAMUEL DE (1567-1635). French explorer of Canada. In 1603 he sailed up the St. Lawrence beyond Montreal, and in 1608 was again in Canada. He founded a settlement at Quebec, discovered Lake Champlain, and remained in the country as governor for the French king. Taken prisoner by the English, 1629, he was restored to his former post, 1633. He died at Quebec, Dec. 25, 1635.

S. de Champlain, French explorer

CHAMPNEYS, BASIL (h. 1842). British architect. Born at Lichfield, son of Dean W. W. Champneys, he began to practise in 1867. Among his more important buildings are Newnham College, Cambridge, Somerville and Mansfield Colleges, Oxford, quincenary buildings at Winchester College, the Butler Museum at Harrow, and the new buildings of Bedford College, Regent's Park.

CHAMPOLLION, JEAN FRANÇOIS (1790-1832). French Egyptologist. Born at Figeac, Lot, Dec. 23, 1790, he studied under his brother Jean Jacques Champollion-Figeac. In his

Précis du système hiéroglyphique, 1824, he perceived hieroglyphs to be partly alphabetic, and subsequently deduced an alphabet of 25 letters, entitling him to rank as the founder of Egyptology, a professorship of which was created for him in Paris. He died March 4, 1832. His elder brother, Jean Jacques Champollion-Figeac (1778-1867), a distinguished archaeologist, was professor of Greek at Grenoble, and librarian at Fontainebleau.

CHANAK. Chief town of the sanjak of Bigha, Asia Minor. Known also as Kale Sultanieh and Dardanelles, it stands on the Dardanelles, at its narrowest part, opposite Kilid-Bahr. During the Great War it was unsuccessfully attacked by the Allied Fleet, March, 1915. Pop. 8,000. See Dardanelles.

CHANCELLOR (Lat. cancellarius). Name given to a high official who, in western Europe, assisted emperors and kings in affairs of state. In England the chancellor soon became important. His duties included the keeping of the great seal which he affixed to the royal documents. Through him passed the petitions to the king, and when these increased in number and variety he was given wide powers of dealing with them, thus originating the court named after him, the chancery court. He was soon known as the lord high chancellor. When a further division of labour became necessary the chancellor was relieved of many administrative duties and was confined more to his legal functions. He remained the president of the House of Lords.

Meanwhile other chancellors had come into existence. There was a chancellor of the exchequer, a chancellor of the duchy of Lancaster, and others. Bishops had and have their chancellors, who discharge the legal duties of the various dioceses. The orders of knighthood have each their chancellor. The official head of each university in the United Kingdom is known as the chancellor.

The chancellor of the exchequer is an English office which originated in the reign of Henry III. Its present importance dates from the early 19th century. The chancellor is now a leading member of the Cabinet. He presents the annual Budget to the House of Commons, and is responsible for the collection and expenditure of the revenue. See Exchequer.

CHANCELLOR, CHANCELOR OR CHANCELOUR, RICHARD (d. 1556). English navigator. In 1553 he accompanied Sir Hugh Willoughby's expedition to discover a north-east passage to India. Leaving his vessel at the mouth of the Drina, he travelled down to Moscow, where he was received by the Russian tsar, who promised complete freedom of trade to British ships. During his return from a second voyage to Moscow, in 1555, his vessel was wrecked off the Aberdeenshire coast, Nov. 10, 1556, and he and most of his companions were lost. From his voyages dated the lucrative trade between Russia and Britain.

CHANCELLORSVILLE. Farmhouse on the old plank road leading from Fredericksburg to Orange Court House, in Virginia, U.S.A., 70 m. N.W. of Richmond. It has given its name to one of the battles in the American Civil War, fought in the Wilderness region, May 1-4, 1863. Here the Federal armies under Hooker were defeated by the Confederates under Lee and Jackson.

CHANCERY. Literally, the place in which a chancellor transacts his business, i.e. his office. It is now used chiefly for a court of law—and the whole system which has developed around it: but in diplomacy it is used for something like a foreign office.

The court of chancery administers not common law, but equity, and is so called because this branch of justice was early put into the hands of the chancellor. In England the court of chancery grew around the person of

the chancery and it became, after the privy council and the House of Lords, the chief court of the land. Its rules were very complicated and its procedure usually dilatory. In 1873, when the judicial system was reformed, the court of chancery was made one of the three divisions of the High Court. It is manned by six judges, and there are masters attached to them. The head is the lord chancellor, but the acting president is the master of the rolls. There is an appeal to the court of appeal. See Appeal; Lord Chancellor.

Chancery Lane, which has a long association with the law, is a narrow street running from Holborn to Fleet Street.

CHANCRE (Fr.). Medical term for two forms of ulcerous sore. A hard chancre is a sore with a firm base due to infection by the organism of syphilis, and usually appearing three or four weeks after exposure to contagion. A soft chancre is due to infection by a different organism, and appears usually within a few days after infection. Treatment consists in keeping the sore clean by bathing it with mild antiseptics such as boracic acid. See Syphilis.

CHANCTONBURY RING.

Prehistoric earthwork on the Sussex downs, 2½ m. N.W. of Steyning. The tree-topped hill, 814 ft. high, was defended by an oval rampart 500 ft. by 400 ft., with outworks 380 yds. distant in two directions. Excavations in 1909 revealed Roman coins and other remains.

CHANDOS. Name of an English family which in the 13th century, claimed descent from a companion of William the Conqueror from Chandos, in Normandy.

The 9th baron Chandos, James Brydges (1673-1744), was created duke of Chandos in 1719. Known as the princely Chandos, he built the mansion at Canons (q.v.). In 1789 the dukedom and barony lapsed with the 3rd duke.

CHANDRAGUPTA (d. c. 295 B.C.). Indian ruler and founder of the Maurya dynasty. He was related to the king of Magadha, by whom he was exiled. During his exile he made the acquaintance of Alex-

CHANGE OF LIFE, CLIMACTERIC, OR MENOPAUSE. Change occurring in women, usually between the ages of 45 and 50, when the reproductive organs become functionless and the capacity to bear children ceases. Physiologically, the change is indicated by shrinking of the uterus and ovaries and cessation of menstruation. Some women pass through the period without disturbance, but others suffer from headaches, nervousness, and depression of spirits. Care should be taken to protect the general health and avoid excessive fatigue, worry, and exposure to cold.

CHANG TSO-LIN (1875-1928). Chinese soldier. By birth a Manchurian, after the revolution of 1911-12 he became governor of Fengtien, and in 1919 he obtained control of two other provinces in Manchuria. In 1925 he marched on Peking, which he occupied, and from then until 1928 he was dictator of Northern China. He did much to check

by the Acts of the British Parliament unless this is specially stated therein.

In 932 the group was acquired by the duke of Normandy, and subsequently came under the rule of the English kings. See Alderney; Guernsey; Jersey etc.

CHANNEL TUNNEL. Term applied in Great Britain to an undersea tunnel between England and France. The first proposal for such a tunnel was made at the beginning of the 19th century. In 1876, after negotiations between the two Governments, a protocol was signed; a company was formed in France and another in England, and an Act passed in each country authorising preliminary operations.

On each side an experimental tunnel was bored for a distance of over 2,000 yds., that on the English side from a shaft sunk near the Shakespeare Cliff, Dover; that on the French side from Sangatte, near Calais; but in 1882 work was stopped by order of the Board of

Channel Tunnel. Sectional diagram showing a plan for the construction of a tube railway beneath the English Channel. P.P., pumping stations. Based upon details supplied by Sir Arthur Fell.

Bolshevist advances in China, but the nationalist movement from Nanking resulted in the Southerners obtaining control of Peking in May, 1928. Chang withdrew to Manchuria, and on June 4 he was wounded by a bomb. His death was announced on June 21, 1928.

CHANNEL. Sheet of water between two larger areas. An example is the English Channel, called by the French simply the channel (La Manche). The Straits of Dover, its narrowest point, have been swum several times. See Dover.

CHANNEL ISLANDS. Group of islands in the English Channel, consisting of Jersey, Guernsey, Alderney, and Sark, and a number of smaller islands and rocks—Herm, the Casquets (q.v.) or Casquets, Ortac, Breechou, Burhou, Jéthou, Minquiers, Chauseys, etc. With the exception of the Chauseys, which are French, the islands belong to Great Britain, but geographically they are attached to France, lying from 4 m. to 40 m. W. of the Cotentin peninsula. The passages between the islands have been the scene of numerous wrecks, as have the jagged Casquet rocks. They are reached by boat from Southampton and Weymouth. The total area is 75 sq. m. Pop. 90,230.

Trade. In 1914 the proposal was under the consideration of the Committee of Imperial Defence, but owing to the outbreak of the Great War it was again shelved. In May, 1929, a special committee opened an inquiry into the economic aspects of the proposed tunnel. Its report, issued March, 1930, favoured the construction of a tunnel.

CHANNING, WILLIAM ELLERY (1780-1842). American divine and author. Born at Newport, Rhode Island, April 7, 1780, he was ordained in 1803 to the Congregationalist ministry at Boston. From Calvinism he passed to Unitarianism, but remained minister of the same church all his life. Famous as a preacher and as a social reformer, he advocated temperance and opposed slavery. Channing died Oct. 2, 1842.

CHANT, LAURA ORNISTON (1848-1923). British social reformer. Born at Cheston, her maiden name was Dibbin. She studied at Apothecaries' Hall, was a nurse at the London Hospital, and in 1876 married Thomas Chant, M.R.C.S. As an ardent advocate of temperance, women's suffrage, and social purity, she became a well-known speaker in Great Britain and the U.S.A. She died Feb. 16, 1923.

CHANTARELLE (*Cantharellus cibarius*). Edible fungus of the family Agaricaceae. It is a woodland species, of uniform rich egg-yellow colour, from 3 ins. to 4 ins. across the top, which is cup-shaped. The exterior is ribbed. It grows either in groups or rings.

CHANTILLY. Town of France, in the dept. of Oise. It is on the Nonette, 25 m. by rly. N.E. of Paris. Chiefly famous as a pleasure resort, it has a racecourse and large racing establishments. There was a castle here in the 10th century or earlier. The Grand Condé rebuilt the house, making it one of the most magnificent in France. This Grand Château was pulled down at the Revolution.

The present Grand Château was built in 1876-82 by Henri, duke of Aumale, fourth son of Louis Philippe, who inherited the Condé estates. Adjoining is the châtelet or

Channel Islands. Maps of the group of islands in the English Channel, and the four chief islands, Jersey, Guernsey, Alderney, and Sark.

under the Great, organized an army, and conquered the Punjab. He then captured Magadha, 321 B.C. and established his dynasty. His name in Greek is Sandracottus.

Alderney, and Sark are under a single lieutenant-governor. Guernsey and Alderney have a government of their own, and Sark is a dependency of Guernsey. The islands are not bound

petit château, a Renaissance building erected in the 16th century, which served as a model for the new Grand Château. The château

Chantilly, near Paris. The Grand Château built by Henri, duc d'Aumale, and bequeathed to the nation

d'Enghien was built in the 18th century as a guest house. The duc d'Aumale left his pictures, statuary, furniture, and other art treasures to the nation. This Musée Condé, as it is called, and the park containing the châteaux, are now open to the public. Near the town is the forest of Chantilly, much used for exercising race-horses. Pop. 5,539.

CHANTREY, SIR FRANCIS LEGATT (1781-1841). British sculptor. Born at Jordanthorpe, Derbyshire, April 7, 1781, he became a portrait painter in London, but before long he abandoned painting and confined himself to sculpture. The bust of Sir Walter Scott, executed in 1820 and now at Abbotsford, is a good specimen of his work. Elected R.A. in 1818 and knighted in 1835, he died in London, Nov. 25, 1841, having amassed a large fortune, the bulk of which constituted the Chantrey Bequest.

Sir Francis Chantrey, R.A., British sculptor

This was a fund to be devoted to "the encouragement of British fine art in painting and sculpture only." It became operative in 1875, when the capital yielded an annual income of £2,100. The president and council of the Royal Academy, who were vested with full powers of purchase and administration, began to buy pictures and sculptures in 1877. These pieces have been exhibited in the National Gallery of British Art (the Tate Gallery) since 1897.

CHANTRY (old Fr. chanterie, singing, place of singing). That part of a church where masses are chanted for the benefit of founders or patrons. It is usually a space screened off from the body of the church, and in the Middle Ages generally contained the tomb of the founder. The finest chantry in London is the Islip Chapel, Westminster Abbey, the screen being a splendid example of 14th century Gothic.

CHANTY OR **CHANTEY**. Song formerly sung by sailors of the navy and the mercantile marine when engaged together in heavy work such as weighing the anchor. Different varieties of chanty are the capstan, the halliard, and the sheet, tack, and bowline chanty. The chanty-man sings the solo lines, others join in the chorus. Pron. Shan't-y.

CHAPBOOK (A.S. ceap, trade, barter). Small book or pamphlet of a popular character circulated by chapmen or pedlars. Common in the 17th and 18th centuries in England, Scotland, and Ireland, they contained tales such as Valentine and Orson, lives such as that of Dick Whittington, histories, ballads, etc., and usually had crude illustrations on the front page. They are now seldom seen. A monthly periodical devoted to contemporary poetry was started in London in 1919 entitled *The Monthly Chapbook*.

CHAPEL (late Lat. capella). A building or part of a building set apart for Christian worship. The chapels in cathedrals and churches are generally additions screened off from the body of the structure. In Great Britain the term is commonly applied to a building for Nonconformist worship. Ecclesiastical law classifies chapels as Royal, Collegiate, Free, of Ease, and Private. Chapels Royal are those of the Savoy and St. James's, London, and St. George's at Windsor. Collegiate chapels are attached to colleges, either religious or secular. Free chapels generally belonged to the monastic orders, while a chapel of ease is an offshoot of a parish church to accommodate remote parishioners. Private chapels are those attached to a royal or episcopal palace or a mansion.

The term chapel is used for a companionship of workmen, especially compositors, in a printing office. The meetings, also called chapels, are held to settle disputes, decide on common action, consider grants from the common fund, and to admit members.

CHAPEL-EN-LE-FRITH. Market town of Derbyshire. It is 20 m. by the L.M.S. Rly. S.E. of Manchester. It has iron works, and there are coal and lead mines and lime works in the neighbourhood. Market days, 1st and 3rd Thursdays. Pop., parish, 5,283.

CHAPELTOWN. Market town of Yorkshire (W.R.). It is 8 m. N. of Sheffield, on the L.M.S. and L.N.E. Rlys. The industries include coal and iron mining and the manufacture of bricks. Market day, Fri. Pop. 9,077.

CHAPLAIN (Lat. capellanus). Name first applied to the priest who accompanied the French armies in the field. It is now used of a priest in charge of a private chapel, or a minister who officiates in college and school chapels, public institutions, and religious communities, or is attached to military and naval establishments.

Chaplains of the British army are under the War Office, are drawn from all denominations, and are given honorary military rank. During the Great War the chaplain's department expanded from a personnel of 54, who accompanied the B.E.F. to France in 1914, to a total of 3,480. In 1919 the prefix royal was given to the Army Chaplains' Department. In the navy a chaplain has no special rank, the chief chaplain being called the Chaplain of the Fleet. There is also a Chaplain-in-Chief of the Royal Air Force.

Examining chaplains are clergymen appointed by the bishops to examine candidates for holy orders. The English College of Chaplains consists of the 36 chaplains and honorary chaplains of the royal household, with the Clerk of the Closet at their head, and is composed exclusively of Church of England clergymen. In Scotland the royal chaplains are recruited from the Church of Scotland alone. Chaplains to the House of Commons must belong to the established church.

The chaplain-general is head of the Church of England commissioned chaplains in the British Army. His office is at 15, Albemarle Street, London, W.

CHAPLIN, CHARLES SPENCER (b. 1889.) Anglo-American cinema actor, commonly known as Charlie Chaplin. Born April 16, 1889, at Camberwell, London, at the age of 7 he was engaged in music-hall work, and in 1914 in the U.S.A. made his first appearance on the cinema

Chaplain. Badge of British army chaplain

Charles Chaplin, cinema actor

stage. In this he achieved world-wide success. In 1917 he was established in California as a producer of films in which he performed, notably *The Kid*, *The Gold Rush*, *The Circus*, and *City Lights*.

CHAPLIN, HENRY CHAPLIN, 1ST VISCOUNT (1841-1923). British politician and sportsman. Born Dec. 22, 1841, he won the Derby in 1867 with *Hermit*, and was regarded as one of the leading sportsmen of his day. From

1st Viscount Chaplin, British politician
Elliott & Fry

1868-1905 he was Conservative M.P. for the mid or Sleaford division of Lincolnshire, and from 1907-16 for Wimbledon. In 1885-6 he was chancellor of the duchy of Lancaster; in 1889 the first president of the Board of Agriculture, and from 1895-1900 president of the Local Government Board. In 1885 he was made a privy councillor, and in 1916 a viscount. He died May 29, 1923.

CHAPMAN, ARTHUR PERCY F. (b. 1900). English cricketer. Born Dec. 3, 1900, he was educated at Uppingham

and Cambridge and played cricket for his university. In 1920 he played for the Gentlemen, and then for Buckinghamshire and Kent, for which county he qualified in 1925. In 1926 he captained the English team in the last test match, and in 1928-29 he led the team that won four test matches in Australia. He had previously toured Australia in 1922-23 and 1924-25.

A. P. F. Chapman, English cricketer
Lenore

CHAPTER (Lat. capitulum, little head). Term derived from the monastic custom of assembling every morning to hear a chapter

of the rule read. The word was applied to the meeting-place, hence chapter house, and to the meeting itself. To-day, outside monastic communities, the name is used for an assembly of the canons and prebendaries of a cathedral or collegiate church under the presidency of the dean or provost. The term is also used of an assembly of members of an order of knighthood. The chapter house commonly joined the church by a cloister, and had a seat of stone round the wall, with a raised seat for the president. See *Cathedral*; *Canon*; *Dean*.

CHARCOAL. Amorphous form of carbon, prepared by charring wood or bones. To prepare wood charcoal the old method is to build large conical heaps of wood logs covered with turf or clay and having channels for the ingress of air, and the escape of the products of combustion. Modern processes involve the use of iron cylindrical retorts. Good charcoal contains about 93 p.c. of carbon and 3 p.c. of ash, the other constituents being oxygen and hydrogen. Wood charcoal is used as a source of heat, and, when powdered, for decolorising purposes, purifying alcohol, filtering water, etc.

Chapter House in York Minster

In Great Britain immense forests were destroyed for the production of charcoal for the early iron industry, e.g. in Sussex.

Charcoal is also used by artists to "block in" their paintings or statuary; in other words, to sketch in outline the general plan of the work. It consists of a charred vine twig, but is also made from the sawdust of the willow, poplar, or lime, pressed in a mould and charred in a retort.

CHARCOT, JEAN BAPTISTE ETIENNE AUGUSTE (b. 1867). French explorer. He was born at Neuilly-sur-Seine, and in 1903-05, on board the *Frangais*, and 1908-10, on the *Pourquoi Pas?*, he commanded two expeditions which carried out important work in mapping, sounding, etc., in S. Polar regions along the coasts of Graham Land, Alexander Land, Deception Island, etc. Consult his *Autour du Pôle Sud*, 1912.

Charcot Land, which lies to the S. of Graham Land, was named after the explorer. In 1929 Sir Hubert Wilkins found it to be an island.

CHARCOT, JEAN MARTIN (1825-93). French physician. Born in Paris, Nov. 29, 1825, in 1862 he was appointed medical attendant at the Salpêtrière, an institution for insane and otherwise afflicted women. A member of the Institut de France, he held the professorship of pathological anatomy at Paris, 1873-82, and from 1882 until his death that of nervous diseases, specially founded for him. He was one of the first physicians to employ hypnosis as a curative agent in mental disorders. He died Aug. 16, 1893.

Charcot's disease, discovered by and named after him, consists of a change in the joints occurring in the course of locomotor ataxia. Little can be done in the way of treatment.

CHARD. Borough and market town of Somerset. It is 15 m. by rly. S.E. of Taunton, on the G.W. and Southern Rlys., and has manufactures of lace, linen, iron goods, and brassware. Roman villas have been discovered in the vicinity. In 1928 Chard School was refounded by Mr. W. Wyndham of Oreham Wyndham. It dates from 1671 when the building was given by William Symes, or earlier Market day. Thurs. Pop. 4,372.

Jean Chardin,
French painter

CHARDIN, JEAN BAPTISTE SIMÉON (1699-1779). French painter. Born in Paris, Nov. 2, 1699, he became the most noted French painter of genre and still life in the 18th century. He died Dec. 6, 1779. His most characteristic pictures include *The Teetotum*, *The Young Fiddler*, and *The Blessing*. The last named and several others are in the Louvre.

CHARGÉ d'AFFAIRES (Fr.). Diplomatic representative of the fourth class. He is accredited by his own foreign minister to the foreign minister of the country to which he is sent, and sometimes acts temporarily for a representative of a higher class.

CHARING CROSS. Open space and thoroughfare, S. of Trafalgar Square and the W. end of the Strand, London, from which radiate Whitehall, Cockspur Street, Northumberland Avenue, and other thoroughfares. It derived its name from the former village of Chering or Charing, which stood here, and the stone cross, one of a series of twelve set up by Edward I (1291-94) to commemorate his queen, Eleanor. The cross was removed in 1647, but a copy, erected in 1865—doubtful in detail—stands in the courtyard of Charing Cross Station (Southern Railway). Charing Cross is the official centre of London for the measurement of taximeter motor cab distances.

In 1930 it was decided to proceed with the new bridge at Charing Cross as advised by the Royal Commission on cross-river traffic in London.

Charing Cross. Copy of the original Eleanor cross

is a medical school of the university of London.

CHARIOT. Two-wheeled vehicle for conveying persons especially in ancient times. Used at first in hunting and warfare, it was afterwards adapted to private life, racing, and public processions. The body was of carpentry, wicker, or bentwood, with metal or leather mountings, and usually open at the back. Springless and usually seatless, it was sometimes floored with interlaced thongs or ropes. It was drawn by two or more horses.

A warrior was sometimes buried with his chariot, sometimes with his horses and charioteer as well. Examples have been unearthed in Yorkshire and elsewhere.

CHARITES. Three deities of grace and beauty in Greek mythology, the Roman Gratiae (Graces). They were the children of Zeus, and their names were Euphrosyne, Aglaia, and Thalia. Their home was with the Muses on Mt. Olympus. Pron. Karri-tez.

CHARITY. One of the seven Christian virtues. In its fullest sense, it is a disposition of the mind to love God for Himself alone and mankind for its own sake. Both reason and revelation urge the habit and practice of charity, the former because all men are of one human family, possessing qualities in common and capable of enjoying greater happiness by mutual aid than by mutual hate.

ORDERS OF CHARITY. These are religious orders of men and women who are devoted to the service of the poor and afflicted. Apart from the regular monastic orders the first modern community to be called brothers of charity was founded in Belgium by Canon Triest in 1809. It subsequently established houses in England, Ireland, and Canada. The first sisters of charity in the Roman Catholic Church were founded by S. Vincent de Paul in Paris in 1633, and this order is now established in many parts of the world. Sisterhoods of charity were also formed in the Anglican communion in the 19th century.

CHARITY COMMISSION. Body of commissioners appointed in 1853 by Parliament to look after charitable trusts. In 1874 the commissioners acquired similar powers in connexion with the endowments of schools, but in 1899 this authority was transferred to the Board of Education. The offices are in Ryder Street, St. James's, London, S.W., and the funds under its control are £70,000,000.

CHARLEMAGNE OR CHARLES THE GREAT (742-814). Roman emperor and Frankish king. He was elder son of Pepin the Short, a

Frankish king, and his wife Bertrada; but little is known of his early days. In 768, on Pepin's death, he and his brother Carloman became kings of the Franks, but the death of Carloman in 771 left Charles king of the whole realm. He had a long reign, most of it full of action. He conquered the Lombard kingdom in Italy and brought much of that country under his rule; he passed over the Pyrenees and drove the Moors back behind the Ebro; he brought the Bavarians within his empire, as he did the Avars, living still farther east. The longest of his wars was that against the Saxons, and this, too, ended in success. Several times he went to Italy, and in 800 he visited Rome in answer to an appeal from the pope and was there crowned emperor. In this way, on Christmas Day, 800, was founded the Holy Roman Empire, that lasted a thousand years, or until 1806.

Charlemagne, founder of the Holy Roman Empire. Painting by Albert Dürer, 1500, in the Nat. Mus., Nuremberg

Charles was for the rest of his reign the greatest figure in Europe. He was a lawgiver, a notable administrator, a builder, and, above all, took the keenest interest in supervising the work of the Church and seeking to spread the Christian faith. Education was another of his interests. He died Jan. 28, 814, and was buried at the church at Aix, where his remains were afterwards placed in a magnificent shrine.

CHARLEROI. Town of Belgium, in the prov. of Hainaut. It stands on the canalised Sambre, 22 m. by rly. E. of Mons, coaxed by waterways with the great canal system of N.E. France and Belgium. On a coalfield, with chemical, glass, and pottery works, it is situated in one of the most densely populated areas in Belgium. The chief buildings are the church of S. Anthony, the hôtel de ville, and the palais de justice. Originally named Charnoy, in 1666 the village was renamed Charleroi, in honour of Charles II of Spain. It was in German occupation throughout the Great War. Pop. 27,394.

BATTLE OF CHARLEROI. The battle fought between the French and Germans, Aug. 21-24, 1914, was the most important of the Great War up to the first battle of the Marne, and was remarkable for the escape of a French army from envelopment.

The heaviest fighting took place on Aug. 21, when the Germans forced the passage of the Sambre at Tamines and Jemeppe, driving back detachments of the French 10th and 3rd corps, and on the 22nd, when four German corps attacked on the Sambre and penetrated into Charleroi. A French counter-attack S. of Châtelet inflicted heavy loss on the Prussian Guard. Elsewhere, French defeats at Virton and Morhange left a wide gap between Lanrezac's troops and the 4th French army, on his right, while on his left the falling back of French cavalry opened a serious gap between the 5th French army and the British. This led to the French retirement. See Mons.

Chariot. Assyrian chariot from a relief on the great gates of Nineveh

CHARLES I (1600-49). King of Great Britain and Ireland. Son of James I of England, he was born at Dunfermline, Nov. 19, 1600. On the death of his elder brother, Henry, 1612, he became his father's heir, and in 1616 he was made prince of Wales. He succeeded to the throne in 1625, when he married Henrietta Maria of France. From 1625-29 Charles was engaged in a ceaseless contest with his parliaments. He dissolved parliament in 1629, and ruled without one for 11 years, raising money by every possible device. In 1639 an attempt, at the instigation of Archbishop Laud, to impose an Anglican liturgy upon Scotland united the Scots in armed opposition. The king's financial resources were exhausted, so in 1640, advised by his chief supporter, Strafford, he summoned the Short Parliament, which refused supplies and was dissolved. In the same year he summoned the Long Parliament, by which Strafford was arrested and executed, and Charles was forced to consent to various reforms. Following an attempt to arrest five members, Charles left London in Jan., 1642, and civil war began in August.

Charles I, King of England
Portrait by Van Dyck

In the first two campaigns success lay with the Royalists, but in 1644 the Parliamentary army defeated them at Marston Moor, and in 1645 the cause of Charles received its deathblow at Naseby. Charles surrendered to the Scots, who handed him over to the English Parliament. He was finally tried for treason and beheaded on Jan. 30, 1649. Of a large family six children survived. These were the future kings Charles II and James II, Henry duke of Gloucester and three daughters: Mary, the wife of William of Orange, Henrietta, duchess of Orleans, and Elizabeth. See Buckingham; Civil War; Cromwell; Pym; Strafford.

CHARLES II (1630-85). King of Great Britain and Ireland. Son of Charles I, he was born at St. James's Palace, London, May 29, 1630. After Naseby he retired to France, but gaining the support of the Covenanting party in Scotland, he returned and was crowned at Secone in 1650. In spite of Cromwell's victory at Dunbar he invaded England in 1651; his army was shattered at Worcester, and he himself after hairbreadth escapes reached France again. Recalled to England in 1660, he entered London amid popular acclamation. He favored religious toleration, but nevertheless allowed the Cavalier parliament to persecute the Covenanters. He dismissed Clarendon in order to appease popular anger over the Dutch War of 1665-67, and during the subsequent Cabal ministry made the secret Treaty of Dover with Louis XIV, the result being the second Dutch War. By this treaty Charles had engaged England to the service of France at the price of a pension from Louis, his plan being to make himself independent of parliament and to control a small standing army with which to maintain this independence. This he achieved when he dissolved parliament in 1681 and ruled without one for the next four years. He died Feb. 6, 1685. His marriage with Catherine of Braganza was childless, but he had many children by his various mistresses, among them the boys who became dukes of Monmouth, Southampton, Grafton, Richmond, and St. Athans.

CHARLES (1887-1922). Emperor of Austria-Hungary, 1916-18. Born Aug. 17, 1887, he was a son of the archduke Otto and a grand-nephew of the emperor Francis Joseph. On the murder of Francis Ferdinand in June, 1914, he became heir to the aged emperor Francis Joseph, whom he succeeded, Nov. 21, 1916. Charles abdicated in Austria on Nov. 12, 1918, and in Hungary on the 16th. Twice during 1921 he tried, but in vain, to recover the throne of Hungary. He died at Finchéal, Madeira, April 1, 1922. By his wife Zita, a princess of Bourbon-Parma, he had eight children, the eldest being Francis Joseph Otto (b. 1912).

CHARLES. Name of seven rulers of the Holy Roman Empire. The first is generally known as Charlemagne (q.v.). The second was his grandson Charles, called the Bald. A son of the emperor Louis I, he was recognized as king of the western Franks in 843, and in 875 was crowned emperor in Rome. He died Oct. 6, 877. Charles III, called the Fat, also a descendant of Charlemagne, was crowned in 882 and ruled over both the east and the west Franks. He was deposed in 887 and died Jan. 10, 888.

CHARLES IV. Roman emperor and German king from 1346 to 1378. The son of John, king of Bohemia, he was born at Prague, May 14, 1316, and succeeded his father, who was killed at Crécy, in 1346. He is known as the author of the Golden Bull and the founder of Prague university. He died Nov. 29, 1378.

CHARLES V (1500-58). Roman emperor and king of Germany and Spain. Born Feb. 24, 1500, at Ghent, he was the elder son of Philip, archduke of Austria and duke of Burgundy, and Joanna, daughter of Ferdinand and Isabella of Spain.

On the death of his father in 1506 he succeeded to Burgundy and the lands in the Netherlands which had come down from Charles the Bold through his daughter Mary to Philip. In 1518 he was recognized as king of Castile and Aragon. Finally, in 1519, through the death of his paternal grandfather, the emperor Maximilian, he obtained the lands of the Hapsburgs. On this followed his election as emperor, and he was crowned Oct. 23, 1520.

Charles plunged into hostilities with Francis I of France. His success in the Italian campaigns of the war set the pope against him with the result that Rome was sacked and Pope Clement VII was taken prisoner (1527), thereby becoming almost a puppet of Charles. By the peace of Cambrai of 1529, Charles received Lombardy from Francis I. In Spain and in the Netherlands he established his supremacy but in Germany he met with a serious reverse and was obliged to make terms with the Protestants at Passau in 1552. In 1556 Charles abdicated in favour of Philip as king of Spain and of his brother Ferdinand as emperor. He then retired to a monastery in Estremadura, and died Sept. 21, 1558.

CHARLES VI (1685-1740). Roman emperor and king of Hungary and Bohemia. Born in Vienna, Oct. 1, 1685, the second son of the emperor Leopold I, he became the nominee of the Hapsburgs for the throne of Spain, against the Bourbon Philip of France. He proceeded to Spain in 1703, where he remained during the greater part of the War of the Spanish Succession. In April, 1711, Charles succeeded his brother, the emperor Joseph I. He was crowned emperor, and in 1714 agreed to the peace of Utrecht, which gave Spain to his rival. Having no sons, he endeavoured to secure the succession to his daughter, Maria Theresa, by means of the Pragmatic Sanction, but at his death, Oct. 20, 1740, this was ignored.

Charles (1697-1745), who was elector of Bavaria, was chosen emperor in opposition to Francis, the husband of Maria Theresa. He is called the emperor Charles VII.

CHARLES. Name of ten kings of France. Charlemagne (q.v.) ranks as the first and the emperor Charles the Fat as the second. Charles III was king from 893 to 922, when he was deposed. He died Oct. 7, 929. Charles IV (1294-1328), called the Fair, a son of king Philip IV, reigned from 1322 to 1328. Charles V (1337-80), called the Wise, was a son of John II, who was taken prisoner at Poitiers (1356). He ruled France as regent until his father's death in 1364 and as king until his own death, Sept. 16, 1380. During his reign war was incessant, and the misery of the people led to a rising of the peasants.

Charles VI (1368-1422), a son of Charles V, was called the Well-beloved and sometimes the Mad, as he lost his reason. His land was conquered by Henry V of England, who married the daughter of Charles and was crowned king of France. Charles's son, Charles VII (1403-61), made his capital at Bourges, claimed the throne and, after the victories of Joan of Arc, was crowned king at Reims, in July, 1429. Before he died, July 22, 1461, he had driven out the English, except from Calais. Charles VIII (1470-98) by marriage united Brittany

shattered at Worcester, and he himself after hairbreadth escapes reached France again.

Recalled to England in 1660, he entered London amid popular acclamation. He favored religious toleration, but nevertheless allowed the Cavalier parliament to persecute the Covenanters. He dismissed Clarendon in order to appease popular anger over the Dutch War of 1665-67, and during the subsequent Cabal ministry made the secret Treaty of Dover with Louis XIV, the result being the second Dutch War. By this treaty Charles had engaged England to the service of France at the price of a pension from Louis, his plan being to make himself independent of parliament and to control a small standing army with which to maintain this independence. with France, and his invasion of Italy in 1494 is regarded as an historical landmark, being one of the events that mark the beginning of the modern world.

Charles IX (1550-74), a son of Henry II and Catherine de' Medici, was the second of three brothers who occupied the throne. He reigned from 1560 until his death, May 30, 1574, and consented to the massacre of S. Bartholomew.

Charles X (1757-1836) was a son of Louis XV and the younger brother of Louis XVI. He lived mainly in Scotland, 1789-1814. Ten years later he succeeded his brother as king. In 1830 he abdicated, and he died at Gorizia, Aug. 2, 1836.

CHARLES OR CAROL (1839-1914). King of Rumania. Born April 20, 1839, he was the son of Charles Antony of Hohenzollern-Sigmaringen, this being a Roman Catholic branch of the family until 1918 ruling in Germany. He was chosen prince in 1866, and became king when in 1881 Rumania was recognized as an independent state. Charles married Princess Elizabeth of Wied, better known as Carmen Sylva. They had no sons and his nephew Ferdinand became king when he died, Oct 11, 1914.

CHARLES. Name of four kings of Spain, the emperor Charles V being the first. Charles II, a son of Philip IV, reigned from 1665 to 1700. He left his vast inheritance to Philip, a grandson of Louis XIV, and so brought about the War of the Spanish Succession. Charles III, a son of Philip V, was king from 1759 to 1788, his son, Charles IV, from 1788 to 1808, when he abdicated. He died Jan. 20, 1819.

CHARLES IX (1550-1611). King of Sweden. Born Oct. 4, 1550, he was the youngest son of Gustavus Vasa. On the death of his brother John III, 1592, Charles was the recognized leader of the Protestant party in the country. Sigismund, king of Poland,

Charles X (Gustavus),
King of Sweden
Portrait by Bourdon

John's son, and a Catholic, succeeded, but Charles was made regent, 1595. Civil war ensued, and the defeat of Sigismund at Staungebro, Sept. 25, 1598, left Charles the real ruler of Sweden. He was crowned king in 1607, and reigned until his death, at Nykoping, Oct. 30, 1611.

His grandson, Charles X (1622-60) succeeded to the throne on the abdication of Christina, in 1654. He declared war against Poland, entered Warsaw, and took

Charles XI,
King of Sweden

Danes in 1676-78. In 1676 his forces were defeated by the elector of Brandenburg. One of Sweden's wisest kings, he died April 15, 1697.

CHARLES XII (1682-1718) King of Sweden. The only son of Charles XI, he was born June 17, 1682, and became king when only 15 years old. Peter the Great of Russia saw his opportunity for despoiling Sweden with the aid of Denmark and Poland, and a league was formed in 1699. But in 1700 Charles flung himself upon the Danes, and dictated his own terms to them at the peace of Travendal, Aug. 18. He then sprang at Russia, and with 8,000 men utterly routed Peter's army of 60,000 at Narva, Nov. 30, 1700.

In 1704 he ejected Augustus of Saxony from the throne, replacing him by his own nominee, Stanislaus Leszczynski. In 1708, with over 40,000 men, he crossed the Vistula. But in the heart of Russia his forces were enveloped and annihilated at Poltava, July 8, 1709, and he himself barely succeeded in escaping over the Turkish frontier. In 1714 he rushed north to save Sweden, but found it impossible to do more than patch up a peace with his enemies. On Dec. 11, 1718, he was killed by a bullet at the siege of Frederikshald.

CHARLES XIII (1748-1818). King of Sweden. Born Oct. 7, 1748, he was the son of Adolphus Frederick and brother of Gustavus III. He became king on the deposition of Gustavus IV in 1809. He was forced to make an immediate peace with Russia which lost Finland to Sweden. The union of 1814 made him the first king of Sweden and Norway. He died Feb. 5, 1818.

CHARLES XIV (1763-1844). King of Sweden and Norway. A Frenchman, named Jean Baptiste Jules Bernadotte, he was born at Pau, Jan. 26, 1763, the son of a lawyer. In 1780 he entered the French army and won speedy

Charles XIV,
King of Sweden

promotion, being, in 1801, in command of the army in the war of La Vendée. In 1810 he was appointed to the command in the Netherlands, and in the same year, as Charles John, was formally elected crown prince of Sweden. He soon became the real ruler of the country. In 1814 Norway was ceded to Sweden by Denmark, and in 1818 Charles formally succeeded to the throne. He proved an excellent ruler of the two kingdoms until his death, March 4, 1844.

His grandson Charles XV (1826-72) reigned from 1859 to 1872.

CHARLES (1433-77). **DUKE OF BURGUNDY**, called the Bold. Born at Dijon, Nov. 10, 1433, he was the son of Philip the Good and Isabella of Portugal. In June, 1467, he became, by his father's death, duke of Burgundy. The ten years of Charles's reign were passed almost entirely in warfare with France. His ruin, however, came from his challenge to the Swiss, by whom his forces were routed at

Charles the Bold,
Duke of Burgundy
After R. van der Weyden

Granson in March, 1476, at Morat in June, and at Nancy, where, on June 5, 1477, he himself was killed. His only child, Mary, became the wife of the emperor Maximilian.

CHARLES, JACQUES ALEXANDRE CÉSAR (1746-1823). French aeronaut. He was born at Beaugency, Loiret, and became a student of physics. He joined with a friend, M. Robert, in balloon experiments, and on Aug. 27, 1783, they sent up the first hydrogen-filled balloon. On Dec. 1, 1783, he and Robert made the first ascent in such a balloon, reaching a height of 2,000 ft., remaining in the air for two hours and travelling 27 m. See Aeronautics.

CHARLES EDWARD (1720-1788). Stuart prince known as the Young Pretender, and to his friends as King Charles III. The son of James Edward and the grandson of James II, he was born at Rome, Dec. 31, 1720. In 1745 he made a desperate effort to recover the throne of his fathers. With a few companions he sailed from France on June 22, and landed in Moidart on the west coast of Scotland, July 2. He soon had a following of Highlanders, and on Sept. 21 shattered the government troops under Sir John Cope at Prestonpans.

Invading England, he reached Derby on Dec. 5, but was compelled to retreat by lack of troops. At Culloden, on April 17, 1746, Charles met with an overwhelming defeat. He became a fugitive, and only after many hairbreadth escapes, due to the fidelity of the clansmen and the loyalty of Flora Macdonald, was he able to escape to France. After the death of his father, in 1766, he lived chiefly in Florence and Rome, where he died, Jan. 31, 1788. See Jacobites: Stewart.

CHARLESTON. City of South Carolina, U.S.A., county seat of Charleston county and the largest city in the state. A port of entry, it is 7 m. from the Atlantic on a low peninsula formed by the confluence of the Ashley and Cooper rivers, 82 m. N.E. of Savannah, and is served by the Atlantic Coast Line and other rlys. The city has a fine land-locked harbour and a wireless station.

It was the bombardment of Fort Sumter here in 1861 that heralded the opening of the civil war, the fort being captured by the Confederates, who retained it till 1865. In 1886 great havoc was caused by earthquake, three-fifths of the town being destroyed. Charleston was the state capital, 1783-90. Pop. 67,957.

Charleston, capital of West Virginia, U.S.A., is 365 m. from Richmond on the Chesapeake and Ohio and other rlys. Pop. 39,608.

The Charleston was a dance very popular in the United States and Great Britain in 1925-26. Negroid in origin, its strenuous steps made it different from the prevailing dances.

CHARLEVILLE. Town of France, in the dept. of Ardennes. It stands on the Meuse, opposite Mézières, 150 m. N.E. of Paris. The most interesting buildings are the houses on the dual square and a Romanesque church. Charleville became prominent in the early stages of the Great War, and was the headquarters of the German General Staff, Aug., 1914, to the end of 1916. The French retook it in Nov., 1918. Pop. 21,711.

CHARLEVILLE. Town of Queensland, Australia. On the river Warrego, 480 m. W. of Brisbane, it is watered by an artesian bore, and forms the commercial centre of rich pastoral plains. Its mineral products include opal. There is a weekly return air service between Charleville and Camooweal. Pop. 1,934.

Charles Edward Stuart,
the Young Pretender
Painting by Le Tocque

CHARLOCK (*Brassica arvensis*). Cornfield weed of the order Cruciferae. A native of Europe, N. Africa, N. and W. Asia, it is an annual about 2 ft. in height, with bristly stems and leaves and four-petalled yellow flowers.

CHARLOTTE (1744-1818). Queen of George III. The daughter of Charles Louis, a prince of Mecklenburg-Strelitz, she became engaged to the king in 1761. The two had never met, but the union, which dated from Sept. 8, 1761, was one of great happiness. The queen took no part in public affairs, being entirely occupied with her large family, for she had fifteen children, and her routine duties. She died at Kew, Nov. 17, 1818.

CHARLOTTE (1796-1817). British princess. The only child of George, prince of Wales, afterwards George IV, by Caroline of Brunswick. She was born in London, Jan. 7, 1796, and in 1816 married Prince Leopold of Saxe-Coburg, who became later king of the Belgians. She died Nov. 5, 1817.

CHARLOTTE DUNDAS. Name given to the first practical steam-driven vessel. A steam tug, built by William Symington in 1801, she plied on the Forth and Clyde canal. Two years later a larger vessel of the same name was built, but the directors of the canal, fearing for the safety of the banks, would not allow her to be used. See *illus.* below.

CHARLOTTENBURG. Town of Germany, a suburb of Berlin. It stands on the Spree to the W. of the metropolis. The most notable buildings are the palace, the technical school, the Kaiser Wilhelm memorial church, and the modern Rathaus. The industries include the making of porcelain, glass, chemicals, leather, dyes and electrical apparatus, and ironworking. Pop. 322,766.

CHARLOTTETOWN. Capital of Prince Edward Island, Canada. On the S. coast, it stands on the Hillsborough estuary and has steamer communication with several Canadian ports. Its buildings include the government offices, Roman Catholic cathedral, city hall, court house, and colleges. There is a Dominion experimental station. It was named after Charlotte, the consort of George III. Pop. 12,347.

CHARLTON. District of London. In the borough of Greenwich, it stands on the S. bank of the Thames, $7\frac{1}{2}$ m. S.E. of Charing Cross station on the Southern Rly. In 1925 the Greenwich borough council bought Charlton House, one of the finest examples of Jacobean domestic architecture in the country, built from designs by Inigo Jones.

CHARMOUTH. Village of Dorset, at the mouth of the Char, 6 m. from Axminster. The church of S. Andrew was rebuilt in the 19th century. The house in which Charles II slept after his defeat at Worcester still stands. Charmouth was a Roman station. Pop. 668.

Named after Charmouth, where it is typically developed, a stage of the Lias, in the Jurassic system of stratified rocks, is termed

the Charmouthian. It consists of clays, lime-stones, and marlstone, the fossils including many ammonite species.

CHARWOOD FOREST. Barren district of Leicestershire. About 5 m. S.W. of Loughborough, it is hilly, 20 sq. m. in area, and rises to 912 ft. in Bardon Hill. On account of its geological interest it was made an enclosed area by act of parliament in 1812.

In Charmwood forest occur the Charmian series of rocks of the Archean or Pre-Cambrian age. Of volcanic origin, and composed to a large extent of volcanic agglomerates and tuffs, the rock-masses peep out as hills partly covered by a mantle of Triassic marls.

CHARON. In Greek mythology, the ferryman, son of Erebus and Nox, who rowed the dead across the Styx to Hades. An obol (1 $\frac{1}{2}$ d.) was placed in the mouth of his passengers as payment of their fare.

CHARPENTIER, GUSTAVE (b. 1860). French composer. Born at Dieuze, in Lorraine, June 24, 1860, his best known work, for which he wrote both music and libretto, is the opera *Louise*, produced at the Paris Opéra Comique, 1900. As director of the conservatoire of Mimi-Pinson, he was active in the service of the wounded in the Great War.

CHARR or **CHAR** (Gaelic *ceara*, red), *Salmo salvelinus*. Fresh-water fish of the Salmon family, native of Europe and N. Asia, with allied species in N. America. Its preference for isolated deep-water lakes in the mountain districts has led to the evolution of a number of local races or varieties. The charr of Scotland is similar in form to the brown trout, with differences in the situation of certain teeth. The flesh is red.

Charr. A fresh-water fish of the salmon family

CHARRINGTON, FREDERICK NICHOLAS (b. 1850). British temperance worker. Son of a wealthy brewer, he was born at Bow. Feb. 4, 1850, and gave up succession to a fortune estimated at £1,250,000 to devote himself to temperance work. He founded the Tower Hamlets Mission, and made the Great Assembly Hall in the Mile End Road, built by his efforts, a centre of Christian work in E. London. He was member of the L.C.C., 1889-95.

CHART (Lat. *charta*, paper). Map used by navigators. The British Admiralty has issued charts for use in every sea, and in many cases the Admiralty charts are the only existing accurate maps of certain islands or comparatively unfrequented shores.

CHARTER (Lat. *charta*, a writing). Word used for a document, more especially one conveying a grant of land or privileges by a king or lord. The most important, historically, is *Magna Carta*; charters were also granted to London and various English towns by the kings in early days. To-day towns are still incorporated by royal charter: societies obtain charters in order to carry on their work; by a royal charter a college becomes a university. Charters are not given usually to associations working for profit.

Chartered companies originated after the discovery of America, when a sovereign gave or sold to a subject or subjects the sole right of trading with a certain country. A second class of chartered companies consisted of those founded to exploit a certain part of the sovereign's own dominions. Such was the Virginia Company of Elizabeth's days.

CHARTERHOUSE, THE (Fr. *Chartreuse*). Architectural relic of old London. Situated in Clerkenwell, and immortalised in Thackeray's

Charterhouse, London. The great hall, in which are preserved parts of the old monastic buildings
W. S. Campbell

The Newcombes, it is named after a Carthusian monastery founded here in 1371 by Sir Walter de Manny and Bishop Northburgh. The monastic buildings, in which Sir Thomas More lived for four years, were bought in 1611 by Thomas Sutton, who used them to found a hospital for 80 poor and aged gentlemen, a school for 40 poor boys, and a chapel.

The school, which developed into a great public school, was removed to Godalming in 1872, when that of the Merchant Taylors Company found a home here. The chapel contains the tomb of Sutton and other notable monuments: parts of the old monastic buildings are preserved in the Great Hall, renovated in 1571, and in Wash-house Court. See *Carthusians*.

CHARTERS TOWERS. Town of Queensland, Australia. On Towers Mt., 80 m. by rly S.W. of Townsville, it is the centre of a gold-mining district. Pop. 9,009.

CHARTIER, ALAIN (c. 1386-1440). French lyric and prose writer. Born at Bayeux, he became secretary to Charles VI and Charles VII, and was one of a group of poets, including Villon and Charles d'Orléans, who specialised in the ballade and rondeau. Chartier wrote also moral and political treatises in prose.

CHARTISM. Political movement in England, so called from its charter of reforms. In 1838 the London Working Men's Association formulated six demands in what was called the People's Charter. In 1839 the Chartist convention assembled, and a great Chartist petition signed by over 1,000,000 persons was ignored by the House of Commons. A serious riot followed at Newport, Monmouthshire, involving loss of life.

In spite of riots in 1842, the agitation weakened, but in 1848 a monster petition was prepared and a monster meeting was called to assemble on Kennington Common and then to march to the House of Commons to present it. But the Chartists were overawed by troops under the Duke of Wellington and the procession was abandoned. Chartism, rent by internal disputes and the rivalries of its leaders, steadily declined, and by 1854 no longer had political significance.

CHARTLEY HOLME. Parish of Staffordshire, 5 m. N.E. of Stafford, on the L.N.E. Rly. Chartley Hall stands in a park long celebrated for its breed of white cattle. There are ruins of a 13th century castle.

CHARTRES. City of France, in the dept. of Eure-et-Loir. It is on the Eure, 55 m. S.W. of Paris. The Gothic cathedral of Notre Dame, one of the finest in the world, was built

Charlotte, British Princess
After A. E. Chalon

Charlotte, Queen
of George III
After a painting by
Gainsborough

She plied on the Forth and Clyde. See above

in the 13th century. Its chief features are the western towers, the stained glass, the choir screen, and the sculptures. Other churches are those of S. Pierre, of the 12th century, S. Aignan, and S. Martin. Secular buildings include the hôtel de ville and the episcopal palace.

Chartres has a gateway and other remains of its fortifications, and a 14th century bridge. It was the Roman Autrium, and later Civitas Carnutum. Pop. 23,349.

Courtesy of Office Français du Tourisme

CHARTREUSE. French form of the word Carthusian, and applied to the houses of that order of monks, especially to the Grande Chartreuse near Grenoble, the first and greatest house of the order. The Italian equivalent is Certosa. The Grande Chartreuse is in the dept. of Isère, 12 m. from Grenoble. The order was founded by S. Bruno before 1100, at Cartusia, where a house was built.

Chartreuse is the name of a liqueur originally made at this monastery. The particular herbs used and the process of manufacture are the secret of the Carthusian monks, who still produce it at their new home at Tarragona in Spain. See Carthusians; Certosa.

CHARYBDIS. In classical mythology, a famous whirlpool in the Straits of Messina opposite the cave of the sea monster Scylla. See Scylla.

CHASING (Fr. *châsse*, frame). Art of ornamenting objects in gold, silver, or other metal by means of appropriate tools. The raised portions of the design are shaped by hammering from the reverse side of the metal, and finished on the right side by a chasing tool. Chasing also describes the method of engraving designs with a burin or graver.

CHASTELARD, PIERRE DE BOSCOBEL DE (c. 1540-63). French poet. Born in Dauphiné, it was as page to the Marquess Damville that he was in the escort of Mary Queen of Scots, in 1561. Becoming infatuated with the queen, who accepted his love songs, he concealed himself beneath her bed. Discovered and forgiven, he repeated the offence at Armentières and was hanged at St. André.

CHASUBLE (Fr. *chasuble*, *casula*, little house). Vestment worn by a priest over the alb and stole when celebrating the Eucharist. Oval in shape, sleeveless, and with an aperture in the centre to admit the head of the wearer, it is made of linen or silk, and usually embroidered with a Y-shaped cross. Originally a kind of outdoor cloak, like the Roman *paenula* and the Spanish *manta*, and the poncho of Latin America, it was adopted in modified form by the clergy in the 6th century, and since then has changed in form considerably.

CHAT (Saxieola). Name given to several species of birds belonging to the thrush family, including the whin-chat and stone-chat. They feed on insects, and are found in Europe, N. Africa, and W. Asia.

CHATALJA. Village near Constantinople (Istanbul). It gave its name to the Turkish fortified entrenchments, known as the Chatalja Lines, stretching from Derkos, on Lake Derkos, to the head of the Bay of Chekmeje, about 20 m. W. of Constantinople, which held up the Bulgars during the first and second Balkan Wars (q.v.).

CHATEAUBRIAND, FRANÇOIS RENÉ, VICOMTE DE (1768-1848). French author and politician. Born at St. Malo, Sept. 4, 1768, in April, 1791, he set out for America, but returned on hearing of the arrest of Louis XVI, landing in France, Jan. 2, 1792. He then joined the emigrés, was wounded at the siege of Thionville, and escaped to England. In 1797 Chateaubriand published his *Essai sur les Révolutions Anciennes et Modernes*, and in 1800 the love story of *Atala*, which established his literary reputation. In his *Génie du Christianisme*, 1802, he recanted his earlier sceptical opinions, and vindicated Roman Catholicism. In 1811 he began his *Mémoires d'Outre-Tombe*, intended for posthumous publication. In 1814 he supported the Bourbon régime, and from 1822-24 was ambassador to Great Britain. He died July 4, 1848.

Chateaubriand, French author

CHÂTEAU GAILLARD (Fr. *saucy castle*). Fortress of France on the Seine near Les Andelys. It was built in 1197 by Richard I to protect his duchy of Normandy from the king of France. It stood on a promontory jutting into the Seine, and was approached landwards by a narrow strip. After a long siege it was taken by Philip Augustus in March, 1204, and fell into decay. See Castle.

CHÂTEAU-THIERRY. Town of France, in the dept. of Aisne. It stands on the river Marne, 60 m. N.E. of Paris. Its ruined castle, said to have been built by the Franks, gave its name to the town. The church of S. Crépin dates from the 15th century.

The town gives its name to an important battle fought between American and German forces towards the close of the Great War. In this it was recovered by Franco-American troops on July 21, 1918, after six American divisions had helped to stay the Germans' offensive on July 19. It was decorated with the Cross of the Legion of Honour. Pop. 7,751. See Marne.

CHATHAM. Borough and seaport town of Kent. On the S. bank of the Medway, 34 m. by rly. E.S.E. of London, on the Southern Rly., it is joined on the W. by Rochester and on the E. by Gillingham. It is an important and strongly fortified naval and military station, and its dockyard covers 515 acres and extends for about 3 m. along the river.

The original dockyard was founded by Queen Elizabeth in 1588 and transferred to its present site in 1662. Within the fortified lines are government establishments, including barracks, arsenal, artillery park, military school and institute, and convict prison. The lines, now obsolete, have been

superseded by a strong chain of detached forts of modern design: Fort Pitt, to the W. of the town, has been converted into a military hospital. The Royal Naval Hospital, which replaced Melville Hospital (now a barracks), is at Gillingham. The church of S. Mary, rebuilt 1788, and S. Bartholomew's Hospital, founded for lepers in 1078, are other notable buildings.

There is a fine town hall and assembly rooms, and the corporation maintains a library and museum, technical school, and several recreation grounds and pleasure gardens. Pop. 40,820, excluding non-civilians.

CHATHAM OR **MIRAMICHI.** Town of New Brunswick, Canada, in Northumberland co. It is on the Miramichi river, 24 m. from the Gulf of St. Lawrence and 6 m. N.E. of Newcastle on the Canadian National Rlys. A river port, with a good harbour, it has saw and pulp mills, machine shops, and fisheries, and exports lumber. It possesses a fine town hall and a Roman Catholic cathedral. Pop. 4,506.

Another Chatham is in Ontario. It is on the Thames, 65 m. S.W. of London. Pop. 13,256.

Chatham Islands are a group in the S. Pacific. They cover 375 sq. m. and belong to New Zealand. They are 535 miles from Lyttelton.

CHATHAM. British cruiser, the nameship of a class of six light cruisers. Early in the Great War the Chatham discovered the German cruiser *Königsberg* hiding in shoal water six miles up the Rufiji river (German E. Africa), and heavily bombarded her Oct. 30, 1914. In 1920 she was presented to New Zealand. See Birmingham.

CHATHAM, WILLIAM PITT, 1ST EARL OF (1708-78). British statesman. William Pitt the elder was born in Westminster, Nov. 15, 1708, the grandson of Sir Thomas Pitt, governor of Madras. In 1735 he entered Parliament. Walpole was then in supreme control, and Pitt became attached to the opposition group which centred in Frederick, prince of Wales. He entered the Pelham ministry in 1746 as paymaster-general, and set an example by refusing the immense perquisites usually attached to that office. In 1755 he was again in opposition, but in 1757 joined the coalition which had been brought about by the incompetence of Newcastle's ministry.

Pitt's conduct of the Seven Years' War raised Great Britain from a position of humiliation to world-supremacy. In 1761, however, he was forced to resign. In 1766 he came back to form a ministry to deal with the struggle with the American colonies, but wrecked his own influence and prestige by accepting the earldom of Chatham. The ministry was hardly formed when Chatham's health broke down completely. On his partial recovery in 1769 he found that the breach with America had been made irreparable, and he resigned office. He continued vigorously to oppose the Government policy towards America until his death on May 11, 1778. The younger William Pitt was his second son; the elder, Thomas, succeeded to the title. See Pitt, W.

CHÂTILLON. Town of France, called *Châtillon-sur-Seine* to distinguish it from other places of the same name. It is in the department of Côte d'Or, 44 m. from Dijon. It has an old church, S. Nicolas, an hôtel de ville, formerly part of the Benedictine house, and a château standing in a large park. This was erected by Auguste Marmont, one of Napoleon's marshals, whose name it bears. A still earlier château has disappeared, but its Romanesque chapel remains. Pop. 4,413.

William Pitt, 1st Earl of Chatham
After R. Brompton

Chatham. The Town Hall, an imposing modern building

Chasuble. Vestment worn by a priest

The Congress of Châtillon was a meeting held in Feb. and March, 1814, between representatives of the Allies and those of France to discuss peace proposals. The Allies demanded that the French frontier should be the same as in 1791; Napoleon objected, and the sittings were suspended on Feb. 9. They were resumed later, but without result. *See Vienna.*

CHAT MOSS. Tract of land in Lancashire, 7 m. W. of Manchester. Formerly a morass, 12 sq. m. in extent, it has been largely reclaimed. The carrying of the Liverpool and Manchester Rly. across the Chat Moss in 1829 was one of George Stephenson's greatest engineering achievements. Manchester has an aerodrome on Chat Moss. *See Manchester.*

Chatsworth House. The magnificent Derbyshire seat of the Duke of Devonshire
Frith

CHATSWORTH. Parish of Derbyshire. It stands on the river Derwent, nearly 3 m. N.E. of Bakewell. Chatsworth House, a seat of the duke of Devonshire on the site of an earlier mansion, is a massive quadrangular structure in the Ionic style, erected, except for the N. wing, which was added in 1820, in 1687-1706. The park is about 11 m. in circumference.

CHATTANOOGA. City of Tennessee, U.S.A., co. seat of Hamilton co. On the Tennessee river, at the head of navigation, 150 m. S.E. of Nashville, it is served by the Alabama, Great Southern and other rlys. The seat of Chattanooga University, it has a museum, library, college of law, and a national cemetery. Pop. 57,895.

A battle was fought here, Nov. 23-25, 1863, between the Federal Army under Grant and the Confederates under Bragg, and ended in a decisive victory for the Federals.

CHATTEL (Lat. caput, head, property). In English law personal property comprises goods, chattels, and choses in action. In modern law the term includes everything except choses in action and real property. Originally it meant cattle. Chattel interests in land is an English legal term for any interest in land other than a freehold—that is to say, a leasehold. An incorporeal chattel is a description, not of things, but of rights relating thereto. The most common of them are patents, copyrights, trade marks.

CHATTERIS. Urban dist. and market town of Cambridgeshire. It lies on the W. edge of the Isle of Ely, 8 m. S. of March by the L.N.E. Rly. Market day, Fri. Pop. 5,086.

CHATTERTON, THOMAS (1752-70). British poet. Born at Bristol, Nov. 20, 1752, he began to write verse at the age of ten. Access to old parchments from the muniment room of the church of S. Mary Redcliffe led him to fabricate poems and prose fragments which he attributed to ancient sources. Among these were the Rowley Poems, described as by a 15th century monk. Failing to secure Walpole's help, he left Bristol for London, and lived at Shoreditch. He died by poison in

Thomas Chatterton in his boyhood

a garret in Brooke Street, Holborn, Aug. 24-25, 1770. Definite proof of his impostures was not forthcoming until afforded by Prof. Skeat in 1875. Chatterton's work contains some ballads and lyrics of great beauty.

CHAUCER, GEOFFREY (c. 1340-1400). English poet. The son of John Chaucer, a vintner of Thames Street, in the city of London, Geoffrey Chaucer was in the service of the duchess of Clarence in 1357. Two years later he was taken prisoner while serving in the army in France. Ransomed with the help of Edward III, he became a yeoman of the chamber and, later, one of the king's esquires. In 1374 Chaucer was appointed controller of the custom and subsidy of wool, skins, and hides in the Port of London, and in 1382 controller of the petty customs. He received other marks of royal favour, was several times sent abroad on special missions, and remained until his death in receipt of royal pensions. He died Oct. 25, 1400.

His fame rests chiefly upon *The Canterbury Tales*, a series of stories told by a party of pilgrims on the road to Canterbury. In his famous Prologue to the *Tales* he describes the assembling, at the Tabard Inn at Southwark, of nine and twenty pilgrims, from many different classes. The host offers a complimentary supper to the teller of the best story on the road, and Chaucer gives twenty-four of the stories, of which two are unfinished, interspersing them with some delightful talks. With the exception of a few short poems all Chaucer's later work went into *The Canterbury Tales*. In his prologue and stories he has left a gallery of portraits almost unequalled. Consult *Works*, ed. W. W. Skeat, 1901; and the Chaucer Society publications.

CHAUDIÈRE. River of Quebec, Canada. Rising near the border of Maine, U.S.A., it passes through Lake Megantic and follows a generally N. to N.W. course to the St. Lawrence river, which it enters 7 m. above Quebec; length 103 m. Lake Chaudière, an expansion of the Ottawa river, 18 m. long by 5 m. broad, terminates on the E. at Ottawa in the falls of Chaudière, which supply power for the electricity service of Ottawa.

CHAUTAUQUA. Lake of New York, U.S.A. It is 10 m. S.E. of Lake Erie, 1,300 ft. above sea level, 20 m. long, and averages 2 m. in width. The village on the W. side is the seat of the Chautauqua Literary and Scientific Circle, and of a summer school for teachers. The Assembly Grounds, N. of the lake, contain 500 cottages for the students, lecture halls, an amphitheatre, a museum of archaeology and other buildings.

CHAWORTH, MARY ANNE (1786-1832). Fourth cousin and early love of the poet Byron. Heiress of Annesley Hall, near Newstead, she was 17 and Byron 15 years of age when they met in 1803. In 1805 she married John Musters of Wiverton Hall, and from the pair is descended the family of Chaworth-Musters, still residing at Annesley. The poet's affection for her is expressed in a number of his poems, notably in *The Dream*; and in the lines *To a Lady* (in *Hours of Idleness*). *See Byron.*

Geoffrey Chaucer, English poet
Harleian Coll., Brit. Mus.

CHAW STICK (*Gouania domingensis*). Climbing shrub of the order Rhamnaceae. A native of Brazil and the W. Indies, its stems are chewed as a stomachic, and are also cut into short lengths and the fibres separated at the ends to form a tooth brush.

CHEADLE. Market town of Cheshire. It stands near the Mersey, 3 m. S.W. of Stockport, of which it is a residential district. The L.M.S. Rly. has stations at Cheadle and Cheadle Heath. It has bleaching and printing works. The Perpendicular parish church of S. Giles contains a 15th century altar tomb. With Gatley it forms an urban dist. Market day, Fri. Pop. 11,026.

CHEADLE. Market town of Staffordshire. On the L.M.S. Rly., 13 m. N.E. of Stafford, it has tape and metal working industries, and there are coal mines in the vicinity. Market day, Fri. Pop. parish, 6,178.

CHEAM. District of Surrey, 12 m. from London on the Southern Rly. There is an old wooden bouse, Whitehall, said to have been visited by Queen Elizabeth. Cheam school is one of the oldest private schools in England. It was established here in the time of Charles II. In the neighbourhood is Nonsuch Park. In 1928 Cheam became part of the urban district of Sutton. Pop. 7,849.

CHEAPSIDE. Historic London thoroughfare. Rebuilt after the Great Fire, it runs from S. Paul's churchyard to Poultry. Old Chepe (A.S. ceap, a bargain), an open-air market, contained two crosses, one pulled down in 1390 to build the conduit, the other a Queen Eleanor cross, destroyed in 1643.

In the side streets are the halls of the mercers, saddlers, and other city companies. These halls and the churches in the immediate neighbourhood, mostly the work of Wren were all built after the Fire. The

Cheapside. Queen Mary de' Medici passing along the thoroughfare during her visit to Charles I
From an old print

Mermaid tavern is generally believed to have been between Friday Street and Bread Street. It was the haunt of Shakespeare, Jonson, Beaumont, Fletcher, and other poets and dramatists. Modern Cheapside's points of interest include Bow Church and the old plane tree off Wood Street. *See London.*

CHEDDAR. Parish and village of Somerset. It lies S. of the Mendip Hills, 2 m. S.E. of Axbridge on the G.W.R. Adjacent are the Cheddar gorge and cliffs, with remarkable stalactite caverns. Cheddar gives its name to a variety of hard cheese. Pop. 2,007.

CHEDDITE. Generic name of a number of blasting explosives consisting essentially of a chlorate incorporated with a nitro-compound dissolved in castor oil. Potassium chlorate is the salt most frequently employed. Cheddites are used in large quantities for blasting.

CHEESE (Lat. caseus). Article of food made from milk. By condensing the bulk of the fat and casein of milk into cheese, and getting rid of the whey, a palatable and

Mary Anne Chaworth. Byron's first love

nutritious article of diet is obtained that keeps well and is conveniently small in bulk. Cheese is a very old form of food, having been made and eaten as early as 1400 B.C. At present a great variety of cheeses are made. They are divided into hard and soft, the difference depending upon the amount of water left in the cheese and the way in which it is cured. Of hard cheeses the chief are the English Cheddar, Stilton and Cheshire, and the French Gruyère. The soft or cream cheeses include Camembert and other varieties, made largely in France and Switzerland.

CHEETAH (*Cynaelurus jubatus*). Member of the Cat family, often known as the hunting leopard. It differs from the true cats in having the claws only partially retractile, and in its dentition. A slender, long-limbed animal, its fur is tawny in colour, and thickly spotted with black. Its tail is long. Common in many parts of Africa and the southern countries of Asia to India, it is often trained for hunting.

Cheetah, or Indian Hunting Leopard

CHEFOO or **CHI-FU**. Treaty port of China. In the prov. of Shantung, it is on the Gulf of Chih-li, 100 m. N.E. of Kiaochow. It has a large foreign settlement. Pop. 102,200.

CHEKA. Russian secret police. This first appeared in 1918, when the Soviet government employed it to destroy opposition, which was ruthlessly done. In 1922 its place was taken to some extent by a political department that had its own police, but the cheka remained in existence, and in 1929 the activities of the organization were again noticeable.

CHEKE, **SIR JOHN** (1514-57). English scholar. Born at Cambridge, June 16, 1514, from 1540-47 he was professor of Greek in the university there. In 1542 he was appointed tutor to the future King Edward VI, and was provost of King's College, Cambridge, 1548-53. He was knighted in 1552 and in 1553 made secretary of state. He died in London, Sept. 13, 1557.

CHEKHOV, **ANTON PAVLOVICH** (1860-1904). Russian novelist and dramatist. Born at Taganrog, S. Russia, he turned from the study of medicine to literature, and soon gained a wide popularity. His work consisted mainly of short stories, but he was also the author of several plays, including *The Seagull*. Among English translations of his writings are: *The Black Monk and Other Stories*, 1903; *The Kiss and Other Stories*, 1908; and *Plays*, 1912.

Anton P. Chekhov, Russian novelist

CHELLEAN. Early stage of the Palaeolithic age, when primitive man used flints and flint pebbles for making tools. It is named from Chelles, near Paris, where some of the implements have been found. The distinctive type of tool for this stage of culture was the boucher (hand-axe). See p. 98.

CHELMSFORD. City, borough and co. town of Essex. It stands in the valley of the Chelmer, near its junction with the Cann, 30 m. N.E. of London by the L.N.E.R. It has corn mills, tanneries, and breweries, and manufactures electrical apparatus, farm tools, etc. In 1914 the diocese of Chelmsford was formed out of that of St. Albans. The perpendicular church of S. Mary was made the cathedral. The diocese includes a large part of Greater London. The buildings comprise

grammar and endowed schools, shire hall, and corn exchange. There is a racecourse in the vicinity. Chelmsford is a centre of the wireless industry, having the works of the Marconi Co. and of other companies. The B.B.C. had a large broadcasting station here before the Danvers station was built. Market day, Fri. Pop. 20,761.

CHELMSFORD, **BARON**. British title borne by the family of Thesiger since 1858. Frederic Thesiger (1794-1878) was a lawyer and an M.P. Having been solicitor-general and attorney-general, he was lord chancellor in the Conservative ministries of 1858 and 1866-68. In 1858 he was made a baron, and he died in London, Oct. 5, 1878.

His son, Frederic Augustus, the 2nd baron (1827-1905), was a soldier. He commanded the British troops against the Kaffirs, and in the unfortunate Zulu War, 1878-79. He died Oct. 9, 1905, and was succeeded by his son, Frederic John Napier. Having been governor of Queensland, 1905-09, and of New South Wales, 1909-13, he was viceroy of India from 1916-21. In 1924, having been a viscount since 1921, Chelmsford was first lord of the Admiralty in the first Labour ministry.

CHELSEA. Borough of S. London. Extending westwards from Pimlico about 1½ m. along the N. bank of the Thames, it has long been a favourite residential suburb.

About 1524 Sir Thomas More settled in the house later known as Beaufort House from the duke of Beaufort, to whom it passed, and who sold it to Sir Hans Sloane, by whom it was pulled down in 1740. On the site of Sir T. More's garden has been reconstructed Crosby Hall. Henry VIII acquired the old manor house and built the new manor house as a nursery. It adjoined the palace of the bishop of Winchester, which stood on the E. side of the present Oakley Street and extended as far as Don Saltero's coffee house in Cheyne Walk. For some years the princess Elizabeth lived here.

1st Viscount Chelmsford, Viceroy of India

Chelms, London. The Old Church. Above, exterior of Chelms Hospital with the Chillianwalla memorial

Notable residents include Carlyle, Sir Hans Sloane, whose statue by Rysbrack stands in the Physio Garden; Walpole, Fielding, Turner, George Eliot, Rossetti, and Whistler. Chelms has a polytechnic and a public library. Chelms Old Church dates from the 12th

century, and contains the More chapel and some chained books, the gift of Sir Hans Sloane. The church is a chapel of ease to the new parish church, S. Luke's, built in 1820-24, in which Charles Dickens was married. Chelsea Embankment, between Victoria or Chelsea and Battersea bridges, was opened in 1873. There is a power station in Lots Road. Pop. 63,700.

Baron Chelmsford, Lord Chancellor

Chelsea china was produced 1745-84, when the factory was transferred to Derby. Pieces of the early period, domestic services and small figures, have an opaque glass-like paste and rather crude colouring. Pieces of the second period have a heavy compound paste, the mixture being imperfect, so that when held up to the light semi-transparent disks or "crescents" are seen. In the third period rich deep blue, pea-green, elaret, and turquoise grounds were common, the pieces being richly decorated and coloured.

Chelsea Hospital is an institution for old and disabled soldiers with no family responsibilities. Accommodation exists for about 550 in-pensioners. The hospital owed its foundation to Sir Stephen Fox (d. 1716), and was built by Wren, 1682-92. See Crosby Hall.

CHELTENHAM. Borough and market town of Gloucestershire. In the valley of the Chelt to the W. of the Cotswold Hills, 109 m. W.N.W. of London, on the G.W. and L.M.S. Rlys., it owes its fame as a health resort to the accidental discovery of mineral springs in 1716. The three saline spas, Old Well, Montpellier, and Pittville, and one chalybeate spa, Cambray, are considered beneficial for gout, dyspepsia, and liver complaints. Among local institutions are the proprietary college, ladies' college, training college for teachers, and grammar school. It is a hunting centre, the Cotswold having their headquarters here.

Cheltenham has a 14th century parish church, a modern town hall, winter garden, and free library, and among attractions is the annual county cricket week in Aug. Market days, Thurs. and Sat. Pop. 49,580.

Cheltenham College is a public school, established in 1840 on Church of England lines. Cheltenham Ladies' College, the first proprietary girls' school in England, was started Feb. 13, 1854, with 84 pupils. When Miss Dorothea Beale was made principal in 1858 there were only 69 pupils, but by 1873 the college possessed its own buildings and grounds, and at the present time it accommodates over 1,000 pupils.

CHEMIN DES DAMES.

Road in the dept. of Aisne, France. Known also as Route des Dames, or Ladies' Way, the road lies between the rivers Aisne and Lette, and runs E. to W. from Craonne to Malmaison along the summit of the Craonne plateau. Its situation on the heights of the Aisne has always made it a battle-ground.

During the Great War incessant fighting took place for the possession of the Chemin des Dames. When the Germans retreated to the Aisne in Sept., 1914, they secured the heights, and from that time onward the French were engaged in guarding this critical area. Throughout 1914-16 this region was the scene of intermittent fighting. In the second battle of the Aisne (q.v.) April, 1917, the capture of the Chemin des Dames was an important objective. In the third German offensive in 1918 the Germans captured it on May 27. It was regained by the Allies in July-Oct.

CHEMIST. By the Pharmacy Act, 1868, the title "chemist" is reserved for persons registered under that Act. These are dispensers of medicine or pharmacists, who were the original chemists. In modern times a class of men has sprung up who specialise in chemical problems, and are distinguished as professional, consulting, or analytical chemists.

A government chemist is an official who, on behalf of the Government, conducts analyses to test the purity of food and in connexion with kindred matters. The offices are at the Custom House, in Lower Thames Street, London, E.C.3, and at 13, Clement's Inn Passage, London, W.C.2. See Adulteration.

The Institute of Chemistry has as its objects to ensure that consulting and analytical chemists are duly qualified for the proper discharge of their duties. Examinations are conducted for the associateship. The offices are at 30, Russell Square, London, W.C.1.

CHEMISTRY. Branch of natural science concerned with the study of the composition of substances, the processes, termed chemical changes, by which substances are formed, the factors which influence such changes, and the accompanying phenomena. When Robert Boyle (1627-91) began his investigations, many substances had been prepared by chemical methods, and their properties had been examined, but the processes were carried out without real knowledge of the principles involved. Boyle was mainly responsible for raising chemistry to the status of a science. He defined an element as a substance which so far had not been split up into any other substances.

For about a century after Boyle chemists were mainly concerned with the study of combustion. The explanation of combustion and calcination now accepted was first given by Lavoisier (1743-94), to whom we owe also the establishment of the law of the conservation of mass. Between 1780 and 1810, the laws of chemical combination both by weight and by volume were established by the investigations of Proust, Dalton, Richter, Gay-Lussac, and others. Dalton propounded his atomic theory in 1808.

CHEMICAL CHANGE. When some finely-divided iron and flowers of sulphur are rubbed together in a mortar a mixture is obtained in which both substances retain their properties. When, however, some of the mixture is heated in a test tube it begins to glow, the glow spreads through the mass, and on cooling a product is obtained which is a definite chemical compound—iron sulphide—with characteristic properties of its own. There are two main types of chemical change: (1) Combination, when two or more substances unite to form a third; (2) Decomposition, when one substance at least splits up into two or more substances. Chemical changes are invariably associated with energy changes, e.g. the evolution or taking up of heat.

CLASSIFICATION OF ELEMENTS. With a slight modification of Boyle's definition, an element may be defined as a substance which cannot be decomposed at will. Between 80 and 90 elements are known. Copper, silver, gold, lead, and a number of other elements are termed metals. They show metallic lustre, conduct heat and electricity, and possess certain definite chemical properties. Elements which do not show these properties are termed non-metals. Certain elements, such as arsenic and tellurium, show some of the properties of both metals and non-metals. A few elements, such as hydrogen, oxygen, nitrogen, and chlorine, are gases at the ordinary temperature; two only, mercury and bromine, are liquid, and the great majority are solid under ordinary conditions.

LAWS OF CHEMICAL COMBINATION. For each element a fixed number, termed its atomic

weight, combining weight, or chemical equivalent, can be found, which represents the ratio, or a simple multiple or submultiple of the ratio, in which the element enters into chemical combination (*see Atom*). Chemical equivalents are now usually referred to oxygen taken as 16 (hydrogen = 1.008). Varieties of an element may exist which, though similar in properties, have different atomic weights. The name of isotope is given to such a variety. Though indistinguishable by chemical means such isotopes are separable physically. Dalton spoke of the atoms of compounds, as well as of atoms of elements, but the term as applied to compounds is unsatisfactory. Avogadro drew a distinction between atoms, the smallest particles of matter which can take part in chemical changes, and molecules, the smallest particles of matter capable of independent existence.

SYMBOLS AND FORMULAE. As chemical compounds are formed by the combination of two or more elements, it is natural to indicate the composition of a compound by writing side by side the symbols of the elements composing it. The symbol stands also for the atomic weight of the element. When more than one atom of an element occurs in the molecule of a compound, this is indicated by writing the appropriate figure at the lower right-hand corner of the symbol. Thus H_2SO_4 indicates that the molecule of sulphuric acid contains two atoms of hydrogen, one atom of sulphur, and four atoms of oxygen.

Chenonceaux. The castle, built in 1515, in which Francis II and Mary Queen of Scots spent their honeymoon

The study of radio-activity and the attendant atomic disintegration has shed a new light on chemistry. The alchemists sought for the mythical philosopher's stone, believing that with its aid they would be able to transmute base metals into gold. Transmutation occurs in nature, and the radio-active element uranium, for example, passes through a series of stages in progressive degradation, the end product being lead. This is an infinitely slow process, however, spread over millions of years, and cannot be influenced by any known means. *See Alchemy; Atom; Element; Gas; Isotope; Molecule; Radio-activity.*

There are a number of societies founded to promote the study of chemistry. Of these the principal British ones are The Chemical Society, founded in 1841 and holding its meetings at Burlington House, London; and the Society of Chemical Industry, devoted to the advancement of applied chemistry, Central House, Finsbury Square, London, E.C.2.

CHEMNITZ. Town of Saxony. It is on the river Chemnitz, about 50 m. by rly. S.E. of Leipzig. The old town hall and the church of St. James are Gothic. Modern features include the art gallery, technical school, town hall and public library. In the new town is an old Benedictine abbey, with its Gothic church still standing, known as the Schloss.

Engineering and textiles are the chief industries. Its modern prosperity dates especially from the commercial union of Germany in 1834, and the discovery of the local coalfield; this was so great as to win it the name of the Manchester of Saxony. Chemnitz is also a centre for tourists visiting the Harz Mts. Pop. 333,857.

CHENG-TU. City of China, capital of Sze-chuen prov. It lies in the valley of the Min, a tributary of the Yang-tse, 175 m. N.W. of Chung-king, a treaty port. The surrounding plain is one of the most productive and densely populated areas in the world. A centre of the tea and silk industries, the city is identified with Marco Polo's Sindafu. Pop (est.) 800,000.

CHÉNIER, ANDRÉ MARIE DE (1762-94). French poet. Born at Constantinople, Oct. 30, 1762, the son of the French consul-general in

André de Chénier, French poet

his Greek wife, Greek became his special study, and he made it his aim to infuse French verse with the old Greek spirit. His idylls, *Le Mendant* and *L'aveugle*; and his later *Hermès*, an imitation of Lucretius, are perhaps his best known works. Though a supporter of the Revolution, he was a vigorous writer against the Terror, and was guillotined, July 25, 1794.

CHENIES OR CHENESS. Village of Buckinghamshire. On the Chess, 4 m. E. of Amersham, it is famous for its connexion with the Russell family, who obtained land here at the dissolution of the monasteries. Adjoining the old church of St. Michael is the Russell chapel, built in 1556, and containing memorials of Lord William Russell and others of the family.

CHENONCEAUX. Village of France, in the dept. of Indre-et-Loire, on the river Cher, 20 m. E.S.E. of Tours. Close by is the famous Renaissance castle begun by Thomas Bohier in 1515. It is joined with the opposite bank of the river by a two-storeyed gallery. It became state property and was given by Henry II to Diane of Poitiers. Later it was occupied by Madame Dupin, who was visited there by Voltaire, Rousseau and Bolingbroke.

CHEOPS. Egyptian king of the IVth dynasty. The name is, in Herodotus, the Greek form of the Egyptian Khufu. At Giza the great pyramid attributed to him contains a so-called king's chamber with a granite sarcophagus. In Sinai he sculptured rock-tablets. At Hatnub he quarried alabaster, vases of which are in London and Liverpool. At Abydos Flinders Petrie found in 1903 an ivory statuette of him, now in Cairo.

CHEPSTOW. Urban dist., market town, and river port of Monmouthshire. It stands on the Wye, about 2 m. from its junction with the Severn, 15 m. S. of Monmouth by the G.W.R. A sub-port of Gloucester, it trades in stone, coal, timber, and hark. In 1917 Chepstow was selected as the site of one of three national shipyards.

At Chepstow the tide (here) rises occasionally to 53 ft., the mean being 23½ ft. Brunel's tubular rly. bridge crosses the Wye, and a suspension bridge carries the road. The ruined castle and town walls date from the Norman conquest. Market day, Tues. Pop. 5,144.

Chepstow. The town and the Norman castle, seen across the river Wye
Valentine

CHEQUE OR CHECK. Document duly drawn up and signed by which money is conveyed from one person to another through the

medium of banks. Legally a cheque is a bill of exchange drawn by the customer on his banker. Cheques are payable on demand by the banker whose name they bear, but for safety the principle of crossing them has been introduced. A crossed cheque cannot be exchanged across the counter for cash, but must be paid into a banking account. The banker must meet any cheque presented to him if the customer's account has the necessary funds, or if arrangements have been made to provide them. Cheques were stamped with a penny stamp until 1918, when the tax was raised to twopence.

CHEQUERS. Mansion and estate in Buckinghamshire. It was presented, in Oct., 1917, by Sir Arthur Lee, M.P., later Lord Lee of Fareham, to the nation as the official country residence of the prime minister for the time being. It stands in a hollow of the Chiltern Hills, nearly 700 ft. above the sea, and the estate covers 1,500 acres.

Chequers. Mansion presented in 1917 by Lord Lee of Fareham for the official use of the British premier.

CHER. Department of central France. It is hilly in the S. and E. In the N.W. is the marshy district of Sologne. The land is largely used for pasturing horses and cattle, but a good deal is forest. Besides the Loire on the E. boundary, the Cher and the two Sautres, Grande and Petite, are the chief rivers, and the department is intersected by canals. Bourges (the capital), St. Amand-Mont-Rond, and Sancerre are the chief towns. Area, 2,819 sq. m. Pop. 298,398.

CHERBOURG. Town, port, and naval station of France, in the dept. of Manche. It lies at the mouth of the Divette, at the N. end of the Cotentin peninsula, on the English Channel, and 230 m. by rly. W.N.W. of Paris. The chief church is La Trinité and there is a fine old hospital. The naval harbour consists of three large and several smaller basins. The commercial harbour is at the mouth of the Divette. The roadstead is protected by an immense breakwater or digue. Steamers go to Southampton, the Channel Islands, and elsewhere. It is also a port of call for the Atlantic liners. It has a wireless station, and exports the produce of Normandy. Cherbourg existed under William the Conqueror, but its modern development dates from the time of Napoleon. Pop. 38,281.

CHEROKEE (Choctaw cave-men). North American Indian tribe of Iroquoian stock. Formerly occupying a large area in the S. Alleghenies, in 1838 they became one of the five civilized tribes in Oklahoma; their separate nationhood ceased in 1903. Their religion is a complex animal-worship and nature-worship. See illus. p. 73.

CHERRY (Cerasus, a town of Pontus). Fruit tree, of the order Rosaceae and genus Prunus. The garden cherry (*P. cerasus*) is

derived from the bird cherry (q.v.) and the wild cherry (*P. avium*), both common woodland trees. It is grown in the form of standards, espaliers, and other shapes in the same way as the apple. The sweet dessert cherries require a warm S. or W. aspect, but the Morello cherries will thrive in any position. Soil should be rich but light. Standard cherries are usually only used for orchard work, when they should be planted about 20 ft. apart every way, or 48 trees to the acre.

The flowering cherry (*Prunus pseudo-cerasus*) is a native of Japan. It is a familiar sight in spring, with its masses of double pink and white flowers. No fruit is borne. In Britain it rarely attains to a height of more than 25 ft., but in the forests of Japan it is a valuable timber tree.

CHERRY LAUREL (*Prunus laurocerasus*). Evergreen shrub of the order Rosaceae. A native of the Levant, it is the common laurel of European gardens. The leaves are broad, lance-shaped, leathery, and glossy; the flowers white, in sprays, succeeded by small cherry-like fruit. The plant is rich in hydrocyanic acid, constituting it highly poisonous.

CHERTSEY. Urban dist. and market town of Surrey. It stands on the Thames, 22 m. by the Southern Rly. S.W. of London. It was the site of a Benedictine abbey, founded 666. Its fairs date from the 12th and 13th centuries. Market day, Wed. Pop. 15,127.

CHERUBIM (lit. cherubs). Term familiar through the Prayer Book canticle, Te Deum Laudamus. The beings so called are here associated with the Seraphim. It is clear from many references in the O.T. that the cherubim were conceived as heavenly beings attendant upon the Divine Being, and as composite figures resembling the huge figures represented in Babylonian art as guarding the doors of temples and palaces. They were not objects of worship or angels, but proclaimed the presence of God and veiled His glory.

CHERUBINI, MARIA LUIGI CARLO (1760–1842). Italian composer. Born in Florence, Sept. 14, 1760, he produced his first opera, *Quinto Fabio*, in 1780, but it was not till 1788, when he settled in Paris, that his more important operatic works were composed. From 1808, when he produced the *Mass in F*, he turned his attention almost entirely to church music, composing the *Mass in C*, 1816, the *Requiem in C minor*, 1817, and the *Requiem in D*, 1836. In

Cherry. Tree of the garden cherry; above, fruit of the wild cherry.

Cherry laurel. *Prunus laurocerasus*

Cherbourg, French naval base. Alexander III Quay and the swing bridge.

Luigi Carlo Cherubini. Italian composer

1822 Cherubini was appointed director of the Conservatoire at Paris, and that post he held for 20 years, publishing his treatise on Counterpoint and Fugue, 1836. He died at Paris, Mar. 15, 1842.

CHERVIL (*Anthriscus cerefolium*). Biennial herb of the order Umbelliferae. It is a native of E. Europe and W. Asia. Long cultivated as a potherb and for flavouring, it has large parsley-like leaves with an agreeable smell, and minute white flowers. Bulbous-rooted chervil (*Chaerophyllum bulbosum*) is a similar plant, but develops a more fleshy root.

CHERWELL. River of Northamptonshire and Oxfordshire. Rising at Charwelton, it flows 30 m. S. to the Thames at Oxford. At Oxford it is known as the Cher.

CHESAPEAKE. American frigate of 36 guns. Commanded by Capt. Lawrence, she had a short severe action with the British frigate Shannon, commanded by Capt. Philip Broke, off Boston, Massachusetts, June 1, 1813. The fight lasted but fifteen minutes, and the Chesapeake became the prize of the Shannon.

CHESAPEAKE BAY. Largest inlet on the Atlantic coast of U.S.A., in the states of Virginia and Maryland. The rivers emptying into it include the Susquehanna, Patuxent, Potomac, Rappahannock, York, and James, all from the W. Its length is 200 m., and its breadth (12 m. at the entrance) varies between 4 m. and 40 m. It is navigable for large vessels almost to the Susquehanna river. Chesapeake Bay was the scene of an indecisive naval engagement fought between the British and the French, Sept. 5, 1781.

CHESHAM. Urban district and town of Buckinghamshire. It lies in the valley of the Chess, 26 m. by the Met. and Great Central Joint Rly. N.W. of London. Pop. 8,584.

CHESHIRE. County of W. England, which it partly separates from Wales; its greatest length 49 m., greatest breadth 33 m., and area 1,028 sq. m. The coast is confined to the Wirral peninsula between the Mersey and Dee estuaries. Mainly flat, except on the E. and W., the surface is thickly wooded in parts and dotted with small lakes, called meres, mainly in the south. The county contains places which are really suburbs of Manchester and Liverpool.

Cheshire is a noted dairy farming county, its cheese enjoying a high reputation. Salt is mined at Northwich, Winsford, Middlewich, etc. The consequent chemical industry is important, and coal and ironstone are worked; shipbuilding and textile manufactures are considerable. The Mersey, Dee, and Weaver are the chief rivers, and it has also the Manchester Ship, Trent and Mersey, Bridgewater, and other canals. The L.N.E., L.M.S., G.W., and Cheshire Lines Rlys. serve the county. Chester, the county town, and Birkenhead, Stockport, Congleton, Crewe, Macclesfield, Hyde, and Stalybridge are important towns. Pop. 1,025,423. See map p. 399.

CHESHIRE CHEESE. THE. Old London hostelry in Wine Office Court, Fleet Street, London. The present building dates from 1667, and arches in the vaults apparently belong to a period anterior to the Great Fire. It is thought that the tavern has existed on this spot since Elizabethan times. Although not recorded by Boswell, Dr. Johnson and Goldsmith are said to have frequented there, and Johnson's "favourite seat" is shown. It specialises in a beefsteak pudding made from a proprietary recipe and a glorified Welsh rarebit. See Fleet Street.

CHESHIRE REGIMENT. British regiment, the old 22nd of the line. It was first raised in 1689, and fought at Dettingen, where it saved King George II from some French cavalry, an incident commemorated in the oak leaf on its dress and colours. The regiment

shared in the capture of Louisburg, 1758, and of Quebec. In later times the Cheshires fought under Sir Charles Napier, and in India won renown by their brilliant defence of Hyderabad. They were engaged on the Modder river, 1899, and at Paardeberg, and in the Great War the regiment won further battle honours. The regimental depot is at Chester.

Cheshire Regiment badge

CHESHUNT. Urban district of Hertfordshire. On the river Lea, it is 14 m. N. of London by the L.N.E. Rly. Cheshunt College, for training Nonconformist ministers, was removed to Cambridge in 1905, and the building bought by the

Capablanca (q.v.), world champion 1921-27, and Alekhine (q.v.), champion since 1927.

Chess is played between two opponents on a board of eight rows of eight squares each, coloured alternately white and black. Each player has on the rank in front of him five kinds of pieces—king, queen, two rooks, two knights, and two bishops—and on the second rank eight pawns. The object of the game is nominally to capture the opponent's king, capturing at chess being effected by placing a man on a square already occupied by a hostile man and removing the latter. In actual practice, however, the game always stops when one king is in such a position that he cannot escape capture next move. The notation is shown in the diagram given below. Each piece has a move varying in direction and scope. The

queen can move in any direction and as far as the limitations of the board allow, and is thus the most valuable piece in the game. Consult *My Chess Career*, J. R. Capablanca, 1920; *My System*, A. Nimzowitsch, 1929.

CHESS. River of Buckinghamshire and Hertfordshire. It rises just above Chessham, and flows S.E. to the Colne near Rickmansworth. It is noted for watercress and trout. It is about 8 m. long.

CHEST (A. S. cest). Oblong or square box of wood or iron, strongly made with a elaborately carved or It was once an in-

Chest. Oak chest, English, 13th century, said to have come from a church in Hampshire
Victoria & Albert Museum, S. Kensington

Cheshire. Map of this English county on the Welsh border. It is noted for its salt mines, its dairy farms, and its meres. See p. 393

Church of England. Near is Theobalds (q.v.), with old Temple Bar. Pop. 14,250.

CHESIL BANK. Shingle ridge, on the coast of Dorset, connecting the Isle of Portland with the mainland at Abbotsbury. Some 16 m. by 170-200 yards, it is bounded for 9 m. by an inlet called the Fleet, noted for its swannery.

CHESNEY, SIR GEORGE TOMRYNS (1830-95). British soldier. Born at Tiverton, April 30, 1830, he entered the Bengal engineers, became president of the engineering college at Calcutta, and was the first president of Cooper's Hill college, 1871-80. From 1880-86 he was military secretary to the Indian government, and from 1886-91 military member of the viceroy's council. He was Conservative M.P. for Oxford city from 1892 until his death, March 31, 1895.

CHESS. Game of skill played with "pieces" on a chequered board. A game very similar to modern chess can be traced back to the 6th century A.D., being mentioned in Indian and Persian literature about the beginning of the next century. By the 13th century chess seems to have been played all over Western Europe in a form little different from that in which the Arabs met it in Persia. England's contribution to the game began early in the 19th century, and Howard Staunton was supreme until, in 1851, the German-born Adolf Anderssen came to London and won the first great international tournament. Masters of the game have included Steinitz, Lasker,

dispensable article of furniture for the storing of church plate, registers, and parish archives. These ecclesiastical chests were often of large size. Some chests were fitted with drawers, hence the term chest of drawers. See Coffin.

CHESTER City, county, and county borough of Cheshire. It lies on a rocky eminence on the river Dec, 16 m. S.E. of Liverpool, being served by the L.M.S., G.W., L.N.E., and Cheshire Lines Ry's. and the Dec and Chester and Nantwich canals. It is still enclosed by its old walls, dating from the 14th century; the gates are of the 18th. The river is crossed by a seven-arched bridge, and by the single stone span Grosvenor bridge, 200 ft. in length, which was erected by Thomas Harrison in 1828.

Chess board, showing the notation

The four main streets which converge on the market cross present a feature known as the Rows. These are formed by continuous, paved galleries, occupying the front part of the first floor of the buildings, and reached by staircases from the street. Many of the houses are timber structures of the 16th and 17th centuries. Stanley Palace, built in 1591, the finest Tudor building in Chester, was presented to the city in 1928 by Lord Derby. The cathedral em-

Chester. The cathedral. Above, Watergate Row, one of the upper paved galleries bordering the streets

broces Norman to Late Perpendicular styles; the central tower, 127 ft. high, has a splendid Perpendicular west window. Of the castle, only Caesar's Tower and a few other remains exist. Outside the walls is the church of S. John; its central tower fell in 1470 and the west tower in 1881. Among other buildings and institutions are the Grosvenor museum and school of art, town hall, King's school, blue-coat school, the Queen's school for girls. Races are held, the Chester Cup being the most famous event. Cheese fairs are held monthly. Chester was the Deva (camp upon the Dee) of the Romans, and an important military centre. Pop. 42,030

Chester was the name of a British light cruiser. She displaced 5,235 tons, had a speed of 25 knots, and ten 5.5-in. guns. It was aboard this ship that J. T. Cornwell (q.v.) remained at his post beside a gun, although mortally wounded, in the battle of Jutland, and for which he received the V.C.

CHESTERFIELD. Borough and market town of Derbyshire. It stands at the junction of the Hipper and the Rother, connected by canal with the Trent, 12 m S of Sheffield. on the L.N.E. and L.M.S. rlys. It has a Gothic church with a twisted spire, 228 ft. high, large market place, grammar school, and iron and brass foundries, tanneries, and silk factories. Market day, Sat. Pop. 66,450.

CHESTERFIELD, EARL OF. British title borne by the family of Stanhope, now Scudamore-Stanhope, since 1628. In 1616 Sir Philip Stanhope was made Baron Stanhope, and in 1628 earl of Chesterfield. His grandson and great grandson, both named Philip, succeeded to his titles, which then came to the famous 4th earl, Philip Dormer. In

Chesterfield. Church
with twisted spire

1883, when the 8th earl died, the direct line failed, and Henry E. C. Scudamore-Stanhope became the 9th earl. In 1887 his son, Edwyn Francis, succeeded him as 10th earl. The earl's eldest son is called Viscount Porchester.

A modern form of sofa with comparatively high back and thickly padded sides is known as a Chesterfield.

Chesterfield House, a mansion at the corner of Curzon and South Audley Streets, Mayfair, London, W., was built in 1750 by Isaac Ware for the 4th earl. After his death it was tenanted by the Chesterfield family until 1850. Later part of the grounds was leased for the building of Chesterfield Gardens, and the property passed to Lord Burton. In 1919 the dowager Lady Burton sold Chesterfield House to Viscount Lascelles, afterwards earl of Harewood.

CHESTERFIELD, PHILIP DORMER STANHOPE, 4TH EARL OF (1694-1773). English statesman, orator, wit, and letter-writer. Born

Earl of Chesterfield, English statesman and letter writer
After Hansky

Sept. 22, 1694, he sat in the House of Commons as a Whig, 1715-23. In 1726 he succeeded his father as earl. Ambassador at The Hague, 1728-30, and lord high steward, 1730, his opposition to the Excise bill brought about his dismissal from office in 1738. In 1744 he joined the Pelham administration, becoming successively special envoy to

The Hague, lord-lieutenant of Ireland, and secretary of state; but in 1748 he resigned office. He is best known by the letter addressed to him by Dr. Johnson (1755), and by the Letters which he wrote to his natural son, Philip Stanhope. He died March 24, 1773. Consult Life, W. H. Craig, 1907.

CHESTER-LE-STREET. Urban dist. of Durham. It stands near the river Wear, 6 m N of Durham by the L.N.E. Rly., on Ermine Street. Its church contains monuments of the Lumleys. It has coal mines and ironworks. Pop. 17,500.

CHESTERS. Residence near Chollerford, in Northumberland. Its park contains a section of the Roman wall and remains of the Roman station of Cilurnum. A good deal of excavating work has been done here and the museum in the park has a splendid collection of Roman relics.

CHESTERTON, GILBERT KEITH (b. 1874). British author. Born in London, he studied art, and early exhibited remarkable precocity with pen and pencil. His first publication was *The Wild Knight* (1900), a volume of poems. A master of paradox, Chesterton delighted an ever increasing public with startling criticisms of life and letters, with fantastic fiction and volumes of essays. Among these were *All Things Considered*, 1908; *Tremendous Trifles*, 1909; and the novels, *The Napoleon of Notting Hill*, 1904; *Manalive*, 1912; and *The Flying Inn*, 1914. He wrote monographs on Browning, 1903; Watts, 1904; and Dickens, 1906; and a series of detective stories, such as *The Innocence of Father Brown*, 1911; *The Wisdom of Father Brown*, 1914. He became editor of *The New Witness*, 1916. Later works are *Irish Impressions*, 1919; *The Return of Don Quixote*, 1927; and *The Thing*, 1929.

His brother, Cecil E. Chesterton (1879-1918), wrote a history of the United States, 1918. He was the founder and editor of *The New Witness*, 1912-16. He served as a private soldier in France, where he died, Dec. 6, 1918.

G. K. Chesterton, British writer
Russell

CHESTNUT. Tree of the order Cupuliferae, genus *Castanea*, largely grown in Spain and on the continent of Europe generally for food. The tree was introduced into Britain many centuries ago, possibly by the Romans. Chestnuts may be grown close together in order to form underwood or covert, in which case they attain a height of only a few feet, or planted at least 30 ft. apart, where they will form noble specimen trees 70 ft. or more in height. The flowers are yellow and bloom in June and July. The horse chestnut (q.v.) belongs to a distinct order, Sapindaceae.

Chestnut. Male and female flowers

CHETWODE, SIR PHILIP WALHOUSE (b. 1869). British soldier. Born Sept. 21, 1869, he served in Burma, 1892-93, and throughout the South African War. In August, 1914, he was in command of the 5th cavalry brigade. In 1916 he was sent to Egypt to take over the desert column of the Egyptian expeditionary force. He took a leading part in the final conquest of Palestine under Allenby. In 1919 he became military secretary to the secretary for war, and in 1922 adjutant-general. In 1923-27 he was G.O.C. the Aldershot command. He became chief of the general staff in India in 1928, and in 1929 was appointed commander-in-chief. In 1905 he succeeded to the baronetcy, created in 1700.

CHEVALIER ALBERT (1861-1923). British comedian. He was born in London, March 21, 1861 and made his first professional appearance in 1877 with the Bancrofts, under the name of Knight, in *An Unequal Match*, at the Prince of Wales Theatre. In 1891 he achieved remarkable success with his coster sketches and songs (*My Old Dutch*, etc.) at the Pavilion music hall. After four years at the halls he went on tour with his own entertainment, both in England and America. Chevalier published two books of reminiscences, in 1895 and 1901. He died July 10, 1923.

Albert Chevalier, British comedian

Chevalier, Sulpice Guillaume (1804-66). French draughtsman and caricaturist, better known by the name Paul Gavarni (q.v.).

CHEVIOT HILLS. Range extending about 35 m. between England and Scotland. They attain their highest elevation (Cheviot, 2,676 ft.) in the extreme E. in Northumberland, 6 m. S. of Wooler. Other prominent summits are Windygate Hill (2,034 ft.), Cuslat Law (2,020 ft.), Peel Fell (1,975 ft.), and Carfer Fell (1,815 ft.). The Coquet, Till, Tyne, and tributaries of the Tweed rise in the hills.

The hills give name to the breed of Cheviot sheep. The wool of this is a medium fine fibre of exceptional springiness used to make Cheviot tweeds.

CHEVRON (Fr. from late Lat. caprio, *goat*). Charge in heraldry counted as one of the ordinaries. It is formed by diagonal bands rising from the dexter and sinister sides of the shield and meeting in a point. It should occupy a third of the field.

The name chevron is given to the V-shaped stripe worn by sailors, soldiers, airmen, and police on the sleeve of a coat or jacket to indicate rank or length of good conduct service. In the British army in the former

case chevrons are worn above the elbow, in the latter below. A serjeant has three chevrons, a corporal two, a lance-corporal one.

The Chevrons Club for petty officers of the navy, non-commissioned officers of the Royal Marines, the army, and the Royal Air Force, was founded in 1918. The address is 74, St. George's Square, London, S.W.

CHEVY CHASE. Ancient border ballad dealing with the rivalry of the English earl Percy of Northumberland and the Scottish earl of Douglas. There is no historical evidence of the battle which ensued as a result of the Percy's defiant hunting in the domain of the Douglas, but the ballad probably celebrates an actual encounter.

CHEYNE, THOMAS KELLY (1841-1915). British scholar. Born in London, Sept. 18, 1841, he was educated at Oxford. Having been ordained, he entered upon the Biblical studies which placed him in the front rank of those who accepted what was called the higher criticism. In 1885 he was appointed professor of the interpretation of Holy Scripture at Oxford and canon of Rochester. Cheyne was Bampton Lecturer, 1889, one of the revisers of the Old Testament and joint editor of *The Encyclopaedia Biblica*. He died Feb. 16, 1915. Pron. Chaîny.

CHIANG KAI SHEK. Chinese president. Having joined the party of Sun Yat Sen, he became in 1920 head of a military academy. In 1925, just after Sun's death, he was made commander-in-chief of the forces of the Kuomintang, and was successful in bringing some of the provinces under its authority. At this time he was closely associated with Borodin and other Soviet emissaries, but about 1927 he broke away from them. The headquarters of the nationalists were transferred from Canton to Nanking, and the communists lost their influence. Further military successes included the taking of Peking, after which, in 1928, Chiang was chosen president of the republic. See China.

CHIANTI. Range of hills forming part of the Etruscan Apennines, Central Italy, between Siena and Arezzo provinces. A wine is made from grapes grown on them. It has a slightly astringent taste, and resembles a dry Burgundy.

CHICAGO. City of Illinois, U.S.A., capital of Cook co. The second city of the U.S.A. in population and importance, it lies on the Chicago river, near the S. end of Lake Michigan, and is the centre of the livestock, packed meats, grain, and lumber trades. Printing is another important industry. The U.S. frontier post, Fort Dearborn, was built in 1804 on the site of the city.

The commercial importance of Chicago began about 1850, and by 1871 it had over 300,000 inhabitants. A fire then swept the city, but it was rebuilt on a finer scale. Notable buildings include many sky-scrappers, such as the Wrigley building, the offices of The Chicago Tribune, and the Masonic Temple. The City Hall is a fine pile.

The Academy of Science stands in Lincoln Park, and the Field Museum of Natural History occupies reclaimed land on the lake front. To the S. is Soldiers' Field, a stadium erected in memory of the Great War. More land is being reclaimed from Lake Michigan. and the World's Fair of 1933 is to be held on reclaimed islands. The Art Institute and the Public Library are in Michigan Avenue.

Among educational institutions are the University of Chicago, occupying over 100 acres on both sides of the Midway Plaisance, and the Northwestern University. Other intellectual establishments include the opera association. Around the city is a reserved belt of forest land

Chevron in heraldry

The Union Stockyards are one of the wonders of the world. Here in 500 acres is centred the organization that feeds much of the civilized world. The great national political conventions often meet in Chicago, and its local politics, complicated by the large alien element and strongly imbued with the democratic spirit, are lively and vehement. In 1929-30 there was a crisis in the city's financial affairs. Pop 3,157,400.

East Chicago is a city of Indiana, 21 m. S.E. of Chicago.

CHICHELEY OR CHICHELE, HENRY (c.1363-1443). English archbishop and statesman. Born at Higham Ferrers, Northamptonshire, he was ordained priest in 1396. Having held the rectory of S. Stephen's, Walbrook, and other benefices, he was appointed bishop of S. David's in 1407, and archbishop of Canterbury in 1414. A staunch supporter of Henry V, he was active in legislative and administrative work. Of his many benefactions the chief was the founding of All Souls College, Oxford. He died April 12, 1443. See All Souls.

CHICHESTER. City and market town of Sussex. On a plain between the sea and the South Downs, 69½ m. by rly. S.W. of London, on the Southern Rly., it is enclosed by an ancient wall, now converted into promenades. The cathedral (11th to 16th centuries), 411 ft. long and 131 ft. wide, superseded a wooden building founded in 1078; it has a detached Perpendicular campanile or bell tower. The present spire (277 ft.) replaced one which fell in 1861. The bishop's palace is S.W. of the cathedral. Other buildings are S. Olave's Church, the Guildhall, S. Mary's Hospital, and the market cross, erected about 1500. The cattle market is probably the largest in the S. of England.

The Regnum of the Romans and the headquarters of Vespasian, Chichester suffered at the hands of the South Saxons in 491, but was rebuilt by Cissa, after whom it is named (Cissae Castrum, Cissaceaster). The Roman road known as Stane Street, from Chichester to London, may still be traced for considerable distances. Market day, Wed. Pop. 12,413.

The town gives its name to the title of earl borne since 1801 by the family of Pelham. Thomas, the 2nd earl (1756-1826), was home secretary, chancellor of the duchy, and postmaster-general. The family seat is Stanmer Park, Lewes, and the earl's eldest son is known as Lord Pelham.

CHICKEN POX OR VARICELLA. Acute infectious disease of children and young adults. The symptoms begin with sickness

ground, and roasted, are much used as an adulterant to or a substitute for coffee. The root contains sugar and starch.

Chicoutimi. City of Quebec, Canada, on the Saguenay, 227 m. N. of Quebec. It is a hunting and fishing centre. Pop. 8,937.

Chidley. Most northerly point of Labrador, also known as Chudleigh.

CHIEF. Word derived from the Latin caput, head, and meaning the principal man of an organization. It and its variant, chieftain, are the head of a tribe. Tenants in chief were landowners who held their land directly from the king. Chief of the staff is the name given to the chief assistant of a sailor or soldier holding a high command.

In heraldry the chief is the upper third of a shield, reckoned as one of the ordinaries. It is represented by a band, the shield being parti-coloured. Any charge borne above the fess point, or middle of the shield, is said to be in chief.

Chief in heraldry

CHIFFCHAFF (*Phylloscopus rufus*). Small song-bird, one of the earliest summer visitors to Great Britain. The head, back, and wings are greenish ash colour and the under parts yellowish white. It feeds on insects, most of which it catches in flight, and it is found mainly about the edges of pools and streams.

Chiffchaff. Young of this small song-bird, an early migrant

CHIGI. Name of an illustrious Roman family. Agostino Chigi (1465-1520), a great banker, acted as financial adviser to Pope Julius II, and built the Farnesina palace and gardens at Rome. Fabio Chigi (1599-1667), became pope as Alexander VII. His nephew, Agostino, made prince of Farnese and duke of Ariccia, was created a prince of the Holy Roman Empire in 1659. From 1712 the hereditary office of marshal of the Church and guardian of the conclave has been held by the Chigi.

CHIGWELL. Village of Essex. On the borders of Epping Forest, it is 13½ m. N.E. of London by the L.N.E. Rly. The church of S. Mary contains a brass to Samuel Harnett, archbishop of York (d. 1631), who founded (1629) the grammar school, where William Penn was a pupil. The old King's Head Inn, where the Verderers' or Forest courts were held until 1855, is the original of the Maypole in Dickens's Barnaby Rudge. Pop. 2,943.

CHILANGA. Station of Rhodesia. On the line from Livingstone to Broken Hill, it is 80 m. S. of the latter place. In 1929 it was selected as the capital of Northern Rhodesia in place of Livingstone.

CHILBLAIN OR KINE (Pernio). Inflammation of the skin due to cold. The toes, fingers, heels, ears, nose, and cheeks are the parts most frequently affected. A chilblain neglected may pass into severe ulceration. Soothing liniments should be applied at first, and later on tincture of iodine, friars' balsam, and compound liniment of camphor are useful.

CHILD, SIR FRANCIS (1642-1713). English banker. He removed to London from Wiltshire, and was apprenticed to a goldsmith. About 1671 he became a partner in and soon afterwards head of the

Chickweed, *Cichorium intybus*

Chicago. 1. Government offices, built in 1905. 2. Offices of The Chicago Tribune. 3. McKinlock Campus buildings of the Northwestern University. 4. Commercial building at the end of Michigan Avenue Bridge

2, 3 and 4, "The Times" copyright

and fever, followed within 24 hours by the appearance of rash, generally on the back or chest. At first the rash consists of red papules, but in a few hours they become rounded vesicles filled with a clear or turbid fluid. After a couple of days the vesicles contain pus or matter, and thereafter they dry up, fresh crops having, however, appeared in the meantime. In the majority of cases chicken pox runs a favourable course.

Chick pea, *Cicer arictinum*

CHICK PEA (*Cicer arictinum*). Annual herb of the order Leguminosae. A native of Europe and Asia, its leaves are broken up into oval leaflets. The pea-like flowers are white or rosy, and succeeded by short pods containing one or two seeds. As gram it is extensively cultivated in India for food and for export to Europe, especially Spain.

CHICKWEED, STITCHWORT OR STARWORT (*Stellaria media*). Annual herb of the order Caryophyllaceae. It is a native of the arctic and N. temperate regions, but naturalized in most other places where the ground is cultivated. It is a tender little plant with fragile jointed stems and little oval leaves in pairs. The small white flowers are often imperfect, the petals being much

reduced in size or absent.

CHICORY (*Cichorium intybus*). Perennial herb of the order Compositae. It has a fleshy, tapering root and long leaves boldly cut in from the edges, which if broken emit a milky juice. The bright blue flower-heads are 1 in. or 1½ in. across, on a rigid, branched stem 2 or 3 ft. in height. The roots, dried,

Chichester. The Cathedral from the E. On the right is the detached bell tower

banking firm which adopted his name. In 1689 he was knighted, and in 1699 was lord mayor. For some years he was M.P. for Devizes, and in 1702 for the City of London. He died Oct. 4, 1713.

His sons continued the business, one of them, Sir Francis, also becoming lord mayor. Another, Robert, had a daughter who married the 10th earl of Westmorland, and to their daughter, Sarah, was left Robert Child's interest in the bank. Sarah married the 5th earl of Jersey, and the earls of Jersey thus became the chief partners in Child's Bank.

CHILD. The law relating to the protection of children and young persons is largely contained in the Children Act, 1908. In that Act child is defined as being a person under the age of 14, and a young person as being a person of 14 or upwards, but under the age of sixteen.

The Act materially strengthens the law which had previously been designed to limit the evils of baby farming. Heavy punishments are provided for cruelty to children and young persons. A parent or other person legally liable to maintain a child or young person neglects him or her for the purposes of this section if he fails to provide adequate food, clothing, medical aid, or lodging for him or her.

Any person who causes or allows a child or young person to be in any street, premises, or place to beg, or to receive alms, or to induce the giving of alms, may be fined £25 or sent to prison for three months with hard labour.

Caro is taken that when children or young persons are detained after arrest or on remand, or after having been committed for trial, they shall be prevented from associating with adults charged with offences, and shall be committed for custody in special places of detention. Sentence of death cannot be pronounced on a child or young person. Instead, detention during his Majesty's pleasure is ordered. A young person aged from fourteen to sixteen cannot be sentenced to penal servitude nor to imprisonment, unless too unruly for a place of detention, and, in addition, a child under fourteen cannot be sentenced to penal servitude or imprisonment.

The Education Act, 1918, which applies only to England and Wales, amended the law relating to the employment of children. Under its provisions no child under the age of 12 years is to be employed at all, and children between 12 and 14 (or 15 if the local education authority has fixed that as the age up to which parents must keep their children at school) must not be employed on Sundays for more than two hours, nor on any day on which they are required to attend school before the close of school hours on that day, nor on any day before 6 a.m. or after 8 p.m. No child may be employed in street trading, nor in any factory, workshop, mine, or quarry. In 1929 it was decided to raise the school-leaving age from 14 to 15.

Courts for children were created by the Act of 1908. They hear charges against offenders under the age of sixteen, investigate the cases of children brought before them for vagrancy, destitution, ill-treatment, or moral danger, and consider the granting of licences for young performers. Juvenile courts can commit young offenders to training institutions. See Adoption; Affiliation; Baby; Borstal; etc.

CHILE. Republic of S. America, on the Pacific coast. It is bounded N. by Peru, E. by the Andes, while the S. extremity terminates in lat. 56° S., where the Pacific and South Atlantic unite. The S. and S.W. ends are fringed with islands. Its extreme length is about 2,800 m. The width varies from 50 m. to 100 m. throughout most of its extent. Santiago is the capital and the seat of the state university. Other important towns include Valparaiso, Concepcion, Iquique, and Antofagasta. Chile is a member of the League of Nations. The area is about 290,000 sq. m.; pop. 4,276,000. (See maps, pp. 121, 275.)

Chile may be broadly divided into three zones—the tropical rainless deserts of the N., the temperate cultivated zone in the centre, and the rainy and stormy forest zone of the S. None of the rivers flowing down the steep slopes of the Andes are of much use as navigable highways, but attention is being increasingly given towards utilizing them for cheap hydraulic and electric power. Earthquakes are frequent.

Mining and agriculture are the chief occupations. Chile is the second greatest copper producing country in the world. For many years the world's supply of natural nitrate has come from the vast nitrate fields in the N., from which region are also obtained iodine, borate of soda, copper, gold and silver. The central zone yields copper, iron, manganese, and silver, while iron and coal are mined in the S. Chile produces large crops of wheat, barley, oats, and maize, besides wine, fruit, and vegetables. The grass lands of the far S., where Chilean territory embraces a considerable stretch of Patagonia and most of Tierra del Fuego, are

mainly devoted to sheep farming. The majority of the population are of European origin. The language is Spanish. The indigenous inhabitants comprise Fuegians in or near Tierra del Fuego, Araucanians (see illus. p. 112) in the valleys and western slopes of the Andes, and Changos on the coast of Atacama in the N. The rlys. are chiefly owned by the state. Most of the ports are connected by lateral lines with the longitudinal rly. running from Tacna in the far N. to Puerto Montt in the S., and there is rly. connexion across the Andes with Argentina and Bolivia. There is a steadily increasing chain of wireless stations along the coast. The nominal unit of currency is the gold peso, worth 6d. All able-bodied citizens from the age of 20 to 50 must serve in the army for a training period of 18 months and then for 12 years in the reserve. The active strength of the navy is about 8,000. An air force was formed in 1918.

Chile was discovered by the Spaniards in the 16th century and remained under Spanish rule until 1818, when its independence was finally secured and a republic set up. The war between Chile and Peru over the nitrate lands in the N., which began in 1879, lasted until 1883, when the Peruvian prov. of Tarapaca was ceded to Chile in perpetuity and those of Tacna and Arica for ten years. In 1929, after a lengthy dispute, Chile ceded Tacna to Peru and retained Arica for a payment of £1,200,000.

A new constitution came into force in 1925. The president is elected by direct popular vote for a term of six years. The legislative power is vested in the National Congress, which consists of a Senate of 45 members and a Chamber of Deputies of 132.

CHILE PINE OR MONKEY PUZZLE (*Araucaria imbricata*). Evergreen tree of the order Coniferae. A native of Chile, it grows to a height of 150 ft., and its symmetrical branches are horizontal, or with a slight tendency downward. These are covered by the overlapping oval leaves, each ending in a sharp point. The male and female flowers are produced on separate trees, the latter yielding cones.

Chile Pine cone

CHILLIES. Fruit pods of *Capsicum annum*, a herb of the order Solanaceae, native of S. America. The fruits are used for making chillie vinegar and, together with those of a shrubby species (*C. frutescens*), in the preparation of the hot condiment known as Cayenne pepper. See Cayenne.

CHILLINGHAM. Village of Northumberland. It stands on the river Till, 4 m. S.W. of Wooler. To the S. is Chillingham Castle, seat of the earl of Tankerville. In the park is preserved a herd of semi-wild cattle.

CHILLINGWORTH, WILLIAM (1602–44). English divine. Born in Oxford, he was there educated and was ordained. Siding with the king in the Civil War, he served as a chaplain with the forces, and was taken prisoner by the parliamentarians at Arundel. He died at Chichester, Jan. 30, 1644. Chillingworth is rightly regarded as one of the most liberal-minded men of his time and a pioneer of liberty of thought among Anglicans.

CHILLON. Castle of Switzerland. It stands on a rocky islet at the E. end of the lake of Geneva. Dating from the 8th century, it was partly rebuilt in 1293 by Amadeus IV. of Savoy. It was long used as a state prison. Bonivard (q.v.), the prisoner immortalised in Byron's poem, was confined here, 1530–36.

Chillon. The castle which stands on an islet in Lake Geneva

CHILTERN HILLS. Range of chalk hills extending some 45 miles north-eastwards from the Thames at Goring. The highest points are Wendover Hill, 905 ft., and Ivinghoe Beacon, 904 ft. From the summits to the north-west there is a sharp drop to the valley of the Upper Thames, or the Vale of Aylesbury. In the opposite direction the land slopes gradually to the London basin of the Lower Thames. At the foot of the scarp numerous streams flow across the plains to the Thame and Great Ouse: down the gentler slope the Wye, Misbourne, Chess, and Colne are almost the only streams. Between the hills are the dry wind gaps usually known by the names of the neighbouring towns of Princes Risborough, Wendover, Berkhamsted, and Luton.

There is a town called Chiltern in Victoria, Australia, 22 m. S.W. of Albury.

CHILTERN HUNDREDS. The hundreds of Burnham, Desborough, and Stoke, in the Chiltern Hills, Bucks. Application for the stewardship of these is the formality gone through by a member of parliament who wishes

to retire, resignation not being permissible by law. A nominal salary of 20s. a year goes with this stewardship, which is the gift of the chancellor of the exchequer, and automatically involves the retirement of a member.

CHIMAERA (Gr. she-goat). In Greek mythology, fire-breathing monster with the fore-quarters of a lion, the middle of a goat, and the tail of a dragon. The monster dwelt in Lycia, where it was the terror of the neighbourhood, until killed by Belleroophon mounted on his steed Pegasus. Pron. Kim-er-a.

CHIMAERA. Sub-class of large fishes, related to the rays. The skeleton is cartilaginous; and the internal organs have points of resemblance with those of the sharks. They are about 4 ft. long, and work havoc with the herring fishery. They inhabit the European seas and are also found along the W. coast of N. America.

Chimaera. Northern chimaera a feeder on herrings

CHIMBORAZO. Mt. of Ecuador. An extinct, craterless volcano of the W. Cordillera of the Andes, its height is 20,498 ft. It was twice ascended by Whymper in 1880. It gives its name to a prov. of Ecuador. See Andes.

CHIMNEY (Lat. caminus, hearth). In Anglo-Saxon times smoke from the domestic fire escaped through a hole in the roof, but by

Chimney. Left, of Abingdon Abbey, c. 1250. Right, of Thornbury Castle, 1514

the 13th century chimneys were common. Palladio (1518-80) knew the principle on which they should be constructed—neither too wide so as to cause loss of heat and diffusion of current, nor too narrow to afford a free outlet. In Great Britain the task of removing soot from chimneys was

originally performed by small boys known as elimbing boys, but the Act of 1842, amended in 1864, made sub employment illegal.

The assemblage of architectural dressings round the fireplace in a room is known as the chimney-piece. At first merely a hood to catch the smoke, attention began to be paid to the stonework surrounding the hearth, though the decorative additions were not always fixtures. Elizabethan chimney-pieces were of stone, wood, and sometimes coloured marble. The

Chimney-piece in Adam style in Lansdowne House, London Country Life

architecture of the chimney-piece was carried up to the ceiling, and the best specimens were in harmony with the wood panelling of the walls. The chimney-piece of the Jacobean period rivalled the staircase as a feature of noble house interiors. About the

middle of the 18th century further developments were introduced by the brothers Adam. In engineering, what is termed a chimney shaft is a device employed (1) to promote draught through a boiler or other furnace, and (2) to discharge waste and noxious gases at a height where they will not create a nuisance.

CHIMPANZEE OR CHIMPANZI (Anthropopithecus troglodytes). Large anthropoid ape. Nearly related to the gorilla, it differs in the teeth, in the shape of the skull, and in the fact that the sexes differ in little but size. The arms do not exhibit the disproportionate length so marked in the other anthropoids. Chimpanzees are natives of Western and Central Equatorial Africa. They live in the forests, spend part of their time in the trees, and feed mainly on fruit. Chimpanzees are shy and wary, and appear never to molest man if unprovoked. See Anthropoid Ape.

Chimpanzee. Large anthropoid ape

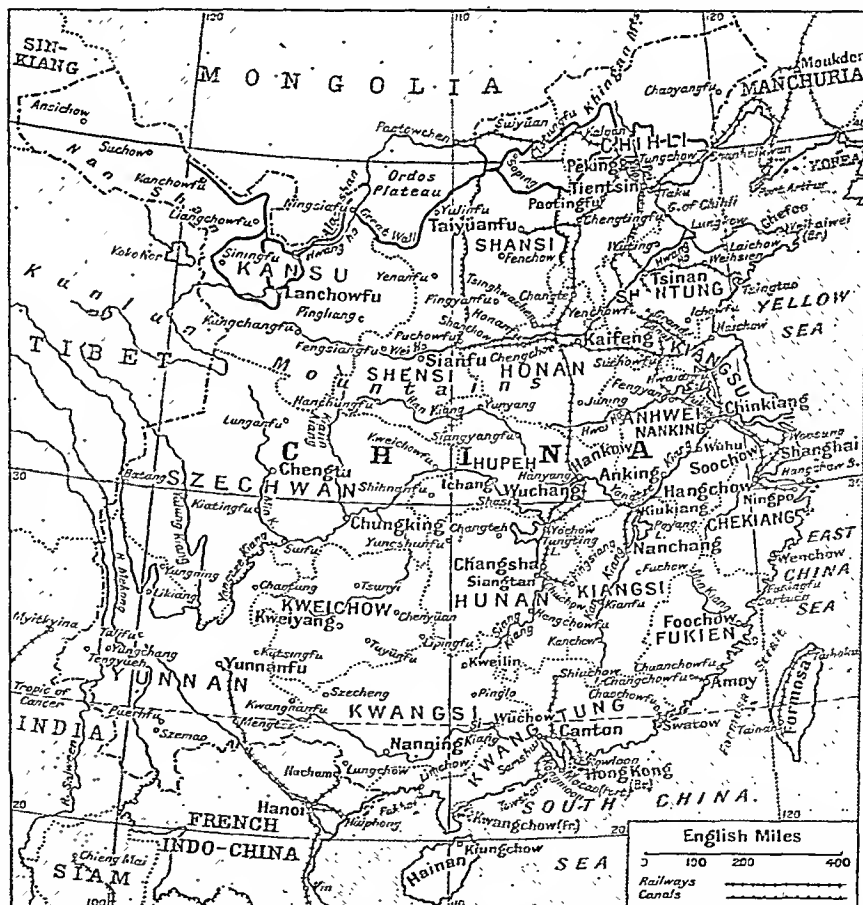

CHINA. Formerly an empire, now a republic of Asia. China proper, exclusive of Manchuria, Mongolia, Sin-kiang, Tibet, and other dependencies, extends approximately from lat 18° to 43° N., and from long. 98° to 122° E. over a total area of 1,532,800 sq. m. It comprises 18 provs., viz.: Sze-Chuen, Yun-nan, Kansu, Chih-li, Kwangtung, Hu-nan, Shan-si, Kwangsi, Shen-si, Hu-peh, Kiang-si, Honan, Kweichow, Shan-tung, Anhwei, Fukien, Kiang-su, and Che-kiang. Important towns include Nanking (the capital), Peking (the former capital), Shanghai, Canton,

the Hwang-ho or Yellow river, the Yang-tse kiang, and the Si-kiang or West river. These broadly represent N., central, and S. China respectively. The climate in general is temperate. The greater part of the country is mountainous, the Kwen-lun range throwing out several branches. In the E. the great plain of China roughly forms a triangle, with its apex near Peking and its base along the Yang-tse from the neighbourhood of Shanghai to that of Ichang. The Grand Canal links the basins of the Pai-ho, Hwang-ho, Hwai, Yangtse, and Tsiang. S. of Ningpo the coast abounds in good natural harbours.

China is essentially an agricultural country. Rice is the staple crop throughout the S. and central provs. In the N. the chief crops are wheat, barley, maize, millet, and beans. The central provs. produce ramie, mulberry, sesamum, and vegetable oils. Cotton is grown as far N. as the N. part of Chih-li, but the lower Yang-tse valley is the great cotton region. The tea gardens are in the W. and S. One of the most successful industries is silk culture.

China. Chief priest of a Buddhist temple

China, map of the great republic of the Far East, exclusive of its dependencies. It has a population of over four hundred millions, and includes some of the most densely populated areas in the world.

Hankow, Ningpo, Tientsin, Soochow, Hangchow, and Foochow. Pop. 414,011,519.

The country falls into three great natural divisions—the basins of the three chief rivers,

China producing about one-fourth of the world's supply of raw silk. Despite repeated efforts to suppress the opium traffic, the poppy is still grown. Pigs are reared everywhere.

Coal is the most important mineral. Iron ores are abundant. Copper is found in most parts, and especially in Yun-nan. Tin is the chief mineral export. China produces more antimony than any other country. Other minerals include gold, silver, lead, and tungsten. Petroleum is also found.

The manufacture of silk is one of the most important industries. Modern industrial methods are being increasingly adopted. There are silk filatures and cotton mills at Shanghai Canton, and other centres, sugar refineries at Canton, iron and steel

China. Chinese lady of rank with her maid in attendance

works at Han-yang, and shipbuilding and engineering works at Shanghai, Hankow, and Foochow. The exports include silk, beans, bean-cake, vegetable oils, cotton, and tea. There are over 7,500 m. of rlys., and the roads have been greatly improved since 1920. The rivers and canals carry most of the internal trade. The postal service is fairly good, and the telegraph service is well developed, and there are wireless stations

The Chinese Empire, one of the oldest monarchies in the world, came to an end in 1912, when the Republic of China was inaugurated. After the death of the first president, Yuan-Shih-Kai, in 1916, the rivalry between N. and S. long continued to disturb the country. In 1927 the government of N. China was established at Peking, while the government of the nationalist party (Kuomintang) was installed at Canton. In June, 1928, the nationalists captured Peking and Nanking was made the capital. In Oct. 1928 Chiang-Kai-Shek, the commander-in-chief of the victorious nationalist armies, became president. He consolidated the South, but early in 1930 there were signs that war with the North was again possible

The government of China is a committee government representing the Kuomintang. It consists of five yuans or councils—executive, legislative, judicial, examination, and control. The yuans are subordinate to the "three conferences," over which that of the nationalist party is supreme. To assist the president there are from 12 to 16 state councillors, from whom the presidents and vice-presidents of the yuans are appointed. There is a cabinet, whose ministers are no more than functionaries of the administrative council.

CHINA ASTER (*Callistephus chinensis*). Annual herb of the order Compositae. A native of China, it was introduced to Great Britain in 1731. It has branching stems about 2 ft. high, with toothed, oval leaves, and rosy lilac flower-heads about 3 ins. across. See Aster; also illus. p. 147.

CHINA CLAY. White clay resulting from the decomposition of felspar. It is used in the manufacture of porcelain, and as a filler or loading in paper making. China clay is yielded by granite, gneiss, pegmatite, porphyry, and some felspathic sandstones, through kaolinisation, a process of alteration whereby the felspar passes into a soft, white, pulverulent mass. China clay is worked largely in the W. of England, in the St. Austell district, and on Bodmin Moor and Dartmoor.

CHINA-ROOT. Root of *Smilax china*, a climbing plant of the order Liliaceae, a native of China and Japan. The large, reddish, fleshy root is used for food in its native countries, and is exported as a dyestuff.

CHINA SEA. Western division of the Pacific Ocean. Its N. part, the Yellow Sea, lies between Korea and Kiang-su; the central part, the Eastern China Sea, lies between Japan and Formosa; while the S. portion, or S. China Sea, extends from Luzon, Philippine Islands, S. to Borneo and the Malay Peninsula. These inland waters are periodically subject to typhoons. See Pacific Ocean.

China-root. Part of root, and flowering spray.

CHINAWARE. Name originally denoting fine pottery imported from China, and afterwards applied to any porcelain ware. Porcelain is broadly distinguished from other pottery fabrics by being vitreous and, when thin, translucent.

True or hard porcelain is composed of a hard-paste body formed by mixing white infusible china clay—Chinese, kaolin—with fusible felspathic china stone—Chinese, petuntse—and quartz, the glaze being of china stone and lime. Both are fired at one operation at about 1,350° C. Ordinary steel cannot scratch it, and its fractured surface is shell-like. Invented by the Chinese during the Tang dynasty, 618-906, it was reproduced in similar materials, now commonly called Dresden china, by J. F. Böttger, at Meissen, near Dresden, about 1713, and by W. Cookworthy, at Plymouth, about 1768. The latter's patent rights were acquired by R. Champion, and passed in 1781 to Staffordshire. The development there of chinaware under Spode, Copeland and Minton, and others, belongs to the 19th and 20th centuries.

Artificial or soft porcelain is composed of a soft-paste body fired to an unglazed or "hiscuit" condition at about 1,100° C., the glaze being applied subsequently and fired at about 1,000° C. It is easily scratched, and its fractured surface is granular.

English soft porcelain is traceable back to 1745. Within a dozen years it was being produced at Bow, Chelsea, Derby, Worcester, and Longton Hall. J. Sadler, of Liverpool, by his invention of transfer printing about 1752, helped to secure for English ware the pre-eminence in mass production. In 1769 W. Duesbury bought the Chelsea works, running them concurrently with Derby for 16 years—the Derby-Chelsea period. In 1776 he acquired the Bow stock-in-trade. The Crown Derby period extended from 1780 to 1830.

CHINA MARKS. Devices employed by potters for identifying their work. They pertain to all objects of baked clay included in the term ceramic, whether earthenware, stoneware, or porcelain. They usually denote the place of manufacture, master potter, workman, or decorator; less frequently, the patron, date, quality, capacity, and other details. Produced on the plastic surface, they are imprinted, painted, stamped, or incised. Still-marks left by the supports used in the kiln are often characteristic. The fraudulent imitation of marks is of high antiquity. Consult Marks and Monograms on Pottery and Porcelain, W. Chaffers, 12th ed. 1908.

CHINCHILLA (*Chinchilla lanigera*). Small squirrel-like rodent, allied to the porcupines, found in the Andes. It has long hind legs and a bushy tail. It is 10 ins. long, lives in burrows in barren districts, and is valued for its fur.

CHINDE. Port of Portuguese East Africa (Mozambique), on the Chinde river, the only navigable mouth of the Zambezi. Important as an outlet for the Zambezi valley, N. Rhodesia, and Nyasaland by the Shire river, goods and passengers travel by coasting steamers to Beira (q.v.). Chinde exports cotton, sugar, coffee, rubber, oil-seeds, ivory, wax, etc. Pop. 3,400.

CHINESE WHITE. Zinc oxide prepared by burning zinc and allowing the vapour to condense. The white powder that results is known also as flowers of zinc. It is used as a pigment in place of white lead. Although more permanent, it has less covering power than white lead.

CHINGFORD. Urban district and parish of Essex, 10½ m. N. of London by the L.N.E.R., between Epping Forest and the river Lea. The Tudor building known as Queen Elizabeth's Hunting Lodge may have been the manor house. The old church of All Saints dates from the 14th century. Abandoned in 1844, and partly restored in 1873, its roof collapsed in Feb., 1904. In 1929 the church was restored and again used for public worship. The new church of SS. Peter and Paul is on Chingford Green. Chingford reservoir, 1½ m. long by ¾ m. wide, was opened Mar. 15, 1913. Pop. 13,500.

CHINO-JAPANESE WAR. Fought in 1894-95 mainly in and about Korea. Korea held herself to be independent, though nominally under the suzerainty of China, while Japan had established there large and flourishing settlements. In May, 1894, the king of Korea applied to China for assistance to quell an insurrection, and a small Chinese force was sent. Japan immediately dispatched a brigade. The rebellion was put down and China wished to withdraw her men, but Japan insisted on a guarantee for future maintenance of order. China objected to Japanese interference.

War was declared on Aug. 1, and Japan drove the Chinese out of Korea with only two serious engagements, the battle of Pingyang on Sept. 15, and the crossing of the Yalu river on Oct. 25. On Sept. 17 the Japanese attacked the Chinese conveying fleet, destroying practically all except two battleships. On Nov. 21

China Marks. 1, 2, 3. Bow, 1730-75; 4, 5, 6. Chelsea, 1745-69; 7. Derby, 1751-69; 8. Chelsea-Derby, 1769-80; 9. Crown Derby, 1780-1816; 10. Bloor, 1816-39; 11. Derby, modern; 12, 13. Plymouth, 1768-72; 14, 15. Bristol, 1770-77; 16, 17, 18. Worcester, 1751-83; 19. Chantilly, 1725; 20. St. Cloud, 1695-1773; 21. Sèvres, date 1754; 22. Dresden-Meissen, date 1716; 23. Copenhagen, 1772-74

the Japanese carried Port Arthur by assault. After further victories in Manchuria, the Japanese prepared to march on Peking. The war ended with a peace treaty, signed April 17, 1895, by which the Liao Tung peninsula and Formosa were surrendered to Japan, and China was to pay an indemnity.

CHINON. Town of France, in the dept. of Indre-et-Loire. On the Vienne, 22 m. S.W. of Tours, it was part of Anjou. Its historic buildings include the churches of S. Stephen, S. Maurice, and the ruined S. Mesme. On a rock above the town are the ruins of the castle, which consists of three parts. Of the Château de S. Georges, built by Henry II, who died here, little remains. The Château du Milieu, built in the 11th century on the site of the Roman fort of Caino, has been repeatedly restored. Pop. 5,622.

Chinon. The ancient French town and château on the right bank of the river Vienne

CHINOOK. Warm, dry wind experienced in the belt stretching along the E. margins of the Rocky Mts., in lats. 55°-60° N. Air currents descend on the E. side of the Cordillera and become both denser and warmer, and consequently can now absorb water vapour. Thus the descending warm, drying wind clears away snow, and allows cattle to find pasture.

CHINS (Chinese, men). Collective name for hill-tribes of Tibeto-Burman stock in N.W. Burma. With the Lushais and Kukis they represent an early Tibetan migration, and cling tenaciously to their pre-Buddhist animism.

CHIOGGIA. City of Italy, on Chioggia Island, at the S. end of the Venetian Lagoon, 15½ m. S. of Venice. A stone bridge connects it with the mainland. It is the principal fishing port of Italy. The cathedral dates from 1663. In 1379 it was the scene of a naval battle between the Venetians and Genoese, who were defeated. Pop. 36,104.

CHIOS, KHIOS, or SCIO. Island of the Aegean Sea, belonging to Greece, about 8 m. off the W. coast of Asia Minor, S.W. of the entrance to the Gulf of Smyrna. Its area is 321 sq. m. It is one of the most beautiful islands in the Levant. Antimony is mined and marble quarried. Chios or Castro, the capital, on the E. coast, is the seat of a Greek bishop. Pop., island, 75,680; town, 22,122.

CHIPMUNK. Name for species of ground squirrel (*Tamias*) common in Siberia (*T. asiaticus*) and N. America (*T. striatus*). In appearance they resemble the British squirrel, but live in holes in the ground or in hollow logs.

CHIPPENDALE, THOMAS (d. 1779). English cabinet-maker. Born in Worcestershire, he came to London about 1750, and carried on the business of cabinet-making and upholstery in S. Martin's Lane.

His name is chiefly associated with chairs, cabinets, and bookcases. His book, *The Gentleman and Cabinet-Maker's Director*, 1754, contains his own drawings for the furniture he designed and made. He died Nov. 13, 1779. In the best Chippendale period the chairs had square backs with outspreading ears; ladder or pillar bars, either turned or flat splat work, with interlaced centres; legs round or square, and also of cabriole type. These three patterns of legs were also seen in the small round and square tables. Cabinets and chests of drawers were solid, rather low, rectangular or with bowed or serpentine fronts. Bookcases had traceried doors and usually heavy pediments.

Chipmunk. North American species

CHIPPENHAM. Borough and market town of Wiltshire. It stands on the Bristol Avon, 13 m. N.E. of Bath by the G.W.R. The entrance to the town is by a long old bridge, rebuilt in 1796, across the stream. In the Market Square is the old Guildhall. The Norman church of S. Andrew has been largely rebuilt. Market days, second and last Fridays in the month. Pop. 7,757.

CHIPPING CAMPDEN. Market town of Gloucestershire. It is 9 m. from Evesham, with a station on the G.W. Rly. A picturesque place, it has some old houses dating from the time when it was a flourishing centre of the wool trade. The chief buildings are the magnificent Perpendicular church, the town hall, and the grammar school. Pop. 1,700.

CHIPPING NORTON. Borough and market town of Oxfordshire. It is 13 m. S.W. of Banbury by the G.W. Rly., and has woollen and glove factories and a Gothic church. Market day, Wed. Pop. 3,522.

Chipping Wycombe is a variant for High Wycombe, Bucks. See Wycombe, High.

CHIRK. Parish and village of Denbighshire. It is on the Ceiriog, 9 m. S.S.W. of Wrexham, on the G.W. Rly. The Ellesmere Canal, by means of an aqueduct, here passes over the river, which is also spanned by a rly. viaduct. The castle occupies the site of one erected in the time of Edward I. Pop. 2,576.

CHIROL, SIR VALENTINE (1852-1929). British journalist. Born May 23, 1852, he travelled much in the East, joined the staff of *The Times* in 1892, and from 1899-1912 was the director of its foreign department. He served on the Indian Royal Commission, 1912, in which year he was knighted. His writings include 'Twixt Greek and Turk, 1881; *The Far Eastern Question*, 1896; *The Middle Eastern Question*, 1903; *Indian Unrest*, 1910; *The Egyptian Problem*, 1920; *The Occident and the Orient*, 1924; *Fifty Years in a Changing World*, 1927. He died Oct. 22, 1929.

CHIRON or CHEIRON. In Greek legend, one of the Centaurs, distinguished for justice and wisdom. Accidentally wounded by a poisoned arrow of Hercules, he refused to take advantage of his immortality, which he bestowed upon Prometheus, and died.

CHIROPRACTIC (Gr. *cheir*, hand; *prasein*, to act). System of drugless therapeutics which treats disease from its cause in the spine. Its theory is based on the principle that pressure upon nerves, through malalignment of the spinal column, causes loss of function of the organs and tissues involved. It treats the cause of disease by physiological adjustment of the displaced vertebrae. No instruments of any kind are used.

CHIROPTERA (Gr. *cheir*, hand; *pteron*, wing). Order of mammals commonly called bats. The hands are enormously developed, the fingers being much longer than the body. Between these fingers stretches a leathery membrane which also covers the hind legs and the tail, and which forms the wings. See Bat.

CHIRU (Pantholops Hodgsoni). Antelope found in the barren districts of Tibet. The male has long horns and a curiously swollen muzzle. The horns are often over 2 ft. long, though the animal only stands 32 ins. high at the shoulder.

CHISLEHURST. Urban district of Kent. Beautifully situated, 300 ft. high, 11 m. S.E. of London, by the Southern Rly., it is a favourite residential district. Camden Place, where William Camden, the antiquary, died in 1623, became later the home of Napoleon III.

S. Nicholas is the oldest of the churches, and S. Mary's (R.C.) has associations with Napoleon III and the Prince Imperial. The ancient chalk caves, the original use of which can only be conjectured, were reopened to the public in 1920. In 1928 a school of church music was opened. Pett's Wood was acquired as a memorial to William Willett, the promoter of daylight saving. Pop. 10,000.

CHISWICK. Urban district and parish of Middlesex, 5 m. W. of Hyde Park Corner, in a loop of the Thames between Hammersmith and Brentford. Its stations are Chiswick and Grove Park on the Southern Rly. and Chiswick Park on the District Rly. The church of S. Nicholas, with a 15th century tower, was rebuilt in 1884.

Chiswick House was built by the architect earl, Lord Burlington, about 1730, and passed into the possession of the 5th duke of Devonshire. C. J. Fox and G. Canning died here. The house afterwards became a private asylum; its iron gates were removed to Devonshire House in Piccadilly, and later re-erected in the Piccadilly side of the Green Park. In 1928 the mansion was sold by the duke of Devonshire to the district council. The grounds were opened in 1929 as a public park. Chiswick Hall, pulled down in 1874, became in 1810 the home of the Chiswick Press. On Chiswick Act, or Eytot, the Danes are said to have wintered in 879. Pop. 40,938.

CHITRAL. State in India in the Malakand (Dir, Swat, and Chitral) Agency of the North-West Frontier Province. There are three fertile cultivated valleys in the state, which is shut in by spurs of the Hindu Kush mts. The ruler of Chitral is called the Mehtar. It covers 4,500 sq. m. Chitral is the capital.

In 1895 a British fort in Chitral was attacked by turbulent tribesmen incited by emissaries of the amir of Afghanistan. The fort, which was an outpost of Kashmir, the suzerain of Chitral, was the centre of British influence in the country, and the political agent, Sir George S. Robertson, and a garrison of 543 British and Sikhs were compelled to shut themselves up in it.

Two expeditions were sent to relieve him. One under Sir R. Low, advanced on Chitral by the Malakand Pass; the other, under Col. Kelly, started from Gilgit in Kashmir. The siege, begun on March 4, was raised by Kelly's force on April 20, after a brilliant march in face of many difficulties. Consult Chitral: A Minor Siege, G. S. Robertson, 1898.

CHITTY, SIR JOSEPH WILLIAM (1828-99). British judge and athlete. Son and grandson of famous lawyers, he was born in London. He stroked the winning Oxford boat in 1850-52 inclusive. Called to the bar at Lincoln's Inn, 1856, and Q.C. 1874, he was elected Liberal M.P. for Oxford, 1880, and was made a judge of the high court and knighted 1881. He was raised to the court of appeal in 1897, and died Feb. 15, 1899.

CHIVES (Lat. *cepa*, onion). Perennial, purple-flowering plant of the order Liliaceae, genus *Allium*. Its leaves are employed in soups and salads in preference to the onion, as the flavour is more delicate. It can be grown anywhere, usually in the herb garden, by planting in March.

CHLORAL or **TRICHLORACETALDEHYDE** (C_2HCl_3O). Substance first prepared by Liebig in 1832. It is obtained by the chlorination of alcohol. The pure chloral is converted into chloral hydrate by mixing 100 parts of water with 12½ parts of chloral. Chloral hydrate ($CCl_3 \cdot CH(OH)_2$) is a white, crystalline substance, freely soluble in water. Chloral was formerly much used for relieving sleeplessness, but as it has a depressing effect upon the circulation and respiration, it has since been largely superseded. An overdose produces profound unconsciousness and laboured respiration.

CHLORATES. Salts formed by the reaction of chloric acid (q.v.) and metals. The best known is potassium chlorate (KClO_3), which is used in the manufacture of matches, in fireworks and as an oxidising agent in calico-printing. It is also used as a source of oxygen and is administered as a febrifuge, and as a gargle or in tablets for sore throat.

CHLORIC ACID (HClO_3). Oxyacid of chlorine discovered by Berthollet in 1786. It is a powerful oxidising agent; organic bodies such as paper decompose the acid at once, and so rapidly as to take fire.

CHLORINE. Element in gaseous form first prepared by Scheele in 1774. Its true nature as an element was proved in 1810 by Davy, who called it chlorine from its greenish yellow colour. Its symbol is Cl ; its atomic weight 35.46; and its atomic number 17. Chlorine gas is not found free in nature, but occurs combined with sodium, potassium, and manganese. Common salt is sodium chloride. Potassium chloride, known as sylvite, is found in abundance at the salt mines of Stassfurt, Saxony. Chlorine is prepared by various methods for laboratory or industrial purposes. In the Weldon process for the large scale production of chlorine black oxide of manganese and hydrochloric acid are heated together. The manganese chloride which forms is regenerated, so that it can be used over and over again. The latest processes are electrolytic, in which metallic chlorides are decomposed by an electric current.

Chlorine at the ordinary temperature is a greenish yellow gas extremely irritating to the lungs. Faraday in 1823, by means of pressure and cold, reduced it to a liquid. In this state it is produced commercially, being stored in iron cylinders. It was in this form that this poisonous gas was first introduced into warfare in 1915. Chlorine is largely employed in bleaching cotton and paper, and it is a powerful disinfectant. When absorbed by quicklime it forms the well-known bleaching powder.

The property of chlorine by which it combines with metals or their oxides to form chlorides is known as chlorination. It is applied to the extraction of metals such as gold and silver from their ores. Chlorimetry is the process of estimating the amount of chlorine contained in a liquid or a solid.

CHLORITE. Mineral group consisting of hydrated silicates of magnesia, iron, and alumina, with much water. It crystallises in a monoclinic system, and occurs as hexagonal plates, and also in fibrous and scaly aggregates. The colour is dark green. It occurs in andesites, porphyrites, and syenites, and is a common constituent of schists.

CHLOROFORM or **TRICHLOROMETHANE** (CHCl_3). A colourless heavy liquid with an ethereal odour and a sweet taste. It is prepared by mixing 10 parts of bleaching powder with 40 parts of hot water, and adding one part of alcohol. A reaction takes place in the course of which the chloroform distils over, and is collected and purified. Discovered by Liebig in 1831, it was first employed as an anaesthetic, now its most important use, by Sir James Simpson, of Edinburgh, in 1848. Externally, chloroform, if rubbed into the skin, is an irritant; hence its value in liniments in the treatment of rheumatism. See Anaesthesia.

CHLOROPHYLL (Gr. chloros, green, and phyllon, leaf). Colouring matter of leaves, consisting of at least two pigments, green and yellow. It is soluble in alcohol, exhibiting an emerald green colour and a deep blood-red fluorescence. Chemically, it is related to the red colouring matter of the blood.

Chlorosis or **GREEN SICKNESS.** Form of anaemia occurring most frequently in young girls. See Anaemia.

CHOATE, JOSEPH HODGES (1832-1917). American diplomatist. Born at Salem, Mass.,

Jan. 24, 1832, he was for many years a leading lawyer at New York and an active supporter of the Republican party. He was U.S. ambassador to Great Britain from 1899-1905 and delegate to the Hague peace conference 1907. His efforts helped to maintain good relations between Great Britain and America. He died at New York, May 15, 1917. Consult Life, T. G. Strong, 1918.

His uncle Rufus Choate (1799-1859) was a noted lawyer, politician and orator.

CHOCOLATE. Beverage and sweetmeat prepared from the bean of Cacao theobroma. Up to the point of roasting, grinding, and winnowing the beans, the processes for the manufacture of cocoa (q.v.) and chocolate are identical. Chocolate, however, retains the natural cocoa oil. The cocoa bean, when intended for chocolate, is mixed with a certain proportion of sugar and ground in a grinding machine, the pans and rollers of which are slightly heated. From this it emerges as a thick liquid, which is run into moulds and cooled. These moulds pass into mixing machines, vanilla and more sugar are added, and the various materials worked into a homogeneous light brown dough. The result is the chocolate of commerce.

CHOCTAW (Span. chato, flat). North American Indian tribe of Muskogian stock. Their name refers to their practice of head-flattening, whence they are sometimes called Flat-heads. They migrated from the W., and settled in middle and S. Mississippi, becoming the chief agricultural tribe of this region. Removing to Oklahoma, they ranked as one of the five civilized tribes until their separate nationhood ceased in 1906. They number about 26,000. See illus. p. 73

Choir of Salisbury Cathedral, a magnificent example of Early English architecture, built 1220-c. 1350

CHOIR (Gr. choros), formerly spelt **QUIRE**. (1) Group of singers for unison or part singing in church services, or a similar group for secular music. The most usual arrangement is in four parts, soprano or treble, contralto or alto, tenor, and bass; but any other division of voices is permissible. (2) By association of ideas choir is the name given to the portion of a cathedral or church where the choir sits.

In early Christian churches it was restricted to the part immediately in front of the altar, and was enclosed by a low wall or other obstruction pierced by a gateway. In Norman churches such as Peterborough, S. Albans, and Winchester, the choir is extended into, and really forms part of, the nave. But a division between the two is often made by a choir screen. See Cathedral; Church.

CHOKE COIL. In electricity, an induction apparatus. By causing reactance or phase displacement, it checks excessive or abrupt changes of potential in an alternating electric current circuit. Choke coils are used in connexion with arc lamps in series, as ballast resistance, and in wireless telegraphy apparatus. They are used extensively in broadcast receiving apparatus, and are employed at the transmitter to control the modulation of the carrier waves.

CHOKE DAMP. Name given by miners to the poisonous gas which follows a mine explosion, as distinguished from the fire damp which causes the explosion. It is the product of the combustion of the fire damp, i.e. chiefly carbonic acid gas. The men, even if unharmed by the explosion, are often overtaken and suffocated by the gaseous products, which course rapidly through the workings.

CHOLERA (Gr. kholē, bile). Acute infectious disease caused by a micro-organism, the vibrio cholerae, discovered by Koch (q.v.) in 1883. Throughout history epidemics of the disease have devastated communities in many parts of the globe. The most frequent method of transmission is by drinking infected water, or milk diluted with water. Conveyance by flies has also been known. A person defined as a carrier (q.v.) may also act as unsuspected means of initiating an epidemic.

After infection there is a period of incubation which varies from a few hours up to six days. The onset is usually sudden, with attacks of diarrhoea. Vomiting occurs early in the disease. The patient rapidly becomes emaciated, and the pulse and heart become weak. Painful cramps may appear in the muscles. Unconsciousness supervenes, and the patient may die in from 12 to 36 hours after the beginning of his illness.

Treatment consists in administering calcium permanganate water and pills containing potassium permanganate at frequent intervals. If the circulation fails, an injection of saline solution into a vein should be made. In the later stages, bismuth and opium may be given. Persistent vomiting may be relieved by sucking small pieces of ice. During the acute stage no food should be taken. When recovery is beginning the patient may take thin arrow-root and milk mixed with soda-water.

CHOPIN, FRÉDÉRIC FRANÇOIS (1810-49). Polish composer and pianist. Born near

Warsaw, Feb. 22, 1810, of a French father and a Polish mother, he studied at the Warsaw Conservatoire, and when only nine years old attracted great attention by his piano playing. In 1830 he went to Paris, where his playing and compositions created the greatest enthusiasm. In 1838, suffering from a chest complaint, he went to Majorca, being accompanied by George Sand, who nursed him for several years. He visited England and Scotland in 1849, where he played in both public and private. He died in Paris, Oct. 17, 1849.

Chopin was essentially a composer of pianoforte music, and as such occupies a unique position. Many of his works are built upon the rhythms of Polish national dances.

CHOPSTICKS (Pidgin-English chop, quick). Pair of slender, tapering rods of wood, bone, or ivory used in China, Japan, and Korea for conveying food to the mouth. Chinese chronicles claim for them an antiquity exceeding 4,000 years. The term was introduced by the 17th century navigators. The Chinese name is kwai-tze (the nimble ones); the Japanese kashi. See illus. p. 407.

Frédéric F. Chopin, Polish composer

CHOREA OR ST. VITUS DANCE (Gr. choreia, dance). Disease, most frequent between the ages of 5 and 15, characterised by irregular, involuntary movements of the muscles. Girls are more often affected than boys. A large proportion of the cases are associated with acute rheumatism or rheumatic fever. A highly strung, nervous temperament, fright, and the strain of education are contributory factors. Heart disease is a frequent complication. Most cases recover after the condition has persisted for two or three months. Treatment consists in keeping the child absolutely quiet in bed, all excitement being avoided.

CHOREOGRAPHY OR CHOREOGRAPHY (Gr. choria, dance; graphein, to write). Dance notation; art of teaching the steps of a dance by written signs. The figure dances of ancient Greece were chalked on the floor in signs, that the dancers might learn them. See Dancing.

CHORLEY. Borough and market town of Lancashire. It stands on the Chor, and on the Leeds and Liverpool Canal, 9 m. S.E. of Preston by the L.M.S. Rly. The church is Gothic. Astley Hall, an Elizabethan structure, with its park, was given by R. A. Tatton as a War Memorial. Cotton, colours, chemicals, and railway wagons are manufactured, and there are brass foundries, bleaching yards, coal mines and quarries. Market day, Tues. Pop. 31,150.

CHORLEY WOOD. Urban district and village of Hertfordshire, 20 m. N.W. of London by the Metropolitan Rly. About 400 ft. above sea level, it is one of the beauty spots of the Chiltern Hills. The Tudor Manor House was restored for Queen Elizabeth, and near is the mausoleum built by the countess of Bedford in 1556. Pop. 2,439.

CHORUS. In ancient Greece, term originally used for a place for dancing, then for dances accompanied by music and song. At the festival of Dionysus, the function of the chorus consisted of singing the praises of the god and his achievements. Later, a separate actor was introduced, with whom the leader of the chorus carried on a conversation. From this the dialogue and, with the addition of a second and third actor, tragedy and comedy proper were developed. The rôle of the chorus then became subordinate.

In modern musical works the chorus now shares largely in the action itself. The word also means the music sung by the chorus singers, and the refrain of a song, whether sung by a body of voices or by the soloist.

Chosen. Japanese name for Korea. It was adopted in 1897, when Korea became a part of the Japanese Empire. See Korea.

CHOSROES OR KHOSRAU. Name of two Persian kings of the Sassanid dynasty. Chosroes I, called the Great, reigned A.D. 531-579. In 540 he captured Antioch, and extended his rule to the Black Sea. Chosroes did much to improve the social conditions of his subjects, and encouraged the arts and sciences.

Chosroes II, named Parvez (the victorious), reigned from 591 to 628. His father, Ormazd (Hormisdas), son and successor of Chosroes I, was killed in a revolution which placed Bahram on the throne. Chosroes took refuge in Byzantine territory and was reinstated by the emperor Maurice. He conquered Syria and made himself master of Egypt and Asia Minor, and pressed on to the walls of Constantinople. The Emperor Heraclius drove off the Persians, invaded their country, and crushingly defeated them near Nineveh (627). A rebellion took place and Chosroes was put to death.

CHOUANS (Fr. chat huant, screech owl). Name given to certain royalists during the French Revolution. In 1792 they rose in revolt.

The movement spread from the western seaboard to Brittany and was in some wise linked up with the rising in La Vendée; hence it is sometimes called La Petite Vendée. Under Georges Cadoudal the rising became more formidable, until it was crushed by Lazare Hoche in 1795. It was finally put down in 1815. See French Revolution.

CHOUGH (Pyrrhocorax). Group of the crow family, including several species, of which the rare Cornish chough is an example. Distinguished from other crows by its red legs and curved beak, it is found only on the rocky coasts of Western Britain. It feeds chiefly on insects.

Chough, Coast-frequenting bird of the crow family

CHOW-CHOW.

Breed of dogs imported from China. It should be self-coloured, without spots or patches. The coat is heavy, with a deep ruff round the neck, and the tail is carried tightly curled on the back. The tongue and the whole interior of the mouth should be black.

CHRIST (Gr. Christos, anointed). Name given to Jesus by those who believed in him. It has much the same meaning as the Hebrew word Messiah. See Jesus Christ.

CHRIST, ORDER OF.

Papal and Portuguese order founded by King Denis at Lisbon, 1317, on the suppression of the Templars, and approved by Pope John XXII in 1319. It is now the highest of the honours of the papal court. The decoration is a long red cross with gold edging surmounted by a crown. The badge worn on the breast is a silver eight-pointed star with the cross of the order in the centre encircled with gold oak leaves.

CHRISTADELPHIANS (Gr. Brethren of Christ). Religious denomination which claims to have revived the apostolic faith of the 1st century. It was established in 1848 by John Thomas, M.D., an Englishman, in the U.S.A. Christadelphians teach as their fundamental doctrines the infallibility of the Bible and the natural mortality of man, immortality being conditional and future.

CHRIST CHURCH. One of the colleges of the university of Oxford. It was founded by Cardinal Wolsey and was at first called Cardinal College. In 1546 Henry VIII refounded it as Christ Church. It is both a cathedral and a college. The dean is the head of both, and five of the canons are professors of the university. The buildings of Christ Church, planned by Wolsey, are among the finest in Oxford. The cathedral serves also as the college chapel.

CHRISTCHURCH. Borough of Hampshire. It stands at the junction of the Avon and Stour, $1\frac{1}{2}$ m. from the sea, and 104 m.

S.W. of London on the Southern Rly. The ancient priory church is a magnificent cruciform Norman and Early English structure, with a fine N. porch and a monument to Shelley. There are remnants of a Norman castle. Pop. 6,993.

CHRISTCHURCH. Town of South Island, New Zealand, capital of the prov. of Canterbury.

It stands on the Avon river, 8 m. by rly. from Lyttelton. Founded by the Canterbury Association of the Church of England in 1850, the city is reminiscent of an English cathedral town. The cathedral is modelled on that of Caen and built from designs by Sir G. Scott, with a tower and spire 240 ft. high. Other buildings comprise government and municipal offices, the museum, and the university college. The chief industries are the freezing and export of mutton. Hydro-electric power from Lake Coleridge in the S. Alps is used. Pop. 123,370.

Christchurch, New Zealand. The fine cathedral designed by Sir G. Scott. Photo, New Zealand Publ. City

CHRISTIAN. Usual name for a follower of Jesus Christ. According to Acts 11 the disciples were first called Christians at Antioch. Occurring only three times in the N.T. (Acts 11 and 26: 1 Pet. 4), it implied a stigma. Christian is the name of the chief character in John Bunyan's Pilgrim's Progress.

CHRISTIAN. Name borne by several kings who reigned over united Denmark and Norway. Christian II (1481-1559) was the son of King John who reigned over Sweden, in addition to Denmark and Norway. His reign was marked by disputes with Sweden, which refused to acknowledge him as king, and finally he lost his throne. Christian IV (1577-1648) was also involved in wars with Sweden. He established a powerful navy, developed the commerce of his country, and founded Christiania (Oslo). Christian V (1646-99) was a weak ruler, and through his incapacity Denmark, after war with Sweden, 1675-79, was left impoverished.

CHRISTIAN IX (1818-1906). King of Denmark. Son of Duke William of Schleswig-Holstein-Sonderburg-Glücksburg, he was born April 8, 1818. In 1842 he married Louise (d. 1893), daughter of the landgrave of Hesse Cassel and a niece of Christian VIII. Ten years later a conference of the European powers in London

Christ Church, Oxford, showing the tower containing the great bell Tom

Christ Church College arms

decided that he should succeed the childless Frederick VII as king of Denmark, and he ascended the throne Nov. 15, 1863. During his reign the duchies of Slesvig-Holstein were lost to Denmark.

Christian IX
King of Denmark

A daughter, Alexandra, married the prince of Wales, later Edward VII; another daughter, Dagmar, married Alexander III of Russia. His second son, George, became king of the Hellenes, and in 1905 one of his grandsons king of Norway as Haakon VII. Christian died in Copenhagen, Jan. 29, 1906.

CHRISTIAN X (b. 1870) King of Denmark. Born Sept. 26, 1870, he ascended the throne May 14, 1912. He married in 1898 Alexandrine, princess of Mecklenburg. Their family consists of two sons.

Christian X,
King of Denmark

CHRISTIAN (1831-1917), Danish prince. A son of the duke of Slesvig-Holstein, he fought with his father for the independence of the duchies. After this had been lost he married, in 1866, Helena, daughter of Queen Victoria, and lived for the rest of his life in England. The prince died Oct. 28, 1917, and the princess June 9, 1923. Their elder son, Prince Christian Victor, died at Pretoria while on active service, Oct. 29, 1900.

CHRISTIAN BROTHERS. Religious order in Ireland. It was founded at Waterford in 1802 by Edmund Rice, to provide education for the children of Roman Catholic parents. The first monastery was opened in 1803. In 1820 the order was formally instituted by a papal brief, and became the first Irish order with a charter from Rome.

CHRISTIAN ENDEAVOUR SOCIETY. Association for promoting Christian work on evangelical lines among young people of both sexes. The Young People's Society of Christian Endeavour was founded in 1831 at Portland, Maine, U.S.A., by Dr. F. E. Clark (q.v.). The movement gradually spread throughout the world, so that there are now about 75,000 local societies, with a membership of nearly 4,000,000.

Christiania. Former name of the capital of Norway, now Oslo (q.v.).

CHRISTIANITY. Religion founded by Jesus Christ and spread abroad by S. Paul and other of his disciples. It is divided to-day into three main branches—the Roman Catholic church, the Greek Orthodox Church, and the various Protestant churches. It is the national religion of most of the western countries, although not officially recognized as the state religion in France and the United States, for instance, but is less strong in the east, where it took its rise. Its adherents number about 700,000,000, but only a fraction of these give more than a nominal allegiance to one or other of its organizations. About 460,000,000 of its followers are in Europe and 120,000,000 in North America.

The basis of Christianity is the teaching of Jesus Christ, as shown in the Gospels, but around this a vast mass of other doctrine has accumulated. Much of this is of Hebrew origin, the greater part of the Bible, for example, and some is of Greek. On these combined ideas the Christian church, now divided into several branches, has been built. The influence of Christianity has been and is far greater than that of its ecclesiastical organizations, and in its purest form, i.e. in

the teaching of Jesus Christ, it is generally accepted as giving ideals of conduct that have never been equalled by any other religion.

The great part which Christianity has played in the spiritual history of mankind is due, according to the Rev. W. P. Paterson, D.D., to three main causes. These are the personality of Jesus; the supernatural element in his life; and the fact that it made a better provision than was otherwise available to meet the spiritual needs of human nature.

The history of Christianity falls into four main periods in which it came under the influence of different races and civilizations, and of diverse intellectual and moral conditions. The chief lines of the development have been: its missionary expansion throughout the world; the elaboration of its doctrines in creeds and confessions and in theological literature; the growth of ecclesiastical institutions; the history of worship, including the use of art; and the progress made in understanding and in realizing all that is implied in the Christian ideal.

In modern times, which may be dated from the beginning of the 18th century, Christianity has had a no less troubled history, and even more fundamental issues were raised. The old controversies continued within the Church, but additional forces came into play which attacked the Christian system as a whole, or threatened injury in some vital place.

Chief among these forces were the scientific discoveries of the 19th centuries, which widened greatly the fissure between science and religion. Christianity, although perhaps weakened in some ways, survived these attacks, only, however, to encounter more insidious ones in the general changes in ideas of faith and conduct that followed the War. See Buddhism; Mahomedanism; Religion, etc.

CHRISTIAN SCIENCE. Name given by Mrs. Baker Glover Eddy to a religious system which she expounded in the U.S.A. during the later part of the 19th century. The principles of the new faith were incorporated in a book entitled *Science and Health* (1875). In this, Mrs. Eddy's main contention is the non-existence of matter. She denies the existence of suffering and evil, sickness being a mere illusion to be overcome by right thinking.

The Church of Christ Scientist, or Christian Science Church, was organized at Boston, Massachusetts, in 1879. It consists of the mother church in Boston, with branches throughout the world. The number of organized congregations in June, 1925, was 2,202. Free public reading-rooms are also maintained where Mrs. Eddy's writings and other Christian Science literature may be consulted. The Christian Science Publishing Society, Boston, issues a remarkable daily international paper, *The Christian Science Monitor*, which has a large circulation. See Eddy, M. B. G.

CHRISTIE, SIR WILLIAM HENRY MAHONEY (1845-1922). British astronomer. Educated at King's College school, London, and Trinity College, Cambridge, in 1870 he was appointed chief assistant at the Royal Observatory, Greenwich. He was astronomer royal 1881-1910, and was knighted 1904. He died Jan. 21, 1922. He published *Manual of Elementary Astronomy*, 1875.

CHRISTIE'S. Popular designation of the firm of Christie, Manson & Woods, auctioneers, of 8, King Street, St. James's, London, S.W. The firm was founded in 1766 by James Christie the elder (1730-1803), who started business in Pall Mall. During the life of James Christie the younger (1773-1831) the business was transferred to King Street in 1824. Christie's is the recognized emporium for the disposal of every description of artistic property, especially paintings, and the catalogues of the

picture sales held on the premises furnish invaluable information to both art connoisseur and student.

CHRISTINA. Name of two queens regent of Spain: (1) Maria Christina (1806-78), who married Ferdinand VII, and after his death was queen regent for their daughter Isabella, 1833-40. (2) Maria Christina, born July 21, 1858, who married Alphonso XII, Nov. 29, 1879. After his death, Nov. 25, 1885, she acted as queen regent until 1902, when their son, born in May, 1886, succeeded to the throne as Alphonso XIII (q.v.).

Maria Christina, queen
regent of Spain, 1885-
1902

CHRISTINA (1626-89). Queen of Sweden. Born at Stockholm, Dec. 8, 1626, the only child of Gustavus Adolphus, she became queen on his death in 1632. A woman of great ability, from 1644 she exercised her influence in state affairs, though not always judiciously, as in the peace negotiations in 1648. She was interested in learning.

Declining to marry, Christina appointed her cousin, Charles Gustavus, as her successor, and in 1654 she abdicated. From that time she lived an unconventional life, travelling from place to place, and died in poverty in Rome, April 19, 1689. Christina and Elizabeth of England were much alike in their abilities and also in their masculine and dominating temperaments.

CHRISTMAS. Annual festival kept on Dec. 25 in commemoration of the birthday of Jesus Christ. The observance of Christmas as a Christian festival dates from the 4th century, when it gradually superseded Jan. 6, the Epiphany (q.v.), still kept as Christmas by the Armenian Church. The fact that Dec. 25 was observed as the solar festival by the Romans probably explains the fixing of that date for the celebration of Christ's birth.

The giving of presents at Christmas may be traced to the custom in pagan Rome of making gifts on Jan. 1. The popular German Christmas songs date from the 11th century, carols date from the 13th century, and the Christmas tree, first employed at Strasbourg in 1605, was only introduced into England from Germany by the Prince Consort in 1840.

CHRISTMAS ISLAND. Isolated atoll in the Indian Ocean, 190 m. S.W. of Java. It belongs to Britain, and is a dependency of Singapore. It contains important deposits of phosphates. The area is 62 sq. m.; pop. 1,159. The Christmas Island in the Pacific Ocean, also a British possession, was attached to the Gilbert and Ellice Islands Colony in 1919.

CHRISTMAS ROSE.

Hardy perennial plant of the order Ranunculaceae, genus *Helleborus*. The plants are about 1 ft. in height, and their white flowers are borne in winter. Many hybrids, having pink and red flowers, have been raised, but these do not bloom until after the turn of the year.

Christmas Rose,
Helleborus niger

CHRISTOPHER, SAINT (Gr. Christos, Christ; pherein, to bear). Legendary Christian martyr of the 3rd century. Reputed to be a native of Syria, converted by a hermit, he undertook for the love of God to carry wayfarers across an unbridged river. A child one

day came to him, and on Christopher nearly stumbling in mid-stream with the weight, the child revealed to him that it was Christ he was carrying. In token Christopher was told to plant his staff in the ground, and next morning the staff had blossomed into a palm tree. Martyred by the Roman prefect Dagnus, he is honoured as the patron saint of ferrymen and travellers by water, and also of bookbinders. His feast in the Roman Catholic Church is on July 25, and in the Greek Church March 9.

CHRIST'S HOSPITAL

OR THE BLUE COAT SCHOOL. English public school. Formerly in Newgate Street, London, E.C., on a site now occupied by the new G.P.O. and the extension of S. Bartholomew's Hospital, it was removed in 1902 to Horsham, Sussex, where it can accommodate about 800 scholars. Founded by Edward VI, it was at first rather an orphanage than a school, and had about 400 inmates, boys, girls, and babies. The girls' section was in 1778 removed to Hertford.

The pupils of Christ's Hospital still retain the blue coat dress of their predecessors,

Saint Christopher bearing the child Christ across the river
Engraving by Albert Dürer

Christ's Hospital. Big School, one of the new buildings at Horsham, whither the school removed in 1902

wearing no head-dress even in winter. Boys and girls are admitted by the presentation of governors and others. See Blue Coat School.

CHRIST'S THORN (*Paliurus aculeatus*). Shrub of the order Rhamnaceae, a native of the Mediterranean region. Its oval leaves have stipules which are converted into a pair of spines, one straight, the other curved into a hook. It has small greenish yellow flowers, succeeded by dry fruits resembling in miniature a head wearing a broad-brimmed hat. Its stems are reputed to have furnished Christ's crown of thorns.

Christ's thorn.
Paliurus aculeatus

CHROME STEEL. Compound of chromium and steel. The effect of chromium is to increase the tensile strength of steel and its resistance to fracture by impact.

CHROME YELLOW. Pigment prepared by adding potassium chromate to a solution of lead acetate. Known also as Paris or Leipzig yellow, it is chemically neutral lead chromate.

CHROMITE. Mineral belonging to the spinel group and consisting essentially of iron oxide and chromic oxide. Found in the serpentine rocks, it is the chief source of the metal chromium.

CHROMIUM. Elementary metal. Its symbol is Cr; atomic weight 52.01, atomic number 24, and specific gravity 6.92. Its melting point is higher than that of platinum. It is steel grey in colour and harder than glass. Chromium was first discovered in 1797 by the French chemist Vauquelin. Its chief commercial source is chromite. Chromium forms important alloys with steel, and is largely used in the preparation of pigments and dyes, and also as a tanning agent.

CHROMOSPHERE (Gr. chroma, colour: sphaira, sphere). Layer of gases surrounding the photosphere or surface region of the sun. It is composed chiefly of hydrogen and helium gases, from 5,000 to 10,000 m. in thickness. From the chromosphere arise the prominences of the sun noticed from 1706 onwards, but whose objective reality, with that of the chromosphere, was hardly established before 1851. At a total eclipse the chromosphere appears as a red ring round the sun with irregular prominences. See Sun.

CHRONICLES, THE FIRST AND SECOND BOOKS OF. Two books of the O.T. They are so closely related to the books of Ezra and Nehemiah that the three together "form really a single, continuous work" (Driver). The history in 1 and 2 Chronicles is parallel with that contained in the books from Genesis to 2 Kings, i.e. from Adam to the decree of Cyrus in 538 B.C. permitting the return of the Jewish exiles; but the chronicler, a later writer, writes from a different standpoint, that of the priest and ecclesiastic, and is concerned mainly with the history of Judah.

CHRONOMETER. Timekeeper of exceptional accuracy used in navigation. The first was made by John Harrison (1761-62), who applied in it the principle of compensation for changes of temperature by the unequal expansion or contraction of two metals.

CHRYsalis (Gr. chrysalis, gold-coloured sheath). Pupal or resting stage in the metamorphoses of insects more correctly restricted to those of butterflies. When the larva has finished the eating stage, it either forms a cocoon or suspends itself to a pad of silk and becomes dormant. During this period as a chrysalis

the entire structure is broken up and the organs of the imago or perfect insect are developed. See Butterfly: Insect; Moth.

CHRYsANTHEMUM

(Gr. chrysos, gold; anthe-mon, bloom, flower). Hardy annual and perennial plant of the

order Compositae, a native of Britain and China. These plants were introduced into Japan, whence foreign varieties reached

Chrysanthemum: three varieties of this favourite flower. 1. Anemone-flowered. 2. Japanese. 3. Incurred

Britain in 1764. The majority of the annual species thrive if treated in the ordinary way, but chrysanthemums, in the general acceptance, are represented by the innumerable hybrid varieties, of which *C. indicum* is the parent. These include the Japanese, Incurred, Reflexed, Anemone-flowered, and other exhibition classes. By stopping out all except the main bud on a plant a solitary bloom of enormous girth is produced for exhibition purposes.

The order of the Chrysanthemum is a Japanese order of chivalry, instituted in 1876. The badge is a red sun with 32 white rays, within a wreath of chrysanthemums; the ribbon is crimson with purple border.

Chrysanthemum.
Badge of the Japanese Order

CHRYSEIS. In Greek legend, daughter of Chryses, a priest of Apollo. Taken prisoner by Achilles in the Trojan War, she passed into the possession of Agamemnon, who refused to give her back to her father. Apollo thereupon visited the Greek host with a pestilence, an assembly was held, and the prophet Calchas declared that the god would not be appeased until the maiden Chryseis was set free.

CHRYSOBERYL. Beryllium aluminate. It is found in varying shades of green, and used as a gemstone. The most precious is the alexandrite. When cut "en cabochon"

it is classed as a cat's eye. Chrysoberyls are found in Ireland, Ceylon, the Urals, etc.

CHRYSOSTOM, JOHN (c. 357-407). Saint and father of the Christian Church. He was born at Antioch, and was carefully trained by his mother, Anthusa, a Christian. He lived for about six years as a hermit, returned to Antioch, and was ordained priest 386. Appointed by Eutropius, minister of the emperor Arcadius, to the archbishopric of Constantinople, 398, he won the love of the

Chronometer. 1. Plates. 2. Connecting pillars. 3. Mainspring barrel. 4. Fusee. 5. Chain stop. 6. Cam acting on chain stop. 7. Staff for mainspring. 8. Winding staff. 9. Fusee chain. 10. Maintenance wheel. 11. Great wheel. 12. Regulator plate. 13. Cylindrical spring. 14. Balance wheel. 15. Bracket. 16. Pinion for the seconds hand. 17. Main staff for hour and minute hands. 18. Pinion wheels. When the chronometer is wound the whole of the chain is on the fusee, 4; the mainspring then gradually unwinds the chain and sets the entire mechanism in motion

Chrysalis of
But-tip moth

people by his generous almsgiving. His zeal for reforms raised enemies against him, and he was banished, 403. Recalled in 404 and again banished, he died Sept. 14, 407.

A prayer from a liturgy attributed to him is in the Prayer Book. The festival of S. Chrysostom is kept in the Greek Church on Nov. 13, and in the Roman Catholic Church Jan. 27. He received the surname Chrysostom, golden-mouthed, from his eloquence.

CHUB (O.E. cop, a head). Fresh-water fish of the carp family; also known as chevin. It occurs in most British rivers with clean gravelly bottoms. Its average length is about 15 ins. and its weight is from 2 lb. to 5 lb. The upper parts are dark greenish, the sides and under parts silvery or brassy.

CHUBB, CHARLES (d. 1845). British locksmith. He started in business as a locksmith, and founded in London the firm known by his name. Assisted by his brother, Jeremiah, he patented various locks, and also designed fire- and burglar-proof safes. He died May 16, 1845. His son John (1816-72) continued and greatly developed the business. The works of the firm are in London and Wolverhampton, with branches all over the world. Its chairman, Sir George Hayter Chubb, was created Lord Hayter in 1927.

CHUNG-KING. Treaty port of China, in the prov. of Sze-chuen, at the junction of the Kia-ling and Yang-tse. It is the principal trading centre of the prov. It was opened to foreign trade in 1891. Pop. 623,300.

CHUNUK BAIR. Range of hills in Gallipoli, 5 m. S.E. of Suvla Bay. It was prominent in the later stages of the campaign in that peninsula. It was seized on Aug. 8, 1915, by New Zealand and other forces, but eventually the Allies abandoned it. See Gallipoli.

CHURCH. Term originally meaning the Lord's house (Gr. Kyriakon dôma), and used in the sense of a body of Christian believers in at least three ways, which may be described as the local, the general, and the ideal. The church is, first, the company or congregation of Christians in any locality; secondly, the aggregate of all such local congregations as, in a real sense, one body in Christ, their one Head; thirdly, the whole assembly of the saved in heaven and on earth.

The phrase the Christian Church is used to include the whole body of believers, but in addition almost every group of Christians. The Society of Friends being an exception, call themselves collectively a church. The Anglican church is a term used for all who accept the rule and teaching as maintained by the Church of England.

The various Protestant bodies, both in Great Britain and North America, call themselves churches, so we have the Protestant Episcopal church, the Wesleyan church, and the several Presbyterian churches. Other churches are the Church of Christ Scientist, the Moravian church, and the Coptic church. The term, moreover, is not entirely confined to Christian bodies, as people speak of the church of humanity, the Buddhist church, etc.

The word church is also used for the building in which Christians meet for worship. In some churches, notably the Roman Catholic and the Anglican, each building is dedicated to a particular saint and known by his name—e.g. S. Peter's and S. Andrew's. See Architecture; Cathedral; Church of England; Roman Catholic Church.

CHURCH. Urban dist. of Lancashire, England. It is 1 m. W. of Accrington, on the L.M.S. Rly. and the Leeds and Liverpool Canal. The industries include dyeworks and chemical factories. Pop. 6,888.

CHURCH, RICHARD WILLIAM (1815-90). Anglican divine. Born at Lisbon, April 25, 1815, in 1838 he was elected fellow of Oriel. Ordained priest in 1852, he accepted the rectory of Whatley, Somersetshire. Church was appointed dean of S. Paul's in 1871. Ten years later he declined the archbishopric of Canterbury. A recognized leader of the older High Church party, to the last he protested against prosecutions and imprisonments for ritual. His best literary works are the books on Anselm, 1870, Dante, 1878, Spenser, 1879, and Bacon, 1884. He also wrote a History of the Oxford Movement, 1891. He died at Dover Dec. 9, 1890.

Chub, a fresh-water fish belonging to the carp family

CHURCH ARMY. Church of England evangelistic organization, founded in a poor district of Westminster in 1882 by the Rev. Wilson Carile (q.v.). At first it held open-air meetings and processions, but later devoted its energies to supplying parish helpers and to social work for the betterment of the poor: It conducts a large number of labour homes for men, refuges and homes for women and girls, institutions for inebriates and first offenders, lodging houses for men and women respectively, an Emigration Test Farm, and other institutions. Its headquarters are at 55, Bryanston Street, London, W.

Church Association. Church of England Society founded in 1865 to maintain Protestant principles; offices 13-14, Buckingham St., London, W.C.2.

CHURCHES OF CHRIST. Religious denomination. The membership in Great Britain exceeds 14,000, with 16,000 Sunday scholars. The offices are at Moss Side, Manchester. There are centres at Newcastle, etc.

CHURCHILL, MISSINNIPI, OR ENGLISH River of Saskatchewan and Manitoba, Canada. Rising in La Loche, or Methy, Lake, it finds an outlet at Fort Churchill into Hudson Bay. It is 1,100 m. long and has rapids.

CHURCHILL, LORD RANDOLPH (1849-95). British politician. Third son of the 7th duke of Marlborough, he was born Feb. 13, 1849, and educated at Eton and Merton College, Oxford. He entered Parliament as Conservative member for Woodstock in 1874, and from 1885 until his death represented S. Paddington. After 1880, when the Liberals were in office, Lord Randolph became extremely prominent as a freelance, attacking the Gladstone administration with unflinching zeal. The small group who acted with him, including Sir John Gorst, were commonly known as the Fourth Party.

When Lord Salisbury took office in 1885 he was made secretary of state for India. On the Unionist triumph in 1886 he became chancellor of the exchequer and leader of the House of Commons; but within six months tendered his resignation, which, much to his own surprise, was accepted. His public appearances from then onwards were rather spasmodic, due in part to a long and painful illness, which ended in general paralysis. He died Jan. 24, 1895. Lord Randolph married a daughter of Leonard Jerome of New York, a lady who was very prominent in London society; they had two sons, Winston and John. Consult Life, W. Churchill, 1906.

CHURCHILL, WINSTON LEONARD SPENCER (b. 1874). British politician. Born Nov. 30, 1874, the elder son of Lord Randolph Churchill, he was educated at Harrow, and passed through Sandhurst into the army, 4th Hussars. In 1895 he was attached to the Spanish army during the war with the United States. There he acted as a war correspondent. In 1897 and 1898 he served on the Indian frontier, and in the latter year was attached to the 21st Lancers, in the campaign that led to the fall of Khartoum. When the South African War broke out, Churchill went thither as correspondent for The Morning Post. On Nov. 15, 1899, he was taken prisoner by the Boers, but he soon escaped from captivity at Pretoria.

Winston Spencer Churchill, British politician
Russell

As a politician Churchill first appeared in 1899, when he stood in the Conservative interest for Oldham. He was beaten, but in 1900, at the general election, he was returned for that borough. He opposed tariff reform and joined the Liberals, and in the Liberal interest he was elected for North-West Manchester in Jan., 1906. He had just been made under-secretary for the Colonies.

In 1908 Churchill entered the Cabinet as president of the Board of Trade, in 1910 was transferred to the Home Office, and in 1911 went to the Admiralty. He was First Lord when the Great War began, and was thus responsible for directing the early activities of the fleet. Since 1906 Churchill had been M.P. for North-West Manchester. On entering the Cabinet he had to seek re-election, and was defeated, but was returned for Dundee. Defeated there in 1922, he twice unsuccessfully tried to enter Parliament, until in Oct., 1924, he was returned for the Epping division.

In the Coalition ministry, 1915, Churchill was relegated to the chancellorship of the duchy of Lancaster. Resigning office in November, he went to France, and for a while was in command of a battalion, but in a short time he was again in England. He became minister of munitions, 1917. In Jan., 1919, he was transferred to be secretary for war. Secretary for the colonies, 1921-22, he was chancellor of the exchequer, 1924 to 1929.

As an author, Churchill has written on the campaigns in which he has shared: The Story of the Malakand Field Force, 1898; The River War, 1899; London to Ladysmith via Pretoria, 1900; and Ian Hamilton's March, 1900. He has also written the standard biography of his father, 1906. His war memories, The World Crisis (3 vols.) and The Aftermath, appeared in 1923-29.

CHURCHILL, WINSTON (b. 1871). American novelist. Born at St. Louis, Nov. 11, 1871, his first success was Richard Carvel in 1899. The best known of his later works are The Crisis, 1901; The Crossing, 1904; Coniston, 1906; Mr. Crewe's Career, 1908; A Far Country, 1915; and A Traveller in War Time, 1918. His three-act play, Dr. Jonathan, appeared in 1919.

CHURCHING. Christian rite of great antiquity. In the Church of England since 1552 its full title has been The Thanksgiving of Women after Child-birth, commonly called The Churching of Women. It is a short service consisting of a Psalm, the Lord's Prayer, and responses. In the Roman Catholic Church the sprinkling with holy water and the blessing by the priest are the special features.

CHURCH LADS' BRIGADE. Church of England movement founded in 1891. It combines military organization with moral and religious instruction. In various parts of the empire it has a membership of over 60,000 lads in 1,332 companies. During the Great War some 250,000 of its members and ex-members served. The headquarters are at Aldwyeh House, Catherine St., London, W.C.2.

CHURCH OF ENGLAND. State church of England and recognized as the mother church of the Anglican community throughout the world. As a national church it owes its existence to the preaching and organizing of S. Augustine, his followers and successors. He came from Rome, and until the 16th century the church remained in communion with the Church of Rome and therefore under the Pope's authority. Its doctrine and organization were those of the Church of Rome, but modified by a certain infiltration of Celtic influences.

Its form of government is episcopal and its bishops claim a direct spiritual descent from the apostles. The archbishop of Canterbury has always been regarded as its head, although in early days his authority over the archbishop of York was questioned.

When Henry VIII quarrelled with the Pope and declared himself head of the church no doctrinal changes were made. Changes, however, were made by Edward VI, but Mary restored the old faith and with it the authority of Rome. Finally Elizabeth effected a settlement which has lasted until to-day. An Act of 1559 made compulsory the use of the Prayer Book of 1552, which contains the orders for divine worship and the administration of the sacraments, while its doctrines are laid down in the appended 39 articles. Elizabeth was declared supreme governor, not supreme head of the church.

Notable events in the church's history since 1559 have been the breaking away of the Nonconformists; the abolition of most of the privileges enjoyed by its clergy and members; and the Oxford movement, which widened the differences between high and low churchmen. In the 20th century the church in Wales, an integral part of the whole organization, was disestablished. The Church has been given a certain amount of self-government, but the rejection of the proposals for the reform of the Prayer Book by Parliament in 1927 and 1928 created a situation which many churchmen considered intolerable.

The church is governed by the two archbishops, each the head of a province, and the various bishops, each in charge of a diocese. Its corporate will is expressed in convocation (q.v.) and in the newer Church Assembly. Established in 1920, this consists of three houses, bishops, clergy, and laity. The laity are elected by the diocesan conferences. The Assembly can decide upon alterations in the church services and organization, but before such changes become law the sanction of Parliament is necessary. There is also an annual meeting called the Church Congress.

For the year ending 1928 the voluntary offerings of the church were nearly £10,000,000. There were 2,339,283 communicants at Easter 1929 and 200,838 confirmations during the year. See Anglicanism; Episcopacy; Prayer Book.

CHURCHWARDEN. Lay officer of the Church of England. Churchwardens are appointed at Easter, usually one by the incumbent and another by the parishioners. Acting generally as lay representatives of the parish, their duties include the preservation of the church fabric and furniture, the collection of the offertory, and the maintenance of order in church.

CHURCHYARD. Burial ground attached to a church. In it parishioners have under common law a right of burial. Equally with

the church itself it is consecrated ground, and is in the care of the churchwardens. See Burial; Cemetery.

CHUVASH. Autonomous republic of Soviet Russia. It lies S. of the Mariiskaia area, some 300 m. E. of Moscow. The chief town is Cheboksari. Its area is 7,192 sq. m. Pop. 893,724.

CIBBER, COLLEY (1671-1757). English dramatist. Born in London, Nov. 6, 1671, he went on the stage in 1691, and in 1696 acted

Colley Cibber,
English dramatist
After Van Loo

in his first play, *Love's Last Shift*, in the part of Sir Novelty Fashion, this making his reputation. He played many parts, and appeared for the last time in 1745. In all he wrote some thirty plays, many of them adaptations from Shakespeare and other dramatists. The success of *The Non-Juror*, 1717, an anti-Jacobite play, adapted from Molière's *Tartuffe*, brought him the poet laureateship. Pope ridiculed him in *The Dunciad*, and Fielding and Johnson spoke of him with contempt, but he had the support of Swift and Steele. He died Dec. 12, 1757.

CICADA (Lat.). Group of large, four-winged insects, of which there are about 500 known species, mostly inhabitants of the tropics. Some 18 species occur in S. Europe. The males make a peculiar chirping sound. The larva lives for several years before its transformation into the perfect insect.

CICATRIX (Lat.). Scar formed by the development of fibrous tissue during the process of healing. Extensive scars, such as those caused by burning, may cause serious deformity by contracting. A scar of any depth or size, though it may fade considerably, will show some indication throughout life. In the early stages it is red, but as time passes it becomes white and glistening.

CICELY (Myrrhis odorata). Perennial herb of the order Umbelliferae. A native of Europe and the temperate parts of S. America, it has a hollow stem about 3 ft. high, a fleshy, spindle-shaped root, and large, much divided aromatic leaves. The small flowers are white, in terminal umbels, of which only the outer series produce fruits. Cicely was formerly cultivated in England as a pot-herb, and in Italy is still used in salads.

CICERO, MARCUS TULLIUS (106-43 B.C.). Roman orator, statesman, and man of letters. Born at Arpinum, Jan. 3, 106 B.C., his father belonged to the equestrian order. After visiting Greece and the East in 79 and 78 especially to study oratory, he began his public career in 77, joining the aristocratic or senatorial party. But he was no consistent supporter of this party, and often severely criticised some of its members. Cicero's oratorical powers were first displayed as a pleader in the law courts. He was consul in 63. His term of office being distinguished by the resolute, though technically illegal, manner in which he crushed the conspiracy of Catiline to overthrow the republic.

In 58 the disreputable Clodius, a personal enemy of Cicero, was allowed to introduce a

measure bringing Cicero to book for his illegalities in putting the Catilinarian conspirators to death without a trial. Cicero left Italy, but was recalled in 57. On the outbreak of the Civil War, Cicero joined the Pompeians, and after the murder of Caesar (44), in which he had no part, he reappeared again in public life, delivering violent speeches against Antony. When Antony became master of Rome Cicero was a marked man, and was killed by the emissaries of Antony, Dec. 7, 43.

It is as a man of letters that Cicero's fame rests on the surest foundation. In addition to over 50 extant speeches, Cicero wrote on oratory, philosophy, law, and politics. Many books of letters also survive.

CID CAMPEADOR, RUY DIAS (c. 1040-99). Spanish military hero. Born in Castile of noble birth, when more than half Spain was in the hands of Moorish princes, he was known to the latter as Sidi, of which Mio Cid was the Spanish version. His personal valour, and successes against the infidel when for a few years he acted as the champion of Christendom, won him an almost fabulous reputation among Christians and Moors alike. His exploits were recorded in the 12th century Spanish epic, the *Poema del Cid*. Innumerable dramas have been written around the story of Ruy Dias.

CIDER. Fermented apple juice. France takes the lead as a cider-producing country; in England the ciders of Devonshire, Somersetshire, Gloucestershire, Herefordshire, Kent, and Norfolk are noted. Cider apples are small in size and generally grown on standard trees in grass orchards. The ripe fruit is first crushed or grated. The juice is then pressed from the pulp and allowed to stand in an open vat until the solid particles present have risen to the surface as a scum, which is skimmed off. The clear liquid is transferred to a fermenting cask, from which it is removed and filtered.

CIGAR (Span. cigarro). Tobacco leaf prepared for smoking by being rolled and tapered at one or both ends. The cigar consists of a core or inside mass of fillers, which are enveloped in an inner and an outer wrapper. The filler for a choice cigar must all be of uniform fine quality and packed longitudinally so that it will burn evenly and allow the smoke to draw easily from end to end. The filler is then wrapped inside a whole leaf of the same quality. For the outside wrapper only the most perfect leaves are used. When the cigars are made, they are dried, either in the sun or by artificial heat.

A cigarette, or little cigar, is a small roll of fine-cut tobacco wrapped in thin paper. The idea of smoking tobacco in this way originated in Russia about the time of the Crimean War. At first the cigarettes were made by the users, but later factories were built where they were made by machinery. To-day enormous quantities of cigarettes are manufactured in Great Britain, the United States, and elsewhere. Of the many varieties those most generally smoked are known as Virginian, Turkish, and Egyptian. See Tobacco.

CIMABUE (1240-1302). Florentine painter, whose proper name was Giovanni Gualtieri. That he was born in Florence and worked at Rome, 1272, and in mosaics at Pisa, 1301, is all that is known of his life. The Altarpiece of The Madonna for Santa Maria Novello at Florence, long described as his most famous achievement, is now known to be by Ducio di Buoninsegna, and paintings by unknown artists have been attributed to Cimabue.

Marcus Tullius Cicero,
Roman orator and statesman

Cimabue,
Florentine painter
From an old fresco

CIMA DA CONEGLIANO, GIOVANNI BATTISTA (c. 1460–c. 1517). Italian painter. Often known as Giovanni Battista da Conegliano, he worked at Vicenza and at Venice, where he was a pupil of Giovanni Bellini (q.v.). Among his best pictures are two of the Virgin and Child with Saints, at Parma; the Glory of S. John the Baptist, Venice; The Incredulity of S. Thomas, National Gallery, London; Madonna and Child, Bologna; S. Peter Martyr, and The Descent from the Cross, Modena. His earliest work was in tempera.

CIMMERII. Name given in the Homeric poems to a mythical people believed to dwell in the far W. where the sun never shone. The historical Cimmerii, originally inhabiting the neighbourhood of the sea of Azov, migrated into Asia Minor in the 7th century B.C. and settled in Lydia. The phrase Cimmerian darkness is used for intense, utter darkness.

CIMON (c. 504–449 B.C.). Athenian general and statesman. The son of Miltiades, his distinguished service at the battle of Plataea (479 B.C.) was followed in 466 by a double victory over the Persians by land and sea. On the death of Aristides, Cimon became leader of the aristocratic party at Athens, and, after Themistocles had been forced into exile, its chief statesman. Having returned from banishment, Cimon became responsible in 450 for a truce between Athens and Sparta.

CINCHONA. Dried bark of the stem and branches of cultivated plants of cinchona succubra. It is used in medicine chiefly in virtue of the quinine it contains, but also as a remedy for dipsomania. It is imported, largely from Java, India, and Jamaica, in the form of quills, and has a bitter, astringent taste. See Bark.

CINCINNATI. City of Ohio, U.S.A. On the N. bank of the river Ohio, and connected by bridges with Covington and Newport on the Kentucky side of the river, it is an important port and rly. centre.

The city runs from the river to an amphitheatre of hills. In the "bottoms" are the manufacturing and wholesale districts, on the higher levels the shopping districts, while the finest residences are on the heights. Notable buildings include the chamber of commerce, U.S. government building, city hall, masonic temple, art museum, S. Peter's (R.C.) cathedral, S. Paul's (Protestant Episcopal) pro-cathedral, and the Union Central Life building of 34 storeys (495 ft. high). In Fountain Square is the beautiful Tyler Davidson fountain. Cincinnati has a municipal university, and is famous for its musical festivals. Pop. 401,247.

CINCINNATUS (c. 519–439 B.C.). Hero of the early Roman republic. Consul 460 B.C. in 458 he was appointed dictator when the country was invaded by the Aequians. The deputation sent to summon him found him, patrician though he was, ploughing his own land. Having defeated the Aequians in 16 days, he resigned the dictatorship and returned to the plough.

CINDERELLA. Heroine of a widespread folk cycle tale. It generally follows the fortunes of a young girl who is cruelly and contemptuously treated by her step-sisters. By the sweetness of her character and the aid of a fairy godmother Cinderella triumphs and wins the love of a prince.

CINDERFORD. Colliery centre of Gloucestershire, 3 m. N.W. of Newnham, on the L.M.S. & G.W. Jt. Rly. Market day, Sat. Pop. 3,500. See Dean, Forest of.

CINEMATOGRAPH, or **KINEMATOGRAPH** (Gr. kinema, movement; graphen, to write, describe). Apparatus employed for projecting animated pictures on to a screen. The first photographic analysis of motion

was made by Edward Muybridge in 1872, when he attempted to take instantaneous photographs of a galloping horse, using 24 cameras placed side by side. Muybridge gave an exhibition of photographic analysis of motion at the Royal Institution in 1882. While glass photographic plates only could be used it was impossible to obtain a continuous picture. The difficulty aroused the attention of George Eastman, who in 1885 discovered how to make the transparent roller film for photography. William Friese-Greene a native of Bristol, invented a moving-picture camera, which he used for the first time on Nov. 15, 1889, in photographing a scene in Hyde Park. Edison, seeking a film to complete the kinetoscope, or moving picture peep-show which he patented in America on Mar. 14, 1893, adopted the Eastman invention, and showed the kinetoscope at the World's Fair at Chicago.

Robert W. Paul, a London scientific instrument maker, finding that Edison had not patented the kinetoscope in England, set to work to make a duplicate. Paul was soon sending his machines all over the world, and later invented a moving-picture camera of his own. The difficulty of projecting a picture had yet to be overcome. In Feb., 1895, Paul was able to throw a clear moving picture on the screen for the first time. The film was 40 ft. long, showing a picture 7 ft. sq. Among those who followed Paul was Charles Urban, who exhibited "moving pictures at theatres under the name of bioscopes. The history of the moving picture producing and exhibiting industry is dealt with in the article Film.

The moving picture camera of to-day resembles in principle the kinetograph invented by Edison in 1889. A narrow, sensitized film is made to pass in intermittent motion behind a focussed lens, and is held stationary for a brief period while the exposure is made, after which the exposed portion is wound on to a spool and a fresh portion comes into place behind the lens. The mechanism is operated by turning a crank, or by a clockwork or electric motor. The moving picture camera takes pictures at the rate of about 20 per second.

A positive film made from the photographic negative is passed between the condenser and lenses of the projecting lantern in such a way that the film lasts for a fraction of a second while each separate picture is thrown on to the screen.

Cinderella. Heroine of the world-famous fairy story
Painting by Val Prinsep, R.A.

fireproof spool boxes. The mechanism is actuated by an electric motor, the operator regulating the speed. To guard against the danger of

fire in picture theatres the projection apparatus is housed in a fireproof chamber, usually with automatic shutters which drop down in emergency and cut off the projection box from the rest of the building.

The recording and reproduction of speech, sound, and incidental music along with the cinematograph picture had been attempted by many inventors without much success until 1927, when different systems got to the practical stage. In the course of the next year a number of sound-film systems were developed, based on three main types of apparatus, to be presently described, and the beginning of 1929 saw the talking picture a formidable rival to its predecessor, the silent film. In one method a sound-record is made on a wax disk as the picture is photographed, and a permanent record prepared from the wax original is passed through a gramophone device as the film is projected, sound-record and picture being carefully synchronised.

In the sound-on-film system the sound vibrations picked up by the microphone are made to cause variations of intensity in a slender beam of light directed upon a narrow band at the edge of the sensitive cinematograph negative. In the projection apparatus the sound record on the edge of the film interrupts a constant beam of light shining through a narrow slit, and so produces electrical variations in a photo-electric cell. These are amplified and converted into sound vibrations.

In the two-film system a separate film is used for the sound record, a beam of light being reflected on to the negative from an oscillating mirror. The sound record is made to produce variations in an electrical circuit, and so to work a loud speaker.

In 1930 the silent picture was being rapidly displaced by the "talkie" in English-speaking countries, while multi-lingual films were being

produced to make possible the universal exhibition of talking films. See Film.

CINERARIA (Lat. cinerarius, ashy). Greenhouse plants, of the order Composite. For the most part natives of S. Europe and the Canary Islands, they were introduced into England in 1777. Of an average height of about 2 ft., with greyish leaves, they bear masses of starry flowers of all shades of colour, from white to red, purple and blue. They are decorative and easily raised from seed.

CINGALESE. Variant name, based on the Tamil spelling, of the Sinhalese, most numerous of the native people of Ceylon. It is applied inaccurately to the whole Ceylonese population, including Tamils. See Ceylon.

CINNA, LUCIUS CORNELIUS (d. 84 B.C.). Chief of the democratic party at Rome and a supporter of Marius. In 87 B.C. he was elected consul with the approval of Sulla leader of the senatorial party. After Sulla had left for the East, Cinna brought forward various proposals, among them one for the recall of Marius from exile. These were opposed by his colleague, Octavius, and Cinna was obliged to leave Rome. He joined Marius, and their combined forces entered Rome and massacred the adherents of Sulla. In the end he was murdered by his mutinous soldiers.

CINNABAR or **VERMILION** (Gr. kinnabari). Called also red sulphide of mercury, it is the name of the ore from which mercury is almost solely obtained. When pure the mineral is composed of mercury 86.29 p.c., and sulphur 13.71 p.c., but it usually carries impurities. It occurs massive and in earthy layers and also crystalline: the colour is normally bright

Cineraria. Many coloured flowers of this decorative greenhouse plant

red, shading off into brownish-red or even brownish-black. Cinnabar is chiefly mined at Almaden, in Spain, and at Idria, in Carniola. Apart from its use as a source of mercury, it is employed as a pigment and for colouring red sealing wax. See Mercury; Vermilion.

CINNAMON (*Cinnamomum zeylanicum*). Small evergreen tree of the order Lauraceae, a native of Ceylon and Malabar. In Ceylon

Cinnamon. Flowering shoot of *C. zeylanicum*

many thousands of acres are devoted to its cultivation, the trees being coppiced to induce the growth of numerous long and slender shoots. From these the tender bark is peeled after a longitudinal cut, and it rolls into the familiar quills of commercial cinnamon, and is then dried in the sun. The peculiar fragrance is due to the presence in the bark of an essential oil (oil of cinnamon) which is carminative and astringent. The bark is valuable in diarrhoea and internal haemorrhage and the oil is used for stimulating the flow of the gastric juices in cases of digestive disorders.

Cinnamic acid is formed in oil of cinnamon by oxidation, and is also prepared from storax for medicinal use. Cinnamic aldehyde which is a bright yellow liquid with an aromatic odour and sweetish, spicy taste, is prepared from oil of cinnamon or oil of cassia.

CINQUEFOIL (*Potentilla reptans*). Perennial herb of the order Rosaceae. A native of Europe, Asia, the Canaries, etc., it has a hard, long root-stock, from which slender stems several yards in length run along the ground in all directions, rooting at intervals. The long-stalked leaves are divided into five oval leaflets with toothed margins; and the bright yellow flowers are an inch across.

Cinquefoil, *Potentilla reptans*

The name cinquefoil is also given to an architectural ornament consisting of a group of five curved pendants inscribed on a pointed arch. When applied to windows it is generally contained in a circular ring.

Cinquefoil in architecture, an ornamental device in a pointed arch

and Rye (q.v.) were added. Faversham is a member of the port of Dover. They undertook obligations as a first line of defence in times of invasion, and in return enjoyed privileges, all of which were definitely set forth in a charter granted by Edward I. This was surrendered to the crown in 1688, and by the Municipal Corporations Act of 1835 and other Acts their administration was brought into uniformity with the rest of the country. The warden of the Cinque Ports, now an honorary office, has a residence at Walmer Castle.

CINQUEVALLI, PAUL (1859-1918). Polish juggler. He first appeared as a trapeze artist at Odessa. As the result of an accident he took up the calling of a juggler. He appeared first in England at Covent Garden Theatre, in 1885, and for the next twenty years was probably the cleverest performer of his class. He retired in 1914, and died in London, July 14, 1918. His most wonderful tricks were performed with billiard cues and balls.

CINTRA. Town of Portugal, 17 m. by rly. N.W. of Lisbon. It is a summer resort and was for centuries a royal residence. Dominated by a Moorish castle, it has two royal palaces and a rock-ent, cork-panelled convent. Pop. 5,930.

The Convention of Cintra was an agreement made Aug. 22, 1808, between the French and British generals in Portugal after the battle of Vimero. The French agreed to evacuate Portugal, British transports being provided to take them back to France.

CIPHER (Arab. sifr, anything empty). Secret method of communication. There are numerical and alphabetical ciphers, syllable and word ciphers, stencil and blackline, and miscellaneous ciphers. The latter include angle-writing thread-writing, the foot-rule cipher, the puncture-system, the playing-card cipher, etc. Ciphers highly developed can be traced back to classical and earlier times, and rarely but practical methods are found among primitive peoples. Speaking generally, every cipher can be deciphered in course of time.

CIPRIANI, GIOVANNI BATTISTA (1727-85). Italian painter and engraver. He was born in Florence, and after art work there and in Rome he came to London in 1755. Cipriani's free, easy, and graceful style suited the mode which Bartolozzi had rendered popular. Cipriani restored some of Antonio Verrio's paintings at Windsor and Ruhen's ceiling in Whitehall Chapel. A foundation member of the Royal Academy, he designed the diploma given to members on their election. He died Dec. 14, 1785. Pron. Chipriaby.

CIRCE (Gr. Kirkē). In Greek mythology, an enchantress who lived upon the island of Acaea. According to Homer, Circe by means of a magic potion changed into swine the companions of Odysseus when cast ashore on her island. Odysseus himself, fortified by an antidote from Hermes, drank of the cup unharmed, and remained on the island with Circe for a year. Pron. Sir-see.

CIRCLE (Lat. circulus, little ring). Plane figure bounded by a curved line called the circumference every point of which is equidistant from a fixed point known as the centre of the circle. Any straight line through the centre and terminated at both ends by the circumference is a diameter of the circle, and each half of it is a radius. Thus the fundamental property of the circle is that its radii are all equal. Another is that if both ends of a diameter are joined to any point on the circumference, the angle formed is a right angle.

Circular measure is the term given to a mathematical method of measuring the size of an angle in terms of the arc which it subtends. See Geometry.

CIRCUIT (Lat. circum, around; ire, to go). Name given in the English-speaking world to the journeys of judges for the purpose of trying criminals and settling disputes of importance. At present England and Wales are divided into eight circuits: Northern, North-Eastern, Midland, Western, Oxford, North Wales and Chester, South Wales, and South-Eastern. London and Middlesex are outside the circuit system. Scotland is divided into two circuits, North and South. The

North of Ireland has one only, while the Irish Free State is divided into eight circuits. See Assizes; High Court; Judge.

CIRCUIT. In electricity, the path traversed by an electric current. If the positive and negative terminals of a galvanic battery or accumulator be connected by a wire a circuit is formed, the current flowing from one terminal through the wire back to the other terminal and through the battery. If a wire loop with its ends joined be rotated in a magnetic field, so as to cut the magnetic lines of force, a current is induced in it, and the wire then constitutes a circuit. A circuit is said to be closed when no gap or break exists; when continuity is broken at any point it is said to be open. In some cases the earth serves as a portion of an external circuit. Short circuit is a leakage of current from one portion of a circuit to another, whereby the current takes a short cut instead of passing through the whole circuit.

A circuit breaker is a device inserted in an electric circuit for breaking or stopping the current. See Cell; Dynamo Kathode.

CIRCULAR NOTE. Note issued by a bank which its representatives abroad will cash on demand. Much used by travellers, they are usually issued for not less than £10 each.

CIRCULATOR. Invention for heating water quickly. The water passes through a coil of piping surrounded by gas jets, and in three or four minutes will reach boiling point. This apparatus is enclosed in a circular box which can be fixed over sink or bath: pipes can also be carried to other rooms.

CIRCUMCISION (Lat. circum, around; caedere, to cut). Surgical operation of high antiquity, practised by many peoples preparatory to adult life. A universal Jewish rite, it is found almost everywhere, except in the Indo-European world and in non-Semitic Asia. A religious ceremony in origin, circumcision is also useful as a hygienic and preventive measure.

The Feast of the Circumcision is a Christian festival kept on Jan. 1 in memory of Christ's obedience to the old covenant (Luke 2).

Circe. Sir Edward Burne-Jones's picture, *The Wine of Circe*. The Greek enchantress mixing the potion which transformed human beings into animals
Photo Fredk. Hollier

CIRCUS (Lat. ring, circle). Place in ancient Rome specially constructed for holding chariot and horse races, games, and, later, athletic and wild beast combats. The structure was in the form of a long rectangle, with a semicircle at one end. The most notable circus at Rome was the Circus Maximus, 1,875 ft. long by 625 ft. wide. The seating capacity was enlarged from time to time, and in the 4th century it was said to be capable of seating 385,000 spectators.

Of modern circuses in the United Kingdom, the oldest and best known was that built in London by Philip Astley in 1770, familiar for many years as Astley's Amphitheatre, afterwards taken over by Mr. Lord George Sanger. Another notable one was P. T. Barnum's "Greatest Show on Earth," consisting of a huge company of equestrians, clowns, and acrobats, human freaks, and a menagerie. It was known later as Barnum and Bailey's.

CIRENCESTER. Urban dist. and market town of Gloucestershire. The Roman Corinium it is situated on the river Churn and the

Cirencester. The market place and parish church

Thames and the Severn Canal, 21 m. S.E. of Cheltenham on the G.W. and L.M.S. and Southern Junc. Rlys. The parish church of S. John the Baptist has an embattled tower 134 ft. high. Of the abbey founded 1177 by Henry I only an Early English gateway remains. Cirencester Park, belonging to

Earl Bathurst, contains an avenue 5 m. long and a deer park. The Royal Agricultural College is near the town. Market day, Mon. Pop. 7,408. Pron. Sissiter.

CIRRHOSSIS (Gr. kirrhos, reddish yellow). Chronic inflammation with increase of connective tissue of an organ. The term is most often used of the liver, when the most frequent cause is long-continued alcoholism. The organ may be reduced in size or may be much enlarged. Pressure of the new tissue upon the blood-vessels in the liver eventually leads to obstruction of the circulation, chronic catarrh of the stomach with dyspepsia and vomiting, and sometimes severe hæmorrhage from the mucous membrane. The veins on the surface of the body become enlarged, and there is often dropsy of the abdomen. In the early stages strict abstinence from alcohol, light diet, and healthy living may do much to arrest the disease. After dropsy has occurred measures must be taken to reduce the fluid.

CISALPINE REPUBLIC. State in Italy set up in 1797 by Napoleon. Its area was about 16,500 sq. m., and its population about 3,500,000. Milan was its capital. It was governed by a directory of five members and a parliament of two houses. It became later the short-lived (1805-14) kingdom of Italy.

CISSBURY. Site of an early British earthwork, near Worthing, Sussex. The camp covers 60 acres, with oval fosse and vallum, and near by are 50 circular pits, 40 ft. deep, with lateral tunnels. They are attributed to neolithic flint miners.

CIST (Gr. kistē, chest; Welsh eistvaen, stone chest). Small stone sepulchral chamber. Sometimes denoting a rock-hewn tomb, the term is used especially of a prehistoric stone coffin, formed by setting up on edge four or more hewn or unhewn slabs, with one or more flat capstones. It developed into the dolmen and sarcophagus. Pron. Sist.

CISTERCIANS. Roman Catholic religious order founded at Cîteaux by S. Robert, abbot of Molesme, Langres, France, in 1098. It followed the Benedictine rule, its chief leaders being S. Alberic (d. 1109), S. Stephen Harding, an Englishman (d. 1134), and S. Bernard. From the 14th until the end of the 18th century, when it was suppressed, it declined in numbers and discipline. But a reform had

been instituted at La Trappe in Normandy in 1663, and the Trappists took refuge in America and revived the order in Europe in the 19th century. In 1892 they were united into one order, while the Cistercians of common observance remained a separate order. Their most famous house was Port Royal, and they had several in England. See Abbey; Monasticism.

CITADEL (Ital. città, n. city). Name for a fortress in or near a city. Citadels were built to protect the city and in case of siege to be the refuge of its inhabitants; also to be a storehouse of weapons and the centre of the defensive organization. Notable citadels are those at Plymouth and Quebec and at Belfort and Carcassonne. See Carcassonne; Castle.

CITRIC ACID (Lat. citrus, citron) ($C_6H_8O_7$). Acid to which lemons owe their sour taste. It occurs naturally in other fruits, such as cranberries, red currants, gooseberries, and raspberries. Lemon juice contains from 6 to 7 p.c. of citric acid. The acid is used in beverages such as lemonade and also in calico printing and dyeing.

CITRON (Citrus medica). Member of the orange family. A native of N. India, it is considered by some to be the wild species from which cultivated forms of orange, lemon, lime, and shaddock have been evolved. The glossy, lance-shaped leaves are attached to the leaf-stalk by a distinct joint. The flowers are purple on the exterior and white inside. The fruit is oblong, 6 ins. to 9 ins. long, with a thick, hard rind, yellow and fragrant when ripe. The pulp is white and the juice acid.

Citron. Flowering spray of Citrus medica

CITY (Lat. civitas, borough; Fr. cité). In Domesday Book the name city was commonly bestowed upon the county town in each shire. Later on the term tended to be limited to towns which were episcopal sees and the sites of cathedral churches.

To-day in Great Britain a number of large towns have by royal authority been raised to the honorary eminence of cities, irrespective of their ecclesiastical character. In the U.S.A. every town which enjoys a government by mayor and corporation is commonly called a city, and in Canada the name is given to places having a certain population, say over 25,000. The special name, The City, is used to denote the older or central portions of both London and Paris. See Borough.

CITY COMPANIES. THE. Guilds or companies of the city of London, also called livery companies from the distinctive costume worn by members from the time of Edward III. Each company secured a monopoly of its trade within a prescribed area. They acted in common with similar guilds in provincial towns, and on the Continent and in association with the Privy Council maintained a control of the chief commerce of the country.

Cistercians. Dress of this monastic order

To-day, with few exceptions, the city livery companies of London are limited in action to the administration of charitable trusts committed to their care; the encouragement of technical and general education; and hospitality. Of the 80 companies remaining of the original 109, twelve take precedence, and are known as the Great Companies: Mercers, Grocers, Drapers, Fishmongers, Goldsmiths, Skinners, Merchant Taylors, Haberdashers, Salters, Ironmongers, Vintners, and Clothworkers. See Guild; also entries under the names of the respective companies.

CITY OF REFUGE. Jewish institution, resembling the asylum of ancient Greece and Rome, for abating the evils of blood-revenge. Moses appointed six such cities: three on the E. of the Jordan, Bezer, Ramoth, and Golan; and three on the W., Kedesh, Shechem, and Hebron (Deut. 4; Josh. 20). If anyone who had unintentionally killed another could reach any one of these cities before being overtaken by the avenger of blood, he was safe.

CIUDAD BOLIVAR. City of Venezuela. capital of Bolívar state. It stands on the Orinoco, and exports rubber, cocoa, coffee, sugar, tobacco, etc. In 1819 its name was changed from Angostura to Bolívar. Pop. 19,712.

CIUDAD RODRIGO (Span. Roderick's city). City of Spain, in the prov. of Salamanca. On the Agueda river, 56 m. by rly. S.W. of Salamanca, it has a 12th century cathedral (modernised) and remains of a Roman aqueduct, the bridge being built on Roman foundations. Founded by Count Rodrigo Gonzalez in the 12th century, it was captured by the French in 1810, but was recaptured in 1812 by Wellington, who received from it the title of duke. Pop. 8,761.

CIVET OR **CIVET CAT** (Arab. zabad) Family Viverridae of the carnivora. Coming next to the cats in general structure, they differ from them in dentition, and in many cases the claws are only partially retractile. All have slender bodies, heads with sharply pointed muzzles, long tails, and short legs. The general colour of the fur is brownish grey, handsomely mottled, and the hair is coarse. They have highly developed glands near the tail, which secrete the valuable civet perfume. Civets live in woods and high grass, and feed at night on small mammals, birds, and reptiles. All are natives of the Old World, being found both in Asia and Africa.

CIVIL LAW (Lat. civis, a citizen). Law which a state enacts for its citizens, more particularly that derived from the Roman

Civet. White-whiskered palm civet

Corpus Juris Civilis, compiled in the 6th century by order of the emperor Justinian. It is the basis of most of the law of W. Europe to this day. Scots law is also founded on it, but it had much less influence in England, where the people were jealous of their own Common Law.

CIVIL LIST. THE. Name given in Great Britain to the allowances paid to the king and others of the royal family, and to other payments made for the upkeep of the crown.

The civil list is revised at the beginning of each reign. King Edward VII received £470,000 a year from the country, or rather more than had been enjoyed by his mother, Victoria; and when the list was revised after his death in 1910 the same amount was granted to King George and Queen Mary. In addition King George receives about £70,000 a year from the revenues of the duchy of Lancaster. The Prince of Wales derives his income from the revenues of the duchy of Cornwall, and not from the civil list.

In Great Britain yearly allowances, known as civil list pensions, are given by the state to persons not in affluent circumstances, distinguished by their work in literature, science, and art, or to their dependents.

CIVIL SERVICE. Name given to permanent salaried non-combatant officers of the crown whose duty it is to administer in any capacity the affairs of the nation, or to maintain its interests abroad. They are grouped into many departments, and are controlled by the nation through its parliamentary system. The great public branches are represented in the House of Commons by a responsible minister. The cost of the home civil service is defrayed from the national revenue. Particulars of the estimated expense of each department are furnished yearly to Parliament, by which the requisite amounts are voted.

The majority of appointments of every grade are awarded on the results of examinations in which any qualified candidate may take part. Candidates for certain situations requiring special knowledge or experience are nominated and then appointed after an examination confined to nominees. Examinations for entrance into the civil service are controlled by the Civil Service Commission, Burlington Gardens, London, W.

Women are extensively employed in the civil service, especially in the Post Office. Since the Great War they have also been admitted to certain positions hitherto reserved for men, notably as first class clerks and inspectors of taxes.

Initial salaries are generally small, and promotion is often tardy. Against these drawbacks should be set the right of every efficient officer to a fixed annual increment, steadily advancing his salary, apart from special promotion, to the maximum prescribed for his class. Another advantage is security of tenure. The pension scheme is non-contributory, and provides for a retiring allowance, at the age of 60, with a cash payment not exceeding $1\frac{1}{2}$ years' salary. The maximum pension is half-pay, which is secured by 40 years' service.

Since the Great War civil servants have, in addition to their salaries, received bonuses, these being calculated according to the official cost of living figures. In 1929 a royal commission was appointed to inquire into the conditions of employment, pay, etc., in the service.

The Indian civil service is quite distinct from the home service, but the annual examination for entrance to it is the same as that for Class I clerkships at home. Australia and Canada have each their own service, and there is a colonial service, which includes positions in the various crown colonies.

CIVIL WAR. Struggle between Charles I and the Parliament from 1642 to 1649. The quarrel came to a head when, on Aug. 22, 1642, Charles raised his standard on a hill outside Nottingham Castle, since known as Standard Hill. The first pitched battle was fought at Edgehill on Oct. 23. Several small royalist successes followed, and the winter was spent in fruitless negotiations. In 1643 the royalists captured Bristol and other towns, and besieged Gloucester, but a new parliamentary army, led by Essex, relieved the city. On Sept. 20, 1643, was fought the first, and indecisive, battle of Newbury.

Charles next entered into negotiations with Ireland, while the Parliamentarians turned for aid to Scotland, the result being the Solemn League and Covenant by which a Scottish army was promised. This took the field in 1644, and on July 2 the contending forces met on Marston Moor. The royalists suffered a severe defeat at the hands of Cromwell, and Charles lost most of his strongholds in the north of England. The second battle of Newbury was fought on Oct. 27, the result being again indecisive. On June 14,

1645, the newly organized parliamentary armies gained an overwhelming victory at Naseby, this being followed in 1646 by the surrender of the king's army in the west.

For two years Charles remained a prisoner, but in 1648 the royalist risings recommenced. Cromwell first crushed the insurgents in Wales and then hurried north to meet the duke of Hamilton, who was advancing from Scotland, and whose army he destroyed in running fights lasting three days. The capture of Colchester on Aug. 28 marked the end of the Great Civil War. See Charles I.; Cromwell; Rupert.

CLACHAN. Small cluster of cottages in Scotland and Ulster. They are usually of stone. The word is presumably connected with Gaelic clach, a stone, often applied to stone circles and menhirs, such as Clach-na-Breatain, Stone of the Britons, in Glenfalloch, Perthshire.

CLACKMANNAN. Scottish county, bounded by Perthshire, the Firth of Forth, Stirlingshire, Kinross-shire, and Fifeshire. The Ochil Hills traverse the northern border, whence the surface descends gently to the Forth. Besides the Forth, the only rivers of note are its tributaries the Devon and Black or South Devon. Its area is 55 sq. m. Pop. 32,543.

CLACTON. Urban district and popular seaside resort of Essex. It is 70 m. by rly. N.E. of London on the L.N.E.R. In 1929 a town hall and municipal offices were erected. Steamboats go regularly to and from London during the summer months. Pop. 17,049.

CLAIRVAUX. Village of France, in the department of Aube, on the Aube river, 35 m. S.E. of Troyes. Its name, a corruption of Latin clara vallis (clear valley), is due to its position in the valley of the Aube, where in 1115 S. Bernard (q.v.) founded an abbey. The abbey buildings, used as a prison, mainly date from the 18th century. See Cistercians.

CLAIRVOYANCE (Fr. clair, clear; voir, to see). Faculty of seeing, or becoming cognizant of, things not at the time visible to the eye. This phenomenon usually takes the form of a person suddenly seeing something happening at a distance; but there have been cases where the clairvoyant, when blindfolded or in total darkness, was able to describe pictures or the colour of objects placed in the hand, or to read the contents of a closed book. See Psychical Research: Spiritualism.

CLAM. Name vaguely applied to many bivalve molluscs. In Scotland it means the scallop, and in England is used for species of Mya and Macra, both marine. In America it is used especially for the genera Venus, Mya, and Tridacna. The name refers to the firm grip of the shell when shut tight, clam meaning a vice or pincers.

CLAN (Gaelic clann; cf. Lat. planta, stock). Social group claiming a common ancestry. The word denotes primarily communities developed in the Scottish highlands in early times. By the 14th century they began to appear beyond the highland line. In the 15th century the system became profoundly changed. It might still comprise a chief, kinsmen within a limited degree, and a com-

monalty of the same blood, all bearing the same surname, commonly a patronymic with the prefix Mac, son. It embraced also subordinate septs claiming no blood-relationship.

The tenacity of the clan-spirit culminated in the rebellions of 1715 and 1745. When the Stuart cause was finally suppressed clanship was uprooted by the abolition, in 1748, of heritable jurisdictions and the disarmament of the clansmen. The number of clans and septs still preserving their historic continuity is about sixty. Some of them have established societies or associations.

CLAN-NA-GAEL. Society founded among the Irish-Americans by some Fenians in the U.S.A. about 1832. Their object was to terrorise the English people into giving Ireland independence. The headquarters were at Chicago. See Fenianism.

CLANRICARDE, EARL OF. Irish title now borne by the marquess of Sligo. In 1543 Ulick de Burgh was made earl of Clanricarde, and in 1785 his descendant, the 12th earl, was made a marquess. The marquessate became extinct in 1795, but was revived in 1825.

Hubert George, the 2nd marquess (1832-1916), came into prominence by his resistance to the policy of land purchase in Ireland, which he fought in the law courts. In the end the Clanricarde estates were sold in 1915. When he died, April 12, 1916, he left his great fortune to his nephew Viscount Lascelles, later earl of Harewood (q.v.).

CLAPHAM. Suburb of London. In the met. bor. of Wandsworth between Brixton and Battersea, it is served by the Southern Rly. and also by one of the London tubes. The station and district known as Clapham Junction is in Battersea. Clapham Common has been public property since 1874. At a house on a corner site of Cavendish Road, Henry Cavendish (q.v.), the chemist, made his experiment. Macaulay spent his earlier years at No. 5, The Pavement, a house facing the common and near the Plough Inn.

Clapham was the home of prominent members of the Evangelical party, called the Clapham Sect. Clapham Park was laid out by Thomas Cubitt in 1824. The parish church of Holy Trinity was built 1774-76, and Grafton Square Congregational Church in 1852. There is a school of art and a hospital for women. As a div. of the bor. of Wandsworth, Clapham returns one member to Parliament. Pop. 60,540.

The sensational case known as the Clapham Common Murder originated in the finding of the mutilated body of Leon Beron, an elderly Russian, many years resident in the East End, under some bushes on Clapham Common, Jan. 1, 1911. A ticket-of-leave man, Stinic Morrison, was charged with the crime, and convicted at the Old Bailey, the capital sentence being commuted.

CLAPPER BRIDGE. Name given to the cyclopean bridges of unhewn granite spanning many of the brooks on Dartmoor. They are not of Neolithic origin, but were constructed by tinners in the Middle Ages. The finest remaining specimen spans the East Dart at Postbridge, in the centre of the moor.

Clackmannan. Map of the smallest of the Scottish counties

CLAPTON. District of N.E. London. A ward of the borough of Hackney, it lies N. of Homerton, 4 m. N. of Liverpool Street station, L.N.E.R. Part of the locality is known as Clapton Park. The Salvation Army have their Congress Hall in Lynsott Road.

CLAUQUE (Fr. hand-clapping). Word applied to professional applauders or claqueurs, engaged to promote the success of a theatrical performance. The claque as an established business institution dates from about 1820, when an Assurance des succès dramatiques (Insurance for dramatic success) was founded in Paris, to supply claqueurs to all the theatres.

CLARE. Market town of Suffolk. On the Stour, 25 m. from Bury St. Edmunds, it has a station on the L.N.E. Rly. It was evidently in Anglo-Saxon times a border stronghold between the peoples of Suffolk and Essex. A castle was built here, and the earls of Clare or Clarence took their title from the place. There are remains of the castle and of a priory. The church is of the 15th century, with an older tower, restored in the 19th century. The market cross was pulled down in 1838. Market day, Mon. Pop. 1,340.

CLARE. County of the Irish Free State, in the prov. of Munster. Between Galway Bay and the river Shannon, it has an area of 1,330 sq. m. The Aran and other islands lie off the coast. The county is studded with small lakes. The river Fergus empties into the Shannon. In Galway Bay and Ballyvaghan Bay are oyster beds. Railway communication is provided by the Gt. Southern Rlys. The largest towns are Ennis (co. town), Kilrush, and Kilkee. Anciently known as Thomond, Clare received its present name in 1276. Pop. 95,064.

Another Clare is an island in Clew Bay, Ireland. It belongs to co. Mayo and has a lighthouse on its N. extremity. Its area is 4,000 acres.

CLARE (1194-1253). Italian saint. Her name was Chiara Scifi, and she was born at Assisi, July 16, 1194. She came under the influence of S. Francis about 1212, and took the vows of the Franciscan order. She thus became the first of the nuns, sometimes called after her the Poor Clares. For them a house was found at S. Damiano, close to Assisi, and over this Clare presided until her death, Aug. 11, 1253. She was canonised in 1255. See Francis, S.

CLARE, EARL OF. English title. Given to a follower of William the Conqueror soon after 1066, it remained with his descendants until the last earl was killed at Bannockburn in 1314. From 1564 to 1768 it was held by the Holles family. The second earl founded Clare Market, London, about 1657. This disappeared when Kingsway was made.

In 1795 John Fitzgibbon (1749-1802) was made earl of Clare. He was lord chancellor of Ireland and had a great deal to do with the passing of the Act of Union, 1800. He died Jan. 28, 1802, and the title became extinct when his younger son died in 1864.

CLARE, JOHN (1793-1864). British poet. The son of a labourer, his life was spent in casual employment and poverty. In 1820 the publication of his *Poems Descriptive of Rural Life and Scenery* brought him transient fame. From 1837 till his death at Northampton, May 20, 1864, Clare was confined as insane. His first venture was followed by *The Village Minstrel*, 1821; *The Shepherd's Calendar*, 1827; and *The Rural Muse*, 1835, his best work.

John Clare,
British poet
After Hilton

Clare. Map of this Western maritime county of the Irish Free State

CLAREMONT. District in Surrey, 14½ m. S.W. of London by the Southern Rly. The mansion was erected by Sir John Vanbrugh in the early 18th century, and reconstructed by Lord Clive in 1768. It was bought in 1882 for the duke and duchess of Alhany. After the death of Sir W. Corry, who had acquired the mansion at Claremont, the estate was sold for building purposes.

There is a suburb of Perth, Western Australia, on the Swan River, called Claremont. Pop. 6,300.

CLARENCE, DUKE OF. English title borne by several princes. It is a variant of Clare, a town in Suffolk, where the powerful family of Clare had a castle. In 1362 Lionel, son of Edward III, was made duke of Clarence, his wife being the heiress of the Clares. Henry IV's son Thomas was made duke in 1412. Like Lionel, he left no sons, and again the title became extinct. In 1461 George, a brother of Edward IV, was made duke of Clarence, but after his violent death in 1478 the title was

Albert Victor,
Duke of Clarence
Downey

long in abeyance. It was revived in 1789 for William, the son of George III, who became King William IV, and again in 1890 for Albert Victor (1864-92), eldest son of Edward VII, then prince of Wales. See Clare.

Clarence House is the London residence of the duke of Connaught. It stands immediately W. of St. James's Palace, and was built in 1825 for the duke of Clarence, afterwards William IV. Later it was tenanted by the duchess of Kent, Queen Victoria's mother.

Clarenceux or Clarencieux is the title borne by one of the three kings of arms of the English Herald's College. The office was first instituted by Henry V.

CLARENDON. Village near Salisbury, Wiltshire. One of the early English kings built a palace here, of which there are some remains, and this accounts for the name given to the Constitutions and Assize of Clarendon. Henry II founded a priory here.

The Constitutions of Clarendon were a code of sixteen laws issued by Henry II in 1164, their main object being to curtail the privileges of the clergy. They were the cause of the quarrel between the king and Becket.

CLARENDON. Printing type with a narrow and heavy face, some varieties of which are known as Egyptian.

This line is set in Clarendon.

CLARENDON, EARL OF. English title borne by the families of Hyde and Villiers. In 1661 it was given to Edward Hyde, the lord chancellor, and it remained with the Hydes until the 4th earl died in 1753. He had a sister, Jane, wife of the earl of Essex, and their daughter married Thomas Villiers (1709-86), a younger son of the earl of Jersey. The pair inherited the estates of the Hydes, and in 1776 Thomas was made earl of Clarendon. The title has since been held by his descendants. The family seat is The Grove, Watford, and the earl's eldest son is called Lord Hyde.

George William Frederik Villiers, 4th earl of Clarendon (1800-70), was ambassador to Madrid 1833-39 and lord lieutenant of Ireland 1847-52. A leading Whig, he was foreign minister for three periods, 1853-55, 1865-66 and 1868-70. He died Jan. 27, 1870. His descendant George, the 7th earl (b. 1877), chairman of the British Broadcasting Co. 1927-30, was in 1930 appointed governor-general of S. Africa.

CLARENDON, EDWARD HYDE, EARL OF (1608-74). English statesman and historian. He was born at Dinton, near Salisbury, Feb. 18, 1608. Called to the bar, 1625, he was returned as a member of the Short Parliament, and then of the Long Parliament in 1640. As the Puritans became more aggressive, Hyde joined Falkland and the moderates, who supported church and crown.

In 1643 he was the king's chancellor of the exchequer. During the Commonwealth he was the ablest and wisest of Charles II's council, and in 1658 was formally made lord chancellor.

At the Restoration he returned with the king to act as his first minister for seven years, being made earl of Clarendon in 1661. In 1667 Charles demanded his resignation of the chancellorship, his enemies framed an impeachment, and the king advised him to leave the country. He spent the last seven years of his life in exile, completing his *History of the Great Rebellion* and writing an autobiography. His daughter Anne became the wife of the duke of York, later James II.

Clarendon died at Rouen, Dec. 9, 1674, and was buried in Westminster Abbey. His

Edward Hyde,
Earl of Clarendon
After a portrait in the Bodleian

S. Clare, founder of the religious order called the Poor Clares
From a painting by Vivarini, in the Accademia, Venice

History was first published at Oxford, 1702-4 (ed. W. D. Macray, 1888), and from the profits of the copyright the Clarendon Press at Oxford was established.

Clarendon Code is the name given to four Acts, chiefly the work of Edward Hyde, earl of Clarendon, passed after the restoration of Charles II in 1660. Their object was to ensure the supremacy of the Anglican Church and the humiliation of the Puritans, and to correct the irregularities which, during the Commonwealth, had crept into the Church.

CLARENS: Village of Switzerland, on Lake Geneva, 3½ m. by rly. S.E. of Vevey. It was immortalised by Rousseau in his *Nouvelle Héloïse*. Byron lived here in 1816.

CLARET (Fr. *clairret*; Lat. *clarus*, clear). Bordeaux wine, made in Gironde, France. It is a light table wine, slightly acid, and containing from 10 p.c. to 14 p.c. of alcohol. Clarets are classified under five main heads or *crus* (growths).

CLARINET OR **CLARINET**. Wood wind instrument of cylindrical form with bell-shaped lower end, and having single reeds. The clarinet acts like a "stopped" pipe, and its compass is an octave lower than an open pipe of similar length (e.g. hautboy). There are three varieties, in C, A and B flat. The tone of the clarinet family is sombre and full below, mellow and rich in the middle, and brilliant in the upper notes. The B flat clarinet, used in numbers, is the chief soprano voice of the full military band. In the orchestra, clarinets are commonly used in pairs, and in varying keys.

CLARION (Ital. *clarino*). Musical instrument. It is a trumpet of high range, hence the use of the word for a loud clear call. It also means an organ reed-stop of 4 ft. pitch.

CLARK, FRANCIS EDWARD (1851-1927). Founder of the Christian Endeavour movement. Born at Aylmer, Quebec, Sept. 12, 1851, he entered the Congregational ministry. Clark organized the Society of Christian Endeavour at Portland, Maine, 1881, and was president of the United Society of Christian Endeavour from 1887, and of the World's Christian Endeavour Union from 1895. He died May 25, 1927. See *Christian Endeavour*.

CLARKE, CHARLES COWDEN (1787-1877). British author. Born at Enfield, Dec. 15, 1787, he became a bookseller and then a music publisher. In 1828 he married Mary Victoria Novello (1809-97). He won fame by lecturing on Shakespeare and other dramatists, and she by her *Concordance to Shakespeare's Plays*, 1845. Clarke died March 18, 1877, and his widow on Jan. 12, 1897.

CLARKE, SIR EDWARD GEORGE (b. 1841). British lawyer. Born in London, Feb. 15, 1841, he was the son of a jeweller. Called to the bar in 1859, his defence of one of the accused in the Penge case in 1877 placed him in the front rank as an advocate. In 1880 he was elected Conservative M.P. for Southwark at a by-election, and 1880-1900 was M.P. for Plymouth; in 1900, partly owing to his opposition to the S. African war, he retired from Parliament.

Clark was solicitor-general 1886-92, but held no other political office. In Jan.-June, 1906 he was M.P. for the city of London. He was knighted in 1886. Consult his *The Story of My Life*, 1918.

Sir Edward Clarke, British lawyer
Elliott & Fry

CLARKSON, THOMAS (1760-1846). English anti-slavery advocate. He was born Mar. 28, 1760, and educated at Cambridge. His preparation for the prize Latin essay of 1785, on the question whether it is right to make men slaves against their will, determined his future career. Having gained the support of William Wilberforce and other philanthropists, he travelled up and down the country collecting evidence for a parliamentary committee. He died Sept. 26, 1846.

CLARY (*Salvia selarea*). Perennial herb of the order Labiatae. A native of S. Europe, the lower leaves are stalked, heart-shaped, and wrinkled; the upper ones are stalkless and clasp the square stem. Above these are bright red bracts which set off the bluish-white flowers. Another European species (*S. verbenacea*) is known as wild clary. Its flowers are blue-purple.

CLAUDIANUS (c. A.D. 400), more commonly known as Claudian. Last of the Latin poets. Born probably at Alexandria, he came to Rome about 395. His most considerable work is an unfinished epic, *On the Rape of Proserpine*. He also wrote panegyrics on Stilicho and Honorius. His work is erudite, but is lacking in true poetic feeling. Consult Claudian, the Last of the Roman Poets, T. Hodgkin, 1875.

CLAUDIUS I (10 B.C.-A.D. 54). Roman emperor. A son of Drusus and nephew of Tiberius, born at Lugdunum (Lyons), Aug. 1,

Claudius I, Roman Emperor
Bust in Vatican Museum, Rome

10 B.C., he was regarded as of somewhat weak intellect. He was 50 years of age when the soldiery acclaimed him emperor after the murder of Caligula. At first he ruled wisely, but fell under the influence of his unscrupulous freedmen Pallas and Narcissus, who with his wife, Messalina, became the real rulers. Messalina was put to death in 48. His fourth wife, Agrippina, was strongly suspected of having poisoned him with a dish of mushrooms. Claudius was a man of literary tastes and composed several historical works. His name was also associated with the construction of the great Claudian aqueduct.

Claudius II (d. A.D. 270), the Roman emperor surnamed Gothicus, was of Illyrian origin, and succeeded Gallienus as emperor, 268. He died at Sirmium in Pannonia, 270.

CLAUDIUS, APPIUS. Roman general and statesman, called Cæcus, because he became blind in his old age. During his censorship in 312 B.C. he began the Appian Way (q.v.) and constructed the first aqueduct. He was considered by the ancients the founder of jurisprudence and grammar.

Another Appius Claudius was one of the decemvirs of ancient Rome. His tyrannical behaviour made him generally hated, and public indignation reached its height when he abducted Virginia, daughter of the centurion Virginius, and the father killed his daughter to save her from dishonour. The incident is described in Macaulay's *Lays of Ancient Rome*.

CLAUSEN, SIR GEORGE (b. 1852). British painter. Born in London of Danish parents, he was elected A.R.A. in 1895, and R.A. in 1903. Two of his pictures, *The Girl at the Gate* and *The Gleaners Returning*, were pur-

chased by the Chantrey Bequest and are in the Tate Gallery. He is the author of *Six Lectures on Painting*, 1904; and *Aims and Ideals in Art*, 1906. He was knighted in 1927.

Sir George Clausen
British painter

CLAUSEWITZ, KARL VON (1780-1831). Prussian soldier and writer. Born at Burg, June 1, 1780, he entered the Prussian army. After seeing active service in the Prussian and Russian armies, in 1818 he became director of the War Academy at Berlin. In 1830 he was made inspector of artillery. He died of cholera at Breslau, Nov. 18, 1831.

The remarkable reputation of Clausewitz rests on his teaching and writing on war, and more than anyone else he was the creator of the Prussian and the later German army.

CLAUSTROPHOBIA (Lat. *claustrum*, bar, barrier; Gr. *phobos*, fear). Name given to a morbid fear of being in a confined space, such as a room or railway carriage. This is a symptom frequently associated with obsessional neurosis or neurasthenia (q.v.).

Clavichord. Example from the Wit Collection at Leipzig

CLAVICHORD (Lat. *clavis*, key; *chorda*, string). Obsolete keyed instrument of simple mechanism, and a predecessor of the piano-forte. In it the strings, of brass or steel wire, were struck from below by a metal "tangent," which not only set the strings in vibration, but also stopped off the length required. It was a favourite with composers, notably J. S. Bach.

CLAVICLE (Lat. *clavicula*, little key). Name for the collar-bone. This extends from the sternum or breast-bone to the point of the shoulder, where it articulates with the acromion process of the scapula or shoulder-blade. Fracture of the clavicle is common, the break being most often at the outer end of the middle third of the bone. Treatment consists in bringing the broken ends of the bone into apposition, and securing the arm and shoulder firmly in their normal position by bandages.

Clavicle. Sectional diagram showing a fracture of the collar-bone

CLAVIE, BURNING THE. Ancient New Year's Eve (Old Style) custom, observed notably at Burghhead on the Moray Firth, Scotland. The clavie—a tar-barrel in which is a 4 ft. long fir pole surmounted with barrel staves—is lighted and carried round the fish-curing yards and then deposited on a hilltop stone receptacle prepared for it.

CLAW. Hard, horny appendage at the extremity of the toes in many mammals, birds, and reptiles. It corresponds to the nails in the primates and the hoofs in the ungulates. As a rule the claws are sharp in climbing

animals and blunt in those that spend their time on the ground. The pincers of the crustaceans differ widely from true claws.

CLAY (old. Eng. clæg). Term denoting earths which are plastic when wet, and become stone-like if baked to redness. They are formed of small particles derived from the decomposition of various rocks, chiefly felspathic, and emit a characteristic odour. True clay substance, composed essentially of hydrated aluminium silicates, is in nature invariably mixed with impurities. When ordinary clay is fired to 300° C. or more it can never become plastic again. Boulder clay is the result of glacial drift. Most brick-clays contain chalk or sand. When more than 5 p.e. of lime is present it becomes marl; when mixed with sand it is called loam. Loess is a calcareous and sandy clay deposited by wind which covers large areas in central Europe.

Clay slate is a rock, composed primarily of compact clay, changed by the action of heat or pressure or both to a hard fissile mass. It is developed extensively around granite masses in Cornwall and Devon, where it is known locally as killas. See China Clay.

CLAY, HENRY (1777-1852). American statesman. He was born in Virginia, April 12, 1777, and became speaker of the lower house of Congress in 1811. The pressure he brought to bear upon President Madison went far to force him into the declaration of war against Great Britain in 1812. Three years later Clay was one of the commissioners who arranged the terms of the treaty of Ghent which closed the war. He was an unsuccessful candidate for the presidency in 1824, 1832 and again in 1844. Clay died at Washington, June 29, 1852.

Henry Clay,
American statesman

CLAY CROSS. Urban district and market town of Derbyshire. It lies in the centre of a large coal and iron district, 5 m. S. of Chesterfield on the L.M.S. Rly. Market day, Sat. Pop. 8,685.

CLAYMORE (Gael. claidheamh mor, great sword). Broad sword, two-edged and sometimes requiring two hands to wield it, used by the Scottish Highlanders. The name is also applied to the basket-hilted broad sword introduced in the 16th century and carried by officers of Highland regiments. See Sword.

CLAYTON-LE-MOORS. Urban district of Lancashire, England. On the Leeds and Liverpool Canal, 5½ m. N.E. of Blackburn, it has calico-printing works and cotton mills. Its station is Accrington on the L.M.S. Rly. Pop. 8,756.

CLEARING HOUSE. Institution where companies and firms in the same line of business, having numerous and complicated transactions with each other, mutually adjust or clear their accounts. Thus, by setting off one against another, and paying only the balance, much labour is saved. The most important are the various clearing houses maintained by bankers and rly. companies in London. See Bank.

CLEARING NUT (Strychnos S. Clare, Lam.). Seed of a tree of the order Loganiaceae. The fruit consists of a single seed from a pulpy pulp. The natives of India use

the seed for rhnhing the inside of their earthenware pots before filling them with water from pond or stream. The impurities in the water sink to the bottom as a result of the albumen and casein contained in the seed.

Clearwing, the Lunar Hornet moth

CLEARWING MOTH. Name of a group of moths, somewhat resembling Hymenoptera and Diptera. Their wings are more or less destitute of scales and semi-transparent. Fourteen species are recognized as British. See Moth.

CLEAT. Nautical term for a double hook used for making ropes fast without tying them by a knot. They are of different shapes, and are placed in various parts of a boat. A thumb cleat is a small piece of wood affixed to a spar so that a rope can be bent around it. A comb cleat resembles a small double-arched bridge.

Cleat. Comb cleat for making ropes fast without using a knot

CLEATOR MOOR. Urban district and market town of Cumberland. It stands on the Ehen, 4 m. S.E. of Whitehaven, on the L.M.S. Rly., in a coal and iron mining district. Market day, Sat. Pop. 8,299.

CLEAVERS or GOOSE GRASS (*Galium aparine*). Annual wayside weed of the order Rubiaceae. A native of Europe, N. Africa, Asia, and the temperate parts of N. and S. America, it has a slender brittle stem, 6 ft. or 7 ft. in length, whose four angles are covered with hooks, as are the lance-shaped leaves. The small white flowers are succeeded by bristly purple fruits, which cling to clothing or the fur of quadrupeds.

Cleavers or Goose Grass

CLECKHEATON. Market town of Yorkshire (W.R.). Formerly an urban district, in 1915 it was formed, with Gomersal and Liversedge, into the urban dist. of Spennborough. It is 5½ m. S.E. of Bradford on the L.N.E. and L.M.S. Rlys. It has woollen, flannel, and machinery manufactures. Market day, Sat. Pop. 12,537.

CLEE. Chain of hills in Shropshire, extending 10 m. in a N.E. direction from Ludlow. The principal summits are Brown Clee (1,790 ft.) and Titterstone Clee (1,749 ft.). Dhu stone, locally Jewstone, a black, igneous paving rock, is quarried, and coal is mined.

CLEETHORPES. Urban district and watering place of Lincolnshire. It stands on the Humber estuary, 3 m. S.E. of Grimsby, on the L.N.E. Rly. There is a wireless station. At the village of Clee, 1 m. to the W., is a church dating in part from Saxon times. It is built of rubble, with large quoins at the angles, and has a Norman nave. Pop. 31,000.

CLEF (Lat. clavis, key). Sign of the pitch of musical notes. There are three clefs in use

—namely, G or G clef, F or C clef,

C or Bass clef.

The C clef is used in various positions for medium voices or instruments. The clefs are related in pitch as shown. See Stave.

CLEMATIS (Gr. klematis, brushwood). Hardy and half-hardy climbing plant of the order Ranunculaceae. Many species are

Clematis,
Garden variety

natives of Britain. About 100 sorts are in cultivation, and the flowers are white, pink, claret, purple, and yellow. Clematis vitalba, or Traveller's Joy, is a native of British hedgerows. C. viticella is the parent of most of the climbing Clematises seen in gardens, and it is easy of cultivation.

CLEMENCEAU, GEORGES EUGÈNE BENJAMIN (1841-1929). French statesman. He was born at Château de l'Auhraie, Fesle, in

Georges Clemenceau,
French statesman
Henri Manuel

La Vendée, Sept. 28, 1841. The son of a doctor, he was educated at Nantes and in Paris. Between 1866-70 he studied social conditions in England and the U.S.A., where he married an American lady, Mary Plummer. After some years' experience in local government, in Feb., 1876, he was returned to the French Chamber, where he won the nickname of The Tiger by overthrowing ministry after ministry. Rejected by the electorate in Aug., 1893, he spent more than nine years in journalistic and literary work, gaining prominence by his efforts to secure a fair trial for Alfred Dreyfus.

Clemenceau became a senator for the department of the Var, joined the cabinet of M. Sarrien, March, 1906, as minister of the interior, and succeeded him on Oct. 23, as premier. Having brought about the separation of Church and State and introduced valuable social reforms, he resigned July 20, 1909. A keen critic of successive governments during the opening years of the Great War, he again became premier with the inflexible resolve to secure victory for the Allies, in Nov., 1917. He secured the appointment of Marshal Foch as generalissimo, and presided over the Peace Conference in Paris.

Clemenceau was elected to the French Academy, and in the French Senate, Nov., 1918, a bill was passed providing that in every mairie in France there should be engraved on the walls a statement that, together with the armies of France and Marshal Foch, "citizen Georges Clemenceau had deserved well of his country." Resigning office in Jan., 1920, he was succeeded by M. Millerand; was nominated for the presidency in succession to M. Poincaré, but withdrew his candidature. He died Nov. 24, 1929, and was buried in his native place.

As a journalist he was no less conspicuous than as politician. He founded La Justice, Le Bloc, L'Aurore, and L'Homme Libre, for some time during the war called L'Homme Enchaîné, and contributed to many journals. An excellent swordsman and a good shot, he fought several duels.

His novel Les Plus Forts (1898) was published in English as The Strongest, 1920, and in that year he published Au pied du Sinaï. Shortly before his death he published In the Evening of My Thought, and in 1930 his Grandeur and Misery of Victory, first published serially in The Daily Telegraph, appeared. Consult The Tiger, George Adam, 1929; Clemenceau, Jean Martet, 1930.

Clemens, SAMUEL LANGHORNE (1835-1910). Real name of the American author better known as Mark Twain (q.v.).

CLEMENT. Name borne by fourteen regular popes and two anti-popes, the latter calling themselves Clement VII and VIII. Except Clement I, known as Clement of Rome (q.v.), the first three were not notable.

Clement VII, pope from 1523-34, was noted for his policy of procrastination in connexion with the divorce of Henry VIII of England. Clement IX, an Italian, pope from 1667-69, arranged a compromise with the Jansenists, brought about the peace of Aix-la-Chapelle between France and Spain, 1668, and sought to defend Crete against the Turks. Clement XII, a Florentine (1730-40), issued the first papal decree against freemasonry. The reign of Clement XIII, pope from 1758-69, was occupied in efforts to defend the Jesuits.

CLEMENT OF ROME (d. c. A.D. 99). Bishop of Rome. As Clement I he is third pope in the list of Roman pontiffs after S. Peter. First mentioned in the 2nd century, Hegesippus (writing about A.D. 160) makes A.D. 90-99 the period of his reign. One of the 4th century legends makes Clement a martyr of the Crimea, where, attached to an anchor, he was thrown into the sea. S. Cyril, when in the Crimea c. A.D. 865, found some bones and an anchor in a mound which were brought to Rome and buried in the basilica of S. Clement. The anchor is the common emblem of S. Clement, who has always been venerated as a martyr, his festival being kept on Nov. 23.

CLEMENT'S INN. One of the old London Chanecery Inns. It was situated between S. Clement Danes Church, Strand, whence its name, and Clare Market. Formerly attached to the Inner Temple, its original buildings no longer exist, but its name survives in chambers let to the general public. Its history goes back to the 15th century, but with the other inns of chanecery its existence as a legal society ended in the 18th century.

CLEON (d. 422 B.C.). Athenian demagogue at the time of the Peloponnesian War. A tanner by profession, he opposed Pericles, and afterwards became leader of the party opposed to peace with Sparta. He was chiefly responsible for the atrocious decree to put the whole of the adult male population of Mitylene to death when that town revolted from Athens in 428. In 422 Cleon was defeated by Brasidas in a battle near Amphipolis in which both commanders were slain.

CLEOPATRA (69-30 B.C.). Queen of Egypt. On the death of her father, Ptolemy XIII Auletes, 51 B.C., she was appointed joint ruler with her younger brother. Three years later she was ousted from the throne, but was reinstated by the intervention of Julius Caesar. For a time the great Roman yielded to her fascinations, and she is believed to have borne him a son named Caesarion. In 41, when Mark Antony and Octavian were partitioning the Roman world between them, Cleopatra visited Antony, who fell under her spell. In 32 Octavian declared war upon Cleopatra. Antony met Octavian's fleet, commanded by Agrippa, at the battle of Actium (Sept. 2, 31). During the battle Cleopatra was seized with panic and took to flight; the lover left the fight to follow his mistress, and Agrippa's victory was

complete. Antony, on a report that she was dead, slew himself, and Cleopatra died by her own hand, according to an improbable

Cleopatra's Needle, Victoria Embankment, London

story, from the bite of an asp. The name Cleopatra's Needles is given to two red granite obelisks erected by Thothmes III at Heliopolis in Egypt (about 1475 B.C.), and removed to the Caesareum at Alexandria under Augustus (12 B.C.). One—68½ ft. high and weighing 108 tons—was in 1878 brought to London and placed on the Victoria Embankment. The other—69½ ft. high and weighing 200 tons—was set up in Central Park, New York (1879). See Obelisk.

CLEPSYDRA (Gr. kleptin, to steal; hydor, water). Instrument for measuring the passage of time by the regulated flow of water.

The time was noted by the descent or ascent of a float on the water, on a dial with a hand governed by the float. The clepsydra was used in the Athenian law courts to limit the speaker's time, and was introduced into Rome in 159 B.C.

CLERESTORY or CLEARSTORY. That part of a structure which is above and "clear of" the roofs of other parts and has windows in its walls. A clerestory is thus the antithesis to a blind storey or triforium. In church architecture it constitutes the upper division of the nave, choir, and transept. The type of window varies from the circular to the lancet.

CLERK, SIR DUGALD (b. 1854). British engineer. Born at Glasgow, the son of a machinist, he was trained as a civil engineer. He was director of engineering research to the Admiralty, and filled other positions during the Great War. Inventor of the Clerk cycle

Clerestory. Two examples of clerestory windows. See above

gas engine, he was knighted in 1917.

CLERKENWELL. District of London, within the met. bor. of Finsbury. Named from a holy well where the parish clerks

performed miracle plays, it grew up round the priory of S. John of Jerusalem, of which the gateway remains. S. John's Church has a crypt dating from 1140. Northampton Institute, built in 1897, is one of the largest polytechnics in London. Finsbury Town Hall and public library and the offices of the Metropolitan Water Board are in Clerkenwell. Mount Pleasant, the headquarters of the parcel post, occupies the site of the house of correction. Clerkenwell is a centre of the watch-making industry. Pop. 57,121.

CLERK-MAXWELL, JAMES (1831-79). British physicist. Born in Edinburgh, June 13, 1831, he was educated at Edinburgh and Trinity College, Cam-

bridge. When he returned to Cambridge in 1871 as first professor of experimental physics, he was recognized as one of the greatest authorities on pure physics. A paper read before the Cambridge Philosophical Society in Dec., 1855, foreshadowed his great work, *A Treatise on Electricity and Magnetism*, 1873. Clerk-Maxwell brought the kinetic theory of gases to a point at which it remains identified with his name. His theoretical work on electric waves suggested the experiments which have been since developed into a system of wireless telegraphy. He died at Cambridge, Nov. 5, 1879.

James Clerk-Maxwell, British physicist

CLERMONT-FERRAND. City of France. Near the Allier river, 112 m. W. of Lyons, overlooked by the Puy-de-Dôme mountain, it was originally two towns, Clermont and Montferrand. It is an important junction, a market for the produce of Auvergne, and has iron and steel industries. The cathedral of Notre Dame dates in part from the 13th century. The Romanesque church of Notre Dame du Port, founded in the 6th century and restored in the 12th, has a long vestibule in front, fine sculptured capitals, and a black image of the Virgin. There is a university and several colleges.

Clermont was the Clarus Mons of the Romans. Several ecclesiastical councils were held here, notably that at which Urban II ordered the first crusade in 1095. Pop. 111,701.

CLEDON. Urban dist. and seaside resort of Somerset. It is on the Bristol Channel, 15 m. W. of Bristol by the G.W.R. Cledon Court, a 14th century mansion, was the home of the Hallams. Henry Hallam, the historian, and his son Arthur, Tennyson's friend, were buried at S. Andrew's Church. Market day, Wed. Pop. 6,503.

CLEVELAND. Moorland district of Yorkshire (N.R.), extending from Yarm on the Tees to Whitby. It gives name to

a celebrated breed of horses, but is chiefly important for its deposits of ironstone, which supply the iron-working industry of Middlesbrough. Cleveland Dyke, a notable relic of volcanic activity, crosses the district.

Cleveland, Ohio. The public square of this American city on Lake Erie

CLEVELAND. Largest city of Ohio, U.S.A., and county seat of Cuyahoga county. At the mouth of the river Cuyahoga, on the S.

Cleopatra. Figure and seal from relief sculpture at Denderah, Egypt

shore of Lake Erie, 375 m. E. of Chicago, known from its broad, tree-lined streets as the "Forest City," it is one of the leading ports on the Great Lakes and an important rly. centre and market for ore and fresh-water fish. Notable buildings include the city hall, county court house, museum of art, public auditorium and public library, federal building, and federal reserve bank. It is the seat of the Western Reserve University. Cleveland has large iron and steel works, oil refineries, and motor vehicle works. Pop. 922,864.

CLEVELAND, BARBARA VILLIERS, DUCHESS OF (1641-1709). Mistress of Charles II of England. Daughter of William Villiers, 2nd Viscount Grandison, in 1659 she married Roger Palmer, who was created earl of Castlemaine, 1661. She became intimate with Charles II not later than May, 1660, and for the next ten years her influence with the king was considerable. Barbara was created duchess of Cleveland in 1670, but lost her lover's favour about 1674. She died at Chiswick, Oct. 9,

Barbara Villiers, Duchess of Cleveland
After 1674

1709. By Charles who was the founder of the Fitzroy family, and her sons became dukes of Cleveland, Grafton, and Northumberland.

On the death of the duchess, her son Charles Fitzroy became duke of Cleveland. The title became extinct in 1774 on the death of Charles's son William. In 1833 William Henry Vane, Baron Barnard, was made duke of Cleveland, he being descended from a daughter of the 1st duke. The title again became extinct when the 4th duke died in 1891.

CLEVELAND, JOHN (1613-58). An English poet. He was educated at Christ's College, Cambridge, afterwards becoming a fellow of S. John's. He was a considerable scholar, and soon, the Civil War looming, became known as a follower of the king. He left Cambridge for Oxford and was judge-advocate of the royalist forces at Nevark in 1646. He lived a wandering life for the next nine years, and, imprisoned for three months, 1655-56, was released on a personal appeal to Cromwell. He died in Gray's Inn, April 29, 1658. Of his satires and poems, *The Rebel Scot*, a fierce and stinging satire on the surrender of Charles I, is best known.

CLEVELAND, STEPHEN GROVER (1837-1908). President of the U.S.A., 1885-89 and 1893-97. Born at Caldwell, New Jersey, March 18, 1837, he was called to the bar in 1859. In 1884 Cleveland was selected by the Democrats as their candidate for the presidency. With James G. Blaine as his opponent, he won after a violent contest, and set to work to carry out his promise to reform the civil service. He unsuccessfully advocated a reduction of the duties on raw material.

S. Grover Cleveland,
American president

tariff and of the duties on raw material. Defeated in 1888 by Benjamin Harrison, but re-elected in 1892, against the wishes of many of his own party, he forced the senate to repeal Sherman's silver-purchasing Act, and withdrew the treaty which sanctioned the annexation of Hawaii. In 1897, on the conclusion of his term of office, he retired from public life and settled at Princeton, where he died, June 24, 1908.

CLEW. The after lower corner of a sail, the forward corner being the weather clew. Clew garnets are ropes used to pull sails up to the yards so that they may be furled. Clewing up is pulling sails up by these ropes.

CLEWER. Two parishes, Within and Without, of Berkshire, forming part of the borough of New Windsor. Here is the Anglican sisterhood the Community of S. John the Baptist—established in 1849. Under its direction are a number of schools and colleges, orphanages, hospitals, etc.

CLICK BEETLE. Insect of the family Elateridae. They are often known as skip-jacks, from their ability to right themselves, when turned on their backs, by springing into the air. In doing this they make a slight clicking sound, hence their popular name. Their larvae are wire-worms. See Beetle.

CLIFDEN. Seaport and market town of Galway, Irish Free State. On Ardber Bay, 50 m. by rly. N.W. of Galway on the Gt. Southern Rlys., it is a wireless station.

The Irish title of Viscount Clifden has been borne by the family of Agar since 1781. The 5th viscount, who died without sons in 1899, was succeeded by a kinsman, Thomas C. Agar-Robartes, 2nd Baron Robartes, who became the 6th viscount. He had inherited the Cornish estates of his forebears, the earls of Radnor. The viscount's chief seat is Lanhedrock, Bodmin. His eldest son, Thomas Charles Agar-Robartes, M.P., was killed in action in the Great War, 1915.

CLIFFORD. Name of an English family, long powerful in the north of England, and now represented by Lord de Clifford and Lord Clifford of Chudleigh. The name is derived from the village of that name in Herefordshire. The barony of De Clifford, one of the oldest in England, after being held by the earls of Cumberland, passed through the female line to the Tuftons, the Southwells, and finally to the Russells, its present holders.

The British title baron Clifford of Chudleigh has been held since 1672 by the family of Clifford. It was conferred on Sir Thomas Clifford, who belonged to the Devonshire branch of the family, and from him the present baron is descended. The first baron became one of the confidential advisers of Charles II, and was one of the five who made up the Cabal. The family has always been Roman Catholic, and its seat is Ugbrooke Park, in Devonshire.

CLIFFORD, JOHN (1836-1923). British Nonconformist divine. He was born at Sawley, Derbyshire, Oct. 16, 1836. After some years in business, he completed his education at London University. From 1858-1915 he was minister at the Baptist Chapel, Praed Street, Paddington, and at Westbourne Park. A social reformer and Liberal, he was twice president of the Baptist Union, 1888-89; of the Baptist World Alliance, 1905-11. He was a

John Clifford,
British divine
Window & Grove

recognized leader of militant Nonconformity, championing the passive resistance movement. He died Nov. 20, 1923.

CLIFFORD, WILLIAM KINGDON (1845-79). British mathematician. Born at Exeter, May 4, 1845, he was educated at Trinity College, Cambridge, where he was second wrangler in 1867. A brilliant mathematician, his career was cut short by death, March 3, 1879, after he had been eight years professor at University College, London.

His wife, Lucy Clifford, was well-known as a novelist, writing under the name of Mrs. W. K.

William K. Clifford,
British mathematician
Emery Walker

Clifford. In 1883 she published *Anyhow Stories*; and in 1885 her first novel, *Mrs. Keith's Crime*, published anonymously, proved a distinct success. Her later volumes include *Aunt Anne*, 1892; *A Flash of Summer*, 1895; *A Woman Alone*, 1901; *Three Plays*, 1909; *Sir George's Objection*, 1910; *The House in Marylebone*, 1917; *Miss Fingal*, 1919. She also wrote several plays, including *The Searchlight*, 1913; *A Woman Alone*, 1914; and *Two's Company*, 1915.

CLIFFORD'S INN. Most ancient of the London inns of ebancery. At the rear of S. Dunstan's Church, it has entrances from

Clifford's Inn, London. The old Hall of the Inn, dating from 1767

Fleet Street and Fetter Lane. The message was granted to Robert de Clifford, 5th baron, 1310, was leased to law students by his widow in 1344, and bought by the Society of Clifford's Ian in 1618 for £600. The society was dissolved in 1902, and the property sold in 1903 to W. Willett, the London builder, for £100,000, of which £60,000 was devoted to legal education. The present hall, which dates from 1767, was saved from destruction by the Imperial Society of Knights Bachelor.

CLIFTON. Watering-place of Gloucestershire, a W. suburb of Bristol. It lies on the river Avon, which here passes through a gorge.

Brunel's suspension bridge (constructed partly of material from old Hungerford Bridge, Charing Cross, London) which spans the Avon has a length of 702 ft. and is 275 ft. above low water. It was opened in 1864. For upwards of 400 years Clifton was celebrated for its hot springs (Hotwells), but they no longer exist. Clifton has been the seat of a Roman Catholic bishopric since 1850. A notable feature is the Rocks Railway. Clifton Down and Durdham Down are public property. See Bristol.

The public school for boys, Clifton College, was founded by private persons in 1862, and incorporated by charter in 1877.

CLIMATE (Gr. klima, slope, clime). Average weather, or the total of the average meteorological phenomena characteristic of a given area. The meteorological elements which are observed are the temperature, pressure of the atmosphere, the quantity of rainfall, the direction and force of the winds, the duration of sunlight, and the proportion of the sky which is covered with cloud. The values obtained by the observers at stated times are averaged and form the basic material with which the climatologist deals.

The simple climatic elements refer to winds, rain, and sunlight. The consideration of these brings out the effect of variation in latitude: from the equator polewards a traveller journeys through a succession of climates which may be summarised thus: (1) trade winds: heavy tropical constant rains, small quantities of sunshine: on the polar side of this belt

Clifton suspension bridge, which crosses the gorge of the Avon

the rains become summer rains only and the sunshine increases; (2) the belt of calms: light summer rains or no rains at all, the sunniest areas in the world; (3) westerly winds: at first winter rains, then rain at all seasons, with decreasing hours of sunshine; (4) circumpolar winds without definite character. snow and little sunshine.

Recent work in meteorology has added considerably to our information concerning the upper layers of the atmosphere, and has brought to light new facts, the chief of which are: that above an elevation of about 30,000 ft. the temperature is constant at approximately -53°C. ; that clouds do not occur above this elevation; and that the main causes of weather changes are in the layers of the atmosphere at about this level.

CLIMBING BOY. Name given to small boys formerly employed to climb up chimneys and sweep them. In Great Britain it is illegal for a child, if under 10, to be employed by a sweep; if under 16, to be apprenticed to a sweep; and if under 21, to climb a chimney or flue. The climbing boy figures in Charles Kingsley's *Water Babies*.

CLIMBING PERCH (*Anabas scandens*) Popular name for an Indian fresh-water fish.

It is about 8 ins. long, and has the power of travelling a considerable distance over land, and according to reliable evidence is also able to climb trees.

Climbing Perch. An Indian fish which climbs the banks of streams. See Perch.

CLINIC (Gr. *klinikos*, connected with a bed). Strictly, a class or demonstration for medical students held at the bedside of the patient; also applied to an institution for medical treatment.

Clinical medicine is that branch which deals directly with the treatment of patients at the bedside. It is thus distinguished, for example, from preventive medicine, which aims at the prevention of disease. See Hospital.

CLINKER OR **CLINCHER**. Word used for a boat so constructed that the lower edges of the planks of which the hull is made overlap each other. Most small boats are built in this manner. Occasionally one finds them diagonally built, i.e. constructed of double planking crossed diagonally.

CLINOMETER. Instrument used in surveying to measure angles of inclination. In the simplest form a plumb-line is fitted with a pointer which moves over a graduated scale of angles. The instrument is mounted on a flat base which lies along the slope to be measured, and the angle is read off from the scale.

CLINTON, BARON. English title borne since 1299 by several families, and now by that of Hepburn-Stuart-Forbes-Trefusis. In 1794, after an abeyance, it was allowed to Robert George William Trefusis, who became the 17th baron. He was a descendant of the 12th baron, and his descendants still hold the barony. In 1867 the 20th baron took the additional names of Hepburn-Stuart-Forbes. The family estates are in Devonshire.

Sir Henry Clinton
British soldier
From an engraving by Davidoff

Sir Henry Clinton (c. 1738-95). British soldier, was the son of the Hon. George Clinton, governor of New York, 1741-51. He came to England, 1761, and he distinguished himself in the Seven Years' War. On the outbreak of

the War of Independence, 1775, he returned to America, and in 1778 succeeded Howe as commander-in-chief of the expedition which captured Charlestown, 1780; but the disastrous surrender of Cornwallis at Yorktown in 1781 caused him to resign. Clinton was governor of Gibraltar, 1794-1795.

His son, Sir Henry Clinton the younger (1771-1829), served in the Peninsular War, and commanded the 3rd division at the battle of Waterloo.

CLIO OR **CLEIO** (Gr. *klein*, to celebrate). In Greek mythology, one of the nine Muses. The province of epic poetry was at first assigned to her; later, she was commonly known as the muse of history. She is generally represented with a papyrus roll in her hand.

Clío, the muse of history in Greek mythology. From a statue in the Vatican.

CLIPPER. Sharp-bowed vessel built for quick sailing. The name was first applied to the Yankee privateers known as Baltimore clippers, that came into use during the American wars. Clippers were employed later in carrying tea. Among famous clippers were the *Cutty Sark*, *Ganges*, *Lochce*.

CLITHEROE. Borough and market town of Lancashire. On the Ribble, at the base of Pendle Hill, 35 m. N. of Manchester on the L.M.S. Rly., it has cotton industries and lime and cement works. The grammar school was founded in 1554: the ancient church of S. Mary Magdalene has been reconstructed. There are remains of the 11th century castle of the De Lacys. The honour of Clitheroe is part of the duchy of Lancaster. Market day, Sat. Pop. 12,204.

CLIVE, CATHERINE OR KITTY (1711-85). British actress. She was born in London, the daughter of William Raftor, an Irish lawyer of good family. Gifted with a sprightly humour and possessing a fine, well-trained voice, she made her first appearance at Drury Lane in 1728 as a singing page in Nathaniel Lee's tragedy of *Mithridates*. In 1731 she married George Clive, a barrister, and from 1746-69 she was a member of Garrick's company. In 1769 she retired from the stage, and until

Kitty Clive,
British actress
After Hatches

her death, Dec. 6, 1785, lived near her friend, Horace Walpole, at Twickenham.

CLIVE, ROBERT CLIVE, LORD (1725-74). British soldier and administrator. Born Sept. 29, 1725, near Market Drayton, he went to India as a writer in the service of the East India Company. The rivalry between the English and the French was just beginning, and Clive, having taken part as a volunteer in the fighting, received his commission as an ensign in 1747. He scored a victory over the French leader, Duplex, by a sudden dash upon Arcot, the capital of the Carnatic, which with only a

Lord Clive.

After a painting in Government House, Calcutta

small force he seized and occupied (Aug. 31, 1751). He held at bay for seven weeks an army of 10,000 men, sent to recapture the place, then sallied out and routed the enemy, a victory which turned the tide of war.

Clive came home in 1753, returning to India as a lieutenant-colonel in 1755. His victory over the nabab of Bengal at Plassey (June 23, 1757) avenged the outrage known as the Black Hole of Calcutta and made Bengal, in effect, a British province. He went back to England in 1760, was elected M.P. for Shrewsbury, and made an Irish Peer in 1762. Knighted in 1764, in 1765 he returned to India, finally leaving it in 1767. After his return, having been fiercely attacked in parliament and in the press, and troubled with ill-health and melancholia, he died by his own hand, Nov. 22, 1774.

CLIVEDEN. Seat of Lord Astor in Buckinghamshire. It is charmingly situated among rocks and hanging woods on the Thames, 3 m. N.E. of Maidenhead and close to Dropmore. Lord Astor bought it from the duke of Westminster.

CLOACA (*cluere*, to cleanse). Latin word for a sewer. The system of sewers in ancient Rome was wonderfully complete, the largest

Clipper. The *Teapung*, one of the first clippers in the tea-carrying trade from China to England.

and most notable being the *Cloaca Maxima*, 12 ft. high and 10½ ft. wide, and nearly half a mile in length. It still serves its original purpose, and is generally in an excellent state of preservation. These sewers were probably constructed during the regal period. In republican times they were under the supervision of the censors, but during the empire under that of a special board of officials.

CLOCK.

Mechanical contrivance for measuring time by means of a regulated motion. The fundamental time-measure is afforded most obviously by the sun's motion, as shown on a sun-dial. The desire to measure the hours after sunset led to the introduction of mechanical devices. Among the ancient Egyptians, Greeks, and Romans the water clock, or *clepsydra* (q.v.), was used. The first clocks were made in the 13th century. They were as a rule large "turret clocks"; the dials had no minute hands.

Cloaca. One exit of the *Cloaca Maxima*, a 6th cent. B.C. Roman sewer

The essential features of a modern clock are the driving power and the escapement. The driving power in large clocks is a weight attached to a rope coiled over a barrel. The escapement is a rocking part which clicks in and out of a toothed wheel, allowing the weight to fall slowly, and this moves a train of wheels, which drives the clock bands.

A clock jack is an automaton which strikes a bell on the outside of a clock at regular intervals. Jack the Smiter, an oaken effigy, mounted in Southwold Church in the 15th century, is extant, but unused. Other famous examples are at Exeter, Norwich, Oxford, Rye, and York.

ELECTRIC CLOCKS. Electricity is applied to the working of clocks in various ways. Self-wound clocks are independent clocks kept in motion by electric power, or by the influence of magnetic attraction on the pendulum or balance wheel. Electrically synchronised clocks are independent as regards motive power, but are subject to the electrical control of a distant master clock. Electrically operated dials are used in large institutions where it is desirable that all clocks should show the same time without individual adjustment. The master clock, which may be electrical or not, sends an electrical impulse through the system at regular intervals, and the hands of each dial are then moved by a step-by-step magnetic apparatus.

The Clockmakers' Company is one of the London City Livery Companies. It was incorporated in 1631. In 1873 it deposited a collection of ancient clocks, watches, watch movements, etc., together with its library of works on horology and watch-making, in the Guildhall, the collection of the Rev. H. L. Nethropp being added in 1894.

CLODD, EDWARD (1840-1930). British scientist. Born July 1, 1840, Clodd was from 1872 to 1915 secretary of the London Joint Stock Bank. A student of folk-lore and of human origins, he soon became known by his scientific writings, in which he set forth a materialistic conception of the universe. His books include: *The Story of Creation*, 1888; *The Story of Primitive Man*, 1895; *Pioneers of Evolution*, 1897; and *Animism, the Seed of Religion*, 1905. Clodd's *Memories* appeared in 1916, and he died March 16, 1930.

CLOG. Wooden-soled boot, with uppers of leather. The uppers of the clog are cut from stout kip or "split" leather and fastened round the outer edge of the wooden sole by a band of leather or webbing through which tacks are driven. Old boots are largely converted into clogs, the dilapidated inner and outer soles being removed and the leather tops

Clog. Lancashire clog with leather upper

refitted with clog soles. Beech and ash are the woods most in use, the former for soles intended for wear under wet conditions, and ash for dry country wear. In England clogs are worn, but to a diminishing extent, by women mill operatives and the children of the industrial population in Lancashire and Yorkshire, and in certain parts of Wales.

The Clog Dance originated in Lancashire. It is generally performed as a solo. The dancer wears wooden clogs, the quick toe-and-heel tapping providing the rhythm. The American clog dance originated with the negroes.

CLOGHER. Village of Tyrone, Northern Ireland. On the Blackwater river, 80 m. N.W. of Dublin, it is served by the Clogher Valley Light Rly. Formerly an important ecclesiastical city, it has an 18th century cathedral and a bishop's palace. Near the former is a stone, presumed to be the clogher, or "golden stone," after which the village is named. Pop. 200.

Clock. Famous astronomical clock in the cathedral at Strasbourg

CLOISONNÉ (Fr. cloison, partition). A kind of decorated enamel. The design on the porcelain or metal is outlined in metallic bands which are secured to the surface. The spaces between these bands are next filled with enamel powder or paste of the requisite colours, and the whole is melted into glass (vitrified) in the furnace. When the design is engraved or cut in the surface and the depressions are filled with enamel paste and fired, the resulting enamel is known as *champlevé*, a form largely affected in the West for jewelry, but not favoured in Oriental decorative schemes. Cloisonné enamel was famous in ancient Byzantine art, and fine examples are still produced by the Chinese and Japanese.

CLOISTER (Lat. *claustrum*, enclosed place). Square or rectangular covered way of a church or monastery enclosing an open court known as the cloister-garth. In monastic

Cloister. The 12th century cloisters of Fountains Abbey, near Ripon, Yorkshire

establishments the cloister generally formed part of the passage from the church to the chapter house or other adjacent buildings. As such it served as a place of recreation for the monks and was sometimes fitted up with cells or stalls or benches carved out of the walls.

CLONAKILTY. Urban district, market town, and seaport, co. Cork, Irish Free State. It stands on Clonakilty Bay, 33 m. by rly. S.W. of Cork. Market day, Fri. Pop. 2,770.

CLONCURRY, BARON. British and Irish title borne by the family of Lawless. Valentine Frederick, 4th baron (1840-1928), was a famous oarsman, and afterwards a noted shot and a keen horseman. In 1921 he became a senator of the Irish Free State. Cloncurry's sister was Emily Lawless (d. 1913), the novelist. On the death of his brother Frederick (1847-1929) the title became extinct.

There is a little town named Cloncurry in Queensland. Pop. 1,000.

CLONES. Urban district and market town of co. Monaghan, Irish Free State. It is 64½ m. by rly. W.S.W. of Belfast by the G.N.I. rly. There are abbey ruins and a round tower. Market day, Thurs. Pop. 2,365.

CLONMACNOISE. Village of the Irish Free State, famous for its eccles. remains. It is on the Shannon in King's county (Offaly), 8 m. from Athlone. The ruins include the remains of seven churches, two round towers, three crosses, a castle, and a palace. In the Middle Ages Clonmacnoise had an abbey, founded about 540, and one of the most famous of its time.

CLONMEL. Borough, co. town, and holiday resort of co. Tipperary, Irish Free State. It stands at the head of navigation on the Suir, 28 m. N.W. of Waterford, and is an important rly. centre. Market days, Wed. and Sat. Pop. 9,056.

CLOSE. Literally an enclosed place. It is used specially, however, for the precincts of a cathedral or monastery, the part reserved for the use of the clergy and other officials. The word is used for certain private pieces of land and in Scotland for the entry to a building composed of tenement houses.

CLOSE TIME. Period of time in which it is unlawful to take or kill certain kinds of fishes, birds, etc., usually those included in the term game. The object is to protect the animal in question during the breeding season.

In the United Kingdom the close time for partridges is from Feb. 2 to Aug. 31, and for pheasants from Feb. 2 to Sept. 30. The grouse is protected from Dec. 11 to Aug. 11. For nearly all wild birds, notably woodcock, snipe, and quail, there is a close time. Close times, although not legally enforced, are observed in practice for foxes, stags, otters, etc. As regards fish, there is a close time for salmon, this being usually from Sept. 1 to Feb. 1 for nets, and from Nov. 2 to Feb. 1 for rods.

This refers to England and Wales; in Scotland and in Ireland it varies from river to river, but must not be less than 168 days in the year. There is also a close time for trout, char, and other fresh-water fish, and for shell-fish. It is illegal in England and Wales to kill certain game, or to fish with nets, on a Sunday or Christmas Day. See Angling.

CLOSURE (Fr. *clôture*). Closing of debate before all the intending speakers have been heard. This was introduced by Gladstone into the British House of Commons in 1882, when the Irish members were especially obstructive. It permitted a member to move the closure, i.e. that the debate come at once to an end and the question be put to the vote. If a majority of members supported him, and numbered at least 200, the Speaker could forthwith order the vote to be taken. Later the number of necessary members was reduced to 100, and it was decided that a bare majority was sufficient. A more recent development is closure by compartments, which was introduced to prevent the discussion of an excessive number of amendments, and allows the Speaker to select those he thinks most worthy of consideration. See Commons, House of.

CLOTH. General term for any pliable fabric. Derived probably from a Teutonic root meaning "to cling," the word is used generally of any material made of animal or vegetable fibre, and specifically of a woollen clothing fabric.

The Clothworkers' Company is the twelfth of the London city livery companies. It was formed in 1528 by the incorporation of the Sheermen and Fullers. Pepys, the diarist, was master in 1677, and the chased silver loving cup presented by him is one of the treasures preserved in Mincing Lane, E.C. The old hall, bought by the Fullers in 1455, was partly burnt down in 1666. The present building was inaugurated in 1860. The company's benefactions include the establishment of a Technical School at Bradford in 1882.

CLOTILDE (475-545). French saint and queen. She became the wife of Clovis, king of the Franks, in 493. She was a Christian, and it was largely owing to her that her husband adopted that faith. After his death in 511 she retired to the abbey of S. Martin, at Tours. Her festival is kept on June 3.

CLOUD. Fogs or mists formed at some distance above the ground and composed of tiny water particles floating in the air. Like fogs or mists, clouds can be produced only by the cooling of masses of air containing water vapour. In most cases the condensation occurs on minute solid dust particles; but it has been proved that water vapour may be condensed upon ions of the air itself.

Cirrus (wisp), stratus (sheet), and cumulus (heap) clouds may be described as the three primary types of clouds. To these may be added the shapeless black mass known as the nimbus or rain cloud. Intermediate types are described by combining these words, e.g. cirro-cumulus, strato-cumulus, and so on.

A cloud-burst is the sudden precipitation of a large amount of rainfall or hail in a very short space of time. Such rain splashes are not uncommon in Britain during summer.

CLODBERRY (*Rubus chamaemorus*). Creeping shrub with herbaceous erect flowering stems, a native of N. Europe, Siberia, and N. America. It is about 8 ins. high, terminating in a single white flower. The leaves are roundish, heart-shaped, with lobed margins. The fruit is like a mulberry, but is of an orange-red tint and of more agreeable flavour.

CLOUDED LEOPARD (*Felis nebulosa*). Large wild cat, found in India, Malay, and the E. Indies. A handsome animal about 6 ft. in length, with long tail, it lives in trees and feeds on small birds and mammals.

CLOUET, FRANÇOIS (c. 1510-72). French painter. Also called Jehannet or Janet after his father Jean Clouet (1486-1541), court painter to Francis I, he was born at Tours and succeeded his father in the royal favour and offices in 1541. He died Dec. 22, 1572. He used simple colours, drawing on ivory, vellum, or wood. Of the various paintings attributed to him the portraits of Charles IX and Elizabeth of Austria, both in the Louvre, are among the best. Pron. Cloo-ay.

CLOUGH, ANNE JEMIMA (1820-92). First principal of Newnham College, Cambridge. Born at Liverpool, Jan. 20, 1820, the sister of Arthur Hugh Clough, her childhood was spent in America with her parents. Returning to England in 1836, she was engaged in educational work. She was in 1871 appointed head of the first house for women students in Cambridge. This developed into Newnham Hall in 1875 and into Newnham College, with Miss Clough as its principal, in 1880. She died at Cambridge, Feb. 27, 1892.

Anne Jemima Clough.
British educationist

CLOUGH, ARTHUR HUGH (1819-61). British poet. Born at Liverpool, Jan. 1, 1819, he was educated at Rugby and at Balliol College, Oxford. In 1853 he returned to England from America to take up a post as examiner under the Board of Education, which he held until his death from paralysis at Florence, Nov. 13, 1861.

Among his poems *Say Not the Struggle Naught Availeth* is perhaps the best known. Clough is commemorated in Matthew Arnold's *Thyrsis*.

Arthur Hugh Clough.
British poet

CLOVE (*Eugenia caryophyllata*). Evergreen tree of the order Myrtaceae, a native of the Moluccas, but also grown in many hot countries. It is from 20 ft. to 40 ft. in height, with somewhat oval, pointed leaves. The pale purple flowers are gathered before they open, and dried in the sun. The volatile oil is found in all parts of the tree, but especially in the unopened flower buds. Most of the world's supply comes from Zanzibar and Pemba, hut Penang and Amboyna produce the best. See *Carnation*.

Clove. Flowering shoot of this aromatic tree

CLOVELLY. Village and holiday resort of Devonshire, on Barnstaple Bay, 11 m. W.S.W. of Bideford. Quaintly pretty, it lies in a well-woodedcombe. Its principal street is formed by a series of steps. Pop. 634.

CLOVER. Name given strictly to leguminous plants of the genus *Trifolium*, so called because the leaf consists of three leaflets. The flowers are crowded together into heads, and the corolla does not fall off when the seeds begin to form, but persists in a withered condition. Clovers are valuable as a forage crop or for haymaking. They also add to the store of combined nitrogen in the soil, owing to the presence in small swellings on their roots of bacteria that fix the nitrogen of the air.

Six true clovers are of agricultural importance; white or Dutch clover (*Trifolium repens*); red or broad clover (*T. pratense*); cow grass, usually a variety of the preceding (*T. pratense perenne*); Alsike or Swedish clover (*T. hybridum*); crimson or Italian clover (*T. incarnatum*); and yellow suckling clover (*T. minus*). Trefoil or yellow clover (*Medicago lupulina*) superficially resembles the last-named species, but is not a clover at all, being related to lucerne.

CLOVER WEEVIL (*Sitones*). This is one of a large group of minute beetles. They have the head produced in front to a long beak with the mouth at its extremity. Most are farm and garden pests in the larval state, and this species does much damage to clover crops.

CLOWN. Term originally applied to uncouth "clods" or rustics. It afterwards became the recognized appellation of a type of whimsical comedian who developed into the figure of English pantomime and of the circus. The most famous clown was Joseph Grimaldi. See *Harlequin*; *Pantomime*.

CLOYNE. Market town of co Cork, Irish Free State, 15 m. E.S.E. of Cork. It has a Roman Catholic bishopric, but the Anglican one was united to that of Cork in 1835. Opposite the 14th century cathedral is a round tower over 90 ft. high and 9 ft. in diameter. Market day, Thurs. Pop. 712.

CLUB (Scand. cf. *clump*). Association of persons having common interests or sympathies. In England social clubs became prominent in the literary life of London when the Mermaid tavern was the haunt of Elizabethan playwrights and poets. Later, clubs with literary associations met at coffee houses as well as at taverns.

The modern club, possessing premises of its own, dates back to the beginning of the 19th century. Admission to membership by ballot safeguards to some extent the best interests of any club. London clubland is centred in

Pall Mall. Another class of clubs are those for working men. Some are social or political, while others are benefit clubs, i.e. societies to which a weekly or other payment is made, and in return money is paid out for holidays, burials, clothing, or Christmas fare.

By a law passed in 1910 every club must be registered and particulars about its membership and objects sent to the clerk to the magistrates. Intoxicating liquor can only be sold to members for consumption on the premises and only during such hours as its sale is allowed in the district. There are heavy penalties for breaches of these regulations. Night clubs are a recent development.

Club-foot. Deformity of the foot. It is sometimes present at birth, but more often due to infantile paralysis. See *Foot*.

CLUMBER. Seat of the duke of Newcastle. About 2½ m. S.E. of Worksop, Nottinghamshire, it is included in the Dukeries (q.v.). The park has a circuit of 11 m. and an area of 4,000 acres. The mansion has a fine library, pictures, and other art treasures. It was built about 1772 and was damaged by fire in 1879.

The house was closed in 1929 and some of the pictures loaned to the collection in Nottingham Castle. It gives name to the Clumber spaniel. See *Spaniel*.

CLUNIACS. Name of a Roman Catholic religious order, so called from Cluny, a town situated 12 m. from Maçon, which was its place of foundation. Its members were the earliest reformed branch of the Benedictines, and ranked eventually as a separate order. Following the Benedictine rule, the Cluniacs wore the black habit, but their organization was on totally different lines. Cluny rose to a position of commanding eminence, reaching its height in the 12th century. It gave four popes to the church, and was a recognized centre of learning in Christendom.

The abbey church of Cluny, until the construction of S. Peter's at Rome, was the largest church in Christendom. The Hôtel de Cluny, the Paris house of the abbots, is now a museum. The order in the 16th century had some 2,000 houses throughout Europe.

CLUSTER. Group of stars in close physical connexion, and often threaded with strands of nebulous matter. Clusters are classified as either irregular or globular. A familiar example of the irregular cluster is the Pleiades; the six stars visible to the naked eye are multiplied by a telescope into hundreds, and by prolonged photographic exposure into thousands. They are of various degrees of brightness. The globular cluster is roughly spherical in shape, and its members often present either a remarkable uniformity in brightness or a methodical gradation in this respect. There is in general a condensation of the globular cluster towards the centre. See *Constellation*; *Stars*.

CLUSTER CUP (*Puccinia*). Genus of parasitic fungi of the order Uredineae. The species are polymorphic, i.e. appear under several different forms on different host-plants. Many cultivated plants suffer more or

Cluniac. Dress of the Order

From an old engraving

less from the activities of these parasites, including hollyhock, mint, chives, gooseberry, anemone, pinks, barberry, and the cercals.

CLUTCH. In mechanics, an arrangement whereby one revolving part can be engaged with, or disengaged from, another part revolving about the same axial line. In the positive or dog type of clutch a collar sliding endways on, and revolving with, a shaft is made to engage with a fixed collar on another abutting shaft, or with the slide of a loose pinion or pulley on the same shaft. Both the driving member and the driven one have teeth projecting from them, which interlock when the clutch is engaged. The friction clutch is a more elastic method of engagement, and comprises one or more frictional plates pressed together with increasing force until the friction overcomes the resistance of the driven element. The coil clutch tightens on an internal drum when its free end is pulled by a lever, and the expanding type of clutch works on much the same principle as the expanding brakes of a motor car.

Cluster-cup. Much magnified example of this fungus on leaf of the common daisy

Clutch. Multiplate type. Flywheel, A, with casing, B, bolted to crankshaft, S'. Friction plates in drum, C, mounted on driven shaft, S', are engaged with plates mounted on casing, B, by pressure of spring forcing cup, D, inwards. Plates are separated and engine disconnected by pressure on pedal

Lanarkshire, flows past Bothwell, Lanark, Hamilton, Glasgow, and out to form the Firth of Clyde. Its chief tributaries are the Medwin, Mouse, N. Calder, S. Calder, Kelvin, and Leven on the right; and on the left the Duneaton, Douglas, Nethan, Avon, and Cart. Near Lanark are the falls—Bonnington Linn, Corra Linn, Dundaf Linn, and Stonebyres Linn. Its length is 106 m. From Glasgow the Clyde is one of the most important highways in the world, and on its banks are some of the great ship-building yards. The largest vessels can ascend its channel as far as Glasgow.

The Firth of Clyde is generally regarded as beginning at Dumbarton, and extends for 65 m. to Ailsa Craig. It receives the waters of the Garnock, Irvine, Ayr, Doon, Girvan, and

other rivers, throws off several sea-lochs, and contains Arran, But, the Cumbræes, and other islands. Among its ports, besides Dumbarton, are Port Glasgow, Greenock, Ardrossan, Irvine, and Ayr. In 1930 a government committee examined proposals for a Clyde-Forth ship canal.

The valley of the upper Clyde is called Clydesdale, from which the duke of Hamilton derives the title of marquess. It is famous for its orchards and coal and iron mines, and gives name to a breed of cart horses. See Horse.

CLYDE, COLIN CAMPBELL, 1ST BARON (1792-1863). British soldier. Born at Glasgow, Oct. 2, 1792, the son of a carpenter named MacIver, he was educated by his mother's brother, Colonel John Campbell, who procured him an ensigncy in the 9th Regt. in 1808, whereupon he took the name of Campbell. He served in the Peninsular War, in China, 1842, and in India, 1848-49. In 1849 he was knighted. In 1854 he went to the Crimea at the head of the Highland brigade, which he led at the battles of the Alma and Balaclava. On the outbreak of the Indian Mutiny in 1857 he went to the East, and as commander-in-chief brought the mutiny to an end. For this he was rewarded with a peerage in 1858. He died Aug. 14, 1863.

1st Baron Clyde, British soldier

In 1920 James Avon Clyde, M.P. for West Edinburgh (1909-20) and lord advocate (1916-20), took the title of Lord Clyde on being made president of the court of session.

CLYDEBANK. Burgh of Dumbartonshire and Renfrewshire. It stands on the right or N. bank of the Clyde, 6 m. from Glasgow. Ship-building and engineering are the most important industries. It has stations on the L.N.E. & L.M.S. Rlys. Pop. 48,600.

John R. Clynes, British politician

CLYNES, JOHN ROBERT (b. 1869). British politician. Born at Oldham, he worked in a cotton factory as a boy. He joined the trade union movement at an early age, and in 1891 was appointed

organizer of the Gasworkers' and General Labourers' Union for Lancashire. In 1906 he was Labour M.P. for N.E. Manchester, and he retained his seat at subsequent elections. In July, 1917, he was chosen parliamentary secretary to the Food Ministry, and a year later succeeded Lord Rhondda as Food Controller and became a privy councillor. He resigned office in Nov., 1918, when the Labour Party withdrew from the Coalition. He was Lord Privy Seal and deputy leader of the House in the first labour government, Jan.-Nov., 1924, and when the second labour government was formed, became Home Secretary in June, 1929. Consult From Millboy to Minister, E. George, 1918.

Clyde. Map of the Firth, or estuary, of the Clyde, on which are several of the chief Scottish ports

CLYTAEMNESTRA, more correctly **CLYTAEMNESTRA**. In Greek legend, wife of Agamemnon (q.v.), king of Mycenae. On the return of her husband from the Trojan War she murdered him. The murder was subsequently avenged by her own son Orestes (q.v.).

CNOSSUS. Largest town in the island of Crete, on the N. coast, S.E. of the modern Candia. It was famed as the residence of Minos (q.v.). Cnossus has attracted great notice as the centre of a pre-Hellenic civilization, attested by excavations. Researches have shown the existence in Crete of a very early, original pictorial system of writing, developed later into a linear alphabet, in which each sign may have represented a syllable. The clay tablets on which it appears consist chiefly of business documents. See Aegean Civilization; Crete.

COACH (Old Fr. coche; Hungar. kocs). Large enclosed four-wheeled carriage, first made in the Hungarian village of Kocs. A distinction between the coach and its later development, the carriage, is that the

Coach. Type of vehicle used in the early 18th century

roof of the former is part of the body framework, and that of the latter a canopy erected on iron or wooden bars. At first the coach was reserved for royalty and persons of high quality. By 1605 it had become common in England. The royal state coach, heavily gilded, with room for standing footmen at the back and drawn by six or eight horses, is still used in royal processions, and the state coach of lord mayors is of the same character.

The Coachmakers' Company is one of the London City livery companies. Incorporated in 1677, its hall in Noble Street, E.C., was acquired from the Scriveners' Company about 1720, and rebuilt in 1841 and 1870.

COACHING. The term used for the running or driving of a coach. The first stage coach in England ran from Coventry to London in 1659, and up to the early 19th century coaching was the most popular way of travelling. The Four-in-Hand Club, inaugurated

Coronation Coach, built about the time of George III in 1856, and the Coaching Club, 1872, are two prominent driving institutions

COADJUTOR (Lat. co-, with; adiutor, aider). Term applied in the Roman Catholic Church to one who has been appointed to assist a bishop who is incapacitated by age or infirmity. See Bishop.

COAGULATION (Lat. coagulare, to cause to curdle). Setting or solidification which takes place in various animal and vegetable fluids on exposure to air or a high temperature. When blood is allowed to stand after being drawn from the body it becomes thick, or coagulates.

COAL. Coal includes those solid, combustible materials of vegetable origin which occur in a fossil state. Ordinary or bituminous coal usually consists of glistening black portions, called bright coal, mixed with dull black fibrous parts, called mineral charcoal or mother of coal, showing imperfect woody structure. Bituminous coal is classed as steam, house, gas, and manufacturing. Other varieties are brown coal or lignite, with a distinct woody structure; cannel coal, amorphous, black, and easily ignited; anthracite, stone-like, and not readily ignited.

All coals contain carbon, hydrogen, oxygen, and nitrogen, which form the combustible portion, and some incombustible material called the ash. The carbon percentage is highest in anthracite, and lowest in brown coal. Coal occurs in beds—the seams and veins of the mines—amidst lacustrine, estuarine, and marine strata. The beds occur from a few inches to many feet in thickness, and, mingled with dirt layers, possess a united thickness amounting to several hundred feet. All coals originated in cellulose, the main constituent of plant tissue.

Coal beds are found in British coalfields lying at all angles from a horizontal to a vertical position. The bed or beds may occur in a basin (syncline) with the coals inclined towards the centre of the basin. Less commonly the coals dip from off the crest of a saddle (anticline), the inclination being greatest on the flanks of the fold. The coals lie at considerable depths, and many shafts now exceed 3,000 ft. in depth. In no part of the world has coal been found in rocks older than the Devonian. From the Carboniferous period upwards to the Quaternary, each of the stratified formations, either in one part of the world or another, contains coal either as true coal or as lignite. In all countries the best coals occur in the Carboniferous formation. See Mining.

ECONOMIC ASPECT. The importance of coal in economic life became particularly evident during the Great War, when the British industry came under Government control. In 1919, following a series of demands by the Miners' Federation, the Government appointed a commission to inquire into the conditions prevailing in the industry, particularly as to wages and hours of labour. Mr. Justice Sankey was appointed chairman, and the recommendations embodied in the commission's reports were carried into effect. In March, 1921, financial decontrol of the mines took place. This was followed by a three months' strike, after which a settlement was made on the basis of profit sharing.

From 1921 to 1925, owing partly to the French occupation of the Ruhr, the coal trade enjoyed a fair amount of prosperity. But this was followed by a period of extreme depression, relieved by financial assistance from the Government, and in March, 1926, a royal commission, under Sir Herbert Samuel,

issued a report upon the situation. This declared against further financing from public funds, and recommended wage reductions, amalgamations, research, profit sharing and other schemes. The Government accepted the report, but the miners refused it, and a strike lasting from May 1 to Nov. 30 ensued. Negotiations then resulted in district settlements and a return to work.

The number of persons employed in coal production in Great Britain in 1929 was given as 929,172. In July, 1929, the Mines Department issued a statistical summary relating to the first quarter of that year. It was shown that the industry as a whole had made a profit amounting to ninepence per ton.

In 1929-30 the Labour Government introduced a measure to reform the industry by securing amalgamations and reducing hours of labour. It also provided for marketing schemes and a quota system for limiting output. The bill was fiercely attacked by the Opposition, and on one occasion the Government were defeated on the quota scheme. However, it passed its third reading in the House of Commons on April 3, 1930.

COALBROOKDALE. Town and district of Shropshire. It lies on the Severn, 11 m. S.E. of Shrewsbury on the G.W.R. The iron and limestone supply the great iron-works, founded in 1709 by Abraham Darby, but the coal seams are nearly exhausted.

COAL GAS. Gas used for purposes of illumination and fuel. In Great Britain it is obtained chiefly by the distillation of coal. See Gas.

COALITION (Lat. co-, with; alacere, to grow up). In domestic politics a ministry composed of members of two or more political parties. Examples in British history are the coalition between Fox and North in 1783, the ministry formed of Whigs and Peelites under the earl of Aberdeen in 1852, and that formed by the Conservatives and Liberal Unionists in 1895. In May, 1915, the Unionists joined the Liberals in a coalition ministry under H. H. Asquith, to carry on the Great War, and in Dec., 1916, Lloyd George became the head of one which lasted until 1922. There was, during the war period and later, a coalition in Canada under Sir Robert Borden.

COALPORT. Village of Shropshire famous for its pottery. In 1751 a factory was established at Caughley, also in Shropshire, where an excellent type of porcelain was produced. Coming into the possession of John Rose, the works were removed to Coalport in 1814, and have continued there since. Coalport vases are noted for their fine shapes, delicate scenery and figure paintings, and rich colours.

COAL TIT (PARUS ATER). Small bird of the tit family, fairly common in many parts of Great Britain. Its general colour is drab, with lighter underparts, and the head is black. It is a valuable bird to the gardener, as it eats caterpillars and destructive insects.

COALVILLE. Urban dist. of Leicestershire. It is in a rich coal-mining district, 5 m. S.E. of Ashby-de-la-Zouch, on the L.M.S. Rly. Market day, Fri. Pop. 20,467.

COAST. The shape and character of coastlines are determined by the action of the sea and of other agents of denudation and transportation; by the uplift and depression of the land, and by differences in the character of the rocks. If the coast consists of loose or soft materials the waves themselves will readily eat into it and wash away fragments. Hard rock is cut back by stones and pebbles, which are hurled against cliff faces. Extensive masses of rock are thus undercut and eventually fall.

Above high-water mark the ordinary agents of weathering are at work. In highly jointed rocks dipping seawards, large blocks will readily fall on the beach, and produce overhanging cliffs, while where the rocks dip landwards, the loosened blocks cannot fall until they are undercut. Hard strata, being less readily eroded, tend to form headlands or promontories, while the softer measures are more easily cut back and form gulfs or bays.

For protection the coast is armoured with a wall of masonry, concrete, or timber; and with hanks of shingle collected by barriers, called groynes, huilt out more or less at right angles to the coast. The purpose of groynes is to raise the surface of the foreshore, by trapping the shingle, sand, and other matter which the currents roll along the beach.

COAST GUARD. Force which grew out of the preventive service, whose principal activities were directed against smuggling. These duties still devolve upon the coast guard in association with the revenue authorities. The coast guard was transferred from Treasury to Admiralty control in 1858, and to the Board of Trade in 1923. The force is a reserve for the navy, from which it is entirely recruited.

For coast guard purposes Great Britain and Northern Ireland is divided into districts, each with a naval captain in charge. The coast guard attends to the protection of fisheries and wild birds, the manning of signal stations, and reports movements of warships and of vessels in distress.

COATBRIDGE. Burgh of Lanarkshire. It is 9 m. E. of Glasgow on the L.N.E. and L.M.S. Rlys., and is the centre of the Scottish iron smelting industry.

Coal Tit. A common British bird with a black cap.

Coast Guardsman in the uniform which was introduced in 1923

Its development is due to the establishment of the Gartsherrie Iron-works in 1830. Pop. 44,300.

COATES, ALBERT (b 1882). Anglo-Russian musician. Born in St. Petersburg, April 23, 1882, he was the son of a British merchant and a Russian mother. In 1911 he was appointed chief conductor of the Imperial Opera, St. Petersburg (Leningrad), where his opera *Sardanapalus* was produced, 1916. In 1919-20 he conducted orchestras in London, and from 1921-25 he was in the U.S.A.

COATES, JOHN (b. 1865). British tenor singer. Born at Gillington, near Bradford, Yorks June 29, 1865, he made his first appearance as a singer at the Savoy Theatre, London, in 1894. He sang in grand opera as Faust in 1901. He has sung in America, Australia, South Africa, and Germany, and with the Moody-Manners, Beecham and other opera companies in Great Britain.

COATES, JOSEPH GORDON (b. 1878). New Zealand statesman. Born at Matakoho, the son of a farmer, he entered the House of Representatives in 1911. Having served in France from 1917-19, he was made minister of justice on his return to New Zealand. Other departments of state, including railways, public works, and the post office, were placed under his control, and in 1925 he became prime minister as successor to W. F. Massey. At the general election of Nov., 1928, his party was in a minority, and he resigned.

Joseph Gordon Coates, N. Zealand statesman

COATI OR **COATIMUNDI** (Nasua). Carnivorous mammal related to the racoon, found in S. America and Mexico. Distinguished by its long, flexible snout and long tail, the coati lives in troops in the trees, feeding upon birds, lizards and fruit.

COATS. Scottish family of thread-makers at Paisley. James Coats was one of those who brought the industry into the town in the later 18th century, and under his sons, Peter (1808-90) and Thomas (1809-83), the business grew enormously. It was turned into a public company in 1890, as J. & P. Coats.

Both brothers were Baptists, a fact commemorated by the beautiful memorial church at Paisley, of which town they were great benefactors. Peter, who was knighted, left a son, James, who, in 1905, was made a baronet, and was succeeded in 1913 by his son, Sir Stuart Coats, a Conservative M.P. from 1916-22, and a Roman Catholic. The eldest son of Thomas Coats, Thomas Glen-Coats (d. 1922), was made a baronet in 1894, and was long the chairman of the company. From 1906-10 he was a Liberal M.P. His younger brother George (1849-1918) was made Baron Glentanar in 1916.

COATS LAND. Part of Antarctica, S. of the Weddell Sea and N. of Prinz Luitpold Land, in lat. 74° 1' S. and 22° W. It was discovered by Dr. Bruce, 1903, and named after his patrons, the brothers Coats.

COBALT. Elementary metal. Its symbol is Co; atomic weight, 58.94; atomic number, 27; specific gravity, 8.50; and melting point, 1,500° C. It is of a grey colour with a touch of red; hard and unaffected by water. Its chief ores are smaltine, or tin-white cobalt, essentially cobalt and arsenic; cobaltine or cobalt glance, also arsenical but containing sulphur; cobalt pyrites, in which the metal may be associated with manganese, iron, and copper; skutterudite, cobalt and arsenic; and cobalt bloom. All these ores are contained by mispickel and most nickel ores.

The great source of the metal is the district of Cobalt in Northern Ontario, where it occurs in large percentages with nickel in rich silver ores. Payable ores of cobalt are found also in Missouri (U.S.A.), New Caledonia, Belgian Congo, and Germany. Cobalt is used in preparing certain alloys of copper, and in making pigments for colouring pottery

and has other artistic uses. Smalt, the beautiful blue pigment, is made from cobalt ore.

COBALT. Mining town of Ontario, Canada. On Cobalt Lake, about 330 m. N. of Toronto, it is served by the C.N.R. The major portion of the town was rebuilt after a fire in 1912. It owes its existence to the rich silver and cobalt mines around it. Pop. 4,449.

Frances Power Cobbe, British philanthropist

rage, and she actively promoted the Matrimonial Causes Act, 1878, which enabled magistrates to grant judicial separations. She wrote several theistic books. She died April 5, 1904.

COBBETT, WILLIAM (1762-1835). British author and politician. Born at Farnham, Surrey, March 9, 1762, he spent his early years working on his father's farm. In 1791 he began his career as journalist in Philadelphia. Returning to England in 1800, he started in Jan., 1802, Cobbett's Weekly Political Register; and in 1803 the Parliamentary Debates, transferred in 1812 to Hansard. His collection of State Trials was begun in 1809. From 1804 Cobbett became the unsparing critic of the Government, and an ardent reformer. Sentenced in June, 1810,

William Cobbett, British politician
From an engraving by Bartolozzi

to two years' imprisonment and a fine of £1,000 for an article in the Register condemning military flogging, he came out of prison financially ruined. In 1818 he issued his Grammar of the English Language. In 1832 Cobbett was elected member for Oldham to the reformed Parliament. He died June 18, 1835. His most popular book is Rural Rides, 1830.

COBDEN, RICHARD (1804-65). British politician. The son of a Sussex yeoman, he was born at Heyshott, near Midhurst, June 3, 1804, and at fifteen became a clerk in his uncle's office in London. In 1828 he set up on his own account, selling cotton goods on commission, and in 1832 settled in Manchester as a calico printer. He was soon associated with John Bright and Charles Villiers in the crusade for free trade. In 1846 the repeal of the corn laws was carried, and Peel with truth declared that the success of the measure was due to Richard Cobden. He was elected in 1847 for the W. Riding of Yorkshire, which he represented for 10 years.

Cobden denounced the Crimean War and the Chinese War of 1857, and with Bright and other leaders of the Manchester school lost his seat in Parliament at the election of that year. Two years later he was returned for Rochdale without opposition. In 1860 he negotiated a commercial treaty with France.

Cobden's neglect of his own affairs in the pursuit of public duty had ruined him financially in 1845, but a subscription on his behalf raised £80,000; and another subscription in 1860 brought in £40,000. He died in London, April 2, 1865. In 1928 Dunford House, Heyshott, Sussex, long his residence, was opened as the headquarters of the Cobden Memorial Association.

The Cobden Club was founded in 1866 in memory of Richard Cobden. The headquarters are 69, Victoria Street, S.W.1.

COBHAM OR **CHURCH COBHAM.** Parish and village of Surrey. It is on the Mole, 19 m. S.W. of London on the Southern Rly. The church contains fine brasses. Pop. 5,103.

COBHAM, VISCOUNT. English title borne since 1718 by the families of Temple, Grenville, and Lyttelton. In 1714 Sir Richard Temple of Stowe was made Baron Cobham, and four years later a viscount. His sister, Hester, wife of Richard Grenville, succeeded to these titles, and in 1749 was made countess Temple. In 1889 the viscountcy passed to the eldest male descendant of the 1st viscount's 3rd sister, Christian; this was the 5th Baron Lyttelton, who became 8th Viscount Cobham.

COBHAM, SIR ALAN JOHN (b. 1894). British airman. Born May 6, 1894, after a brief commercial career he took up aviation, and served in the R.A.F. in the Great War. On being demobilised he entered civil aviation, joining the De Havilland Aircraft Co., and did much aerial photography. He made a number of long-distance flights, Belgrade-London; Europe, N. Africa, Egypt, London-Rangoon and back. In 1926 he flew from London to Cape Town and back, also England to Australia and back (see illus. p. 27), and in 1928 from London to Cape Town and back. He received the K.B.E., 1926. He wrote several works dealing with his flights.

Sir Alan Cobham, British airman
Challoner

Coble. A small flat-bottomed fishing boat

—have been developed for heavy seas. A smaller boat used by salmon-fishers is also called a coble.

COBLENZ. City of Prussia, capital of the Rhine province. It stands at the junction of the Rhine and Moselle, hence its name, from Latin confluentes, flowing together. Opposite, on the right bank of the Rhine, is Ehrenbreitstein. Coblenz is 58 m. by rly. from Cologne.

Coblenz. Bridge of boats, 485 yds. long, across the Rhine

In the older part of the city are the 12th century Romanesque church of S. Castor, the Liebfrauenkircho with Romanesque towers;

the Kaufhaus, or merchants' hall, restored in the 18th century, the Schöffenhaus, a museum; the old palace of the electors of Treves, called the Burg, containing the municipal picture gallery; and the house in which Metternich was born. In the modern part of the town is the palace, erected by the elector of Treves in the 18th century. There are some fine bridges across both rivers and a bridge of boats across the Rhine. The old bridge over the Moselle dates from about 1340. In Dec., 1918, under the terms of the armistice Coblenz was occupied by American troops, who in 1923 were replaced by French. Pop. 58,322.

COB NUT. Cultivated variety of the hazel. It is easily raised from seeds and suckers, particularly in Kent, as it flourishes best in a well-drained soil, which the chalk subsoil of that county provides. Filberts and hazels are varieties of the same genus, distinguished only by the fact that many of them have been grafted on a Southern European variety known as the Constantinople hazel.

Cob-nut. Cultivated variety of the hazel

COBRA. Genus (*Naja*) of large venomous snakes found in Africa and S. Asia. They are able to inflate the skin of the neck into a kind of hood when excited; in one species this hood bears black markings resembling a pair of eye-glasses. There are some ten species, one of the best known being the black cobra of India. In length it occasionally exceeds 6 ft., and the king cobra is sometimes 14 ft. long. It feeds largely on other snakes, but also takes birds' eggs and small mammals. It is one of the most deadly of all snakes.

Cobra was the name of a British destroyer. On Sept. 18, 1901, she sank in the North Sea and 67 lives were lost. A relief fund started in aid of the survivors formed the nucleus for the Naval Disasters Fund.

COCA (*Erythroxylon coca*). Shrub of the order Linaceae, a native of Bolivia and Peru. It forms a bush 6 ft. or 8 ft. in height with oval leaves about 2½ ins. long. The small

Coca. Leaves of the bush from which cocaine is derived

greenish flowers are produced in clusters of three or four from between the leaf-stalk and the stem. Its leaves contain the alkaloid cocaine. For some centuries the leaves have been used as a masticatory to stimulate the nerves and enable the user to endure continued fatigue. Its prolonged use, however, is harmful.

COCAINE. An alkaloid derived from the leaves of *Erythroxylon coca*. Preparations of cocaine and its salts are used in medicine to produce local anaesthesia for the purpose of performing small operations. Weak solutions may also be applied to ulcers and fissures to relieve pain. An overdose of cocaine may produce acute poisoning, while chronic poisoning may occur in those who are victims of the cocaine habit, which may be started by taking the drug to relieve toothache or nasal catarrh. If long persisted in, the habit may lead to melancholia or mania. A dose slightly larger than usual may prove suddenly fatal. If the patient can be broken of the habit, complete recovery will probably occur. See Anaesthesia; Drug.

COCCO, TARO, OR EDDOES (*Colocasia antiquorum*). Perennial plant of the order Araceae. It is a native of the East Indies, but is cultivated throughout the tropics and in S. Europe as a food plant. It has a tuberous root-stock, from which the large oval heart-shaped leaves arise directly on long stalks. The simple flowers are borne on a club-shaped spadix. The leaves and corn are protected by a very acrid principle, but this is dissipated by thorough cooking, so that the young leaves are used like spinach, and the starchy corn provides material for making bread.

Cocco. Leaves and root-stock of this East Indian plant

COCCOLITH (Gr. *kokkos*, grain, berry; *lithos*, stone). Minute, elliptical disk-shaped body which occurs in vast numbers in deep-sea deposits. They are supposed to have been detached from the surface of globular organisms named *eocospheres*, which probably belong to the calcareous algae.

COCHIN. Native state of India, on the S.W. coast. The ruler is a maharaja and is entitled to a salute of 17 guns. The capital is Ernakulam. Area 1,418 sq. m.; pop. 979,080.

Cobra. Poison-spitting black cobra, a native of South Africa

The town of Cochin is the chief port of the Malabar district of Madras. About 90 m. S. of Calicut, it occupies the N. end of a strip of land separated from the mainland by a system of lagoons or backwaters. Pop. 20,637.

COCHIN CHINA. French colony in S.E. Asia, forming the S. portion of French Indo-China. Bounded on the N. by Cambodia and Annam, it has an area of about 26,500 sq. m., mainly in the hot, marshy jungle of the delta of the Mekong. The colony is under a governor. The colonial council consists of 24 members, and one deputy is sent to the French Parliament.

Cochin China is very fertile. Rice is the staple product. River and sea fishing is an important industry. Saigon, the capital and chief commercial centre, and Cholon have rice mills, saw mills, and soap factories. There are wireless stations at Cap St. Jacques and other places. The people are mostly Buddhist Annamites, but most of the trade is in the hands of Europeans and Chinese. Pop. about 4,000,000, of whom about 17,000 are Europeans. See Indo-China.

COCHINEAL. Scale insect (*Coccus cacti*) and the famous dye which it yields. The insect feeds on several kinds of cactus. The use of cochineal as a dye is now superseded by aniline compounds, except for soldiers' uniforms and for colouring confectionery. The insect is cultivated in Honduras and the Canary Islands.

Cochineal insect. *Coccus cacti*

COCHRAN, CHARLES BLAKE (b. 1872). British theatrical manager. Born at Lindfield, Sussex, Sept. 25, 1872, he appeared in 1890 on the stage in New York. About 1900 he returned to London, where he staged *The Miracle at Olympia* and promoted important wrestling and boxing contests, as well as entertainments of other kinds, earning the title of

"the world's greatest showman." He became manager of various theatres, and from 1926 was manager of the Albert Hall. In 1925 he wrote *The Secrets of a Showman*.

COCKADE (Fr. *coquarde*). Rosette of black, white, or coloured material. A very old ornament, worn in hats and turbans, it formed part of the uniforms of the military and court retinue. In France the white cockade of the Bourbons, the Red of the Terrorists, and the Tricolor of the Republicans became celebrated.

COCKATOO. Family of the zoological order Psittaci, which includes the parrot tribe. They are natives of Australia and adjacent islands. Cockatoos are distinguished by the crest of feathers on the head.

Most are white, often tinged in parts with yellow or red; but the largest is entirely black in plumage. The finest is Leadbeater's Cockatoo of S. Australia. In this species the crest is finely coloured with vermilion and yellow, and the underparts are of a beautiful rose pink.

Cockatoo. The sulphur-crested species of this Australasian bird

COCKATRICE. Fabulous reptile. Its breath was supposed to be fatal to anything it touched. In heraldry a cockatrice is a beast with head, shoulders, and legs of a cock, and the body, wings, and tail of a wyvern.

COCKAYNE OR COCKAIGNE. Fabled land of luxury, idleness, and especially of good living, referred to by ancient British, French, and Italian writers. Attempts have been made to prove that cockney, applied to London and Londoners, is a form of the same word.

COCKBURN, SIR ALEXANDER JAMES EDMUND (1802-80). British lawyer. Born Dec. 24, 1802, he was called to the bar in 1829. Liberal M.P. for Southampton, 1847, he was solicitor-general 1850, and attorney-general 1852-56. In 1856 he was made chief justice of the Common Pleas, and in 1859 lord chief justice. He represented the British Government at the Alhambra arbitration, 1872. He died Nov. 20, 1880. Pron. Co-burn.

Sir Alex. Cockburn, British lawyer. Painting by A. D. Cooper

Cockburn Channel is the passage between Clarence Island and the mainland of Tierra del Fuego, Chile.

COCKCHAFER (*Melolontha vulgaris*). Brown beetle peculiarly destructive to vegetation. Several allied species are common both on the Continent and in Great Britain. In its adult stage, which lasts for only a few weeks, it attacks the leaves of trees. The eggs are laid in the ground, and the larvae, fat white grubs, feed upon the roots of grasses and cereals, and exist in this stage from three to five years.

Cockchafer, a beetle very destructive to vegetation

COCKER, EDWARD (1631-75). English engraver and writing master. He is said to have introduced the first English copy-book

with model sentences, etc. He published several works on penmanship, and was the author of Cocker's Arithmetick, 1678, which gave rise to the phrase According to Cocker, i.e. correct. It was long a standard work.

COCKERMOUTH. Urban dist. and market town of Cumberland. It lies at the confluence of the Cocker and Derwent, 32 m. S.W. of Carlisle by the L.M.S. Rly. In its ruined castle Mary Queen of Scots was imprisoned in 1568. It has a grammar school and was the birthplace of Wordsworth. Market day, Mon. Pop. 4,838.

COCKER SPANIEL. The smallest of all spaniels, this dog weighs from 20 to 25 lb. His head is cleanly chiselled, ears lachrymal, long, and set on low, clothed with long, silky hair; the coat all black, black and white, or roan. The tail should be carried in a line with the back. The coat should be flat and silky, never waved or harsh. It derives its name from its use in woodcock shooting. See Spaniel.

Cocker Spaniel, a small sporting dog which makes a good companion

COCKFIGHTING. Pitting one gamecock against another, sometimes designated cocking. The sport goes back to very ancient times. Cockpits discovered in Cornwall show that they were in existence in Britain before the Roman period. In the United Kingdom the passing of the Prevention of Cruelty to Animals Act in 1849 put an end to public exhibitions of cockfighting; but mains (the term for several fights between different pairs of cocks) are still brought off secretly. Birds are specially bred and reared for fighting

Cockfighting, an ancient and now illegal sport. Scene in a cockpit as depicted by Hogarth

The name cockpit is also given to a room in a warship assigned to the wounded. In aeronautics the cockpit is the compartment in the fuselage of the aeroplane which accommodates pilot and crew. See illus. p. 28.

COCK LANE. London thoroughfare bnking Snow Hill with Giltspur Street, E.C. It was the scene, Jan.-Feb., 1762, of the imposture known as the Cock Lane Ghost, in which certain mysterious noises were shown to be caused by a girl, Elizabeth Parsons, moving a board concealed in her bed.

COCKLE. Bivalve mollusc of the genus Cardium, of which there are many species. Cockles are found in the sand about low-water

mark and in estuaries, and Cardium edule is used for food. The shell is deeply ribbed and the long foot enables the mollusc to jump.

Cockle. Cardium edule, the edible cockle

London in the early part of the 19th century. The chief were William Hazlitt, Leigh Hunt, Keats, and Shelley.

COCK OF THE ROCK (*Rupicola crocea*). Bird found in the northern parts of S. America. The cock is of brilliant orange colour, and the feathers of the head form a fine crest; but the hen is of quite dull colour.

COCKROACH (Span. cucaracha). Family of the Blattidae, of the genus Orthoptera, or straight winged insects. Some six species are found in Great Britain, three of them importations. The domestic species which is usually known as the "black beetle" is not a beetle at all, and its colour

Cockroach. Above, male of the domestic species. Right, female and egg capsule

is reddish brown. The males have conspicuous wings, but in the female these are rudimentary. The eggs are deposited in a horny capsule, and the larva resemble the adult female in appearance.

COCLES, HORATIUS. Legendary hero of ancient Rome. When the Etruscan army under Porsena was about to attack the city, with two companions he stemmed the onrush of the army while the Romans demolished the bridge behind them. Horatius then swam safely to the As a reward he received as much land as he could plough in a single day. Pron. Cock-leez.

COCOA, or more correctly CACAO (*Theobroma cacao*). Small tree of the order Sterculiaceae, native of tropical America, but cultivated in many hot, moist countries. The leaves are pointed, oblong, and smooth. The flowers are produced in clusters direct from the trunk or from the larger branches, and consist of a rosy calyx exceeding the yellow corolla in size. These are succeeded by yellow oval-oblong fruits with tough rinds, about 8 ins. long. Within are five cells, each containing about a dozen large seeds, the cocoa beans or nibs, surrounded by pulp. In cultivation each cocoa plant yields from one to ten pounds of dry nibs annually.

In preparing cocoa for commercial purposes, the seeds or nibs are separated from the pulp, then sweated and slightly fermented. They are then dried and rubbed, and packed for export.

In the English process of manufacturing cocoa the beans are roasted in cylindrical pans revolving over open coke fires. The nibs are next ground to a liquid of a cream-like consistency. The fact that a liquid is produced is due to the large amount of oil (nearly 50 p.c.) in the cocoa bean. This liquefied chocolate is freed from its oil or cocoa butter by powerful hydraulic pressure. Cocoa was introduced into England about 1656. See Chocolate.

COCONUT PALM

(*Cocos nucifera*). Tall, graceful tree of the order Palmae. Attaining a height of about 50 ft., it is a native of the East Indies, but grows, however, on all coasts and islands of the tropics. Its leaves may be as much as 20 ft. long, divided into long, narrow, glossy segments. The flowers are borne in spikes, and consist of three sepals and three petals. The fruit is the familiar hard-shelled coconut, which is enclosed in a large elliptical three-sided envelope. Coir and copra are obtained from the nut. See Coir; Copra.

Coconut Palm, a useful tree, native of the East Indies

COCOON (Fr. cocon, small shell). Case or chamber, usually of silky material, constructed by the larvae of many Lepidoptera as a shelter in which to pass the resting or pupal stage. See Chrysalis.

COCOS OR KEELING ISLANDS. Group of about 20 small coral islands in the Indian Ocean, 700 m. S.W. of Sumatra, and 1,200 m. S.W. of Singapore. They have been annexed to Singapore since 1903. The islands were discovered by Captain Keeling in 1609. There is a wireless station. At Cocos Island the German cruiser Emden (q.v.) was sunk, Nov., 1914, by the Sydney. Pop. 1,009.

COD (*Gadus callarias*). One of the largest of the family of marine fishes which includes haddock, whiting, ling, and hake. It is found in comparatively shallow water, especially in the temperate seas of the northern hemisphere. The cod has conspicuous fins, a large mouth with the upper jaw longer than the lower, and a barbel on the chin. Usually from 2 ft. to 4 ft. in length, it sometimes attains 6 ft. It is greenish or olive-coloured on the back, with greyish underparts; but the colour and markings vary considerably. The flesh is somewhat coarse, but its nutritious quality, its abundance and cheapness, and the ease with which it can be preserved by drying or salting, make it of high economic importance.

Cod. A valuable food fish of the seas of the northern hemisphere

The oil extracted from cod liver is a valuable medicine, and isinglass is obtained. The chief cod fisheries are those of the North Sea and the shores of Newfoundland.

CODE. Word derived from the Latin codex, meaning wooden tablets covered with wax and formed into a book. In law it has come to mean any complete and systematic body of law, such as the Code Napoléon.

In education the code is the body of regulations issued every year by the Board of Education for England and Wales.

The word code also denotes systems of signals for the transmission of letters, numerals, punctuation marks, and conventional phrases by electric telegraph; and systems of cryptography for sending messages in secret form. See Cipher; Morse Code; Signalling.

CODEINE (Gr. kodeia, poppyhead). Alkaloid obtained from opium. It is given to relieve pain, though its action is much less powerful than that of morphine, and is also used to diminish glycosuria (sugar in the urine) in diabetes.

CODEX. Ancient MS. in book form. It developed after vellum was invented from the hinged wax tablet or diptych, and examples are traceable to the 2nd century B.C. The term is also applied to agave-paper or deerskin rolls bearing Mexican and Mayan pictographs; and to particular collections of Roman law, and to MSS. of the classical authors.

CODICIL (Lat. codicillus, little book). In English law, a sort of postscript to a will. It must be executed with the same formalities as to signature and witnesses. A codicil is generally used to effect some small alteration or addition to the provisions of the will (q.v.).

CODRINGTON, SIR EDWARD (1770-1851). British sailor. His fighting career began with the outbreak of the war with France. At Trafalgar he led the *Orion*; in 1814 his ship was with the force serving against the United States. He was knighted in 1815. Codrington was the admiral who led the allied fleets of Britain, France, and Russia against the Turkish fleet at Navarino in 1827. He became a full admiral before he died, April 28, 1851.

Sir E. Codrington,
British sailor
After Laurence

CODY, SAMUEL FRANKLIN (1861-1913). British aviator and inventor. Born in the U.S.A., he came to England in 1896, was naturalized, and became man-lifting kite constructor at Aldershot in 1906. The first man to fly in Great Britain and the maker of the first practical British flying machine, he flew in a machine of his own make for 27 mins. in Oct., 1908. He was killed in a flying accident, Aug. 7, 1913. See Aeronautics.

CODY, WILLIAM FREDERICK (1845-1917). American scout and showman. Born at Iowa, Feb. 26, 1845, as scout and guide in the U.S. army he served throughout the Civil War. During the construction of the Kansas Pacific Rly. Cody supplied the workmen with buffalo meat, hence his sobriquet of Buffalo Bill. Cody took part in many expeditions against the Indians. In 1883 he founded his great Wild West show, with which he toured Great Britain and Europe. Cody died at Denver, U.S.A., Jan. 10, 1917.

William F. Cody,
American scout
Vandyk

CO-EDUCATION. Education and training of the sexes together. There are now about 250 secondary schools in England and Wales in which both sexes are received. Some of these are on the dual method, in which the sexes only share the same teachers, and spend no further time together. In higher education all the modern universities are co-educational. Scotland and the United States have adopted the principle of co-education for much longer time, and more generally, than England.

COELENTERATA (Gr. koilos, hollow; entera, intestines). Phylum or sub-kingdom of the invertebrates, placed systematically between the sponges and worms, and distinguished by the identity of the body cavity and the alimentary canal. They are simply hollow tubes, the interior being a cavity for the ingestion of food. The exterior may have

appendages or tentacles, as in the hydra and the sea anemone; and it may secrete a calcareous external skeleton, as in the corals. The coelenterata are usually divided into three classes: hydrozoa, scyphozoa, etenophora.

COELOSTAT. Mirror, so mounted and adjusted on an axis which points to the Pole, and revolves at half the apparent diurnal motion of the stars, that the image of the sky reflected in it always shows the stars at rest. Thus a fixed telescope directed at the image in the moving mirror finds all the stars or any star in its field of view at rest.

COERCION ACTS. Various Acts of Parliament which had for their object the enforcement of law and order in Ireland. The best known are those passed by the Gladstone Government in 1881 and 1882, following the Phoenix Park murders. After the failure of the Home Rule bill another coercion bill was introduced by A. J. Balfour in 1887. This followed the lines of earlier Acts, and was instrumental in restoring order. After a year or two the need for it died away, although the authorities retained the power to put it in force if necessary. The Act passed in Aug., 1920, which set up special tribunals for the repression of crime in Ireland, was sometimes called a Coercion Act.

COFFEE (Coffea). Genus of evergreen trees and shrubs of the order Rubiaceae. It has opposite leaves and funnel-shaped tubular

flowers that are followed by a pulpy fruit somewhat like a cherry, containing within the pulp two seeds, the familiar "coffee beans." There are many species, and several are grown commercially, but the principal are the so-called Arabian coffee (C. arabica), really a native of Abyssinia, and the Liberian coffee (C. liberica), native of W. Africa. Under cultivation in different localities with hot climates these have yielded distinct varieties, usually known by the place-names of their origin: thus Java coffee, Ceylon coffee, Brazilian coffee, etc. About four-fifths of the world's annual crop is produced in Brazil. Coffee, usually considered an importation from Arabia, was first used as a beverage in Abyssinia, whence it reached Arabia at the beginning of the 15th century. It was not until the middle of the 17th century that it was introduced into England.

Coffee. The plant and berries

COFFEE HOUSE. House of entertainment, where coffee and other refreshments are provided. The first coffee house in London was opened in 1652 in S. Michael's Alley, Cornhill. For a century the coffee houses were a prominent feature of London social life. The frequenters of the coffee houses formed themselves into coteries, and each coterie made its headquarters at a particular house. Thus the St. James's, in St. James's Street, was the recognized whig resort; the Grecian, in Devereux Court, Strand, kept by a Greek, was devoted to learning.

City coffee houses were also frequented by business men who desired to obtain the latest news affecting their interests. See Baltic; Club.

COFFER. Form of chest most used in the early and Middle Ages for the storage of valuables. Made usually of oak, some were carved and painted; others were covered with leather, brocade, or painted canvas. The

best examples, in museums and private collections, are magnificently decorated pieces, the work of Italian craftsmen. See Chest.

Coffer. Italian 16th century wooden coffer, ornamented with carvings illustrating subjects from Roman history
By courtesy of the Victoria and Albert Museum

COFFER FISH (Ostracion). Marine fish of which there are more than twenty species, all found in the warmer seas. The body is covered with a mosaic of six-sided bony plates, hence the name. Only the fins and tail are capable of movement.

Coffer fish, Ostracion cornutus, also called the horned trunk fish

COFFIN (Gr. kophinos, basket). Casket or box in which the dead are placed before interment or cremation. The modern British coffin is usually of oak or elm, sometimes lined with lead, hexagonal in shape, with a brass name plate on the lid and other metal fittings. The first wooden coffins were doubtless bawn out of tree trunks. Stone, iron, lead, marble, and even glass have been used. Coffins did not come into general use until the beginning of the 18th century. The term coffin-ship was applied to unseaworthy vessels sent to sea before the introduction of the Plimsoll (q.v.) line. See Burial; Sarcophagus; also illus. below.

COGNAC. Town of France, in the dept. of Charente. It stands on the left bank of the river Charente, 30 m. W. of Angoulême. The church of S. Leger, with a Romanesque portal, dates in part from the 11th century, and there is a 15th century castle. The chief industry is preparing the special kind of brandy known as cognac. Pop. 18,876. See Brandy.

Coffin. Stone coffin, about 12th century, excavated on the site of Bermondsey Abbey. See above

COHERER (Lat. co-, with; baerere, to stick). Device for detecting electro-magnetic waves, consisting of two metallic electrodes in light contact. The contact is so delicate that virtually the circuit is open, but when an electro-magnetic wave passes the electrodes cohere. Branly invented his coherer in 1890. This consisted of a tube containing metallic filings loosely packed between two metal plugs. The passage of an electro-magnetic wave caused cohesion between the filings and the ends of the rods and completed the circuit. See Wireless.

COHORT. Strictly, the tenth part of a Roman legion consisting of 600 men. The term, like the English word corps, was loosely applied to bodies of men constituted for any definite military or police service. The word is derived from the Lat. cohors, meaning originally an enclosed space, and was afterwards applied to its contents.

COIF or **QUOIR** (late Lat. *cofia*, cap; Fr. *coiffe*). Term for any close covering for the head, such as a hood. A coif cap of white silk or lawn used to be part of legal dress and the distinguishing badge of serjeants-at-law; later it became the custom to wear a small black cap over the white coif.

COIL (Lat. *colligere*, to gather together). In electricity, a coil of wire used to create a magnetic field by passing a current through it. A bar of iron inserted in the coil becomes magnetised during the passage of the current. An induction coil is one in which an electric current passing through one coil (the primary) induces a current of higher or lower voltage in another (the secondary).

The choke coil and the transformer are types of coil each with a specific purpose, the first to reduce the intensity, and the second to change the voltage, of an alternating current. Both are used in broadcast receiving apparatus, which also gives use to coils of various other kinds. The aerial circuit is tuned by an inductance coil in conjunction with a variable condenser. Another method of tuning is provided by varying the magnetic coupling between a pair of coils, one in the aerial circuit, and one in a secondary circuit, respectively. Loading coils with more or fewer turns are brought into the circuit to increase the maximum wave-length to which it can be adjusted. See Condenser; Inductance; Wireless.

COIMBRA (anc. *Aeminium*). City of Portugal, in the prov. of Beira, capital of Coimbra dist. Picturesquely seated on the Mondego, 115 m. N.N.E. of Lisbon, it was the capital of Portugal for some 250 years, and is the seat of a university. Coimbra has two cathedrals, one dating from the 12th century, an episcopal palace, fine churches, and convents. The ruins of the monastery of S. Clara, and the Quinta das Lagrimas, Villa of Tears, where Inez de Castro was murdered, 1355, stand on the river banks. Six Portuguese kings were born at Coimbra, as was the poet Francisco Sa de Miranda, and, according to one tradition, Camoëns, who attended the university. Pop. 20,841.

COINAGE. Name given to the coins or metallic money in, or available for, circulation in a country. In the United Kingdom three metals or alloys of metals are used for the coinage, which is known as the imperial coinage. Sovereigns (20s.) and half-sovereigns (10s.) are coined in gold, while on special occasions, such as a coronation, coins for £5 and £2 are struck. Of silver coins the most frequent are the half-crown (2s. 6d.), florin (2s.), shilling (1s.), sixpence (6d.), and threepence (3d.). A certain number of crowns (5s.) and double florins (4s.) are also struck, while there have been silver pennies and twopenny pieces. The fourpenny piece was frequently coined in the past. There are three bronze coins in circulation: penny, halfpenny, and farthing. These coins were made of copper before 1860. All the common British coins date back to Tudor times or earlier, except the florin, introduced in 1849. Since the early years of the Great War gold coins have been withdrawn from circulation, their place being taken by treasury notes.

Canada and India has each its own coinage, but Australia and South Africa use British coins with special designs thereon. New Zealand and other parts of the Empire use British coins.

In the United Kingdom changes affecting the coinage are dealt with by proclamation.

The melting of gold and silver coia is prohibited. See Bank of England; Exchange; Mint; Money; Numismatics.

COINING. Illegal making or counterfeiting of coins. The laws against coining were codified in 1861, and supplemented by the Counterfeit Medals Act of 1883. By these laws offences are punishable by terms of imprisonment ranging from penal servitude for life to two years' imprisonment with or without hard labour.

COIR (Malay *kayar*, cord). Fibre from the husk of a coconut, exported principally from the tropical islands of the Indian and Pacific Oceans. The husks having been softened in water, the fibre is removed either by beating or by treatment on spiked drums. Coir fibre has great strength, and does not decay in damp surroundings.

COKE. Product of coal obtained by charring or dry distillation. Coke is to coal what charcoal is to wood; and both coke and charcoal are prepared by essentially similar methods. Coke for metallurgical purposes used to be made in the same way as common charcoal had been made from time immemorial, but this process was soon superseded by the introduction of the beehive coke oven.

The coke made in this oven is very hard, and therefore peculiarly suited for use in modern blast furnaces. The best qualities contain 80 p.c. of carbon with 8 p.c. of ash and 1.4 p.c. of moisture. The greater portion of metallurgical coke is, however, now made in kilns of different type, such as the Appolt (q.v.), Coppée, and Simon-Carvé. These do not produce coke equal in quality to that from the beehive oven, but they permit the recovery of gas, and of a number of other valuable by-products. An inferior form of coke is made on an enormous scale in the manufacture of ordinary gas for lighting and heating from coal. It is an important fuel, since it produces hardly any smoke when it burns.

COKE, SIR EDWARD (1552—1634). English lawyer. Born at Mileham, Feb. 1, 1552, he was called to the bar in 1578, became Recorder

Sir Edward Coke,
English lawyer.
After a portrait in
"Serjeants' Inn"

of Coventry, 1585, and of London, 1592. He was elected M.P. for Norfolk and Speaker of the House of Commons the same year, and in 1593 became attorney-general. Coke conducted the prosecution of Essex and Southampton, 1600; of Raleigh, 1603, and of the gunpowder plotters, 1605. In 1606, as chief justice of the Common Pleas, he opposed James I's exaggeration of the royal prerogative, and also negated the king's claim to legislate by Proclamations. He was removed from the chief justiceship in 1616. As M.P.; Coke distinguished himself by his advocacy of the liberties of Parliament. He died Sept. 3, 1634. Consult Chief Justice Coke: His Family and Descendants at Holkham, G. W. James, 1920.

COLBERT, JEAN BAPTISTE (1619—83). French statesman. Born at Reims, Aug. 23, 1619, he entered the service of Mazarin in 1651. Mazarin recommended him to Louis XIV (1660), and Colbert was placed in charge of the national finances, then in ruinous disorder. By instituting a council of finance and by other measures he produced order out of chaos, and prosperity where disaster was threatening. Yet the huge national expenditure involved heavy taxation, for which Colbert was blamed, and he died Sept. 6, 1683, execrated by the people.

COLCHESTER. Borough, market town, and river port of Essex. It stands on the

S. bank of the Colne, 12 m. from the sea and 52 m. E.N.E. from London by the L.N.E.R. Interesting old buildings include the keep of the Norman castle, the largest in England, the ruins of the 12th century priory of S. Botolph, and the gateway of the 11th century monastery of S. John. In 1920 the castle was purchased for £8,000 by the town council, the money being provided by Lord Cowdray. The oyster fisheries of the Colne are municipal property. The bishop of Colchester is suffragan to the bishop of Chelmsford.

The Camalodunum of the Romans, Colchester retains many evidences of their occupation. The ancient walls still exist, and finds include tessellated pavements, inscriptions, pottery, coins, a steelyard and buckle, and two pieces of a gateway. The Roman street has been traced across the Castle Park, as well as an apsidal-ended chamber. The baths comprise one of the most notable Roman remains in S.E. England. Market day, Sat. Pop. 45,170.

Colchester Castle. The quadrangular Norman keep, the largest of its kind in England

COLCHESTER, CHARLES ABBOT, 1ST BARON (1757—1829). A British politician. Born at Abingdon, Berkshire, Oct. 14, 1757, in 1795 he became M.P. for Helston, Cornwall, and in 1800 introduced the first Census Act. He was chief secretary for Ireland, 1801, and Speaker from 1802—17, when he retired with a peerage. He died May 7, 1829. The title became extinct on the death of his grandson, the third baron, in 1919.

COLCHICINE. Alkaloid or active principle of *Colchicum autumnale* or meadow saffron. It is present chiefly in the seeds and bulb, both these parts of the plant being used in medicine. In any but minute doses, colchicine is a powerful poison.

COLD. Physical phenomenon, the opposite of heat. Considered formerly as possibly a positive quality, rather than as the absence of heat, it was only with the general acceptance of the dynamical theory of heat that cold came to be regarded as a negative condition dependent on the lessening of that vibration of molecules which produces heat. At the temperature of absolute zero —273° C., i.e. at the lowest possible degree of cold, it has been conjectured that all movements of molecules must cease. See Heat; Thermodynamics.

A person rescued after being overcome by cold should be placed in a cold room, wrapped in a blanket, and the surface of the body should be rubbed with the hand dipped in cold water. The temperature of the room should be raised gradually. Warm stimulating drinks, such as coffee, may be given.

COLD HARBOR. Village of Virginia, U.S.A., in Hanover county. It is 10 m. N.E. of Richmond, and was the scene, in 1864, of a series of sanguinary conflicts between the Federal troops under Grant and the Confederates under Lee.

GOLDINGHAM. Coast parish and village of Berwickshire, 3 m. N.W. of Eyemouth. It has ruins of an 11th century priory. Fast Castle, about 4 m. to the N.W., is the Wolf's Crag of Scott's Bride of Lammermoor. Pop. 2,830.

COLD STORAGE. Method of preserving perishable goods by keeping them in a sealed insulated chamber at a low temperature. Cold stores of large capacity form part of the equipment at the principal ports where refrigerated meat is received from abroad, and at meat markets. See Refrigeration.

COLDSTREAM GUARDS. British regiment of foot guards, said to be the oldest in the army. It originated in a unit which was placed under George Monk. Called Monk's regiment, it remained in Scotland until 1659, when the regiment spent three weeks, waiting on events, at Coldstream on the Tweed, and got its present name. The Coldstreamers fought under William III and Marlborough in the Netherlands, served in America and Spain, and lost heavily at Waterloo. They were in the Crimea and South Africa. The regiment had a wonderful record during the Great War. Its headquarters and record office are at Birdcage Walk, London, S.W.1.

Coldstream Guards
regimental badge

COLE, MADAME BELLE (d. 1905). American singer. Born at Chautauqua, New York, she began her career as soloist in a New York church. In 1887 she came to England and sang at the Crystal Palace. Later she made tours through the U.S.A. and the British Dominions. She died in London, Jan. 5, 1905.

COLENZO. Village of Natal, S. Africa. On the Tugela, 15 m. by rly. S. of Ladysmith, it was occupied by the British on Feb. 20, 1900, in the S. African War. See Tugela.

COLENZO, JOHN WILLIAM (1814-83). British prelate and mathematician. Born at St. Austell, Jan. 24, 1814, at Cambridge he was second wrangler, and a fellow of S. John's. For a time master at Harrow, his name became known by his text-books on algebra and arithmetic. In 1853 he was made bishop of Natal. He remained there until his death at Durban, June 20, 1883. Colenso reached conclusions upon the Pentateuch which were regarded as heresy. In S. Africa the bishops declared him deposed, but the privy council decided against this, and Colenso remained.

John William Colenso,
British divine

COLEOPTERA (Gr. koleos, sheath; pteron, wing). Order of insects known as beetles. They are distinguished by the modification of the fore-wings into horny elytra of chitin, which serve as cases to cover the folded hind-wings. See Beetle.

COLERAINE. Urban dist., market town, and seaport of Londonderry, Northern Ireland. It is on the Bann, 4 m. from the sea and 61 m. N.W. of Belfast on the L.M.S. Rly. The linen industry, pork-curing, and salmon fisheries are important. Pop. 7,785.

COLERIDGE, JOHN DUKE COLERIDGE, 1ST BARON (1820-94). British lawyer. Born Dec. 3, 1820, a great-nephew of S. T. Coleridge, he became a barrister. In 1865 he was Liberal M.P. for Exeter, becoming solicitor-general in 1868. As attorney-general he conducted the crown's case in the Tichborne trial. Made chief justice of the common pleas and a baron, 1873, he succeeded Cockburn as lord

Baron Coleridge,
British lawyer

chief justice in 1880, holding that post until his death, June 14, 1894.

His eldest son, **Bernard** (1851-1927), 2nd Lord Coleridge, for a time a Liberal M.P., was made a judge of the high court in 1907.

Stephen William Buchanan Coleridge, born May 31, 1854, a younger son, became a barrister. He is best known as an opponent of vivisection and a writer on that and other subjects.

COLERIDGE, SAMUEL TAYLOR (1772-1834). British poet, critic, and philosopher. Born Oct. 21, 1772, at Ottery St. Mary, Devonshire, he was sent in 1781 to Christ's Hospital, where he began his long friendship with Charles Lamb. At Cambridge he offended the authorities by his Unitarianism and republican sympathies. He left without a degree. In 1796 he settled at Nether Stowey, where his friendship with Wordsworth began. After a visit to Germany he settled with the Wordsworths at Keswick. He lectured at the Royal Institution, London, in 1808, and in 1811-12 came the notable

S. T. Coleridge,
British poet

Portrait by W. Allston
in the Nat. Port. Gall.

lectures on Shakespeare and Milton. In 1816, to combat the opium habit, he put himself in the hands of Dr. Gillman, of Highgate. He died at Highgate, July 25, 1834. Among Coleridge's best-known works are *Remorse* (a tragedy), *Christabel*, *The Rime of the Ancient Mariner*, and *Kubla Khan*. Coleridge's eldest son, **Hartley** (1796-1849), published *Poems*, 1833, and *Worthies of Yorkshire and Lancashire*, 1836. Derwent, second son (1800-83), was first principal of St. Mark's College, Chelsea, 1841-64, and rector of Hanwell, 1864-80. He wrote a *Life of Hartley Coleridge*, 1849. Sara Coleridge, daughter of S. T. Coleridge (1802-1852), married her cousin, Henry Nelson Coleridge, with whom she edited her father's works.

COLERIDGE-TAYLOR, SAMUEL (1875-1912). British composer. Born Aug. 15, 1875, he studied at the Royal College of Music. His first distinctly successful composition was the music to *Hiawatha*, 1898. Other works include orchestral, chamber and piano music; also the incidental music to several plays by Stephen Phillips. He died Sept. 1, 1912. Consult *Life and Letters*, W. C. B. Sayers, 1915.

S. Coleridge-Taylor,
British composer

COLESBERG. Town of Cape Province, S. Africa. It is 4,407 ft. above sea level, 308 m. by rly. N. of Port Elizabeth, and 141 m. S. of Bloemfontein. The old wagon route to the Orange Free State passes through the town and crosses the Orange river, 18 m. distant, by a fine bridge. It was the scene of important operations during the S. African War (1899-1902). Pop. (white) 999.

COLET, JOHN (c. 1467-1519). English scholar and divine. Born in London, he was ordained priest in 1498, and was appointed dean of St. Paul's in 1505. In 1509 Colet founded and endowed St. Paul's School. A friend of Erasmus and Sir Thomas More, Colet stood for the New Learning. With More and Fisher he was averse from separation from Rome. He died Sept. 16, 1519.

Colewort (A.-S. eaulwyrht). Plant belonging to the cabbage family and one of the cultivated varieties of *Brassica oleracea*.

COLIC (Gr. kolikos, connected with the colon). Severe gripping abdominal pains of a paroxysmal character. The condition is

most frequently due to an attack of acute indigestion. The passage of a gall stone from the gall bladder along the bile duct leading to the intestines may give rise to agonising pain, constituting the condition known as biliary colic. Renal colic is due to the passage of a stone from the kidney into the ureter. For simple colic the best treatment is to administer a purgative. See Gall Stones.

COLIGNY, GASPARD DE (1519-72). Leader of the French Huguenots. Born at Châtillon-sur-Loing, Feb. 16, 1519, he served in the armies of Francis I and Henry II, and was made admiral of France in 1552. About 1557 he became a Huguenot, and the active leader of the Protestant party. After the death of Condé, Coligny assumed the sole command of the Huguenot forces, maintaining the contest until the peace of 1570. An unsuccessful attempt was made to assassinate Coligny on Aug. 22, 1572, and two days later he was murdered in the general massacre of St. Bartholomew's day.

Gaspard de Coligny,
French Huguenot

Odé de Coligny (1517-71), elder brother of the foregoing, was cardinal of Châtillon. Converted to Protestantism, he was deprived of his rank. He was poisoned by his valet, when in England seeking aid from Elizabeth, and died Feb. 14, 1571.

COLISEUM. Theatre of varieties, in St. Martin's Lane, London, W.C. Built in 1904, it is in the Italian style. A feature of the building is its specially built revolving stage. The famous amphitheatre at Rome is more correctly spelt *Colosseum* (q.v.).

COLITIS. Inflammation of the colon or large intestine. In simple ulcerative colitis the colon is enlarged and often the mucous membrane is extensively ulcerated. The course is usually chronic, lasting from two to four months. The symptoms are frequent diarrhoea, fever, wasting, debility, and increasing anaemia. The diet should consist mainly of peptonised milk; irrigation of the intestine is often highly efficacious. The cause is unknown. In mucous colitis shreds and strips of tenacious mucus are passed. The disease is often associated with severe neurasthenia, hysteria, or other forms of neurosis. Treatment consists in strict attention to diet, irrigation of the intestine with warm alkaline solutions, and relief of the associated neurasthenic condition.

COLLAR (Lat. collum, neck). Neck band of linen or other material, the neck part of a coat, a band of jewels, or, when speaking of armour, a defence of mail for the neck. The Romans used chin cloths, of which the wimples of the Middle Ages were a development. The ruff of the Tudors gave place to bands or falling collars about the end of the reign of James I. Neck cloths or cravats, the forerunners of the modern collar, succeeded the neck band during the reign of Charles II. In engineering, the term collar means (1) a rim or enlargement on an axle of a railway vehicle which resists a side thrust of the journal bearing; (2) a ring or round flange which bears upon or against another object, e.g. collars for pipe joints.

The collar bone is another name for the clavicle (q.v.).

COLLATERAL (Lat. com, with; lateralis, of the side, lateral). In law, relatives who are neither ascendants, such as parents, grand-

Gaspard de Coligny,
French Huguenot

After Clouet

parents, etc., nor descendants, such as children, grandchildren, etc. A brother, cousin, uncle, aunt, nephew, niece, are collaterals.

Collateral security, in English law, is a term applied to a security which is only in aid of an obligation, generally an additional security in reinforcement of the main security.

COLLECT (Lat. com, with; legere, to gather). Short prayer which precedes the reading of the epistle in the Mass of the Roman Catholic Church and the Holy Communion service of the Church of England. There is a collect for each Sunday and each festival.

COLLECTIVISM. Term for the collective and national ownership of the land and other means of production. It is practically a synonym for state socialism. The word was first used in *The Saturday Review*, May 8, 1880. See Socialism.

COLLEGE. Word used for an educational and occasionally for an ecclesiastical or other body. Thus the constituents of a university are colleges, while establishments for training teachers, army officers, clergymen, and others are usually called colleges. The Collège de France is a French state-supported academic institution. Among colleges of other kinds are the College of Physicians and the College of Arms.

In the ecclesiastical sense the word is used for the college of cardinals, and when speaking of a collegiate church, i.e. one which, although not a cathedral, has a college or chapter. The word is applied also to the actual building in which the college works, and at Oxford and Cambridge undergraduates live either in or out of college. College yells are the organized cries of students and graduates of American colleges and schools. See Cambridge; Oxford.

COLLEGE OF ARMS. Society incorporated and endowed 1483 by Richard III to attend the earl marshal's court and determine upon descents, pedigrees, escutcheons, and the like. The college is composed of the three kings of arms (Garter, Clarenceux, and Norroy), the six heralds (Windsor, Chester, Lancaster, York, Richmond, and Somerset), four pursuivants (Rouge Croix, Bluemantle, Rouge Dragon and Portcullis), and two extra heralds.

Their general duties are to attend the sovereign at the House of Lords, and on certain high festivals to the chapel royal; to make proclamations, marshal the proceedings at public processions, and attend the installation of the Knights of the Garter. They grant coats armorial to persons authorised to bear them. The original college was destroyed in the Great Fire, 1666. The present brick edifice in Queen Victoria Street, London, was built about 1669 by Sir Christopher Wren. See Arms; Heraldry.

COLLEONI, BARTOLOMEO (1400-75). Italian soldier. Born in 1400, he made a reputation in the wars between Milan and Venice, serving either side as suited his purpose. He is credited with having been the first to fit guns with crannions. In 1455 he became generalissimo of the Venetian forces. There is a statue to him at Venice.

COLLES'S FRACTURE. Fracture of the lower end of the radius, the bone on the thumb side of the fore-arm. The accident is most

often due to putting out the hand to break the effects of a fall. It is named after Abraham Colles (1773-1843), an Irish surgeon.

COLLEY, SIR GEORGE POMEROY (1835-81). British soldier. He entered the 2nd or Queen's Regiment in 1852. He saw service in Cape Colony, 1857-58, and in China, 1860. He then entered the Staff College, and was for a time professor. Appointed governor of Natal, in 1880 he commanded the forces in the first Boer War. He was killed at the battle of Majuba, Feb. 27, 1881.

COLLIE. Breed of Scottish sheep-dog. Renowned for its sagacity and intelligence, it was originally used wholly by shepherds, but during the 19th century came into favour as a companion. It should have a very long and narrow head, with sharp muzzle, small ears, and a heavy ruff round the neck. The long, bushy tail should be carried raised at the tip. In colour, black or tan, or the two combined, is preferred.

COLLIER, JEREMY (1650-1726). English divine. Born at Stow-cum-Quy, Cambridgeshire, Sept. 23, 1650, he was ordained in 1677. He was strongly against William III, refusing to acknowledge the monarch or the bishops who had accepted the Revolution. He was imprisoned in 1688 and 1692, and in 1696 was outlawed. In 1698 appeared his *Short View of the Immorality and Profaneness of the English Stage*. Collier also published an *Ecclesiastical History of Great Britain* (1708-14), sermons, and miscellaneous writings. He died April 26, 1726.

COLLIER, JOHN (b. 1850). British painter. The second son of Lord Monkswell, he was born in London, Jan. 27, 1850. He studied in Paris, under J. P. Laurens, and at Munich. He began to exhibit in London in 1874, and for many years his works were prominent at the Royal Academy. He was noted for his portraits.

COLLIER, JOHN PAYNE (1789-1883). Shakespearean critic. Born in London, Jan. 11, 1789, he was connected with *The Times* and *The Morning Chronicle* as reporter and critic. In 1842-44 he brought out an edition of Shakespeare, based in part on MS. corrections which he said he had found in a First Folio belonging to the earl of Ellesmere. In 1852 and 1853 Collier published *Notes and Emendations to the Plays of Shakespeare*, claiming to have obtained them from a Second Folio belonging to himself. Later the annotations in both folios were pronounced to be recent fabrications. He died Sept. 17, 1883.

COLLINGS, JESSE (1831-1920). British politician. Born at Lymington, Devon, he settled in Birmingham, associated with J. Chamberlain, and in 1878 was mayor of the town. In 1880 he was M.P. for Ipswich. As a Liberal

Unionist he was M.P. for the Bordesley division of Birmingham, 1886-1918. Collings was prominent owing to his demand of "three acres and a cow" for the agricultural labourer. He died Nov. 20, 1920.

COLLINGWOOD. Town of Ontario, Canada. It stands on Georgian Bay, 90 m. N.W. of Toronto by the Canadian National Rlys., and is the eastern terminus for steamers on Lakes Huron and Superior. It has ship-building and steel works. Pop. 5,882.

COLLINGWOOD, CUTHBERT COLLINGWOOD, BARON (1750-1810). British sailor. Born at Newcastle-upon-Tyne, Sept. 26, 1750, he was only a child when he went to sea on a man-of-war. In 1779 he commanded the *Badger*. He co-operated with Nelson off the West Indies, 1783-86. He commanded the *Barfleur* on the glorious 1st of June, 1794, and was in the battle of Cape St. Vincent in 1797. At Trafalgar he led the second line on the Royal Sovereign. He was made a baron after Trafalgar (1805), and died at sea, March 7, 1810.

COLLINS, ARTHUR (b. 1863). British theatrical manager. Born in London, he began life in the office of his father, an architect, but in 1881 he was apprenticed to a scene painter at Drury Lane Theatre, of which he was stage-manager, 1887-96; and in 1897, after the death of Sir Augustus Harris, lessee and manager, retiring 1920.

COLLINS, MICHAEL (1890-1922). Irish leader and soldier. Imprisoned for his share in the Easter Rebellion in 1916, he was M.P. for S. Cork county in 1918. He organized the Irish volunteers and commanded the republican army. One of the signatories of the treaty, he was finance minister in the provisional government of 1922, and later commander-in-chief of the Free State army. He was killed in an ambush, Aug. 22, 1922.

COLLINS, WILLIAM (1788-1847). British painter. Born in London, Sept. 8, 1788, he entered the Royal Academy schools in 1807, and became R.A. in 1820. Between 1807 and 1846 he had 124 exhibits. He died Feb. 17, 1847. Of his two sons one, William Wilkie Collins, was the novelist, and the other son, Charles Allston Collins (1828-73), married Kate, Charles Dickens's younger daughter.

COLLINS, WILLIAM (1721-59). British poet. Born at Chichester, Dec. 25, 1721, he came to London in 1746, and a legacy in 1749 made him independent. With waning vitality Collins returned to Chichester, where he died, June 12, 1759. His finest poems are the *Ode on the Death of Thomson*, *Ode to Evening*, *The Passions*, and the ode beginning "How sleep the brave."

COLLINS, WILLIAM WILKIE (1824-89). British novelist. The son of William Collins, R.A., he was born in London, Jan. 8, 1824. He entered Lincoln's Inn and was called to the

Colleoni. Verrocchio's bronze statue of Bartolomeo Colleoni in Venice

bar, 1851. His first novel, *Antonina*, appeared in 1850. He collaborated with Charles Dickens in *No Thoroughfare*, and to *Household Words* and *All the Year Round*. Collins contributed his best work, notably *The Woman in White*, 1860; *No Name*, 1862; and *The Moonstone*, 1868. *Arncliffe*, 1866, and *The New Magdalen*, 1873, appeared in *Cornhill* and *Temple Bar*. He died in London, Sept. 23, 1889.

Wilkie Collins,
British novelist

COLLODION (Gr. kolla, glue). Colourless fluid obtained by dissolving pyroxylin in alcohol and ether, which dry up when exposed to the air, leaving a transparent film. It is used for photographic plates and in surgery.

Colloid cotton is nitrocellulose of rather low nitrogen content, completely soluble in nitroglycerine or ether-alcohol. It is largely used in the preparation of smokeless powders, blasting gelatine, artificial silk, etc.

COLLOID. Name given by Graham to substances having a very small power of diffusion, e.g. gelatin or starch. He found that while certain substances in solution diffused readily through a membrane, others did not. To the former class he gave the name crystalloids, since they were chiefly such substances as crystallise well. It is now recognized that substances may exist in both colloidal and crystalline state, and the terms are used to distinguish different conditions of matter. A colloid in the form of a solution is known as a sol; if in a solid medium it is termed a gel.

Two types of colloids are distinguished, reversible and irreversible, the former redissolving after drying, while the latter do not. Glue, albumen, and gum arabic are reversible, and colloidal metals irreversible. Colloidal silver salts are essential for photographic sensitised plates and papers. Colloidal solutions of mercury, gold, copper, and silver have a medicinal value not found in crystalloid form.

COLLUSION (Lat. con, with; ludere, to play). Term used in English divorce law to describe an arrangement made by husband and wife to get a divorce. If the court discovers that the petitioner and the respondent are merely trying to get rid of the marriage tie by arrangement, a divorce will be refused.

COLMAN. Name of many Irish saints, including: (1) The founder of the see of Dromore (c. 450-520). Festival, June 7. (2) Colman MacLenine, royal bard of Munster (c. 510-601) and founder of the see of Cloyne. Festival, Nov. 24. (3) S. Colman Elo, nephew of S. Columba. He was the first abbot of Muckamore and bishop of Connor. Festival, Sept. 26. (4) Colman, a native of Connacht (c. 605-676), a monk of Iona who became bishop of Lindisfarne in 661. Festival, Aug. 8.

COLMAN, GEORGE, THE ELDER (1732-94). British dramatist. Born at Florence, he was called to the bar in 1757. Garrick, who produced his successful comedy, *The Jealous Wife*, in 1761, early diverted his attention from the law, and with him Colman wrote *The Clandestine Marriage*. From 1767-74 he was manager of Covent Garden, and from 1777-85 of *The Haymarket*. He wrote and adapted a number of plays, and edited Beaumont and Fletcher and Ben Jonson. He died Aug. 14, 1794.

His son George (1762-1836), also a dramatist, was born Oct. 21, 1762. His first play

was produced at *The Haymarket* in 1784, and from 1789-1820 he was manager of *The Haymarket*. Of his plays *The Iron Chest* (1796), *John Bull* (1803), and *The Heir at Law* (1808) were the most popular. He died Oct. 17, 1836.

COLMAR. Town of France, in Alsace, capital of the dept. of Haut-Rhin. It is at the foot of the Vosges Mts. on the Lauch, a tributary of the Ill, 42 m. by rly. and canal S.W. of Strasbourg. Declared a free city in 1226, it was held by the French from 1673 till 1871, when it became German. It was returned to France in 1919. The town is the greatest cotton-spinning centre of Alsace. In the old part are houses of the 16th and 17th centuries, S. Martin's Church or cathedral, and the restored buildings of the old Benedictine convent of Unterlinden founded in 1232, and used as an art museum. Pop. 43,141.

COLNE. River of Essex. Rising in the N.W. of the county, it enters the North Sea at Mersea I. after a S.E. course of 35 m. The oyster beds are the property of the corporation of Colchester. Brightlingsea on the estuary is a yachting centre.

Another Colne, or Coln, rises near Hatfield and flows from Hertfordshire between Middlesex and Buckingham to Staines, where it joins the Thames. Its length is 35 m.

COLNE. Borough and market town of Lancashire. It is on a small tributary of the Calder, 344 m. N. of Manchester on the L.M.S. Rly. The chief buildings are the old church of S. Bartholomew, the grammar school, and the cloth hall. Its chief manufactures are printed calicoes and woven fancy goods. Slate is worked in the vicinity. Market day, Wed. Pop. 25,270.

COLNEY HATCH. District of Middlesex, in the N.E. part of the co. Its station, New Southgate, is on the L.N.E. Rly. Here is one of the largest of the County of London mental hospitals (opened 1851), with accommodation for over 2,000 inmates.

COLOBUS. Genus of monkeys found only in Africa and noted for their long, silky hair and tufted tails. The thumb is either absent or consists at most of a small tubercle. The skin is in demand for furs.

COLOGNE. City of Prussia, in the Rhine Province. Mainly on the left bank of the Rhine, it includes Deutz across the river and other suburbs. It is a great rly. junction and river port. Besides eau de Cologne, its manufactures include chocolate and machinery. Pop. 698,064.

The old town lies near the river. The newer parts are beyond the site of the old

fortifications. The cathedral, begun in 1248 but not completed until 1880, is one of the finest Gothic buildings in the world. Other famous old churches are the church of S. Maria im Capitol, S. Pantaleon's, Great S. Martin's, S. Andrew's, S. Gereon's, S. Ursula's, and S. Cecilia's. One of the finest modern churches is the Roman Catholic cathedral at Deutz. Among old secular buildings are the Gürzenich (partly used as the stock exchange), Rathaus, Templars' Lodge, and House of the Staple. Modern buildings include the library and archives, the post office, and the fine central station. There is a university.

Cologne owes its name to the Romans, who founded a colony here. Soon after 300 it had a bishop. He was made an archbishop in the 8th century, then one of the seven electors of the German king, and remained a great personage until the wide lands of his see were given to secular princes after 1101. Cologne joined the Hanseatic League 1201, and was made a free imperial city. In a short time the government passed largely into the hands of the trading guilds. During the 17th and 18th centuries Cologne's commercial

prosperity decayed, but, after being transferred to Prussia in 1815, the city recovered, especially after the formation of the German Empire in 1871. The first international Cologne fair was held in 1924.

Cologne was of great importance during the Great War. Its position and railway facilities made it one of Germany's chief military centres, and consequently it was bombed by Allied airmen. The terms of the armistice provided that the Allies should occupy the city and also a bridgehead with an area of 18 sq. m. on the other side of the Rhine. This particular area was allotted to the British. Cologne was the headquarters of the British army of occupation from Dec., 1918, until Dec., 1925, when it was transferred to Wiesbaden.

COLOMBES. Suburb of Paris. To the N.W. of the city, it is 5 m. from its centre, with which it is connected by tram and railway. It has a 16th century church, but the castle, in which Queen Henrietta Maria died, has disappeared. There is a stadium for international football matches and other athletic events, and a race-course. It is largely a residential town for Parisians. Near by is Bois Colombes, another town, with a population of 18,000, also a residential district. Pop. 32,271.

COLOMBIA. Republic of S. America. It is bounded N.W. by the republic of Panama, W. by the Pacific Ocean, N. by the Caribbean Sea, E. by Venezuela and Brazil, and S. by Peru and Ecuador. The area is estimated at about 462,000 sq. m. and the pop. at 6,617,000.

The W. part of Colombia is traversed by three great ranges of the Andes—the Western, Central and Eastern Cordilleras. To the east are immense plains. The N. section of these is covered with rank grass, flooded in the wet season, parched in the dry. The S. part is watered by the Amazon and Orinoco and their tributaries, and is dense tropical forest. The Eastern Cordilleras consist of vast plateaux; this is the most densely populated part of the republic and the climate is temperate. The coastal plains are hot and humid. The chief rivers are the Magdalena, Cauca, and Patia. Bogotá is the capital, other important towns including Medellín, Barranquilla, Cartagena, and Manizales.

The chief agricultural products are coffee, cotton, bananas, tobacco, and wheat and other cereals. The forests yield cedar, dyewoods, and medicinal plants. Mineral products include emeralds, platinum, gold, silver, copper, iron, coal, and petroleum. It is estimated that Colombia has the largest prospective oil field in the world. There are valuable pearl fisheries. The chief exports are coffee, bananas, and platinum. The mountainous character of the country makes the construction of rlys. and roads difficult. The rlys. consist of small lines linking up the towns with the rivers or the sea. Aerial ropeways are widely used. Aeroplane services are very highly developed. There is wireless communication with Europe and U.S.A. Spanish is the language of the country.

Originally under Spanish rule, Colombia gained its independence in 1819, when Simon Bolivar established the republic, consisting of what are now Colombia, Panama, Venezuela, and Ecuador. Venezuela and Ecuador withdrew in 1830 and Panama in 1903. Colombia is a member of the League of Nations. The president is elected by direct popular vote for

of Representatives of 113 members, who are elected for two years.

COLOMBO. Capital and chief port of Ceylon. The administrative and trade centre of the island, it is on the W. coast. It has one

Colombo. The new building for the Legislative Council, which was opened in 1930

of the largest artificial harbours in the world, covering over 600 acres, and is a first-class port and an important coaling station. The leading export is tea. The business quarter lies at the S. end of the harbour, where are the governor's residence, government buildings, and principal hotels. Farther on is the lake, and beyond it Victoria Park, the chief residential quarter, while between the lake and the sea is a narrow isthmus, Galle Face, where are promenades and recreation grounds. The two cathedrals, Christ Church and the R.C. cathedral, are near the harbour. The hall of the legislative council, opened in 1930, is one of the finest modern buildings in the East. The new university of Ceylon is situated in Colombo.

Colombo belonged to the Portuguese from 1517 to 1656, when it became Dutch. It has been British since 1796. Pop. 248,326.

COLON. Gold coin, named after Columbus, a monetary unit of Costa Rica. Its nominal value is about 1s. 10d., 10-45 colons equalling £1. It is divided into 100 copper cents, or 5, 10, 25, and 50 cent pieces in silver.

COLÓN. Coast town of Panama, Central America. It stands on the Caribbean Sea, at the W. end of the Panama Canal, 47 m. by rly. N. of Panama. Founded in 1850 by the builders of the Panama Rly., it was first called Aspinwall, after one of the builders, but was officially named Colón, after Columbus. Pop., with Cristobal, 32,000.

COLONEL. Officer of the British and other armies. The word comes from the Italian colonello, and was given because this officer originally led the colonello or little column at the head of the regiment. It is the rank between lieutenant-colonel and major-general, and is indicated by a crown and two stars. A new rank, colonel commandant, was instituted in 1920 in place of brigadier-general, which was temporarily abolished. Each regiment has also a colonel-in-chief, an honorary position to which a general officer or other person of distinction is appointed.

COLONIAL CONFERENCE. Name formerly given to the periodical conferences of representatives of the self-governing parts of the British empire. The first was held in 1887, and others in 1894 and 1902, all in London. The term now used

COLONIAL OFFICE. Department of the British Government which looks after the affairs of the colonies and dependencies, excluding India. Its head is a secretary of state, who is assisted by a parliamentary and a permanent under-secretary. Since 1925 he has also been secretary for Dominion affairs, but the Dominions Office, although under the same head and in the same building as the Colonial Office, is a separate department of state. It has also charge of all business relating to the Imperial Conference. See Civil Service.

COLONISATION. Act of founding a colony, i.e. of settling men and women in an unoccupied land, which becomes their home and a possession of the colonising country; or in earlier times the settling of men and women in a conquered country. A colonising race needs certain physical and mental qualities, and needs also to seek out a land which, from the climatic point of view, is suitable to it. White men, for instance, can never truly colonise the tropical parts of Africa. They are, however, the most suited of all for colonising

Colonial Office, Whitehall. Government offices built after the design of Sir Gilbert Scott, 1875

the temperate zones, and by them most of the colonising has been done.

The Phoenicians are generally regarded as the earliest colonists. Next came the Greeks, who sent out a steady stream of colonists who dotted the coasts of the Mediterranean with settlements and founded colonies on the shores of the Black Sea. Colonisation by the Romans was generally military in origin. Of modern nations, Great Britain ranks as the first colonising power of the world. See British Empire; consult also A Short History of British Expansion, J. A. Williamsou, 1929.

COLONNA. Name of a great Italian family. Prospero Colonna (1452-1523), soldier of fortune, fought for Charles VIII of France in the invasion of Italy, 1494-95, then entered the service of Spain against the French. He captured Milan from the French in 1521.

Pompeo Colonna (d. 1532), served as a soldier, and was ordained against his will. Created cardinal and vice-chancellor of Rome, he turned against the papacy and supported the Emperor Charles V. Pardon and reinstated in 1530, he was made viceroy of Naples, 1532, where he died.

Vittoria Colonna (1490-1547), Italian poet, was born at Marino, near Rome. The daughter of Fabrizio Colonna, grand constable of Naples, she was betrothed at the age of five to Francesco Ferdinando d'Avalos, and was brought up in the house of his aunt, where Tasso and the intellectual men of the time were frequent guests. Her poems are either religious, addressed to her husband, Francesco Ferdinando d'Avalos, or inspired by his memory. She died Feb. 25, 1547.

Colombia. Map of the South American republic traversed by the Andes and watered by the Amazon and Orinoco

four years. The legislative power is vested in a Congress of two houses, the Senate of 48 members, elected for four years, and the House

empire. The first was held in 1887, and others in 1894 and 1902, all in London. The term now used

COLONNADE. In Greek architecture, a range of columns, usually in one line, carrying an entablature. When in front of a building

Colonnade. North wing of the colonnade, built by Bernini in 1655, flanking the approach to St. Peter's, Rome. Behind is seen the Vatican palace

or court a colonnade is called a portico; when surrounding it, a peristyle. A range of four columns is called a tetrastyle, six a hexastyle, and so on. See Architecture; Column.

COLONSAY. One of the Inner Hebrides, Argyllshire. It was named after S. Columba, who founded a college here. It is 8 m. long and covers nearly 20 sq. m.

COLOPHON (Gr. kolophon, finishing touch). Device or inscription placed on the final page of a book or MS. giving place or date of publication or both, name of printer or author, and similar details. Colophons began to be superseded in the 16th century by title-pages, the name of the printer or printing office, placed now at the end of a book or on the reverse of the title-page, being called the imprint.

COLORADO. River of U.S.A. and Mexico. Known also as the Colorado River of the West, it is formed by the union of the Green river, which rises on Fremont's Peak in Wyoming, and the Grand river, coming from the Rocky mountains in Colorado. It flows through the dry plateau region of the S.W. to the head of the Gulf of California, and drains an area of 250,000 sq. m. Its length is estimated at 2,200 m., including its principal head-stream, the Green river. Of its many cañons the most remarkable is the Grand Cañon.

The Colorado river of Texas, or Eastern Colorado, rises in the W. of the state, and flows generally S.E. to the Gulf of Mexico. It is about 900 m long, and is navigable to Austin, about 300 m. from its mouth.

The Colorado river of Argentina is formed by the Rio Grande and Rio de Barrancas. Rising in the Andes, it enters the Atlantic through two mouths between Bahia Blanca and Union Bay. Its length is about 550 m.

COLORADO. West-central state of the U.S.A. It has an area of 103,948 sq. m. The surface consists of a collection of ranges belonging to the Rocky Mountains in the W., a vast plain, almost devoid of trees, in the E., and a well-watered and wooded region of foothills in the centre. The mountain region is notable for its valleys, or "parks," which occupy the basins of dried-up lakes.

Colorado has a dry and healthful climate. There are mineral springs at Colorado Springs, Manitou, and other places. The numerous

Norte. and the Arkansas. A remarkable effect is produced by earth pillars and rock pinnacles, as in the Garden of the Gods, near Colorado Springs.

Agriculture thrives, and by irrigation much of the soil has been rendered cultivable. Gold, silver, copper, lead, zinc, coal, and petroleum are among the chief mineral products. There are 13,234,380 acres of national forests. Denver is the capital. Pop. 1,090,000.

COLORADO BEETLE or **POTATO BUG** (*Chrysomela* or *Doryphora decemlineata*). North American beetle, a great pest to potato crops. It is yellow in colour, with black spots and stripes, and less than $\frac{1}{2}$ in. in length.

COLORADO SPRINGS. City of Colorado, U.S.A., county seat of El Paso county. Nearly 6,000 ft. above sea level at the foot of Pike's Peak, it is 75 m. S.S.E. of Denver, on the Atchison, Topeka, and Santa Fe and other rlys. Its equable climate, magnificent scenery—the Garden of the Gods, the Cave of the Winds, and the Cheyenne Cañons—and the Manitou mineral springs have made it a favourite health resort. Pop. 30,105.

COLORIMETER. Apparatus for determining the depth of colour in a liquid against the tint of a standard solution. It consists of two glass tubes, one containing a standard solution, the other the solution to be tested. The latter is diluted with water until the tint is the same as that of the standard solution.

COLOSSAE. City of Phrygia, Asia Minor, on the Lycus, a tributary of the Macander. In the time of Herodotus it was a flourishing city, but declined with the rise of the neighbouring Laodicea. It was an early centre of Christianity, one of the epistles of S. Paul being addressed to its church.

COLOSSEUM, less correctly spelt **COLOSEUM**. Name of the larger of the two amphitheatres in Rome, of which considerable ruins still exist, the other being the Amphitheatrum Castrense, near the Lateran. The Colosseum was begun by Vespasian (A.D. 72) and completed by Titus (80). The building is oval, and constructed of large blocks of travertine. The exterior consisted of four storeys, three having arcades

Colosseum. Remains of the great amphitheatre in Rome built by the emperors Vespasian and Titus in the first century A.D.

rivers are all unnavigable, many flowing through gorges or cañons. The chief are the South Platte, Grand, and Rio Grande del

was used for gladiatorial and wild beast fights. Here many Christians met their deaths. See Amphitheatre; Rome.

COLOSSIANS, EPISTLE TO THE. One of S. Paul's Epistles. It seems to have been written about A.D. 60 from Rome, where S. Paul suffered two years' imprisonment. Having beard of errors among the Colossians, he writes to exhort them and their leader Archippus (4, 17) to be strong in the true faith.

COLOSSUS. Term applied in ancient times to statues of gigantic size. The most famous of all was the colossus of Rhodes, the statue of the sun-god Helios, which was included among the seven wonders of the ancient world. It was in bronze, the work of the sculptor Chares of Lindus, and stood about 100 ft. high, at the entrance of the harbour. It was completed in 280 B.C., and was overthrown by an earthquake about 60 years later. Other famous examples are the statues of Amenhotep III at Thebes. They are 70 ft. high. See illus. below.

Colossus was the name-ship of a class of three British battleships, Neptune and Hercules being the others. Completed in 1911, they were scrapped after the Great War.

COLOUR. Effect produced on the retina by the different wave-lengths of light. The colour of any object viewed by the eye is due to that object's idiosyncrasies in reflecting, selecting, and absorbing the rays of light which fall on it. Sunlight is made up of vibrations of light of innumerable variations in wave-length. When passed through a prism, it is seen that it is composed of a number of different kinds of pure light. The light emerges from the prism in classes of vibrations—violet, the smallest and simplest vibration, indigo, blue, green, yellow, orange, and red, in order.

When this spray of colours falls on what may be called a red flower, the sensation of red is produced on the retina and senses, because the texture of the flower absorbs the violet, blue, and green rays and most of the yellow, but reflects and scatters the red rays. All opaque bodies reflect some of the light shed on them. A transparent body may allow all the colours to pass through it with equal facility, in which case it is colourless, or it may reflect some one or other of them back at its farther surface, in which case it appears to detach a colour.

COLOUR MIXING. Colours can be mixed so as to produce different colours, by which is meant that they produce a new physiological effect on the retina, or a new psychological effect on the senses. The primary colours of pigments are red, yellow, and blue; by combining these in proper proportion, all other hues may be obtained. The three

primary colours of the spectrum, i.e. coloured lights, are red, green, and blue-violet.

COLOUR PHOTOGRAPHY. This is the process of photographing objects in natural colours. Colour filters are used to split up the rays of light passing from the coloured object through the lens into three sets—red, green, and blue-violet—which are caused to act separately upon colour-sensitive plates. When a blue print is made from the red-sensation negative, a pink print from the green, and a yellow print from the blue, and the three transparent prints are superimposed in register, a colour-print is produced.

COLOUR PRINTING. In the three-colour process of colour printing, photo-mechanical plates are made from the blue, green, and red sensitive negatives obtained by photographing the original object (e.g. an oil painting). These plates are inked with yellow, red, and blue ink respectively, the paper being printed in turn from each plate.

Colorado Beetle. Pest to potato crops

Colossus. The Colossi of Amenhotep III at Thebes. See article above D. McLeish

COLOURS. Standards of British infantry. Each battalion has two colours, the King's and the regimental. The regimental colour of the first and second battalions of a regiment always bears the ancient badges, devices, distinctions and mottoes conferred by royal authority for services in war. All colours are of silk, and the dimensions are 3 ft. 9 ins. flying and 3 ft. deep on the pike exclusive of fringe. The ceremony of trooping the colours is performed annually by each regiment of the British army, the colours being borne through the ranks of the regiment drawn up on parade. Colours are not now carried on active service, but are deposited in churches, public buildings, or the dépôt. See Flag.

COLOURS. Term used in connexion with various sports. Playing members of cricket, football, and other clubs who are chosen to represent their institution or country in competitions with rival clubs are said to win their colours, and thereafter are entitled to wear the distinctive cap, jersey, or blazer which indicates membership of the representative eleven, fifteen, or, in the case of rowing, the boat. At Oxford and Cambridge the university colours are known as the blue. In horse-racing the distinguishing jackets and caps worn by the jockeys are called colours, each racehorse owner having his own. See Blue.

COLOUR SERJEANT. Rank in the British infantry next below that of regimental quartermaster-serjeant. It was abolished in 1913. The colour-serjeant wore a special badge to denote the origin of the rank, viz. that in 1813 certain serjeants were selected to guard the regimental colours in battle.

COLSTON, EDWARD (1636-1721). English philanthropist. Born at Bristol, he was educated at Christ's Hospital, London. From 1710-13 he was Tory M.P. for Bristol. His philanthropic undertakings were chiefly associated with Bristol, and included the foundation of almshouses and schools. He is commemorated by the Colston Hall, Bristol.

COLT, SAMUEL (1814-62). American inventor. Born at Hartford, Connecticut, July 19, 1814, he was for a time a lecturer on chemistry. In 1835 he took out his first patents for a revolving pistol, and in 1847 received his first contract for the supply of revolvers to the U.S. army. He died at Hartford, Jan. 10, 1862.

COLTSFOOT (Tussilago farfara). Perennial herb of the order Compositae. It is a native of N. Europe, N. Africa, N. and W.

Coltsfoot, stalk and flower

Asia, and Himalaya. In early spring its bright yellow flower-heads on long, scaly stalks are a familiar sight, before the heart-shaped leaves, with cobweb-like down on their under surface, appear. It is employed as a cough remedy, and the leaves are smoked by sufferers from asthma.

COLUGO or **COBEGO** (Galeopithecus). Flying lemurs of Malaya and the Philippine Islands. The skin of the neck and sides is extended so as to involve the legs and tail, thus forming a kind of parachute, by the aid of which the animal can take flying leaps of as much as 70 yards.

COLUMBA (521-597). Saint and abbot of Iona. Born at Gartan, co. Donegal, Dec. 7, 521, he was educated by S. Finian at Moville, where he became a monk. After founding monasteries at Derry and other places in Ireland, he departed to Scotland with a band of monks. In 563 he arrived at

Iona and founded the monastery which for more than a century was the ruling house of all the monasteries established by him and his disciples. Columba was the pioneer of Christianity in Scotland. His festival is kept on June 9, the day of his death. See Iona.

COLUMBIA or **OREGON.** River of N. America. Rising in British Columbia, on the W. slopes of the Rocky Mountains, it flows S. through some narrow lakes into the U.S.A. Passing through part of Washington state, it forms the boundary of Washington and Oregon, and falls into the Pacific. It drains an area of some 260,000 sq. m., and is about 1,350 m. long. Navigation is impeded by rapids and falls. It is one of the chief salmon rivers of the world.

COLUMBIA. District of the U.S.A., seat of the U.S. Government. Enclosed on three sides by Maryland, and bordered by the Potomac river on the S.W., it covers 69 sq. m., and is continuous with the city of Washington. The surface is hilly or undulating, with fertile valleys watered by the Potomac and Anacostia rivers.

The district originally covered 100 sq. m., the land being granted by Maryland and Virginia, but in 1846 the portion, about 36 sq. m., ceded by Virginia was restored to that state. It was established as the seat of government under Act of Congress, July 16, 1790. Government is by a board of three commissioners, appointed by the President of the U.S.A. Pop. 540,000.

COLUMBIA UNIVERSITY. Leading university of New York. It stands on Morningside Heights on the upper W. side of the city. Founded as King's College in 1754 by royal charter, it was reincorporated after the Revolution as Columbia College. Its many buildings include a fine library. It has a school of journalism, endowed by Joseph Pulitzer, and its medical work is carried on by the College of Physicians and Surgeons.

Columbine represented by Pauline Chase

Asia, and America, varying in height from 6 ins. to 2 ft., it has flowers white, pink, buff, blue, and purple. Many varieties are cultivated as garden flowers. The wild columbine of the woods is *Aquilegia vulgaris*.

COLUMBINE. (Lat. columbinus, dove-like). Traditional character in the Italian comedy or Commedia dell'Arte. Her prototypes are the cynical and impudent waiting-women in the plays of Plautus. In English pantomime Columbine is always the daughter of Pantaloon. The clown is in love with her, but Harlequin wins her affections.

COLUMBITE. Mineral, one of the rarer ores of iron. It occurs both crystalline and massive, disseminated in the gangue or rock body. In colour it is brownish black; it is opaque and brittle; fracture reveals iridescence. The mineral occurs in Bavaria, Bohemia, and the Urals in Europe, and in the U.S.A. columbite, which takes its name from Columbia, is the source of the metal formerly known as columbium, now as niobium (q.v.).

COLUMBUS. City and port of Ohio, U.S.A. The capital of the state and the seat of the state university, it stands at the junction of the Olentangy and Scioto rivers, 135 m. S.W. of Cleveland, and is served by the Baltimore

and Ohio and several other rlys. In the heart of a region rich in coal, iron, and natural gas, Columbus is an important rly., commercial and industrial centre. Iron founding and engineering are prominent industries. Pop. 292,822.

COLUMBUS, CHRISTOPHER (c. 1451-1506). Italian navigator. Born at Genoa, he followed his father's trade of weaver until about 1472,

Christopher Columbus. The oldest authentic portrait Uffizi Gallery, Florence

and in 1474-76 made a voyage to Cbio and another in the northern seas beyond Britain. From 1485-89 Columbus was in Spain endeavouring to win support for a voyage westwards. On Aug. 3, 1492, he set sail from Palos with three vessels and 120 men. On Sept. 6 he left the Canaries. After a voyage of five weeks, Columbus reached the Bahamas, taking possession in the name of Spain. After a brief stay, he left behind a garrison on the island of Española (afterwards San Domingo), and returned to Spain, Mar. 15, 1493.

Columbus was received with acclamation, and later in the same year returned with a much larger flotilla to what was to be known henceforth as the W. Indies. But he was not an efficient leader or governor, and could neither control his men nor dominate his colleagues. He was therefore sent back to Spain in 1500 as a prisoner by Bobadilla, who had been sent out to replace him. On his arrival he was set at liberty. In 1502 Columbus was sent on his last voyage to the west, in which he coasted Central America. He returned to Spain, arriving there in 1504. He died at Valladolid, May 25, 1506. His body lies in a special mausoleum at Seville.

Diego Columbus (1480-1526), eldest son of Christopher, was governor of the W. Indies from 1509-23. Ferdinand (1488-1539), was the natural son of Christopher and Beatriz Enriquez of Cordova. He was the author of a geography of Spain.

Bartholomew Columbus (d. 1514), elder brother of Christopher, visited England and France, 1489, seeking assistance for Christopher's voyage. He sailed for Española in 1494, becoming governor of the island. He died at Seville.

COLUMN (Lat. columna). In architecture, any body that supports another in a vertical direction. In its component parts the column consists of a base, shaft, and capital. Each of these has been fashioned in many different forms, and none more so than the shaft, which may be round, plain, or fluted, spiral, rusticated, or twisted. The columns employed in the three Greek orders, Doric, Ionic, and Corinthian, were sometimes made in one piece, but more often formed a series of drums. See Colonnade; also illus. p. 116.

Column. The Nelson Column, London

COLVIN, SIR SIDNEY (1845-1927). British scholar. Born in London, June 18, 1845, he was educated privately and at Trinity College, Cambridge. Fellow of Trinity in 1868, he was Slade professor of fine art, 1873-85, and from 1876-84 director of the Fitzwilliam Museum at Cambridge. In 1884 he became keeper of the prints and drawings at the British Museum. Knighted in 1911, he retired in 1912, and died May 11, 1927. He edited the Letters of R. L. Stevenson, 1899, new edition 1911.

COLWALL. Village of Herefordshire. It is 3 m. N.E. of Ledbury on the G.W.R. Elizabeth Barrett Browning resided there during her early life. There is a racecourse at Colwall Park. Pop. 2,043.

COLWYN BAY. Urban district and watering place of Denbighshire. It is 6 m. W. of Abergel, with a station on the L.M.S. Rly. It is situated in the midst of some of the finest Welsh scenery. Pop. 24,000.

COLZA OR RAPE OIL (F. *colza* or *colzat*). Brownish yellow oil obtained by crushing and pressing, or by dissolving, the seeds of rape (q.v.). It is used for burning in special lamps, and is employed in soap-making.

COMA (Gr. *koma*, lethargy). Condition of profound unconsciousness from which the patient cannot be roused. Its commonest causes are apoplexy and other diseases, prolonged exposure to cold, and poisoning by opium and other drugs.

COMB. Toothed instrument for disentangling the hair, or an ornament for the latter when dressed. Combs are made of ivory, tortoiseshell, bone, celluloid, or metal. They have been found in the tombs of the Egyptians, among Greek and Roman remains, and Saxon and British barrows have yielded some of bone and ivory.

The fleshy crest on the crown of the head of some birds, more especially those of the family to which the domestic fowl belongs, is known as the comb.

Combing is a process by which all fibre of less

than a certain average length is removed from textile fibres. Originally a hand process, combing is now effected by machinery.

COMBE MARTIN. Village of Devonshire, 225 m. from London and 5 m. E. of Ilfracombe station on the Southern Rly. Its position amidst beautiful scenery has made it a popular resort. Pop. 2,004.

COMBUSTION (Lat. *comburere*, to burn). Chemical reaction accompanied by an evolution of light and heat. It is an oxidising phenomenon, and put in another way it is "the amount of energy given out when a definite amount of an element combines with oxygen."

When combustion is rapid, heat is given out quickly and is perceptible, but if the process is a slow one, such as in the rusting of iron, the heat of the reaction escapes into the surroundings and the rise in temperature is not noticeable. The expression spontaneous combustion is used when the heat generated by the slow combustion of a substance raises the temperature sufficiently high to cause ignition. See Heat; Thermo-dynamics.

COMÉDIE FRANÇAISE OR **THÉÂTRE FRANÇAIS.** French national theatre, in Paris. Originating at the command of Louis XIV in the fusion of Molière's troupe with two rival companies, it was inaugurated Aug. 26, 1680, and established as the Théâtre Français in 1689. Suppressed at the Revolution of 1793, the theatre was reorganized by Napoleon in 1812, since which date its constitution has been

several times modified. The building belongs to the state. The members of the company are known as associates.

Comédie Française, the French national theatre in Paris, founded in 1680 as the Théâtre Français

COMEDY (Gr. *komos*, revel-song). Originating in Sicily or Megaris, Greek comedy arose from the Phallie processions held at country festivals in celebration of the vintage. It was established in Athens in the time of Pericles, when the demagogues introduced the country sports of the lower classes into the city to give them an opportunity of attacking their political opponents with impunity. Personal satire, or caricature, was the distinguishing note of the Old Comedy.

With Aristophanes (fl. 427-388) this came to an end, and the Middle Comedy, of which criticism was the distinguishing note, came into being. After his death came the New Comedy, a comedy of manners, which essentially is the comedy of our own time. In this there is an admixture of sport and earnest, chance taking the place held in tragedy by destiny, and emphasis being laid on what is laughable in human character and situations. In a much later age Molière in France, and Congreve in England, were masters of comedy comparable to Aristophanes.

COMENIUS OR **KOMENSKI, JOHANN AMOS** (1592-1670). Czech educational reformer.

Born in Moravia, March 28, 1592, he was rector of the Moravian school at Prerau, 1614-16. In 1631 he published his *Janua Linguarum Reserata* (The Gate of Languages Unlocked), expounding a method of learning languages on the principle of placing the names of common objects in parallel columns in Bohemian, Latin, and Greek. Driven out of Lissa, he was bishop of the Moravian Brethren, he settled in Holland, and died at Amsterdam, Nov. 15, 1670.

Johann Comenius, Czech reformer

COMET. (Gr. *komētēs*, long-haired). Luminous heavenly body with a tail. Comets are of two kinds: those visible to the eye, and those

only seen by the watchers of the observatories. Of the latter kind some four or five cross the field of the searching telescopes every year. All comets as they appear are noted and their movements registered at Kiel Observatory; and from these movements the mathematical astronomers compute the comet's orbit and determine its origin.

The comet is itself supposed to be a shoal of meteoric fragments speeding through the solar system, and as yet neither coalesced into a solid body nor permanently attracted and attached to some great and stable planet.

Among the best known periodic comets are Halley's comet, with a period of about 76 years, which was discovered in 1682, and returned 1759, 1835, 1910; Encke's comet, with the shortest period of all, 3.3 years; and Biela's comet. See Astronomy.

COMET. Name of one of the earliest British steamers. Built at Port Glasgow, 1811-12, she was 40 ft. long and had engines of 3 h.p. which operated paddles. The Comet plied between Greenock and Glasgow.

COMFREY (*Symphytum officinale*). Bristly perennial herb of the order Boraginaceae. It has large lance-shaped leaves and yellow or purple tubular flowers. It occurs by stream-sides and other wet places in Europe and W. Siberia. The tuberous-rooted comfrey (*S. tuberosum*), also a native of Europe, is smaller and more slender, with smaller yellow flowers. Prickly comfrey, a native of the Caucasus, is sometimes grown as a fodder crop.

Comfrey. Flower heads of this perennial herb

COMINES, PHILIPPE DE (c. 1447-1511). French historian. Born at Renescure, in Flanders, he passed his youth at the court of

Comet. Above, Halley's comet and Venus, photographed in 1910. Below, orbit of Halley's comet, which takes 76 years to accomplish its long journey

Courtesy of Union Observatory, Johannesburg

his godfather, Philip V. duke of Burgundy. He became chamberlain and councillor of the Burgundian Court, but in 1472 transferred his loyalty to Louis XI of France and became his chamberlain and councillor. On diplomatic missions he visited England, Spain, and Italy, but after the death of Louis, in 1483, his fortunes waned. He died at Argenton, Oct. 18, 1511. His Mémoires are of great value to historians. The first part deals with the history of France 1464-83. The second consists chiefly of notes on the wars of Charles VIII.

Comines is a small town on the river Lys, partly in France and partly in Belgium.

COMMANDANT (Lat. com-, together; mandare, to enjoin). In Great Britain, the title of an appointment to the control of a military educational establishment. In 1920 the rank of colonel commandant was introduced into the British army to replace the former title of brigadier-general.

COMMANDER. Officer in the Royal Navy ranking below a captain and above a lieutenant-commander, elevation to the rank and out of it being by selection

and not by seniority. Commanders are usually employed as executive officers (under the captain) in big ships, or in command of light cruisers, scouts, flotilla leaders, and destroyer divisions. A wing-commander in the R.A.F. corresponds to a commander in the navy, and is equivalent to a

lieutenant-colonel in the army.

Commander-in-chief is the designation given by the British government to the officer whom it appoints to command the land forces in a particular theatre of war.

Commander of the Faithful is the designation first assumed by the Caliph Omar I (634-644), and retained by his successors in the Caliphate. See Caliphate.

COMMEMORATION. Annual closing festival of the academic year at Oxford University. The proceedings include a Latin oration commemorating founders and benefactors, the conferring of honorary degrees, and the recitation of prize poems and essays. The corresponding festival at Cambridge University and at some American universities is called commencement.

COMMENDATORE. Title borne in Italy by a knight who ranks in his order below the knights grand cross. It was given originally to those members of certain orders of knighthood, the Knights Hospitallers, for instance, entrusted with the care of the order's property.

COMMISSARY (late Lat. commissarius). Ecclesiastical term for a deputy. It is commonly applied to a bishop who in diocesan matters is authorised to act for the bishop of that diocese during his absence. The term is frequently used in connexion with civil administration, as in France, for a superior police officer under the prefect of police.

COMMISSION (Lat. committio, I entrust). Word used in several senses, all having the same origin, that of a relationship of trust. In affairs of state it is used to describe the entrusting of an office to someone. Such is a commission in the army and navy.

A warship is said to be put in commission when she is ready to sail, her captain having received a commission for a certain purpose. Another use is for the commission of the peace, entrusting to certain men and women the duty of trying minor offenders. Judges and other high officials also receive the king's commission on appointment.

A like use is for a royal commission, a body of men and women appointed to inquire into a particular question, and for permanent bodies,

e.g. the Charity and Church Estates Commissions. There is also a prison commission.

Commission is also used for the practice in the United Kingdom of entrusting one of the great offices of state not to one man, but to a body of men. The Treasury and the Admiralty are cases in point. The chief representative of the self-governing dominions in England is called the High Commissioner. A commissioner for oaths is a solicitor who is allowed to take oaths.

COMMISSIONAIRE. Word derived from commission, and meaning primarily an attendant at an hotel, whose duty is to look after the luggage of the visitors. In England there is a corps of commissionaires, which finds employment for old soldiers of good character. The headquarters of the corps are Exchange Court, 419, Strand, London, W.C.

COMMITTEE (Lat. com-, with; mittere, to send). Name for a small body of men deputed by a larger to discharge certain duties. In most clubs and societies, philanthropic, sporting, and others, a committee of persons elected by the members manages their affairs, reporting once a year to a general meeting of all members. In parliamentary procedure the Houses of Lords and Commons go into committee when considering bills in detail. The two Houses also appoint committees, using the word in its more usual sense, as also do the various government departments. See Commons, House of.

The Committee of Imperial Defence originated in 1902 to provide an authority to deal with naval and military matters as one problem and to review the question of defence as it affected the Empire as a whole.

COMMODORE. Temporary rank in the British navy given to a captain while holding a special appointment of any kind, the duties of which are more important than those that would be ordinarily discharged by an officer of captain's rank. Commodores fly a swallow-tailed pennant. The principal officers of yacht squadrons are termed commodores.

COMMODUS, LUCIUS AELIUS AURELIUS. Roman emperor, A.D. 180-192, born at Lanuvium, Aug. 31, 161, son of Marcus Aurelius by the younger Faustina. On his father's death (March 17, 180), in Pannonia, Commodus concluded an inglorious peace and hurried back to Rome. His misrule and cruelty aroused public hatred, and the discovery that he intended to put the consuls-elect to death led to his murder.

COMMONER. In the United Kingdom one who is not a peer; at Oxford and Cambridge Universities an undergraduate who is not a scholar or exhibitioner. The name has also been used for a member of the House of Commons, as when Pitt was called the Great Commoner. See University.

COMMON GOOD. Name given in Scotland to the property owned by a royal burgh, the common property of the town. It consists usually of land and houses, and the income may be applied to purposes for which the money from the rates is not available.

COMMON LAW. Law which in its 1700 there were 513, to which 45 were added earliest inception consisted of customs and for Scotland in 1707. In 1800 a further 100

usages, and afterwards of principles enunciated by generations of judges when trying the causes which came before them. Sometimes common law is used to distinguish the law administered by the King's Bench Division from that administered by the Chancery Division, which is called equity.

COMMON PLEAS, COURT OF. English court of law. About the time of Henry II pleas of the crown were distinguished from common pleas, or private litigation. From the time of Edward I it had its own judges under a chief justice, its own rolls, and its own method of procedure. In 1873 the court became the Common Pleas Division of the High Court, and soon after was incorporated in the Queen's (now King's) Bench Division.

COMMONS. Name given in law to common land on which the inhabitants of a village have rights in common. It consists of two kinds—commons that have been taken over for the public generally by a local authority, and commons on which the lord of the manor and the manorial tenants retain their ancient rights or some of them. They are regulated by Acts of Parliament, which have given local authorities considerable powers over them. These bodies can take them over and manage them under the supervision of the Ministry of Agriculture.

The amount of common land in England and Wales is estimated at 1,500,000 acres. In Scotland, commons have almost disappeared, as an Act of 1695 gave power to divide the land among the persons who had rights thereon. The Commons and Footpaths Preservation Society, 71, Eccleston Sq., London, S.W., has done good work in preserving commons for the public. See Enclosures; Manor.

COMMONS, HOUSE OF. One of the two houses of the British, Canadian, and other Parliaments. The name was first used in the 14th century for the knights of the shire and representatives of the boroughs, who about that time began to act as a separate body, leaving the other members of parliament to form the House of Lords.

The members of the House of Commons have always been elected. The first electors were a few holders of freehold land, and the elections were conducted in haphazard fashion by the sheriffs. Gradually the right of voting was given to others until, in 1928, it was extended to include all men and women over 21 years of age. It is done by ballot, with safeguards against corruption and intimidation.

The number of members has varied. In

Commander. Sleeve badge of naval commander

Lucius Commodus, Roman Emperor
From a coin

Commons. Chamber of the House of Commons, looking towards the Speaker's Chair. The Government benches are on the left

were added for Ireland, and at 658 the total remained, in spite of the changes introduced in 1832. In 1884 the number was increased to 670, and in 1918 to 707, but in 1922, when parliaments were set up in Ireland, it was reduced to 615. Before 1918 membership was confined to men, but since then a few women have been elected. Members are elected for the duration of a parliament, which cannot be longer than five years and may be less. The 615 members are divided as follows:

England	492	Counties	300
Wales	36	Boroughs	241
Ireland	74	London	62
N. Ireland	13	Universities	12
	615		615

The Speaker presides over the House, his deputy being the chairman of committees. Its procedure is governed by an elaborate set of rules and precedents. Voting is done by walking into one or other of the lobbies, one for the ayes and the other for the noes, where the names are taken by tellers. The House has a leader, usually the prime minister, and his followers sit on the right of the Speaker's chair, members of the Government occupying the front bench. Opposite them are the members of the Opposition. There are no cross benches, so independent members sit below the gangway. The business of the House is arranged by the secretary to the treasury in conjunction with the other whips.

Since 1911, when the Parliament Act was passed, the House of Commons has been the dominant part of the legislature. Before this it had won the sole right to vote all money required for the nation's needs, but otherwise its legislative powers were shared by the Lords. In 1911, however, the power of the Lords was reduced. All measures passed by the Commons can now become law, in spite of the Lords, who, at the most, can delay them for two years. *See* Lords; Parliament.

Canada adopted the term House of Commons for the lower house of its legislature when this was founded in 1867. It consists of 245 members, the number varying automatically according to the populations of the various provinces. The representation of Quebec remains fixed at 65, while the other provinces each elect a number which bears the same proportion to its population as 65 does to that of Quebec. As in Britain, Canadian M.P.'s are paid.

COMMONWEALTH. Term meaning the common good or common weal, and used politically for forms of government in which this is the first aim. In a special sense it is applied to the period of English history between the execution of Charles I in Jan., 1649, and the restoration of Charles II in 1660. The official name of the federation of the states of Australia, formed in 1900, is the Commonwealth of Australia.

COMMONWEALTH BAY. Extension of D'Urville Sea, on the coast of Adélie Land, Antarctica, in lat. 67° S., long. 143° E. The bay contains Cape Denison, where the Australasian Antarctic expedition, 1911-14, established its headquarters.

COMMUNE. In modern France an administrative division or municipality. It is also the name given to the period March 18-May 28, 1871, when the commune of Paris attempted to replace the National Assembly at Versailles by an organization based on a federation of communes. When the victory at last fell to the government, the retiring Communists slaughtered prisoners and also destroyed public buildings. The victors were equally merciless.

COMMUNION, HOLY. The partaking by Christians of the sacrament of Christ's body and blood (Matt. 26; Mark 14; Luke 22; 1 Cor. 10). In the Church of England the term is used for the service of the Lord's Supper,

whereat holy communion is received. In the Roman Catholic Church, while the communion of the priest is an essential part of the service of the Mass, holy communion is frequently given to the people apart from the Mass (q.v.).

COMMUNISM. Organization of society on the basis of the common ownership of the means of production and of the goods produced. It differs from socialism in its theory of the state, in that it substitutes a federation of groups or small communities for the central government of social democracy. Anarchism differs from communism in denying even the right of the group or commune to legislate for its members without the consent of all.

Ideal communism has existed throughout the ages in the voluntary associations of certain Eastern sects, of the Buddhist and Christian religious orders, etc. Modern communism is founded on the basis of the Communist Manifesto, issued in 1848. The strength of the movement outside Russia varies greatly in different countries. A National Communist Party was founded in Britain in 1920. *See* Bolshevism; Socialism.

COMMUTATION (Lat. *com*., with, *mutare*, to change). Act of exchanging one thing for another. The term is now more particularly applied to the payment of a large sum of money in order to cancel a periodical charge of any kind, e.g. an annuity. The commutation of a tithe is the process of turning a tithe, or a tenth of the produce, into a rent charge, a money payment charge on the land and paid by the landlord. This is done by virtue of the Tithe Commutation Act of 1836. The term is also used in algebra, in astronomy, and to describe the reduction in a criminal's sentence. *See* Tithes.

COMMUTATOR. Device attached to the armature of a dynamo whereby the current induced is collected in such a manner that the current flows continuously instead of as an alternating current. A cylinder formed of alternate sections of conducting and non-conducting materials is fitted on the armature shaft. Two metallic brushes press lightly upon the cylinder as it rotates. The conducting sections are connected to the armature winding, and the brushes are so arranged that, at the moment the current changes in direction, contact between a given section and one brush is broken, and established between the same section and the other brush. Commutators are also fitted to the armatures of motors. *See* Current; Dynamo.

COMMENUS. Family, probably of Italian origin, of landed proprietors in Paphlagonia, Asia Minor, which furnished a dynasty of East Roman or Byzantine emperors, 1057-1185. One of them, Alexius, founded an independent kingdom at Trapezus (Trebizond).

Como. View of the mountain-girt lake of Como, one of the most beautiful of the Italian lakes

COMO or **IL LARIO** (anc. *Laus Larius*). Lake of N. Italy in Lombardy. Formed mainly

by the Adda, which emerges at the S.E. end, it is divided by the promontory of Bellagio (q.v.) into two arms, the eastern being called Lago di Lecco. It lies 652 ft above sea level, is some 31 m. long, from 1 to 2½ m. broad, and about 1,350 ft. deep; its area is 56 sq. m. It is enclosed by highlands and mts.

COMO (anc. *Comum*). City of N. Italy, capital of the prov. of Como. It stands at the S. end of an arm of Lake Como, 30 m. by rly. N. of Milan, and is one of the world's beauty spots. Como has a marble cathedral dating from 1396, altered and rebuilt; a Romanesque church, rebuilt 1265; a basilica dating from the 8th and rebuilt in the 12th century; the Broletto, now the town hall, completed 1215 (restored), and most of the town wall, with three towers. The museum housed in the Palazzo Giovinetti contains Roman relics. Pop. 36,000

COMORIN. Headland of India, in Travancore native state, forming the southern point of the peninsula. The temple of Kanniyambal, the virgin goddess, is a resort of pilgrims.

COMORO ISLANDS (Fr. *Iles Comores*). Group of islands at the N. end of the Mozambique Channel between Africa and Madagascar. A French protectorate since 1886, in 1914 they were made a colony under Madagascar. The chief islands are Great Comoro or Angaziya, Moheli or Mobilla, Anjouan or Johanna, and Mayotte. The islands are of volcanic origin and mountainous. The inhabitants are of mixed Malagasy, Arab, and Negro descent. Area, 790 sq. m. Pop. 119,305.

COMPANION OF HONOUR. British order. Created by George V, June 21, 1917, it consists of one class, is restricted to 50 members, and includes men and women equally. It is conferred for "conspicuous service of national importance," but confers neither title nor precedence. The badge of the order is an oval-shaped gold medallion, and is suspended from a earmine ribbon with a gold interlaced *bordure*.

COMPANY. Military unit in which infantry of the British Army are organized. In the cavalry and artillery regiments, however, the equivalent units are, respectively, the squadron and the battery. The strength of the company of British infantry has varied from time to time, immediately prior to 1914 being 3 officers and 120 men, but in that year the double company system was re-introduced and the battalion subdivided into four companies instead of eight, each company consisting of 6 officers and 221 men. The four companies are distinguished by the letters A, B, C and D. Each is divided into four platoons, and these are subdivided into sections. The company sergeant-major is the senior N.C.O. of the company.

COMPANY LAW. In English law a company may be described as an association of two or more individuals united for one or more common objects. It is an association whose members may transfer their interests or liabilities in, or in respect of, the concern, without the consent of all the other members. These companies, save only a few created by Act of Parliament or by royal charter, are joint stock companies. Their essential feature is that the liability of shareholders is limited to the amount of their shares. The law about them is contained in the Companies Act of 1862 and several later Acts, especially the important ones passed in 1908 and 1929. They must be registered at Somerset House, London, where they must file full particulars

Companion of Honour badge
By courtesy of
Messrs. Dean & Son

of their capital, etc. on which a stamp duty must be paid. They must adopt a memorandum of association and articles of association, which state what they can do, must add the word limited to their name, and make returns each year to the registrar at Somerset House.

Companies are divided into public and private. The latter have certain privileges, but also work under certain restrictions. For instance, the returns they make are less full, but on the other hand they cannot offer their shares to the public, nor have more than 50 shareholders. Every company must have a board of directors and must submit its accounts, at least once a year, to a meeting of shareholders.

A company comes to an end by liquidation or winding up. Sometimes this is voluntary, done to facilitate reconstruction; in other cases it is compulsory and is equivalent to bankruptcy. The winding up of a company is conducted by judges of the High Court and their assistants.

COMPASS, MAGNETIC.

Instrument by which a ship's course at sea is directed. Upon its dial are marked the four cardinal points, N., S., E., and W. These divide the compass into four quarters and each quarter is divided into eight points, making 32 points altogether. Each point is marked on the dial by the initial letter of its name, as S. for south, S.S.W. for south-south-west. A large arrow-head on the dial marks the N. point. The dial, or card, is fixed upon a needle, one end of which has been magnetised, and the needle is laid exactly N. and S. The needle in the ordinary way points to the magnetic N., and the variation from the true N. depends upon the particular place one is in, as well as on certain other external causes. The case containing the compass is called the binnacle.

A special form of magnetic compass is used on aircraft, and a gyroscopic compass is employed on both ships and aircraft. See Gyroscope.

COMPASS (Lat. com, with; passus, step). In music, the interval between the highest and the lowest notes of a voice, an instrument, or a composition.

COMPASS PLANT (*Silphium laciniatum*). Perennial herb of the order Compositae. A native of N. America, it has a tall bristly stem, and the upper leaves are cut into lance-shaped leaflets. The large flower-heads are yellow. The lower stem-leaves and the root-leaves stand erect, and on the open prairie so disposed that their edges point more or less N. and S.

COMPIÈGNE. Town of France, in the dept. of Oise. On the river Oise, near its junction with the Aisne, 52½ m. N.E. of Paris, it has a hôtel de ville with a belfry, and its chief churches are S. Jacques and S. Antoine. On the site of the old castle is the palace built by Louis XV. Joan of Arc was taken prisoner by the Burgundians at Compiègne in 1430. In the forest of Compiègne, between Choisy-au-Bac and Rethondes, Marshal Foch, on Nov. 8, 1918, presented to the Germans the armistice terms.

The name battle of Compiègne-Néry is given to an engagement fought between the British and Germans, Sept. 1, 1914. The British lost about 500 and the Germans 800 men.

COMPLINE (late Lat. completorium). Roman Catholic evening office completing the daily canonical hours of prayer. The service originated with S. Basil in the 4th century. Compline is frequently sung as a Sunday evening service in R.C. churches.

COMPOSITE ORDER. One of the five orders recognized in Roman architecture. As used by the Romans it is an adaptation in a single capital of the Ionic and Corinthian orders of the Greeks. See Architecture.

COMPOSITION. Term used in English law. It means that an insolvent person, instead of paying his creditors in full, arranges to pay them all a rateable portion of their debts, e.g. 5s. in the £. A composition must be with all the creditors, and not with some. See Bankruptcy.

COMPOSITOR. One who sets up or composes type in a printing office. There are news (newspaper), book, and jobbing compositors, the last named being employed on what is called display work. Since the introduction of the monotype, the linotype, and other type-setting machines, the hand-setting compositor is engaged mainly on display work. The London Society of Compositors, registered as a trade union in 1894, has offices in 7-9, St. Bride Street, London, E.C. The principal institution for other parts of the United Kingdom is the Typographical Association, whose headquarters are in Manchester. See Printing.

COMPOUND. Term applied in chemistry to substances which can be resolved into two or more simpler substances. They are distinguished from mixtures in that the definite properties of their components have become lost. As an example, when iron filings and sulphur are mixed in a mortar both substances retain their properties and may be separated. If, however, the mixture is heated, combination takes place, much heat is evolved, and a compound—iron sulphide—is formed with characteristic properties different from those of the component substances. See Catalysis; Chemistry; Element.

Compiègne, France. The 16th century Town Hall, with its belfry

The air occupies less space, but when the pressure is relaxed recovers its original volume. Compressed air finds many applications in manufacturing operations, in chemical works,

glass-blowing, rock-drilling, riveting, pumping, and driving engines. Tools operated by compressed air are largely used in breaking open road surfaces ready for repair; air is supplied by a portable compressor worked usually by engines of the Diesel type

COMPRESSION (Lat. com, together; premere, to press). Term used in mathematics. A solid body is supposed to be subjected to uniform pressure all round it. Then the state of stress induced in the body will be one of uniform pressure, the same at all points, and the same in all directions round any point. There will be compression, the same at all points, and it will be proportional to the pressure. The amount of the compression can be expressed as p divided by k where p is the uniform applied pressure and k is the constant which is called the "modulus of compression."

The modulus of compression for steel is calculated as about 1.43×10^{12} dynes per sq. centimetre, or about 9,100 tons per sq. in.

Henry Compton, British actor

COMPTON, HENRY (1805-77). British actor, whose real name was Charles Mackenzie. Born March 22, 1805, he made his first appearance in London at the English Opera House on July 24, 1837, as Robin in *The Waterman*. During the next 10 years he played at various theatres, and from 1853-70 was a member of Buckstone's company at The Haymarket. He died Sept. 15, 1877.

His son Edward, born in London, Jan. 14, 1854, was also a well-known actor. He made his first stage appearance at Bristol, 1873, and eight years later organized the Compton Comedy Company, for many years a leading touring company. With Virginia Bateman he was the father of Miss Fay Compton, and the novelist, Compton Mackenzie (q.v.). He died July 16, 1918.

Edward Compton, British actor

Compton Wynates, in Warwickshire. A beautiful example of Tudor domestic architecture

Country Life

COMPTON WYNATES. Warwickshire seat of the marquess of Northampton. In a hollow between Edge Hill and Long Compton, and once moated, it was built by William Compton (d. 1529), who was knighted at the battle of the Spurs. A fine example of Tudor domestic architecture, it has a chapel with Tudor screen, great hall with gallery, many secret cupboards, and beautiful gardens. When the Parliamentarians took it in 1646 they laid the adjacent church, which was restored in 1663, in ruins. The manor was known formerly as Wineyate and Compton-in-the-Hole.

COMTE, ISIDORE AUGUSTE MARIE FRANÇOIS XAVIER (1798-1857). Founder of Positivism (q.v.). He was born at Montpellier,

Jan. 19, 1798. Auguste became a sceptic and republican at the age of fourteen. In 1816 he was expelled from the École Polytechnique, Paris, for taking the lead in a mutiny of the pupils.

Auguste Comte, French philosopher

In 1825 Comte married Caroline Massin, but the union ended in separation seventeen years later. He worked intensely at his philosophy of life, and in 1826 began a series of public lectures upon it, but his mind gave way, and his work was interrupted for some months. In 1828 Comte resumed the writing of his *Cours de Philosophie Positive*, which appeared during the years 1830-42. From 1848 to 1854 he worked at his *Système de Politique Positive*. He died Sept. 5, 1857.

CONCENTRATION (Lat. con, with; centrum, centre). Process used in metallurgy. Ore as it is brought to the surface from the mine is seldom ready for immediate smelting. As a rule, it must be sorted and the metalliferous portions separated from the worthless gangue, or rock. Sometimes picking over by hand is sufficient; generally the ore, broken small, is separated by a process in which reliance is placed on the difference between the specific gravity of those portions which contain the metal and the worthless rock.

CONCEPCIÓN. City of Chile. It is situated 7 miles from the mouth of the river Biobío. From Concepción to the sea the river is known as Concepción Bay, and contains three ports, Talcahuano, Penco, and Tome. Concepción is a commercial centre for the fertile province and does a considerable trade, especially through the naval station Talcahuano, with which it is connected by railway. Pop. 66,130.

CONCEPTION. Fertilisation of the ovum or female element by the spermatozoon or male element. In the human species this process is believed to occur in the Fallopian tube. After fertilisation the ovum travels to the uterus or womb, in which development into the infant organism occurs. See Annunciation.

CONCERTO. One of the forms of musical composition belonging to the sonata group. From the middle of the 18th century it was virtually an orchestral symphony, with a chief part for a solo instrument.

CONCHOID. Curve devised by Nicomedes (c. 150 B.C.), a Greek mathematician. It was used by him for obtaining by construction two mean proportionals between two given quantities. It is defined as follows: "If from a fixed point (the pole) straight lines be drawn intersecting a fixed straight line, and on these lines points be taken at a constant distance from their intersections with the fixed straight line, this succession of points will form a conchoid of Nicomedes, consisting of two branches."

CONCIERGEERIE, LA. Ancient prison of Paris on the Île de la Cité (Isle of the City) in the Seine, forming part of the palais de justice or law courts. A section of it is now used for the detention of accused prisoners and for their preliminary examination before the president of the court of assizes. During the Revolution most of the prisoners were confined in the Conciergerie. Marie Antoinette's cell was converted into a memorial chapel, 1816, and destroyed in the rising of 1871.

CONCILIATION. Word used in industrial life for efforts made to settle disputes between employers and employed. Strictly speaking, conciliation is anterior to the more formal arbitration. There are conciliation boards in connexion with many of the great industries. See Arbitration; Labour; Strike.

CONCLAVE (Lat. con, with; clavis, key). Term meaning a locked room or place in which cardinals assemble to elect a pope. It is also used for the body of cardinals assembled together for that purpose. The conclave dates back to 1271. It meets within a portion of the Vatican walled off for that purpose. All intercourse with the outside world is prohibited, and proceedings take place in absolute seclusion. On the 11th day the cardinals pass into the Sistine Chapel, where the voting takes place. The form of election is by secret ballot, and the candidate is chosen by a two-thirds vote. In Oct., 1928, it was announced that a palace for conclaves was to be built in the Vatican gardens. See Pope.

CONCORD. City of New Hampshire, U.S.A., capital of the State. It is on the Merrimac river, 75 m. N.W. of Boston. The Boston and Maine Rly. works are here, and granite is quarried. Pop. 22,167.

Concord, in Massachusetts, is the most ancient inland town in the state, and is noted for its associations with Emerson, Thoreau, Hawthorne, and other men of letters. Here took place an engagement at the outset of the War of Independence, April 19, 1775.

CONCORDANCE. Alphabetical index or dictionary of words or topics in a book or series of books. Examples are concordances to the Bible and the works of Shakespeare. See Clarke, C. C.; Cruden, A.

CONCORDAT. Agreement between Church and State defining the limits and powers of the ecclesiastical and civil authorities in matters where both are affected. It is commonly made by the pope on behalf of the Roman Catholic Church, but bishops have on two occasions in Portugal arranged concordats with the sovereign. The term is specially applied to the concordat of 1801, which re-established the church in France. This endured till Dec. 9, 1905, when church and state were again separated. See Vatican.

Concrete. 1. Simple reinforced concrete girder or beam: a, a, steel tension bars, often arranged as in dotted lines, b (both forms may be used in combination); c, c, c, steel bar stirrups. 2. Reinforced concrete beam and flooring formed together (monolithic formation); part of floor concrete removed to show arrangement and tying of steel reinforcement rods, a, a, a; beam as in 1. 3. Reinforced concrete column or pier in process of formation; part of wooden casing removed to show arrangement of steel bars, a, a, a, and steel ties, b, b. When concrete is set, casing is removed.

CONCRETE. Ordinary concrete is a composite mass of materials such as broken brick or stone fragments, gravel, and sand, bound together by an adhesive agent such as lime or cement, the whole being mixed with water. In modern practice the chemically active ingredient or matrix is nearly always Portland cement. One of the most extensive applications of concrete is in the construction of the underwater portions of breakwaters and dock walls. Concrete as a building material received a considerable stimulus after the Great War owing to the dearth of houses and the lack of bricklayers to build them in the ordinary way with the ordinary materials, and many systems were devised for constructing them in concrete with continuous walls, with blocks or slabs, or with precast members that could rapidly be put in place.

REINFORCED CONCRETE. This is called also ferro-concrete; it may be defined as "Concrete which is reinforced by metal so combined therewith that the metal will (a) be sufficient to take up all the tensile stresses; (b) assist in the resistance to shear; (c) assist in the resistance to compression where necessary." Concrete is about ten times stronger under compression than under tensile force. Steel, on the other hand, is strong against tensile and shearing forces, and this supplies the qualities in which the concrete is deficient. Reinforced concrete is the most adaptable of building materials, and has been adopted for every class of structure, especially for buildings of the warehouse class, and for harbours, docks, reservoirs, bridges of limited span, lighthouses, waterworks, retaining walls, and similar works. Adaptations of the principles of reinforcement are numerous, and include many patent fire-resisting flooring systems, piling, and foundations, and the use of expanded, perforated, or corrugated steel, or wire-mesh fabric for the reinforcement of walls, floors, and roadways.

CONCRETION. In geology, an aggregate of mineral matter around a centre. In rocks this is formed through the agency of water, and usually consists of nodules in which the centre is a small fragment of animal or vegetable substance. In some formations concretions form continuous beds, as in Magnesian limestone. Nodular forms are common in beds of clay-ironstone. Nodules of flint, common in the upper Chalk, are concretions of silica around such organisms as sponges and sea-urchins. Among minerals forming concretionary structure are calcite, marcasite, pyrite, and various forms of silica.

CONCUBINAGE (Lat. con, with; cubare, to lie). Union between a man and a woman legally less binding than marriage, the female partner being known as a concubine. She had not the same claim upon the man as had a wife, nor had their children the same rights of inheritance as had those of a wife. The institution was prevalent among the Jews from the time of Abraham, and was also recognized by the Romans and other peoples of antiquity.

CONDÉ. Town of France. It stands at the junction of the rivers Schelde and Haine, near the Belgian frontier. It is a mining town, and has a church with a curious tower. At the battle of Mons (q.v.) the left of the British army was stationed along the canal that runs between Mons and Condé. The town was in the possession of the Germans from Aug., 1914, to Nov., 1918. Pop. 4,702.

Condé gave its name to a famous French family, a branch of the Bourbons. This was founded by Louis de Bourbon (1530-69), who called himself prince of Condé. From him was descended another Louis de Bourbon, prince of Condé (1621-86), the soldier who is known as the Great Condé. By defeating the Spaniards at Rocroi in 1643 and gaining victories over the Bavarians, he made himself one of the great captains of his age. He crushed the Frondeurs, but later became their leader in a fresh rebellion. He then served the Spanish king in the Netherlands, but in 1659 he returned to France and led the French armies almost until his death, Dec. 11, 1686. The title

Louis de Bourbon, Prince of Condé

came in time to his descendant Joseph (1756-1830), who was murdered Aug. 29, 1830. -He was the last prince of Condé.

CONDELL, HENRY (d. 1627). Actor and Shakespearean editor. Shakespeare, Burbage, and Condell were members of the company of players known in Queen Elizabeth's time as the Lord Chamberlain's men, and on the accession of James I as the king's servants. To Condell, Burbage, and John Heming, Shakespeare bequeathed 26s. 8d. apiece to buy them rings, and, with Heming, Condell brought out the first collected edition of Shakespeare's works in a single folio volume in 1623. He was buried in the church of S. Mary, Aldermanbury, London, Dec. 29, 1627.

CONDENSER. Vessel in which vapours are cooled till they assume a liquid form. Cooling is effected by air, or, more commonly, by water. The condenser which receives the exhaust steam from a steam engine increases the efficiency of the engine by lengthening the expansion range of the steam.

ELECTRICAL CONDENSER. Apparatus for accumulating a charge of electricity. It consists of two or more conducting plates, A and B, separated by a non-conducting substance, C, known as a dielectric (q.v.). The charge may be supplied by an alternating current or from a static source, and is proportional to the capacity of the

Condenser. Fixed form of copper foil and mica sheets tightly clamped together.

condenser; the capacity is dependent on the size of the plates and the nature of the dielectric. The static form is the Leiden jar (q.v.). In both cases the seat of the charge, the energy store, is in the dielectric, which, on one theory, is put in a state of strain by the electro-motive force applied.

Condenser. Variable air dielectric form with moving brass plates.

apparatus is of this type. It consists of a set of metal plates between which, separated by an air space, a set of vanes may be brought by rotating a spindle. The more the vanes and plates overlap the greater is the capacity of the condenser. Mica or paper condensers of fixed value are also used.

CONDOR (*Sarcophagus gryphus*). Great vulture of the Andes. It is the largest of the American vultures, and restricted in geographical range to S. America. Its length exceeds 3 ft., exclusive of the tail feathers, and the span of its extended wings is about 8 ft. It feeds chiefly on carrion, but attacks goats, lambs, and young calves. When gorged with food the bird cannot rise without

Condor. One of the largest of the vultures and a native of South America.

considerable running space. Condors roost in company on trees, but usually make their nests on the ledges of inland cliffs.

Condor is also the name of a British gunboat commanded by Lord Charles Beresford at the bombardment of Alexandria in 1882.

CONDORCET, MARIE JEAN ANTOINE NICOLAS CARITAT, MARQUIS DE (1743-94). French revolutionist. He was born at Rihemont, near S. Quentin, Sept. 17, 1743. He espoused the cause of revolution, being elected deputy for Paris in the legislative assembly in 1791 and president in 1792. On account of his Girondist sympathies, in 1793 he was proscribed by the Convention, and took refuge with a friend in Paris for eight months. Leaving his hiding place and falling under suspicion, he was arrested and thrown into prison, where he died March 29, 1794.

CONDOTTIERI.

Mercenaries of the 13th and 14th centuries who sold their services to Italian cities and states in exchange for licence to pillage. Several attained distinction, among them an Englishman, Sir John Hawkwood.

CONDUCTION (Lat. *conducere*, to lead together). Method of transmitting heat. Heat may be transferred (1) by radiation, without the intervention of matter; (2) by convection, i.e. by the actual visible transference of matter as in steam heating; (3) by conduction, without any visible motion of matter taking place. The heat may be pictured as travelling through a body as the warmer molecules heat the neighbouring colder molecules and so on. See Heat.

Cone. Volcanic cone of Vesuvius, built up by successive discharges of lava and ashes.

ELECTRIC CONDUCTION. All substances may be roughly classed as conductors or non-conductors of electricity. In a conductor the electrification spreads all over the body if by any means one point of the body is electrified. In a non-conductor or insulator the electrification remains in the neighbourhood of the point where the electrification took place. Conductors are roughly divisible into (1) metallic conductors, (2) non-metallic conductors, (3) electrolytic conductors, and (4) gaseous conductors. The conductivity of metals increases with a rise in temperature, whereas that of other solids, e.g. carbon, decreases. The resistance of a conductor varies inversely as its sectional area, and directly as its length. The maximum strength of current

that a conductor will carry is decided not merely by its substance and sectional area, but by its shape and surroundings. Copper is most widely used as a conductor on account of its very low resistance, moderate cost, high tensile strength, and toughness. Iron is employed only for aerial telegraphic wires—which only carry weak currents, and may be of small diameter—and for electric railways in the form of conductor rails. The relative conducting powers of the principal metals for heat and electricity are:

Metal	Heat	Electricity
Silver	1,000	1,000
Copper	736	999
Gold	532	800
Aluminium	323	630
Zinc	280	299
Tin	152	154
Iron	119	155
Lead	85	88
Platinum	84	105
Nickel	—	79
Antimony	40	39
Mercury	13	25

See Cable; Electricity.

CONDUIT (late Lat. *conductus*, escort, canal). Artificial channel, aqueduct, tube, or pipe line for the conveyance of fluids, more particularly a masonry-lined channel, either open or closed, for the conveyance of water. Water conduits are usually lined with cement or brickwork, and sometimes constructed of reinforced concrete.

A conduit is also any pipe or tunnel constructed for the accommodation of gas, water and hydraulic mains, or telegraph and telephone cables. In electrical work a conduit is a subway or tube in which conductors are laid that carry electric current for operating railway or tram cars, and a system of tubing within a building which protects the wires for supplying electric current throughout.

CONE. In geology cones are of two kinds: alluvial and volcanic. The former are fan-shaped piles of detritus deposited by running water. Detrital material is dropped abruptly when the speed of the stream is checked. Coarser material is dropped first, the finer particles being carried on and spread out. This causes the formation of an apex pointing up the water-course, and a base which may be hundreds of miles broad.

Volcanic cones are formed by the explosive discharge of lava, ashes, and volcanic dust from an orifice in the earth's crust. The ejected material tends to accumulate most thickly round the rim of the vent, and to become thinner radially outward. The cones so formed are usually surmounted by cup-like hollows or craters.

CONE (Lat. *conus*). Female flowers and fruit of the pines, firs, larches, etc. (*Coniferae*). In the flower-cone a number of bracts are arranged spirally or in whorls around an axis, and in the axil of each bract there is a carpellary scale bearing two or more naked ovules. After the fertilisation of these, the scales enlarge and become woody, in the pines thickening at the free end, and form what is commonly known as a fir-cone. In the firs and spruces they are thin-sealed, and more cylindrical than conical, and in the cedars and cypresses almost round. In the junipers the scales become fleshy instead of woody, so that the fruits are popularly known as berries. The opening of the cone usually takes place during the prevalence of high winds, so that the seeds are carried far from the parent tree.

The cone flower is a genus of perennial herbs of the natural order Compositae, a native of N. America, with purple or violet flower-heads. From its elevated head its name is derived.

CONEY OR CONY (Gr. koniklos, rabbit). Name still used in English law for the rabbit. But it is more correctly applied to the hyrax (q.v.), probably the coney of the Bible.

CONEY ISLAND. Sandy island, forming part of New York City, U.S.A., and included in the borough of Brooklyn. A popular resort, it was named by emigrants from Ireland after the largest island on Lough Neagh. The westernmost of a collection of sand-bars fringing the S.W. shore of Long Island, it is 5 m. long, $\frac{1}{2}$ m. to over $\frac{3}{4}$ m. broad, and separated from the mainland by Gravesend Bay, Sheephead Bay, and Coney Island Creek. It has three beaches. Sea Gate, at the W. end of the island, is a residential quarter.

CONFEDERATION (Lat. con, with; foedus, a league). Name for a union of states retaining a large amount of independence. Such were the North German Confederation, 1867-71, and the earlier Confederation of the Rhine, set up by Napoleon. Switzerland forms a confederation, but it is now hardly correct to call the United States one, since during the 19th century the central government became much more powerful.

The states which seceded from the American Union in 1860-61, on the question of states rights, i.e. the right of each state as a sovereign body to terminate its connexion with the federal government, were known as the Confederate States. See American Civil War; British Empire; United States.

CONFESSION. Penitential declaration of sins made privately to a priest. The practice is obligatory in the Roman Catholic and Eastern Churches, and permissive in the Anglican communion. In the former the priest sits in one compartment of a structure known as a confessional, partitioned off from the penitent, who confesses to him through a lattice or grille. The priest is bound to preserve absolute secrecy concerning all sins confessed. The pardon declared by him is conditional on the contrition and amendment of the penitent.

CONFIRMATION (Lat. confirmatio, strengthening). Religious service administered as a complement to baptism. In the Anglican Church confirmation is one of the conditions of admission to communion, and the service consists of the public renewal of the baptismal vows by one who has come to years of discretion, and of the invoking of God's blessing by the laying on of the bishop's hands. In the Lutheran Church the main feature is a public profession of faith after an examination in Christian doctrine. In the Roman Catholic Church confirmation is one of the seven sacraments. In the Eastern Church it is called myron or unction, and there is no imposition of hands.

CONFUCIANISM. System of thought and life based on the teaching of Confucius. This name is the latinised form given by Jesuit missionaries to the man known among his own people as K'ung Fu-tsu, the philosopher Kung. Born 551 B.C. of good family, he was early in life appointed to important positions in the State. From 530-501 B.C. he devoted himself to teaching, gathering a growing band of disciples and giving much time to the collecting, editing, and publishing of the ancient writings of his country. In 501 B.C. he was appointed governor in his native state, Lu, and later chief criminal judge, but, disgusted with the way in which his country was governed, he resigned, and

Confucius. Chinese portrait of the philosopher

spent over 12 years wandering from land to land. In 484 B.C. he returned to his native province, and remained there until his death in 478 B.C.

The scriptures of Confucianism are the so-called Nine Classics, still regarded as the authoritative exposition of this religion, and, by the hulk of the people, as inspired. They embrace the Five Kings and the Four Books or Shus. The Five Kings are the chief standard writings of the Chinese, and are made the basis for conduct, private and political. Confucius is popularly regarded as the author, or at least the compiler of these, although only one can with certainty be ascribed to him. The Four Books or Shus, an abbreviation of the Books of the Four Philosophers, are less esteemed, but a Chinaman masters and memorises them before he attempts the study of the Five Classics.

Confucius taught that the regeneration of social and political order lay in a return to the good old days, and this was to be brought about by studying the sages of old. He himself taught no doctrine of God, of spirits, or of a future life. He considered religion a good thing for the people, because it promoted peace and order.

Every Chinese town possesses a temple in honour of the sage, and twice a year ceremonies are performed there by local officials, there being no dedicated priesthood.

CONGÉ D'ÉLIRE (Fr. leave to elect). Term used in the Church of England for the formal permission given by the sovereign to the dean and chapter of a cathedral to elect an archbishop or bishop. This election is merely a form, for the sovereign sends at the same time the name of the person whom his advisers have recommended for the vacant see. If the person named is not elected within twelve days, the crown appoints someone by letters patent. See Bishop.

CONGER (Leptocephalus conger). Large edible marine fish of the eel family. It is common off the coasts of Europe, including the Mediterranean, Africa, as far S. as St. Helena, Tasmania, and Japan. The female attains a length of over 6 ft., but the full-grown male is only 2½ ft. The larval state is a thin, transparent, ribbon-like fish, the morris. The mature congers repair to very deep water for spawning, after which they die. Full-size females weigh 60 lb. or more.

CONGLETON. Borough and market town of Cheshire. It stands on the Dane, on the L.M.S. Rly. and the Macclesfield Canal, half-way between Macclesfield and the Potteries. Its chief industry is silk manufacture. The Swan is a famous inn. Market day, Sat. Pop. 11,764.

CONGLOMERATE. Rock composed of consolidated gravel or shingle, in which the pebbles are rounded and water-worn. A local name is pudding-stone. It is distinguished from breccia, in which the fragments are angular. Varieties are named according to the nature of the contained pebbles or of the cementing material. Quartz conglomerates are the most abundant, but limestone conglomerates or breccias are also found.

CONGO. River of Central Africa. It takes its rise in British territory on the S. slope of a plateau between Lakes Nyasa and Tanganyika, the Chambezi being generally regarded as its true source. The river issues from the swamp S. of Lake Bangweulu as the Luapula, and below Lake Mweru it is called the Lualaba. After Nyangwe, the point from which it is generally known as the Congo, it flows N. to the Equator, then N.W. and S.W., finally entering the Atlantic through an estuary 100 m. long. In its course of over 3,000 m. the Congo receives many tributaries, which drain an area of more than 1,300,000 sq. m.

The Congo was first made known to Europeans by the Portuguese discoverer, Diego Cam, who reached its mouth in 1484-85. Captain Tuckey, sent by the British Government, explored the estuary in 1818. The discoveries of Livingstone on the Luapula and Lualaba in 1867-71, and the later journey of Stanley in 1876-77, revealed the full extent of the river.

CONGO, BELGIAN. Belgian colony in central Africa. It has a small coastline at the mouth of the Congo. Its land frontier of some 6,000 m. faces French Equatorial Africa and the Anglo-Egyptian Sudan to the N.W. and N., Uganda and Tanganyika Territory to the E., and Northern Rhodesia and Angola to the S. The colony includes Ruanda and Urundi, formerly part of German East Africa, ceded to Belgium under a mandate of the League of Nations. Area about 910,000 sq. m.; pop. about 10,000,000, of whom some 20,000 are Europeans.

The country is a vast basin drained by the river Congo and its tributaries. Lying on both sides of the Equator, it has a tropical climate. Products include palm nuts, palm oil, white copal, rubber, cocoa, coffee, ivory, rice, and cotton. The forests yield mahogany and other valuable timber. Cattle are raised. The Katanga province is one of the world's chief producers of copper. Other minerals include gold, diamonds, tin, and radium. The capital is Leopoldville. The chief seaports are Banana, Boma, and Matadi. The chief river ports are the capital, Coquilhatville, Stanleyville, Ponthierville, Kindu, Kongolo, and Bukama.

Railway lines are being built to link the Katanga with the lower Congo and also

Conger. Large edible fish of the eel family. It sometimes attains a length of six feet

with Lohito Bay, via the Benguela Rly. There are regular air services between Boma and Elisabethville and other points, and there are several wireless stations.

The Congo Free State, as the country was originally called, was founded by Leopold II, King of the Belgians, in 1885, and was ruled by him as his personal property. It was transferred to the control of the Belgian Parliament, through the colonial minister, in 1908, and henceforth was known as the Belgian Congo. See Cape to Cairo Rly.

CONGREGATIONALISM. Religious denomination of English origin. The distinguishing features in the position maintained by Congregationalists or Independents, are as follows: (1) they recognize Jesus Christ alone as Head of the Church; (2) each individual church is composed of Christian believers who have accepted the doctrines of the New Testament as their standard; (3) each individual church is autonomous, and the seat of authority rests in the assembly of its members. It elects its own ministers and officers and manages its own affairs.

Independency was the outcome of the Reformation. Its original founder in England was Robert Browne, who protested against ecclesiastical settlement in the reign of Elizabeth, and organized separate churches on an Independent or Congregational basis. In 1831 the majority of the churches were formed into the Congregational Union of England and Wales, incorporated in 1902, and in 1919 nine districts or provinces were formed, each under a Moderator. In 1929 there were 4,621 churches and preaching stations in the British Isles, with 2,921 ministers.

CONGRESS (Lat. con, with; gradus, step). Literally, a meeting of any kind, but generally applied to assemblies of more than ordinary size and importance. It is the word generally used for international meetings, such as the Congress of Berlin (1878).

In a particular sense it is the name given to the supreme legislative body of the U.S.A. This consists of two houses, the Senate and the House of Representatives. The Senate consists of 96 members, two of whom are chosen by each state. The House of Representatives is elected by a popular vote, the states returning members in accordance with their population. There is an election every two years. The President can veto any legislation passed by Congress, but if they pass the measure again by a two-thirds majority of each house it becomes law.

CONGREVE, SIR WALTER NORRIS (1862-1927). British soldier. Born Nov. 20, 1862, he was a staff officer in the South African War and won the V.C. for his attempt to save the guns at Colenso, Dec., 1899. He distinguished himself on the Somme and later commanded the 7th Corps, which bore the brunt of the German offensive, March, 1918. Knighted in 1918, he took over the Southern Command in Dec., 1922, and became governor of Malta, 1924. He died Feb. 23, 1927. His son, Capt. W. La T. Congreve, V.C., fell in action, 1916.

CONGREVE, WILLIAM (1670-1729). English dramatist. Born at Bardsey, near Leeds, he came to London at the age of 20, and after studying law for a short time began to write for the stage. Congreve's early plays, *The Old Bachelor* and *The Double Dealer* (both, 1693), obtained immediate success. In 1695 appeared *Love for Love*, and in 1697 his tragedy, *The Mourning Bride*. *The Way of the World*, 1700, Congreve's last play, was a comparative failure and, annoyed by its reception, he vowed to write no more. He died Jan. 19, 1729. See Comedy.

William Congreve,
English dramatist
After Kneller

CONISBROUGH OR CONISBOROUGH. Urban district of Yorkshire (W.R.). On the Don, it is 5 m. S.W. of Doncaster by the L.N.E. Rly. There are limestone quarries. The castle, now in ruins, figures in Ivanhoe. Pop. 17,050.

CONISTON. Lake of Lancashire, known as Coniston Water. At the E. foot of Coniston Fells, 13 m. W. of Kendal, it is $\frac{1}{2}$ m. long, $\frac{1}{4}$ m. broad, 184 ft. deep and 147 ft. above sea level. To the N.W. lies the Old Man of Coniston, 2,635 ft. high, and on the E. bank is Brantwood, once the residence of Ruskin.

CONISTON GRITS. These are a development in the English Lake district of a series of gritty rocks of Ludlow age belonging to the Silurian system. They are 4,000 ft. in thickness. The Coniston Limestones are the uppermost series of Ordovician rocks developed in the English Lake district, of the same age as the Caradoc series in Shropshire.

CONJUNCTIVITIS OR OPHTHALMIA. Inflammation of the conjunctiva or mucous membrane which lines the inner surfaces of the eyelids and is continued over the white of the eye. The symptoms of simple, acute conjunctivitis are pain, redness of the conjunctivae, and formation of a sticky secretion. Bathing the eye with a solution of boracic acid may cure mild cases. Severe cases may require treatment with silver nitrate or some of the organic salts of silver and astringents.

Acute purulent conjunctivitis is most often due to infection with the organism of gonorrhoea, and most frequently met with in the newly-born, when it is sometimes termed

ophthalmia neonatorum, the infection resulting from gonorrhoea in the mother. It has been estimated to account for as much as 30 p.c. of all cases of blindness in the United Kingdom. Midwives are now instructed in methods of cleaning the eyes immediately after birth. Other forms of conjunctivitis, termed granular, follicular, and phlyctenular, are each characterised by the appearance of minute growths on the inner surfaces of the eyelids.

CONJURING. Art of producing illusions. In ancient times magicians were supposed to possess supernatural powers and conjuring was largely used to take advantage of the credulity of the ignorant, to inspire awe and to bring terror to the evil-doer.

In modern times conjuring is practised as a form of entertainment, and may be described as the production of effects, apparently miraculous, by natural means. The chief branches of the art are sleight of hand, in which the magical appearance, disappearance, or change of an article is brought about by the dexterity of the hands; and illusions, usually produced on a large scale, and more particularly suited for the stage, as intricate and ingenious apparatus is generally used. There are also many experiments performed by conjurers in natural magic, where science is brought into combination with sleight of hand, and the up-to-date magician finds electricity and chemistry valuable aids to his art.

CONNAUGHT OR CONNACHT. Province of the Irish Free State. It comprises the counties of Galway, Leitrim, Mayo, Roscommon, and Sligo, and covers 6,610 sq. m. The surface rises from the E., where the Shannon forms part of the boundary, and becomes mountainous in the W. The coast is deeply indented, and contains well-sheltered harbours. Only two towns, Galway and Sligo, have more than 10,000 inhabitants. Connaught had its own kings before the English conquest of Ireland. After that the Burghs or Bourkes were the great family in the district.

Connaught Rooms is the name of a London assembly hall on the south side of Great Queen Street, W.C., used for banquets, balls, and similar functions. Connaught Square is a London square between Stanhope Place and Connaught Street, Hyde Park, W.

CONNAUGHT, ARTHUR WILLIAM PATRICK ALBERT, DUKE OF (b. 1850). British prince. Born May 1, 1850, the third son of Queen

Victoria, he entered the Army in 1868. In 1874 he was made duke of Connaught and Strathearn. He saw service in Canada, 1870, and in Egypt in 1882: from 1886-90 he had a command in India. In 1902 the duke was made a field-marshal, and in 1904 inspector-general. He was commander-in-chief in the Mediterranean 1907-9, and from 1911-16 he was governor-general of Canada. In 1921 he visited India to inaugurate the new legislative assembly. In 1879 he married Louise, daughter of Prince Frederick Charles of Prussia. She died March 14, 1917, leaving three children: Arthur, Margaret, crown princess of Sweden, who died May 1, 1920, and Patricia, who on her marriage in 1919 with the Hon. A. R. M. Ramsay took the title of Lady Patricia Ramsay. Consult Life, Sir George Aston, 1929.

CONNAUGHT, PRINCE ARTHUR OF (b. 1833). British prince. The only son of the duke of Connaught, he was born at Windsor, Jan. 13, 1833. Educated at Eton, he entered the army in 1901, serving with the 7th Hussars and 2nd Dragoons. In 1913, he married his

cousin Alexandra, duchess of Fife. He retired from the army in Dec., 1919, and from 1920 to 1924 was governor-general of S. Africa.

CONNAUGHT RANGERS. Formerly a British regiment, originally the 88th and 94th Foot. It was raised in 1793, and saw service in Flanders in that year. It participated in the taking of Seringapatam, 1799, and served in the Peninsular War, the Crimean War, and the Indian Mutiny. In the Zulu War of 1879 the 2nd battalion bore the brunt of the Kafir attack at Ulundi. During the South African War the regiment distinguished itself at the Tugela Heights and at Colenso. In the Great War it won further battle honours, in France, in Gallipoli, and the Balkans. The regiment, whose depot was at Galway, Ireland, was disbanded in 1922.

Connaught
Rangers' regimental badge

CONNECTICUT. One of the 13 original states of the American Union. It has an area of 4,965 sq. m. The surface is hilly and uneven in the W., traversed in the centre by the Connecticut river, in the W. by the Housatonic and the Farmington, and in the E. by the Thames. Hartford is the capital and New Haven the largest city. Pop. 1,380,631.

The Connecticut river is 370 m. long and enters the sea in Long Island Sound.

CONNECTING ROD. Part of an engine which converts the reciprocating, or up-and-down, motion of the piston into the circular motion of the crank-shaft. The small end of the rod is connected to the piston in such a manner that its other, big, end is enabled to follow the circular path of the crank-pin.

CONNEMARA. Western division of co. Galway, Irish Free State. A boggy and mountainous expanse with deeply indented coastline and numerous lakes, its scenery makes it a favourite resort. The chief heights are the Twelve Bens or Pins, in the Bunabola group, reaching 2,695 ft. A variety of marble found in the district is named Connemara.

Connecting Rod of a
driving wheel

CONNING TOWER. Circular structure, heavily armoured, from which the movements of a warship are directed in action. Submarines have a conning tower with watertight door. See Battleship; also illus. p. 445.

CONNOR, RALPH (b. 1860). Pen-name of a Canadian author, Charles W. Gordon. Born at Glengarry, Sept. 13, 1860, he was educated at Toronto and Edinburgh. Ordained to the Presbyterian ministry in 1890, he went as missionary to the miners and lumbermen in the Rocky Mountains. In 1894 he became pastor of St. Stephen's Presbyterian Church, Winnipeg. His first book, *Beyond the Marshes*, 1897, was followed by *Black Rock*, 1898; *The Sky Pilot*, 1899; *The Man From Glengarry*, 1901; *The Doctor of Crow's Nest*, 1906; *Corporal Cameron*, 1912; *The Sky Pilot of No Man's Land*, 1919; and *The Runner*, 1929. He served as chaplain with the Canadian forces in the Great War.

Conquistador (Sp. conqueror). Name given to Cortés, Pizarro, and other soldiers and adventurers.

Connaught. Left, Duke of Connaught, third son of Queen Victoria. Centre, Duchess of Connaught. Right, Prince Arthur of Connaught
Downey

CONRAD. Name of four German kings, two of whom were also emperors of the Holy Roman Empire. Conrad I, a Franconian noble, was chosen king in 911 on the death of Louis the Child. He died Sept. 23, 918. Conrad II was elected king in 1024 and was crowned emperor in Rome in 1027. He was the first of the Franconian or Salian emperors. He died at Utrecht, Jan. 4, 1039.

Conrad III, the first ruler of the Hohenstaufen family, was a nephew of the emperor Henry V. He was chosen king in 1127, but his rule was not generally accepted until 1137. He died Feb. 15, 1152. Conrad IV, a son of the emperor Frederick II, was chosen king in his father's lifetime. His reign was spent in fighting for his own and his father's rights against the pope. Having been driven from Germany, he died May 21, 1254. The struggle was continued in the name of his young son Conradin, who was put to death at Naples, Oct. 29, 1268. See Hohenstaufen.

CONRAD, JOSEPH (1857-1924). English novelist of Polish parentage. Teodor Jozef Konrad Korzeniowski was born in the Ukraine, Dec. 6, 1857. He was sent to the gymnasium at Cracow, but, firmly resolved to join the British merchant service, he landed at Lowestoft in May, 1878, and until 1894 was a deep-water seaman, becoming a master in 1884. Conrad's first work was *Almayer's Folly*, 1895. It was followed by other notable novels, which, however, did not find a large public till some years later. *The Mirror of the Sea*, 1906, and *Some Reminiscences*, 1912, are both autobiographical. Conrad died Aug. 3, 1924. Consult Joseph Conrad as I Knew Him (1926), by his widow; and also Joseph Conrad: Life and Letters (1927), edit. by G. Jean-Aubry.

Joseph Conrad,
English novelist
Arbutnot

CONSCIENCE (Lat. con, with; scire, to know). Consciousness of moral obligations, which asserts itself with or in opposition to natural impulses. Conscience clause is a term applied to clauses in Acts of Parliament that exempt persons from obeying the Act if they have a conscientious objection to doing so. The laws about vaccination are an example.

Conscience money is money sent voluntarily to the chancellor of the exchequer in payment of taxes by those who have hitherto evaded payment.

A man who refused military service on conscientious grounds after the passing of the first Compulsory Service Act in 1916 was known as a conscientious objector.

CONSCRIPTION. Method of raising armed forces. The men required are selected from all able-bodied males, usually by lot, and the substitution of one man for another is allowed. It differs from compulsory military service, which calls upon all fit males to serve and does not allow substitution, but the two cannot easily be separated, and the term conscription is popularly used for both.

From the Revolution to 1872 France had conscription, but after the Franco-Prussian War this was abandoned for compulsory

service. The new German Empire about the same time adopted compulsory service, which had been introduced into Prussia in 1808. Russia introduced it in 1874 and Italy in 1875. The term was usually two or three years of active service followed by 20 or more years in the reserve. The system gave most of the armies that fought in the Great War.

In England there has always been a tradition of compulsory service, although not enforced until the Great War. This was recognized by law in 1803, and it was the basis of the militia organization. In Jan., 1916, conscription was applied to unmarried men between 18 and 41; in May of the same year it was extended to married men, but with many exemptions and reservations; in April, 1917, a third and more rigorous Act was passed under pressure of military necessity; and in March, 1918, the age of liability was raised from 41 to 50. Compulsory service in Great Britain ended on April 1, 1920. The United States also raised her armies for the Great War by compulsory service.

CONSECRATION. Term generally used for the act which sets apart persons or things for the service of God. Ecclesiastically, it is a rite performed solemnly by a bishop in distinction from a simple blessing pronounced by a priest, the only exception to this being the consecration of the bread and wine at Holy Communion. Thus the consecration of a priest to the episcopate, the dedication of a church or churchyard, or any religious building, are the special functions of a bishop.

CONSENT (Lat. con, with; sentire, to think). Term employed in English law. (1) In the law of contract, it indicates the agreement of the minds of the parties contracting. There can be no contract unless they consent to the same thing. (2) In legal proceedings the parties often consent to an order or judgment, and they can consent to things which the court could not order. (3) In certain sexual criminal cases the question often arises whether the prosecutrix consented to the act charged as an offence. A girl under 16 cannot consent in law; and it makes no difference that she did so in fact.

CONSERVATIVE. Political party in Great Britain now officially called Unionist. It regards existing British institutions with defensive pride, and exercises a vigilant caution against constitutional change. The headquarters of the party organization is at Palace Chambers, Bridge St., London, S.W.1, while the National Union of Conservative and Unionist Associations represents the various associations and clubs throughout England and Wales.

The Conservative Club, founded in 1840, has its house at 74, St. James's St., London. See Ashridge; Liberal; Primrose League; Tory.

CONSERVATOIRE. School of music, founded with the object of preserving and encouraging the art. The Paris Conservatoire, dating from 1795; the Brussels Conservatoire, 1832; the Conservatorium of Leipzig, 1843; the Royal Academy of Music, 1822, and Royal College of Music, 1882, in London, are among the chief institutions of this kind.

CONSERVATOR. Literally, one who preserves or keeps anything. It is applied especially to men entrusted with the duty of looking after fisheries and the like on the various rivers. Each river of any size in the United Kingdom has its own board of conservators, under the general supervision of the Ministry of Agriculture and Fisheries. The chief of these is the Thames Conservancy.

CONSETT. Urban district and market town of Durham. On the Derwent, 16 m. S.W. of Newcastle-upon-Tyne by the L.N.E. Rly., it is a coal-mining and iron-working centre. Market day, Sat. Pop. 13,500.

CONSIDERATION (Lat. considerare, to observe). In English law, that which moves the grantor or promisor to grant or promise. It is either (1) good or (2) valuable. (1) Good consideration is, e.g., natural love or affection, in consideration of which a man may give or promise something to a wife, a child, a friend. (2) Valuable consideration only is the basis of a legal obligation. It may be money or money's worth; or it may be doing or forbearance from doing.

CONSISTORY (Lat. consistorium, place of assembly). In the Church of England, the court of justice of a diocesan bishop. It is held in the cathedral church of the diocese for the trial of ecclesiastical causes. The president is the chancellor of the diocese, or some other commissary appointed by the bishop. It constitutes a court of appeal from the archdeacon's court, and appeals from its decisions may be carried to the provincial or archiepiscopal court, and to the privy council. In the Roman Catholic Church the name is given to the assemblage of cardinals in council with the pope.

CONSOLE (Lat. con, with; solidus, solid). Name given to the bracket of a cornice or a triglyph in a frieze, or to any small supporting member of a bust, vase, or other work of sculpture or architecture. The term also denotes the part of an organ containing the manual keyboards, the stops, the pedal keyboard, and accessory mechanism.

CONSOLIDATED FUND. Technical name for the greater part of the public revenues of the United Kingdom. Before 1787 these were paid into various accounts, and on each of these certain items of expenditure were charged. In that year they were thrown together, and the new fund was called on this account the Consolidated Fund. The expenditure of the United Kingdom is divided into that which is charged on the Consolidated Fund and that which is not.

CONSOLS. Word used for certain public debts of the United Kingdom, being an abbreviation of consolidated annuities. The early public loans took the form of annuities, some being redeemable and others perpetual, and in 1751 these were consolidated or made uniform, bearing interest at the rate of 3 p.c. This was later reduced to 2½ p.c. Until the outbreak of the Great War the bulk of the national debt was in consols. The money to pay for that struggle was raised in different ways and it was given other names, so that in 1920 consols formed only a small proportion of the National Debt. In 1929 they amounted to £276,225,755.

The price of consols was long regarded as the index of Britain's credit. In 1898 the average price was £110 18s. 9d. for every £100 of 2½ p.c. stock. In May, 1920, the price touched 47½; in 1930 it was 57½. See National Debt; Sinking Fund.

CONSPICUOUS GALLANTRY MEDAL.

Silver medal established in 1874 for award to petty officers, non-commissioned officers and men of the Royal Navy and

Royal Marines distinguished by conspicuous gallantry in action with the enemy. The ribbon is three stripes of equal width, blue, white, blue.

CONSPIRACY (Lat. con, with; spirare, to breathe). In English law an agreement by two or more persons either to do something unlawful, or to do something

by unlawful means which is not unlawful in itself. Conspiracy at common law is punishable by imprisonment up to two years. It is also a tort, giving rise to an action for damages.

Conspicuous
Gallantry Medal

CONSTABLE (Lat. comes stabuli, count of the stable). Name applied to the master of the horse and a high officer of state under the later Roman Emperors and among the Franks. In France he became commander-in-chief of the army, leader of the vanguard, and judge of military offences. The lord high constable of England was judge of the court of chivalry with the earl marshal and had wide jurisdiction. The hereditary title of lord constable of Scotland survives. The governors of royal castles in England are sometimes called constables, one such being the constable of the Tower of London. The duties of petty or parish constables now mainly fall to the police, also known as constables. Special constables help the police in emergencies. *See* Police.

The Royal Irish Constabulary was a semi-military force established in 1822 and responsible for the maintenance of law and order throughout Ireland, except in the City of Dublin. It was disbanded in 1922.

CONSTABLE, ARCHIBALD (1774-1827). Scottish publisher. Born at Carnbee, Fife, Feb. 24, 1774, he started business as a bookseller in Edinburgh in 1795. He secured *The Scots Magazine*, 1801, issued *The Edinburgh Review*, 1802, and in 1812 purchased the copyright of the *Encyclopaedia Britannica*. Constable published nearly all the later works of Scott, who became his business partner. In 1826 the firm failed, with very heavy liabilities. In 1827 Constable obtained some success by the issue of his *Miscellany*. He died July 21, 1827.

CONSTABLE, JOHN (1776-1837). British painter. Born at East Bergholt, Suffolk, June 11, 1776, he was admitted at the Royal Academy schools in 1799, exhibiting his first picture in 1802. He was elected A.R.A., 1819, and R.A. 1829. Three of his pictures shown at the Paris Salon in 1824 created a tremendous sensation, but recognition in England was slow in coming. From 1830 to 1833 he was closely occupied with the celebrated series of masterly mezzotints by David Lucas in illustration of English landscape. He died suddenly, March 31, 1837.

John Constable, British painter
After the painting
by C. R. Leslie

Constable loved the scenery at his doors, and was content to paint the beauties of cloud and sky, river, woodland, and simple, unpretentious buildings around him. Many of his pictures are in the National Gallery, London; and he is represented at the South Kensington Museum; the Louvre, Paris, etc. *See* illus. p. 138.

CONSTANCE, LAKE (anc. Lacus Brigantinus; Ger. Bodensee). Lake of central Europe, between Switzerland and Germany, and touching Austria at the S.E. end. It is formed by the Rhine. The largest Alpine sheet of water after the lake of Geneva, its greatest length is 46½ m.; greatest width, 10½ m.; greatest depth, 827 ft.; area, 205 sq. m. It lies 1,308 ft. above the sea.

CONSTANCE (Ger. Konstanz). Town and watering-place of Baden. It stands on the left bank of the Rhine, where that river leaves the lake of Constance. Its chief buildings are the cathedral, built in the 11th century, but rebuilt later, and the 16th century Renaissance town hall. The guildhouse of the butchers, called the Rosgarten, is now a museum. One of the suburbs, Kreuzlingen, is in Switzerland.

As the seat of a powerful bishop, Constance was a place of note from the 8th century. It was a possession of Austria until handed

over to Baden in 1805. The bishopric came to an end in 1827. Pop. 31,252.

The Council of Constance was a church

Constance. View of this watering-place from the lake, showing the 11th century cathedral on the right

council convoked with the primary object of putting an end to the disruptions of Christendom which the council of Pisa in 1409 had but accentuated. Opened Nov. 5, 1414, it held 45 sessions, and by the election of Martin V as undisputed pope in Nov., 1417, succeeded in extinguishing the schism which had lasted from 1378. The council of Constance was also concerned with the repression of heresy.

CONSTANS. Name of two Roman emperors. **Constans I** (Flavius Julius) was the youngest of the three sons of Constantine the Great. On the death of his father in 337 he received as his portion of the empire Italy, W. Illyricum, and Africa. After the death of his brother Constantine II, Constans remained undisputed ruler in the W. His unpopularity with the army led to a revolt, headed by Magnentius, in which he was killed.

Constans II was an East-Roman emperor (A.D. 642-668). He checked the advance of the Arabs in Syria. Constans proposed to make Rome again the capital of the empire, but his failure against the Lombards in N. Italy forced him to abandon the idea. He afterwards removed with his court to Syracuse, where he was murdered.

CONSTANT, JEAN JOSEPH BENJAMIN (1845-1902). French painter. Born in Paris, June 10, 1845, a visit to Morocco in 1872 inspired his best work in figure subjects. After 1888 he devoted himself to portraiture almost exclusively, among his finest portraits being those of Lord Savile, M. de Blowitz, Queen Alexandra, and Constant's son André. Constant died May 26, 1902.

CONSTANT DE REBECQUE, HENRI BENJAMIN (1767-1830). French thinker and politician. Born at Lausanne, Oct. 25, 1767, he is known for his association with Madame de Stael, who became his mistress in 1796. In 1795 he settled in Paris. A supporter of the Revolution, he was averse from the more violent changes, and became an opponent of Napoleon. He lived in Germany from 1803 to 1814, when he returned to Paris. He had a hand in placing Louis Philippe on the throne, and was president of the council of state when he died, Dec. 3, 1830. Constant wrote a great work in 6 vols., *De la religion*, 1824-32; his *Journal Intime* contains some of his letters.

CONSTANTA, CONSTANZA OR KUSTENJI. Town of Rumania, the ancient Constantiana. In the Dobruja, it is on the Black Sea, 140 m. E. of Bukarest, and is the terminus of the rly. from Bukarest and the principal port of Rumania. Its docks cover 150 acres. It exports chiefly grain and petroleum. During the Great War, Oct., 1916, to Nov., 1918, it was occupied by Bulgarian and German forces. Pop. 65,000.

CONSTANTIA. Village in Cape Province, S. Africa. It stands at the foot of Table Mountain, 6 m. from Wynberg, and is celebrated for its wines. The government farm, Groot Constantia, contains some 140,000 vines.

CONSTANTINE. City of Algeria. It lies on a rocky plateau 54 m. by rly. S.S.W. of Philippeville. Formerly the capital of the Roman province of Numidia, called Cartia by the Carthaginians and Ciria by the Romans, it was destroyed about A.D. 311, but was rebuilt by Constantine the Great. It was taken by the French in 1837. Pop. 93,733.

CONSTANTINE. Name of eleven Roman emperors who reigned in Constantinople, the first being Constantine the Great (A.D. 288-337). Born at Naissus, probably in 288, he was the son of the emperor Constantius Chlorus, upon whose death, at York, July 25, 306, he was proclaimed emperor by the soldiery. Maxentius, another claimant to the throne, had seized supreme power at Rome. In a battle between him and Constantine on Oct. 27, 312, Maxentius was defeated and lost his life. Constantine had staked all on this battle, having in a dream seen in the sky a fiery cross with the legend "by this conquer."

As a consequence of this victory, Constantine ordered his soldiers to wear on their shields the monogram of the name of Christ, and decreed the toleration of Christianity in the western empire. He conducted a war against Licinius, the ruler of the eastern part of the Empire, which ended in a total victory for the western ruler. After this he founded a new capital at Byzantium, which was completed in 330 and renamed Constantinople. Constantine died at Nicomedia, on May 22, 337.

Constantine II, the son and successor of Constantine the Great, reigned from 337 to 340. He divided the Empire with his brother Constans, but the two quarrelled. Constantine III only reigned for a few weeks in 641. Constantine IV (648-85) spent most of his time in defending his throne against the Saracens. Constantine V, emperor from 741 to 775, was noted for his opposition to image worship. Constantine VI reigned from 780 until blinded by his mother Irene in 797.

Constantine VII, called Porphyrogenitus, or horn in the purple, reigned from 912 to 959, but until 944 affairs were controlled by his mother Zoe. Constantine VIII ruled with his brother Basil from 976 to 1025 and alone until his death in 1028. Constantine IX reigned from 1042 until his death, Jan. 11, 1055, and Constantine X Ducas from 1059 to 1067. Constantine XI, Palaeologus, was the last emperor at Constantinople.

CONSTANTINE (1868-1923). King of Greece. Son of George I of Greece, he was born at Athens, Aug. 3, 1868. He married Sophia,

Constantine, King of Greece

princess of Prussia, in Oct., 1889, and succeeded to the throne on his father's assassination, March 18, 1913. On the outbreak of the Great War he proclaimed Greece neutral, a policy which led eventually to his deposition, June 11, 1917. Again king in 1920, he abdicated Sept. 27, 1922, and died Jan. 11, 1923.

Constantinople. City and former capital of Turkey, now known as Istanbul (q.v.).

CONSTANTINUS, FLAVIUS CLAUDIUS (d. A.D. 411). Roman soldier and usurper. Declared emperor by the soldiers in Britain

Constellation. Map of the heavens showing, left, the relative positions of the stars during the spring months in Great Britain, and, right, those during the summer months. The position of the observer is marked by a cross. The stars of each group have been joined by lines for purposes of reader identification

Constellation. Map of the heavens during the autumn (left) and winter months, showing the positions of the stars as they would be seen by an observer in Great Britain. The centre of each map, marked by a cross, is the point in the sky immediately above the observer. The band of the Milky Way is clearly shown

in 407, he made himself master of Gaul and was acknowledged by Honorius, emperor of the West, as his colleague. His intention was to march into Italy and dethrone Honorius, but having been defeated at Arles by the imperial troops, he was taken to Ravenna and put to death with his son in 411.

CONSTANTIUS. Name of three Roman emperors. Constantius I, Flavius Valerius (c. A.D. 250-306), surnamed Chlorus (the Pale), emperor 305-306, was the father of Constantine the Great. Under the decentralisation scheme of Diocletian he became, in 292, ruler of Britain, Gaul, and Spain, with the title of Caesar. On the abdication of Diocletian, May 1, 305, Constantius received the title of Augustus. He died at York, July 25, 306.

Constantius II, Flavius Julius (A.D. 317-361), emperor, 337-361, was the third son of Constantine the Great, on whose death he received the eastern portion of the empire. Much of his reign was occupied in war with Persia. The overthrow of his brother Constans by Magnentius, involved Constantius in a struggle which ended in 351 with the defeat of Magnentius and left Constantius sole ruler of the empire. In 359 war again broke out with the Persians, and his cousin Julian, commander in Gaul, was proclaimed emperor. Constantius decided to attack Julian, but died Nov. 3, 361.

Constantius III (d. 421) was commander of the imperial troops in the reign of Honorius. Having married Placidia, the sister of Honorius, he was admitted to a share in

the Empire. He died seven months after his elevation to the throne.

CONSTELLATION (Lat. con, together; stella, star). Group of stars. For purposes of identification the fainter stars in the neighbourhood of a bright group have been added to its constellation, while the map of the heavens has been completed by organizing groups of faint stars into constellations.

Aratus (3rd century B.C.) describes (after Eudoxus of Cnidus, c. 408-355 B.C.) all the old constellations now known, except Libra, the Balance. But the consolidation of the position of the classical constellations and their enumeration in 48 figures is to be referred to Hipparchus (c. 160-125 B.C.), and after him to Ptolemy (2nd century A.D.). The work of Ptolemy was translated and amended by Al-Sufi, a 10th cent. Arabian astronomer.

Modern astronomers recognize 88 constellations. They have definite boundaries, and cover the whole sky. The boundary lines usually wind in and out among the stars, and are very irregular. The constellations are of very unequal size. They may be grouped as follows. The 28 conspicuous constellations are as follows:

Andromeda	Gemini	Sagitta
Aquila	Hercules	Sagittarius
Aries	Leo	Scorpio
Auriga	Libra	Serpens
Cassiopeia	Lyra	Taurus
Corona Borealis	Ophiuchus	Triangulum
Corvus	Orion	Ursa Major
Cygnus	Pegasus	Ursa Minor
Delphinus	Perseus	Virgo
Draco		

The following five constellations have only one bright star in each.

Boötes	Canis Minor	Piscis Australis
Canis Major	Canes Venatici	

Of the constellations 19 are not very conspicuous:

Aquarius	Crater	Lynx
Camelopardus	Equuleus	Monoceros
Cancer	Eridanus	Pisces
Capricornus	Hydra	Scutum
Cepheus	Lacerta	Sextans
Cetus	Leo Minor	Vulpecula
Coma Berenices		

There are 36 southern constellations:

Antlia	Fornax	Octans
Apus	Grns	Pavo
Ara	Horologium	Phoenix
Caclum	Hydrus	Pictor
Carina	Indus	Puppis
Centaurus	Lepus	Reticulum
Chamaeleon	Lupus	Sculptor
Circinus	Malus	Telescopium
Columba	Mensa	Triangulum
Corona	Microscopium	Australe
Australis	Musca	Tucana
Crux	Norina	Vela
Dorado		Volans

See Astronomy; Stars; Zodiac; illus. p. 85; consult also The Stars and How to Identify Them, E. W. Maunder, 1919.

CONSTIPATION (Lat. constipare, to press together). Irregular and insufficient evacuation of the bowels. Its chief causes are: sluggishness resulting from sedentary habits or improper feeding; general ill-health, particularly anaemia; diseases of the liver, stomach, and nervous system; local causes, such as obstruction of the intestine. The effects are headache and lassitude, depression

of spirits, coating of the tongue, loss of appetite, bad breath, and sleeplessness.

Excess of food and indigestible food should be avoided, daily exercise should be taken, plenty of time allowed for meals, and an attempt should be made to perform the function at the same time each day. Aperients may be taken at the beginning of a course of treatment.

CONSTITUENCY (Lat. *constituere*, to place together). Term used in politics for a body of electors who form an electoral district to return one or more members to a representative assembly. See Election.

A constituent assembly is, in general, any assembly authorised to draw up a constitution for a country. After the Great War constituent assemblies met in Austria and Czechoslovakia and other new states.

Constitution Hill, London. Arch at the Piccadilly end of this thoroughfare

CONSTITUTION HILL. London thoroughfare running from Buckingham Palace to Hyde Park Corner. The arch here was erected in 1846 opposite Hyde Park Corner, but was removed to its present site in 1883, when Wyatt's equestrian statue of Wellington, which surmounted it, was removed to Aldershot and a quadriga with a figure of Peace put in its place.

CONSUBSTANTIATION. Doctrine of the Holy Eucharist which maintains that the substance of the elements of bread and wine exists with the substance of Christ's body and blood after consecration, in contradistinction to transubstantiation, the doctrine of the Roman Catholic Church, that the substance of the elements becomes the substance of Christ's body. See Eucharist; Transubstantiation.

CONSUL. Name of an official who looks after the trading interests of his country in foreign towns. The duties of British consuls may be summarised as follows: To administer the Merchant Shipping Acts with regard to British ships and seamen, wrecks, and collisions; to report fully on the trade and commerce of the district, to assist compatriots in distress, to act as notaries public and registrars, and generally to facilitate British commerce and uphold British trade.

Consulate is the name given to the building in which a consul and his staff discharge their business. Consulates are usually regarded by international law or courtesy as the soil of the country whose representatives they house.

The chief consulates-general in London are: America (U.S.A.): 18, Cavendish Sq., W.1. Argentina: 7, Gower St., W.C.1. Belgium: 10, Lowndes Sq., S.W.1. China: 49, Portland Place, W.1. France: 51, Bedford Sq., W.C.1. Germany: 9, Carlton House Terrace, S.W.1. Italy: 68, Portland Place, W.1. Netherlands: 28, Leinster St., W.1. Japan: 1, Broad St. Place, E.C.2. Portugal: 40, Woburn Sq., W.C.1. Spain: 47, Bloomsbury Sq., W.C.2. Switzerland: 32, Queen Anne St., W.1.

In ancient Rome a consul was one of the chief magistrates. First established in 510 B.C., the consuls were two in number. They held office for one year and possessed supreme judicial and military powers. Twelve lictors carried before them the symbols of office, fasces (bundles of rods), and an axe.

CONSUMPTION. Popular term for disease of the lungs which is due to infection by the bacillus of tuberculosis. See Phthisis; Tuberculosis.

CONTAGION (Lat. *contagio*, contact). Communication of disease from person to person by contact. No rigid distinction can be drawn between diseases thus conveyed and those spread by infection through the air, drinking-water, or other channel. See Infection; Public Health.

The Contagious Diseases Act was the name given to a series of statutes, mainly local in their application, passed in the middle of the 19th century for the purpose of regulating prostitution in the neighbourhood of garrisons.

CONTEMPT OF COURT. In English law, disobedience to the orders, rules, or process of a court of competent jurisdiction, or some violation of its dignity. Contempt of court includes such acts as laughing, or talking hoisterously, or striking another person in court. It also includes press comment in a pending case which is calculated to prejudice the trial, and the court may fine or commit to prison the writer or publisher. To assault a person who comes to serve a writ, summons, or order of the court is contempt. So also to disobey an injunction, or to violate an undertaking given to the court.

CONTINENT (Lat. *con*, with; *tenere*, to hold). Name given to one of the great divisions of the land surface of the globe, or a large upraised portion of the earth's crust surrounded or almost surrounded by the ocean. Accepting the second definition, the continents are (1) Eurasia, consisting of Europe and Asia; (2) Africa; (3) Australia; (4) North America; (5) South America; (6) Antarctica. It is customary to speak of Europe and Asia as separate continents, and this may be justified on economic grounds.

Off all continents there occurs a comparatively gentle slope which descends to about 100 fathoms. This is known as the Continental Shelf. Beyond there is a steep inclination of the ocean bed to a point usually between 200 and 400 fathoms, beyond which is a gradual descent to the bed of the ocean. See Africa; America, etc.

CONTINUATION SCHOOL. Institution established to provide instruction for children for several years after leaving an elementary school. In 1918, the Education Act (England and Wales), re-enacted by the Act of 1921, in addition to raising the school age, provided for the establishment of free and compulsory continuation schools for all young persons (i.e. those between the limit of school age and 18 years) who were not otherwise receiving adequate instruction. The act authorised compulsory attendance within a period of seven years for 280 hours a year, and 320 hours after that period, but provided exemption under certain conditions.

CONTRABAND (Lat. *contra*, against; and *bannum*, a proclamation). Goods, materials, or other commodities which international law forbids neutrals to supply to belligerents in times of war. The articles which constitute contraband are, in general, divided into two classes, (1) those which are of direct application to naval and military use, and (2) those which are fit for and can be employed for military or naval purposes, but are not directly prepared for that sole use. The Conference of London, 1908-9, defined the exact nature of the goods included in each class. See Blockade; International Law.

CONTRACT (Lat. *contrahere*, to draw together). In English law, contract requires: (1) the agreement of two or more persons to the same thing; commonly called offer and acceptance. The acceptance must be absolute, and not conditional. (2) There must be a

communication of both offer and acceptance to the other party. Silence is not an acceptance. (3) Either valuable consideration or a deed under seal. (4) This agreement must be of such a kind that both parties must be reasonably supposed to think that it is legally binding, that is, it must not be merely social. Consult Law of Contract, R. W. Holland, rev. ed. 1920.

A contract note is the name given to any memorandum stating the result of a transaction carried out by a broker, and sent by him to his client. It is evidence that the transaction has been carried through. Contract notes relating to dealings in stocks and shares must bear stamps varying with the amount involved.

CONTRACT BRIDGE. The essence of contract is that the declarer scores towards game only the tricks he has contracted to make. The scoring is different from auction. To make game it is necessary to score 100 points below the line. The trick values are: No trumps 35; spades and hearts 30; diamonds and clubs 20. For a rubber won in two games declarer and his partner score 700. For a rubber won in three games 500 points.

A feature is the scoring when a side is vulnerable. Players are vulnerable when they have won a game. The penalties for undertricks are then automatically doubled and if the contract is doubled are quadrupled. The penalties for failure in contract are when not vulnerable 50 per trick undoubled. If doubled 100 for the first two tricks short of contract, 200 per trick for the third and fourth tricks, and 400 for subsequent tricks. When vulnerable the penalties are, if undoubled 100 for the first trick and 200 for each subsequent trick. If doubled when vulnerable the penalty is 200 for the first trick, and 400 for each subsequent trick.

Slams, which are not scored unless bid, carry big points: 500 for little slam and 1,000 for grand slam if not vulnerable. When vulnerable 750 for little slam and 1,500 for grand slam. Honours are scored only for four in one hand. Four in one hand in any suit, 100. Five in one hand in any suit, 150. Four aces in one hand in no trumps, 150.

Bidding must be more conservative than at auction. An initial bid of one of a suit should indicate the probability of making at least five tricks if the suit named becomes trumps. An initial bid of one no trump should have all four suits guarded. See Auction Bridge; Bridge; consult also Contract Bridge For All, A. E. Manning Foster, 1929.

CONTRALTO (Ital.). Lowest and fullest kind of woman's voice, having an ordinary compass of about an octave and a half:—

Some voices add three or four semitones at either end of this range, while exceptional contraltos cover as much as:

CONTREXÉVILLE. Watering place of France, in the department of Vosges. It stands on the Vair, 39 m. W. of Epinal. It owes its popularity to its curative medicinal waters.

CONTROL, BOARD OF. Term applied in Great Britain to at least three distinct bodies. (1) In 1784 the India Act of William Pitt established a Board of Control to watch over the doings of the East India Company. This came to an end in 1858. (2) In 1913, under the Mental Deficiency Act, a Board of Control was established to look after the mentally defective in England and Wales. (3) In 1915 the Government was, by the Defence of the Realm Act (No. 2), given power to control the liquor traffic in any munition or camp area.

CONVENER. One who convenes or calls together a meeting. The word is more used in Scotland than in England, where chairman is virtually its equivalent. There the chairmen of the county councils are called conveners. *See* Chairman.

CONVENT (Lat. *convenire*, to come together). Originally applied to an assembly of Roman citizens (*conventus*), the word was appropriated to the members of a Christian community and to their place of habitation. The equivalent of monastery, when common use made this the term for a religious house for men, convent became the special term for a nunnery or religious community of women. *See* Abbey; Monasticism.

Conventicle is a diminutive of convent. The word is generally used, however, in a disparaging sense for a small place of worship. It was applied to the places of worship belonging to nonconformists at a time when their worship was illegal, or almost so, and was frequently used for the secret, and usually outdoor, services of the Covenanters.

CONVENTION (Lat. *convenire*, to come together). Term for a meeting or assembly of any kind, but among English-speaking peoples used mainly for certain kinds of political assemblies. In the U.S.A. the meetings held by the great political parties for the selection of their candidates for the presidential election are called conventions.

Convention is also the name for international agreements, as the Brussels and Hague Conventions, and those of Paris and Geneva.

CONVERSION (Lat. *convertere*, to change). In English law, to convert another's chattels to one's own use. This is done by exercising any act of dominion over the chattels; and it makes no difference that the converter is morally innocent.

In financial language, conversion denotes changing the nature of stocks and shares, e.g. making a 4 p.c. stock into a 5 p.c. one, or conversely making a 3 p.c. stock into a 2½ p.c., as was done to Consols in 1887-88. There are many other instances in public finance. *See* Consols; National Debt.

CONVERTER. Term applied to the furnace in which, in the Bessemer process of making steel, the crude iron is first purified, by having air blown through the molten mass, and then converted into steel by the addition of a suitable compound of iron and carbon. *See* Bessemer, Sir H.

CONVEYANCING. English legal term for the act of transferring property, or some interest therein, by deeds and documents; and usually to the drawing of documents relating to real property, leaseholds, and trusts. Conveyancing has been greatly simplified by the Conveyancing Act of 1881 and certain amending Acts, and to some extent has been supplanted by a system of land registration.

The stamp duty on the conveyance or transfer of property is 1s. where the purchase money does not exceed £5, and there is a graduated scale; 5s. where the value exceeds £20 but does not exceed £25; 5s. for every additional £25 up to £300; and if exceeding £300, 10s. for every £50. In addition there are the usual solicitor's charges. *See* Costa.

CONVEYER. Device for carrying and lifting broken substances, such as coal, coke, ashes, ore, macadam, grain, earth and sand, and parcels or packages of goods. One form of conveyer is the endless belt running at the delivery end round a driving pulley, and at the other round an idle tension wheel. The upper

or carrying side is supported at intervals of a few feet by groups of rollers which give it a trough-like form; the lower side by "idlers" mounted on straight shafts. By means of a movable throw-off the belt may be made to discharge its load at any point of its travel.

Other conveyers working on the same principle have a series of overlapping plates or trays attached to links of an endless chain. *See* Elevator.

CONVICT (Lat. *convictus*, proved guilty). In English law, a person on whom a sentence has been passed for treason or felony. The Forfeiture Act, 1870, abolished the forfeiture by convicts of their lands and goods, but enables the crown to appoint administrators of their property and to award from it compensation to injured persons and the costs of prosecution. Convicts liberated on licence before the expiry of their sentence are popularly known as ticket-of-leave men. *See* Criminology.

CONVOCACTION (Lat. *convocare*, to call together). Term meaning generally an assembly, but more especially the official and constitutional assemblies of the clergy of the Church of England. Convocation meets in two houses in each province of Canterbury and York, as it has done since the 14th century. The two upper houses consist of the diocesan

Conway Castle, built by Edward I in the 13th century, and the Telford suspension bridge. *See* below

bishops exclusively, and are presided over by the archbishops of Canterbury and York respectively. The lower houses consist of deans, archdeacons, and two proctors for each diocese, these being chosen by the beneficed clergy. *See* Church of England.

Convolutulus. Genus of twining plants. *See* Bindweed.

CONVOY. Word meaning an escort or protecting force, chiefly used in connexion with shipping. When a ship of war, in time of war, under an officer appointed by government, sails with merchantmen to protect them from the enemy, it is called a convoying ship, and the merchantmen are called the convoy.

CONVULSION (Lat. *convellere*, to pull together). Violent contraction, followed by relaxation of the muscles of the body. Convulsions form a symptom of great variety of diseases or abnormal conditions. The condition is most often observed in young children. The immediate treatment is to place the

Conveyer. Babcock and Wilcox patent tipping tray conveyer. TB, tipping bar; AAA, tilting trays

infant in a warm bath, but it is more important to direct attention to the cause of the convulsions. *See* Rickets.

CONWAY OR **ABERCONWAY** (anc. *Conovium*). Borough, market town and seaport of Carnar-

vonshire. It stands at the mouth of the river Conway, 13½ m. E.N.E. of Bangor, on the L.M.S. Rly. The town is enclosed by a high wall with 21 round towers. Among other features are the ruins of the castle, erected by Edward I in 1284; the Plas Mawr, a 16th century timber mansion; and the two bridges over the river Conway. Market day, Fri. Pop. 6,500. *See* illus. below

Moncreux Conway, American author

CONWAY, MONCREUX DANIEL (1832-1907). American man of letters. Born in Virginia, March 17, 1832, he became a Unitarian minister. In 1863 he came to England and was minister of South Place Chapel, London, until 1884. He wrote *Lives of Carlyle, Emerson, Hawthorne, and Thomas Paine*. He died in America, Nov. 15, 1907.

COOCH BEHAR. Semi-independent state of Bengal, India. Its area is about 1,300 sq. m. The soil is alluvial, rice being the chief crop. Pop. 592,500. The capital is Cooch Behar. Pop. 11,461.

COOK. Group of islands in the Pacific Ocean, also called the Hervey Archipelago. They are 1,640 m. N.E. of Auckland, New Zealand, and are mostly coral atolls. The largest is Rarotonga, which has a wireless station. The archipelago was taken over by New Zealand in 1901. Its area is about 280 sq. m. Pop. 13,877.

COOK, SIR EDWARD TYAS (1857-1919). British journalist and author. Born at Brighton, May 12, 1857, he entered upon a journalistic career in London. In 1890 he succeeded to the editorship of *The Pall Mall Gazette*, which he left in 1892 to become the first editor of the *Westminster Gazette*. From 1896-1901 he was editor of the *Daily News*, which he left in 1901, as he believed in prosecuting the war against the Boers to its conclusion. From 1901-12 Cook was a leader writer on *The Daily Chronicle*, and from 1916-19 joint director of the Press

Eliza Cook, British poet

Bureau. Knighted in 1917, he died Sept. 30, 1919. Cook was a leading authority on Ruskin.

COOK, ELIZA (1818-89). British poet. Born Dec. 24, 1818, in Southwark, she wrote *Lays of a Wild Harp*, 1835, and *Melaia and Other Poems*, 1838. The *Old Arm Chair*, 1837, established her popularity. From 1849-54 she conducted *Eliza Cook's Journal*. She died Sept. 23, 1889.

COOK, JAMES (1728-79). British navigator. Born Oct. 27, 1728, at Marton, Yorks, in 1755 he joined the navy as A.B. and in 1759 became master of the *Mercury*. In 1768 he was given command of the *Endeavour*, sent to the Pacific to observe the transit of Venus. On the return voyage New Zealand was circumnavigated, and Australia was visited. Returning by way of the Cape, Cook dropped anchor in the Downs, June 12, 1771.

On July 13, 1772, Cook sailed for the Antarctic in the *Resolution*, accompanied by the *Adventure*, and after careful exploration, sailed N., explored the New Hebrides, and discovered

James Cook, British navigator After N. Dance, R.A.

New Caledonia. A year later he sailed again to explore the N. Pacific. He discovered the Sandwich Islands, March 7, 1778, to which, after a cruise farther N., he returned Jan. 17, 1779. Here Cook was murdered, Feb. 14, 1779.

COOK, SIR JOSEPH (b. 1860). Australian politician. Born in England, he emigrated to Australia in 1885 and settled in New South Wales. In 1894 he took office as postmaster-general, and in 1898 was minister for mines and agriculture. On the formation of the Commonwealth in 1900, Cook entered the Federal House of Representatives. In 1909 he was minister of defence under Deakin, but the general election of 1910 went against them and they resigned. In 1913 Cook, as leader of a coalition, secured a narrow victory at the general election, and was for a short time prime minister, but in September, 1914, he resigned. He was minister for the navy, 1917. In 1918 he was knighted. Delegate at the peace conference, 1919, he was high commissioner for Australia in London, 1921-7.

COOK, THOMAS (1808-92). British tourist agent. Born Nov. 22, 1808, he became a printer and an itinerant preacher. In 1841, in connexion with a temperance meeting, he secured a special train from Leicester to Loughborough; this carried passengers for 1s. each. Other excursion trains were chartered by Cook, who soon had a regular arrangement with the Midland Railway. He died July 19, 1892.

His son, John Mason Cook (1834-1909), joined him, and the business was known, after 1872, as Thos. Cook & Son. Attention was turned to foreign travel, and fresh lines of business were developed, until the firm had branches all over the world. It was absorbed by the International Sleeping Car Co. in 1928.

Cookham. District of Berkshire. It is on the Thames, 2½ m. W. of London on the G.W.R. There is a lock here. Pop. 5,348.

COOKSTOWN. Urban district and market town of co. Tyrone, Northern Ireland, 53½ m. by rly. W. of Belfast. Its industries include linen and chemical manufactures. Market days, Sat. and Tues. Pop. 3,700.

COOLGARDEE. Town of W. Australia, 357 m. by rly. E.N.E. of Perth. On the transcontinental rly., it is an important junction for several goldfields. This rich area, now somewhat worked out, originated in the sensational find of 1892. Pop. 4,000.

The Coolgardie aqueduct is part of the pipe line, 350 m. long, that supplies water to the W. Australian goldfields.

COOLIDGE, CALVIN (b. 1872). American president. Born July 4, 1872, at Plymouth, Vermont, he became a lawyer at Northampton, Mass. In 1912 he was elected a member of the Massachusetts senate and in 1918 was chosen governor of the state. By that time he had become a leading Republican, and in 1920 he was chosen vice-president of the U.S.A., succeeding to the presidency on Harding's death in Aug., 1923. Coolidge was re-elected president in 1924, but retired when his term ended in March, 1929. He published his Autobiography in 1929.

COOLIE (Hind. quli, labourer). General term for unskilled Asiatic labourers. In the 19th century the migration and exploitation of Indian and Chinese coolies led to such

abuses that a convention between China, Great Britain, and France in 1866 established fair conditions of labour, and British conventions with France, 1861, and Holland, 1870, were directed to a similar end. In 1883 the Indian government restricted still further the contract labour of coolies overseas. Coolie contract labour within India itself is regulated by an Act of 1901.

COOPER. Skilled mechanic engaged in barrel making. "Wet" coopers are highly skilled workmen who construct bulging vessels for holding wine and other liquids; "dry" coopers make barrels for dry goods, where less exactness in fitting the staves is required; "white" coopers are concerned mainly with tubs, churns, and other domestic articles without the bulge.

The Coopers' Compny is a London city livery company. Incorporated in 1501, it was empowered by Henry VIII to search and gauge all beer, ale, and soap vessels within the city and 2 m. round, ¼d. being allowed for each cask. The hall in Basinghall Street, E.C., was burnt in 1666 and rebuilt a second time in 1668.

COOPER, ALFRED DUFF (b. 1890). British politician. A son of Sir Alfred Cooper and Lady Agnes Duff, sister of the duke of Fife, he was educated at Eton and New College, Oxford. During the Great War he served with the Grenadier Guards, winning the D.S.O. From 1924 to 1929 he was Unionist M.P. for Oldham, and from 1926-29 was financial secretary to the War Office. He married Lady Diana Manners, daughter of the 8th duke of Rutland, the central figure in *The Miracle* and other film pieces.

Sir Astley Cooper, British surgeon

demonstrator of anatomy at St. Thomas' Hospital, he was appointed surgeon to Guy's Hospital in 1800. He was president of the College of Surgeons in 1827 and 1836, and wrote treatises on anatomy and surgery. In 1820 Cooper operated for a tumour on George IV and was made a baronet. He died in London, Feb. 12, 1841.

COOPER, JAMES FENIMORE (1769-1851). American novelist. Born at Burlington, N.J., Sept. 15, 1769, he joined the merchant service as a seaman, 1806, and in 1808 entered the navy, resigning his commission in 1811. Among his thirty-two novels are *The Last of the Mohicans*, 1826; *The Prairie*, 1826; *The Pathfinder*, 1840; and *The Two Admirals*, 1842. Cooper made the Red Indian a familiar figure in fiction. He died at Cooperstown, New York, Sept. 14, 1851.

COOPER, SAMUEL (1609-72). English miniature painter. Born in London, he became the greatest miniaturist of the English school. To him are due portraits of Cromwell, Milton, Albemarle, Montrose, Waller, Hampden, Charles II and his Queen, and other notabilities. He died May 5, 1672.

Coolie. Chinese coolie with load

COOPER, THOMAS SIDNEY (1803-1902). British painter. Born at Canterbury, Sept. 26, 1803, he was engaged as a youth in coach and scene-painting. Elected A.R.A. in 1845 and R.A. in 1867, between 1833 and 1902 he exhibited 266 pictures at Burlington House. He died Feb. 7, 1902.

COOPERAGE. Practice of selling spirits and tobacco that have not paid duty, to fishermen in the North Sea. Dutch traders began the business about 1850, their vessels being called *koopers*. As far as Great Britain is concerned, the practice is now illegal.

COOPERATION. Name given to an industrial system, self-governed, and organized for the mutual benefit of its members. It does not admit the authority of the private capitalist, and is to be distinguished from systems of co-partnership and profit-sharing devised for the joint benefit of labour and capital. The founder of cooperation was Robert Owen, who in 1821 established in London the first cooperative society. In 1844 Owen's disciples started the first distributive store at Rochdale. These Rochdale pioneers consisted of 28 weavers, and while their full programme included the establishment of colonies and workshops, their immediate plan was to subscribe £1 each for the purchase of foods, open a store and divide the profits from sales in proportion to the amount of goods purchased by each member. This principle has remained the vital and distinctive feature of the cooperative movement.

To get rid of the difficulties of buying goods, a north of England Cooperative Wholesale Society was established at Manchester, 1864, and a Scottish Wholesale Society in 1868. The former received its present name, the Cooperative Wholesale Society, in 1873. As each local retail society consists of members who are required on joining to take up a £1 share, which £1 may be paid out of the dividend on purchases, so the share capital of the C.W.S. was raised by the local societies, and its shareholders are exclusively these societies.

All members of a retail society participate in its dividend, and membership is open to all. The total profits of each local society are not entirely allotted as dividends, for a certain amount may be spent on educational work, and all the more progressive societies arrange for reading rooms and for courses of lectures out of their funds. In 1917 a political cooperative party was formed. In 1927 it was united with the Labour party.

In 1928 there were 1,293 retail, 3 wholesale and 70 productive associations controlled by consumers. These 1,366 societies had an aggregate membership of 5,827,000, and capital and reserves of £176,468,000.

COOT (*Fulica atra*). Aquatic bird of Central and S. Europe. It is found on lakes and ponds in most parts of England and Ireland, and in Scotland in summer. It is recognized by the conspicuous white naked patch on the forehead. It feeds on aquatic insects, small fish, and leaves and buds of water plants, generally building a nest on the water.

COPAIBA. Oleo-resin obtained from the trunk of *Copaifera lansdorffii*, a tree found in the E. and W. Indies but native of Brazil. It is only occasionally used in medicine, but oleum copaiba, which is a volatile oil distilled from copaiba, is more usually employed as an internal disinfectant.

Calvin Coolidge, American president

Fenimore Cooper, American novelist

Coot. European aquatic bird of the rail family
Parker

COPAL VARNISH. Oil varnish with characteristic hardness. Copal is a hard resin found in E. Africa, Zanzibar, and Madagascar. The varnish is prepared by fusing the copal and mixing it with hot linseed oil, diluting with spirit of turpentine, and adding a siccative. It is used for purposes where a hard protective surface is required.

CO-PARTNERSHIP. System of organization in industry which aims at bringing about a permanent improvement in the relations of capital and labour and a definite change in the status of the workers. It claims for all workers (1) that they shall receive, in addition to their standard wages, some share in the final profit of the business or the economy of production; (2) that they shall accumulate their share of profit, or part thereof, in the capital of the business; (3) that they shall acquire some share in the control of the business by acquiring share capital, and thus obtain the rights and responsibilities appertaining to shareholders.

The principle of co-partnership may be worked out in a variety of ways. In 1928 there were 308 firms in Great Britain with schemes of this kind, and 222,000 employees participated in the benefits.

COPE (late Lat. cappa, cape). Semi-circular ecclesiastical cloak of silk or other material fastened across the breast by a metal clasp or band, called the morse. Its use as a specific ecclesiastical vestment worn over surplice or alb-dates from the 12th century. It is worn to-day in the Roman Catholic Church by the officiating priest on certain occasions. In the Anglican communion it is worn by some bishops, by the clergy of certain cathedrals at Holy Communion, and in churches where pre-Reformation ritual is practised. It has always been worn by Anglican bishops at the coronation of the sovereign. See Alb; Archbishop; Vestments.

COPE, SIR ARTHUR STOCKDALE (b. 1857). British artist. A son of Charles West Cope, R.A., he was born Nov. 2, 1857, and educated at Norwich. He studied art, and first exhibited at the Academy in 1876. In 1910 he was elected an R.A., and in the same year was knighted. Cope's chief works are portraits of Edward VII, George V. and other royalties.

COPE, SIR JOHN (d. 1760). English soldier. In 1745 he was commander-in-chief of the government forces in Scotland, but failing to check Prince Charles Edward's progress, he took his troops by sea to Dunbar. On Sept. 20 and 21 the two armies met at Prestonpans, when Cope was totally defeated. The contemptible nature of the fight put up by his army is recorded in the song "Hey, Johnnie Cope! are ye waukin' yet?" He died July 28, 1760. See Charles Edward.

COPENHAGEN (Dan. Kjøbenhavn, merchants' haven). Seaport and capital of Denmark. It stands partly on the E. coast of the island of Zealand, and partly on the island of Amager, which is separated from Zealand by the Kalvehodstrand, crossed by two bridges. The smaller and more modern portion on Amager is known as Christianshavn.

The chief thoroughfare is the Gøttersgade, between Kongens Nytorv (New King's Market) in the centre of the city, and the boulevards in the W. The commercial quarter lies between the harbour and Kongens Nytorv. The chief buildings are the palace of Charlottenborg, used as an academy of arts; the castle and palace of Rosenborg, the Thorwaldsen and Hirschsprung museums,

the town hall, university (dating from 1479), and exchange. Ecclesiastical buildings include the Vor Frue Kirke (Church of Our Lady), the cathedral church; Frederikskirke, Holmen's Kirke, and Vor Frelsers Kirke.

Copenhagen grew up round a castle built by Bishop Absalon, and was originally called Axelhuus. In 1443, Christopher II, king of Denmark, made it the capital. Pop. without suburbs, 587,150; with suburbs, 731,496.

The British attack on Copenhagen in 1801 arose from the efforts of Denmark, Sweden, and Russia to establish the right of convoy. The British fleet under Sir Hyde Parker entered the Sound on March 30 and attacked the Danish ships, which in the end were forced to capitulate. On this occasion Nelson, second in command to Parker, put the telescope to his blind eye when the signal to cease firing was hoisted.

COPEPODA. Order of small crustaceans. They are found in both fresh and salt water, many being parasitic and known as fish-lice. The Cyclops (q.v.) of the ponds is an example of the free-living Copepoda. The order furnishes a large part of the food of the herring and other important fishes.

Nicolaus Copernicus, Polish astronomer. Portrait in possession of the Royal Society.

at Heilsberg, where he prosecuted the construction of a new cosmic theory of the universe. From 1522-29 he sat in the Prussian

COPERNICUS, NICOLAUS (1473-1543). Polish-German astronomer. Born in Thorn, Poland, Feb. 19, 1473, he went in 1491 to Cracow, where he studied medicine, theology, astronomy, and mathematics. In 1500 he went to Rome, later studying medicine at Padua, and ecclesiastical law at Ferrara. He left Italy in 1505, and spent the six succeeding years at Heilsberg, where he prosecuted the construction of a new cosmic theory of the universe. From 1522-29 he sat in the Prussian

Copepoda. Calanus finmarchicus, highly magnified.

Copenhagen. 1. Peblinge Lake, to the N.W. of the city. 2. The Town Hall. 3. Frederikskirke; the dome is a noted landmark.

Diet. To his intimate friends alone he confided the then audacious theory that the sun is the central body round which the earth and the

remaining planets revolve. At last he consented that his work, *De Revolutionibus Orbium Coelestium* should be published, but the first printed copy reached him only on his death-bed. He died May 24, 1543.

COPHETUA. Legendary African king who made the daughter of a beggar his queen. The story is referred to by Shakespeare and Jonson, and was the subject of two old ballads. Tennyson modernised the story in his poem *The Beggar Maid*.

COPLEY, JOHN SINGLETON (1737-1815). Anglo-American painter. Born in Boston, Mass., July 3, 1737, he received his early art training from his stepfather, Peter Pelham. He sailed for England in 1774, and then spent a year in Italy. On settling in London in 1776 he was elected A.R.A., becoming R.A. in 1779. He painted portraits and historical subjects with conspicuous success. He died Sept. 9, 1815. His son became Lord Lyndhurst (q.v.). Consult Life, A. T. Perkins, 1873.

COPPER. Elementary metal. Its symbol is Cu; its atomic weight, 63.57; atomic number, 29; specific gravity, 8.8 to 8.95; melting point, 1,050° C.; specific heat, 0.095. In hardness copper ranks after manganese, cobalt, nickel, and iron. In tensile strength copper comes after iron. It has a red colour and will take a fine polish. Highly ductile and malleable, copper may be drawn into extremely fine wire.

The processes of extracting copper from its ores are generally two, known as wet and dry extraction respectively. A preliminary operation, indispensable where the sulphides constitute the chief ore, is the process of roasting or calcining the raw ore to remove the excess of sulphur. The roasting finished, the ore is ready for wet or dry process of extraction. The former consists in dissolving the copper out of the ore by a suitable solvent.

The dry method of extraction, by which the great bulk of the world's copper is produced, comprises generally the following operations. First, smelting the roasted ore to "matte," "regulus," or coarse metal in blast furnaces. The molten product is run off into a settler, from which the slag is tapped off. There remains a mixture of chiefly copper and iron sulphides. The product is again roasted, after which the residue is once more smelted either in a reverberatory, or now more generally in modern works, in a modified form of Bessemer converter. The final product is metallic copper containing probably 99 p.c. of the metal.

Copper as an industrial metal ranks second only to iron, alike in the extent of its production and in importance in the arts. It is used in its natural state for an immense number of purposes in the forms of bars, sheets or plates, and wire. Alloyed with zinc it forms brass, and with tin, bronze. See Alloy; Brass; Bronze; Metallurgy.

COPPER ORES. Many minerals are copper-bearing, but only those containing sufficient quantity are mined as copper ores. In the deepest zone of vein deposits are the sulphides of copper and iron, usually called copper pyrites, or chalcocite (34.6 p.c. copper), the original ore of the metal. Nearer the surface are such sulphides as chalcocite or copper-glance (77 p.c.) and erubescite (53 p.c.). In the upper weathered portion of the lodes are found the oxides, including cuprite (88 p.c.) and melaconite (80 p.c.), the carbonates malachite (56 p.c.) and chrysocolla (69 p.c.), the silicate chrysocolla (36 p.c.).

The world's production of copper in 1929 amounted approximately to 2,136,021 tons. More than half came from the U.S.A.

COPPER AGE. Archaeological term denoting a cultural phase conditioned by the use of copper, without an intentional alloy, for

implements and ornaments Where it occurs, it is intermediate between the stone and bronze ages, with no sharp lines of demarcation and no long duration.

The early period, coincident with the late Neolithic in Egypt, Crete, Cyprus, and W. Asia, exhibits copper objects as a rarity, in conjunction with predominant flint implements and crude handed pottery. The middle period marked a substantial development, especially in middle Europe. The late period, coincident with the earliest bronze age, exhibits implements cast in bronze from copper reproductions of stone originals. See Anthropology; Bronze Age, etc.

COPPERHEAD (Ancistrodon or Trigonocephalus contortrix). Poisonous snake of North America. Beautifully marked with coppery red and brown, and usually about a yard long, it is common in mountain valleys, preys upon birds and small mammals, and gives no warning before it strikes. It is also known as Moccasin-snake.

COPPERMINE. River of the N.W. Territories, Canada, named after the rich mineral deposits in the neighbourhood. It rises in an unnamed lake, flows S. into Lake Gras, N.W. through Lake Point, and finally N. to Coronation Gulf in the Arctic Ocean. It is about 525 m. long.

COPRA (Hind. khopra, coconut). Broken and sun-dried kernel of the coconut. It is exported from the South Pacific Isles for the sake of its oil, of which the kernel contains over 70 p.c. See Coconut Palm; Margarine.

COPROLITES. Fossilised nodules of the excrement of animals. Fish coprolites occur in Carboniferous shales of the Firth of Forth area, and in the Cretaceous beds of Cambridgeshire, where they form a source of phosphate used for artificial manures.

COPTOS. Ancient town near the right Nile bank, 26½ m. below Luxor, Upper Egypt. The modern Kufi, it attained importance at the beginning of dynastic history as the Nile terminus of several desert routes. Flinders Petrie's excavations in 1894 revealed Neolithic implements and cultural objects.

COPTS. Early native Christians, and their Monophysite successors, in Egypt. The European name has become fixed through long association with the town of Coptos. All fellahin (peasants) are racially Copts, but the Moslem majority have acquired by intermingling somewhat Arab and Nubian characters. In lower Egypt the Copts are scribes, traders, and artisans. They have assimilated the Moslem dress and some social culture.

The ancient Egyptian language passed, under the Roman domination, into Coptic, and was written in a hybrid alphabet of Greek uncials and demotic characters. Early Christian Egypt, with its inheritance of centuries of artistic tradition in association with religion, exerted a profound influence upon Christian art at large. Such conventional motives as the S. George and Dragon, perhaps even the Madonna and Child, are of Nilotic origin. So also the ankh (see illus. p. 91), the sign of life,

determined the form of the Coptic cross. Under Oriental influence Coptic craftsmen formed a distinctive school.

The Coptic Church, represented by the see of Alexandria, was famous in the 3rd and 4th centuries, but after 451 it became estranged from the orthodox churches of the East and from the Latins of the West. In Egypt to-day it has about 850,000 members. The head of the church is the patriarch of Alexandria.

COPYHOLD. In England, a form of holding land something between freehold and leasehold. Copyhold land was always land in a manor, and was so named because it was held on conditions laid down or copied on the rolls of the manor. This form of tenure in England was ended by the Law of Property Act of 1925. See Manor.

COPYRIGHT. Exclusive right of an author, artist, composer, or his representative, to produce or reproduce his works in any material form. The Copyright Act of 1911 repealed most of the statutes then in existence, and codifies the law of British, and in large part, of Imperial, copyright.

In addition to the sole right to produce or reproduce, to perform or publish, the case may be, copyright includes rights of translation, dramatisation,

and reproduction by mechanical contrivances. There are numerous ways of infringing copyright, e.g. by publishing an unpublished work, such as a letter; by pirating the whole or a substantial part of a published work; by dramatising or filming a novel; by "novelising" a play; in each case without the consent of the owner of the copyright.

Copyright subsists for the life of the author and fifty years after his death;

in a photograph, 50 years from the making of the negative; in mechanical contrivances, 50 years from the making of the original plate. Copyright may be assigned, either wholly or partially, or with limitations as to area and time. The ordinary remedies conferred by law for infringement of a right—injunction, damages, etc.—are open to the owner. Registration at Stationers' Hall is no longer required.

In 1930 a bill to amend the law with regard to musical and dramatic copyright was introduced into Parliament.

COQUELIN, BENOÎT CONSTANT (1841–1909). French actor. Known as Coquelin aîné, he was born Jan. 23, 1841, and appeared at the Théâtre Français, 1860. He made several tours in America, and acted in London 1892, 1902, and 1903. His greatest success

was in Rostand's *Cyrano de Bergerac*. He died Jan. 27, 1909. His brother, Ernest Alexandre Honoré Coquelin (1848–1909), Coquelin cadet (the younger), was also a successful actor. Jean Coquelin (b. 1865), son of Coquelin aîné, and like him an actor, appeared at the Théâtre Français in 1890. He created the part of Raguenau in *Cyrano de Bergerac* (q.v.).

COQUES, GONZALES (c. 1618–84). Flemish painter. Born at Antwerp, he determined to paint portraits in Van Dyck's manner, and earned the sobriquet of *The Little Van Dyck*. He composed some of his subjects in the form of conversation-pieces. He died April 18, 1684. Pron. Cok.

COQUET. River of Northumberland. It rises on the E. side of the Cheviots and flows to the North Sea about 1 m. below Warkworth. Its length is 40 m. Coquet Island lies about 1½ m. S.E. of its mouth.

CORACLE (Gael. curach, boat). Primitive fishing-boat. It is still seen in the Hebrides and on the rivers Dee and Teify. Very light, made of canvas over a tarred basket-work frame, it holds one man, who fishes with one hand and with the other directs the boat by a paddle.

CORAL (Gr. corallion, Lat. corallium). Term applied to a large number of polyps,

related to the sea anemones, and belonging to the sub-kingdom Coelenterata. As a rule coral polyps have the power of extracting lime from the sea water and using it to build up a kind of calcareous skeleton, which may assume the form of an external case or tube, or of an internal supporting axis round which the fleshy substance of the coral "animal" grows. The lime-building corals are found in tropical

and sub-tropical seas. The surface is pierced with minute holes geometrically arranged.

When the coral was alive, each hole was occupied by a polyp, resembling a sea-anemone, which protruded from the hole like a tiny stellate flower. From time to time these put forth buds which developed into new individuals, each of which built its tube, and so the mass grew. All the polyps were connected with one another by a series of canals, and each contributed to the life of the complex organism. Some corals do not live in colonies, and these construct the cup corals, mushroom corals, and other curious forms.

The red coral is the work of a polyp of different organization. It builds up an internal limy stalk or pedestal, round which its reddish-yellow flesh-substance develops. This is starred all over with the flower-like polyps.

CORAL REEF. This is a formation built by coral polyps. For conditions favourable to the growth of reef-building coral the temperature of the water must not fall below 70°F. This virtually limits coral formation to a belt roughly extending to 30° N. and S. of the

Copperhead. North American poisonous snake

French actor

equator. The presence of any sediment prevents coral growth, so that coral reefs are absent near the mouth of a river bringing sediment to the sea. Coral polyps cannot build in fresh water, owing to the absence of the necessary food constituents. Polyps cannot exist at a greater depth than 30-40 fathoms. There are three kinds of reef-fringing reefs, barrier reefs, and atolls. See Atoll.

CORALLINE (*Corallina officinalis*). Small seaweed of the order Corallinales, in the class Rhodophyceae. It is common on rocks, shells, and stones in shallow water. At first soft and flexible, it later becomes hard and brittle through the deposition of carbonate of lime.

Coralline. Specimen from W. Australia

CORAL ROOT or **CORAL-WORT** (*Cardamine bulbifera*). Perennial herb of the order Cruciferae. A native of Europe and W. Asia,

Coral root, showing leaves, seed pods and bulbils

it is found in woods and copses. It has a creeping, scaly root-stock, lower leaves divided into a few pairs of oblong leaflets, upper leaves simple, bearing reproductive bulbils in their axils; and the flowers are white or lilac.

The name coral-root orchis is given to a genus of orchids (*Corallorhiza*) with fleshy coral-like root-stocks. *C. trifida*, a rare species, occurs in boggy woods in Scotland. The lip of the flower is white, with purplish spots.

CORAL SNAKE. Poisonous snakes of the genus *Elaps*. They are restricted to the American continent. Small, but long in body, they are usually of handsome appearance, banded with coral red and black. They are found in the forests, some species being arboreal in their habit.

CORAM, THOMAS (1668-1751). British philanthropist. Born in England, his early days were spent in the U.S.A. In 1719 he settled in London. About 1735 the condition of the London foundlings attracted his attention. He raised a subscription, obtained a charter, and a hospital was built, which was opened in Hatton Garden in 1741. It was moved to Bloomsbury in 1745. In 1749 Coram was granted an annuity. He died March 29, 1751. See Foundling Hospital.

CORBEL (late Lat. *corvellus*, little crow). In medieval architecture, name for a bracket of stone or metal projecting from a wall and supporting a structural feature such as an oriel window, etc. When a corbel projects more than double its height it is called a cantilever; when its depth equals its projection, a block corbel; when its projection is half its height or less, a console.

Corbel, a bracket of stone

CORBETT, JAMES JOHN (h. 1866). American boxer. In 1889 he knocked out Joe Choynski in 28 rounds. He defeated Jake Kilrain in 1890, and in 1891 fought a drawn battle with Peter Jackson. In 1892 Corbett

became world's champion by beating James L. Sullivan. He successfully defended his title against Charley Mitebell, 1894, but lost to Bob Fitzsimmons at Carson, Nevada, 1897. In his last fight, on Aug. 14, 1903, he was knocked out by J. J. Jeffries.

CORBIE STEP or **CROW STEP** (Scots corbie, crow). Scots term for either the top stone of a gable on which the pinnacle is set, or the stepped sides of a gable. The latter form is a picturesque feature of many mediæval houses in the Netherlands and Germany.

Corbie Steps on the gable of a 12th century house in Cologne

CORBRIDGE. Town of Northumberland, on the N. bank of the Tyne, 4 m. E. of Hexham. It has a square peel tower. The church of S. Andrew is built partly of materials from the neighbouring Roman station of Corstopitum (q.v.). Pop. 2,415

CORCYRA. Latin form of Kerkyra, the Greek name of Corfu (q.v.). Colonised by the Corinthians about 733 B.C., its alliance with Athens in 432 B.C. was a cause of the Peloponnesian War. Corcyra was taken by the Romans, 229 B.C. See Ionian Islands.

CORDAY, CHARLOTTE (1768-93). French revolutionist and assassin. Born at Saint Saturnin, July 27, 1768, she at first ardently supported the Revolution. On the fall of the Girondists, with whom she sympathised, Charlotte determined to rid France of Marat. On July 13, 1793, she obtained admission to his apartments, where Marat was sitting in his bath, writing. While he was taking note of the names of certain Girondists, Charlotte stabbed Marat with a knife. She was guillotined, July 17, 1793.

Charlotte Corday, French revolutionist. Drawn from life by J. J. Hauer at her trial

Coral snake. A poisonous snake of the American continent

CORDELIERS, CLUB OF THE. Political club founded in Paris in 1790. The full title was Society of the Friends of the Rights of Man and of the Citizen, but it was familiarly named from its original meeting place in the empty chapel of the Cordelier friars. It possessed great influence over the mob and was largely responsible for the fall of the Girondins (1793), but the increasing violence of its opinions drove the more level-headed members elsewhere, and in 1794 those who were most prominent were guillotined. The club was finally dissolved in Aug., 1795.

CORDIERITE. Hydrated silicate of alumina, iron, and magnesia. Crystallising in rhombic system, with pseudo-hexagonal symmetry, it occurs in granite and gneiss, and occasionally in volcanic rocks, and is easily decomposed into other minerals.

CORDILLERA. Spanish term for extensive mt. systems, applied locally in America to sections of the Rocky Mts and Andes. See illus. pp. 13 and 53.

CORDITE. Standard smokeless propellant, technically known as a nitroglycerine powder. It was patented by Abel and Dewar on behalf of the British Government in 1889. It consists of nitroglycerine, 30 p.c.; gun cotton,

65 p.c.; and mineral jelly, 5 p.c. Cordite is brownish-yellow in colour and translucent. In small weapons it is placed direct in a brass case and ignited by a percussion cap, but for large guns it is packed in silk bags with a pocket at one end containing gunpowder. The latter is ignited by a percussion cap or electric firing tube, and fires the charge.

CÓRDOBA. City of Argentina. Situated in the central part of the republic, on the Primero river, it is an important rly. junction and a busy centre of communication between Buenos Aires and the northern provinces. There is a considerable trade in cattle and wheat. The city has a cathedral, a 16th century Jesuit church, an observatory, and a university, founded in 1613. Pop. 221,200.

CÓRDOVA. City of Spain, capital of Córdoba prov. It stands on the Guadalquivir, 82 m. by rly. N.E. of Seville, on the main line to Madrid, and is an important railway junction. It has a Roman-Moorish bridge, an alcázar, a cathedral, bishop's palace, colleges and schools, including an academy for girls (1590), which confers degrees. Its greatest glory is its mezquita, a mosque built on the site of a Christian (Visigothic) church, and transformed into a cathedral in 1236.

Founded by the Carthaginians, colonised by the Romans and beautified by the Moors, Córdoba was the birthplace of the two Senecas, of Lucan, and Averroës. The famous Córdoba leather industry is dead, but the city is still famous for its silver and filigree work. There are orange plantations near. Pop. 81,125

CORDUROY. Coarse, heavy, corded or ribbed cotton fustian, used chiefly for labourers' clothes. The term is also applied to lighter and finer fabrics of similar appearance. A corduroy road is one made through swamps or soft ground by laying transverse logs touching one another. The ends of the logs may be attached to longitudinal logs.

CORDWAINER. Originally a maker of shoes from leather from Córdoba. In 1410 the London cordwainers were incorporated as one of the livery companies. Their hall is at 7, Cannon Street, E.C.4.

CORELLI, MARIE (1864-1924). British novelist. Born May 1, 1864, of Scottish and Italian parentage, she was adopted when an infant by Charles Mackay. Mainly to help her adoptive father she became a professional novelist, and the success of *The Romance of Two Worlds*, 1886, determined her career. Among other novels from her pen are *The Sorrows of Satan*, 1895; *The Mighty Atom*, 1896; *The Master Christian*, 1900; *Temporal Power*, 1902; *Holy Orders*, 1908; *Innocent*, 1914; *The Young Diana*, 1917; and *The Secret Power*, 1921. She died April 21, 1924.

Marie Corelli, British novelist. Copyright photo: G. B. H.

CORFE CASTLE. Town of Dorset. It is on the isle of Purbeck, 5 m. S.E. of Wareham, on the Southern Rly. The castle stands on the site of a hunting lodge, at the gate of which Edward the Martyr was murdered in 978. Edward II was incarcerated there in 1326. The castle was unsuccessfully besieged by the parliamentarians in 1643, but dismantled by them in 1646. Purbeck marble and fireclay are worked near by. Pop. 1,406.

CORFU. Island of Greece in the Mediterranean Sea, one of the Ionian Islands. Separated from Albania by the Channel of Corfu, its length is 40 m., width from 2½ m. to 19 m., and area 227 sq. m. The mountains are bare, but fertile valleys yield vines, olives, figs, oranges, etc. Many goats are reared.

Sulphur, salt, honey, coal and marble are produced. Corfu, the capital, is a seaport on the E. coast. During the

Corfu. The Villa Achilleon, the ex-Kaiser's former residence

settled through the League of Nations. Pop. (island) 106,251; (town) 32,221.

CORIANDER (*Coriandrum sativum*). Annual herb of the order Umbelliferae. A native of S.E. Europe and W. Asia, it has much divided leaves with a bug-like odour and small irregular umbels of white flowers. The small, roundish aromatic fruits are used for flavouring and in medicine.

Coriander, leaves and umbels of fruit

CORINTH (Gr. Korinthus). City of Peloponnesus, in ancient Greece. Its position on the isthmus between the Corinthian and Saronic gulfs, its harbours, Lechaicum and Cenehrace, and its stronghold, the Acrocorinth made it of great importance. In 657, Cypselus made himself tyrant, and under him and his son Periander, 629-585 B.C., Corinth reached the height of its power.

In 582 the oligarchy was restored. Jealous of the power of Athens and irritated by her support of Corcyra in her quarrels with the mother-country, Corinth brought about the Peloponnesian war, 431. In 337 the Acrocorinth was occupied by the Macedonians until 243, when Corinth became the chief city of the Achaean League. It was destroyed in 146 by the Romans.

In 40 Julius Caesar built a new city, notable as one of the first places in Greece where a Christian church was established. With a brief interval of Venetian occupation, Corinth was in the hands of the Turks from 1459 to 1822. The city was famous for its vase-paintings and work in clay and bronze; the alloy known as Corinthian bronze was celebrated, and an order of Greek architecture was named after it. The foundation of Syracuse and Corcyra and trading stations on the Greek and other coasts are proof of its important colonial and commercial activities.

The new town, known as New Corinth, is built on the Gulf of Corinth, 3 m. from the ruins of the old city. It was almost destroyed by earthquake, April 23, 1928.

The Corinth Canal is a ship canal, about 4 m. long, connecting the Gulfs of Corinth and Aegina. Begun in 1882 and opened in 1893, it shortens the voyage from the Ionian Sea to Athens by about 200 m.

CORINTHIAN. Term used in England, especially in the early part of the 19th century, for a man of wealth who shared in the follies of the day and was also a sportsman.

The Corinthian Football Club is the leading amateur club playing the Association game.

CORINTHIAN ORDER. Third order of Greek architecture. Only a few important examples of its use in Greek buildings exist, and none much earlier than 300 B.C., but the Romans adopted and elaborated it. In its simplest form a garland of acanthus leaves is a chief feature of the order, which admits of many combinations. See *Architecture*: illus. pp. 116, 151.

CORINTHIANS.

EPISTLES TO THE. Two Epistles written by the Apostle Paul. S. Paul had visited Corinth during his third missionary journey. Later he heard that abuses had arisen in the Church there, and he dealt with these in a reply known as the First Epistle to the Corinthians, written from Ephesus, probably A.D. 55.

The Second Epistle, written later, deals with the building up of the Church after internal dissensions and the preaching of "false prophets."

CORIOLANUS, GAIUS (or GNAEUS) MARCIUS. Legendary Roman hero, surnamed Coriolanus for the part he took in the capture of the Volscian town of Corioli. An aristocrat, he was banished for the part he took against the plebeians in a dispute with the patricians. He settled among the Volsci at Antium and led them against Rome. When his army was near the city he refused to listen to several deputations. Yielding finally, however, to the entreaties of a body of Roman matrons, accompanied by his mother, wife, and two children, he led his army back to Volscian territory. Shakespeare used the legend in his *Coriolanus*.

CORK (*Quercus suber*). Evergreen tree of the order Amentaceae, a species of oak, native of S. Europe. The best qualities are supplied by Spain. The bark is of

great thickness, and increases by annual layers. After eight or nine years the outer layers fall off naturally; but to obtain the better qualities of commercial cork the outer coats are stripped

carried to great perfection in the U.S.A. The refuse pieces are ground and mixed with rubber and used for floorcloth.

CORK. County of the Irish Free State, in the prov. of Munster. Its area is 2,890 sq. m. Its irregular coast has many bays and sheltered harbours, the chief being Bantry and Dunmanus bays and Cork, Kinsale, and Clonakilty harbours.

Mountainous in the W. and S.W., the surface declines to a fertile plain in the centre and E., and is again relieved in the N.E. by the W. extension of the Knockmealdown Mts. Bere, Clear, Whiddy, and other small islands lie off the S.W. coast. The Blackwater river crosses the county from W. to E., the Lee flows to Cork harbour, and the Bandon empties into Kinsale harbour.

Cork is noted for its dairy produce, especially butter, and has fisheries. Inland communication is supplied by the Great Southern Rlys. Cork is the co. town, others being Queenstown, Fermoy, Youghal, Kinsale, Bandon, and Skibbereen. Pop. 365,747.

CORK. County borough, seaport, county, and capital of co. Cork, Irish Free State. It stands on the river Lee, 11 m. above its entrance into Cork Harbour, and 166 m. by

Cork. Map of the southernmost county of Ireland. In it is Queenstown, on Cork Harbour, an important port of call for trans-Atlantic shipping

ry. S.W. of Dublin, on the Great Southern Ry. The city possesses more than 4 m. of quays. Cork has flour, woollen and other manufactories, distilleries and breweries. It exports oats, butter, and cattle, and imports wheat, grain, sugar, and timber. The chief ecclesiastical buildings are the Anglican Cathedral, the Roman Catholic Cathedral of S. Mary's, and the church of S. Anne, Shandon, famous for its bells. University College, founded as Queen's College (1849) is now part of the National University of Ireland. Race meetings are held in the City Park. The city occupies the site of a 7th century abbey founded by S. Finbar. Pop. 78,490.

CORK, EARL OF. Irish title held since 1620 by the family of Boyle. Sir Richard Boyle (1566—1643) was born at Canterbury, Oct. 13, 1566, and settled in Ireland in 1588. He was knighted in 1603, created baron in 1616, and in 1620 became earl of Cork. He died Sept. 15, 1643. His son Richard, 2nd earl, was also earl of Burlington. This title, which became extinct in 1753, was re-created in 1831. A kinsman, John Boyle, earl of Orrery, succeeded to the earldom of Cork, and since then these two titles have been united.

The earl's eldest son is called Viscount Dunbar. See Boyle, Robert.

CORMORANT (Lat. *corvus marinus*, sea-crow). Genus of large sea-fowl, widely distributed. The common cormorant found round the British coasts is blackish brown, with a crest of slender feathers at the back of the head and naked patches at the base of the beak. A fine specimen is about a yard in length. Cormorants are heavy fliers, but powerful swimmers and expert divers after fish. Their voracity is proverbial. In Oriental countries cormorants are trained to catch fish for their owners. In the 17th century this curious form of sport was popular in England.

CORN (Lat. *cornu*, horn) OR **CLAVUS** (Lat. *clavus*, nail). Localised thickening of the epidermic layer of the skin, which also projects downwards and rests upon the deeper and more sensitive layer, giving rise to pain when pressed upon. Ill-fitting hoots are the commonest cause.

Corn-cockle. Common British field weed

are produced in an egg-shaped, capsule, which splits at the top into five teeth.

CORNCRAKE OR **LANDRAIL** (*Cren pratensis*). Brown insectivorous bird about the

size of a partridge. A summer visitant to Britain, its creaking call is uttered at nightfall.

Corncrake or Landrail, a summer visitor to Britain

dramatist. Born at Rouen, June 6, 1606, he practised as an advocate from 1624, but after the success of his comedy, *Mélie*, 1629, abandoned law. In 1636 he took Paris by storm with *Le Cid*, the first masterpiece of the French stage. This was followed by four great tragedies—*Horace*, *Cinna*, *Polyeucte*, and *La Mort de Pompée*; and *Le Menteur*, 1642, the best French comedy before Molière. He was made a member of the Academy. 1647. Discouraged by the failure of his *Pertharite*, 1653, he retired to Rouen, and though he returned to the theatre in 1658, he never repeated his earlier triumphs. He died Oct. 1, 1684.

His younger brother, Thomas Corneille (1625—1709), born at Rouen, Aug. 20, 1625, was made a member of the Academy, 1685, and died at Les Andelys, Dec. 8, 1709. His tragedies (e.g. *Timocrate*, 1636; *La Mort d'Annibal*, 1669), though far inferior to those of Pierre, have much of his heroic spirit.

CORNEL. Name of several plants or shrubs of the order Cornaceae. *Cornus mas*, the Cornelian cherry, is a native of Europe (not Britain), with oval downy leaves, and yellow flowers which appear before the foliage. Its red, pulpy, acid fruits are used for making tarts. *C. sanguinea* is the dogwood (q.v.).

CORNELIUS, PETER VON (1783—1867). German painter. Born at Düsseldorf, Sept. 23, 1783, he went to Rome in 1811. Recalled to Düsseldorf, 1819, to remodel the Academy, he went then to Munich, 1825, where he remained for over 20 years, decorating the Glyptothek and the Pinakothek with frescoes. In 1841 he was appointed director of the Academy at Berlin, and there decorated the Royal Mausoleum with the frescoes of *The Four Riders of the Apocalypse*. He died March 6, 1867.

CORNET. (1) Wind instrument of various pitches. The last survivor of these instruments was the *hass* or *serpent* (q.v.). (2) Chief brass instrument of soprano pitch in the modern military band (Italian *cornetto*, French *cornet à piston*). In the military band the cornets are mostly pitched in B flat, and their "open" notes are:—

sounding The fundamental sound, shown as a black note, is not used. A smaller cornet (soprano cornet) is also used in military bands, pitched in E flat. (3) The organ stop called *cornet* consisted of a combination of flue pipes on each note, reproducing a section of the harmonic series, which resulted in a reedy tone not unlike the old cornet.

Cornea (Lat. *corneus*, horny). The transparent part of the surface of the eyeball. It is continuous with the white of the eye (q.v.).

CORNEILLE, PIERRE (1606—84). French

Pierre Corneille. French dramatist

CORNET (Fr. *cornette*, standard). Rank formerly given to an officer on first joining the cavalry, equivalent to that of an ensign in the infantry. It was abolished in 1871.

CORNFLOWER. Hardy and half-hardy annual and perennial plant of the order Compositae, genus *Centaurea*. It is a native of N. America, Britain, and W. Asia, and is grown easily in any garden soil. *C. cyanus* is the blue cornflower, but there are also red and white flowering varieties.

Cornflower. *Centaurea cyanus*

CORNHILL. London street running E. from the Mansion House and Royal Exchange to Gracechurch Street. Once noted for its corn market and its drapers, its old features included The Wey House, where merchandise was weighed at the king's beam; its Standard, used as a measure of distance; its Tun, a prison for night-walkers; and its pillory.

The Cornhill Magazine was a periodical founded Jan., 1860, by George Smith, founder of the firm of Smith, Elder & Co., whose publishing house was then in Cornhill. The magazine was taken over by the firm of John Murray in April, 1917.

CORNICE (Fr. *corniche*). In classic architecture, the topmost member of the entablature. The parts of a cornice are the bed-

mould, corona, and cymatium. A cornice can be employed without the other members of the entablature, to finish a storey either inside or outside a house, or to crown a doorway, chimney-piece, or other part. When applied to the interior of a room, it generally takes the form of one or more moulded fillets. Each order in classic architecture shows a cornice peculiar to itself in detail, though the chief ornamental characteristics were the same.

Cornish Light Infantry. English regiment more commonly known as the Duke of Cornwall's Light Infantry (q.v.).

CORN LAWS. Laws regulating the import, and sometimes the export, of corn. In

England the term refers to the laws passed early in the 19th century to protect the farmer from the competition of foreign corn. In 1815 a law was passed forbidding altogether the import of foreign corn when the price of native corn was under 80s. a quarter. This made bread very dear, and in 1828 a sliding scale was introduced. When home corn was 73s. or more a quarter, a duty of 1s. was put on the imported article. The duty was increased as the price fell, until corn at 64s. a quarter meant a duty of 23s.

In 1838 the Anti-Corn Law League was founded, and in 1846 Sir Robert Peel passed a law to repeal the duties. This came into force in 1849, although a registration duty of 1s. a quarter was retained until 1869. This was temporarily reimposed in the 20th century.

In 1917 a Corn Production Act fixed minimum prices for wheat and oats and guaranteed the agricultural labourer a minimum wage of 25s. a week. This was repealed in 1921. See *Agricultural Labourer*; *Barley*; *Cohden, R.*; *Protection*; *Tariff Reform*; *Wheat*.

Cornet. Light model Besson instrument fitted with Proteau quick-change slide

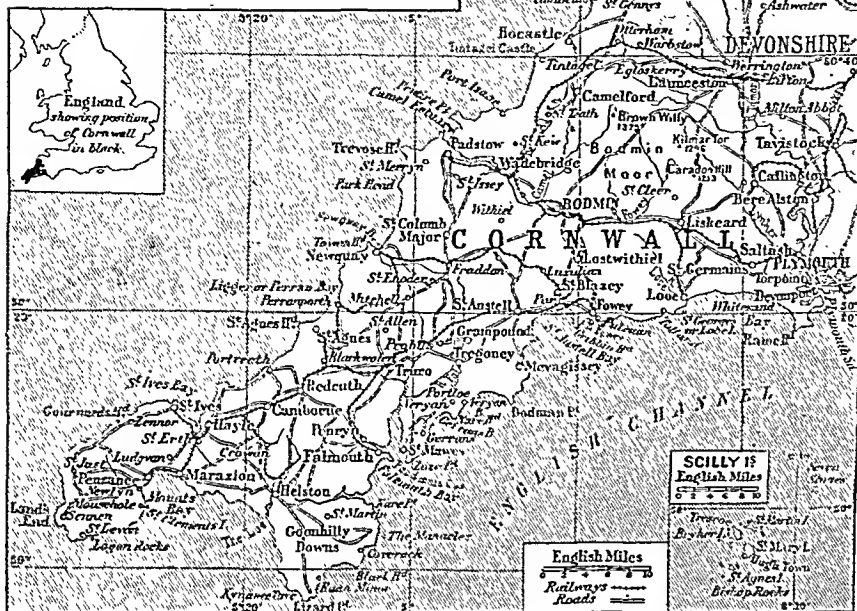

Cornice. Topmost member of the entablature in classic architecture

CORN MARIGOLD (*Chrysanthemum segetum*). Annual herb of the order Compositae. It grows in cornfields and waste places. The ray is golden yellow, the head being about 2 inches across.

CORNSTONES. Lenticular layers of close-grained limestone. Usually red or grey, they occur at the base of the Old Red Sandstone series. They are well developed in Monmouthshire. Notable forms of extinct fish (e.g. *pteraspis*) are found as fossils in them.

CORNUCOPIA (Lat. cornu, horn; copia, plenty). A device in architecture, and also in heraldry. It generally consists of a horn

the eldest son of the British sovereign by inheritance and consist of property, not only in Cornwall and Devon, but also in London. The estates are managed by a council, of which the prince is president.

Cornwall. Map of this beautiful county in the extreme south-west of England. Inset, the Scilly Isles

placed in the hands of a mythological figure represented as pouring forth its abundance of fruit and flowers, cereals, or coin.

CORNWALL. County of England, bounded on the E. by Devonshire and on all other sides by the sea. Its area is 1,356 sq. m. Its rugged coast is pierced by many indentations, on the N. the Camel estuary and St. Ives Bay, and on the S. Mount's Bay and Plymouth Sound. The most prominent headlands are Land's End and Lizard Point. About 25 m. S.W., and belonging to the co., are the Scilly Isles, between which and the mainland is said to lie submerged the Land of Lyonesse. The largest rivers, none long, flow to the English Channel, and of these the Tamar, Lynher, Looe and Fowey are the chief.

Cornwall enjoys a mild climate. Vegetables and fruit are grown, and dairy farming and cattle raising engaged in. Mining is the principal industry, tin and copper being found. China clay is also worked. Pilchard and mackerel are taken in great quantities. The Southern and G.W. Rlys serve the co. Bodmin is the co. town, others including Falmouth, Penzance, Truro, St. Ives, and Launceston. Cornwall is in the diocese of Truro. The Cornish language died out in the 18th century. Pop. 320,705.

LITERARY ASSOCIATIONS. Cornwall is the background of much of the literature concerning King Arthur, Tintagel being associated with him. R. S. Hawker's prose and verse about the county centre in Morwenstow. Several of S. Baring-Gould's novels are set in Cornish scenes, and Sir Arthur Quiller-Couch has made Fowey the centre of many stories.

DUCHY OF CORNWALL. This is the name given to large estates owned by the prince of Wales as duke of Cornwall. These come to

CORNWALL. Town of Ontario, Canada 68 m. from Montreal. Near the Long Sault Rapids on the St. Lawrence, it is the terminus of the Cornwall Canal. Pop. 7,419.

CORNWALL. British light cruiser. Belonging to the Kent class, she was completed in 1927. Her displacement is 10,000 tons, speed 31.5 knots, and principal armament eight 8-in. guns. She is 630 ft. long, and has a crew of 679 men. An earlier Cornwall, which took part in the battle of the Falkland Islands, displaced 9,800 tons and carried fourteen 6-in. guns. Her speed was 24 knots. See Kent.

CORNWALL, BARRY (1787-1874). Pseudonym of Bryan Waller Procter, British poet. Born at Leeds, Nov. 21, 1787, he became a solicitor and afterwards a barrister. He is remembered rather by his songs than his longer poems, such as *Marican Colonna*, 1820, and *Dramatic Scenes*, 1819, though the latter was praised by Lamb. He died Oct. 5, 1874.

CORNWALLIS. British battleship of the Duncan class. Launched in 1901, she had a displacement of 14,000 tons, four 12-in. and twelve 6-in. guns. She rendered service in the Dardanelles, 1915, and was sunk by a submarine, Jan. 11, 1917. A later Cornwallis, a sloop, belongs to the Royal Indian Marine.

CORNWALLIS, EARL. British title borne by the family of Cornwallis from 1753 to 1852. In 1661 Sir Frederick Cornwallis was made Baron Cornwallis. Charles (1700-1762), 5th lord, was in 1753 made Earl Cornwallis.

His son Charles, 1st Marquess Cornwallis (1738-1805), was born in London, Dec. 31, 1738. He fought in the Seven Years' War, and succeeded to the earldom in 1762. In 1776 he was sent to North America, but after

some successes was compelled to surrender at Yorktown in 1781. In 1786 he went as governor-general and commander-in-chief to India, where he broke the power of Tippoo Sahib. He was created a marquess in 1793. In 1805 he returned to India as governor-general, but he died at Ghazipur, Oct. 5, 1805. The title is now extinct.

CORNWELL, JOHN TRAVERS (1899-1916). Hero of the Great War. Born at Leyton, 1899, he trained as a sailor at the Devonport training establishment. At the battle of Jutland, May 31, 1916, he was on the Chester (q.v.). Mortally wounded early in action, he remained standing alone at an exposed post, awaiting orders, until the end of the action. He died on June 2 in Grimsby Hospital. His heroism was recognized by the posthumous award of the V.C. After him was named Mount Cornwell, Canada.

1st Marquess Cornwallis, British soldier

COROLLA (Lat. little crown). Collective botanical name for the second series or whorl of the floral envelope (perianth). It consists of the petals, which are either separate, or connected by their edges to form a tube, cup, or bell. The purpose of the size and brilliance of the corolla is to attract the insects essential to fertilisation. See Flower.

Corolla of hebe

The name Corolla is given to a southern constellation identified with Corona Australis. It lies beneath Sagittarius. See Constellation.

COROMANDEL. Township of Auckland, New Zealand. Here is the oldest goldfield in New Zealand, discovered in 1867.

Coromandel Coast is the name formerly in use for the E. coast of the Madras Presidency, India. It is said to be a corruption of Cholomandalam, the country of the Cholas, whose capital in the 10th century was Tanjore.

CORONA (Lat. crown). Concentric coloured ring, usually of small diameter, seen round the sun or moon. The colours are in the same order as those of the rainbow, the red being on the outside. The appearance is due to the refraction and interference of light passing through clouds of moderate thickness. The corona is partly made up of self-luminous gases, such as flaming hydrogen and the unknown coronium, partly of white-hot solid or liquid particles. These materials are of inconceivable thinness on the outskirts, and the streamers may reach 10,000,000 miles. The Corona Borealis is a small constellation on the left of Bootes.

Corona of daffodil

In the inflorescence of some other plants, it is formed of separate scales; while in others it forms a diminutive coronet.

CORONATION (Lat. corona, crown). Public ceremony of placing a crown upon a king's head in token of his sovereignty.

In former days coronation immediately followed accession, and is still performed within twelve months. The right to crown the British sovereign belongs properly to the archbishop of Canterbury, the archbishop of York

having the honour of crowning the queen consort. Clothed in the supertunica of cloth of gold and seated bare-headed in S. Edward's chair, the sovereign takes the oath, this being followed by the ceremonies of anointing, investiture, crowning, and homage.

The Coronation Stone, long used at Seone as the coronation seat of the Scottish kings, was removed in 1296 to England by Edward I, and placed beneath the chair of S. Edward in Westminster Abbey. See Ampulla; Chair; Coach.

CORONEL. Seaport of Chile. It stands on the Bay of Arauco, 20 m. by rly. S. of Concepción. Pop. 5,400.

BATTLE OF CORONEL. Soon after the outbreak of the Great War a German squadron caused much damage by attacking Allied ships. It consisted of the armoured cruisers Scharnhorst and Gneisenau, with the light cruisers Leipzig, Nürnberg, and Dresden, and was commanded by Rear-Adm. von Spee.

In Oct. a small British squadron under Rear-Adm. Sir C. Cradock (q.v.) proceeded in search of the Germans. He sighted the enemy off Coronel on Nov. 1 when the two squadrons were steaming S. in a heavy sea. Both sides opened fire at 12,000 yards, but the enemy's superior strength and heavier batteries soon began to tell. Cradock's flagship Good Hope was badly damaged and sank with him. The Monmouth, after fighting for hours, went down with all her crew. The Glasgow and Otranto escaped and reached the Falklands. The British loss was two old cruisers and 1,500 men.

CORONER (late Lat. coronator). One of the oldest judicial officers in England, the office dating back to the 12th century. The chief function of the king's coroner, or crowner, was to collect and guard certain revenues of the king. Escheat of a felon's property to the crown and the other revenue collecting duties of the coroner, except that relating to treasure trove, are now abolished.

The Coroners Act of 1887 requires the coroner to hold an inquest in a case of violent or unnatural death or of a sudden death of which the cause is unknown. Formerly he could not sit without a jury, but since 1927 he need not have a jury unless it appears to him that there is reason to suspect that the death was caused by murder, manslaughter, or infanticide, or by a street accident, or that the death took place in prison. See Inquest.

CORONET. Minor crown, assigned in British heraldic practice to princes, princesses, peers, peeresses, kings of arms and, by courtesy to heirs of peers bearing courtesy titles not lower than baron. Coronets are worn or carried by peers and peeresses at coronations and other functions. See Duke; Earl, &c.

COROT, CAMILLE JEAN BAPTISTE (1796-1875). French painter. Born in Paris, July 16, 1796, after studying under A. E. Michallou and V. Bertin, he exhibited his first picture—View from the Bridge of Narni—at the Salon in 1827. He made all his sketches in the open air in summer, and developed them in his studio in winter. He died Feb. 22, 1875. Corot is represented in the National Gallery and Wallace Collections, London, in the Louvre, and in Glasgow, New York, and Washington.

Camille Corot,
French painter

CORPORAL. In the British army, a non-commissioned officer ranking below a sergeant. He is distinguished by two chevrons on the left sleeve. Below him is the lance-corporal. In the household cavalry there is a corporal of horse, the equivalent of the sergeant elsewhere, and in the navy the ship's corporal assists the master-at-arms to maintain discipline.

CORPORATION (Lat. corpus, body) Word used for an association which is independent, so far as its existence is concerned, of those who compose it, i.e. it is never terminated by death. In English law a corporation is either a corporation sole or a corporation aggregate. Thus a bishop is a corporation sole, so is the parson of a parish. Corporations aggregate are, for example, municipal corporations, companies incorporated under the Companies Acts, railway companies, etc. They exist by virtue of a royal charter, or Act of Parliament, or ancient custom.

A tax levied by the British Government on the property of corporations and similar bodies is known as a corporation duty. Introduced in 1885, it is at the rate of 5 p.e. on the annual income of the corporation. See Borough; Company Law.

CORPUS CHRISTI (Lat. Body of Christ). Festival of the Roman Catholic Church, instituted in 1264 in honour of the Holy Eucharist and celebrated on the Thursday after Trinity Sunday. Its special feature is the outdoor procession of the Blessed Sacrament commonly held on the following Sunday. The festival has no place in the English Book of Common Prayer.

There are colleges dedicated to Corpus Christi at both Oxford and Cambridge. The one at Cambridge was founded in 1352 and extended in 1823-27. Corpus Christi college at Oxford was founded by Richard Fox, bishop of Winchester, in 1516.

CORREGGIO (c. 1494-1534). Italian painter, whose real name was Antonio Allegri. Born at Correggio, he was supposed to have come under the influence of Andrea Mantegna and Leonardo da Vinci. He was the master of the art of chiaroscuro, and wrought in oil and fresco. His Ecce Homo, the Education of Cupid, and the Virgin with the Pannier are in the National Gallery, London. His grandest work was the fresco of the Assumption of the Virgin, in the dimly lit dome of Parma Cathedral. He died March 5, 1534.

Correggio,
Italian painter
Self-portrait

CORROBOREE. Spectacular dance of the Australian aborigines. Sometimes informal, its most characteristic manifestation involves much preparation and a cycle of three successive moonlit nights. Animal head-dresses, awe-inspiring patterns painted upon the skin, and singing by the audience are features of these pantomimic scenes of war, the chase, and tribal history. The performers usually work themselves up into a state of great excitement.

CORROSIVE SUBLIMATE or **MERCURIC CHLORIDE** (HgCl₂). Heavy crystalline powder. A solution of 1 in 1,000 parts of water makes a strong antiseptic, largely used for disinfecting purposes and washing towels and the hands previous to surgical operations. A solution of 1 in 2,000 may be used for wounds. Corrosive sublimate is a powerful poison.

CORRUGATED IRON (Lat. corrugare, to wrinkle). Sheet metal pressed into a series of parallel curved ridges and furrows. It is a cheap and durable roofing material, and is largely used for making sheds, fences, etc. The

corrugations impart strength and rigidity to the material. See Iron.

CORSAIR (late Lat. cursarius, a pirate). Name given both to pirates and their vessels, especially to the Barbary pirates of the Mediterranean. See Barbary; Piracy.

CORSET (Fr. little body). Stay or support for the figure made of material stiffened with whalebone or steels. The custom of wearing stays has been general among the women of civilized nations, and even the Greeks wore supporting bands. As an adjunct to fashion the corset was responsible for the unnatural wasp waist of the Victorian era.

CORSHAM or **CORSHAM REGIS.** Market town of Wiltshire. It is 4½ m. S.W. of Chippenham by the G.W.R., and has freestone quarries, and was a royal residence in Saxon times. Corsham Court is the seat of Lord Methuen. Pop. 3,940.

CORSICA. Island in the Mediterranean. Separated from Sardinia by the strait of Bonifacio, it belongs to France, of which it forms the dept. of Corse. Its area is 3,367 sq. m. On the N. it runs into a narrow needle of land, terminating in Cape Corso.

The island is mountainous. The rivers are short and swift. The coast on the E. is steep and little indented, but on the W. are fine bays forming excellent harbours. Minerals exist, but are little worked; there are quarries of marble and other building stone. Among the products are grain, olives, wine, and fruit, particularly edible chestnuts. Ajaccio is the capital; other ports are Bastia and Calvi.

Famous as the birthplace of the great Napoleon, the island was colonised by the Phoenicians, passed to Rome, and fell to the Goths and other Northern races. Later it was held by Genoa, who sold it to France in 1768. A quarter of a century later the Corsicans expelled the French, who regained possession in 1796. Pop. 289,890. See France.

CORSTOPITUM or **CORCHESTER.** Romano-British military town near Corbridge, Northumberland, 3 m. S. of Hadrian's Wall. Within its partly ramparted, oval enclosure of 22 acres remains are traceable of large buildings, two granaries, barracks, a potter's kiln, and smiths' hearths. The Corbridge lanx, a silver sacrificial dish, bears Greco-Roman divinities in relief. The Corbridge lion, in stone, was perhaps a fountain ornament. Besides silver

Corroboree. Spectacular dance of the Australian aborigines, in which they typify their battles and hunting exploits

coins, hoards of gold coins were found in 1908 and 1911. In 1913 a bronze scent-box in the form of a barbarian head was unearthed.

CORTES. Spanish word, the equivalent of the English parliament, and as such still used in Spain. The Cortes consists of two houses, Senate and Congress

CORTÉS, HERNANDO (1485-1547). Spanish conqueror of Mexico. Born at Medellín, he went in 1504 to the W. Indies. In 1518 he sailed to the spot afterwards named Vera Cruz, within the territory of Montezuma, where he renounced the authority of Velasquez, governor

of Cuba, and declared his allegiance to the king of Spain alone. After an encounter with the Mexicans Cortés entered Mexico, Nov. 8, 1519, and seized the emperor. He was soon obliged to return with some of his party to Vera Cruz, where an expedition had arrived from Velasquez to recall him. Cortés refused to obey, and the bulk of the new force went over to him, the remainder being sent back to Cuba.

Hernando Cortés, Spanish conqueror of Mexico
Portrait in Sacat Mus., Madrid

Returning to Mexico, Cortés found his position in the city untenable, and he and his men cut their way out. After a visit to Spain he returned in 1530 to America, and spent the next ten years in exploring Mexico and the Pacific coast. In 1540 he returned finally to Spain, and died at Seville, Dec. 2, 1547.

CORTONA. City of Italy. Overlooking the lake of Perugia, it is 73 m. by railway from Florence. One of the twelve cities of Etruria, its old walls still stand. The cathedral, dating from the 11th century, was restored in the 18th. Pop. 30,400.

CORUNDUM (Hind. Kurund). Mineral chiefly consisting of oxide of aluminium. Its finer coloured varieties include some of the most highly prized gem stones, such as the ruby, emerald, sapphire, and those varieties of the amethyst, hyacinth, chrysolite, and topaz known as Oriental, all remarkable for hardness and brilliancy. The mineral is used as an abrasive, and is mined for this purpose in India, S. Africa and Canada.

CORUNNA (Sp. La Coruña). Seaport of Spain. It stands on a peninsula in an inlet of the Atlantic, 320 m. by rly. N.W. of Madrid. Corunna is composed of an old town, defended by a citadel and walls, and a modern town with arsenal, barracks, and wireless station. Its harbour is safe and well sheltered. In 1386 John of Gaunt landed here to claim the crown of Castile; the Armada sailed from here in 1588; the town was captured by Drake in 1589; and in the bay the English fleet defeated the French in 1747 and, on another occasion, in 1805. Pop. 65,932.

Corunna was the scene of a battle fought between the British and the French, Jan. 16, 1809, in which Sir John Moore defeated the French army under Soult, but was himself mortally wounded. See Peninsular War.

CORVETTE.

Ship of war now obsolete. In the days of sailing ships it ranked next below a frigate, which it rather resembled, but usually had only one tier of guns. Its counterpart to-day is the light cruiser. In the United States it was called a sloop of war. See Cruiser.

Corvette. Type of obsolete warship
Model in Victoria and Albert Museum

CORVUS, MARCUS VALERIUS (c. 376-270 B.C.). Hero of ancient Rome, six times consul and twice dictator. During a single combat with a Gaul a raven attacked his enemy, and so confused him that Valerius obtained the victory, hence his surname Corvus (raven).

CORWEN. Market town of Merionethshire. It stands on the Dee, 11 m. N.E. of Bala on the G.W. and L.M.S. Rlys. Pleasantly situated N. of the Berwyn Mts., it is frequented by artists and anglers. Market days, Tues. and Fri. Pop. 2,690.

Corybantes. Priests of Cybele or Rhea, in Phrygia. A feature of their rites was their noisy dance to cymbals and drum.

COSELEY. Urban dist. of Staffordshire, 3 m. S.E. of Wolverhampton, of which it is virtually a suburb. It has a station on the L.M.S. Rly. and two on the G.W. Rly. It is a mining centre. Pop. 24,213.

COSGRAVE, WILLIAM THOMAS (b. 1880). Irish politician. Born in Dublin, he became M.P. for Kilkenny city in 1917, and was returned for N. Kilkenny as a Sinn Féin in Dec., 1918. Member of the provisional government, Jan., 1922, and chairman, Aug., 1922, he was elected president of Dail Eireann in Sept. of that year. After the establishment of the Irish Free State, Cosgrave became president of its executive council, Dec. 6, 1922, and he was still in power in 1930. See Irish Free State.

William T. Cosgrave,
Irish president
Lafayette

COSIMO, PIERO DI (1462-1521). Italian painter. Born in Florence, his real name being Piero di Lorenzo, he took his adopted name from Cosimo Rosselli. With Rosselli he assisted in the decoration of the Sistine Chapel, Rome, returning to Florence in 1485, where he died, 1521. One of his best works, The Death of Procris, is in the National Gallery, London.

COSSACK (Russ. kazak; Turk. quzqaq, bandit, light-armed horseman). Name originally denoting the steppe-dwellers on the marches along the E. frontiers of Muscovy and Poland. They were organized in ten army corps called voiskos, and were settled in villages under elective chiefs known as hetmans or atamans. As a military organization distinct from the imperial army, they were trained to arms from boyhood. The Cossacks joined the Russian revolution of March, 1917, but later were frequently engaged in hostilities with the Soviet government.

COSTA RICA. (Span. rich coast). Republic of Central America, between Nicaragua and Panama. Its W. shores are washed by the Pacific and its E. coast by the Caribbean Sea. Area, about 23,000 sq. m. Pop. 492,541. The country is traversed from N.W. to S.E. by the Central Cordillera, which in parts reach a height of over 11,000 ft. The slopes of the mts. from the tree limit are heavily forested, the timber including mahogany, rosewood, and other cabinet woods. The San Juan is the only navigable river. The climate of the low E. coast lands is tropical, that of the W. coasts and the mt. area temperate. Rainfall is abundant and earthquakes are frequent. San José is the capital; other towns include Cartago, Limón, Heredia, Punta Arenas and Alajuela. The language is Spanish. San José and Colorado each have a government wireless station, and there is a high power international station at Paraiso.

An independent state since 1821, Costa Rica is a member of the League of Nations. Legislative power is vested in the congress of 43 deputies. The executive authority resides in a president, who is elected for four years. See Central America.

COSTS (Lat. constare, to consist). Term applied in England to legal expenses. There are party and party costs, which the loser of an action has to pay to the winner; and

solicitor and client costs, which a client has to pay to his own solicitor. Any person who is liable to pay costs has a right to have them overhauled, reviewed, or taxed by a master of the Supreme Court, called a taxing master.

In England, except by express written agreement, no one is liable to pay costs to a solicitor unless and until the solicitor has presented a detailed bill. See Solicitor.

COSTUME. Collective term for the articles of clothing worn by men and women. The earliest examples of civilized costumes shown in sculpture are those of Babylon and predynastic Egypt, about 3500-4000 B.C. Greek costume, which depended for its effect on a simplicity only possible in a warm climate, influenced Roman, from which in its turn Byzantine was evolved. From this came the dress of civilized Europe in the Middle Ages, or from about 900 to 1350.

In England, until quite modern times, the essentials of the costume of the poorer classes were warmth and durability. Woollen was therefore the chief material. The richer classes were influenced by the fashions of France and Italy, and the costumes, both of men and women, became extraordinarily elaborate in both Tudor and Stuart times. In the 18th and 19th centuries there was a tendency towards simple forms of costume, which, however, lacked the picturesqueness of that of earlier days.

The trend towards simplicity of dress was accelerated by the Great War. Women abandoned the long skirt, and the fashion for short hair necessitated simpler and better fitting headgear. The attire of men, too, tended to become less formal, while the great improvement in the standard of living led to the disappearance, to a great extent, of the differences in costume between class and class. See Boot; Cap; Hat; etc.

COSWAY, RICHARD (1740-1821). British miniature painter. Born at Tiverton, he was elected A.R.A. in 1770 and R.A. in 1771. His fame rests on his miniatures, which are among the best of the English school. In 1785 he was appointed principal painter to the prince of Wales. He died July 4, 1821. His wife, Maria Hadfield (1759-1838), also painted miniatures.

COTENTIN. Peninsula in N. France, on the English Channel in the dept. of Manche. It is a flat, marshy district, noted for cattle. Coutances is the chief town and Cherbourg the chief port. The Channel Islands lie off its western side. See Manche.

COTILLON (Fr. petticoat). Dance invented for the court of Louis XIV. At first a dance for one person, it was gradually developed into one for eight, and is said to be the origin of the quadrille. The cotillon popular in London in the late 19th century was totally unlike the original cotillon.

COTMAN, JOHN SELL (1782-1842). British painter. Born at Thorpe, Norwich, May 16, 1782, he came to London about 1799. He exhibited, 1800-6, at the Royal Academy, but was never a member of that body. In 1825 he was elected to the Royal Society of Painters in Water Colours, and in 1834 was appointed professor of drawing at King's College, London. He died July 24, 1842. As a painter in water colours Cotman divides with "old Crome" the leadership of the Norwich School.

His eldest son, Miles Edmund Cotman (1810-58), became professor at King's College, in succession to his father. His landscapes and seascapes were much admired. The second son, Joseph John Cotman (1814-78), showed ability as a landscape painter, and was greatly valued as a teacher.

COTONEASTER (Cotoneaster integerimus). Shrub of the order Rosaceae. A native of Europe, N. and W. Asia, and the Himalaya,

it has leathery, oblong leaves, downy beneath, minute pink flowers, and red and shining fruit similar to that of the hawthorn.

COTOPAXI. Volcanic mt. of Ecuador, in the Andes, probably the highest active volcano in the world. It is 35 m. S.S.E. of Quito, and its alt. is 19,613 ft. The crater is over 2,300 ft. in diameter. The first recorded eruption was in 1532. Others were in 1698, 1768, 1877 and 1903. It was first ascended by Wilhelm Reiss in 1872, and by Edward Whymper in 1880.

COTSWOLD OR **COTTESWOLD HILLS.** Range of oolitic limestone hills in the western midlands of England. They extend from the valley of the Bristol Avon towards the N.E., where it slopes away near the Cherwell valley.

Numerous short streams flow to the Severn; the chief, the Stour and Stroud Water, have cut into the hills and separate the southern, central, and northern portions. The gentle slope of the Southern Cotswolds drains to the Bristol Avon; the Churn, Colne, Windrush, and Evenlode drain the Central Cotswolds, and the Northern Cotswolds give rise to a number of small streams which join the Evenlode or Cherwell.

COTTER OR **COTTAR** (late Lat. *cota*, *cot*, hut). One who cultivates a small plot of land. Such was evidently the cottar of Burns's poem *The Cottar's Saturday Night*. The name represents the *cotarii* of Domesday Book, a small class of men who worked on their own plots of land or for those who cultivated larger areas. See *Crofter*; *Manor*.

COTTESMORE. English hunt. The name is taken from a village $\frac{1}{2}$ m. N.E. of Oakham, and the country hunted is in Leicestershire and Rutland. It covers about 400 sq. m. and touches the Quorn and Belvoir countries. One earl of Lonsdale was master 1788-1802, and another 1806-42. The 6th earl was master 1907-11 and again in 1915-19.

COTTINGHAM. Urban dist. of Yorkshire (E.R.), 4 m. N.W. of Hull by the L.N.E.R. The castle occupies the site of Baynard Castle, destroyed by fire in 1541. Pop. 5,135.

COTTON. This, the seed hair of the cotton plant, is the most largely produced of textile fibres; it is cheapest to manufacture, and capable of conversion into the widest variety of goods. The plant belongs to the botanical order of the Malvaceae or mallows, its generic name being *Gossypium*. The cotton plant varies greatly in different countries, but it may be

Cotton plant seeds, to which the actual cotton is attached

described as generally a bushy plant, growing about 3 ft. to 6 ft. high. The leaves are large, divided into three or five lobes.

Sea Island has deeply-cut lobes, like a vine leaf, American Upland represents the opposite extreme, and the Indian leaf is smaller, with rounded lobes. The flower also differs considerably, ranging from red to a creamy shade. The boll, or fruit, is from $\frac{1}{2}$ in. to 1½ ins. in diameter. It is divided into from three to five compartments, each containing a "lock" of from seven to nine seeds, to which the lint—the actual cotton itself—is attached.

The climate most suitable to cotton growing is sub-tropical. The crop requires an ample water supply. Drought (or untimely rain), frost, insect pests such as the boll weevil and

the holl worm, and inferior seed, form the chief obstacles to a successful yield. The seed is separated from the lint (or cotton) by a process known as ginning, and the cotton is packed in bales for the manufacturers.

Cotton began to be manufactured in Lancashire soon after 1700, and the close of the 18th century was the dawn of the age of machinery. The first cotton spinning mill was erected in Manchester in 1781, following upon the momentous inventions of Hargreaves, Arkwright, and Crompton.

Cotton goods are classified as grey or bleached, dyed, printed, or coloured (woven from dyed yarns). They are woven in long lengths, which are severed to form pieces of required yardage. In addition to piece goods there are woven cut-up articles like flags, handkerchiefs, and shawls. Cotton net, curtains and lace, tape, sewing-thread, and surgical dressings are important articles of the trade.

In Great Britain there are about 57,000,000 cotton spindles and 788,000 looms. The world's total is 165,000,000 spindles and 3,000,000 looms. The world's cotton crop is about 25,880,000 bales, made up as follows: U.S.A. 15,075,000; East Indies 5,175,000; Egypt 990,000; remainder, 4,640,000. Cotton grown in the Empire for the year 1928-9 was estimated to amount to 3,156,215 bales. A bale of cotton contains about 500 lbs.

The British Cotton-Growing Association was founded in 1902 in order to promote the growing of cotton in the British Empire.

COTTON, CHARLES (1630-87). English poet and translator. Born April 28, 1630, in 1656 he married a sister of Colonel Hutchinson. In 1685 he brought out his translation of Montaigne's *Essays*. He wrote burlesques of Virgil and of Lucian, but his best verses are his *Ode to Winter* and *The Retirement*. In 1676 he wrote a treatise on fly-fishing for the 5th ed. of Izaak Walton's *The Compleat Angler*. He died in Feb., 1687.

COTTON GRASS (*Eriophorum*). Genus of perennial tufted herbs of the order Cyperaceae, natives of the N. temperate and arctic regions. They have grasslike stems, and the simple flowers are gathered in spikelets. The sepals and petals are represented by bristles

Cotton Thistle. Its leaves have a woolly surface

which develop into long, silky filaments resembling tufts of cotton. They grow in hoggry ground, especially on elevated moors.

COTTON THISTLE (*Onopordum acanthium*). Biennial herb of the order Compositae. A native of Europe and Siberia, it has large, broad, spiny leaves, covered with woolly filaments. The stout stem (3 ft. to 6 ft.) branches above, and each branch ends in a large, cobwebby, and prickly flower-head with pale purple flowers.

COTYLEDON. In botany, the first leaf, or one of the first pair of leaves, formed in a plant developing from seed. Monocotyledons, or endogens, have but one; dicotyledons, or

exogens, comprising about two-thirds of the known plants, have two; in the few cases where there are more, the plants are known as polycotyledons.

COUCH GRASS

(*Agropyron* or *Tritium repens*). Perennial grass, a weed of cultivated ground. It has a long creeping root stock. The sessile spikelets grow each in a notch of the spike, in opposite rows. Twitch and speargrass are local names.

Cotyledon. Germination of a bean, showing cotyledons, A A'

COUÉ, EMIL (1857-1926).

French physician. In practice at Nancy, he devoted many years to investigating psychology and treatment by auto-suggestion. He prescribed certain formulas to be repeated by the patient many times a day. Coué gave séances in London in 1922. He died at Nancy, July 2, 1926. See *Psychoanalysis*.

Cougar. Name used by French naturalists for the puma (q.v.) or American lion.

COULOMB. Quantity unit of electricity, representing the amount of electricity given by 1 ampère in 1 second. It is the practical unit, and is equal to 1-10th of the absolute electro-magnetic unit. It is named after Charles Augustine de Coulomb (1736-1806), a French scientist, who investigated the theory of magnetic attraction and repulsion.

COULSDON. Village of Surrey, an urban district with Purley. It is 15 m. S. of London, being served by the Southern Rly. Between here and Chaldon is Farthing Down, where in 1872 several harrows were opened. Within the parish is Cane Hill, with its mental hospital. The village has a picturesque church. Pop., urban dist., 27,154.

COUNCIL (Lat. *concilium*). Word meaning a meeting of any kind, but especially one called to give advice. The Church early adopted the word, and its most important assemblies are known as councils, such as the councils of Nicaea and Trent.

In a general way the word is used for a governing body, e.g. the council of a school or college, of a trust or society. In some countries the assembly of ministers is known as the council of ministers, and the body of allied leaders that decided questions arising out of the Great War. In 1919 and 1920 was known as the Supreme Council. The government of India is directed by a council, and in 1930 an Economic Advisory Council was established in London. In the Netherlands Alva set up the Council of Blood in 1567.

The word has also found a place in the system of local government. In the United Kingdom there are county councils, town councils, district councils, parish councils, etc. See *District Council*; *Town Council*; etc.

COUNCILLOR. Variant of counsellor, one who gives counsel. In England and Ireland this form is especially used for the directly elected members of a county, city, town, or urban district council. In the City of London they are known as common councillors.

Countdown. Market town of Durham. It is 1½ m. S.E. of Bishop Auckland by the L.N.E.R. Market day, Thurs. Pop. 6,937.

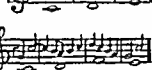

COUNSEL (Lat. *consilium*, advice). Term used in English law for a barrister who advises or appears in court for a client. It is sometimes applied to a solicitor in his capacity of an advocate in one of the inferior courts. Counsel cannot be compelled to divulge anything that takes place between them and their clients. When conducting a case they conduct it their own way, and their clients are bound thereby; but they cannot compromise against express

instructions. Counsel can make any statement in court, or ask any question, without being liable for the consequences. See Bar.

COUNT (Lat. comes). Title of nobility. The title is only used in Great Britain in the feminine form countess, the wife of an earl, but was frequent in France, Germany, and Italy. From it comes the English word county, analogous to the Fr. comté. The German form is graf. See Earl; Peccage.

COUNTER IRRITANT. Substance applied to the skin to produce irritation and dilatation of the blood vessels with the object of relieving congestion or inflammation in underlying organs. The commonest are mustard plasters and liniments, oil of turpentine, and iodine. When vigorous action is desired a blistering substance such as cantharides may be employed. See Cantharides.

COUNTERPOINT (Fr. contre, against; point, point). Addition of notes to the notes of a given melody, i.e. note against note, or point against point, as musical notes were called in the Middle Ages. Harmony concerns itself chiefly with the building-up of solid chords; counterpoint observes rather the flow of single voices or parts, in relation to other parts. Harmony is looked at vertically, counterpoint horizontally. Strict counterpoint is classified in several species:

1. Note against note:—
2. Two (or exceptionally three) notes to one:—
3. Four (or six) notes to one:—
4. Suspensions and syn-
copations (q.v.):—
5. Florid: 

Modern counterpoint is simply free part-writing, and it is untrammelled by medieval rules. See Harmony.

COUNTERPOISE. In wireless telegraphy, etc., an insulated system of conductors in connexion with the aerial system, used in addition to, or in place of, an earth connexion at a transmitting station.

COUNTY. Division of the United Kingdom and other parts of the British Empire and a unit for purposes of local government. The word comes from the French comté, and its equivalent was given in France to districts ruled by counts. From there it passed over to England about 1066.

Gradually England was divided into counties until there were 40 of them. Each had a sheriff, and an earl, whose duties, however, soon became nominal. Each, irrespective of size, sent two members to Parliament, there being only one or two exceptions to this rule before the Reform Act of 1832. From Tudor times each had its own lord-lieutenant and its own body of magistrates. Each had its county town, some of these being miniature capitals. Some were counties palatine—i.e. their rulers had exceptional powers because they occupied positions of exceptional danger. Such were the border counties of Durham, Lancashire, and Cheshire. Wales was organized into counties on the English model soon after its conquest by Edward I, as was Scotland. The word also spread to Scotland, and later to Canada, Australia, and the

CORRAL STATES. Hero in large towns were made counties and twice dict. This principle was extended with a Gaul a rment Act of 1888, which and so confused him-laces county boroughs, the victory, hence his su. any place with over

75,000 inhabitants is usually made into a county borough. These county boroughs are free from any control on the part of a county council.

The Act of 1888 created administrative counties, i.e. counties with a county council, and in England and Wales there are now 62 of these, compared with 52 geographical counties, as the older areas are called.

COUNTY COUNCIL.

By the Local Government Acts of 1888 and 1889, county councils were established in every county of England, Wales, and Scotland, and in 1898, by a similar act, in Ireland. They were set up to manage local affairs, duties hitherto discharged in the main by the magistrates in England, Ireland, and Wales, and by the commissioners of supply in Scotland.

These councils are composed of aldermen and councillors. The councillors are elected by the ratepayers, both men and women, and serve for three years. An election takes place in March every third year. The counties are divided into districts, each of which sends one member to the council. The councillors choose the aldermen, usually one alderman to every three councillors, and they hold office for three years. The aldermen and councillors choose the chairman, who is elected each year. Women are eligible for membership. From April 1, 1930, they took over the duties formerly discharged by the Boards of Guardians.

COUNTY COURT. In England, Wales, and Ireland a court of law set up in 1846 for the trial of civil cases. It must be distinguished from the old county courts that date back to Anglo-Saxon times.

England and Wales, except the city of London, are divided into districts, and each district has a court. The circuits are numbered, and for each there is a judge who holds sittings as occasion demands in the chief towns of his district. He is assisted by a registrar, who hears certain less important cases, a high bailiff, and other officials, there being a separate staff for each court. These judges are appointed by the lord chancellor except in the duchy of Lancaster.

County court judges can try any action in which not more than £100 is involved, and can also hear equity cases in which not more than £500 is at stake; and they also examine bankrupts and do a good deal of other judicial business. From their decisions there is an appeal to the High Court. The various Rent Restriction Acts greatly increased the work of the county courts. A county court judge is addressed as Your Honour.

COUPAR ANGUS. Burgh and market town of Perthshire. It stands near the left bank of the Isla, 16 m. by rly. N.N.E. of Perth, in the centre of Strathmore. It has a station on the L.M.S. Rly. Pop. 1,976.

COUP D'ÉTAT. French expression meaning literally a state blow, applied to a violent change in the constitution of a state. The term is used of the overthrow of the Directory in 1799 by the great Napoleon and of the overthrow of the Republic in 1851 by Napoleon III. Pron. Coo-dah-tah.

COUPERUS, LOUIS MARIE ANNE (1863-1923). Dutch novelist. Born at The Hague June 10, 1863, after publishing two volumes of poems he turned to fiction, and established his reputation with *Eline Vere*, 1889, a novel

dealing with life in Amsterdam. His works include *Noodlot*, 1890; *Extaze*, 1892; *Majesteit*, 1893; *Metamorfoze*, 1897; *De Stille Kracht*, 1901; *Dionyzos*, 1905. Couperus died July 16, 1923.

COUPLER. Device for rapidly connecting and disconnecting rly. vehicles. The type used in Great Britain consists of a bar, fitted with a centre turning lever, the ends being screwed with right and left-hand threads, which screw into and through the flat ends of a pair of links. At each end of every passenger vehicle a drawbar hook projects, to the shank of which one of the end links is permanently attached. To secure two vehicles, the link at the free end of one of the couplings is looped over the drawbar hook of the other vehicle. The lever bar is then turned until the tension exerts a firm pressure between the buffer springs of both vehicles.

Coupler. 1. English goods train coupling. 2. American express automatic coupling, also used on District Rly. London. 3. Standard English express train couplers

In the U.S.A. and some other countries an automatic coupling is employed which also serves the purpose of a central buffer. The drawbar hooks are jaw-shaped, the jaws being pivoted and arranged right- and left-handed at the two ends of the carriage. When two vehicles come into contact, the pivoted jaw of each, pressing against the opposite bar, is turned at right angles, locking pins drop into position, and the two jaws are automatically and securely locked together.

In music, coupler is the mechanism for causing the keys of one manual or pedal to act on another keyboard, or on a higher or lower octave of the same keyboard.

COUPLET (Lat. copula, bond). Two rhymed lines containing the complete expression of a single thought. The form is a distinguishing characteristic of English heroic verse of the 18th century, and Pope in particular excelled in its production.

COURIER (Lat. currere, to run). Messenger sent post or in haste to carry letters or dispatches. The ancient Persians, Assyrians, and Egyptians had organized courier services, and relays of runners were used by the Greeks and Romans. In the Middle Ages professional runners were employed by the nobility.

Special couriers, known as king's messengers in England, are sent with diplomatic messages to the country's representatives. The modern courier is a professional attendant on travellers.

COURLAND. District of Latvia, once a separate duchy. Until 1795 it was under the protection of Poland or Russia, and from 1795 to 1917 it was a province of Russia.

COURSING. Chasing of hares with greyhounds, by sight. One of the most ancient of field sports. Solomon eulogises the greyhound, and Arrian (2nd century A.D.) described the sport as practised in his time. The first code of laws governing the judging of greyhounds in Great Britain was drawn up in Elizabeth's reign.

Each individual course consists of two greyhounds running one against the other in pursuit of the hare. The dogs are held in leash by the slipper, who releases them simultaneously directly a hare comes in their direction. The course is closely followed by the judge, who is mounted and awards points for speed and other qualifications.

The principal event in the coursing world is the Waterloo Cup, which takes place annually in February at Alcar. See Greyhound; Waterloo Cup; and illus., p. 461.

COURT (Lat. cohors, an enclosed place). The original sense still survives as the name of a mansion e.g. Hampton Court; or that of a narrow court or cul-de-sac. From it have come the two main uses of the term. The king's court or house was the place where he heard disputes and where he received his

COURT MARTIAL. Military tribunal for the trial of officers and soldiers for breaches of the Army Act, and of civilians for offences against the Defence of the Realm Act or other contravention of regulations when a state of martial law is proclaimed.

The court is both judge and jury - it decides upon the question of

guilt and also pronounces sentence. The prisoner may be represented by counsel or by an officer who acts as prisoner's friend. The prosecutor is usually an officer, but sometimes a representative of the judge advocate. Should the accused be

towers; a belfry dating from the 14th century stands in the market-place. A canal connects the town with the Schelde.

Courtrai is famous for the battle in July, 1302, when 700 spears were collected from dead French knights and hung up in the church by the victorious Flemings. Pop. 38,251.

COUSIN, VICTOR (1792-1867). French philosopher. Born at Paris, Nov. 28, 1792, in 1817 he visited Germany, where he became acquainted with Hegel and Schelling, and took back German philosophy with him into France. After the revolution of 1830 he entered politics, and became minister of public instruction in the Thiers cabinet of 1840. After the coup d'état of 1851 he retired into private life. He died Jan. 13, 1867. In philosophy, Cousin tried to combine the views of Descartes and the Scottish school with those of Kant, Schelling, and Hegel into a system which he called eclecticism.

COUTTS, THOMAS (1735-1822). British banker. Born in Edinburgh, Sept. 7, 1735, he settled in London, being employed by the firm of goldsmiths in the Strand founded by John Campbell. Under him this developed into Coutts's bank, which was in 1920 affiliated to the National Provincial Bank, Ltd. Thomas Coutts died Feb. 24, 1822. To his second wife he left his immense fortune, which on her death passed to his granddaughter, Baroness Burdett-Coutts (q.v.).

COUVADE (Fr. hatching). Custom observed by some primitive tribes, whereby at childbirth the father simulates the maternal condition. The term has been extended to a group of practices indicating a belief that the father is physically affected by the birth, or that indulgence in certain acts or foods will react sympathetically upon mother or child.

COVENANT (Lat. convenire, to agree). Term occurring frequently in the Bible, especially in the O.T. Here it is used for many different kinds of agreements, but particularly applies to an engagement made between God and men. The Book of the Covenant is the name given in Exodus 24, 7 to a collection of ancient Hebrew law codes incorporated in the Pentateuch.

In English law, a covenant is a promise made under seal, i.e. by a deed sealed and delivered. A covenant is binding although made without valuable consideration, unlike an ordinary promise. Again, an action for breach of covenant is only barred by the lapse of 20 years instead of 6 years.

The term covenant is applied to the document embodying the clauses in the Versailles Treaty of 1919, which define the creation and administration of the League of Nations.

Courtrai. The Town Hall, built in the early 16th century and restored about 1850

It is also applied to the King's Confession or National Covenant adopted in 1581 by the General Assembly of Scotland, and signed

Coursing. A course in the Croxeth Stakes, held at Altcar, Liverpool. See p. 460

vassals and retainers. Thus court came to mean a place where justice was dispensed, and to-day the term courts of law covers all tribunals from the high court of justice and the supreme court of the U.S.A. to the county court and the magistrates' court. Thus also comes the term high court of Parliament.

The manorial courts were the court baron, attended by the freeholders, the court customary for the copyholders, and the court leet for hearing criminal cases.

Court is also used for the attendants and surroundings of a sovereign, a useful collective term for a king and queen and their suite. Presentation at court is in Britain a preliminary to entrance into society. These presentations, in the case of ladies, take place at courts, i.e. evening assemblies held by the king and queen, usually at Buckingham Palace, in May, for which invitations are issued by the lord chamberlain. Men are presented at levées, held by the king alone.

COURT CIRCULAR. This is the daily official record of events at court and movements of members of the royal family. It is issued from the Lord Chamberlain's office to the newspapers nightly.

COURTENAY. Name of an old English family derived from its French place of origin. Their heiress, about 1150, married a son of Louis VI of France, and their descendants were for a time emperors of Constantinople or Romagna.

Robert de Courtenay married a daughter of the earl of Devon, and a later Courtenay, Hugh, was made earl of Devon in 1335. William Courtenay (c. 1342-96), fourth son of Hugh, 2nd earl of Devon, and through his mother great-grandson of Edward I, was born at Exeter. He was made bishop of Hereford, 1370, bishop of London, 1375, and in 1381 archbishop of Canterbury. He died July 31, 1396. Sir William Courtenay (d. 1511) married a daughter of Edward IV: their son, made marquess of Exeter, was executed in 1539. The title of the earl of Devon, several times forfeited and recovered, is still held by the Courtenays.

COURTESY or **CURTSEY** (Fr. courtoisie). Something granted as a favour, not as a right. Such are courtesy titles, which are titles not legally valid, but granted by custom. The eldest son of a duke, marquess, or earl is known by one of his father's titles, usually the second; for example, the eldest son of the duke of Devonshire is the marquess of Hartington. The younger son of a duke or marquess has the prefix lord with the Christian name and surname, and his wife has lady prefixed to her husband's Christian name and surname. The daughter of a duke, marquess, or earl has the prefix lady with her own Christian name and surname. The eldest son of a Scottish viscount or baron is called master, e.g. the master of Stair. Holders of courtesy titles may sit in the House of Commons.

found not guilty he is at once released from military custody, and if guilty his sentence is not promulgated until the proceedings have been confirmed, because a general by endorsing the records "not confirmed" may annul both verdict and sentence. Courts martial are of three kinds, regimental, district, and general.

NAVAL COURTS. In the royal navy, courts martial are held under similar circumstances to those in the army, and are competent to try all persons belonging to the navy or on board any of H.M. ships. They can be convened by the senior officer commanding the squadron, and must be held publicly on one of the ships. The procedure is similar to that of a military court, but the sentence (unless of death) does not require confirmation. A barrister, the judge advocate of the fleet, advises the Admiralty on all matters connected with courts martial.

COURTNEY, LEONARD HENRY COURTNEY, 1st Baron (1832-1918). British statesman. Born at Penzance, July 6, 1832, he was

Baron Courtney, British statesman. Window & Grove

professor of political economy, University College, London, 1873-75. From 1876-85 he was M.P. for Liskeard, and from 1885-1900 for the Bodmin division of Cornwall. From 1886-92 he was Chairman of Committees and deputy speaker of the House of Commons. Made a privy councillor in 1889, and a peer as Baron Courtney of Penwith in 1906, he died May 11, 1918. Consult Life, G. P. Goode, 1920.

His brother, William Prideaux Courtney (1845-1913), was the author of a Register of National Bibliography, 1905-12.

COURTNEY, WILLIAM LEONARD (1850-1928). British scholar. Born Jan. 5, 1850, he was a tutor at Oxford before he began his work as literary and dramatic critic for The Daily Telegraph in 1890. He became editor of The Fortnightly Review in 1894. His published work includes Studies in Philosophy, 1882; Kit Marlowe, a blank verse drama, 1893; The Development of Maeterlinck, 1904; The Literary Man's New Testament, 1915; Old Saws and Modern Instances, 1918; and The Bedside Bible, 1926. He died Nov. 1, 1928.

COURTRAI. Town of Belgium, on the Lys, 27 m. S.W. of Ghent. The 15th century church of Notre Dame was partly rebuilt in the 18th, and contains a painting by Van Dyck and some medieval wall-paintings. St. Martin's Church is Gothic, largely restored, with a beautiful W. portal, and St. Michael's is 17th century chnreh. The hôtel de ville, dating from the 16th century, has wonderful interior decorations, and was restored about 1850. There is an old bridge with two massive

by King James VI; to the Covenant of 1638; and to the Solemn League and Covenant of 1643. See League of Nations.

COVENANTERS. Adherents of the Scottish covenant which was signed in 1638. Its signatories bound themselves to maintain the Presbyterian faith as the religion of their land, in opposition to the plans of Charles I. After the restoration of Charles II, in 1660, the Covenanters were persecuted. Their rising in 1666 was cruelly suppressed. See Bothwell; Cameronians.

COVENT GARDEN. London district and wholesale fruit, vegetable, and flower market, between the Strand and Long Acre. Covent, formerly called Convent, Garden was a garden of the abbot of Westminster. It was granted by Edward VI to the earl of Bedford. The market dates from the middle of the 17th century, the square having been built some twenty years earlier on the plans

Covent Garden Theatre. Exterior of the famous London opera house

of Inigo Jones, the architect of St. Paul's Church, Covent Garden. In 1913 most of the property was sold to H. Mallaby-Deeley, M.P. In 1918 the Covent Garden estate was bought by the Covent Garden Estates Co. (Limited). There is a station on the Piccadilly tube rly.

Covent Garden Theatre, the chief seat of grand opera in London, stands on the site of the playhouse opened by John Rich, the famous harlequin, in 1732. Enlarged and altered, the theatre was the scene of John Kemble's greatest triumphs until it was burned, Sept. 20, 1808. The second theatre, opened Sept. 18, 1809, met with the same fate in 1856. The present building was opened May 15, 1858.

COVENTRY. County borough and city of Warwickshire. It is on the river Sherbourne and Radford Brook, 94 m. N.W. of London by the L.M.S. Rly. Originally walled and pierced by 12 gates, the walls were levelled by Charles II in 1662, and only two gates remain.

It was a bishop's see from 1102-85. The present bishopric dates from 1918. The cathedral church is St. Michael's, a Perpendicular building dating from 1373-94, with a high spire 296 ft. high. The Guildhall (St. Mary's Hall) is a 15th century building, noted for its carved oak roof, stained

Coventry. The 15th cent. Guildhall, known as St. Mary's Hall
W. F. Taylor

glass, and tapestry. A new council house was opened in 1920. In 1928 it was proposed to restore the ruins of Caludon Castle.

The "City of Three Spires"—thus named from its three prominent churches—was the centre of the cloth industry to the close of the 17th century; it afterwards became noted for ribbons, watches, and sewing machines, and is now most actively engaged in cycle, motor cycle, motor car, aeroplane, telephone and other electrical apparatus, and artificial silk manufactures. Several fairs are held, in one of which the pageant of Lady Godiva and Peeping Tom is occasionally introduced. Market day, Fri. Pop. 166,000.

COVENTRY, EARL OF. English title borne since 1697 by the family of Coventry. Sir Thomas Coventry was made Baron Coventry in 1628. In 1697 his descendant, the 5th baron, was made Viscount Deerhurst and earl of Coventry. The 9th earl died in March, 1930, having held the title for the long period of 87 years. The earl's eldest son is called Viscount Deerhurst, and his seat is Croome Court, Worcestershire.

COVERDALE, MILES (c. 1488-1568). Translator of the Bible. Born at Coverham, Yorks, he was ordained in 1514, and joined the Austin Friars. Later he broke with the friars, and adopted Lutheran views, living abroad for some years. He finished his translation of the Bible in 1535. This was the first published version of the complete Bible in English. In 1540 Coverdale's edition of Crammer's Bible was published. From 1551-1553 he was bishop of Exeter, but on Mary's accession he was deprived of his see. He was rector of St. Magnus the Martyr, London, 1564-66. He died in 1568.

Miles Coverdale, translator of the Bible

COWAGE, COWHAGE OR COWITCH (*Mucuna pruriens*). Perennial climber of the order Leguminosae, native of the W. Indies. It has trefoil leaves, pea-like flowers and curved seed-pods coated with stiff brittle hairs whose points are toothed. These hairs in contact with human skin cause irritation.

COWANS, SIR JOHN STEVENS (1862-1921). British soldier. Born Mar. 11, 1862, he entered the Rifle Brigade in 1881. In 1906 he went to India, where he was director-general of military education, and from 1908-10 he commanded a brigade. In 1912 he was appointed quartermaster-general and member of the Army Council, being knighted in 1913. In March, 1919, Sir John left the army for a business appointment. He died April 16, 1921.

Sir John S. Cowans. British soldier Elliott & Fry

COWBANE (*Cicula virosa*). Perennial herb of the order Umbelliferae. A native of the N. hemisphere, it has a short, stout root-stock and large, wedge-shaped, much-divided leaves. The minute white flowers are borne in flat-topped umbels 4 ins. or 5 ins. across. From its exceedingly poisonous properties it is known as water hemlock.

COWBERRY (*Vaccinium vitis-idaea*). Evergreen shrub of the order Ericaceae. A native of N. Europe, N. Africa, and N. America, it

has twisted trailing, wiry stems, with box-like leathery leaves and bell-shaped pink flowers. The red round acid berries are larger than cranberries.

Cow Bird, American gregarious bird

COW BIRD (*Molothrus*). Genus of American birds belonging to the troupial tribe. Gregarious and polygamous in habit, they sometimes take possession of the nests of other birds, in which, following the habit of the cuckoo, they deposit their eggs.

COWBRIDGE. Borough and market town of Glamorgan. It stands in the valley of the Thaw, 12 m. by road W. of Cardiff, 23 m. by the G.W. Rly. Market day, Monday. Pop. 1,157.

Cowdenbeath. Burgh of Fifeshire. It is 23 m. N.W. of Edinburgh by the L.N.E. Rly., and is a mining centre. Pop. 14,215.

COWDRAY, WEETMAN DICKINSON PEARSON, 1ST VISCOUNT (1856-1927). British contractor and politician. Born July 15, 1856, he became the head of the firm of S. Pearson & Son, contractors. From 1895-1910 Pearson was Liberal M.P. for Colechester, and on his retirement was made a baron. In 1917 he became a viscount. He died May 1, 1927. Consult Weetman Pearson, First Viscount Cowdray, by J. A. Spender, 1930.

Viscount Cowdray British contractor and politician
Vandyk

His eldest son, Weetman Harold Miller Pearson (b. 1882), who succeeded to the title, was Liberal M.P. for the Eye division of Suffolk, 1906-18.

COWEN, SIR FRIDERIC HYMEN (b. 1852). British composer and conductor. Born at Kingston, Jamaica, Jan. 29, 1852, he came to England in 1856. He was conductor of the Covent Garden Promenade Concerts (1880), of the Philharmonic Society, 1888-92, and again from 1900; of the Scottish Orchestra, 1900, the Handel Festival, and orchestras at Manchester, Liverpool, and elsewhere. His compositions include operas, oratorios, cantatas, symphonies, and songs. Knighted in 1911, he published *My Art and My Friends*, 1913.

Sir F. H. Cowen, British composer
Russell

COWEN, JOSEPH (1831-1900). British politician and journalist. Born at Blaydon-on-Tyne, July 9, 1831, he was Liberal M.P. for Newcastle, 1873-86. He founded *The Northern Tribune* and owned and edited *The Newcastle Chronicle* for many years until his death, Feb. 13, 1900.

COWES. Urban dist., seaport, and seaside resort of the Isle of Wight. It is on the Medina river, 11 m. S.E. of Southampton, with which and with Portsmouth and Ryde it has regular steamer communication. It has a station on the Southern Rly. On the opposite bank of the Medina, and connected by a floating bridge and steam ferry, is East Cowes.

Cowes is the headquarters of the Royal Yacht Squadron. Ship and yacht building are important industries, to which the manufacture of aircraft has been added. Of the two forts (erected 1540) which formed the nucleus of East and West Cowes, the western still stands, now the Royal Yacht Squadron club house. Pop. 11,500.

Cowgate. Historic thoroughfare in Edinburgh, leading from the Grassmarket to St Mary Street. See Edinburgh.

COWL (Lat. cucullus, hood). Originally the hood attached to a cloak and worn over the head in the Middle Ages. Later the term was restricted to its present use, a hood worn by many orders of monks and friars. That of the Augustinians is a separate garment.

Cowl, as worn by members of the Franciscan order

In aeronautics the term cowl denotes the sheet metal cover or casing usually fitted over the engine and end of the fuselage to reduce head resistance. The term is also applied to the hood-shaped cover attached to chimneys.

COWLEY, ABRAHAM (1618-67). English poet and essayist. Ejected from Cambridge, where he was a fellow of Trinity College, on the outbreak of the Civil War, Cowley espoused the Royalist cause; and in 1646 followed the queen to Paris. On his return to England in 1656, he was arrested as a spy, but was released on bail of £1,000. In 1657 he became M.D. of Oxford, and in 1661 he wrote his Proposition for the Advancement of Experimental Philosophy. In 1665, receiving a Crown grant of land, he retired to Chertsey, where he died July 28, 1667. His Collected Works were issued in 1668. Cowley's elegies on Harvey and Crashaw, his paraphrases from Anacreon, The Chronicle, his hymn To Light, and his essays, will preserve his name in English literature.

Abraham Cowley, English poet and essayist

COWLEY, HANNAH (1743-1809). English dramatist and poet. Born at Tiverton, her first play, The Runaway, was produced in 1776. Her best comedy was The Belle's Stratagem, 1780. She corresponded in verse with Robert Merry (Della Crusca), and their joint poems were published in 1788. She died March 11, 1809.

COWLEY. Suburb of Oxford. It consists of two villages, Church Cowley and Temple Cowley, and a district separated from them by Cowley Marsh. A military college was formerly here, but now the place is known because of the large motor works erected by Sir W. R. Morris. The chapel of St. Bartholomew's Hospital and Cowley Church are worthy of mention.

COWLEY FATHERS. This is an order in the Church of England, founded in 1865, at Cowley, as the Society of St. John the Evangelist. It consists of mission priests and lay brothers. The London house is 22, Great College St., Westminster, and there are several branch houses.

COW PARSNIP (Heracleum sphondylium). Biennial herb of the order Umbelliferae, a native of Europe, N. Africa, and N. Asia. It has, in its second year, a stout, hollow and furrowed stem, 5 ft. or 6 ft. in height, with rough leaves 3 ft. long, broken into large leaflets holdly lobed and toothed. The comparatively small white or pinkish flowers combine in large umbels, making the plant conspicuous. The edible stems are chiefly used for feeding pigs.

Cow Parsnip, flowering head

COWPER, WILLIAM (1731-1800). English poet. Born at Great Berkhampstead, Herts, Nov. 15, 1731, he was educated at a country school and later at Westminster. Having become a barrister, he held a position in the courts of law, but his health gave way, and

from Dec., 1763, to June, 1765, he was an inmate of a private asylum, melancholia dating from his mother's death having developed into a form of insanity. In 1767, he moved, with the Unwin family from Huntingdon to Olney, Bucks, where he came under the influence of the Rev. John Newton. He had a rather mental breakdown in 1773.

At the suggestion of Mrs. Unwin, he began to write poetry—a series of moral satires, The Progress of Error, Truth, Table-Talk, Hope, Charity, etc., his first volume appearing in 1782. Meanwhile he had met Lady Austen, who suggested his ballad John Gilpin, 1782, and also his most important work, The Task, 1785. A translation of Homer and several other poems followed. He removed to Weston in 1786, received a state pension in 1794, and settled at East Dereham, Norfolk, 1795. He died April 25, 1800.

Of Cowper's smaller poems, the lines, On the Receipt of My Mother's Picture, To Mary (Unwin), and The Castaway, and the patriotic Boadicea and The Loss of the Royal George will long serve to keep his memory green. His letters are notable. Pron. Cooper.

COWRY or **COWRIE** (Hind. Kauri, shell). Name applied generally to shells of the genus Cypraea, in which the outer or body whorl is so developed as more or less completely to cover and conceal the others. The aperture is long, narrow, and usually denticulated, and runs the whole length of the shell.

Cowry. Various specimens of cowry shells, the use of which as money has been widespread After W. D. Merrill, A.R.A.

The yellowish money cowry was long used as currency in the East, and is still so employed in parts of Africa. Cowries are also worn as charms or amulets.

COWSLIP (Primula veris). Perennial herb of the order Primulaceae, a native of Europe and Western Asia. The wrinkled,

Cowslip, Flower-head of Primula veris

spoon-shaped leaves spring directly from the rootstock. The drooping, yellow, funnel-shaped flowers are borne on short stalks from the summit of a stout, juicy, leafless stem (scape), and appear in spring. The fruit is a capsule, opening by five valves at the top and containing numerous seeds.

COW TREE. Several trees of different genera whose sap is very similar to the milk of the cow. One of the best known is the Palo de Vaca (Brosimum utile), a species of Urticaceae, native of Venezuela. Incisions are made in the trunk, and a sweet, cream-like fluid exudes, which is not only an efficient substitute for real milk, but makes excellent glue. Another species is the Hya-Hya (Tabernaemontana utilis) of British Guiana.

COW WHEAT (Melampyrum). Genus of annual herbs of the order Scrophulariaceae.

William Cowper, English poet

Engraving by W. Holl

Natives of Europe and the temperate parts of Asia, they are partial parasites, tapping the roots of other plants. The leaves are slender and opposite. The cylindrical flowers have the mouth closed by two appressed lips.

COX, DAVID (1783-1859). British painter. Born at Deritend, Birmingham, April 29, 1783, he went to London in 1804, where he painted for theatres, and took lessons from John Varley. He resided at Hereford, 1814-27, teaching drawing and painting incessantly in water colours. Returning to London in 1827, about 1839 he took to oils. He lived at Birmingham from 1841 until his death, June 7, 1859. Cox's favourite ground was North Wales, and simplicity the note of his character and work. Drawings by him are to be seen in the British and Victoria and Albert Museums, London.

David Cox, British painter Painting by an unknown artist in the Nat. Port. Gallery

COXSWAIN. In the British navy, a petty officer in charge of a boat's crew. The Lifeboat Institution gives the name to the official in charge of a lifeboat station. The word comes from cock, sometimes used for a small boat, and swain. Cox is the man who steers a racing eight or four.

COYOTE (Canis latrans). Prairie wolf of North America. Having longer fur and a more bushy tail than the common wolf, it resembles a large jackal, and lives usually in burrows and feeds on young birds and small mammals. The coyote is not dangerous to man or large mammals, but is a serious pest to poultry farmers.

Coyote or prairie wolf of N. America, a member of the dog family W. S. Derridge, F.Z.S.

COYPEL, NOEL (1628-1707). French painter. Born in Paris, Dec. 25, 1628, he won the favour of Louis XIV, who kept him occupied for twenty years. He was director of the French Academy in Rome, and in 1690 director of the Paris Academy. He died Dec. 24, 1707.

His son, Antoine (1661-1722), also a painter, was born in Paris, April 12, 1661. His picture of Louis XIV Crowned by Victory secured his election in 1681 to the Academy, of which he became director in 1714. He is represented at the Louvre by Esther and Ahasuerus. He died Jan. 7, 1722. His son Charles Antoine Coypel (1694-1752) painted popular genre works as well as portraits in crayon. Another son of Noel, Noel Nicholas Coypel (1690-1734), painted mythological subjects.

COYPU. S. American rodent. It is often mistaken for a large water-rat or a small beaver, hence its name Alyocastor (Gr. mys, mouse, castor, beaver). It lives in burrows beside the water, and feeds on the leaves and roots of aquatic plants.

Coypu. One of these South American rodents

CRAB. Popular name applied generally to the short-tailed crustaceans (Brachyura), particularly to the large common crab (Cancer pagurus). Sixty species are

Crab. 1. Masked crab, *Corystes cassivelaunus*. 2. Great Spider crab, *Maia squinado*. 3. Squat lobster, *Galathea squamifera*. 4. Velvet Fiddler, *Portunus puber*. 5. Long-legged Spider crab, *Macropodia longirostris*. 6. Pea-crabs, *Pinnotheres pisum*. 7. Hairy-handed Hermit, *Eupagurus sculptimanus*. 8. *Dromia vulgaris*, covered with living sponge as a disguise.

natives of the British coasts, presenting great variety of form and habit, small groups being distinguished as swimming crabs, spider crabs, hermit crabs, etc. The British species are all marine, but in other countries there are freshwater crabs, and in the Bahamas and W. Indies are found land crabs that inflict serious damage to the sugar-cane.

Crabs pass through several larval stages before arriving at the adult form. They possess five pairs of legs, of which the first pair is greatly developed into the powerful pincers. The complicated mouth-parts include sharp cutting jaws, there are two pairs of antennae, and the eyes are mounted on foot-stalks, which, in some species, are very long.

Crab-apple blossom

CRAB APPLE (*Pyrus malus*). Small tree of the order Rosaceae. A native of Europe and W. Asia, it is the original stock from which cultivated varieties of apple have been produced. It has pink and white fragrant flowers succeeded by yellow fruit about an inch across, with very acid juice.

CRABBE, GEORGE (1754-1832). British poet. Born at Aldeburgh, Dec. 24, 1754, he was apprenticed to a surgeon, but abandoned medicine for literature. Edmund Burke assisted Crabbe to publish his poem, *The Library*, in 1781. Crabbe took orders, and was chaplain to the duke of Rutland at Belvoir (1782-85). Occupied with his clerical duties, he published practically nothing more for 22 years. In 1807 appeared *The Parish Register*, followed by *The Borough*, 1810; *Tales in Verse*, 1812; and *Tales of the Hall*, 1819. In 1810 Crabbe was made rector of Trowbridge. He died, Feb. 3, 1832.

CRACOW. City of Poland. On the left bank of the Vistula 160 m. S. of Warsaw, Cracow is a busy commercial centre.

The old capital of Poland, it has many interesting buildings. The cathedral, built on a rock, is a 14th century Gothic building. Other churches include S. Peter's, modelled on S. Peter's at

Cracow. Cloth Hall of this ancient city, the former capital of Poland

republic which lasted until 1846. It was again part of Austria from 1846 to the peace treaty of 1919, by which it was included in the restored state of Poland. Heavy fighting took place between the Russians and Austro-German forces for the possession of Cracow, in Dec., 1914. Pop. 205,262. See Poland.

CRADLE (A.S. *cradol*). Little bed for a baby. It was originally a small wooden chest, upon which rockers were eventually fixed, or which was slung upon up-rights at either end. Wicker-work cradles or bassinets on wooden rockers were in use until the middle of the 19th century.

The word is used for many things which have something of the shape or purpose of the cradle, such as a framework placed over an injured limb to prevent pressure; the apparatus in which a large animal is slung into, or from, a ship and the frame placed under a ship for launching it.

In metallurgy, the hand appliance employed by the miner in obtaining gold from alluvial deposits is called a cradle. It consists of a box, mounted on rockers and having a removable hopper sieve. The "pay dirt" is thrown into this hopper with water and the cradle is rocked by means of a handle, by which action the dirt is broken up, the fine material being carried down and the coarse retained.

CRADLEY. Market town of Worcestershire. It is 2½ m. N.E. of Stourbridge by the G.W.R. There are iron and steel works. The parish includes the village of Cradley Heath, in Staffordshire, which has chain-making works. Market day, Sat. Pop. 7,800.

Rome; and those belonging to the Dominicans and Franciscans. Of secular buildings the chief is the castle, where the Polish kings lived. The university, founded in 1364, is now housed in a fine 19th century building; its older home is used for the library. Of museums the principal are the national museum in the old cloth hall, a 13th century building, largely rebuilt in the 19th, and the Czartoryski, with a valuable collection of pictures. In the vicinity are the salt mines of Wieliczka and Kosciusko Hill, a mound of earth thrown up early in the 19th century in honour of the Polish hero.

Cracow was part of Poland until the third partition of that land, when Austria obtained it. In 1815 it was made the capital of a little republic which lasted until 1846. It was again part of Austria from 1846 to the peace treaty of 1919, by which it was included in the restored state of Poland. Heavy fighting took place between the Russians and Austro-German forces for the possession of Cracow, in Dec., 1914. Pop. 205,262. See Poland.

CRADOCK, SIR CHRISTOPHER GEORGE FRANCIS MAURICE (1862-1914). British sailor. Born July 2, 1862, he served with distinction in the Sudan, 1891; and in China, 1900. Rear-admiral in 1910, he was given command of the Atlantic Fleet in 1911, and went down with his flagship, the *Good Hope*, in the battle of Coronel (q.v.), Nov. 1, 1914.

Sir C. Cradock, British sailor
Littell & Fry

Terry, from 1889-97 he acted under Henry Irving. He produced operas and plays in London, Berlin, Florence, and Moscow, introducing innovations in scenery and stage construction. His books are *On the Art of the Theatre*, 1911; *Towards a New Theatre*, 1913; and *The Theatre Advancing*, 1921.

CRAIGAVON, JAMES CRAIG, 1ST VISCOUNT (b. 1871). British politician. Born Jan. 8, 1871, he was chosen Unionist M.P. for a division of co. Down in 1906. He was with the Ulster division during the Great War. In 1918 he was created a baronet. In 1921 he became Unionist leader in Ulster, and was the first prime minister of N. Ireland. Created a viscount in 1927, in 1929 a general election confirmed Lord Craigavon in office.

Viscount Craigavon, British politician
Laloy, Ltd.

CRAIGIE, PEARL MARY TERESA (1867-1906). Anglo-American novelist whose pseudonym was John Oliver Hobbes. Born at Boston, U.S.A., Nov. 3, 1867, her earliest stories, *Some Emotions* and *A Moral*, 1891; *The Sinners' Comedy*, 1892; *A Study in Temptations*, 1893; and *A Bundle of Life*, 1893, achieved immediate success. In her later works, *The School for Saints*, 1897, and its sequel *Robert Orange*, 1900, Mrs. Craigie reached higher levels. She also wrote several plays. She died Aug. 13, 1906.

Cradle. 1. From a drawing in MS. by Matthew Paris, c. 1244. 2. Cradle of Queen Elizabeth, at Hatfield

CRAIK, DINAH MARIA (1826-87). British author. Born at Stoke-upon-Trent, April 20, 1826, her maiden name was Mulock. Her first novel, *The Ogilvies*, was published 1849, and her most popular book, *John Halifax, Gentleman*, 1856. In 1864 she married G. L. Craik, a partner in Macmillan's publishing house. She died Oct. 12, 1887. *Consul Memoir*, L. Parr, 1898.

CRAIOVA OR CRAJOVA. Town of Rumania. Capital of the dist. of Oltenia, Wallachia, about 120 m. W. of Bukarest, it is an important rly. and road centre, manufactures leather and rope, and has a large export trade in grain and cattle. During the Great War it was occupied by the Germans on Nov. 21, 1916, after the Rumanian defeat in the second battle of Targul Jiu. Pop. 52,000.

CRAKE. Bird of the Rallidae or rail family. The landrail or cornrake is a familiar British example. The name crake, derived from the harsh cry, should be applied only to the genus *Crex*. See Cornrake.

Dinah Craik, British author
From her portrait at in
Tuesbury, church

Cramlington. Urban district of Northumberland. It is 10 m. N.E. of Newcastle by the L.N.E.R. Pop. 9,300.

CRAMP. Painful spasm of the muscles, generally of the leg. Irritation of the stomach and intestines is probably the most frequent cause; prolonged exposure to cold, as in bathing, excessive fatigue, and a tendency to gout or rheumatism are other influences. Forcibly straightening the limb and vigorous rubbing are the best means of treatment.

Cramp ring was the name given to a ring blessed by the kings of England on Good Friday, supposed to be a preventive of or cure for cramp and epilepsy. It was long kept in Westminster Abbey.

CRAN (Gaelic). Scottish measure of capacity used for fresh herrings. It represents a fish-barrel full, or about 750 fish, and was fixed at 37½ imperial gallons in 1852.

CRANACH, LUCAS, THE ELDER (1472-1553). German painter. Born at Kronach, Bavaria, Oct. 4, 1472, he was twice hurgomaster of Wittenberg. He painted several portraits of Luther, Melancthon, and other Protestant leaders. His compositions include *The Agony in the Garden*, at Dresden; and *Motherly Love*, at Antwerp. He died Oct. 16, 1553.

His second son, Lucas Cranach the Younger (1515-86), born at Wittenberg, painted portraits and figure subjects, the latter including at least three versions of the Crucifixion, at Dresden, Leipzig, and Wittenberg.

CRANBERRY (*Vaccinium oxycoccos*). Creeping evergreen shrub of the order Ericaceae. It has egg-shaped leaves whose margins are rolled back. The small red flowers have four or five widespread segments. The small round dark red berries are acid and astringent. The cranberry of the fruit shops is usually the American cranberry (*V. Macrocarpus*).

Cranberry stalk and leaves

CRANBROOK. Market town of Kent. It is on the Crane, 44 m. S.E. of London, on the Southern Rly. Formerly the centre of the broadcloth industry introduced by the Flemings, it now has a trade in malt and hops. In 1928 the old cloth hall, formerly called Coursethorpe, was sold. The church, with its detached baptistery, is noteworthy. Market day, Wed. Pop. 4,061.

The title of earl of Cranbrook has been borne by the family of Gathorne-Hardy since 1892.

CRANE. Family of birds of the family Gruidae, distinguished by their long legs, necks, and bills and powerful wings. There are about 20 species, spread over most of the world, except in S. America. None inhabits Great Britain, but the common crane and the demoiselle crane are occasional visitors.

CRANE. In engineering, a machine for lifting and moving heavy weights. Cranes may be classified as (1) jib cranes, which revolve and carry the load on a long overhanging beam or girder; and (2) bridge cranes, which carry the load intermediately on a horizontal girder supported at both ends.

Crane. The Common Crane, *Grus cinerea*, of Europe

Travelling jib cranes consist of a wheeled truck, whereon is a turntable, with the jib attached to one side of it and a platform for a counterbalancing weight on the other. Floating cranes are mounted on large pontoons subdivided into watertight compartments and heavily ballasted. In the operation of cranes, human, steam, or electric power is applied through de-multiplying trains of toothed wheels with compound block tackle. Hydraulic power is used mostly for stationary cranes which have to deal quickly with light loads.

CRANE, WALTER (1845-1915). British artist. Born in Liverpool, Aug. 15, 1845, he was a prolific draughtsman in black and white, his work being usually of a decorative character. Of his books *The Baby's Opera* was a special favourite. His *Lady of Shalott* was exhibited at the Royal Academy in 1862. His best known pictures were *The Fate of Persephone*, at Karlsruhe; and *The Renaissance of Venus*, Tate Gallery, London. Crane in later life identified himself with the Socialist movement. He died at Horsham, March 14, 1915.

Walter Crane, British artist. Self-Portrait. Uffizi Gallery, Florence

from its slender form and larvae, known as leather jackets, are destructive grass pests.

CRANE'S BILL (*Geranium*). Genus of herbs (a few shrubs) of the order Geraniaceae. It has swollen joints, leaves more or less cut or lobed, and five-petalled flowers. The fruit is a capsule with a long beak which breaks into five parts, each containing a large seed with a long awn, which, separating from the beak and curling, suddenly ejects the seed to a considerable distance.

CRANK. In mechanical engineering, a bend in a shaft, or an arm or plate and pin attached to it, whereby rotary motion is converted into reciprocating motion, or vice versa. A single or outside crank is found at the end of a shaft. A double or inside crank is of U form. Single cranks for steam engines are usually made separate from the shaft and keyed or sprung on. Double and multiple cranks may be machined out of the same forging as the crank-shaft or they may be built up.

The crank serves as a lever, enabling the connecting rod to rotate the driving shaft. When there are more than one crank to a shaft, the cranks are set at an angle to avoid a dead centre. The two bars connecting the pedals of a bicycle to the gear wheel shaft are also known as cranks, as they convert the downward pressure on the pedal into a rotatory force. See Bicycle.

Crane. Example of a mammoth jib crane which will lift 150 tons

CRANE FLY (*Tipula olerea*). Large two-winged insect, otherwise known as daddy long legs long limbs. The

Crane Fly, or daddy long legs

Crane's-bill, *Geranium pratense*

CRANMER, THOMAS (1489-1556). English prelate. Born at Aslockton, Notts, July 2, 1489, he went to Cambridge and became a priest. He attracted the notice of Henry VIII by suggesting that the divorce question should be submitted to the universities of Europe, and became a royal chaplain. Having been abroad on public business, he became archbishop of Canterbury in 1533, and as such pronounced Henry's first marriage invalid. Later he dissolved the union with Anne Boleyn, married the king to Anne of Cleves and pronounced their divorce. Equally subservient in political and doctrinal matters, he helped Henry to throw off the papal supremacy and to make himself head of the church.

During the reign of Edward VI Cranmer was equally prominent. He had a large share in reforming the rites and doctrines of the church. He signed Somerset's death warrant, helped to depose Gardiner and Bonner, and agreed to the succession of Lady Jane Grey. This led to his fall.

On Mary's accession he was tried for treason and sentenced to death. The sentence was not carried out at once, but he was deprived of his archbishopric (1556). Solemn recantations, in which he declared his belief in the Papacy and the Mass, did not save him, and he withdrew these just before he was burned at Oxford, March 21, 1556. Consult Cranmer and the English Reformation, A. F. Pollard, 1904.

Thomas Cranmer, English prelate. Engraving by W. Hoell

CRANNOG (Gaelic, crann, tree). Ancient lake-dwelling in Scotland or Ireland. Logs, brushwood, sometimes small stones, laid on an islet or in a shallow, and bound together with timber piling, formed a platform above water level, bearing one or more round huts with stone hearths. Notable examples are at Dowalton, Wigtonshire; Lochlee, Ayrshire; and Hyndford, Lanarkshire.

CRANWELL. Village of Lincolnshire. It is 4 m. N.W. of Sleaford. Its old church presents a variety of architecture, from Norman to Perpendicular. The cadet college of the R.A.F. is here, and there is also an aerodrome. The college was founded in 1920, and new buildings were opened in 1929.

CRASSUS, MARCUS LICINIUS (c. 115-53 B.C.). Roman general and triumvir, surnamed Dives. He joined Sulla in the struggle with the Marian party in 83, and as praetor in 71 crushed the revolt of Spartacus. He quarrelled with Pompey, but a reconciliation was effected by Caesar, and in 60 the three formed the so-called First Triumvirate. Embarking on an expedition against the Parthians, Crassus was crushingly defeated at Carrhae, June 8, 53, and was himself killed.

CRAVEN. District of Yorkshire (W.R.) on the borders of Lancashire. It is a hilly region around the sources of the Aire and Wharfe. There is a Craven Museum at Skipton and a Craven Hunt in the district.

The title of Earl of Craven was held by the Craven family from 1603 to 1697, and again from 1891.

Crane. A crank-shaft; B, crank; C, crank-pin

CRAWFISH (*Palinurus vulgaris*). Spiny species of rock lobster common round the British coasts. Considerably larger and with coarser flesh than the common lobster, and reddish-brown in colour when alive, it has the carapace thickly armed with short spines, long antennae, and no pincers. It should not be confused with the crayfish (q.v.).

Crawfish, or rock lobster

CRAWFORD, EARL OF. Scottish title borne since 1398 by the family of Lindsay. Ludovic, the 16th earl, fought for Charles I and later under Montrose. Consequently he lost his earldom, which was given in 1644 to John Lindsay, who had been made earl of Lindsay in 1633. On the death of the 22nd earl, in 1808 the two earldoms were separated, and for 40 years the earldom of Crawford was in abeyance. In 1848 it was granted to James Lindsay, 7th earl of Balcarres, and since then its holder has been earl of Crawford and Balcarres. He ranks as the premier earl of Scotland, and as earl of Balcarres has been a peer of the United Kingdom since 1826.

David Alexander Lindsay (b. 1871), who became the 27th earl of Crawford in 1913, was, as Lord Balcarres, M.P. for Chorley, 1895-1913. He was president of the board of agriculture, lord privy seal, and first commissioner of works in the Coalition Government, 1916-22. Known also as a patron of art, he has valuable literary and artistic treasures at his seat, Haigh Hall, Wigan.

27th Earl of Crawford
Beresford

CRAWFORD, FRANCIS MARION (1854-1909). American novelist. Born in Tuscany, Aug. 2, 1854, from 1879-80 he was a journalist in India. His first novel, *Mr. Isaacs*, 1882, was remarkable for its treatment of occultism. Among his later works were *A Roman Singer*, 1884, descriptive of modern Italian life and character; *Saracinesca*, 1887; and *A Cigarette Maker's Romance*, 1890. He died April 9, 1909.

CRAWLEY. Village of Sussex. It stands in the N. vicinity of Tilgate Forest, 7 m. N.E. of Horsham by the Southern Rly. It is a popular stopping place on the Brighton road. Pop. 453.

CRAYFISH (*Potamobius pallipes*). Freshwater edible crustacean, resembling a miniature lobster. It is common in many British rivers, and must be distinguished from the crawfish (q.v.).

CRAYFORD. Urban district of Kent. It stands on the Cray, 1½ m. S.E. of London by the Southern Rly. Here in 457 the Saxons defeated the Britons. Today it is an industrial centre, Vickers being among the firms that have works here. Pop. 11,924.

CREAM. That part of milk which rises to the top when milk is allowed to stand. Richmond's analysis of thick cream is as follows: water, 39.37; fat, 56.09; sugar, 2.29; albuminoids, 1.57; ash, 0.38, and miscellaneous matter 0.30. The old method of cream-raising by allowing the milk to stand in shallow pans has been varied according to the shape and depth of the vessels employed. See Milk.

CREAM OF TARTAR OR ACID TARTRATE OF POTASSIUM ($\text{KHC}_4\text{H}_4\text{O}_6$). Product obtained by purifying argol. The argol is ground to a coarse powder and boiled with water, strained, and allowed to rest for six or seven days, when most of the cream of tartar is deposited. What remains in the mother-liquor is converted into tartaric acid by adding sulphuric acid. Cream of tartar is used in preparing ginger beer and in baking powder.

CREATINE (Gr. *kreas*, meat, flesh). White, inodorous substance, a constant constituent of muscle-substance. It is prepared from meat extract, from which it was first separated by Chevreul in 1835.

CREATION (Lat. *creare*, to bring into existence). According to the Hebrew and Babylonian conception of the universe, the world is a solid expanse of earth which rests upon, and is surrounded by, the waters of a world ocean. Above the earth is a rigid vault or firmament, and around and above this are spread the waters of a heavenly ocean.

This is the background of the Biblical story of Creation, of which there are two versions in Genesis. Parallels to the O.T. accounts are found in a Babylonian epic in the British Museum. There Marduk overthrows Tiamat, the dragon impersonation of the watery deep. Egypt attributed creative acts to various deities: a master workman and a master potter who, from the Nile mud, produced the cosmic egg and fashioned man on a potter's wheel. Early Aryan India named Varuna maker of all, and postulated a golden egg whence man emerged; and other ancient peoples had their own creative deities.

CRÉCY, BATTLE OF. Fought between the English and French, Aug. 26, 1346. Edward III landed with an army near Cherbourg and advanced through Normandy towards Rouen. Philip VI of France set out to meet him, and soon the rival hosts were close together, marching on opposite sides of the Seine towards Paris. Edward, however, found an unguarded ford which his army crossed, and on Aug. 25 was on the outskirts of the forest of Crécy. Next day the French arrived on the field and the battle opened. The French forces were severely defeated and suffered very heavy losses.

CREDENCE (late Lat. *credentia*, a sideboard). Small table at the side of the altar. Upon it are placed, in preparation for Mass or for Holy Communion, the Eucharistic vessels and unconsecrated elements.

CREDITON OR KIRTON. Urban district and market town of Devonshire. It stands on the Creedy, near its confluence with the Exe, 7½ m. N.W. of Exeter, on the Southern Rly. Crediton was the seat of a bishop from 909 to 1049. Market day, Sat. Pop. 3,502.

CREED. (Lat. *credere*, to believe). Verbal expression of belief. The term is applied to a general body of doctrine, and to a summary of articles drawn up for belief. The three creeds of the Christian Church are the Apostles', the Nicene, and the Athanasian.

Creeping Jenny. Variant name for the moneywort. See Moneywort.

CREEVEY, THOMAS (1768-1838). British politician. Born at Liverpool, he was called to the bar in 1794. Elected M.P. for Thetford in 1802, he was secretary to the board of control, 1806, and treasurer of the ordnance, 1830. He died in Feb., 1838. The Creevey Papers, letters and comments written by him, were edited by Sir H. Maxwell, 1903.

CREFELD. Town of Prussia, in the Rhine Province. It stands near the Rhine, 32 m. N.W. of Cologne. Its prosperity is due to its position on the Westphalian coalfield, from which power is obtained for its important textile industries. It is an important rly. centre.

Crefeld became a chartered town in the 14th century, and was soon a market of some importance. With the county of Mors, it passed into the possession of Prussia in 1702, and remained therein except for a few years during the time of the French Revolution. Its industrial prosperity began when religious refugees settled here, and was augmented by the introduction of the silk manufacture by Dutchmen, and the opening of the Westphalian coalfield. Pop. 131,008.

CREIGHTON, MANDELL (1843-1901). British divine and historian. Born at Carlisle, July 5, 1843, he went to Merton College, Oxford, where he became a fellow and tutor. In 1875, having been ordained and married to Louise von Glehn, he became vicar of Embleton. In 1884 he was appointed first Dixie professor of ecclesiastical history at Cambridge, in 1891 bishop of Peterborough, and in 1896 bishop of London. In addition to *The History of the Papacy during the Reformation, 1882-94*, he wrote *Lives of Simon de Montfort, 1876*, *Cardinal Wolsey, 1888*, and *Queen Elizabeth, 1896*, and was the first editor of *The English Historical Review* (1886-91). Creighton died Jan. 14, 1901.

Mandell Creighton,
British historian
Russell

CREMATION (Lat. *cremare*, to burn). Reduction of a corpse to ashes by fire. In Great Britain regulations are made by the Home Office. When it is desired to cremate a body, a form of application must be filled up by the executor or nearest surviving relative of the deceased, and the application must state that the deceased had expressed no objection orally or in writing to being cremated after death. Two medical certificates are required. When an inquest has been held, a special certificate is given by the coroner.

Crematorium dating from c. 1460 in the church of S. Cross, Winchester

A crematorium is a structure built specially for the practice of cremation. The first in England was that at Woking, Surrey, first used March 26, 1885. Crematoriums were opened later at Golder's Green and in various cities, e.g. Leicester, Manchester, and Ipswich. See Burial.

CREMONA. City of Italy. It stands on the N. bank of the Po, 55 m. by rly. S.E. of Milan. The cathedral, consecrated in 1190, has a facade built of red and white marble. The detached belfry is the loftiest in Italy (396 ft.) and the baptistery is octagonal. Most of the churches contain paintings of the

Cremona school, as do the Palazzo Pubblico and other 13th century palaces. The Campo Santo has an 8th or 9th century mosaic pavement. Pop. 65,305. See illus. p. 467.

Cremona is the popular name for a violin from the workshops of the great violin makers of Cremona, e.g., Amati and Stradivari. See Violin.

Thomas Creevey,
British politician
By courtesy of
Mr. John Murray

CREMORNE GARDENS. London pleasure resort at Chelsea. Originally known as Chelsea Farm, it was built by the earl of Huntingdon in the 18th century, and finally became the property of Viscount Cremorne, who renamed the place Cremorne Villa.

After the death of Lady Cremorne the house and grounds were sold for pleasure gardens, which were opened in 1845, and as such they remained until 1877, when they were suppressed as a nuisance. Their memory is preserved in some of Whistler's Nocturnes.

CREOLE. French form of a West Indian Spanish word *criadillo* (creatureling). It denotes in general the country-horn offspring, and their descendants, of immigrants. No racial admixture is necessarily implied.

CREOSOTE OR CREASOTE. Name applied to a mixture of phenols and phenoloid bodies derived from the destructive distillation of wood, coal, and shale. Wood-tar creosote is obtained by distilling beechwood tar. The product is a colourless liquid when freshly distilled, but turns brown on keeping. Creosote contains phenol, cresols, xylenols, guaiacol, and creosol. Coal-tar creosote is the "heavy oil" or "creosote oil" obtained in the distillation of coal tar. Its composition varies, but naphthalene, anthracene, pyrene, and carbazole are generally present. Chiefly employed for preserving timber, e.g. railway sleepers, it is also used as fuel, and for making lampblack and disinfectants.

CRESCENT (Lat. *crescens*, growing). Term originally applied to the waxing moon, the waning moon, and then to any figure of similar shape. The crescent was made the badge of Byzantium in 339 B.C., and was a Turkish badge as early as the 13th century. It is still used by the Ottoman Turks as their military and religious emblem, appearing on their flag with a star between the horns, and is applied figuratively to Islam.

In heraldry the crescent is used as a charge with the horns pointing upwards; if to dexter, as an inescutcheon; if to the sinister, as a decrescent. It is also a difference or mark of cadency to denote a second son. See Heraldry.

CRESCOGRAPH. Apparatus invented by Sir J. C. Bose (q.v.) for demonstrating the rate of growth and of reaction in plants in response to the application of manures, anaesthetics, poisons, or electrical stimuli.

CRE SOL. Constituent of coal tar. It is a mixture of three isomers, orthocresol, metacresol, and paracresol. These are used for the manufacture of aniline dyes and also as disinfectants. See Creosote.

CRESS. Popular salad vegetable of the order Cruciferae, genus *Lepidium*, commonly associated with mustard. A hardy annual and a native of Persia, it was introduced into Britain about 1548. Seed can be sown out of doors in March in fortnightly succession until Sept., or it can be sown indoors in warm greenhouses. See Watercress.

CRESETT (old Fr. *carisse*, mod. *graisse*, grease). Lamp consisting of an iron cage or cup containing pitch-smear rope or other combustible material. It was formerly used for lighting the streets, for holding beacon fires, and by the street watchmen. The term is also applied to a fire basket for lighting docks, etc.

Creset. Two examples of ancient cresets mounted on poles

CRESSWELL CRAGS. Beauty spot in Derbysire, 9 miles from Chesterfield. In 1875, in Robin Hood Cave, Sir W. B. Dawkins found a palaeolithic engraving, the first found in England. In 1928, in Pin Hole Cave, an engraved bone and some flint implements were found. The bone, probably of a reindeer, bears the engraving of a masked human figure and is the first of the kind found in Britain.

CRESSY. Nameship of a class of six British cruisers built 1898-1901. On Sept. 22, 1914, the Cressy and two of her sister ships, Hogue and Aboukir, were sunk by the German submarine U 9, 20 m. N.W. of the Hook of Holland. See Aboukir.

Crest (Lat. *crista*, tuft, comb). Figure of a man, beast, bird, or monster worn by knights on their helmets.

CRESTE. Properly a decorative ornament attached to the ridge of a roof, to a coping, to the pinnacle of a gable, etc. Cresting is the same ornament multiplied into a continuous feature.

Creste, decorative ridge ornament. An example from Exeter Cathedral

CRESLYATE. Salt formed by trinitro-cresol when it combines with alkalis, metals, and other inorganic or organic bases. The alkaline salts are used as explosives, ammonium cresylate having been extensively employed in Austria under the name of *ecrasite*. Under the name of *cresylite*, mixtures of trinitro-cresol and trinitrophenol have been used as high explosives for shell filling.

CRETACEOUS SYSTEM. Uppermost division of the Secondary or Mesozoic stratified rocks. The typical succession of strata in England includes a basal series of sands and clays, forming the Wealden beds; these are overlain by variable layers of greensands, the Gault clay, subordinate beds of greensands and marls, and finally the chalk of the upper portion. In other areas Cretaceous rocks vary in constitution. In the Cretaceous system the fossils are nearly all of marine animals.

CRETE. Island of the Mediterranean, sometimes called Candia. It lies across the S. end of the Aegean Sea, of which it is much the largest island. Its area is 2,950 sq. m.

The surface consists of mt. ranges and fertile alluvial plains and valleys, well watered by numerous unnavigable streams. There are no rivers, and few good roads. The only good natural harbour is Suda Bay, near Canea. The valleys and plains are well suited for fruit growing, and provide good feed for stock. There are no minerals. Modern towns are the capital, Candia, Canea, and Retimo. Pop. 336,151.

The civilization of Crete is of great antiquity and remarkable interest, as the ruins of Chossus, Phaestus, and other cities show. It was the first European land to attain any high achievement in art, this taking place between about 2200 and 1600 B.C., the Middle Minoan period. This was ended perhaps by an invasion from Greece, which was followed by other invasions; the result was that

another civilization, in which Asiatic influences played a part, developed in the island, its date being about 1000 B.C. The laws also at this time show a degree of social organization superior to that of any part of the mainland.

The rise of the maritime cities of Greece deprived Crete of its dominant position, and it was of minor importance until modern history begins. It was included in the Roman and the Byzantine empires until 1204, when, for trading reasons, it was seized by Venice. Attempts made by the Turks to capture it failed until 1669, when success came to their arms, and the island was a Turkish possession nominally until 1913.

The 19th century was marked by repeated risings against Turkish rule and by constant feuds between Christians and Moslems. From 1824 to 1852, by decree of the Powers, the island was governed from Egypt. In 1868, after a further period of grave disorder, the Powers, while giving the islanders a certain independence, themselves by means of consuls took a hand in its government. In 1897, with the aid of many Greeks, the islanders started upon a war of liberation. The Turks were driven out and the Powers decided to administer the island themselves. After further troubles the island was, in 1913, handed over to Greece. See Aegean Civilization; Chossus; Greece; Phaestus.

CRETINISM. Condition of menta. and physical defectiveness in children due to absence or loss of function of the thyroid gland, known in adults as myxoedema. In a typical case the lips are thick and swollen, the eyelids puffy, and the nose depressed. The abdomen is swollen. Treatment consists in supplying the missing secretion either by giving the child a small amount of sheep's thyroid gland daily or extracts made from the gland.

CREUSOT OR LE CREUSOT. Industrial town of France. In the department of Saône-et-Loire, it is 55 m. from Dijon and stands in the centre of a coal and iron field. Well served by rlys. and near the Canal du Centre, here are the Creusot Works, opened by Adolphe and Eugène Schneider in 1836. Pop. 32,419.

Crevasse. Diagram illustrating the formation of crevasses

CREVASSE (Fr. *crever*, to break) Fissure or crack in a glacier. Where the valley floor is smooth and of uniform slope and

Crevasse. Remarkable example on Mont Blanc

width, the surface of the ice is generally unbroken and comparatively smooth. Where the slope changes suddenly, transverse cracks or crevasses are caused, but these may narrow or even close with a later change of slope. If the valley widens, longitudinal crevasses tend to be formed. A notable crevasse is at the western edge of the Ross Sea Ice Barrier in the Antarctic. In the U.S.A. the name is applied to gaps in river embankments caused by floods

CREWE. Borough of Cheshire. It is 158 m. by rly. N.W. of London, on the L.M.S. Ry. Crewe owes its prosperity to the L. & N.W. Ry. (now L.M.S.) which has there some of the largest rly. constructional workshops in the world. It has a school of art and a technical school. In 1887 the company presented the borough with a splendid recreation ground 40 acres in extent. Lord Crewe's seat, Crewo Hall, built by Inigo Jones and burnt in 1866, was rebuilt by Edward Barry. Market day, Mon. Pop. 46,477

CREWE, ROBERT OFFLEY ASHBURTON CREWE-MILNES, 1st MARQUESS OF (b. 1858). British politician. Born in London, Jan. 12, 1858, and educated at Harrow and Trinity College, Cambridge, he was the son of the 1st Lord Houghton, to whose title he succeeded in 1885. He was made earl of Crewe in 1895, and created marquess in 1911. He was lord-lieutenant of Ireland, 1892-95; lord president of the council, 1905-8; colonial secretary, 1908-10; and secretary for

India, 1910-15. He was lord president of the council in the Coalition government, 1915, chairman of the L.C.C. 1917, and British ambassador to Franco, 1922-28. Crewe's second wife was a daughter of Lord Rosebery, whose life he undertook to write.

CREWE HOUSE. This mansion on the N. side of Curzon Street, Mayfair, London, W. was once the residence of Lord Wharncliffe, and was known as Wharncliffe House until purchased in 1899 by the marquess of Crewe. It was occupied in 1918 by Viscount Northcliffe, and his staff, as director of propaganda.

Crewe House. Mansion in Mayfair, London, the residence of the Marquess of Crewe

CREWKERNE. Urban dist. and market town of Somerset. It is 7 m. S.W. of Yeovil on the Southern Ry. It has a grammar school founded in 1499 and a Perpendicular church. Earl Poulett's seat, Hinton House, is near. Market day, Sat. Pop. 3,726.

CRIBB, TOM (1781-1848). Champion English pugilist. Born at Hanham, Gloucestershire, July 8, 1781, he was only beaten once—by George Nicholls, in July, 1805. Cribb secured the championship by defeating Jem Belcher (twice), Tom Molineaux (twice), and Bob Gregson; and held it from Feb. 1, 1809, until his death, May 11, 1848.

CRIBBAGE. English card game. It is played with a full pack, and a marker called a cribbage-board pierced with sixty holes for each player and one for game, on which the score is pegged. The game is usually played by two persons. Court cards count as tens; the rest of the pack bear their face value, the ace being reckoned as one. Points are scored by different combinations of the number of the pips on the cards, totalling 15; by sequences and runs, and by pairs, pairs royal, etc.

Thomas Cribb, English pugilist After Sharples

CRICCIETH. Urban dist. and watering-place of Carnarvonshire, Wales. It stands on Tremadoc Bay, 4 m. W.S.W. of Tremadoc. Pop. 1,886.

CRICHTON, JAMES (1560-c. 1585). Scottish scholar, known as the Admirable Crichton. Born in Scotland, Aug. 19, 1560, he travelled to Franco in 1577, and spent two years in the French army. He visited Genoa in 1579, addressing its senate in Latin, and in 1580-1 he argued at Venice and Padua on philosophy and mathematics. The date of his death is uncertain, but it was probably in 1585.

CRICHTON - BROWNE, SIR JAMES (h. 1840). British physician and publicist. Trained for the medical profession at Edinburgh and Paris, he made a reputation as a specialist in lunacy. In 1883 he was elected F.R.S., and in 1886 was knighted. Crichton-Browne achieved distinction as an authority on public health and educational problems, and was the author of a number of works on mental and nervous diseases.

Sir J. Crichton-Browne, British physician Russell

CRICKET. Orthopterous (straight winged) insect of the family Gryllidae, closely related to the grasshoppers, which it resembles somewhat in general form. One species infests kitchens and bakehouses, lurking in chinks near the fireplace, and though harmless, its incessant chirping makes it a nuisance. The field cricket (*Gryllus campestris*) and the mole cricket (*Gryllotalpa*) are much less common.

Cricket. Field cricket, *Gryllus campestris*, outside its burrow

CRICKET. National summer game of England. It is played between two sides of eleven players, each side having two innings, taken alternately. The exception is when the side which bats second in a three-day match in its first innings shall have scored 150 runs less than its opponents; in a two-day match, 100 less; and in a one-day match, 75 less. That side can be forced to go in a second time at once, to follow on, as it is called.

The wickets are pitched opposite to and parallel with each other, at a distance of 22 yds. Until 1929 the measurements of the wicket were 8 in. wide and 27 in. high, but in that year, in order to counteract the perfection of prepared wickets, it was decided to experiment in first class matches with a larger wicket, one 9 in. wide and 28 in. high. This was continued in the season of 1930, but was not compulsory for ordinary club matches. About the same time the debated leg-before-wicket rule was altered. A player can now be given out if he has played the ball which struck his leg. Previously this was not so. There are a number of different positions in the field, depending on the pace and character of the bowler, the condition of the wicket, and the type of batsman.

TEST MATCHES. The chief events in cricket are the test matches and the county championship. An English team first visited Australia in 1862 and the visit was returned in 1878. The first test match between the two countries was played in 1880. In 1930 an Australian team visited England. Test matches have also been

played between England and S. Africa since 1898. In 1929 a S. African team visited England, but did not win any of the test matches.

COUNTY CRICKET. The county championship was started in 1872, and in 1890 certain counties were definitely marked as first class.

Others were added to the list until there are now 17 of them. The championship is decided by points, but the method of reckoning these has been varied from time to time. In 1928 it was decided that each county must play 28 matches in the championship. There is also a competition among the second class counties, in which some of the first class counties enter a second eleven. Apart from the test matches the chief events of the season are the matches between gentlemen and players. The governing body of the game is the Marylebone Cricket Club, called the M.C.C., Lord's Cricket Ground, London, N.W.

The county champions since 1900 (excluding the war years) have been:

1900	Yorkshire	1913	Kent
1901	Yorkshire	1914	Surrey
1902	Yorkshire	1915	Yorkshire
1903	Middlesex	1916	Middlesex
1904	Lancashire	1917	Middlesex
1905	Yorkshire	1918	Yorkshire
1906	Kent	1919	Yorkshire
1907	Notts	1920	Yorkshire
1908	Yorkshire	1921	Yorkshire
1909	Kent	1922	Yorkshire
1910	Kent	1923	Yorkshire
1911	Warwickshire	1924	Yorkshire
1912	Yorkshire	1925	Yorkshire
		1926	Yorkshire
		1927	Lancashire
		1928	Yorkshire
		1929	Notts

CRICKHOWELL (ROCK OF HOWELL). Parish and market town of Brecknockshire. It stands on the Usk, here spanned by a 13-arched bridge, 14 m. S.E. of Brecknock, and 2 m. S. of the British post of Craighywell, from which it takes its name. Market day, Thurs. Pop. of parish, 1,307.

CRICKLADE. Parish and market town of Wiltshire. It stands on the S. bank of the Thames, 8½ m. N.W. of Swindon, on the G.W. and Southern Rlys. In Saxon times it was important owing to the ford over the river. Market day Tues. Pop. of parish, 1,425.

CRICKLEWOOD. Residential district of N.W. London, a ward of the parish of Willesden. It is a northward continuation of Brondesbury, and has aeroplane works.

CRIEFF. Burgh, market town, and summer resort of Perthshire. It is on the river Earn, 18 m. W. of Perth by the L.M.S. and L.N.E. Rlys. There are two ancient crosses. Market day, first Wed. of each month. Pop. 6,445.

CRIME. (Lat. crimen, charge, offence). Violation of a right as regards the community at large. Crimes are either felonies or misdemeanours. It is usual to speak of acts punishable on summary conviction by fine, e.g. adulteration of food, as offences. See Criminology; Punishment.

CRIMEA (anc. Chersonesus Taurica; Tartar, Krym). Peninsula on the N. coast of the Black Sea, connected with the mainland by the isthmus of Perekop. In the N. chiefly steppe, the S. is hilly and fertile. The chief products are cereals, olives, wine, salt, and porphyry. The chief towns are Simferopol,

Cricket. The field arranged to suit a fast bowler

Sevastopol, Eupatoria, Kertch, Yalta, and Bakhchi Sarai (the old Tartar capital). Its area is 23,312 sq. m. Pop. 700,027.

The Crimea was under Turkish rule from 1475 to 1792, when it was ceded to Russia. It is now an autonomous republic, forming part of the Russian Socialist Federal Soviet Republic. See Russia.

CRIMEAN WAR. Struggle waged by Great Britain, France, Sardinia and Turkey against Russia, 1854-56. In 1853 Russia had seized Moldavia and Wallachia, with the result that Turkey declared war, and in the following year was supported by Great Britain and France, who sent a fleet to bombard Odessa, while another squadron entered the Baltic. In September, 1854, the allied forces landed at Eupatoria, 45 m. N. of Sevastopol, successfully engaged the Russians under Prince Mentschikoff on the S. bank of the Alma, and established a maritime base at Balaklava. On October 25 was fought the battle of Balaklava. In November the battle of Inkerman resulted in the repulse of the Russians and the siege of Sevastopol, which lasted nearly a year.

Crimea medal

The shortcomings of the British army, due to maladministration, were exposed by The Times correspondent, one result being the organization of nursing arrangements by Florence Nightingale. The war dragged on during 1855 until in Sept. the French stormed Malakoff fort and the Russians evacuated Sevastopol. In October Odessa capitulated, and the war ended with the Peace of Paris, March 30, 1856. The British deaths were 19,000, of whom 15,700 perished of disease alone. See Alma; Balaklava; Inkerman; Sevastopol, etc.

CRIMINAL APPEAL, COURT OF. English court of law established in 1907. It consists of the Lord Chief Justice of England and all the judges of the king's bench division, but usually only three or five of them sit. It has power to reverse the finding and judgement of any judge and jury in any trial on indictment before quarter sessions, assizes, the central criminal court, or the king's bench division. In 1926 a court was set up in Scotland.

CRIMINOLOGY. The scientific analysis and classification of penal wrongdoing and penal offenders. It owes its origin to Cesare Lombroso (1836-1909) of Turin, who sought to make a physical classification of criminals. He evolved the theory that the criminal belongs to a class of individual predestined to crime and recognizable by abnormal physical and other characteristics. His theories have been disputed, but they have been the means of focussing the attention of later investigators on the problem and of introducing more humane treatment of criminals.

CRINAN CANAL. Artificial waterway of Argyllshire (q.v.). It connects Loch Gilp, an arm of Loch Fyne, with Loch Crinan, an arm of the Sound of Jura, and was constructed between 1793 and 1801. It is 9 m. long.

CRINOIDEA or **CRINOIDS** (Gr. krinon, lily; eidos, form). Order of Echinoderms, known as sea lilies, or feather-stars. They are provided in many cases with a long stalk by which they support themselves in the ooze at the sea bottom, living generally in colonies. The skeleton is capable of preservation in the fossil state. See illus. below.

CRINOLINE (Lat. crinis, hair; linum, flax, linen). Stiffening material of horsehair and linen or cotton. From it the large hooped skirts worn in the 19th century took their name, as did the frame over which skirts were worn. The term is also given to certain strawlike material used for hats. See Farthingale.

CRIPPLE-GATE (A.S. cripel, burrow; or cripel, den, covered way in a fortification). Name of one of the old gates and of a ward in the city of London, opened from Hart Street into Fore Street. It was rebuilt 1244 and 1491, was several times repaired, and was taken down in 1760-61. Of its original seven churches only four remain—S. Mary, Aldermanbury; S. Alban's, Wood Street; S. Alphage's, London Wall; and S. Giles's. Cripplegate Institute was opened in 1896. The ward is divided into Cripplegate Within and Cripplegate Without.

Cripplegate. Ancient gate of the City of London, removed 1760-61. From an old print

CRISPI, FRANCESCO (1819-1901). Italian statesman. Born Oct. 4, 1819, at Rihera, Sicily, he was called to the bar at Palermo. He took part in the revolutionary movement of 1848, and had to retire to Piedmont. In 1859 he was active in organizing the Sicilian insurrection of 1860. On the Italian Union, 1861, Crispi entered the Italian parliament; he held anti-clerical views, and favoured the Prussian alliance. In 1876 he became president of the chamber, and joined the Depretis Ministry in 1878. Driven into temporary retirement by personal charges, he reappeared in 1887, and succeeded Depretis as prime minister. He retained office with a brief interval (1891-93) till the disaster at Adowa in 1896 compelled his resignation. He died at Naples, Aug. 12, 1901.

Crinoides. Head of sea lily. See above

CRISPIN (d. c. 286). Saint and martyr. A Roman citizen, according to tradition he travelled with his brother, S. Crispinian, in Gaul as a missionary of Christianity, and is the patron saint of leather workers. His festival is Oct. 25.

CRISTOBAL. Port of the Panama Canal Zone, the official Atlantic terminus of the canal. All seahorne traffic for Colón and Panama proceeds through the ports of Cristobal and Balboa. Pop., with Colón, 32,000.

CRIVELLI, CARLO (c. 1430-95). Italian painter. Probably a native of Venice, he painted in tempera. He is represented in the National Gallery, London, by The Dead Christ, the altar-piece of the Virgin enthroned with Saints, and The Annunciation, the last named being his masterpiece.

Crinoline. Frame of Crinoline worn in 1871

to the Adriatic Sea. Important towns are Zagreb, Osek (Esžék), Zemun (Semlin), and Warasdin. Area, 16,920 sq. m.; pop., 2,739,593.

CROCE, BENEDETTO (h. 1866). Italian philosopher and critic. Born at Pescasseroli, Aquila, Feb. 25, 1866. Many of his works have been translated into English, notably *Aesthetic as Science of Expression*, 1909; *Philosophy of the Practical, Economic and Ethic*, 1913; *Historical Materialism and the Economics of Karl Marx*, 1914; and *Logic as the Science of the Pure Concept*, 1917. He was minister of public instruction 1920-21.

CROCHET WORK (Fr. crochet, little hook). Fancy work done with a thread and small steel hook, or with wool and small book of bone.

CROCKER LAND. Land reported to have been sighted by Peary in 1906 off Axel Heiberg Island in the Arctic regions, but proved by D. B. MacMillan, an American explorer, to have been a mirage.

CROCKET (old Fr. croquet; mod. crochet, little hook). In architecture, a small ornament, generally foliated, sculptured on the external edges of a gable, on the ridges of a spire, on the side pieces of woodwork such as choir stalls, etc. Crockets are employed on vertical mouldings, but never on horizontal ones.

Crocket, from a tomb in York Minster, 1255

CROCKETT, SAMUEL RUTHERFORD (1860-1914). Scottish novelist. Born near New Galloway, Kirkcudbrightshire, Sept. 24, 1860, he became minister of the Free Church of Penicuik in 1886, but resigned in 1895. His first success was *The Stickit Minister*, 1893. This was followed in 1894 by *The Raiders and The Lilac Sunbonnet*, and later by a long list of popular romantic fiction. Crockett died April 19, 1914.

S. R. Crockett, Scottish novelist. Moffat

CROCKFORD'S. London gaming house. It originated with William Crockford (1775-1844). The play, chiefly hazard, was high, and Crockford is said to have made £1,200,000 out of his venture. He died May 24, 1844.

The house in St. James's Street is now the Devonshire Club, which has some relics of Crockford's. Crockford's is familiar to a later generation as the name of an annual clerical directory (Church of England).

CROCODILE (Crocodylia). Order of large reptiles, which includes the true crocodiles, alligators, caimans, and gavials. All are lizard-like in form, with the skin protected by an armour of horny, overlapping plates. In crocodiles the top of the wind-pipe passes up into the posterior portion of the nasal cavity, so that the reptile can breathe when its mouth is full of water. The eggs are deposited in deep holes in the sand, and are hatched by the heat of the sun. Crocodiles are distributed throughout all the tropical districts, and are found in the neighbourhood of rivers, lakes, and marshes. The order includes about a score of species, but the true crocodiles constitute less than a dozen. All are carnivorous. See Alligator; Caiman; Gavial.

Crocodile. The crocodile of the Nile, *Crocodylus vulgaris*

Crocodile is a name of the river of S. Africa better known as Limpopo (q.v.).

CROCUS (Gr. krokos, saffron). Hardy flowering plants of the order Iridaceae. Natives of Western Asia and the Alps, they were introduced into Britain in 1605. They are 3 ins. in height, and are yellow, white, purple, and variegated. Crocuses flourish in any garden soil in the open ground, and will also grow in bowls in fibre, or pebbles, and in water in an ordinary room.

Crocus. Flowers and leaves of the purple crocus, *C. vernus*

The autumn crocus, so named from the similarity of its flowers to those of the ordinary crocus, is really the meadow saffron.

CROESUS (595-546 B.C.). Last king of Lydia, the son and successor of Alyattes. Powerful and proverbially wealthy, he appreciated Greek culture, welcomed Greeks at his court at Sardes, and gave handsome donations to the temples of Apollo. It is said that Solon, the Athenian lawgiver, told Croesus that no man could be called happy until his life had ended happily. Croesus came into conflict with the Persian empire, and was totally defeated by Cyrus. His capital, Sardes, was taken, and he was condemned to be burnt to death. At the stake Croesus remembered the remark of Solon, and uttered the name of the lawgiver three times. Cyrus heard him and, learning the reason, spared his life.

CROFTER. One who rents a croft or small holding. The name is now almost confined to tenants of this kind in the highlands and islands of Scotland, although the word croft is an old English word for an enclosed field. A certain number of the crofters are fishermen.

In the 19th century some of the great landowners took to evicting the crofters, or depriving them of the common lands on which they had pastured their beasts. The crofters claimed security of tenure, and in 1886 the first Act for their protection was passed. This set up a permanent commission to look after them, and they were given fixity of tenure and fair rents.

In 1911 the commission was replaced by a Land Court which has authority over the whole country, and takes in all holdings not more than 50 acres in extent and let at a rent of not more than £50 a year.

CROIX DE GUERRE. French military and naval decoration instituted April 8, 1915, awarded for service in the Great War. It is of bronze, with a red and green ribbon, and is worn after the legion of honour and the médaille militaire. It was bestowed upon British soldiers and also upon French towns.

he went to India as secretary to Lord Northbrook in 1872. Having held positions in Egypt, he returned to India as financial member of the council in 1880. In 1883 Baring was appointed British agent and consul-general in Egypt, a post which he held until 1907. Made a baron in 1892 and an earl in 1901, he died Jan. 29, 1917. He wrote *Modern Egypt*, 1908; *Ancient and Modern Imperialism*, 1910; and a number of other books.

Cromer's son, Rowland Thomas (b. 1877), who succeeded to the earldom, was appointed lord chamberlain in 1922.

Croix de Guerre. Front of the decoration

CROMAGNON. Primitive European race of the upper palaeolithic and trans-neolithic ages. A skull called the old man of Cromagnon, with several other human skeletons, was discovered in 1868 in a grotto in the Dordogne; other typical bones come from Wales and Mentone. The mean stature was 5 ft. 10 ins. See table, p. 98.

CROMARTY. Burgh and seaport of Ross and Cromarty. Near the entrance of Cromarty Firth, 20 m. N.E. of Inverness, it has a wireless station. During the Great War Cromarty was used as a coaling station and as a base for cruiser squadrons. On Dec. 30, 1915, the British armoured cruiser *Natal* was accidentally blown up here. Pop. 1,110.

CROMARTYSHIRE. Former county of Scotland. It consisted of lands along Cromarty Firth, and detached portions scattered over Ross-shire, with which county it was incorporated under the Local Government (Scotland) Act of 1889. See Ross and Cromarty.

CROME, JOHN (1768-1821). British painter. Born in Norwich, Dec. 22, 1768, he acquired the rudiments of art during his apprenticeship to a house painter. He delighted in painting the scenery round Norwich. In 1803, with kindred spirits, he formed the Norwich Society, which held annual exhibitions. He showed thirteen pictures at the Royal Academy and five at the British Institution. To the Norwich exhibitions he sent in no fewer than 288 works. He died April 22, 1821. Cromer's Mousehold Heath is in the National Gallery, together with other of his paintings.

John Cromer, British painter

CROMER. Urban district and watering place of Norfolk. On Cromer Bay, known locally as the Devil's Throat, 24 m. N. of Norwich, and 140 N.N.E. of London, it has stations on the L.M.S. and L.N.E. joint railways. Picturesquely placed on the top of cliffs, it has a fine stretch of sand, promenade,

Cromer. Sea-front with parish church and pier in the distance
H. N. King

pier, and golf links. The chief building is the Perpendicular church of S. Peter and S. Paul. Near are the Garden of Sleep, famous for poppies; Sheringham, a popular watering place; Felbrigg, with its woods and other beauty spots; while the Broads can be reached from here. Pop. 5,435.

CROMER, EVELYN BARING, 1ST EARL OF (1841-1917). British administrator. Born Feb. 26, 1841, a son of Henry Baring, M.P.,

CROMFORD. Market town of Derbyshire. It is 2 m. N. of Wirksworth, on the L.M.S. Rly. and Cromford Canal. Here Sir R. Arkwright, in 1776, erected the first cotton mill in Derbyshire. Market day, Sat. Pop. 904.

Cromlech (Welsh, crooked stone). Term popularly used in Britain for an exposed megalithic structure known as a dolmen (q.v.).

CROMPTON. Urban dist. of Lancashire. It is now included in the parl. bor. of Oldham. On the L.M.S. Rly., cotton manufacture and coal mining are the chief industries. Market day, Thurs. Pop. 14,930. See Oldham.

CROMPTON, SAMUEL (1753-1827). British inventor. Born at Firwood, near Bolton, Dec. 3, 1753, to assist his mother he spun yarn at home. The difficulties he encountered suggested the idea of an improved spinning jenny, which he produced in 1779. It was known as the mule, being a cross between the rollers of Hargreaves and the jenny of Arkwright. Crompton handed over the invention to the public for a small voluntary payment. He was later awarded a grant of £5,000. He died June 26, 1827.

CROMWELL, OLIVER (1599-1658). Lord Protector of the commonwealth of England. Born at Huntingdon, April 25, 1599, he was the son of Robert Cromwell. He studied law in London, where he married Elizabeth Bourchier. Returning to Huntingdon, he was its M.P., 1628-29. In the Short Parliament and the Long Parliament Cromwell represented Cambridge. When civil war broke out Cromwell organized his own district, and at Edgehill commanded a troop of horse. He then raised his Ironsides who showed their quality at Marston Moor and under him the new model army was victorious at Naseby.

In 1648 Cromwell crushed the Welsh rising and defeated the Scots at Preston. A member of the Rump, he signed the warrant for the king's execution. In 1649 he put down civil war in Ireland. He routed the Scots at Dunbar, 1650, and the next year crushed the invading army of the young king at Worcester. In 1653 Cromwell dissolved the Rump and formed a council of State.

1st Earl of Cromer, British administrator
Elliott & Fry

thus ending the war. In 1653 Cromwell dissolved the Rump and formed a council of State.

Oliver Cromwell, Lord Protector
After the portrait by S. Cooper

After the dismissal of the short-lived Barehones Parliament he was declared Lord Protector, with almost unlimited executive powers. His first elected parliament met in 1654; he dissolved it after five months, and placed the country under military administration. Offered the Crown by the Second Parliament in 1657, Cromwell refused it. He died Sept. 3, 1658.

Cromwell left two sons and four daughters, all of whom married, Bridget being the wife of Ireton and then of Fleetwood. Of the sons, Richard (1626-1712) was named protector after his father's death. In 1660 he retired and left England, but returned about 1680 and died July 12, 1712. Henry (1628-74) was lord deputy in Ireland, 1657-59.

CROMWELL, THOMAS (c. 1485-1540). English statesman. Born at Putney, he was abroad for some years as soldier and trader. After his return he was employed by Wolsey, who made him his secretary and secured for him a seat in Parliament.

After Wolsey's fall, 1529, Henry VIII took Cromwell into his own service. He became a privy councillor, 1531; chancellor of the exchequer, 1533; and in 1534 secretary to the king and master of the rolls. In 1535, Cromwell was nominated vicar-general, and became the king's vice-regent in all ecclesiastical matters. The visitation of the monasteries which he organized resulted in the suppression of the lesser houses in 1536. In 1539 he was made earl of Essex and lord great chamberlain. In 1540 he was arrested for high treason, tried, and sentenced. He was beheaded July 28, 1540. See Wolsey, Thomas.

Thomas Cromwell,
English statesman

Piet Cronje,
Boer soldier

tender. Cronje died Feb. 4, 1911.

CRONOS or **CRONUS** In Greek mythology, king of the gods before Zeus, and identified by the Romans with Saturn (q.v.). The son of Uranus (heaven) and Ge (earth), he dispossessed his father, who had imprisoned the Cyclopes (also his children) in Tartarus. To avoid a like fate at the hands of his own offspring, he devoured the children he had by Rhea. The latter concealed from her husband the birth of Zeus, Poseidon, and Pluto, and Cronos was afterwards dethroned by Zeus.

CROOK. Urban dist. of Durham. It is 4 m. from Durham on the L.N.E.R. Coal-mining is the principal industry. Market day, Sat. Pop. 13,000.

CROOKES, SIR WILLIAM (1832-1919). British scientist. Born in London, June 17, 1832, he held positions in the observatory at Oxford and at Chester before settling in London. There he devoted special attention to electrical and wireless problems, and questions associated with the wheat and water supply, beet sugar manufacture, and sewage, and wrote a number of books on these subjects. Crookes discovered thallium in 1861, and introduced the

Sir William Crookes,
British scientist
Elliott & Fry

radiometer in 1875. He discovered radiant matter in 1879; devoted much time to the investigation of radium, and invented the spinthariscopes. Knighted in 1897, he was given the O.M. in 1910. He died April 4, 1919.

CROOKS, WILLIAM (1852-1921). British labour politician. Born at Poplar, London, he early identified himself with the trade union movement and democratic politics in his native quarter. Elected to the L.C.C. in 1892, he was mayor of Poplar in 1901. Returned as M.P. for Woolwich in 1903, he was re-elected in 1906, 1910, and 1918, and in 1916 was made a privy councillor. He died June 5, 1921.

CROPREDY. Village of Oxfordshire, 4 m. N. of Banbury, on the G.W.R. The Cherwell flows through it, as does the canal between Oxford and Birmingham. Near the bridge over the stream the parliamentarians in the Civil War were defeated by Charles I.

CROPS. The produce of anything grown in the soil. In Great Britain the chief crops are wheat, barley, oats and rye, but turnips, swedes, mangolds, potatoes, peas and beet are also included in the term, as are clover and other grasses. In warmer countries there are crops of cotton, rice, millet, maize and many other utilities. The crops grown on a farm are determined not only by climatic considerations, but also by economic conditions, transport facilities, etc.

ROTATION OF CROPS. If the same crops are grown year after year on the same land the soil will become impoverished. To avoid this the rotation of crops has been introduced. There are several systems of rotation in use, but for the most part they are adaptations of the principle of alternating root crops and leguminous crops with cereal crops. This is the old four-course rotation of English farming: roots, barley, clover, wheat.

CROQUET (Fr. croquet, crook, hooked stick). Outdoor game evolved from pall mall (q.v.). It is played on a level lawn measuring

Croquet. Plan of ground. Only those portions indicated by a continuous line need be marked. Measurements are given in yards

particular order. The game is played between two sides, each consisting of one or two players, playing alternately with four balls, and the game is won by the side which first completes the course with both balls. Skill is required to take advantage of the position of a partner's or opponent's ball.

There is a Croquet Association, 4, Southampton Row, London, W.C.1, and championship matches are played annually.

CROSBY or **GREAT CROSBY.** Urban district and watering place of Lancashire. It stands on the Mersey estuary, 6 m. N.W. of Liverpool on the L.M.S. Rly. The church of S. Luke is Gothic. The Merchant Taylors' school, founded 1618, was transferred to a new

building in 1878. Pop. 16,229. Little Crosby, also an urban district, is near Pop. 1,123.

CROSBY HALL. Mansion in London. Built by Sir John Crosby before 1475, it stood in Crosby Place, Bishopsgate. Later it became a meeting house, a literary institute and a restaurant. The best example in London of domestic architecture of the 15th century, it was removed in 1910 to Chelsea, where it now stands at the corner of Cheyne Walk and Danvers Street. It is now a woman's hostel.

CROSIER or **CROZIER** (Lat. crux, cross). Name given to the pastoral staff presented as a symbol of authority to a bishop at his consecration. Made of metal or wood pointed at the base and curled at the head like a shepherd's crook, it was probably an adaptation from a staff carried on journeys. It was first mentioned as a liturgical ornament at the Council of Toledo, 633.

Crosier. The Reichenau crosier, a 14th century example
Victoria & Albert Museum

CROSS (Lat. crux). Word applied to the wooden gibbet on which Christ was crucified and to modifications of it in architecture and ornament. Since the 4th century the Latin cross, on which Christ was crucified, has served as the symbol of Christianity. As an instrument of punishment on which malefactors

were hanged, the cross was originally an upright stake. The punishment was abolished by Constantine the Great, who caused the cross to be represented on the imperial standard.

Much of the church architecture of Europe is based on the form of the Latin cross. It served as a distinguishing mark of the Crusaders; it is a common feature of market places and village greens; it is used in many forms in heraldry. The festival called the Invention of the Cross, May 3, commemorates the finding, in Palestine, by S. Helena, mother of Constantine, of what was believed to be the true cross. See Ankh; Calvary; Crucifix.

Cross. 1. Greek. 2. Maltese. 3. Latin. 4. Celtic. 5. S. Andrew's

CROSSBILL (*Loxia curvirostra*). Common European bird, a winter visitant to Great Britain. The mandibles of its beak cross one another, an arrangement adapted for extracting the seeds from the fir cones on which it feeds. The young birds are greenish brown, but after the first moult the males become rose-coloured. After the second moult they are olive brown, with a greenish tinge on the back. The females are grey, with green on the head and breast.

Crossbill, a winter visitor to Britain

CROSSBOW. Medieval weapon formed of a how fixed crosswise upon a stock with a notch to which the cord was stretched and then released by a trigger. Its missile was an arrow, or the bolt and quarrel. After 1300 it was largely superseded in England by the longbow. See Arbalist.

CROSS-EXAMINATION. In British legal practice, putting questions to a witness after he has been examined-in-chief by the

side which calls him. In cross-examination leading questions may be asked; and in addition to questions relevant to the issue, the witness may be asked questions to show that he is mistaken or to test his memory, or to attack his character, and so impugn his veracity. See Evidence.

CROSS FELL. Mt. of Cumberland, one of the chief peaks in the Pennine Range. It is 10 m. N.E. of Penrith, near the source of the South Tyne river. Its height is 2,930 ft.

CROSSLEY, ADA (1874-1929). Australian contralto singer. Born March 3, 1874, in Gippsland, Victoria, she first appeared on the stage with the Philharmonic Society, in Melbourne, 1892. Her first appearance in London was at the Queen's Hall in 1895. Madame Crossley, as she was professionally known, married in 1905 F. F. Muecke, an Australian surgeon. She died Oct. 17, 1929.

CROSSWORD. Form of word puzzle reputed to have originated in America. It is a variation of the word square, and the words required are indicated in short descriptive phrases called clues.

They were introduced into England about 1923, and soon became very popular, many of the daily and weekly papers giving one in each issue. In 1930 *The Times* made a crossword a regular feature.

CROSSWORD. Popular name applied to various plants because of the arrangement of the petals or the leaves. Thus, the order Cruciferae is known as the Crosswort family because all species have the four petals placed at right angles one to another, presenting the form of a cross. One British species of *Bedstraw* (q.v.) is named Crosswort because each whorl of four leaves has a similar disposition, and several species of the allied genus *Crucianella* are known as Crossworts for a like reason.

CROTCHET (Fr., little hook). Musical note consisting of a solid head with a stem, ♪. Its time-value is one-fourth of a semibreve (♩), one-half of a minim (♫). The crotchet is the normal beat-note, though the quaver (♫) and minim often take its place.

CROTON. Large genus of trees and shrubs, including a few herbs, of the order Euphorbiaceae, natives of all the warmer regions. The sexes are in different flowers, the females being destitute of petals. The three-celled capsules contain as many seeds. From those of *C. tigrum* Croton oil is obtained.

CROTON or **CROTONA.** Greek city of Italy, the modern Cotrone. Founded by Achaeans in 710 B.C., it became one of the richest and most powerful cities of Magna Graecia. It was the birthplace of Milo the athlete, and the original home of the society founded by Pythagoras about 540.

CROUCH END. Residential district of N. London, between Highgate and Hornsey. In the borough of Hornsey it has a station on the L.N.E.R. Christ Church, built in 1862, in Early English style, had its tower and spire added in 1867.

CROUP. Disease of the larynx and wind-pipe in children. Two distinct conditions are comprised in this term; membranous or diphtheritic croup, and spasmodic croup.

Membranous croup is nearly always a sign of diphtheria. The first symptoms are hoarseness and cough, followed in a day or two by difficulty in breathing, lividity of the fingers and lips, owing to insufficient oxygenation of the blood, and general signs of acute illness. (See Diphtheria.)

Spasmodic croup is due to a nervous spasm affecting the muscles of the larynx. The symptoms generally occur first at night, the child awakening with difficulty in breathing, a harsh "crowing" cough, and some blueness

of the face. After an interval the symptoms pass off suddenly. The condition is rarely serious. Inducing vomiting by giving a teaspoonful of ipecacuanha wine affords relief.

CROW. Name given to the Corvidae family of birds, which includes the raven, crow, rook, magpie, jackdaw, and jay. The majority of the family, except the jay, have black or black and white plumage, and conspicuously large and stout beaks. They are found nearly all over the world. They are omnivorous in diet. In Great Britain, six distinct species are usually recognized: the raven, rook, carrion crow, hooded crow, jackdaw, and ebon, in addition to the magpie and the jay.

Crowberry, berries of this dwarf shrub

CROWBERRY (*Empetrum nigrum*). Evergreen dwarf shrub of the order Empetraceae, the only species of its genus. It is native of N. temperate and Arctic regions, and of parts of S. America, and grows in bogs on hills and moors. A wiry, leath-like, trailing plant, it has slender oblong leaves whose margins curve under and form a closed tube. The minute flowers, with pink petals, are succeeded by small insipid berries, black, purple, or red.

CROWBOROUGH. Village of Sussex. It is 23½ m. N.E. of Brighton, on the Southern Rly., in the heart of the best Sussex moorland. Crowborough Beacon, 792 ft., on the fringe of Ashdown forest, commands splendid views of the surrounding country. Pop. 5,846.

Crowfoot. Name of various species of ranunculus (q.v.).

CROWLAND or **CROYLAND.** Market town of Lincolnshire. On the Welland, in the Fen district, 7 m. N.E. of Peterborough, Crowland owes its origin to a Benedictine abbey founded by King Ethelbald in 716. The abbey was demolished by the Danes in 866; refounded, it was destroyed by fire in 1091, a magnificent Norman edifice taking its place in 1113. Most of this was also burnt down, and rebuilt in 1170. Pop. 2,700.

Crowland, Lincolnshire. Remains of the 12th cent. Benedictine Abbey

CROWN. Circlet, usually of precious metal, worn on the head as a mark of sovereignty. In England the Saxon kings wore crowns which consisted of a broad ornamented band topped by trefoils. The trefoils were succeeded by floral rays. The existing imperial crown, that made for Queen Victoria, is a mass of precious stones, the headband surmounted by fleurs-de-lis and crosses pattée, and by four half-hoops, in the form of branches of oak leaves in diamonds and pearl acorns supporting a mound and cross pattée. The Koh-i-noor diamond was inserted in the crown worn by Queen Alexandra at her coronation, while for that of George V the Cullinan diamond was added.

THE CONSTITUTIONAL POSITION. The supreme power in the British Empire as vested in the sovereign and exercised by his ministers is called the crown. The crown bestows titles and honours and appoints to all high positions, whether civil, ecclesiastical, military or naval. The crown acts as plaintiff or defendant in

cases in which the state is concerned. The crown office is a department of the High Court of Justice from which writs are issued.

CROWN

LANDS. These are lands belonging to the ruler of Great Britain in his capacity as sovereign. Windsor Forest for example. They were surrendered by George III in 1760 in return for a fixed income from the state and this arrangement has been continued. They are managed by the commissioners of crown lands and in 1929 produced a revenue of £1,733,000.

Crown. 1. Crown of William the Conqueror. 2. Of Henry V. 3. Of Queen Elizabeth. 4. Imperial state crown

CROWN AGENTS. The crown agents for the colonies act as the business agents in Great Britain for the governments of the colonies and protectorates. They are appointed by the Colonial Secretary and have offices at 4, Millbank, London, S.W.

CROWN COLONY. A crown colony is a territory over which the crown retains the power of legislation, such as Hong Kong or Ceylon. They have councils and legislatures, but the Colonial Office nominates some of their members and can veto their decisions.

CROWN. English silver coin, value five shillings. Introduced by Henry VIII, it was first coined in gold. Edward VI introduced the silver crown and half-crown piece; occasionally double-crowns were minted both in gold and silver. Since Charles II's reign it has been coined only in silver.

CROWN PRINCE. Title borne by the heir to the throne in certain monarchical countries, e.g. Sweden, Rumania, etc. Other countries, e.g. Great Britain and Spain, have a special title for the heir. See Asturias.

CROW'S NEST. Place at the foremast head of a ship, in which a look-out man is stationed. It is found mostly in whalers and other vessels that maintain a constant watch.

CROW'S NEST. Pass of the Canadian Rockies. Near the boundary of Alberta and British Columbia, about 50 m. N. of the U.S. border, it is traversed by the S. branch of the C.P. Rly., at an alt. of 5,500 ft. The Crow's Nest coalfield is important.

CROYDON. County borough and market town of Surrey, the chief English airport. It is 10 m. S.E. of London, of which it is virtually a suburb, although it has its own municipal organization. There are several stations in the town and suburbs on the Southern Railway. Trams and omnibuses also connect it with London. The centre of the town is a long high street, part of the main road between London and Brighton. Here is Whitgift's hospital, still an almshouse, erected by the archbishop of that name in 1596. The municipal buildings form a fine block. The chief church is S. John the Baptist, erected on the site of one destroyed by fire in 1867.

The town has a polytechnic. Whitgift Grammar School is the chief of many schools, and in 1929 it was decided to erect new buildings for it in Haling Park, once the residence of Lord Howard of Effingham. There are several theatres and cinema houses, including the Davis, one of the largest in the country, opened in 1929. The town has a number of industries, including bell founding, but is chiefly a residential district for Londoners. It is in the

metropolitan police district and sends two members to Parliament. There are several parks and open spaces, including Addington Hills.

A very old place, Croydon existed in Anglo-Saxon times. Before coal was brought by sea to London, in the 16th century, the metropolis obtained its charcoal from Croydon, which was the centre of this industry.

Croydon was made a borough in 1883, and a county borough in 1888. It includes Norbury, Upper and S. Norwood, Addiscombe, Waddon (q.v.), Selhurst, Thornton Heath, and other places. It became the official Continental air terminus for London in 1920. The station is at Waddon, Market days, Thurs. and Sat. Pop. 212,400.

Croydon, in Queensland, 94 m. by rly. E. of Normanton, its port on the river Norman, is a mining centre in a rich pastoral district.

CRUCIBLE. Instrument in which ores are smelted or metals melted out of contact with the fuel, and in which chemical operations

Crucible. 1. Plum-bago. 2. Porcelain. 3. Clay

requiring great heat are conducted. While to some extent displaced by electrical and mechanical furnaces, the crucible still plays an important part in the manufacture of steel, brass, and bronzes, and in the refining of metals.

It is usually a vessel of fireclay or of plum-bago, with a cylindrical body, with sides tapering or rounding off to a flat solid bottom. The top is open, and generally formed with a short spout. It may be of any size from that of a large thimble to one capable of holding 200 lb. of melted steel.

Crucible cast steel is a metallurgical product. Shear steel, while directly utilisable for many purposes, for others requires further treatment. Bars are therefore cut into small pieces and melted in crucibles, the product being crucible cast steel.

CRUCIFIX (Lat. *crux*, cross; *fixare*, to fix). Cross bearing the figure of Christ crucified. Persecution imposed reticence on the early Christians as to the sacred sign of their faith, and the crucifix was only displayed gradually on public monuments towards the close of the 6th century.

The practice of placing the crucifix on the altar during Mass dates from about the 11th century. In the Eastern Church the crucifix is not allowed. In the Church of England it was discarded and forbidden under Queen Elizabeth, but has been widely restored since the later years of the 19th century. The wayside crucifix, often with the figure of life size, is commonly found in Catholic countries of the Continent, placed often at cross-roads. See Calvary; Cross; Oxford Movement.

CRUDEN, ALEXANDER (1701-1770). Author of the Concordance to the Bible. Born at Aberdeen, May 31, 1701, he came to London in 1722. A private tutor, and then a bookseller, he published his Concordance in 1737, and was subsequently corrector to the press. His mental eccentricities caused him to be confined in asylums on several occasions. He also was interested in prison reform. He died Nov. 1, 1770.

Alexander Cruden, Scottish author. After T. Fry

CRUELTY. The movement to prevent cruelty to animals began in Great Britain about 1809. In 1822 Richard Martin, M.P., secured the passing of an Act to protect animals from serious bad treatment, and in 1835 bull fighting, dog fighting, and cock fighting were declared illegal. Other progress was made, until in 1911 an important measure, the Protection of Animals Act, was passed. This forbade quite a number of practices such as the cropping of dogs' ears or the dishorning of cattle. Other sections dealt with the business of the knacker and the slaughtering of cattle. In 1919 the use of anaesthetics for major operations on horses and cattle was ordered. Much of this work has been done under the lead of the Royal Society for the Prevention of Cruelty to Animals, 105, Jermyn St., London, S.W.1.

The movement to prevent cruelty to children was started by the Rev. B. Waugh, who founded the National Society for the Prevention of Cruelty to Children in 1884. Its offices are at 40, Leicester Square, London, W.C.2.

CRUFT'S. Annual exhibition of dogs—in full, Cruft's Great International Dog Show Society. This was founded by Charles Cruft in 1884, and is held the second week of Feb. each year at the Royal Agricultural Hall, Islington, London, various prizes being awarded.

CRUIKSHANK, GEORGE (1792-1878). British caricaturist and illustrator. Born in London, Sept. 27, 1792, the son of Isaac Cruikshank (1756-1811), a caricaturist, he was self-taught, and sold his first etching in 1804. He began with caricature, and then took up the illustrating of books by woodcuts or etchings. He illustrated Defoe, Goldsmith, Fielding, Sterne, Smollett, Scott, Dickens, and Harrison Ainsworth. Cruikshank later espoused the cause of teetotalism, and his series of pictures called *The Bottle*, 1847, and his huge cartoon of *The Worship of Bacchus*, 1862, now in the National Gallery, achieved great popularity. He exhibited at the R.A. and the British Institution, and his oil painting, *Cinderella*, is at South Kensington. He died Feb. 1, 1878.

George Cruikshank, British artist

His elder brother, Isaac Robert Cruikshank (1789-1856) was a caricaturist and miniature painter. He collaborated with George Cruikshank and other artists.

CRUISER. Warship designed primarily for speed. At one time cruisers were divided into armoured and unarmoured, but this distinction is now obsolete. The most powerful are called battle cruisers, designed to combine speed and power and to act with battleships. Such were the *Lion*, *Tiger*, and others of that class, and the *Hood*, the most powerful ship in the British Navy.

Ordinary cruisers vary in strength from 10,000 tons to 4,190 tons, and show equal variations in strength of armour and in gun power. The Washington Conference of 1921-22 limited the size of cruisers to 10,000 tons, but made no decision about their number. Four new 10,000 ton cruisers of the London class were completed in 1929, forming the First Cruiser Squadron, Mediterranean. In 1930 the question of limiting the number to be built by each power was considered at the London Conference. See *Battleship*; *Hood*; *London*, etc.; also illus. pp. 77, 120, 210, 305, etc.

Crummock Water. Lake in the W. of Cumberland. Situated among mountains, 7 m. S.W. of Keswick, its length is 2½ m.

CRUSADES. Name given to the expeditions undertaken by Christian Europe with the primary object of recovering from the Saracens, and retaining in Christian hands, the Holy Places in Palestine. They took place between 1100 and 1300. Their name was taken from the Cross, which was adopted as their symbol.

The First crusade started in an ill-organized form in 1096 under Peter the Hermit and a knight named Walter the Penniless. Hordes of enthusiasts followed the banner of the Cross across Europe, but the whole force was shattered by the Turks at Nicea. A better, well-organized army was assembled in 1097 at Constantinople, captured Edessa and Antioch in 1098, and stormed Jerusalem in 1099, Godfrey of Bouillon becoming first king of Jerusalem. The fall of Edessa brought about the Second crusade (1147), headed by Louis VII of France and the emperor Conrad III. It was a disastrous failure. In 1186 the sultan Saladin (q.v.) defeated the Christians at the battle of Tiberias, and in 1187 captured Jerusalem. This roused Western Europe to unite in the Third crusade in 1189, in which Richard I of England took part. But the crusade ended by a treaty in 1192 which secured nothing more than safe access to Holy Places for Christian pilgrims.

The pitiful Children's Crusade of 1212 resulted in thousands of children perishing of hunger and exhaustion or being sold as slaves.

CRUSTACEA (Lat. *crusta*, crust, shell). Large class of the Arthropoda. Three subclasses are usually recognized—Entomostraca, Malacostraca, and Cirripedia. About 6,000 species are known. In size they range from the crabs and lobsters to the "water-fleas" scarcely visible to the naked eye. All have segmented bodies, the head being formed by the union of the first five to seven segments. Most crustaceans breathe by gills, and the majority are aquatic, inhabiting both the sea and fresh waters. In many of the larger forms the outer covering of chitin is more or less impregnated with lime, when part of it forms the carapace familiar in crabs and lobsters. In some instances the young are miniature replicas of their parents, but in the majority of genera the life cycle consists of a series of metamorphoses. See *Arthropoda*.

CRUTCHED FRIARS OR **CROSSED FRIARS** Order of mendicant friars. In 1169 Pope Alexander III gave them a rule similar to that of the Augustinians. They carried wooden staves surmounted with the cross—hence their name *Fratres Cruciferi* (cross-bearing brothers). Besides founding houses in several places in England, they settled in London, near Tower Hill, 1249, on a site still known as Crutched Friars. See *Monasticism*.

CRYPT (Gr. *kryptein*, to hide). Vault beneath the pavement of a church. Usually their floorage corresponded with that of the transept and choir of the church above. Crypts are not found earlier than the 6th century, and then only of unimportant size. During the Carolingian era (9th and 10th centuries) they became an important feature of church architecture. In the 13th century, when the choir was constructed level with the nave, crypts were used rather as places of sepulture than of worship, and were built mainly as underbuildings to correct a slope in the site of the main church. See *Catacomb*.

CRYPTOGAMIA (Gr. *kryptos*, hidden; *gamos*, marriage). One of the chief divisions of vegetable life, distinguished by the non-production of seeds. It includes plants very diverse in their organization, e.g. ferns, mosses,

CUBISM. Theory of art which holds that reality can be expressed only by volumes and their relationship to one another. As its name suggests, it involves the study of the cubic

Cuba. Map of the largest of the West India Islands. See article p. 474

capacity of things, i.e. the space occupied by things in nature, which it expresses by means of planes and surfaces. It holds that form and colour are one and inseparable; that the ordinary representation of things as they appear visually is superficial realism. Cubism is generally held to be the invention of Pablo Picasso, a Spanish painter resident in Paris. Other exponents are Derain, Metzinger, Léger, and Wyndham Lewis. See Futurism.

CUBIT (Lat. *cuhitum*, elbow). Ancient measure of length. Approximately only, it applied to the length from the elbow to the tip of the longest finger. The Hebrews had two cubits, the ordinary cubit, and a longer one used by Ezekiel for measuring the Temple.

CUCHULLIN. Figure in Irish legendary history. He is credited in story and song with deeds of superhuman heroism. Alone he defended the frontier of Ulster against the forces of Queen Maeve of Connacht and her allies. His name, meaning the hound of Chulinn, was gained by the over-mastering of a great dog. Pron. Coooollooin.

CUCKOO (Lat. *cuculus*). General name of a family of birds (*Cuculidae*) containing about 200 species. The common cuckoo (*Cuculus canorus*) visits Great Britain early in spring and usually departs in August, spending the winter in S. Africa. It is a grey bird with lighter underparts barred with black, and in flight resembles a hawk. It is promiscuous in its breeding habits and relies on other birds for nesting purposes, the eggs being usually deposited singly in the nests of smaller birds. When the young cuckoo is hatched it ejects the young or eggs of its foster parent.

CUCKOO FLOWER (*Cardamine pratensis*). Perennial herb of the order *Cruciferae*, a native of N. temperate and arctic regions, also of Abyssinia, the Himalaya, and Chile. It has a short rootstock and a rosette of long leaves broken into a number of roundish leaflets. The pale four-petalled lilac flowers are succeeded by two-valved pods.

Cuckoo-flower, a perennial herb

CUCKOO FLY (*Chrysididae*). Family of small, parasitic, metallic-green wasps. The fly deposits its eggs in the nest of a solitary wasp or bee. Its larvae not only consume the food stored, but sometimes the rightful larvae. When seen by the owner of the nest, the adult fly is fiercely attacked, when it rolls itself into a ball. The name is also given to the ichneumon fly (q.v.).

CUCKOO PIXT. In botany, one of the names of the wake-robin (q.v.), a common wildflower.

CUCKOO SPIT. Name popularly given to a spittle-like secretion found in summer time on many plants. This is produced by an insect, the frog-hopper, or froth-fly, as a protective covering for its larvae. It is found notably on the cuckoo-flower.

CUCUMBER (Lat. *cucumis*). Familiar fruiting plant, used as a vegetable, of the order *Cucurbitaceae* and genus *Cucumis*. A native of the E. Indies and parts of Africa, it was introduced into Britain in 1573, where it is usually grown under glass, though some small fruit and gherkins may be obtained out of doors in the warmer parts of the country.

CUDBEAR (*Lecanora tartarea*). Lichen of the order *Parmeliaceae*. It forms a greyish-white crust on rocks, studded with clusters of brownish, saucer-like bodies from which the spores are produced. By treating it with an alkaline substance a crimson dye is obtained. Large quantities are exported from Norway and Sweden.

CUDDALORE or **KUDALUR.** Town of India, in the S. Arcot district of Madras. It is on the Coromandel coast, 118 m. by rly. S. of Madras. The ruins of Fort St. David, built in 1690, lie 1½ m. E. of New Town. In 1758 and 1795 two indecisive actions were fought off the coast between the English and French. Pop. 50,527

CUDESSEDON. Village of Oxfordshire. It is on the Thames, 5½ m. S.E. of Oxford. Cuddesdon Palace is the residence of the bishop of Oxford. A college for training candidates for ordination in the Church of England was founded here in 1854.

Cuckoo. Young specimen of the European species
W. S. Berridge F.Z.S

CUDWEED (*Gnaphalium sylvaticum*). Perennial herb of the order *Compositae*. A native of Europe, Asia, and N. America, it is covered with silvery silky wool, its leaves are narrow, and the small flower-heads disposed in a spike-like raceme. The brownish-yellow bracts surrounding the heads are chaffy and persistent, so that the flowers are known as everlasting. The name cudweed is given to other species of *Gnaphalium*, and to species of an allied genus, *Filago*.

CUDWORTH. Urban dist. of Yorkshire. (W.R.) It is 4½ m. N.E. of Barnsley, on the L.N.E. and L.M.S. rlys. Stone quarrying is carried on. Pop. 7,607.

CUDWORTH, RALPH (1617-88). English philosopher, the chief representative of the Cambridge Platonists. He was master of Clare College, 1645-54, and of Christ's from 1654 till his death on June 26, 1688. Cudworth attacked the sensualism of Hobbes and all forms of atheism and fatalism. His chief work was *The True Intellectual System of the Universe*, 1678.

CUE. Long tapering rod of wood used for striking the balls in billiards and bagatelle. The word is also used to define the last word spoken by one actor in a play, such word being spoken of as the cue for the actor who is to follow. In music the term indicates a few small notes sometimes inserted after a long rest to indicate the context, as a guide to the entry of the vocal or instrumental part.

CUFFLEY. Hamlet of Hertfordshire, 13½ m. N. of London (Cuffley and Goff's Oak sta.) by L.N.E. Rly. There is a memorial on the spot where, on Sept. 3, 1916, Lieut. W. L. Robinson brought down the first Zeppelin in England.

Cucumber, the edible fruits

CUINCHY. Former village of France. About 2 m. S. of La Bassée, it was the scene of fighting between the British and the Germans in Jan.-Feb., 1915. On Jan. 25 the Germans attacked and gained ground, but this was regained by the Guards on Feb. 1 and 6. It was in this fighting that Michael O'Leary won the V.C.

CUIRASS (Fr. *cuirasse*; Lat. *corium*, leather). Armour for protecting the body. Originally of leather, it consisted of a breast and back plate, overlapping on the shoulders and meeting beneath the arms. It succeeded the coat of mail in the 14th century, and is still worn in England by the household cavalry. See Armour: Breastplate.

CULEBRA. Town and hill of Panama, Central America, on the Panama Rly. High on the slope of the hill, it is the healthiest spot in the canal zone. The Culebra cut for the canal was a long and crucial factor in the construction. See Panama Canal.

CULLERCOATS. Seaside resort of Northumberland. It adjoins Tynemouth and has a station on the L.N.E. Rly. It has a fine stretch of sands, wireless and lifeboat stations, and white fish industry. Armstrong College has a marine biological institute here. Pop. 4,389.

CULLINAN DIAMOND. Largest known diamond, presented in 1907 by the Transvaal government to King Edward VII. It weighed 1¼ lb. The largest gem cut from it, known as the "Star of Africa," is in the British sceptre, and the next largest in the British crown. It was discovered in 1905 at the Premier mine, in the Transvaal, the site of which was called Cullinan after the name of the purchaser.

Cullinan Diamond, the largest known diamond

CULLODEN or **DRUMMOSSIE MOOR.** Tract of land in Inverness-shire, about 7 m. E. of Inverness. Here the royalists under the duke of Cumberland inflicted a decisive defeat on the Jacobites on April 16, 1746. The battlefield is marked by a cairn, and a boulder—the Cumberland Stone—shows the spot whence the duke directed the battle. Near is Culloden House, where the Culloden Papers were discovered in 1812. In 1928 the Culloden estate was sold by the family of Forbes, who had owned it since the early part of the 17th century. See Charles Edward; Jacobites.

CULME-SEYMOUR, SIR MICHAEL (1836-1920). British admiral. Born at Berkhampstead, March 13, 1836, he entered the Navy in 1850. He was commander-in-chief in the Pacific, 1885-87, of the Channel Squadron, 1890-92, in the Mediterranean, 1893-96, and at Portsmouth, 1897-1900. He retired in 1901, and died Oct. 11, 1920.

His eldest son, Michael, born Aug. 29, 1867, was director of mobilisation, 1916, and commanded the forces in the Black Sea, 1918-19. In command of the North America and West Indies station, 1923-24, he was made second sea lord, Mar., 1924, and died April 2, 1925.

CULROSS. Burgh and seaport of Fifeshire. It is on the N. shore of the Firth of Forth, 7 m. S.W. of Dunfermline on the L.N.E. Rly. A royal burgh since 1588, the ruins of a Cistercian abbey date from 1217. Linen is manufactured. Pop. 508. Pron. Coor-rus.

CULTER. Town of Aberdeenshire. It is on Culter Burn, at its junction with the Dee, $7\frac{1}{2}$ m. S.W. of Aberdeen by the L.N.E. Rly. Paper-making, which has carried on here since 1750, is the chief industry. Pop. 5,744.

CULTURE (Lat. cultura, cultivation). Word used for the art of cultivating the land, e.g. agriculture, and by an extension for other processes of development. It is thus used in bacteriology and medicine. Its more general use, however, is for a stage of intellectual and moral development. Kultur, the German form of this word, became prominent during the Great War. By it the Germans meant their particular form of life and thought.

CULVERIN (Old Fr. coulevrin, snake-like). Form of cannon used in the 16th century, so called from the snakes which were wrought for its handles.

CUMAE (Gr Kymē). Ancient Greek settlement in S. Italy. Founded about 1030 B.C., 14 m. W. of Naples, it acquired great wealth and power. It was one of the sources of Greek civilization in S. Italy. The rock on which stood the Acropolis is honeycombed with caves, from one of which the Cumaean Sibyl brought the Sibylline Books to Rome. The remains include part of the walls, an amphitheatre, arch temples, and a necropolis.

CUMBERLAND. County of England. It is bounded N.W. by the Solway Firth, and fronts the Irish Sea on the W. The coast is low and sandy along the Solway Firth, but below Maryport becomes high and rugged

Penrith, and Egremont. The area is 1,520 sq. m. Pop. 273,173.

The surface is generally mountainous, and falls into two natural divisions separated by the valley of the Eden. The N.E. and E. is occupied by the N. extension of the Pennine Chain, which culminates in Cross Fell (2,930 ft.) and the S. and S.W., except for a narrow coastal strip, embrace the Cumbrian Mts. and much of the Lake District. The highest summits in England are found here, including Seafell Pikes, Seafell, Helvellyn, and Skiddaw. The lakes comprise Ullswater, Bassenthwaite Thirlmere, Buttermere, Crummock Water, Wastwater, and Ennerdale Water. Besides the Eden, the chief rivers are the Derwent, Esk, Dutton, and Liddel Water. The climate is moist, a very heavy rainfall being recorded.

Sheep (Hardwick breed) and cattle rearing and dairy farming are largely practised, and the fishing industry, especially the salmon fisheries in the Solway Firth, is valuable. The mineral wealth consists of coal and haematite iron ore, which are worked in great quantities. Other industries include shipbuilding, iron and steel working, and woollen and cotton manufacture. The L.M.S. and L.N.E. Rlys. serve the county. Antiquities include stone circles, Roman camps, standing stones, and earthworks. Remains of Hadrian's Wall can be traced, and there are peel towers on the Scottish border. See Lake District.

CUMBERLAND. River of the U.S.A. Rising on the W. slope of the Cumberland Plateau, near the Virginia border, it flows S.W. through S. Kentucky into Tennessee, and enters the Ohio. It drains an area of 18,500 sq. m. and is 685 m. long.

CUMBERLAND, DUKE OF. English title. The first holder of the dukedom of Cumberland was Prince Rupert, the cavalier, from

1644-82, when it became extinct. Prince George of Denmark, husband of Queen Anne, held it from 1689 to 1708; William Augustus, third son of George II, from 1721 to 1765, and Henry Frederick, a brother of George III, from 1766 to 1790. William Augustus (1721-65) was born in London, April 15, 1721. He was the commander who crushed with such severity the Jacobites at Culloden, April 16, 1746.

The later dukedom of Cumberland and Teviotdale was created in 1799 for Ernest Augustus, a son of George III. He became king of Hanover, but his grandson, another Ernest Augustus (1845-1923), not allowed to inherit the kingdom of Hanover, was known as the duke of Cumberland. The duke's only son, Ernest Augustus (1887), married the only daughter of the Kaiser in 1913. In 1917, by Act of Parliament, he was deprived of his dignities and status as a British peer. He died Nov. 14, 1923.

CUMBERLAND, RICHARD (1732-1811). British dramatist. Born Feb. 19, 1732, his comedy, *The Brothers*, was produced at Covent Garden in 1769, and in 1771 his best-known play, *The West Indian*, was brought out by Garrick at Drury Lane. He died May 7, 1811.

CUMBERNAULD. Colliery and iron mining centre of Scotland, in the detached portion of Dumbartonshire. It is 15 m. N.E. from Glasgow, near the Forth and Clyde Canal, on the L.M.S. Rly. Pop. 5,261.

CUMBRAE, GREAT. Island of Buteshire, between the island of Bute and Ayrshire, in the Firth of Clyde. The island is about $3\frac{1}{2}$ m. long and 2 m. broad. In 1929 two mineral wells were discovered. S. of Great Cumbrae lies Little Cumbrae, which is about 1 m. long.

CUMBRIAN MOUNTAINS. Hill range of the Lake District, England. It is parted from the Pennine Chain by the valleys of the Lune and Eden, which are joined by the pass over Shap Summit. The range is in Cumberland, Westmorland, and Lancashire, and extends nearly 40 m. N. to S., and about 35 m. E. to W. Seafell is the highest point.

CUMMIN OR **CUMIN** (*Cuminum cyminum*). Herb of the order Umbelliferae. A native of S. Europe and N. Africa, in general appearance it is much like fennel. Its fruits (cumin seeds), similar to those of caraway (q.v.), were formerly put to similar uses.

CUMNOCK OR **OLD CUMNOCK.** Colliery town of Ayrshire. It is on the Lugar, 34 m. by rly. S. of Glasgow, on the L.M.S. Rly. Alexander Peden, the Covenanter, is buried here. New Cumnock is 5 m. away. Pop. Old Cumnock, 5,491; New Cumnock, 6,281.

CUMNOR OR **CUMNER.** Village of Berkshire. It is 4 m. S.W. of Oxford, with a station on the G.W.R. The church has a massive square

William, Duke of Cumberland

After Sir J. Reynolds

tower, Jacobean pulpit, relics of Amy Robsart (q.v.), and the tomb of Anthony Forster, steward of her husband, Robert Dudley, earl of Leicester. Of Cumnor Hall (Cumnor Place), the theme of Mickle's ballad which inspired Scott's *Kenilworth*, nothing remains save the stones which, in 1814, were used in the reconstruction of Wytham Church.

CUNARD, SIR SAMUEL (1787-1865). British shipowner. Born at Halifax, Nova Scotia, Nov. 21, 1787, he began business at Halifax as the owner of a fleet of whalers, but in 1838 he came to England. With others, he established, in 1839, the British and N. American Royal Mail Steam Packet Co., and in 1840 the first vessel crossed the Atlantic, going from Liverpool to Boston in 14 days 8 hours.

Ernest, Duke of Cumberland

After G. I. Saunders

The firm prospered and became the Cunard Line. In 1859 Cunard was made a baronet. He died in London, April 28, 1865.

CUNAXA. Place about 50 m. N. of Babylon. Here in 401 B.C. was fought the battle between the forces of Cyrus the Younger and those of his brother Artaxerxes Mnemon, in which Cyrus was killed. See Anabasis; Cyrus.

CUNEIFORM (Lat. wedge-shaped). Ancient cursive script composed of nail-shaped or arrow-headed elements, developed in W. Asia. The form was determined by the impress of a chisel-pointed stylus upon humid clay tablets, cones, cylinders, and prisms. The bone or metal stylus, edged with unequal

Cumberland. Map of the north-west border county of England, famous for its lakes, moors, and mountains

in parts. Carlisle is the county town, and others of importance are Workington, Whitehaven, Maryport, Keswick, Cockermouth, and Penrith.

facets, produced wedges of different sizes. They were upright, horizontal or diagonal, and rudimentary school-exercises comprising one each of these elements are extant. When

			"month."

Cuneiform. Examples of three types of cuneiform script, with the English meanings

after clay script became established, inscriptions were chiselled upon hard materials—stone, metal, glass, and gems—the wedge form was scrupulously reproduced

CUNHA, Tristão da (c. 1460-1540). Portuguese navigator. Whilst commanding a Portuguese expedition of 16 vessels to India in 1506 he discovered the island named after him in the S. Atlantic. He thoroughly explored the E. coast of Africa, visiting Zanzibar and Madagascar, and conquered Socotra.

His son, Nuno da Cunha (1487- c. 1538) went out to the Portuguese Indies, 1508, and became governor-general in 1528. In 1529 he captured Mombasa, dying at sea about 1538.

CUNLIFFE-LISTER, Sir PHILIP (b. 1884). British politician. Born May 1, 1884, the youngest son of Colonel Y. G. Lloyd-Greame, he was called to the bar in 1908. Elected M.P. for Hendon, 1918, he became parliamentary secretary to the board of trade two years later, receiving a knighthood. From Oct., 1922, to Jan., 1924 he was president of the board of trade; in Nov., 1924, he again assumed that office, which he resigned in June, 1929. He took the name of Cunliffe-Lister in 1924 as his wife inherited the estates of the 3rd Lord Masham, a rich Yorkshire peer.

Sir P. Cunliffe-Lister, British politician

CUNNINGHAM, ALLAN (1784-1842). Scottish poet. Born in Keir, Dumfriesshire. Dec. 7, 1784, he became a stonemason, removing to London in 1810. His best-known prose work is *Lives of Eminent British Painters*, 1829-33. Of his lyrics a notable one is the song beginning, *A wet sheet and a flowing sea*. He died Oct. 30, 1842. Of his sons, Joseph Davey (1812-51) and Sir Alexander (1814-93) entered the Bengal engineers. The former wrote the *History of the Sikhs* (1849); Peter (1816-69) wrote a life of Drummond of Hawthornden, 1833; Francis (1820-75) entered the Indian army, and brought out editions of the works of Ben Jonson, Marlowe, and Massinger.

CUP. Name given for a drinking vessel. At an early date special cups were made of the precious metals and ornamented in various ways. These were usually on stands, and they survive in the loving-cup and in the one used at the Sacrament, and known as the chalice.

At an unknown date, certainly by 1840, cups began to be given as prizes for sporting competitions. There are the America Cup, the Ascot Cup, the Association Cup, and hundreds of other trophies. See America Cup; Association Cup, etc.

CUPAR. Burgh and co. town of Fifeshire. It stands on the river Eden. 44 m. N.E. of Edinburgh by the L.N.E.R. Flax spinning and linen weaving are carried on. The chief buildings are the town hall, county hall, and the Duncan Institute. The town possesses a public park and an old burgh cross. Market days, Tues. and Thurs. Pop 4,145.

CUPID (Lat. cupido, desire). In classical mythology, the god of sensual love, known also as Amor among the Romans and Eros among the Greeks. He was the son of Aphrodite (the Roman Venus), the goddess of love, and is represented as a beautiful youth or as a little boy with wings. Cupid's weapons were a bow and arrows.

Cupid, from the statue by Praxiteles, Capitoli Museum, Rome

CUPOLA. Term properly applied to a concave roof or ceiling of moderate diameter. A large cupola is generally called a dome. The cupola is a feature of both Byzantine and Mahomedan architecture. The classical revival led to its reintroduction into European architecture. Sir Christopher Wren placed a cupola on the summit of the dome of St. Paul's Cathedral, and used cupolas at the corners to repeat and intensify the effect of the dome.

In fortification the cupola is a revolving turret in which heavy guns are placed.

In metallurgy the name cupola is given to a small blast furnace used by the ironfounder for melting the metal from which he makes his castings. It is worked in all essentials in a similar manner to a blast furnace.

CUPPING. Term used for the process of drawing blood. For this purpose a special glass cup was used. The exhaustion of the air, which takes place as the hot air in it cools, draws the blood to the skin under the cup, whence it can be removed.

CUPREINE. Alkaloid occurring in the bark of Cinchona cuprea, a tree of S. America. From the same bark quinine is also obtained, the cupreine being separated from the mixture of the two alkaloids by treatment with ammonia and boiling ether.

CURAÇAO. Largest island of the Dutch West Indies. It lies in the Caribbean Sea, 40 m. N. of the Venezuelan coast. With five other smaller islands—Bonaire, Aruba, St. Martin (the N. part of which belongs to France), St. Eustache and Saba—it forms a Dutch colony. Tobacco, sugar, cotton, and cacao are grown. Curaçao is administered by a governor assisted by a council. The capital is Willemstad. The area of the colony is 403 sq. m., pop. 61,479; of Curaçao, 210 sq. m., pop. 41,014.

The liqueur known as euraçao or curaçao owes its specific quality and flavour to the macerated peel of oranges. First made in Curaçao, it now comes chiefly from Holland and Great Britain. Sometimes rum is added, and when made with fine brandy it is called Grand Marnier. It has 35 to 40 p.c. of alcohol.

CURARA OR **CURARE**. South American arrow poison produced from species of Strychnos and other plants. It is a blackish-brown dry extract with a bitter taste, and contains an active principle known as curarine. It is made by S. American Indians by boiling the various barks and leaves and straining and evaporating the liquid until it forms a thick solid, suitable for smearing on the tips of arrows. Curara has been used in medicine for treating epilepsy, tetanus, and hydrophobia, doses of $\frac{1}{2}$ gr to $\frac{3}{4}$ gr. being administered hypodermically.

CURASSOW. Family of large game birds, found in Central and S. America, of which there are several species. They are nearly as large as turkeys, are usually of glossy black or purple plumage, and have crests of curled feathers. They live in the forests, but are often domesticated. The name is derived from the island of Curaçao.

CURATE (Lat. curatus). Word used in the English Prayer Book for a clergyman, incumbent or assisting curate, who has a cure or care of souls. It is now commonly applied only to an assistant to a vicar or rector, or to one appointed to officiate in the vicar's or rector's absence, i.e. a curate-in-charge.

CURATOR (Lat. curare, to take care of). One who guards or protects, now used chiefly for the official in charge of a museum or art gallery. In Rome the curator was a man who took charge of a minor or imbecile and his property, and this use persists in Scots law. Later, it was used for officials in charge of museums and the like.

CUREL, FRANÇOIS DE (1854-1928). French dramatist. Born June 10, 1854, at Metz, his novel *L'Été des Fruits Sees* was published in 1885, followed by *Le Sauveteur du Grand Duc*, 1889. In 1892 he produced *L'Envers d'une Sainte*, the first of a series of plays which won for their author a recognized position as a dramatist: the last being *La Danse devant le Miroir*, 1914. Elected a member of the French Academy, 1918, he died April 23, 1928.

CURFEW (Fr. couvrir, to cover, few fire). Custom of ringing a bell every evening as a signal to put out fires and go to bed. In England its introduction is usually attributed to William the Conqueror, who fixed the hour at eight. It was in force in other countries of Europe, the reason for its prevalence being doubtless the necessity of doing whatever possible to prevent the wooden houses of the time from catching fire. The custom survives today in a few places.

CURIA. Name of one of the traditional 30 divisions (curiae) of ancient Rome. It was also applied to the Senate house, and later to the Senate itself. The word became the Latin equivalent for the English court.

The Roman Curia of to-day is the collective name for various offices at Rome responsible to the pope for the government of the Roman Catholic Church throughout the world.

CURIE, PIERRE (1859-1906). A French physicist. Born in Paris, May 15, 1859, and educated at the Sorbonne, he began his studies on radio-active bodies in 1896, assisted by his wife, and their joint discovery of radium was announced in 1898. Pierre Curie was run over and killed in Paris, April 19, 1906.

His wife, born Nov. 7, 1867, at Warsaw, was soon afterwards appointed to succeed him as professor of general physics at the Sorbonne. She received the Nobel prize for chemistry, 1911, and in 1919 became professor of radiology at Warsaw. See Radium.

Pierre Curie and Mme. Curie, French physicists and discoverers of radium

CURIUS, MANIUS (d. 272 B.C.). Roman general, three times consul. Of plebeian family, in 290 B.C. he defeated the Sabines and Samnites, who had been at war with Rome for 50 years, and in 275, by his victory at Beneventum, forced Pyrrhus, king of Epirus, to abandon his Italian campaign. His military talents and simple life made him one of the best representatives of the old Roman republic.

CURLEW (*Numenius arquatus*). Common British bird, of which three recognized species exist. It is distinguished by its long curved beak, and is found along the shore and on moorlands, where it nests on the ground. It feeds mainly on insects and worms, and its strange, wild cry has given it the Scottish name of the whaup.

Curlew. Common British bird of shore and moorland

CURLING. Winter sport of Scotland. It consists in sliding rounded stones along the surface of a sheet of ice towards a mark. Curling takes place on a rink not more than 42 nor less than 32 yds. long. At each end a "diagram" is drawn consisting of three concentric circles with radii of 7 ft. (the "house"), 4 ft., and 2½ ft. The tee is in the centre of the "house." Each player uses stones of so-called granite with two handles to propel them along the ice. The four-side game is predominant. One shot is scored by every stone of one side lying nearer to the tee than the nearest of the opposite party. The game is controlled by the Royal Caledonian Curling Club, founded in 1838.

Curling rinks at St. Moritz, Switzerland. This winter sport was formerly peculiar to Scotland

CURLL, EDMUND (1675-1747). London bookseller. Born in the west of England, he came to London about 1705. He published topographical works of permanent value, and many standard works, including Swift's *Meditation upon a Broomstick* (1710). His quarrel with Pope, which lasted over 20 years, is preserved in *The Dunciad* and in his own *Curliad*, 1729. He died Dec. 11, 1747.

CURRAGH, THE. Tract of common land in Co. Kildare, Irish Free State. It is 32 m. S.W. of Dublin, covers 4,885 acres, and is famous for its beautiful turf. It was the property of the crown, and a ranger was appointed. George IV allowed it to be used as a racecourse, and its meetings soon became celebrated.

The Curragh is even better known for its military camp. From a small beginning, when Volunteers used to assemble here for exercise, it developed into Ireland's chief military station. It was handed over by the British to the Irish Free State, May 16, 1922.

CURRENT. Hardy flowering shrub of the order Saxifragaceae and genus *Ribes*. Bearing red, white, and black fruits, they are natives of Britain. The name comes from Corinth in Greece, where the similar grape-currant was first cultivated and exported. Flowering currants are varieties of a double flowering species with pink, white, and red flowers. Its average height is from 6 ft. to 8 ft.

CURRENCY. (Lat. *currere*, to run). Word used mainly as a synonym for money. Both forms of money, paper and metallic, are included in this term. almost entirely disappeared from circulation.

Currency Note was the official name for a kind of paper money issued by the British Government during the Great War. The notes, value 10s. and £1, first appeared in Aug., 1914, by the authority of the Currency and Bank Notes Act of that year. Currency notes were legal tender for any amount, and were payable in gold at the Bank of England, but they did not rest on a gold basis. From Nov., 1928, currency notes for £1 and 10s. were issued by the Bank of England, not by the Treasury as before.

CURRENT. Stream set up in the surface waters of the ocean, largely by the agency of winds. Currents are relatively warm when they flow towards regions colder than those in which they originated; relatively cold when they move towards warmer latitudes. Stream currents arise when the configuration of the land and the general movements of oceanic waters cause the surface waters to take on a river-like form; the best known current is the warm Gulf Stream

CURRENT. In electricity, "the adjustment along a conductor of a difference of potential between two points." A simpler definition is the transition of electrical energy along a conductor. For practical purposes current is generated chemically, as in a battery, or mechanically, as by a dynamo. The effect in either case is to exert a difference of potential between the terminals. Upon closing the external circuit a current flows which, so long as the generator continues to create a difference of potential, continuously reduces and adjusts the difference and restores equilibrium. The unit of current is the ampere, equal to a rate of flow of one coulomb per second. See *Accumulator*; *Battery*; *Dynamo*.

CURRIE. SIR ARTHUR WILLIAM (b. 1875). Canadian soldier. Born at Napperton, Ontario, Dec. 5, 1875, he settled in British Columbia in 1893. A member of the Canadian militia, he was a lieutenant-colonel, and led a brigade in the second battle of Ypres, 1915. Soon promoted to a division, he succeeded Byng in 1917 as commander of the Canadian Corps. In 1919 he became inspector-general in Canada. In 1920 he became principal of McGill University, Montreal. He was knighted in 1917.

Sir Donald Currie, Scottish shipowner
Elliott & Fry

CURRIE, SIR DONALD (1825-1909). Scottish shipowner and philanthropist. Born at

Greenock, Sept. 17, 1825, he founded a service of sailing ships between Liverpool and Calcutta in 1862, the first boats of the Castle Line.

In 1872 he commenced a service from Liverpool to the Cape. He was Liberal M.P. for Perthshire, 1880-85, and Unionist M.P. for W. Perthshire, 1885-1900. Currie was made K.C.M.G. in 1881, and G.C.M.G. in 1897. He died April 13, 1909.

Currant. Fruit and leaves of, left, white currant; right, red currant

declared that the chasm could only be filled up through Rome's greatest possession being thrown into it, and Curtius leapt into it. The site was afterwards called Lacus Curtius.

CURWEN, JOHN (1816-80). British music reformer. Born at Heckmondwike, Nov. 14, 1816, he entered the Congregational ministry. He studied the tonic sol-fa system invented by Miss Glover, and in 1843 published his *Grammar of Vocal Music*. He founded the Tonic Sol-fa Association in 1853, and the college in 1869. He died in Manchester, May 26, 1880.

His son, John Spencer Curwen (1847-1916), succeeded his father as principal of the Tonic Sol-fa College.

John Curwen, British musician
National Port. Gallery

CURZON OF KEDLESTON, GEORGE NATHANIEL CURZON, MARQUESS (1859-1925). British statesman. Born Jan. 11, 1859, he had a distinguished career at Oxford and was elected fellow of All Souls in 1883. After travelling extensively in the East he became M.P. for Southport, 1886, was under-secretary for India, 1891-92, under-secretary for foreign affairs, 1895-98, and viceroy and governor-general of India, 1898-1905. Curzon was created a baron in 1898, taking an Irish peerage; he was made an earl of the U.K., 1911, and a marquess in 1921.

Marquess Curzon of Kedleston
Russell

In 1915 Curzon became lord privy seal, and was in charge of the air board; he became in Dec., 1916, a member of the war cabinet and lord president of the council. In 1919 he succeeded A. J. Balfour as foreign secretary, resigning in Jan., 1924. Made lord president of the council, Nov., 1924, he died March 20, 1925.

A nephew, Richard Nathaniel, became Viscount Scarsdale; the earldom and marquessate became extinct. His eldest daughter became Baroness Ravensdale. A younger daughter, Cynthia, married Sir Oswald Mosley, and was elected M.P. for Stoke in the socialist interest in 1929. Consult *Life*, Lord Ronaldshay, 1928.

CUSHENDUN, RONALD JOHN McNEILL, BARON (b. 1861). British politician. Born April 3, 1861, he was editor of the *St. James's Gazette*, 1900-04. He was M.P. for a division of Kent, 1911-27. In 1922 he was made under-secretary of state for foreign affairs, and he

Baron Cushendun, British politician
Russell

returned to that office in Nov. 1924. In 1925 he became financial secretary to the Treasury, and in 1927 he entered the Cabinet as chancellor of the duchy. He was then made a peer. In 1928 Lord Cushtendun, as acting foreign secretary, signed the Peace Pact in Paris and represented Britain at the disarmament conference at Geneva. He resigned in June, 1929.

Cushion Pink. Variant name for the moss campion (*Silene acaulis*). See Campion.

CUSTARD APPLE (*Anona reticulata*). Small tree of the order Anonaceae. A native of Brazil, it has aromatic lance-shaped leaves, and flowers brown outside and pale yellow within. The fruit, about the size of a tennis ball, consists of numerous cells completely fused, but whose boundaries are shown by the netted pattern of the exterior. The sour-sop (*A. muricata*) of the W. Indies has a much larger and prickly fruit, weighing 2 lb. or more. The sweet-sop has egg-shaped fruit.

Custard Apple. Fruit and leaf of *Anona reticulata*

CUSTOM HOUSE. London public building where all the duties on goods entering the Port of London are paid. It stands at the E. end of Lower Thames Street, on the river front. The present building dates from 1814. There are custom houses at Liverpool and other seaports. The custom house at Tilbury was enlarged in 1930.

CUSTOMS. In the United Kingdom, the duties collected on certain classes of imported goods. The controlling authority is the Board of Customs and Excise, a British government department forming part of the Treasury and having its head office at the Custom House, London, E.C.

The first customs duties were levied by the English kings at a very early date on wine, and then on cloth, entering the country. In time other imports were taxed in this way until hardly anything escaped, and, as a consequence, smuggling flourished. In 1842-46 Peel, in establishing free trade, abolished most of these duties. Those retained were mainly on goods such as sugar, wine, tea, and tobacco, that were not produced at home. In the case of those also produced at home, e.g. spirits, the customs duty was balanced by an excise duty. See Excise.

At the present day over £100,000,000 of revenue is raised by customs duties, chiefly on wine, tobacco, spirits, and sugar. The duty on tea was abolished in 1929. The McKenna duties on motor cars, watches, etc., are also collected by the customs officials, as were the safeguarding duties on lace, cutlery, gloves, etc., until their abolition in 1930. See Safeguarding.

The Customs Union was an association formed by a number of states which agreed to have a common tariff on goods imported from abroad, and no tariff on goods passing from one to the other. Such a union is sometimes called a Zollverein.

CUTCH. State of India, in the Western India States agency. It is bounded N. and N.W. by Sind, W. by the Indus and Arabian Sea, and S. by the Indian Ocean and the Gulf of Cutch. Area, 7,616 sq. m. excluding the Runn. Two ranges of hills traverse the state from E. to W., reaching an elevation of 900 ft. The capital is Bhuj. The ruler is a maharao, with a salute of 17 guns. Pop. 484,547.

The Runn of Cutch is a salt morass in the N. and E. of the state. In the wet season it divides into two shallow lakes, called the

Great Runn (7,000 sq. m.) and the Little Runn (2,000 sq. m.). See India

CUTHBERT (c. 635-687). English saint. Born probably in E. Lothian. He entered the monastery of Melrose in 650, and later, as its prior, devoted much time to preaching. Prior of Lindisfarne, 664-676, he then lived as a hermit on Farne Island, until made bishop of Lindisfarne in 685. In 687 he returned to his cell on Farne Island, where he died, March 20. His festival is kept on March 20.

CUTLASS (Lat. cultellus, small knife). Heavy, straight-bladed sword with a broad hand-guard over the hilt. It was carried by sailors for boarding purposes, but in the British navy is now issued only to the crews of small ships.

CUTLER. One engaged in the making of cutlery. This industry, which is chiefly carried on in Sheffield, includes the manufacture of knives, razors, scissors, etc., which from 1925 until the end of 1930 was protected by a safeguarding duty of 33½ per cent.

The Cutlers' Company is one of the London livery companies. It dates from the 14th century. The hall, No. 4, Newgate Street, E.C., dates from 1883. There is also a Cutlers' Company in Sheffield.

CUT-OUT. Device for interrupting an electric circuit automatically when the current exceeds or falls below a certain limit. The simplest form of overload cut-out is the fuse of lead alloy, which has a current capacity lower than the rest of the circuit, and heats up and melts before the circuit can be damaged.

CUTTACK. District and city of India, in Bihar and Orissa. The dist. is bounded E. by the Bay of Bengal, and embraces the deltas of the Mahanadi and Brahmani rivers and a lull tract to the N. and W. The chief harbour is at False Point, on the Mahanadi estuary. The area is 3,858 sq. m.; pop. 2,064,678.

The city is the administrative headquarters of the Cuttack dist. It stands at the head of the Mahanadi, and is known for its filigree work. Pop. 51,007.

CUTTER. Single-masted sailing-boat fitted with foresail, main-sail, and jib, as well as a topsail, and balloon or flying jib. The term is also applied to a boat for the use of a ship's company.

CUTTLE

OR CUTTLE

FISH. Name given to any cephalopod, but more correctly applied to the genus *Sepia*. They are provided with sucker-bearing tentacles round the mouth, which serve the double purpose of crawling on the rocks and of catching prey. In general form they resemble a bag, with a head at one end, which bears a pair of staring eyes and a ring of tentacles. They can swim backwards in rapid jerks by expelling water forcibly from the gill cavity. An ink bag secretes a brown fluid which, ejected into the water, forms a dense cloud and conceals the animal from an enemy. The common cuttle abounds round

the British coasts. The body is usually about 8 ins. long and is greyish brown. Cuttles feed

Cuttle. Common cuttle fish swimming with its long tentacles extended

largely on small crustaceans, and in their turn form an important food for various fishes and whales. See Argonaut; Cephalopoda

CUVIER, GEORGES

LÉOPOLD CHRÉTIEN

FRÉDÉRIC DAGOBERT,

BARON DE (1769-1832)

French anatomist. Born

Aug. 24, 1769, at Mont-

béliard, he went in 1789

to Paris, where he be-

came successively

assistant professor of

comparative anatomy in

the Jardin des Plantes

and professor of natural

history in the Panthéon

Cuzco, Peru. Wall in the ancient palace of Pachacutec. The large stone on the left is remarkable as containing 12 angles. Above, doorway of Inca architecture. See below

and Collège de France. Le Règne Animal distribué d'après son Organisation, 1817, is his chief work. He died May 13, 1832.

CUXHAVEN.

Seaport of Germany, in the state of Hamburg. It stands at the mouth of the Elbe, 70 m. by rly. N.W. of Hamburg. The new port can accommodate the largest vessels, while the old does duty for coasting vessels. Cuxhaven was a port of call for the ships of the Hamburg-Amerika steamship company. It has a 14th century castle. In 1873 the villages of Cuxhaven and Ritzbüttel were amalgamated to form the present town, which is a free port and a wireless station. It was raided by British aircraft and war vessels on Dec. 25, 1914. Pop. 17,648.

CUYP, ALBERT (1620-91).

Dutch painter. Born at Dordrecht, he first found adequate appreciation in England. The finest examples of his work can be seen at the National Gallery, notably the River Scene with Cattle, and at Dulwich. Pron. Koip.

CUZCO.

City of Peru. It stands in a mountain dip, 11,400 ft. above sea level, 205 m. N.W. of Arequipa, and was formerly the capital of the Incas. It has a fine cathedral, a university (founded 1598), an Augustinian convent, and a mint. The site of the Inca Temple of the Sun is occupied by a Jesuit church. The city abounds in ancient Peruvian architectural remains.

The city was founded early in the 11th century by Manco Capac, the first Inca of Peru. When captured by Pizarro in 1533, the Spaniards were astonished to behold its beautiful temples, palaces and shrines, and well-planned streets. Gold and silver had been lavishly used in decorating the buildings. Pop. 37,000. See Inca; and illus. above.

Cutter. The "Bloodhound," belonging to the Marquess of Ailsa

CWM. Welsh word meaning an upland hollow, corresponding to the English combe. It is used in place names Cwm in an industrial district in Monmouthshire, England, 3 in. from Ebbw Vale. Cwmdu in Glamorganshire, 3 m. from Bridgend. Both have stations on the G.W. Rly. Cwmmaman is an urban district in Carmarthenshire. Pop. 5,300. There are other places, compounds of Cwm, in Wales.

CYANAMIDE or **NITROJIM.** Product obtained by heating calcium carbide in an atmosphere of nitrogen in an electric furnace. Cyanamide is employed alone as an agricultural fertiliser or converted into ammonium sulphate. Cyanides and nitric acid are made from it.

CYANIC ACID. Pungent liquid, a compound of cyanogen. It gives off a vapour that causes a rapid flow of tears, and applied to the skin raises a blister.

CYANIDE OF POTASSIUM. Poisonous salt (KCN). It is obtained by fusing together potassium carbonate and potassium ferrocyanide (yellow prussiate of potash). It is also made from cyanamide, and by passing hydrocyanic acid vapour into a solution of caustic potash. It is used largely in gold mining for extracting small amounts of gold from "tailings." Cyanide of potassium forms a double cyanide with silver, and on this account is used in electro-plating baths. It is also used for making hydrocyanic acid.

CYANOGEN. Poisonous gas with an odour resembling peach kernels, first prepared by Gay-Lussac in 1815, by heating dry cyanide of mercury in a tube and collecting over mercury the gas evolved. Cyanogen burns with a blue flame and is readily liquefied. With metals it forms the poisonous compounds known as cyanides; while with hydrogen it unites to form hydrocyanic acid, and with oxygen to form cyanic acid.

CYANOMETER. Meteorological instrument for estimating the intensity of blueness in the sky. The earliest type consisted of a scale of blues on a strip of porcelain with which the blue of the sky was compared. A more satisfactory apparatus is one in which a small area of white surface is illuminated by any particular tint desired.

CYANOSIS. Blueness or lividity of the skin due to distension of the small vessels with venous blood. The condition may be due to cold, or to interference with the circulation or aeration of the blood from asphyxia, or to disease of the respiratory system or the heart.

Cybele. In Greek mythology, another name of the nature goddess Rhea (q.v.).

CYCLADES (Gr. *kyklos*, circle). Archipelago in the Aegean sea, constituting a department of Greece. About 220 in number, their land area is about 1,040 sq. m. In ancient times they were supposed to form a circle round the sacred island of Delos. Mountainous in character, the loftiest point (3,300 ft.) is on Naxos, the largest of the group. The chief town is Hermoupolis, on Syra. Pop. 129,702.

Cyclamen leaf, stalk, and flower

CYCLAMEN (Gr. *kyklamēnos*). Half hardy and greenhouse perennial plant of the order Primulaceae. A native of Europe and S.W. Asia, its height is 4 ins. to 1 ft. It has a solid tuberous rootstock, or corm. The flowers are pink, white, or purple, the five joined petals of the corolla being

recurved upwards. The fertilised seed heads bend and are pushed into the soil by a twisting of the stalk. The cyclamen is sometimes called sowbread.

CYCLE (Gr. *kyklos*, circle). In astronomy, a recurrent period of a definite number of years in which an event, such as an eclipse, takes place. The Metonic cycle of the moon (19 years) is used for determining the date of Easter. The solar cycle is a period of 28 years.

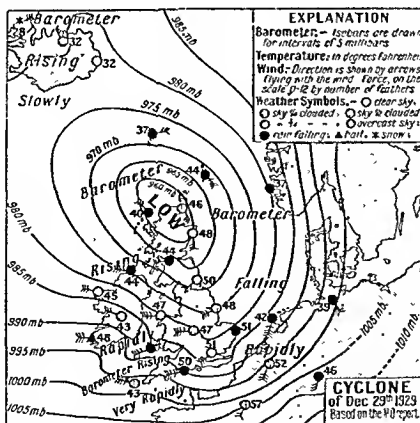

The term is also applied to the operation of an engine from, say, the commencement of its power stroke to the corresponding position at the commencement of the next power stroke. In an alternating current of electricity a cycle is a complete alternation. The frequency of alternations is measured in cycles per second. In wireless transmission the kilocycle (kc.), equal to 1,000 cycles per second, is generally used.

CYCLING. Popular term for riding a bicycle or tricycle, either as a pastime or as a convenient means of locomotion. It is usually confined to machines propelled by man-power.

Cycle racing as a sport first took the form of informal road races. Later, these were supervised by the National Cyclists' Union, the Great North and Bath roads providing favourite courses. Track racing was initiated in the days of the high-wheeled bicycle over level grass and cinder tracks; but with the advent of the safety machine and pneumatic tires, cement tracks, with banked-up corners, were made. Surprising records have been created by the aid of pacing. The headquarters of the National Cyclists' Union are at 11, Great James Street, London, W.C.1.

The Cyclists' Touring Club, organized in 1878 as the Bicycle Touring Club, has members throughout Europe, America, and the East. Under its auspices British road books, Continental road books, handbook and guide (biennial), and a monthly gazette are issued. The headquarters are at 3, Craven Hill, London, W.2. See Bicycle; Motor Cycle.

CYCLOID (Gr. *kyklos*, circle; *eidōs*, form). Curve described by any point on the circumference of a circle rolling along a straight line. The base of the cycloid will be equal to the circumference of the circle.

Cyclone. Map of a cyclone which moved across the British Isles on Dec. 29, 1929

From the Daily Weather Report of the Meteorological Office by permission of the Controller of H. M. Stationery Office.

CYCLONE (Gr. *kyklōn*, whirling round). Region of low barometric pressure in which the winds blow spirally inwards towards the centre of the system. The pressure is always lower towards the centre. Cyclones are of two types: (1) those of small diameter but great intensity; (2) those of great diameter but comparatively small intensity. To the first class belong cyclones originating in tropical regions, where their movement

is first westwards and later polewards. Hurricanes, tornadoes, and typhoons are cyclonic storms of this group. To the second class belong the easterly-moving low pressure systems of temperate latitudes.

CYCLOPES (Gr. *kyklos*, circle; *ops*, eye). In Greek mythology, giants with one eye in the middle of the forehead.

Cyclopes. The giant Polyphemus in a fresco by Giulio Romano. Ducal Palace, Mantua

In Homer's *Odyssey* they are represented as shepherds living in Sicily. Their chief representative is Polyphemus (q.v.). Other traditions represent the Cyclopes as Titans who provided Zeus with thunderbolts, or as the assistants of Hephaestus or Vulcan, in his workshop under Mt. Etna.

CYCLOPS. Minute copepod crustacean, common in ponds and ditches. Just visible to the naked eye, it swims with a curious darting movement. It has one median eye and carries its eggs in two external sacs or pockets.

CYGNUS (Lat. swan). Name of one of Ptolemy's constellations. It lies right at the keystone of the arch of the Milky Way, and a long undulating line of stars skirting the western edge forms the neck of the swan. On Aug. 20, 1920, a new star was discovered in this constellation.

CYLINDER (Gr. *kyklos*, circle; *lindros*, roller). Solid defined by the revolution of a rectangle about one of its sides. The side about which the rectangle revolves is called the axis of the cylinder. Mathematically, the cylinder is supposed not to have flat ends, but to stretch to infinity in each direction. The cross section of a cylinder, perpendicular to the axis, is always a circle of the same diameter. If the cutting plane is at an angle to the axis, the section is an ellipse. In engines, cylinder denotes the chamber in which the piston works. The word is used to describe the type or size of engine, i.e. horizontal or vertical cylinder engines, or 4-, 6-, 8-cylinder engines.

CYLINDER SEAL. This is the name given to an ancient gem of cylindrical form, engraved round the convex surface in intaglio.

CYMBAL (Gr. *kymbalon*). Percussion instrument used in orchestras and military bands. It consists of two circular metal plates with a "boss" in the centre of each, through which a looped leather strap passes, into which the player inserts his hands. They are struck together by a sliding movement rather than a direct blow, in order to secure a ringing tone.

CYMMRODORION. Word meaning the kingdom or realm of the Welsh, and used for societies that aim at preserving the Welsh language.

Cylinder. ABCD is the generative rectangle and AB the axis

Cymbals as used in a modern orchestra

nationality. In 1877 one of these, dating from 1820, was re-established as the Honourable Society of Cymmrodorion. Its offices are at 64, Chancery Lane London, W.C.

marble, and salt are worked. The ancient Phoenician and Roman copper mines are now worked mainly for by-products of copper. The forests are carefully preserved and developed.

capital from Ecbatana to Susa. Alarmed at his growing power, the rulers of Lydia (Croesus), Babylon (Nabonidus), and Egypt (Amasis), and even Sparta, combined against him. In 546 Cyrus overthrew Croesus and made himself master of the coast of Asia Minor. In 539 Babylon fell into his hands without a blow. In 529 Cyrus was killed while fighting against a nomad tribe.

CYRUS THE YOUNGER (d. 401 B.C.) Second son of Darius Nothus, king of Persia. He plotted against his brother, the reigning monarch, Artaxerxes Mnemon, but was forgiven and reinstated in his satrapy of the coast of Asia Minor. In the spring of 401, however, he raised an army against Artaxerxes and was killed at the battle of Cunaxa (q.v.).

CYST (Gr. kystis, bladder). Cavity in the tissues containing more or less fluid. Most of the many varieties of cysts arise in connexion with glands which normally secrete material. In a retention cyst there is accumulation of the normal secretion. Sebaceous cysts occur in the skin and are formed by the dilation of the sebaceous glands. Dermoid cysts contain skin structures, bone, teeth, etc., and are found in the skin and ovaries.

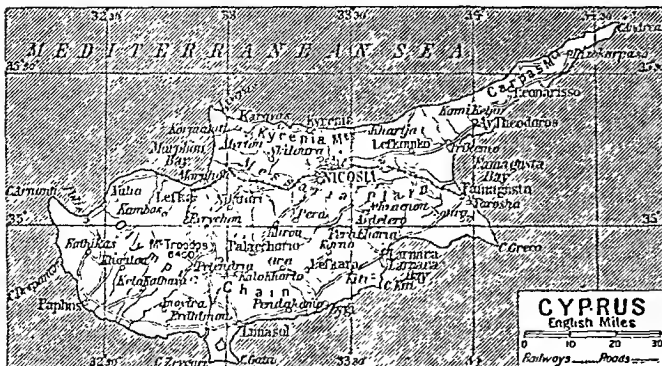

CYSTIDS, CYSTIDEA OR CYSTOIDEA. Group or class of fossil Echinodermata. The body is spherical, and in general construction approaches to that of the Crinoidea (q.v.).

CYTISINE. Poisonous alkaloid obtained from laburnum (*Cytisus laburnum*) and furzes (*Ulex Europaeus*). Cases of poisoning have frequently resulted from eating laburnum. The treatment consists in using the stomach pump or administering emetics, followed by stimulants and hot baths.

CYTOLOGY (Gr. kytos, cell; logos, account.) Branch of biological science dealing with the fundamental units of animals and plant structure. See Cell.

CZECHOSLOVAKIA. Republic of Central Europe, one of the states that arose after the Great War. It comprises the whole or part of five areas formerly belonging to the empire of Austria or the kingdom of Hungary, namely, Bohemia, Moravia, Silesia, Slovakia, and the autonomous territory of Carpathian Ruthenia. It is bounded N. by Germany and Poland, S. by Austria, Hungary and Rumania, E. by Poland and Rumania, and W. by Germany. Important towns are Prague (the capital), Brno (Brünn), Ostrava, Bratislava (Pressburg), Plzen (Pilsen), and Kosice. Its area is 54,207 sq. m. Pop. 14,600,000.

The country is one of the richest in natural resources and one of the most highly industrialised in Europe. Crops include wheat, rye, barley, oats, sugar beet, bops and fruit. Among the minerals are coal, iron, radium, gold, silver, graphite, and rock salt. The forests form an important part of the natural wealth. The industries include the

Cyprus. Map of the Mediterranean colony which, formerly a Turkish possession, was annexed by Great Britain in Nov. 1914

CYNIC (Gr. kynikos, dog-like). Greek philosophical school, so called either from the Kynosarges, a gymnasium near Athens, in which its founder Antisthenes (q.v.) taught, or from the surly behaviour of its members. They held virtue to be the only good, and vice, or surrender to the passions, the only evil. Virtue could be learnt by enduring privations and renouncing the world. Virtue was in itself sufficient to give happiness, and needed nothing else but the strength of Socrates. Cynicism, which represents merely the negative side of the teaching of Socrates, was the forerunner of Stoicism.

CYPRESS. Hardy evergreen tree of the order Coniferae and genus *Cupressus*. They are natives

of Japan, N. and Central America, and the Himalayan Mts. Their height ranges from 4 ft. to 80 ft. The foliage is usually dark green, though there are yellow and cream-coloured variegated varieties.

Cypress. Luxuriant specimens of this hardy evergreen tree
Leonard Bastin

CYPRIAN (c. 200-258). Saint, bishop and martyr. Converted to Christianity about 246, he became bishop of Carthage, 249. During the Decian persecution, 250, he retired into hiding, but in 251, 252, and 256 he presided over councils of African bishops. Cyprian was exiled to Curubis in 257, but recalled in 258, he was beheaded at Carthage, Sept. 14. His writings are mainly concerned with church discipline.

CYPRUS (Gr. Kypros). Island in the E. Mediterranean, about 60 m. W. of Latakia, Syria. Its surface consists of two mt. chains running from E. to W., with a wide alluvial plain, called the Mesaoria or Messaria, between them. Important towns include Nicosia (the capital), Limassol, Larnaca and Famagusta. Its area is 3,584 sq. m. Pop. 310,715.

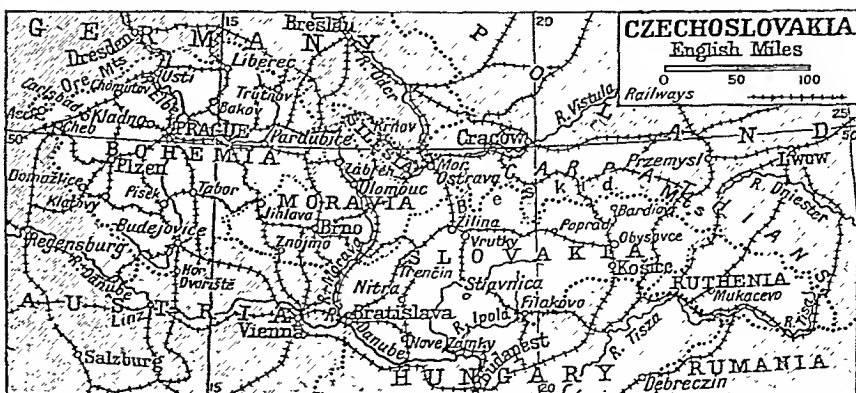

Agricultural products include wheat, barley, vetches, oats, olives, carobs, raisins, and other fruits. Sheep, goats, cattle, and other live stock are reared. Asbestos, gypsum, amber,

vention with the sultan of Turkey, concluded in 1878, it was ceded to Great Britain for administrative purposes. On the entrance of Turkey into the Great War, in Nov., 1914, the island was annexed by proclamation on Nov. 5. In 1925 it became a British colony, under a governor.

CYRENAICA. E. portion of Libya (Libia Italiana). It is bounded on the W. by Tripolitania, on the E. by Egypt, and on the N. by the Mediterranean. Barley and bananas are grown. There are sponge and tunny fisheries, and, at Benghazi, salt pans. Ostrich feathers from central Africa are exported from Benghazi. There are about 100 m. of rly. and some 20 wireless stations. The principal towns are Benghazi, the capital, and Derna. In 1925 Egypt ceded to Italy the oasis of Jaghubb. Area, 235,640 sq. m. Pop., about 235,000, of whom about 10,000 are Italians.

CYRENE. Ancient city of N. Africa. Between Alexandria and Carthage, it is on a tableland 1,800 ft. high, about 9 m. from the coast. Originally a Greek colony, it became the chief city of Cyrenaica. It was famed for its medical school, and was the birthplace of Aristippus, founder of the philosophical school known as Cyrenaics, and of the poet Callimachus. Excavations carried on since the Italian annexation have brought to light many ancient statues and monuments.

CYRUS THE ELDER (c. 600-529 B.C.). King of Persia and founder of the Persian empire, surnamed the Great. According to his own statement in an inscription on a cylinder found in the ruins of Babylon, he was "the son of Cambyses, the son of Cyrus, the son of Teispes, the son of Achaemenes." In 549 Cyrus overthrew his suzerain Astyages, united Media and Persia, and transferred the

Czechoslovakia. Map of the republic which, after the Great War, was formed out of portions of the empire of Austria-Hungary and is peopled by Czechs, Moravians, and Slovaks

manufacture of textiles, iron and steel, glass, chemicals, pottery, leather, furniture, matches, and beer. There are upwards of 8,500 m. of rlys., mostly the property of the state. The country has no seaports, but has the right of access to Stettin and Hamburg. The Danube is the principal waterway. Bratislava (q.v.) has a broadcasting station. Regular commercial and passenger air services are maintained with Paris, Warsaw, Vienna, Berlin, and other towns. A national bank was set up in 1926. The unit of currency is the krone, of which about 163 go to the £ sterling.

Czech girl in national costume

The republic owes its existence to the recognition that Czechs, Moravians, and Slovaks are branches of the same Slav people, and to the national aspirations which followed that recognition and led to a long struggle for autonomy throughout the 19th century. The principal parties in the republic are the national democrats, agrarians, popular, social democrats, and socialists.

The republic came into existence Oct. 28, 1918, and was formally recognized by the treaty of St. Germain, Sept. 10, 1919. A national council took on the control of affairs, and a national assembly chose T. G. Masaryk as president. This election was confirmed in 1920, and in 1927 he was re-elected for seven more years. In 1920 the assembly decided upon a constitution. This consists of a parliament of two houses: a chamber of deputies of 300 members chosen for six years, and a senate of 150 members chosen for eight years. All adults vote for the deputies, and all over 26 for the senators.

Czechoslovakia. A Slovak peasant and his bride

Under the direction of Masaryk and Eduard Benes (q.v.), Czechoslovakia has made tremendous progress. Peace has been maintained and full advantage taken of the opportunity for industrial development. Until 1926 the dominant political party was a coalition of Czechs, but in 1926 this broke up. A coalition in which Slovaks and Germans were also represented then came into power, and this ministry, in which Benes had charge of foreign affairs, was in office in 1930.

CZENSTOCHOWA OR CZESTOCHOWA. Town of Poland, in the county of Kielce. On the river Warthe, 50 m. S.W. of Piotrkow, it is celebrated for its monastery containing an image of the Virgin, which attracts thousands of pilgrims. The monastery was attacked by a Swedish army in 1655, but heroically defended by its monks, assisted by a few soldiers. The town is a textile centre. Pop. 80,473.

CZERNOWITZ. Town of Rumania, formerly the capital of the Austrian prov. of Bukovina (q.v.). On the Pruth, and now known as Chernauti, it is an important point 167 m. S.E. of Lemberg (Lvov) by rly. It is the seat of a Greek archbishop and has a university. It has a trade in grain, and paper is manufactured. Pop. 87,128.

During the Great War Czernowitz changed hands six times, being first occupied by the Russians in Sept., 1914, and finally evacuated in Aug., 1917.

D. Fourth letter of the English and Latin alphabets. It is a soft dental or teeth-sound, the corresponding hard letter being t. D is used to express the numeral 500. See Alphabet: Phonetics.

DAB (*Pleuronectes limanda*). Marine flat fish common in European waters except the Mediterranean. It is of brownish colour, white beneath, and closely related to the plaice and flounder. Usually about 10 ins. long, it is often confused with the lemon sole.

Dabchick. Popular name for the bird, the lesser grebe. See Grebe.

D'ABERNON. EDGAR VINCENT, 1st Viscount (b. 1857). British financier and diplomatist. Born at Slinfold, Sussex, Aug. 19, 1857, he entered the army in 1877, retiring in 1882. From 1883-89 he was financial adviser to the Egyptian Government. In 1899, as Sir Edgar Vincent, he was elected M.P. for Exeter, after being governor of the Imperial Ottoman Bank. He lost his seat in 1906. In 1914 he was made a peer, and during the Great War was chairman of the board that controlled the liquor traffic. Earlier he had been chairman of the Dominions Royal Commission. D'Abernon was British ambassador to Berlin, 1920-6, and was made a viscount in 1926. He published his *Memoirs*, 1929.

Lord D'Abernon, British ambassador

DACCA. Division, district, and city in Bengal Presidency, India. The city was the capital of E. Bengal and Assam during 1905-12, when that prov. was a separate government. It stands on the N. bank of the Burhi Ganga, an arm of the Dhaleswari, and is the chief trading centre of E. Bengal, being noted for its muslins and for gold and silver work. The university of Dacca was established in 1919 as a university for Bengal. The division has an area of 16,244 sq. m. and a pop. of 12,837,311. Pop. district, 3,125,967; city, 119,450.

DACE (*Leuciscus vulgaris*). Small roach-like fish of silvery appearance. It is usually found in shoals, and is common in many English and Continental rivers. The name, also spelt dare and dart, has reference to the swift movement of the fish.

DACHSHUND (Ger. badger-dog). Breed of small German dog. It was introduced into England by the Prince Consort, and has an extremely long body, very short legs, and a smooth and silky coat. It is very plucky, a capital follower of scent, and is used in some places for drawing badgers.

Dachsund. Prize-winning specimen of this German breed of dog

DACIA. Prov. of the Roman empire. Bounded N. by the Carpathians, S. by the Danube, E. by the Hierasus (Pruth), and W. by the Tysia (Theiss). It was conquered A.D. 101-107 and made a Roman province by Trajan. Under Aurelian (270-275) it was given up to the Goths, who were then attacking hard the N.E. frontier of the Empire.

DACOIT (Hind. dakait, robber). Term applied to organized bands of robbers in India.

The Bengal government, in 1793, offered ten rupees per head for their apprehension. In Indian law dacoity means robbery with violence by not less than five men.

Daddy Long Legs. Popular name for the crane fly (q.v.).

DADO (Ital. *dic. cuhe*). In architecture, the space between the base and capping, or sur-base of a pedestal supporting a column or pilaster. It is also a synonym for a wainscot (q.v.) and is applied to the prepared surface surmounted by a moulding that has replaced the panelled dado in the majority of modern houses.

Dado of a Corinthian column

DAEDALUS (Gr. *Daidalos*, skilled artificer). In Greek mythology, Athenian sculptor, architect, and inventor of various tools and instruments. He won the favour of King Minos of Crete, and constructed the subterranean labyrinth for housing the Minotaur (q.v.). For having supplied Ariadne with the clew of thread by which Theseus (q.v.) escaped from the labyrinth, Daedalus and his son Icarus were also confined there. Daedalus then made wings of feathers fastened with wax, with which they flew across the sea. Icarus mounted too high, the sun melted the wax, and he fell and was drowned, but Daedalus reached Cumae in Italy. See Crete.

DAFFODIL (Lat. *nsphodelus*). Hardy bulbous plants of the order *Amaryllidaceae* and genus *Narcissus*. Natives of all parts of the world, they grow to a height of 3 ins. to 2 ft.; and flower from Feb. to May. The familiar yellow flowering daffodils technically represent the Magni Corouati group of narcissi. There are a great many florists' varieties, developments providing pure white sorts, as apart from the yellows, and others with apricot-coloured cups. See Narcissus.

Daffodil. Flowers of the wild species

Dace, a small fresh-water fish of lively and gregarious habits

Daffodil was the name of a British steamship used to support the Vendictive in the attack upon Zeebrugge, April 23, 1918. After the war, Daffodil returned to Liverpool, where she was a ferry steamer.
